(b) The sale or lease would constitute misrepresentation to or deceit or fraud of the purchasers or lessees.
(c) Inability to deliver title or other interest contracted for.
(d) Inability to demonstrate that adequate financial arrangements have been made for all offsite improvements included in the offering
(e) Inability to demonstrate that adequate financial arrangements have been made for any community recreational or other facilities included in the offering
(f) Failure to make a showing that the parcels can be used for the purpose for which they are offered
(g) Failure to provide in the contract or other writing the use or uses for which the parcels are offered, together with any covenants or conditions relative thereto
(h) Agreements or bylaws to provide for management or other services pertaining to common facilities in the offering, which fail to comply with the regulations of the commissioner
(i) Failure to demonstrate that the soil on each lot has been prepared in such a manner that structural damage will not result.

SEC 3 Section 11018 1 of said code is amended to read

11018 1 A copy of the public report of the commissioner, when issued, shall be given to the prospective purchaser by the owner, subdivider or agent prior to the execution of a binding contract or agreement for the sale or lease of any lot or parcel in a subdivision *The requirement of this section extends to lots or parcels offered by the subdivider after repossession.*

(See recommendation 4 (c) p 10)

An act to add Section 17955 to the Health and Safety Code, relating to housing.

The people of the State of California do enact as follows:

SECTION 1 Section 17955 is added to the Health and Safety Code, to read.

17955. Each city, county, and city and county shall, by ordinance, require that one copy of approved plans and specifications for dwellings constructed in a subdivision, as that term is defined in Sections 11535 and 11535 1 of the Business and Professions Code, shall be filed with the building department for retention by such department for at least one year

(See recommendation 4 (d) p 10)

PART II

REPORT ON NEIGHBORHOOD PARKS IN NEW SUBDIVISIONS

FINDINGS

1 Population pressures have created a clear need for more neighborhood recreation and park space in the subdivisions of California

2. There are many methods which are available to local governments to aid in the provision of such neighborhood recreation areas, but all involve substantial increases in bonded debt or property tax burdens.

3. In the past, the preferred technique for acquiring land and/or funds to provide park or recreation space in subdivisions was to assess the subdivider fees or to demand dedication of land as a condition to subdivision plat approval

4. Since 1957, the authority of local government to impose such requirements has been clouded by a series of court decisions which indicate that these requirements may be illegal if not specifically authorized by a state enabling statute and if fees collected are not used to benefit the residents of the affected subdivision.

5. Developers and subdividers maintain that fee and land dedication requirements have frequently been imposed in an unreasonable fashion and that land has been acquired in a haphazard and wasteful manner.

CONCLUSIONS

In order to provide cities and counties with appropriate tools for providing neighborhood park and recreation areas in new subdivisions and, at the same time, to protect subdividers from unreasonable, arbitrary or haphazard regulation, the committee makes the following recommendations for amendments to the Subdivision Map Act

1 The Subdivision Map Act should be amended to authorize local ordinances which would require a subdivider to dedicate land for neighborhood parks and related use,

2. The Subdivision Map Act should be amended to authorize local ordinances which would require payment of fees by subdividers in lieu of land dedication, said fees to be used to acquire land for the benefit of the inhabitants of the subdivision,

3 The Subdivision Map Act should be amended further to require any ordinances which authorize fee assessments or land dedication requirements as prerequisite to plat approval to establish definite planning standards for determining where, and how much, land is needed to fulfill community demands for park and recreation areas,

4 The Subdivision Map Act should be amended to require ordinances which authorize fee or land assessment as a prerequisite to plat approval to insure that there be a reasonable relationship between the amount and location of land or fees extracted from the subdivider, and the use of such land or fees by the future residents of the subdivision

I. INTRODUCTION

Concern is being expressed statewide in California that we may be in danger of " . building ourselves into a cement-lumber jungle "[1] Land pressures have been building steadily and the rising market price of each available scrap of urban land has made land the focus of competitive interests and competitive values Recreation experts, planning commissions and conservationists have long insisted that the provision of recreation areas in subdivisions is a necessity. They argue that healthful, productive community life depends in part on the availability of recreation and park space

Population congestion magnifies the need for urban open space It is perhaps the visual impact of thousands upon thousands of houses built row on row without relief of open space which has been most responsible for stimulating burgeoning citizen interest in the problem of providing for recreation areas in subdivision developments House Resolution 239, authorizing a study of the need for parks in subdivisions is but one symptom of this general and increasing citizen concern.

Pursuant to H R 239, a special subcommittee of the Assembly Committee on Municipal and County Government convened in public hearing on April 24, 1964, to receive testimony The hearing produced a balanced view of the issues and the committee discovered that at least three occasionally overlapping but still quite distinct groupings of interests could be identified as significantly involved

First, there are local community planners and recreation directors and their legal aides who clearly believe in the value of subdivision parks, but who are plagued by the financial and legal difficulties of providing them in the desired number Second, there are builders and developers of subdivisions who are caught between the pressures for good, reasonably priced housing and the seemingly incompatible demands for recreation areas in land-scarce urban areas Finally, there are the taxpaying citizens who desire adequate recreation space for their families but who, at the same time, wish to avoid any increase in already burdensome property taxes

It was the goal of the subcommittee to study all relevant aspects of the problem and to determine what, if any, action the Legislature should take to the end of providing adequate neighborhood recreation space in the multiplying subdivisions of the state

II. THE PROBLEM OF PROVIDING FOR NEIGHBORHOOD OPEN SPACE AND RECREATION AREAS IN SUBDIVISIONS

A. As Viewed by Local Officials

Neighborhood parks are a necessary component of community life. The committee has not encountered one local official who would deny the value of the neighborhood park Elected officials, particularly, have found themselves besieged by demands for more park space.[2] Families who have moved to suburbia in the hope of finding escape from urban congestion have found instead that their children may there too be forced into the streets in their natural pursuit of recreation space These people turn to the community as a whole for aid in providing the desired parks.

The guardians of the community's general fund, however, inevitably find themselves and the fund hard pressed to provide for even the more obvious basic needs of the community and those who demand the new space will often balk at increases in already high property taxes.[3] Desirous of avoiding reliance on state or federal agencies in providing for such a clearly local need, local authorities generally feel that they would be capable of handling the problem if given adequate tools with which to proceed.[4]

Specifically, they insist that it is legitimate to assess the subdivision developer a percentage of his land or a fee for the privilege of developing the land—such land and/or fees to be used for park purposes. They accept the rationale of the "direct benefit theory" which holds that the developer, through private profit-seeking activity, creates a need for public action and expenditure. Just as the developer may legitimately be required to provide for drainage, streets, and walks as a prerequisite to plat approval, so may he be required to dedicate land or be assessed fees for park purposes Thus, he and the subsequent homeowner, rather than the public or general taxpayer, are made to bear the burden of this private act of development for their own benefit. Ultimately, this kind of control of subdivision development

derives from the state's police power and must be exercised in a reasonable fashion.[5]

Case law indicates that local authorities may constitutionally require land dedication or fee assessment for park purposes as a condition for plat approval.[6] However, the courts have inferred that such requirements which are not specifically provided for in state enabling statutes may be struck down as invalid.

In California, the Subdivision Map Act provides that developers must submit a tentative map of proposed subdivisions to local authorities for approval. Local governments may pass ordinances regulating the "design and improvement" of subdivisions, as defined in the Map Act, and the subdivider must comply with the provisions of the ordinances as a condition to map or plat approval.[7] The Subdivision Map Act does not specifically include neighborhood parks or recreation areas within its definition of the "design and improvements" which may be required by local authorities as a prerequisite to plat approval.

A key 1957 case, *Upland* v. *Kelber*, suggested that assessment of fees for park purposes as a prerequisite for plat approval would be held invalid in California if the fees were to be used to subsidize parks for the benefit of the community as a whole and not for the benefit of the affected subdivisions. Moreover, the court indicated that *any* land dedication or fee requirements might be held invalid as long as specific authority for such action remained absent from the Subdivision Map Act.[8]

These legal complications have caused hesitancy to act on the part of many planning authorities and the repeal of numerous ordinances requiring dedication or fee payments. Thus, local authorities suggest revision of the Subdivision Map Act to provide *specific* authority for

requiring park dedication and/or fee assessment as a prerequisite to plat approval [9]

B. As Viewed by the Developers

Urban land is both extremely scarce and extremely expensive The developer and builder are under enormous pressures to provide housing for a rapidly growing population Yet, local authorities make impossible demands upon them through a multiplicity of overlapping, sometimes contradictory ordinances, codes, regulations, and requirements [10] These, plus demands for the valuable land itself or in-lieu fees threaten to make many developments of much needed housing economically unfeasible [11]

Far too often, planners demand valuable land from the developers which is unsuitable or inadequate in size for park purposes, while other land is wasted through the imposition of outdated large lot zoning requirements Local governments have a tendency to acquire land in a haphazard fashion at the expense of the developer and ultimately the homeowner, and such land may never find its way to use as recreation space When land is developed for park purposes, it may become available to the community at large and not just to subdivision residents When this occurs, the fee and land dedication requirements amount to unequal taxation [12]

Developers claim that few communities have felt restrained by the implications of the *Kelber* v *Upland* case and have continued to extract or extort land or money from subdividers, who are too committed to their developments to protest through expensive, lengthy, and delaying litigation.[13]

Finally, some remain unconvinced that park space is always a benefit or is needed where local planners or recreation experts say that it is In any case, the subdividers insist that more study is required to determine the real need of Californians for neighborhood parks [14]

Rather than recommending a revision of the Subdivision Map Act to explicitly permit assessment of land or fees for park purposes, the developers would recommend explicit prohibition of such procedures [15]

III. TECHNIQUES AVAILABLE TO FACILITATE THE CREATION OF NEIGHBORHOOD PARKS

Cluster Zoning

Local ordinances may state that a developer will be allowed to reduce previously required lot sizes by certain percentages provided that the land "saved" is retained as open space for parks The density of the subdivision as a whole remains unchanged, but the developer reduces his cost for streets, sewers and other items, by virtue of the lot size reduction This approach, of course, requires the voluntary participation of the developer.[16]

Fee and Land Dedication Requirements as Condition to Plat Approval

This procedure was discussed at length in Part II of this report The major objection to it is that land may be acquired in a haphazard, even whimsical fashion, by local authorities in possession of powerful weapons *However, this shortcoming may be remedied through a statutory requirement similar to that which applies to fees required for drainage purposes. That is, local authorities may be required to formulate a plan for park acquisition before they may embark on acquisition forays* They may be required to establish standards and any requirements imposed upon the developer could be made to bear a reasonable relationship to the needs of the plan and to the needs of the subdivision [17]

County Service Areas: Community Service Districts

The County Service Area Law and the Community Services District Law can be activated respectively by a resolution of supervisors or a petition of citizens residing in the affected area The residents can be directly taxed or bonds floated under these instruments to the end of providing recreation space in unincorporated areas County officers and residents, however, tend to be reluctant to use these procedures for park purposes, when the needs for basic sanitation and water facilities are often more immediately pressing and also very expensive [18]

Improvement Acts

The Improvement Acts of 1911 and 1913 may possibly be adapted to provide parks and recreation areas in subdivisions However, as committee investigation has indicated, the use of these legal instruments, designed to facilitate improvement in already developed areas, may be subject to misuse when employed to provide improvements in new subdivisions.[19]

Open Space Maintenance Districts

This technique provides for the creation of a maintenance district which can acquire property and maintain it for park purposes The district would be administered and supervised by the city or county within which it exists A special property assessment could be levied upon residents of the district to pay for open space or park maintenance. Assurance could be had through the use of the open space maintenance district that acquired land would not deteriorate into overgrown, unused, unsightly, empty space At present, state enabling legislation does not allow for the creation of open space maintenance districts, although such an ordinance has been adopted by Los Angeles under its authority as a charter city [20]

Zoning

Large lot zoning does not create parks Restrictive zoning never guarantees that land will be held as parkland in perpetuity, particularly when new pressures upon it become severe [21]

Private Ownership

Joint ownership and control of green areas or open space in subdivisions through the medium of condominiums or incorporation will generally work well in high-priced housing developments However, the technique poses problems of continuity, maintenance, and enforcement in lower or middle income areas where residents are more transient and may balk at group standards and assessments [22]

Annexation

A city may impose a fee or land dedication requirement upon a developer as a condition to desired annexation. Obviously, this technique will apply only to those cities surrounded by developing and unincorporated areas.[23]

Business and Building License Fees

Local authorities have imposed fees or "bedroom taxes" on home builders for license or privilege to build, such fees to be used for park purposes. The legality of this procedure appears to be still in question.[24]

Federal Aid

The Open Space Land Program, under Title VII of the Housing Act of 1961 provides for direct grants to eligible public units to assist in the acquisition of open space in urban areas. Grants generally equal 20 percent of acquisition cost, but under certain circumstances, they may amount to 30 percent.[25]

Correlate Procedures: Reservation of Land and Tax Write-Offs

State enabling legislation may allow ordinances to require that land be reserved within subdivisions for public use. This land could remain undeveloped until the local unit of government had the time and opportunity to develop a comprehensive recreation or park plan. For the protection of the developer, limitations on the length of time that land could be reserved may be established, and taxes could be suspended on land, whether dedicated or reserved, which was not available for development.[26]

IV. CONCLUSIONS

It is recommended that the Subdivision Map Act be amended to include dedication of land for neighborhood parks and related open space or fees in lieu of such dedication as among items which may be required as a condition of subdivision plat approval.

It is further recommended that any ordinance imposing such requirements as condition for plat approval be required to establish standards which will prohibit acquisition of land in an arbitrary manner and will guarantee that the fees assessed or land taken will benefit the residents of the affected subdivision.

In Defense of These Recommendations

The committee feels that any action taken by the state government which will allow local authorities to deal more effectively with local problems is action well taken Such an amendment to the Subdivision Map Act will strengthen the prerogatives of local government. It will also safeguard arbitrary imposition of such requirements to the disadvantage of subdividers by establishing the general standards under which such requirements may be invoked.

If a specific situation develops in which developers or builders wish to protest the implementation of the Map Act, they will have recourse to local legislative bodies, and finally to the courts Just as subdividers and builders generally prefer home rule in the regulation of the building industry, we assume they will prefer to deal here, too, with locally based governmental agencies

The committee also recommends that serious consideration and further study be given to the following proposals, especially in light of present studies of existing tax structure currently being conducted by other legislative committees

(1) Authorize reservation of land within subdivisions for a limited period, when a master plan indicates that some public use may require its later condemnation This procedure will allow retention of land in an undeveloped state until decisions can be made as to its future use To insure fairness to the developer, reserved land should be exempt from taxation for the period of reservation.

(2) Amend the Revenue and Taxation Code to provide explicitly that taxes on property from which development rights have been dedicated or sold shall be based solely on the uses to which the property may still be put This exemption would remove a serious obstacle to gift or sale of land development rights for public use

APPENDIX

Model Legislation

An act to amend Sections 11510 and 11511 of, and to add Sections 11525.1, 11546, and 11547 to, the Business and Professions Code, relating to the Subdivision Map Act.

The people of the State of California do enact as follows:

SECTION 1. Section 11510 of the Business and Professions Code is amended to read:

11510 "Design" refers to street alignment, grades and widths, alignment and widths of easements and ~~right~~ *rights* of ~~ways~~ *way* for drainage and sanitary sewers and minimum lot area and width. *"Design" also includes land to be dedicated for parks and related public use.*

SEC. 2. Section 11511 of said code is amended to read:

11511. "Improvement" refers to only such street work and utilities to be installed, or agreed to be installed by the subdivider on the land to be used for public or private streets, highways, ways, and easements, as are necessary for the general use of the lot owners in the subdivision and local neighborhood traffic and drainage needs as a condition precedent to the approval and acceptance of the final map thereof *"Improvement" also includes any work to be done by the subdivider on land to be dedicated for parks and related public use as a condition precedent to the approval and acceptance of the final map of the subdivision.*

SEC. 3. Section 11525.1 is added to said code, to read:

11525.1. Whenever a local ordinance requires that a subdivider shall dedicate land for parks and related public use, the ordinance shall include definite standards for determining what proportion of a subdivision shall be so dedicated. There shall be a reasonable relationship between the quantity and location of the land to be dedicated, and the use of such land by the future inhabitants of the subdivision and the anticipated number of such inhabitants.

SEC. 4. Section 11546 is added to said code, to read:

11546. In lieu of the dedication of land for parks and related public use as provided in Section 11525.1, a local ordinance may require the payment of a fee, to be used solely for the purchase and improvement of park and open space facilities for the direct benefit of, and reasonably accessible to, the inhabitants of the subdivision.

SEC. 5. Section 11547 is added to said code, to read:

11547. A local ordinance may require the payment of a fee as a condition of approval of a final subdivision map for pur-

poses of defraying the actual or estimated costs of purchasing and improving land for parks and related public use

Such local ordinances may require payment of fees pursuant to this section if:

(1) The ordinance has been in effect for a period of 30 days prior to the filing of the tentative map of any subdivision for which payment of a fee is required

(2) The ordinance refers to a recreation element of a general plan adopted pursuant to Section 65465 of the Government Code, which contains an estimate of the total costs of purchasing and improving land for parks and related public use required by the plan.

(3) The park plan, in the case of a city, situated in a county having a countywide general park plan, has been determined by resolution of the governing body of the county to be in conformity with the county park plan or, in the case of a city situated in a county not having a countywide general park plan but in a district having a general park plan, has been determined by resolution of the governing body of the district to be in conformity with the district general plan or, in the case of a city situated in a county having a countywide general park plan and in a district having a general park plan, has been determined by resolution of the governing body of the county to be in conformity with the county park plan and by resolution of the governing body of the district to be in conformity with the district general plan

(4) The costs, whether actual or estimated, are based upon findings by the governing body that subdivision and development of property within the planned local park area will require purchasing and improving of the facilities described in the park plan, and that the fees are fairly apportioned within the local park area either on the basis of benefits conferred on property proposed for subdivision or on the need for local park and related public use facilities created by the proposed subdivision and development of other property within the local park area

(5) The fee as to any property proposed for subdivision within a local park area does not exceed the pro rata share of the amount of the total actual or estimated costs of all facilities within the local park area which would be assessable on such property if such costs were apportioned uniformly on a per acre basis

(6) The park and related public use facilities planned are in addition to existing local park and related public use facilities serving the area at the time of the adoption of the park plan for the area

Fees required by an ordinance adopted pursuant to this section shall be paid into a "planned local park facilities fund" A separate fund shall be established for each local park area.

Moneys in such fund shall be expended solely for the purchasing and improving of land for local park and related public use facilities within the planned local park area from which the fees comprising the fund were collected An ordinance adopted pursuant to this section may provide for the acceptance of cash or other consideration in lieu of the payment of fees

A county or city imposing fees pursuant to this section may advance money from its general fund to pay the costs of constructing park and related public use facilities within a local park area and reimburse the general fund for such advances from the planned local park facilities fund for the local park area in which the park and related public use facilities were constructed

A county or city imposing fees pursuant to this section may incur an indebtedness for purchasing and improving of local park and related public use facilities within a local park area, provided that the sole security for repayment of such indebtedness shall be moneys in the planned local park facilities fund

PART III

Report on the Adequacy of the Current Formula for Apportioning Fine and Forfeiture Revenue (Penal Code Sec. 1463)

FINDINGS

1. Currently, the fines, forfeitures and penalties assessed by California's inferior courts provide an annual sum in excess of $65 million which is returned to the cities and counties The total amount collected in each county is distributed according to a detailed formula prescribed by Section 1463 of the Penal Code, and provisions found in the Vehicle, Fish and Game, and Business and Professions Codes

2. The necessity for some formula by which these moneys would be distributed was occasioned by the court reorganization of 1950.

(a) Prior to reorganization cities had operated their own courts and had retained all revenues from such courts Traditionally these moneys exceeded the amounts necessary to offset costs and in effect became a source of revenue for the city general fund

(b) Court reorganization eliminated all city courts and transferred the operation of all inferior courts to the county. Since the county was assuming an additional cost in providing these court services, a spirit of fairness required that it be compensated for the actual costs of these additional services

(c) Although acceding to the principle that counties should be compensated for the additional court costs they were assuming, the cities had no wish to give up entirely the additional general fund revenues which had formerly been provided by the city courts

(d) Thus, the reorganization plan originally required that moneys from fines, forfeitures and penalties for non-Vehicle Code arrests, be apportioned on the basis of 25 percent to the county and 75 percent to the cities

3 The counties were dissatisfied with the 75 percent–25 percent apportionment, and sought to effect some change which would provide additional revenues for counties In 1953 these efforts resulted in an enactment of the formulas currently contained in Penal Code Section 1463 In an effort to insure that the counties would remain in the same relative financial position which existed prior to court reorganization, a comparison was made of costs and revenues for each city court during the years immediately preceding reorganization The formula of Penal Code Section 1463 sought to insure that future apportionment of court revenues would preserve this same cost-revenue ratio Thus, in theory the county would receive that fraction of court revenues which represented court costs and the cities would receive the balance.

CONCLUSIONS

1. Because city-operated courts no longer exist, it is impossible to obtain the data which would be necessary to test the adequacy of the 1953 apportionment formula or to up-date it. Under present circumstances, therefore, the formula of Penal Code Section 1463 has become an arbitrary formula.

2. Since a court system is necessary to the general welfare of a community, it is questionable to argue that there should be any necessary relationship between the source of a court's finances and the revenue which it generates.

3. There are at least three major alternatives to the present formula contained in Penal Code 1463.

(a) Revise the apportionment ratios in the present formula (Since the present formula has become arbitrary, however, any revision would also be a fairly arbitrary one and would require assent by the individual cities and counties affected)

(b) Establish a single percentage governing the apportionment of fines and forfeiture moneys (This could be a single statewide percentage or countywide percentage which might vary from county to county)

(c) Payment of all court costs from fines and forfeitures moneys with any remainder either returned to the cities or split on some mutually agreeable basis between the cities and the counties

4 The data established by the committee studies do not in themselves justify any sweeping changes in the existing formula Penal Code 1463 could be equitably revised by any of the three methods outlined above or by some variation of them. Such revisions however must await some consensus between the cities and counties of the state both on the necessity for revision and on the manner in which such a revision should proceed.

I. INTRODUCTION

Currently the fines, forfeitures and penalties assessed by California's inferior courts provide an annual sum in excess of $65 million which is returned to cities and counties The total amount collected in each county is distributed according to a detailed formula as prescribed by Section 1463 of the Penal Code together with other provisions found in the Vehicle, Fish and Game, and Business and Professions Code [1] Virtually all of this money is generated as a consequence of arrests made by city officials within city limits

Prior to the court reorganization of 1950 cities kept all of the fine and forfeiture revenue which resulted from arrests by city officials. Part of this sum was used to offset the operating costs of the city courts The balance was transferred to the city general fund. After the 1950 court reorganization, when counties took over the responsibility for all inferior courts, a method of sharing city receipts was sought which would alleviate the county's additional financial burden A formula was devised for each city which has been in effect, with some minor modifications, for the past 10 years At the present time, counties, facing increasing costs, seek a larger share of the revenue, while cities have opposed such a move because of their own need for additional funds

H R. 572 adopted by the 1963 Legislature directed the Interim Committee on Municipal and County Government to study the formula for apportioning fine and forfeiture revenue which is currently provided in Penal Code Section 1463 Initial hearings were held in Sacramento on October 8–9, 1963 As a result of these hearings, Chairman John Knox established an advisory committee to gather and evaluate data on the current apportionment formula Assemblyman Charles Warren was designated to serve as chairman of this committee, which included Assemblyman John Veneman, Mr Richard Carpenter, Executive Director and General Counsel of the League of California Cities, Mr William R MacDougal, General Counsel and Manager of the County Supervisors Association, Councilman James Harvey Brown of the City of Los Angeles, John R Leach, Assistant Chief Administrative Officer, County of Los Angeles; and Mrs Winifred L Hepperly, representing the Judicial Council Staff assistance was provided both by the Municipal and County Government Committee and by the Legislative Analyst's office After considerable discussion and extensive staff work, the advisory committee submitted its recommendations to the full Municipal and County Government Committee. These constitute the basis for the committee recommendations on his subject

[1] California State Controller *Annual Report of Financial Transactions Concerning Counties of California*, fiscal year 1962–63, p vii *Annual Report of Transactions Concerning Cities of California*, fiscal year 1962–63, p v
This amount represents a significant but not major, source of revenue to both cities and counties For example, in fiscal 1962–63 county revenues from fines, forfeitures and penalties were $25 3 million, or 1 51 percent of total revenues of $1 68 billion During the same period cities received $40 7 million from fines and forfeitures, 3 4 percent of total city revenues of $1,98 billion

The balance of this report outlines briefly the origins of the city-county dispute over the distribution of fine and forfeiture revenue, describes the current status of this dispute, and suggests the appropriate role of the Legislature in the controversy

II. BACKGROUND OF THE DISPUTE

Although the distribution of fines and forfeiture moneys among various governmental agencies is affected by provisions in the Vehicle, Fish and Game, and Business and Professions Codes, the basic provisions governing its distribution are found in Section 1463 of the Penal Code Among its various provisions, this section requires that fines and forfeitures resulting from arrests by city officers within cities be divided on a schedule basis as set forth therein A percentage of the money is paid to the county with the balance being paid to the city in which the arrest occurred [2] It is this category of fine and forfeiture—those resulting from arrests by city officers within cities—that is now the subject of controversy between city and county officials

The basis for the controversy dates back to the Court Reorganization Plan of 1950 The Judicial Council, after an extensive study of court organization and court costs, recommended a comprehensive reorganization plan to the 1949 Legislature The plan was adopted, and a constitutional amendment, needed to implement the plan, was approved by the voters in 1950 The reorganization plan became generally effective throughout the state on January 5, 1953

Before the 1950 court reorganization several different types of local courts were maintained by cities Fines and forfeitures produced by these courts supplied an additional source of income for the cities On the other hand their variety and number also produced overlapping jurisdictions and confusion in court structure Court reorganization reduced the types of inferior courts to two—municipal courts, which serve city areas, and justice courts which serve rural and unincorporated areas—and gave responsibility for operating these courts to the counties [3]

In transferring the operation of inferior courts to the counties, reorganization threatened to eliminate court-produced revenue as a source of city funds This concern was finally resolved, however, when cities agreed to support reorganization on the condition that they would "not be hurt financially and that the status quo would be maintained"

[2] For a general outline of the manner in which fines, forfeitures and penalties are distributed under Penal Code Section 1463, see transcript of hearing on the subject of *Fines and Forfeitures*, Assembly Interim Committee on Municipal and County Government, meeting in Sacramento, October 8–9, 1953 (hereafter referred to as *Transcript*)
Statement of Gilbert Lentz, Assistant Legislative Analyst, pp 4–8, 111–114

[3] For a thorough explanation of the background and proposed results of the Court Reorganization Plan of 1950, see *Fourteenth Biennial Report of the Judicial Council of California to the Governor and the Legislature* January 14, 1953

Because the counties were to assume the full burden of court costs, it was considered reasonable to apportion part of the fine and forfeiture revenues to the counties to compensate them for these additional costs The 1949 law had provided that 25 percent of the fines and forfeitures collected as a result of non-Vehicle Code arrests by city officials would be paid to the county The city would retain 75 percent of non-Vehicle Code fines and forfeitures and 100 percent of the fines and forfeitures collected under the Vehicle Code

In 1951, although court reorganization had not yet gone into effect throughout the state, the counties realized that in many cases their share of fine and forfeiture revenue under this plan would be less than the new court costs which would have to be incurred by them Accordingly several unsuccessful attempts were made by both cities and counties to have the 75–25 percent formula changed at the 1951 session of the Legislature Finally the situation was referred to the Senate Interim Committee on State and Local Taxation for further study.

After a lengthy deliberation on the matter, the Senate Committee recommended in part to the 1953 Legislature

> That legislation be adopted which would provide that from the total fines and forfeitures collected there should be deducted and paid to the county an amount sufficient to defray the costs of maintaining the court, exclusive of capital outlay The remainder of the fines and forfeitures should be divided equally between the cities and the county [4]

This report, which generally supported the county position, was not fully accepted by the Legislature, a fact which may be attributed to strong city opposition to giving up a significant source of revenue Extensive city-county negotiations ensued, the result of which was the basic formula presently contained in Penal Code Section 1463 Using data reported to the State Controller during the years immediately prior to court reorganization (fiscal 1948 through fiscal 1951) the Legislative Analyst's office compared the operating costs of the courts of each city to the revenues produced by such courts The results for each city were expressed in percentages For example, the operating costs of city courts in city "X" might have averaged 20 percent of court revenues The percentage for each city was then extended to the reorganized court system Thus the county would receive 20 percent of the fine and forfeiture revenue generated by arrests within city "X"

The object of this approach was to leave the cities and counties in the same relative financial positions they had occupied prior to reorganization Presumably the counties would thus be compensated for the actual cost of operating the courts under the reorganization plan The cities on the other hand would not be deprived of a revenue source that had become traditional to them This compromise proved agree-

[4] California State Senate *The Disposition of Inferior Court Fine and Forfeitures Under the Court Reorganization Plan Adopted in 1950* Senate Interim Committee on State and Local Taxation 1953, p 9

able to both cities and counties, and the percentages as determined by the Analyst's office were incorporated into Penal Code Section 1463 [5]

III. CURRENT STATUS OF THE PROBLEM

In recent years a number of counties have complained that this statutory formula has failed to reimburse them for their court expenses

1 In fiscal 1962–63, for example, Contra Costa County listed receipts of $420,073 01 as the county share of municipal court revenues At the same time it listed expenditures of $585,725 76 for court purposes The cities received $386,490 16 during this period as their share of the court revenues [6]

2 In fiscal 1961–62 the municipal court serving the City of San Diego listed operating costs of $1,522,212 County revenue from this court was $680,223 The City of San Diego received $2,522,630 as its share of court revenue [7]

3 In fiscal 1962–63 Santa Clara County listed operating costs for its municipal courts of $1,188,370 County revenue from municipal courts was listed at $1,035,047; city revenues at $1,729,353 [8]

Such examples provide the basis for the county argument that court costs should be deducted from court revenues prior to returning any portion of fines and forfeitures to the cities, instead of using a fixed percentage figure to determine the county share In retrospect it does seem likely that some costs that were used as the basis for determining the 1953 percentages may have been understated and that cost figures in general may have varied somewhat from city to city because of different items which were listed as court costs In addition counties now argue that court costs have risen faster than has their share of the fine and forfeiture revenues Thus they allege that the statutory formula is further out of line in comparison with actual costs than it was when it was first developed in 1953 Counties also point out that it is difficult for them to control court costs because the Legislature fixes the number and salaries of judges and officers and attachés of each municipal court.

The present position of the counties still relies heavily upon the recommendations of the 1953 Senate Interim Committee on State and

[5] For an extended discussion of the circumstances surrounding the 1950 plan for court reorganization, the setting of the initial apportionment formula and the compromise formula now contained in Penal Code 1463, together with current arguments for changing this formula, see testimony of
Gilbert Lentz, *Transcript*, pp 8–14, 115–117
Richard Carpenter, Executive Director and General Counsel, League of California Cities *Transcript*, pp 15–36 118–124
William R MacDougal, General Counsel and Manager, County Supervisors Association of California *Transcript*, pp 40–55, 125–133

[6] Robert Brunsell, Deputy District Attorney, Contra Costa County *Transcript*, pp 156–157

[7] Robert L Small, Senior Administrative Analyst, San Diego County, *Transcript*, p 143

[8] William R. Siegel, Deputy County Counsel, Santa Clara County *Transcript*, p 135

Local Taxation Thus the counties can point to evidence which indicates that it was the intent of both the Judicial Council and the State Senate that the financial support of the courts be a primary consideration in determining the distribution of fines and forfeitures between cities and counties. Because municipal courts usually produce revenues in excess of their operating expenses, these fines and forfeitures appear as an obvious source of funds for support of the courts

The cities likewise rely on prior circumstances to justify their present position. They view any increase in the county share as a breach of faith by those who nearly 15 years ago received city support for reorganization in exchange for a guarantee against financial loss to the cities. In addition the cities have argued that other aspects of law enforcement are rising and that they need their share of fines and forfeitures to help support these activities There was no indication at the time the distribution percentages were being worked out, however, that the cities' share was intended to be in any way related to city law inforcement programs.

IV. ROLE OF THE LEGISLATURE

Because of the lack of any clear standard to judge the adequacy of the present apportionment formula, the advisory committee suggested that no compelling case for change could be made on the merits of the situation. Thus, it concluded that any broad revision of the existing formula should hinge upon some mutual agreement between cities and counties in regard to a method of approaching this problem [9]

In this connection there appear to be three basic alternatives to the existing system.

1. By using the same approach employed in deriving the original formula, the existing formula might be revised to compensate for any changes which might have taken place since 1953.

(At first glance this approach appears to be a reasonable one. Because cities have not been operating their own courts for over 10 years, however, it is impossible to arrive at a meaningful figure to represent city court costs. It must be recognized that many county-operated municipal courts differ drastically from previous city-operated courts Implicit in the court reorganization plan was the concept that the standards of the courts would be raised Thus, citizens may not now be paying for services that are identical to those they received prior to court reorganization Moreover, although court revenues are easily determined, cities and counties differ sharply over what constitutes a "court cost" in today's circumstances)

2. A second alternative would be to equalize the relative amounts received by cities by returning a single percentage of fines and for-

[9] Correspondence between Assemblyman Charles Warren, Chairman of Advisory Committee on Fines and Forfeitures and Thomas Willoughby, Committee Consultant, July 8, 1964

feitures to all cities throughout the state or to all cities within a given county

(Any such percentage, however, is bound to be arbitrary in its effect on some cities and counties For this reason the decision to proceed with such an alternative should come initially from the cities and counties themselves)

3 As a third alternative the Legislature could enumerate certain allowable court costs and have the county treasurer reimburse the county for these costs prior to turning any of the fine and forfeiture moneys over to the cities

(The facts of the situation appear to lend some support to this alternative because the counties do have a specific financial outlay which is directly connected to court operation Prior to any legislative action, however, cities and counties will need to arrive at some agreement in regard to the specific costs which would be considered reimbursable)

CONCLUSION

Essential to the implementation of any of these alternatives is the support of both cities and counties There is little justification for putting the Legislature in the role of mediator between these two groups, especially when the approach to resolving the conflict must be initially assented to by the parties involved This committee therefore recommends that no specific action be taken by the Legislature until cities and counties indicate a mutually acceptable approach to revising Penal Code Section 1463.

TABLE OF CONTENTS

LETTER OF TRANSMITTAL

January 11, 1965

TO THE SPEAKER AND MEMBERS OF THE ASSEMBLY

Your Interim Committee on Municipal and County Government in accordance with HR 500 of the 1963 Regular Session submits herewith its final report to the 1965 Legislature The report covers six different subjects and is contained in two parts

Part I contains the findings, recommendations and conclusions of the committee on the subjects of

1. Problems of Construction on Expansive Soil
2. Neighborhood Parks in New Subdivisions
3 The Adequacy of the Current Formula for Apportioning Fines and Forfeiture Revenue (Penal Code Section 1463)

Part II contains similar materials on the subject of.

1. Control of Special District Securities
2. A District Reorganization Law
3. Review of the Operations of the Local Agency Formation Commission.

In this connection, Assemblyman George Zenovich has indicated that he does not wish to concur in the recommendations of the committee on the subject of "Control of Special District Securities "

Assemblyman Frank Lanterman does not concur in the recommendations of the committee on the subjects of:

Local Agency Formation Commission.
District Reorganization Law.
Neighborhood Parks in New Subdivisions

Mr Lanterman has succinctly explained the reasons for his dissent in a letter which I have attached to this letter of transmittal.

Respectfully submitted.

JOHN T KNOX, *Chairman*

John P Quimby, Vice Chairman	Frank Lanterman
Don A Allen, Sr	Leo J Ryan

Clair W Burgener	Charles Warren
Houston I Flournoy	George N. Zenovich

2—L-1895

ASSEMBLY
CALIFORNIA LEGISLATURE

January 7, 1965

HON. JOHN T KNOX
Chairman, Interim Committee
Municipal and County Government
State Capitol
Sacramento, California

Dear John

The following are my comments of dissent relating to the committee's recommendations for change in the Local Agency Formation Commission, the District Reorganization Law and the Neighborhood Parks in New Subdivisions Proposal

1 *Local Agency Formation Commission*

Mr Lanterman dissents with most of the proposed committee recommendations in this section relating to Local Agency Formation Commissions He especially points out the lack of control checks under (B) and (C) of paragraph 2, and the loss of local government control of the functioning of the commission if outside assistance grants may be accepted in designing a master plan for consolidation of local government He basically disapproves of any broadening of the authority of the commission unless there is provision for an appeal by the people affected, other than resort to the courts He earnestly recommends that an appeal procedure be established on the order of a four-fifths vote of the elected legislative body of jurisdiction to which the appeal has been made by the persons affected.

2. *District Reorganization Law*

Assemblyman Lanterman dissents with the committee recommendation contained in the last sentence of the final paragraph because it would tend to extend the authority of the commission to become, in fact, a master planning agency for the entire county with no provision for appeal to an elected body by the people affected and could ultimately provide for the dissolution of all district forms of government regardless of the will of the electorate of the district in question

3. *Neighborhood Parks in New Subdivisions*

Mr. Lanterman dissents with the proposed amendments to the Subdivision Map Act as unenforceable and potentially confiscatory without sufficient protections in either paragraphs 3 or 4

Cordially yours,

FRANK LANTERMAN

PART I

CONTROL OF SPECIAL DISTRICT SECURITIES

FINDINGS

1 The use of special districts to provide a significant source of financing for private, promotional projects—primarily land development projects—is on the increase throughout California

2 With boundary lines artfully drawn to include only a developer's land, a new district or a so-called improvement zone within an existing district, can be formed and controlled by a land promoter and his agents

3 Under such circumstances a special district becomes a tightly controlled operating division of the promoter's organization—an operating division which can use its bonding powers to raise risk capital independent of the subdivider's own credit resources or capital reserves

4 Such "promotional" districts often incur extensive indebtedness in the absence of any resident population or demonstrated ability to repay debt Under such circumstances the security behind district bonds is extremely tenuous Risk of eventual bond default, after a period of initial subdivision development, is correspondingly high

5 The decision to incur such indebtedness is made by the developer or his agents Although the developer typically has the advice of a bond attorney and a financial consultant, the fees of the latter are usually contingent upon the sale of bonds Thus no disinterested party is called upon to make a general judgment on the feasibility of the project

6 Subsequent purchasers of subdivision lots are largely unaware of the existence of the district or of the amount of indebtedness which they will be called upon to repay.

7 Purchasers of district bonds, moreover, are unknowingly placed in a position of high risk Such bonds are usually not purchased by large and sophisticated investors They are purchased by brokers for resale to relatively unsophisticated individual investors who are not in a position to see the property in question and who lack the expertise to evaluate such bonds

8 This type of special district indebtedness may have a direct and debilitating effect on the cost of debt which may be incurred by other local agencies In some instances, for example, school districts have had to sell their bonds at higher interest rates because of this type of special district indebtedness In addition default on a number of these issues might eventually force up interest rates on State of California bonds

9 Aside from the foregoing implications, the use of special districts for subdivision financing encourages urban sprawl Special district financing makes it profitable for developers to utilize marginal land which would not otherwise have been developed until it became economically sound to do so Thus, it short circuits efforts to achieve orderly growth and encourages a "leapfrogging" pattern of development

CONCLUSIONS

1 The unrestricted use of special district financing—especially special district general obligation bonds—for promotional purposes poses a potential threat to the credit of various local agencies and eventually to that of the state In addition it subjects unsuspecting homebuyers and bondbuyers to unwarranted risks on their investments

2 Reasonable review of such promotional projects and bond issues is necessary to preserve the continued good standing of California municipal securities and to insure that the credit of public agencies is not used frivolously or for proprietary purposes

3 The Districts Securities Commission already performs this review function for the bonds of a limited number of special districts The jurisdiction of the Districts Securities Commission should be broadened to include review of the bonds of special districts which are associated with promotional projects In this connection the State Treasurer should be added to the membership of the Districts Securities Commission because of his interest in protecting the general good standing of all California municipals

4 The State Division of Real Estate has recently adopted a policy of acknowledging the existence of promotional special districts and the possible implications thereof in its public report on new subdivisions. The Division of Real Estate deserves commendation for inaugurating this policy and should be urged by resolution of the Assembly to maintain and broaden its application In addition, the following specific recommendations are made for the purpose of eliminating provisions in existing law which operate to encourage the use of special district financing for private promotional projects

(a) Municipal Utility District Law Chapter 1403 of the Statutes of 1963 which amended the Municipal Utility District Law should be repealed This legislation was designed to assist a specific real estate development near Loomis, California. For various reasons these provisions were never used and there is little likelihood of their use in the future To retain them in the law is an open invitation to additional promoters in other districts to incur district debt to further their own projects (Public Resources Code—Sections 13000–13233)

(b) Resort Improvement District Law Use of this statute should be discontinued with appropriate savings clauses for the new districts which have been formed under its authorization This measure was enacted in 1961 ostensibly to provide a vehicle by which nonresident property owners could form a district to construct and maintain roads, drainage facilities, etc , at vacation homesites At this writing the enabling legislation has been used only to assist promotional land development projects, principally those undertaken by corporate developers and landowners. Moreover, representatives of various development interests actively sought in 1963 to amend the act to expand the powers of such districts for land development purposes

The California Resort District Law (Public Resources—Sections 10000-12164) provides an adequate procedure by which individual homeowners may improve resort and vacation properties The fundamental hazard in the Resort Improvement District Law is that this statute was designed for, and has been employed by, corporate landowners to finance speculative projects for their own profit without attendant safeguards to protect general public or community interests

(c) Mount San Jacinto Winter Park Authority This agency operates the Palm Springs Aerial Tramway which is experiencing significant financial difficulty In order to insure the orderly conduct of the business of this public agency, the following amendments are recommended to the enabling statute

1. Public bidding should be required in the sale of all authority bonds.
2 All bonds should be reviewed by the Districts Securities Commission before issuance
3 The Authority should be made subject to the provisions of the Ralph M Brown Acts

(d) County Water District Act Legislation enacted in 1963 (Water Code Sections 31703 2, 31703 3) modify the usual provisions of the County Water District Act so that the Sierra Lakes District in Placer County and the Circle Oaks District in Napa County could operate to assist land development projects Although these provisions represent outright special privilege legislation, repeal of them at this time may injure both the bondholders and the purchasers of property within the district These provisions, therefore, should be left intact, but the Legislature is urged to avoid any such legislation in the future

I. INTRODUCTION

California codes are replete with enabling statutes authorizing a seemingly limitless variety of independent public agencies or special districts [1] The general principle undergirding all of these statutes has been that when general purpose government (cities or counties) cannot provide a necessary service to an area, it is appropriate to form a specialized agency to do the job Whatever capital expenditures may be necessary are financed by issuance of district bonds, which enjoy the general tax-exempt status and market advantages of "municipal securities"

Recently however a significant number of special districts have been created which cannot be justified or explained by this principle These latter districts have been created by land developers, well in advance of any resident population within the district Their purpose is to provide an agency which can finance the utilities, the various public improvements, the recreational facilities, etc , which are necessary and helpful for converting raw land into marketable subdivision property The advantage of this procedure is that construction monies are obtained by a public agency With district boundary lines artfully drawn to include only a developer's land, however, the district loses its public characteristics and becomes in effect a tightly controlled operating division of the developer's organization—an operating division which can use its bonding powers to raise risk capital independent of a subdivider's own credit resources or capital reserves

Although the special district approach to land development originated in the early 1960's with the creation of tailormade districts by special acts of the Legislature,[2] unfortunate experiences with some of these tailormade districts [3] led representatives of developers together with bond attorneys to sponsor more subtle changes in the general enabling statutes which govern a number of widely used types of special districts Several 1961 amendments to the Community Services District Law, for example, changed this statute from one which could be used by residents in relatively settled communities to one which could be, and was, used by both corporate and individual land developers [4] Also in 1961 the same interests secured the enactment of the Resort Improvement District Law [5] which developers, especially corporate developers,

[1] For a complete listing of the number of special districts in California and the financial status of each, see State Controller, *Annual Report of Financial Transactions Concerning Special Districts of California*

[4] See the 1961 changes in Government Code Sections 61103 and 61114 For a further discussion of the implications of these changes see *ibid* , pp 28–32

[5] Public Resources Code, Sections 13000–13233

have used to provide financial subsidies for speculative subdivisions in resort areas

At the 1963 session of the Legislature, developer-oriented interests offered a series of measures to further expand the use of special districts and special assessment procedures to finance subdivision improvements Many of these proposals would have effected an expansion in the concept of "reclamation" They would have redefined "reclamation" to include not only the traditional idea of dewatering marshy land, but also the additional concept of excavating, filling, or otherwise preparing almost any type of terrain for subdivision Under such a broad definition developers could use public agencies to finance basic site preparation costs in virtually any situation (Appendix I lists the principal bills involved in this 1963 effort together with a brief description of each)

Most of these measures were referred to interim study because of the concern of the Attorney General and others who cautioned against broad changes in special district laws which would have the effect of placing the credit resources of public agencies behind private proprietary projects, many of which might be highly speculative

To insure a full review of this entire subject, Committee Chairman John T. Knox introduced HR 135 at the first extraordinary session of the 1963 Legislature This resolution authorized a broad study of the use of special district financing in association with land development projects and called for an evaluation of the implications of this type of financing for the potential homebuyer, the bond purchaser and the local community Under this authorization the committee held two major hearings, one in Los Angeles on January 17, 1964 and a second in Richmond on September 15, 1964 With the assistance of the Attorney General's office, the committee and its staff made detailed case studies of a number of so-called "promotional" special districts and the effects of unsupervised incurrence of debt by them Finally several conferences were held with leaders of the state's financial community in an effort to define the areas in which legislative action was required and to insure that remedial legislation would be both reasonable and effective

In general the committee found that there is a serious need for some disinterested agency to review bonds proposed to be issued by so-called promotional districts Such review is needed to protect both the potential bond buyer and the potential purchaser of property in a new subdivision Collaterally, such review would also help to preserve the general integrity of municipal securities issued by other governmental agencies and even help to reduce one significant cause of urban sprawl. The remainder of this report sets forth a number of case studies which illustrate some of the problems associated with promotional districts, describes the characteristics of promotional district bonds and their impact on both subsequent bond buyers and home purchasers, indicates the impact of such securities on the marketability of bonds of other public agencies, and finally suggests the effects of this type of district financing on the general problem of urban sprawl

II. THE USE OF SPECIAL DISTRICTS TO ASSIST PROMOTIONAL PROJECTS—CASE STUDIES

Rio Ramaza Community Services District

The Rio Ramaza Community Services District, situated on the Sacramento River in Sutter County, was formed in the spring of 1963 by vote of a single farmer and his family for the purpose of subdividing a 170-acre ranch Immediately upon formation, the district's three-member board of directors authorized the creation of an assessment district coterminous with the boundaries of the community services districts (and incidentally of the ranch) together with the issuance of $555,000 of 1915-type assessment bonds.[6] The money was used to finance streets, roads and various other subdivision improvements and also to construct a riverfront marina adjacent to the subdivision The assessed value of the farm property at the time of the bond sale was $23,150

Because the state owns the river bottom over which the floating docks of the marina were to be erected, a lease from the State Lands Commission was fundamental to the project Under the circumstances, such a lease should have been concluded or at least authorized before bonds were sold to finance construction of the marina In the Rio Ramaza situation, however, bonds were approved for sale by the district's bond attorney, were purchased by bond underwriters and sold to the public, and a contract was signed for construction of the marina—all approximately six months prior to the time at which the State Lands Commission authorized its executive officer to conclude a lease with the district After the marina had been completed the district leased it to the landowner-subdivider on very favorable terms for the latter

Construction difficulties in the subdivision portion of the district delayed possible land sales with the result that there were no new property owners in the district to make initial bond payments when they fell due The farmer-subdivider was without funds and thus there was a 100-percent default on bond payments Largely because of the large debt burden, subsequent land sales have been unsuccessful and the district has defaulted on all subsequent bond payments Under the provisions of the Improvement Bond Act of 1915, the district must initiate foreclosure proceedings in cases of bond default The district board, composed of the subdivider's immediate family and friends, has steadfastly refused to take this step, and the bondholders are now faced with the additional expense of litigation to force the district board of directors to take action Additional complications include a mortgage on the entire farm acreage held by an eastern insurance company, which was unaware of the formation of the district and now finds itself in a secondary financial position behind the bondholders

In connection with the marketing and sale of these bonds it should be noted that they found their way into the offerings of a large and prestigious brokerage firm and were sold to individual investors without question The committee has on file, for example, a complaint from a resident of Hawaii who purchased some Rio Ramaza Bonds from the firm of Walston and Company When the district's financial troubles began, the broker was apparently as surprised as his client to learn

[6] Improvement Bond Act of 1915, Streets and Highways Code, Sections 8500–8851

that these bonds did not represent conservative investments The role of the bond attorney in this situation is also somewhat of an anomaly In a letter to the committee describing the Rio Ramaza project, the bond attorney specifically declined all responsibility for anything other than his review of the procedural steps taken by the district in authorizing the bonds At the same time, however, he readily admitted that the management of the Rio Ramaza project has been "weak, unwise, and even stupid" [7] Thus neither the operation of the bond market nor the procedural review provided by the district's bond counsel offered any safeguard against the irresponsible use of tax-exempt bonds in a highly speculative situation

Sierra Lakes County Water District

The Sierra Lakes County Water District is composed of approximately 2,600 acres near Soda Springs in Placer County. It was formed in 1961 by petition of the developer, his wife and four employees The developer had little equity in his land, having purchased it by paying $5,000 cash and executing notes for an additional $195,000 After an initial few years of unspectacular lot sales the developer organized and immediately became president of the Sierra Lakes Water District The district called a special bond election at which seven voters authorized the issuance of $4 million in general obligation bonds to finance water and sewer facilities Approximately $800,000 of these bonds have already been issued together with $700,000 of special assessment bonds At the same time the developer transferred his interest in the subdivision property to a corporation of which he was president and controlling stockholder The district subsequently hired this corporation to complete various construction projects without benefit of public bidding This close relationship between the developer as a district officer and his development corporation has apparently been carried on in spite of Water Code provisions which appear to classify such conduct as a misdemeanor [8]

In addition the district has been operating in open violation of Water Code provisions which require its rates and charges to be sufficient to pay operating expenses, depreciation on equipment, bond interest, and to establish a sinking fund for the bond principal [9] The district budget does not include any amounts to pay interest on bonded indebtedness, to provide funds for repayment of debt principal as it becomes due, or to establish reserves for the depreciation of the revenue-producing facilities In fact the district has been using general obligation bond proceeds to pay current interest on its bonded indebtedness

The district has failed to develop as projected by its financial consultant These projections grossly overestimated the sales of land within the district, and grossly underestimated the district tax rate Instead of the projected tax rate of $3 43 for fiscal 1964–65, the actual district tax rate is $29 14 This sharp rise in taxes has critically affected several owners of vacation property in the area who were included in the dis-

[9] Water Code, Section 31047.

trict without notice and now have to bear their share of district debt. The current tax delinquency rate in the district is 33 percent One owner of a small 600-square-foot summer cabin who first learned of the existence of the district when his annual taxes rose abruptly from $78 to $360 is now faced with the necessity of trying to sell property he cannot afford to maintain

An additional indication of the lengths to which proprietary interests may go to alter the laws to further their own projects is provided by a 1963 amendment to the County Water District Law on behalf of the Sierra Lakes District The normal provisions of the County Water District Law require district taxes to be assessed on land, improvements and personal property A tax imposed in compliance with these provisions, however, would have meant that initial home builders within the district would pay higher taxes than the owners of unimproved land Because such a tax policy would deter land sales and would impose added burdens on purchasers, the attorneys for the district successfully sponsored legislation which specifically permitted the Sierra Lakes district to deviate from the general provisions of the law and to levy taxes on land only Both the developer and his attorneys readily admitted to the committee that without this special legislation the normal tax provisions of the County Water District Law would have forced a "complete curtailment of any further development" [10]

Alpine Springs County Water District

The Alpine Springs County Water District was formed in the spring of 1963 in order to provide water and sewer services to a 2,500-acre recreation subdivision in the valley adjacent to Squaw Valley The district was formed by a vote of five persons who elected themselves as the board of directors, then authorized and subsequently sold $1 2 million of general obligation bonds together with an additional $135 000 of special assessment bonds

In its operation the district has disregarded the requirements of the Water Code that its rates be sufficient to cover expenses, provide for bond interest and principal payments, and to establish depreciation reserves for replacement of equipment [11] In fact the district has been using bond proceeds to meet its operating expenses Although the district has had the services of both a bond attorney and a financial consultant, it had neither adopted nor used a budget The current district tax rate is $14 The district has also experienced some difficulty in marketing its special assessment bonds which have been sold at discounts as high as 12 percent [12]

Brooktrails Resort Improvement District

The Brooktrails Resort Improvement District was formed in December 1962 to develop recreation and subdivision facilities on 7,700 acres near Willits in Mendocino County The land in question is principally owned by a single development corporation The petition to form the district was signed by two residents of the district who were business associates of the president of the development corporation. General obligation bonds have been authorized in the amount of $4,250,000 [13]

The Resort Improvement District Act,[14] under which the Brooktrails district was formed, was enacted in 1961, ostensibly to provide a vehicle by which nonresident property owners could form a district to construct and maintain roads, drainage facilities, etc., at their vacation homesites In this respect the aims of the statute were virtually identical with those of the California Resort District Law which has been in effect since 1931 [15] The Resort Improvement District Law, however, gives corporate land owners as well as individuals the power to create districts It thus has an immediate appeal to corporate land developers who desire a convenient financing vehicle.

The potential for danger in using resort improvement districts for land development is succinctly summarized in the current subdivision report on the Brooktrails tract issued by the Division of Real Estate

> "The developer . . is at present the sole owner of the land contained within the district This may mean that the developer will be in complete control of the district, services afforded, planning and construction of recreational and other facilities, management of the district, financing by issuance of district bonds, and otherwise for many years into the future Purchasers may have no control over indebtedness incurred on their behalf In case the management and operation of the district is not to their satisfaction, they may have no recourse . .
>
> "The district intends to pay the cost of the bonds from revenues of the water and sewer system and from recreational facilities *However the bonds are primarily secured by the power of the district to levy taxes on the property There apparently is no maximum limit to the tax rate which may be levied to pay the principal and interest on the district general obligation bonds* In the event that the area does not develop as anticipated by the developer and revenue from water and sewer systems, recreational and other facilities and activities are insufficient, the necessary tax rate could become excessive In the event of default in payment of the district taxes each lot purchaser would be subject to the sale of his property to the district " (Emphasis in original)[16]

Protection Districts—1907 Act

Beginning in the fall of 1963 land developers in Ventura County formed several protection districts under the Protection District Act of 1907 [17] to provide financing for subdivision projects Originally

[13] *Ibid*, p 30, p 86
[14] Public Resources Code, Sections 13000–13333
[15] Public Resources Code, Sections 10000–13164
[16] State Division of Real Estate, "Final Subdivision Report No 7791," September 7, 1964
[17] Water Code, Uncodified Acts, Act 6175

devised to provide for the organization of a district to protect farm lands and communities from overflows from streams and water courses, this enabling statute was designed for use in different situations and in answer to different needs from present efforts to adapt it to subdivision development. It had been little used prior to its employment in Ventura County and in fact has never been codified

The operation of these districts in Ventura County caused the county executive to conclude that their use for promotional purposes provided a substantial windfall to developers at vastly inflated tax costs to eventual homeowners and at the expense of orderly development for the county's urban areas The supervisors reacted by declaring a moratorium on the further formation of protection districts According to the county executive's report, the following questionable features accompany the use of protection districts for land development purposes

(1) Gerrymandering of district boundaries to include only land belonging to developers, while excluding inhabited areas which might have voted down bond proposals

(2) Authorization of large amounts of indebtedness by a few developer-landowners Future homeowners would have no voice in this debt incurrence but would be obligated to pay it off

(3) District financing of facilities which are usually considered an appropriate and proper cost to the developer

(4) Conflicts of interest Engineers for the subdividers became engineers for the district

(5) Balloon bond payment The archaic method of financing required by the 1907 statute would result in repayment of nearly 60 percent more in interest charges than current loan rates

(6) Excessive debt ratios In some instances the ratio of debt to assessed valuation became as high as 405 percent

(7) Excessive tax rate In some instances the 1964–65 tax rate will be $28, in marked contrast to the $4 75 projected by the district financial consultant [18]

Other Agencies

A number of other agencies, formed in association with promotional projects, should also be mentioned for illustrative purposes The California City Community Services District, for example, was formed by petition of nine persons in order to develop a golf course, swimming pool, artificial lake, recreation facilities, utilities and streets for a large subdivision in the Mojave Desert [19] The district, controlled by interests favorable to the developer, has already issued almost $1 million in general obligation bonds and has sponsored the creation of a number of special assessment districts on which an aggregate of $2 6 million of special assessment bonds will be issued Since the development

[18] *September Transcript*, pp 20–23

[19] For a further discussion of the California City Development and together with references to collateral materials, see Assembly, California Legislature, *Final Report to the 1963 Legislature by the Interim Committee on Municipal and County Government*, vol 6, No 20, pp 30–32

consists "mainly of lots with very little structural development in proportion to the number of lots recorded" and sold,[20] the district has been consistently unable to generate sufficient revenues to meet current expenses It has managed to avoid deficit only through annual subsidies from the developer

Two developments in Fresno County reflect the ability of subdividers to establish "zones" within existing districts to finance their projects Fresno County Water Works District No 27, Annex No 1 was formed to develop a 10 acre tract The area has experienced tax delinquencies of 18 percent, a district tax rate of $21 46 and has defaulted on its general obligation bonds Fresno County Water Works District No 32, Annex No 1 was formed to subdivide uninhabited land It has experienced a 32-percent delinquency in taxes, a district tax rate of $24 61 and has defaulted on its general obligation bonds Finally, Fresno County Water Works District No 29, also formed to assist land development, has experienced a 31-percent delinquency on its taxes, a district tax rate of $8 31, and its bonds are also in default[21]

Attention is also directed to the Mount San Jacinto Winter Park Authority This special purpose agency was formed at the instigation of business interests in the City of Palm Springs in order to construct and operate an aerial tramway on neighboring Mount San Jacinto The enabling statute[22] allows the authority to avoid evaluation of its projects or its bonds by any disinterested third party The result of this broad discretion is that the authority has issued over $8 million worth of revenue bonds without recourse to public bidding procedures A thorough staff study of the operation of the authority indicates that it appears headed toward a financial crises after only one year of tramway operation; that the studies of the tramway's financial consultants, on which bond sales were based, were grossly inaccurate, and that the tramway operations are barely generating sufficient revenues to pay operating expenses and are clearly insufficient to repay the bonds or to provide a depreciation reserve for replacement of equipment In addition the authority, although a public agency, does not presently come under the provisions of the Ralph M Brown Acts and has had a record of closing its meetings and records to the public[23]

III. CHARACTERISTICS OF PROMOTIONAL DISTRICT BONDS

As the above case studies amply illustrate, an essential feature of the "promotional district" is complete control by the developer The developer in effect causes district bonds to be authorized and issued in order to finance his subdivision improvements Leaving aside the question of whether it is appropriate to employ a public agency to achieve specific and immediate proprietary objectives, it is possible to make some judgments about this type of indebtedness In the first place this type of district debt need not necessarily constitute a financial hazard to the bond holder or to the subsequent purchaser of subdivision property If there is ample security behind the district

bonds and if the project itself demonstrates a reasonable expectation of success, neither the bond buyer nor the property owner will face untoward financial risks

The source of financial difficulty in a promotional district situation is that there is no disinterested party who can make an independent judgment about the feasibility of the project or the ability of the area to repay its indebtedness The developer obviously cannot be expected to make such a decision In most instances the district also has the advice of a bond attorney and a financial consultant As the case studies demonstrate, however, advice from these sources is not always disinterested or particularly accurate The fees both of bond attorneys and of financial consultants, are based on a percentage of the face amount of the subsequent bond issue Thus if no funds are issued, there is no money to pay fees [24] Under such circumstances, it is not unduly surprising that in a number of the case studies, the projections and predictions of the financial consultant, on the basis of which district bonds were sold, were grossly erroneous It is not uncommon, moreover, for a financial consultant to agree to purchase district bonds as part of his contract of employment Characteristically such a negotiated sale is made at a significant discount to the financial consultant so that the latter may have some cushion in selling the bonds to other brokers or to the public [25]

In short, the difference between financing promotional projects by district bonds and by conventional financing is that the conventional lender is not associated with the project The conventional lender, moreover, is usually well qualified to evaluate the risks involved in lending his money In the case of promotional districts, however, the developer or his agents make a single, one-sided decision that the project is feasible and ought to be financed with tax-exempt bonds

As has been illustrated, the operation of the bond market in itself does not provide adequate protection to the potential buyer of special district bonds High risk bonds can be, and are, sold under the guise of conservative tax-exempt securities This is possible, as members of the state's investment community have admitted, because bond underwriting is essentially a merchandising operation To compound the situation, most of these so-called lower grade bonds, of both the general obligation and special assessment type, are sold to individuals who are unable to evaluate the situation with the same sophistication as an institutional investor might [26] In this respect such securities are quite similar to commercial securities which are issued in connection with the operation and development of various business and commercial ventures The California Corporate Securities Law, however, requires the State Corporation Commissioner, for the protection of the investing public, to determine that the latter type of securities are issued under a "fair, just and equitable" standard.[27] There are

no such safeguards which are applicable to bonds issued by promotional special districts [28]

Some mention should also be made of the protection afforded to the purchaser of property in such a district Many promotional districts arrange bond repayment periods so that the full effect of district indebtedness will not be reflected in the district tax rate until after the initial period of subdivision promotion and land sale. In addition the purchaser in most instances is unaware of the existence of a special district; of his inability to have a voice in the management policies of the district, including those of debt incurrence; and of the effect of district debt on subsequent district tax rates. This situation has been obviated to some extent by a recent policy of the State Division of Real Estate of including relevant information in regard to special districts in the Subdivision Public Report which must be presented to all prospective purchasers of subdivision property Although some developers have protested this policy, it presents an easy and reliable method by which a buyer may be informed of the conditions and circumstances which may have a significant effect on the property he purchases The Division of Real Estate should be commended for adopting such a policy and should be encouraged to expand its use to all situations involving promotional special districts.

IV. IMPACT OF PROMOTIONAL DISTRICT BONDS ON OTHER SECURITIES

In addition to their immediate implications for the investor and the property purchaser, the bonds of promotional special districts may have significant and deleterious effects on securities issued by other public agencies The existence of special district debt, for example, adds to the overlapping debt of other agencies One situation was described to the committee in which the bonded debt of a development-type district increased the amount of overlapping debt within a school district. The result was that the school district was forced to pay significantly higher interest rates on its general obligation bonds. People within the school district moreover were described as "not benefitted whatsoever" by the development project [29] Promotional district indebtedness can have the same type effect on the overlapping debt of cities and counties as well as that of other districts.

Representatives of the state's financial community also contend that this type of district financing can have a more subtle and more far-

[28] Some attorneys for land developers have advanced the novel argument that if district bonds are used to finance construction, for example, of $1 million of improvements on a given tract of land, the value of that property is automatically secured While such arguments obviously promote the interests of developers they appear to have no basis in fact Established practices of real estate evaluation unanimously affirm that the market value of a piece of property is only that price for which it might be sold Thus improvements added to basically undesirable or unmarketable property would not increase the price for which it might be sold For a further discussion on this point, see the exchange between Assemblyman Houston Flournoy and Kenneth I Jones, *September Transcript*, pp 43–48 For a representative discussion of the basic real estate evaluation theory see, F M Babcock, *The Valuation of Real Estate*, McGraw Book Company, New York, 1932, pp 7–40, and James C. Bonbright *Evaluation of Property*, McGraw Book Company, New York, 1937, pp 10–100

[29] Allen Bartlett, *January Transcript*, pp 15–18

reaching influence on the borrowing ability of all public agencies and even that of the state itself. The investment community has acknowledged that post-World War II demands on the state and its political subdivisions have required the investment of large amounts of capital from the eastern part of the United States The demands of the state's current and future growth, moreover, will continue to require large amounts of eastern capital to finance water projects, educational facilities, rapid transit, and a host of other vitally needed public improvements—in spite of substantial amounts of capital which are being supplied by in-state financial institutions The willingness of eastern capital to move to California, however, rests very strongly on the state's heretofore conservative public financing procedures, which are as favorable to investors as any in the nation and more stringent than those in the vast majority of states [30] These procedures have heretofore served to insure investors that tax-exempt financing is undertaken only for proper purposes, and once undertaken is assured of being repaid within its terms As a result eastern investors have placed a larger portion of funds in California securities than would be normal under general principles of investment diversification [31]

Within this context the traditional practice of eastern lenders has been to consider their investment in the bonds of the state and its subdivisions as a single investment package, making allowances through the yield mechanism for bonds less adequately secured, but taking confidence in their overall investment commitment from the general record of conservative borrowing practices and prompt repayment Speculative special district bonds have been depicted as a "rotten apple" which could undermine the general confidence of eastern investors in the entire "package" of California municipal securities In fact there is serious apprehension among the members of the state's financial community that default on a small number of speculative-type special district bonds has signaled the beginning of erosion

If these trends are permitted to continue, they will have serious consequences for the state and all other political subdivisions Any withdrawal of confidence in California municipals will mean that necessary eastern capital can no longer be attracted to California at current interest rates Thus the taxpayers of the state will face the dilemma of curtailing necessary public projects or of paying literally millions of extra tax dollars in increased interest costs To remedy this situation the major financial interests of the state, together with the State Treasurer, have strongly endorsed reasonable state controls over the arbitrary incurrence of debt by speculative-types of special districts [32]

[30] For a comparison of the financial control imposed by other states on the issuance of municipal securities, see report of Legislative Counsel on "Financial Supervision of Public Agencies" No 1778, January 15 and January 30, 1964

V. IMPLICATIONS FOR URBAN SPRAWL

In addition to the direct financial implications described above, the use of special districts to encourage subdivision projects may also involve substantial community costs From a community viewpoint the use of the special district approach to subdivision financing permits the development of marginal land which would not otherwise be developed until it became economically feasible to do so Close-in land which may be more suitable for subdivision purposes and which consequently carries a high price, is bypassed in favor of less desirable land which because of "credit subsidies" from a special district can be developed by the subdivider with less capital investment Such a standard of land use encourages the leapfrogging and crazy quilt pattern of development associated with urban sprawl and leaves a dubious legacy of uncoordinated and disjointed communities In most instances, it also means that the residents of such areas will be faced with increased costs in their daily lives for utility services, communication facilities, roads and transportation, and other adjuncts of urban life.[33]

VI. CONCLUSIONS

Fortunately, the machinery for exercising reasonable review and control over speculative special district bonds already exists The California Districts Securities Commission [34] was created in 1931 as a result of widespread defaults on bond payments by irrigation and water districts throughout the state [35] Composed of five members—the Superintendent of Banks, the Director of Water Resources, the Attorney General, and two public members with prior experience in the management of water district affairs appointed by the Governor—the commission is charged with conducting a disinterested feasibility study of special district projects which will be financed by district bonds and with approving or disapproving the bond issue Bonds approved by the commission are certified by the State Controller and become legal investments for banks, trust funds, etc [36] The commission's review procedures are designed to evaluate each proposed bond issue both from the viewpoint of the district and from that of the potential investor in district bonds In practice this review involves, a study of the project plans and cost estimates to determine if it is in fact feasible; an analysis of the financial condition and of the direct and overlapping debt of the district, an evaluation of the repayment capacity of the district, confirmation of the valuations of property which will provide security for the bonds, a close review of the proposed maturity schedule; provision for the reserve funds and other conditions of the sale of bonds,

[33] For further discussion of this point, see *September Transcript*, pp 20–25
[34] Water Code, Sections 20000-20107
[35] For a review of the circumstances surrounding the creation of the Districts Securities Commission by the 1931 Legislature, see California Irrigation and Reclamation Financing and Refinancing Commission, "Report to the Governor of California," December 1, 1930
[36] Water Code, Sections 20040–20066

including in land development situations, an examination of the developer's plans for a project and the amount of his own capital investment in it.

Although review of special district securities by the Districts Securities Commission is available on request to *any* district providing utility-type services, California water districts[37] and irrigation districts[38] are the *only* major types of districts required by law to submit their securities to the commission before issuance[39] In practice virtually no other districts have chosen to exercise the option of submitting their bonds to the commission for review Thus the development, or promotional, type of district has had little difficulty in avoiding any review of its securities.

The commission, however, has had considerable experience in evaluating land development projects In recent years California water districts have been used increasingly to provide water and sewer services for large land developments One notable example is the Irvine Ranch Water District which was formed in connection with the development of the huge Irvine Ranch in Orange County Another, the Moulton-Niguel Water District, is also in Orange County. In fact the latter district incurred an indebtedness of $6 7 million at a time when its total assessed valuation was approximately $600,000 Employing its regular evaluation procedures, the Districts Securities Commission determined that such an indebtedness would be economically sound and that the proposed project would be feasible Accordingly, the Moulton-Niguel district was able to market its bonds at a good price, investors were assured of conservative municipal securities, and future homeowners were protected from the effects of arbitrarily incurred indebtedness[40]

In its 34 years of operation the Districts Securities Commission has compiled an enviable record—no district which has had its bonds approved by the commission has subsequently defaulted on those bonds Commission review has usually benefited the district by increasing the confidence of investors in such bonds and significantly lower bond interest rates have resulted on many occasions In a number of cases where the commission has questioned the soundness of a district plan, it has worked with the district to effect a modification of the original district program which might proceed under more conservative financial conditions There has been no known instances where supervision by the commission has prevented a district from accomplishing its aims within the context of generally conservative investment principles Moreover, during the course of the committee study, there has been widespread and general agreement among bond attorneys, special district officials, financial consultants, representatives of this state's in-

[37] Water Code, Sections 34000–38501

[40] For a complete discussion of the activities of the Moulton-Niguel Water District in addition to a description of similar financing activities undertaken by the El Toro and Los Alisos Water Districts see Eugene Bell, Secretary-Treasurer, Moulton-Niguel Water District, *September Transcript*, pp 59–63, 91–95

vestment community, and concerned state officials, that any regulation or review of special district securities which might be deemed necessary by the Legislature should be performed by the Districts Securities Commission [41]

Accordingly, the committee recommends that a new chapter be added to the Government Code requiring review by the Districts Securities Commission of the securities of *all* so-called promotional districts The standards prescribed by such legislation should clearly confine commission review to those situations in which the ratio of proposed indebtedness to the value of the property and/or improvements securing that indebtedness is significantly disparate to warrant a separate review of a proposed bond issue by a disinterested third party Commission review should also extend to special assessment indebtedness incurred under such circumstances as well as general obligation bonds After commission approval of such securities, bond certification should not be required but should be left to the discretion of the district and its directors Appropriate penalties should also be provided for failure of any district to comply with these requirements

In addition, the membership of the commission should be expanded to include the State Treasurer, in view of the latter's official interest in any circumstances which might adversely affect bond interest rates of the State of California and its political subdivisions

Specific legislation should also be enacted

To remedy the deficiencies which have been noted above in the Mount San Jacinto Winter Park Authority Act,

To prohibit the formation of new districts under the Resort Improvement District Act, a statute which was promoted by land development interests, which is particularly attractive to the speculative type of subdivisions, and which is filled with hazard for subsequent property purchasers and bond buyers, and finally

To repeal the provisions of the Municipal Utility District Act which were enacted by Chapter 1345 of the Statutes of 1963 at the request of land development interests and which presently operate to encourage the use of that statute by speculative interests

APPENDIX I

1963 Legislation Sponsored by Land Development Interests

1963 MEASURES TO EXPAND THE USE OF TAX-EXEMPT BONDS TO ASSIST LAND DEVELOPMENT

1. AB 2696 (Chapter 1345, Statutes of 1963)—This measure permits developers to establish "zones" within municipal utility districts. Such a zone would be authorized to issue bonds and to finance a wide range of recreational and other improvements The statutory debt limitation restricting the bonded indebtedness of the district would not be applicable to such zones.

2 AB 2276 (passage refused by Assembly Municipal and County Government Committee)—In effect this measure would have permitted developers to use the Municipal Improvement Act of 1913 to finance basic site preparation costs (i e, grading, fill, etc)

3 AB 2329 (passage refused by Assembly Municipal and County Government Committee)—This measure would have permitted developers to establish "zones" within community services districts Such a developer-controlled zone would possess the same powers and authority, including the ability to incur debt, as the "parent" district

4 AB 2420 (passage refused by Assembly Municipal and County Government Committee)—This measure would have permitted developers to utilize county water districts to finance "reclamation" activities (i e basic site preparation) Such projects would have been specifically exempted from statutory provisions requiring them to be self-liquidating.

5. AB 2594 (passage refused by Assembly Municipal and County Government Committee)—Identical to AB 2420

6 AB 2991 (passage refused by Assembly Municipal and County Government Committee)—This measure would have permitted developers to utilize harbor districts to "reclaim" land and to provide utility services to it.

7. AB 2994 (land promotion features deleted by Assembly Municipal and County Government Committee, final measure pocket-vetoed by Governor)—Represented by bond attorneys as a simple procedural revision of the Resort Improvement District Law, this measure contained a new section granting to such districts broad "reclamation" powers. In effect, this change would have allowed a developer to use the district's bonding authority to finance virtually all of his site preparation costs

8 SB 867 (Chapter 1763, Stats 1963)—As introduced, this measure would have permitted developers to utilize reclamation districts to finance basic site improvement work on all types of terrain (deserts, hillside, flatlands, etc) This provision was subsequently amended out of the legislation by the Assembly Municipal and County Government Committee The final measure represented only technical change.

9 SB 907 (passage refused by Assembly Municipal and County Government Committee)—In connection with the original provisions of SB 867 (above), this measure would have permitted a developer to use the Municipal Improvement Act of 1913 to finance basic site preparation work within a reclamation district

10 SB 979 (Chapter 2045, Statutes 1963)—This measure specifically permitted the Sierra Lakes County Water District in Placer County and the Circle Oaks County Water District in Napa County—both of which were land development districts formed exclusively by developers and their associates—to levy a tax on land only, instead of land and improvements as would have otherwise been required by the enabling statute Bond counsel associated with these projects subsequently acknowledged that neither project would have been economically feasible if the districts had been required to levy a tax on both land and improvements

APPENDIX II

Model Legislation

CALIFORNIA LEGISLATURE—1965 REGULAR (GENERAL) SESSION

ASSEMBLY BILL No. 364

Introduced by Assemblyman Knox

January 18, 1965

REFERRED TO COMMITTEE ON RULES

An act to add Chapter 2 5 (commencing with Section 58750) to Division 1 of Title 6 of the Government Code, relating to district securities

The people of the State of California do enact as follows:

SECTION 1. Chapter 2 5 (commencing with Section 58750) is added to Division 1 of Title 6 of the Government Code, to read

CHAPTER 2 5 DISTRICT SECURITIES APPROVAL

58750 This chapter may be cited as the District Securities Approval Law of 1965

58751 This chapter applies to all districts, other than school districts, unless the governing body of the district is entirely composed of members of a county board of supervisors or a city council

LEGISLATIVE COUNSEL'S DIGEST

AB 364, as introduced, Knox (Rls) District securities

Adds Ch 2 5, Div 1, Title 6, Gov C

Requires certain districts to obtain approval of the California Districts Securities Commission before debt obligations may be issued increasing district debt obligation to an excess of 40 percent of the aggregate value of the property to be acquired or constructed with the proceeds of the bonds proposed to be issued by the district and the reasonable value of the land within the district

Subjects district receiving such approval of the commissioner for debt obligations to regulation of financial affairs until the district indebtedness is less than twice the assessed valuation and there are one or more registered voters for each two acres of land in the districts

Directs commission to establish a fee schedule to collect funds for the support of commission activities carried on pursuant to this chapter

58752 As used in this chapter, unless the context otherwise requires

(a) "District" means any public entity with a legislative body, other than a city or county, organized under the laws of California which has the power to incur indebtedness payable from property taxes, assessments, or revenue producing facilities constructed, operated, or owned by the district

(b) "Commission" means the California Districts Securities Commission.

(c) "Assessed value" means the monetary amount shown on the last equalized assessment roll of the county

(d) "Debt obligations" means bonds, warrants, notes, or other evidence of indebtedness, including obligations incurred under the following acts Street Opening Act of 1903, Improvement Act of 1911, Municipal Improvement Act of 1913, Street Improvement Act of 1913, and Refunding Assessment Bond Act of 1935, except

(1) Obligations payable in installments over a period of less than five years

(2) Obligations payable to the State of California, to the United States of America, or to any city, city and county, county, or public entity

(e) "Reasonable value" means four times the assessed value

58753 No district may issue debt obligations without first obtaining the approval of the commission if the proposed debt obligations, or the proposed debt obligations together with any other outstanding debt obligations and debt obligations authorized but not issued, of the district exceed 40 percent of the aggregate value of the property to be acquired or constructed with the proceeds of the bonds proposed to be issued by the district and the reasonable value of the land within the district

58754 The commission shall render its decision as to approval or disapproval under the same standards as govern the approval for certification of bonds pursuant to Article 3 (commencing with Section 20040) of Chapter 1 of Division 10 of the Water Code The decision shall be rendered within 60 days from submission, unless the applicant agrees in writing to an extension of time

58755 The financial affairs of a district receiving approval of the commission for its debt obligations shall be subject to the supervision of the commission in the same manner as provided in Article 5 (commencing with Section 20080) of Chapter 1 of Division 10 of the Water Code for districts whose bonds have been certified until such time as the indebtedness is less than twice the assessed valuation of all land in the district and there are one or more registered voters for each two acres of land in the district.

58756 The California Districts Securities Commission shall establish a fee schedule which shall result in the collection of annual amounts sufficient to cover the annual estimated cost incurred by the commission in performing its functions pursuant to this chapter The commission may adjust the fees as to any particular district to meet special circumstances in relation to that district The commission shall charge and collect fees from districts and other local agencies for whom such services are performed in accordance with the schedule All funds collected by the commission shall be deposited in the General Fund All funds for support of the commission shall come from the General Fund

58757. The directors of any district who authorize any act in any manner not in compliance with the requirements of this chapter are in violation of Section 424 of the Penal Code In addition to other punishment provided by law, such directors are subject to a fine of not more than twenty-five thousand dollars ($25,000).

SEC 2 This act is intended to implement the recommendations of the Assembly Interim Committee on Municipal and County Government as set forth in Volume 6, Number 22 of the Assembly Interim Committee Reports to the 1965 Legislature

O

PART II

DISTRICT REORGANIZATION LAW

FINDINGS

1. There are over 3,500 special districts in California (school districts excluded), organized under a total of 175 general and special enabling statutes

2 These districts have a substantial impact both on the people residing in them and upon the communities of which they are a part For example, in 1962–63 their total revenues exceeded $547 million; their general purpose expenditures exceeded $522 million, and their long-term indebtedness exceeded $1 9 billion In addition, to the extent that unnecessary and obsolete districts encouraged urban sprawl, they generated added costs to the community for roads, utilities, community services, etc

3 A number of these districts, especially those supplying various services to urban areas, were organized as interim governmental agencies to provide needed services until general purpose government might assume these responsibilities

4 Unfortunately, the existing special district enabling statutes do not provide uniform or simple methods by which such districts may be dissolved, consolidated, etc , when it may be appropriate to do so. In addition, there are virtually no provisions which would allow different types of districts to consolidate (e g water district with a sewer district or even two adjacent water districts which were organized under different statutes)

5 In addition to preventing adjacent districts from merging or otherwise reorganizing to meet community problems, existing special district laws also operate to perpetuate obsolete or inefficient districts In some cases statutory anachronisms have prevented dissolution of inoperative districts, in others they have provided residents and taxpayers with no effective means to overcome the reluctance of vested interests to relinquish favored sinecures

6 Public awareness of special districts is low The average citizen is generally aware of the districts in which he may live or of the alternatives which may be available to him for securing needed services

CONCLUSIONS

1. The majority of special districts in California are functioning well and are providing high levels of service to the taxpayers at low cost. Unfortunately, the ability of these districts to adapt to meet the pressures of population growth and community expansion are severely limited
2. The bewildering maze of separate and often conflicting statutory provisions presently applicable to districts is a permanent bar to any efforts to adapt district organization to the needs of growing communities Not only do statutory complexities prevent consolidation or dissolution of unnecessary or obsolete districts, much more important they also inhibit districts which are currently functioning well from making any organizational changes in response to future community needs
3. A proposed District Reorganization Law has been developed to provide a uniform method of effecting organizational change for virtually all types of districts The proposed District Reorganization Law has been drafted in such a way that special districts may be kept responsive to the needs of the voters, the taxpayers and the community In this respect it represents another tool by which local citizens may apply home rule principles to the complexities of the state's growing urban communities
4. It is therefore recommended that the 1965 Legislature enact a District Reorganization Law which would achieve the above mentioned objectives.
5. In addition, in order to provide local citizens and local governmental agencies with appropriate and accurate information about the governmental organization within each county and the implications of any proposed changes in that organization, it is recommended that the Local Agency Formation Commissions be encouraged to gather data and to make studies in regard to the various governmental organizations within the county. It is recommended further that the LAFC's be specifically encouraged to recommend changes in governmental organization as a result of its studies, provided that such change would encourage orderly community growth and would achieve tax savings.

I. INTRODUCTION

The *raison d'être* for virtually all of California's special district government is that when general purpose governments (cities or counties) are unable to provide necessary services to an area, it is appropriate for a specialized agency to do the job This is particularly true in unincorporated, urbanized areas where special districts provide services ranging from water, sanitation, fire and police protection to building hospitals and maintaining libraries or street lights [1] Most of these special districts are separate legal entities with their own governing boards and taxing authority

The Assembly Municipal and County Government Committee has had a continuing interest in the operation of local government generally and has sought to provide new tools by which districts and other local agencies could adapt to the community pressures and to the need for additional community services generated by the state's great surge in population Chairman John T Knox sponsored successful legislation in 1963, for example, which established "local agency formation commissions" in each county The 1963 law enjoined these commissions to review and approve all proposals for incorporating cities or forming districts, or for annexing territory thereto [2] Although the local agency formation commissions have operated with a significant degree of success,[3] additional growth-related problems remain which have particular relevance for special districts These are new problems, deriving principally from the rapid urbanization of California In general, existing district laws are inappropriate to solve them

Relatively few of California's special districts are "problem" districts, which place unwarranted and unnecessary burdens on their taxpayers; i e, only a relative few are obsolete, overlapping, or poorly administered Most districts provide good services to their residents and are a vital part of local government Ironically, however, these latter districts are now confronted with their greatest problem and challenge, viz, the principal impact of the population growth which will double California's population during the two decades between 1960 and 1980 The bulk of this projected growth will occur in the metropolitan areas, particularly the unincorporated areas surrounding major cities, which presently receive most of their public services from special districts [4] To be adequate to the demands of this population thrust, special districts must possess the tools to adapt themselves to changing demands and to continue their tradition of high-level services

Concern about archaic and limiting statutory provisions which would prevent special districts from adapting to such demands prompted Chairman John T Knox to introduce HR 136 in the 1963 First Extraordinary Session of the Legislature The resolution provided the authorization for a broad committee study of the need for uniform

[1] The districts discussed in this report are restricted to the so-called "service type" districts. School districts are specifically excluded from consideration

procedures for special district consolidation, dissolution, detachments, annexations, etc.

As a background for the committee study, the Legislative Counsel prepared a *Draft of Working Material on Dissolution, Consolidation, and Withdrawal (Exclusion) of California District Laws* in December 1963. This compilation enumerated the wide variety of different procedures for effecting changes in district organization and pointed out the complete lack of dissolution or consolidation procedures for a number of districts

In an effort to determine what types of reforms might be appropriate, the committee held two major hearings. The first, on January 16, 1964, in Los Angeles, explored the general feasibility of uniform dissolution, consolidation, and detachment procedures for special districts [5] The second, on September 16, 1964, in Richmond, reviewed the feasibility of specific new procedures which the committee had devised after its initial hearings [6] The committee also conducted a questionnaire survey to obtain further general information about the special district operations.

After careful consideration of the information presented at its hearings, the committee determined that there is a general need for uniform procedures governing reorganization of special districts In addition, it decided that legislation to effect this goal would be feasible. In arriving at these conclusions the committee was significantly influenced by widespread support for the principle of a single district reorganization statute, in spite of the obvious technical difficulties in drafting it The balance of this report discusses the committee recommendations and the general considerations supporting these recommendations.

II. PERSPECTIVES

The California codes abound with enabling statutes authorizing a seemingly limitless variety of special districts—airport districts, fire protection districts, water districts, cemetery districts, irrigation districts, etc. The fundamental principle undergirding all of these statutes is that when general purpose governments (cities or counties) cannot provide a necessary service, it is appropriate for a specialized agency to do the job.

Today, 175 general and special enabling statutes have provided the means to create over 3,500 special districts The 3,500 districts are found throughout the state but are primarily concentrated in growing urban or urbanizing counties with large areas of unincorporated territory. There are, for example, approximately 300 special districts in Los Angeles County and over 100 special districts each in Contra Costa, Fresno, Kern, Orange, Riverside, Sacramento, San Bernardino, San Diego, San Joaquin, and Sonoma Counties [7] Most of these districts

provide urban services to unincorporated areas which are expected to experience heavy population growth in the next two decades [8]

Collectively, these special districts represent big government in terms of the land area they serve, the services they render, the money which they collect and spend In fiscal 1962–63, for example, special districts collected more than $479 million in service charges and taxes for general district purposes Expenditures by districts for general purposes during the same period exceeded $522 million, and the total long term special district debt outstanding at the end of fiscal 1963 approached $2 billion [9] Over the past decade, furthermore, these levels of revenue and expenditure have shown significant annual increases, principally in response to the demands of growth Total district revenues for general purposes increased 11 percent during fiscal 1962, for example, and an additional 12 percent during fiscal 1963 District general purpose expenditures rose by 12 percent during fiscal 1962 and by nearly 8 percent in fiscal 1963 Long-term debt outstanding at the end of fiscal 1963 had increased by 17 percent over the amount of fiscal 1962, which, in turn, had been a 17 percent increase over the preceding year [10] Undoubtedly special district expenditures and revenues will continue to rise as districts provide more and better services to more people At the same time however, taxpayers must have assurances that this money is not spent for inefficient or ineffective agencies

III. DANGERS OF DISTRICT "ISOLATIONISM"

Recently, several studies have aimed at evaluating the performances of special districts as governmental agencies While these studies have been critical of some aspects of district government, they unanimously indicate that most special districts are serving the public well For example, the Advisory Commission on Intergovernmental Relations, a U S commission established in 1959 to study and to advise the President on various governmental problems throughout the nation, concludes a lengthy report on special districts with the observation,

> "In general, the public appears to be satisfied with services received from special districts and, by and large, the districts have resolved the problems which spawned them and have met the demands for public services in an adequate fashion "[11]

At the same time, such studies indicate a genuine need to insure that special districts will have the resources available to continue their high level of services and to be responsive to changing demands of their clientele

Of broad concern is the public's awareness of special districts and of the adequacy of the services they provide A number of indicators suggest that few taxpayers are aware of the districts to which they pay

[10] See State Controller, *Annual Report Concerning Special Districts*, for fiscal years 1960–61, 1961–62, and 1962–63, Introductions, and *Annual Report Concerning Irrigation Districts*, calendar years 1961, 1962, and 1963, introductions

[11] Advisory Commission on Intergovernmental Relations Commission Report A–22, *The Problem of Special Districts in American Government*, Washington, U S Government Printing Office, May 1964, p 61

taxes, and that fewer still are aware of the adequacy of district services or limitations thereon

The Association of Bay Area Governments (ABAG) commissioned an extensive study of special districts in the San Francisco Bay area, which indicated a general lack of awareness of district activity. In regard to district elections, for example, the report indicated

> " The election date varies, depending on the type of district . The elections are seldom given wide publicity, the local papers may or may not carry the returns Unless a controversy has arisen in a district, the voters are not likely to be aware of the identity of either the incumbent directors or the opposing candidates, if any
>
> "The result is very low voter participation A sample revealed a medium turnout at special district elections to be 27 percent, significantly lower than for either county elections (76 percent), or city elections (45 percent).
>
> "Low voter participation, is however, only part of the story of limited voter interest and awareness District elections are often canceled because there are no contests, and the county board of supervisors simply reappoints the unopposed incumbents."[12]

In addition to the ABAG study this committee circulated questionnaires to over 2,000 autonomous special districts in an attempt to get a broad picture of district activity Data from the committee questionnaire corroborated the ABAG conclusions about district elections Relatively few districts held regular elections because district offices were often uncontested. Thus either incumbent officers were reappointed, or district boards of directors hand-picked replacements When elections were held, voter turnout was uniformly low

The committee questionnaire also indicated that much district information, e g , population, number of registered voters, land area within the district, district financial information, is not always readily available from the districts. Interested voters and taxpayers might have to contact several sources, including various county offices, for information In addition, because districts themselves do not have easy access to general information about the activities, service areas, or capacities of adjoining districts, they lack the information necessary to coordinate their activities.

Public awareness of districts is further inhibited by the county's role as tax collector The ABAG report concluded:

> "With few exceptions, the autonomous special districts have their taxes collected by the county The districts submit a budget to the county government, which levies the necessary tax rate to raise the amount required The county's role is ministerial: The board of supervisors has no effective power to review and adjust tax requests submitted by the autonomous districts. Because the tax bill comes from the county, however, most voters assume that the county is in some way finally responsible for district levies " [13]

[12] Scott, Stanley and John Corzine, *Special Districts in the San Francisco Bay Area, Some Problems and Issues*, Institute of Governmental Studies, University of California, Berkeley, 1963, pp 2–3

[13] *Ibid* , p 4

Testimony presented at the two committee hearings supplied some further indications of the difficulty in keeping informed of district operations and thus of coordinating them The Los Angeles County Local Agency Formation Commission, for example, found numerous special districts which lacked such basic information as the extent of district boundaries or the amount of district budgets [14]

These indicators highlight two major concerns about special districts First, although the vast majority of the state's 3,500 special districts are well run, there are a significant minority which are relatively unsupervised by taxpayers, or poorly administered and which provide inadequate or excessively costly services Some examples derived from the committee survey will be illustrative

1 One water district with an annual budget of over $700,000 (greater than the general expenditures of over half of California's cities)[15] has not had an election since its formation in 1941 Incumbent office holders have been the only ones filing for election and have routinely been reappointed to their positions

2. One fire district reported voter participation at 20 percent in 1960 and 10 percent in 1962 Since 1960 it has cancelled three elections for lack of contest Another fire district reported a 4-percent voter turnout in 1964 and three elections cancelled since 1960 for lack of contest

3 A recreation and park district reported the following election returns· in 1960, 13,534 eligible registered voters and a voter turnout of 22,093; in 1964, 18,605 eligible registered voters and a turnout of 26,860. Another recreation and park district reported a 1964 election with 14,000 eligible registered voters and a voter turnout of 29,424

One explanation for these seemingly startling variations may lie in the fact that these district elections were consolidated with general elections It may be possible that district boundaries did not coincide with general election precincts, and thus county officials found it difficult to control participation in the district elections Ironically, in a number of these elections, a large number of candidates were running for office and an accurate vote count was particularly important

4 A county water district collected $18,000 in service charges in fiscal 1964. In addition it has a $1 tax rate Yet it has no authorized budget

5. A fire protection district which covers one quarter of a square mile contracts with a neighboring city for its fire services The district does not know its population and has had no election since 1953

6 A number of county water districts acknowledge that they ignore with impunity the provisions of the Water Code requiring their rates and charges to be sufficient to pay operating expenses, to

[14] Testimony of Gordon Nesvig in *September Transcript*, p 75
[15] State Controller, *Annual Report of Financial Transactions Concerning Cities of California*, fiscal year 1962–63, pp 18–25

depreciate district equipment, to pay bond interest, and to establish a sinking fund for repayment of bond principal.[16]

7. Another water district, in response to a question about district elections, indicated that "All officers have been appointed . . and reappointed because the residents to date have insufficient voting power to offset the developer's votes

Much more important than the relatively few inefficient or administratively lax districts illustrated in the above examples, is the situation confronting those districts which currently operate well and provide good, low cost services to the public In regard to this latter situation, the committee studies of district operations together with other data and research, all indicate a combination of circumstances which inhibit a district's ability to view itself as part of a community in flux. Most districts, for example, give little attention to evaluating their place in the overall governmental framework of their community Few have developed any "master plans" for their service areas or have sought to coordinate their activities with those of various neighboring districts.

Some studies have indicated that groups associated with district activities tend to perpetuate an attitude of district isolationism The Advisory Commission on Intergovernmental Relations identifies two such groups—as a result of its study of districts—the "functional professional" and the economic groups which sell services and material to the district The "functional professionals" are persons with professional training for a particular type of service, such as sanitary engineering or recreation By operating in a special district rather than in a general purpose government, these persons can free the program in which they are interested from budgetary competition with other governmental programs and from supervision by administrators lacking similar dedication to a *single* program Under a special district government, they can develop a high level of services in their particular area with a large degree of political and financial autonomy. The commission concludes:

> "The influence of the functional professional (specialist in a particular service) probably is present in most programs where all three levels of government have a responsibility for the service involved . . the special district device permits the functional professional to bypass the normal governmental processes of at least one, if not two or three, levels of government [17]

Of the second group—those who sell materials or services to districts —the commission concludes.

> "The second type of special interest group influencing the use of special districts consists of various individuals and enterprises which stand to benefit economically not only from creation of a special district but from its perpetuation This group includes attorneys, bond counsels, equipment makers, engineers, public accountants, and others." [18]

[16] Water Code, Sec 31007
[17] Advisory Commission on Intergovernmental Relations, *op cit*, p 74.
[18] *Ibid*

Few persons have the opportunity or the capacity to become knowledgeable about the many, predominantly technical, services provided by special districts or to take any active part in district politics Left to themselves, the governing boards of single-purpose special districts tend to identify with clients who are especially interested in the particular services which the district provides and with various groups which benefit from district operations The result is a tendency for district activities to be carried out in a manner which promotes these particular interests rather than the interests of the community as a whole Because the special district rarely has to confront the entire community, it does not see itself in relationship to the entire community of which it is a part Instead, it tends to view clientele with which it has frequent contact as its "community" and directs its services toward them.

This is not to say that districts behaving in this way are providing inadequate or unsatisfactory services On the contrary, a special district dominated by professional interests and with a firm source of revenue may provide excellent and very elaborate services But, in so doing, it may prevent the development of other services which must rely on the same source of revenue In short the special district device tends to prevent competing claims for tax revenue from being considered together and weighed against one another Winston Crouch, in his study of the Los Angeles Metropolitan area, alludes to this type of situation

> "A mechanism is lacking to evaluate the various claims upon the property tax and to apportion the resources among the several units of government A governing board of a general-purpose government, such as a city or county, is able to allocate its revenue among competing claimants by means of the annual budget When several governments compete for the same source of revenue, however, the responsibility to allocate rests with the voters and they have only a very crude method available to express their choice.
>
> The number of special districts existing in the metropolitan area tends to add to the difficulties of the voter in expressing his will upon public policies He is often less aware of special districts than of general-function governments, and is less clear about the channels by which he may transmit complaints or register a choice on district policies [19]

In short, lack of public knowledge and the tendency for districts to overemphasize their own functions obviate the greatest original advantage of the district—its flexibility as a governmental device for providing a variety of solutions to local problems at a low tax cost.

Since a general increase in public awareness of and concern for special district government would be most unlikely, some alternative method should be found to insure that district activities keep pace with the changing communities they serve In this regard it is wholly preferable to place new and current responsibilities on existing local gov-

[19] Crouch, Winston W., and Beatrice Dinerman, *Southern California Metropolis*, 443 pp, University of California Press, Berkeley and Los Angeles, 1963, pp 395–6 (Winston W Crouch is Professor of Political Science at the University of California, Los Angeles Beatrice Dinerman, coauthor of the study, is Project Director of the Welfare Planning Council in Los Angeles)

ernments, rather than to wait until circumstances force some type of state action Thus an appropriate local agency, such as the local agency formation commission, could well be delegated the authority to take an overview of governmental agencies within each county and to suggest appropriate changes.

A statutory procedure which would permit a relatively small number of interested district electors—or even other agencies of local government—to initiate action for effecting needed changes in district organization would considerably revive the element of district flexibility, which today's operating exigencies have caused to atrophy. Such a procedure, however, should reserve the final decision to the voters and taxpayers involved. In addition it should provide adequate safeguards to protect districts against harrassment or arbitrary proposals The adequacy of existing statutory provisions to these goals is a separate, and collateral, question It is discussed briefly in the following section

IV. NEED FOR A UNIFORM REORGANIZATION STATUTE

Perhaps the most significant barrier to district flexibility is a procedural one Statutory provisions governing the conditions for altering special districts are narrow in application and cumbersome in operation. Legislative Counsel's compilation of the array of separate provisions for district consolidation, dissolution, or withdrawal is self-illustrative There are over 50 different types of general law statutes and well over 100 so-called "special act" statutes (i e special acts of the Legislature creating specific agencies) These enabling statutes provide no uniform or simple methods for effecting changes in special districts Provisions for any type of district alteration vary from act to act The percentage of voters or landowners which must petition for change, the governing body which must handle the petitions, the means for disposing of district property etc, vary markedly Moreover it is virtually impossible for districts organized under different enabling statutes to consolidate, even if they are engaged in providing similar services There is no way, for example, in which a county water district might consolidate with a California water district or a community services district [20]

Yet, as has been pointed out, population pressures will be heaviest on special districts and will bring with them a concurrent need for more flexibility in district organization Demographic forecasts indicate that California's population will double itself during the decades 1960–1980, reaching nearly 29 million persons by the end of that period Ninety percent of these people will live in metropolitan areas. In turn, most of this metropolitan growth will take place outside of the central cities, following a trend established during the 1950–1960 decade, during which some 61 percent of all new homes were built in the metropolitan suburbs [21] Today's special districts will be called upon to serve this population flood, but the problem of providing service may well raise collateral questions about the adequacy of a district As population fills in the surburban areas, for example, the service

[20] Legislative Counsel, *Tentative Draft of Working Materials on Dissolution, Consolidation, and Withdrawal (Exclusion) of California District Laws*, December 1963

[21] Governor's Advisory Commission on Housing Problems, *op cit Appendix*, p 58, section on "The Market for New Housing Recent Trends"

areas of similar districts may approach one another Land which may formerly have separated two water districts will be subdivided Then the question will arise of the best way to provide water to the entire area by the two existing districts, by creating a third district or by consolidating everything into one district Because of the difficulty of consolidation under present law, or the impossibility of such a move if the districts are not identical types, the full range of alternatives cannot be explored Instead, the inflexible provisions of existing district law may, by default, limit the taxpayers' choice to an admittedly inferior one

Although such rigidity may protect the limited interests of a few districts who seek only their own self preservation, it has unwholesome implications for traditional goals of local home rule If an inflexible local government structure prevents, or prolongs indefinitely, the solution of important problems in local areas, especially in metropolitan areas, the state is constrained to superimpose other organizational structures which will bypass local agencies Experience indicates that this method will be employed more frequently as citizens and communities are frustrated in attempts to bring about needed changes through the adaption of local institutions. Thus the districts themselves have a vested interest in laws which permit greater flexibility in reorganization

Significantly, the committee hearings revealed broad support among representatives of special districts for the principle of a uniform reorganization statute [22] Although conceding that drafting such a measure would involve a major technical effort, they agreed that it would constitute a new and valuable tool for local government.

V. RECOMMENDATIONS

After carefully considering the information gathered during the course of its hearings and study, the committee determined, to make the following two recommendations concerning district reorganization to the 1965 Legislature

1 A district reorganization law should be enacted which would provide uniform procedures for handling special district dissolution, consolidation, annexation, detachments, etc

During the legislative interim, the committee has drafted a district reorganization law which would provide such uniform procedures The proposed new procedure has been formulated to keep districts responsive to the needs of the voters, the taxpayers, and the community Under the proposed legislation, the power to initiate a proposal for district reorganization would be given to district voters, to a district board of directors, to a county board of supervisors, to a city council or to a local agency formation commission The proposal would then be reviewed by the local agency formation commission, as are proposals for changes in other governmental agencies Such review would prevent harrassment of districts by minority groups of voters. The final decision on any proposal reorganization would be made by the voters.

2 The local agency formation commissions should be urged to inventory and gather data in regard to special districts and other governmental agencies so that they may recommend changes which would save tax dollars and/or reduce costly sprawl

Such a step would provide local citizens and local governmental agencies with appropriate and accurate information about the general governmental framework within which their agency operates [23] In addition the local agency formation commissions should be encouraged to recommend organizational changes which would achieve significant tax savings and promote orderly community growth

[23] In this connection, Urban Renewal Commissioner William L Slayton has informed Chairman Knox that federal funds would be available for such studies under the Housing Act of 1964, amendment to the 701 Urban Planning Assistance Grant program Details of this program are discussed in the committee report on the local agency formation commissions See p 57

PART III

OPERATIONS OF THE LOCAL AGENCY FORMATION COMMISSIONS

I. INTRODUCTION

The 1963 Legislature created in each county a "local agency formation commission," empowered to review and approve or disapprove all proposals to incorporate cities, to form special districts, or to annex territory to cities or to special districts. The full range of duties assigned to the new local agency formation commissions (hereafter referred to as LAFC's) was provided by two separate legislative measures—AB 1662 and SB 861[1] The Assembly proposal provided for a "local agency formation commission" to review proposals to form new special districts and cities The Senate proposal provided for a "local agency annexation commission" to review proposals to annex territory to cities or to special districts. Provisions in each measure stipulated that if both proposals passed, a single commission would be established in each county to carry on the functions prescribed in both bills[2] Both measures did pass and their combined provisions went into effect September 20, 1963[3]

Each LAFC has five locally chosen members Except in a few smaller counties which contain fewer than two incorporated cities,[4] membership is composed of two county representatives, both of whom must be county officers, two city representatives, selected from elected mayors and councilmen by a selection committee composed of the mayors of each city within the county; and a public member chosen by the initial four LAFC members Staff services for the LAFC are provided by the county, and LAFC expenses are paid from the county general fund

Although the LAFC has jurisdiction over the major problem areas of annexations, incorporations, and district formations, its authority does not currently extend to the more routine, and usually less significant situations which involve exclusion of territory from a city, changes in county boundaries, or corrections of city boundaries Of much greater significance however is the fact that, although the LAFC has authority over special district formations and annexations, it does not presently have similar authority over special district consolidation, dissolution, detachments or reorganizations[5]

Recognizing that some problems and difficulties might occur in the initial operations of the formation commissions which would require modifications or additions to the basic formation commission law, Committee Chairman John T Knox introduced HR 137 in the First

[4] Government Code, Sections 54776 1 and 54776 2

[5] For more extended summaries of the local agency formation commission laws, see "Local Agency Formation Commission" pamphlet published jointly by the County Supervisors Association of California and the League of California Cities for use at institutes held at Berkeley on December 12, 1963, and at Los Angeles on December 13, 1963, 51 pp mimeo

Extraordinary Session of 1963 The resolution authorized a general interim study of the operations of the formation commissions Pursuant to this resolution, the Assembly Interim Committee on Municipal and County Government undertook a broad study of the LAFC's during the fall of 1964, by which time most of the LAFC's had had a full year of experience To gain as complete a picture as possible of LAFC's operations, the committee determined to make both a qualitative and quantitative evaluation of the various commissions Accordingly, a questionnaire was sent to each LAFC requesting detailed information about the number and types of proceedings which had been handled, the amount of territory involved, final decisions of the commission, etc In addition, the committee scheduled three hearings throughout the state to give local government agencies, citizen groups, and the various formation commissions themselves ample opportunity to present their own assessments and evaluations of LAFC performances, and to suggest changes which might permit the commissions to function more effectively Hearings were held in San Diego on November 10, 1964, and in San Rafael on November 13, 1964 A third hearing, scheduled for Fresno, was cancelled because in spite of ample notification to cities, counties, districts and various community groups of the Central Valley, the committee could find no one seriously dissatisfied with the operations of the formation commissions, or willing to propose significant changes in the basic formation commission statutes

The balance of this report presents a composite and comparative picture of the activities of the formation commissions by summarizing the quantitative information contained in the committee questionnaires In addition, it also lists a series of recommendations for specific changes in the formation commission law which the committee believes will help the commissions function more efficiently and effectively These latter recommendations are the product of careful thought and analysis by committee members after reviewing the committee hearings, after continuing meetings with local officials, and after extended consultation with both the League of California Cities and the County Supervisors Association

II. LAFC'S: A COMPOSITE PICTURE

In October 1964, the committee sent to each LAFC a questionnaire requesting information about its operations and the nature of the proposals which it had been reviewing One part of the questionnaire elicited comparative workload data as well as collateral information about related LAFC policies such as the types of conditions that the various LAFC's had attached to conditional approvals, etc This data is summarized in Table I (See Appendix, p 51)

In addition to the data summarized in Table I, a number of situations were described which illustrate the variety of ways in which the LAFC's have responded to administrative and procedural problems. The more significant of these are described in the following paragraphs Several incidents indicate the need for minor legislative changes to provide for uniformity in administrative policies Others demonstrate the virtues of granting the LAFC's broad discretion to meet the needs of specific local problems.

1 Very few LAFC's require that they be notified of further actions which are taken on proposals which they have approved or approved conditionally There is no statutory requirement that they do so However, several LAFC's request subsequent information from the board of supervisors or the county boundary commission to insure that conditions imposed by the LAFC have been met Other LAFC s have assigned staff personnel to keep track of all active proposals (Committee recommendations for uniform administrative procedures for such situations are discussed in subsequent sections of this report)

2 Only two instances were reported in which LAFC's reviewed proposals affecting land in two or more counties In one case, the LAFC of each county approved the proposal [6] In the second case, the Ventura County LAFC made its approval contingent upon approval by the Los Angeles County LAFC but, at the same time, expressed its willingness to reconsider the proposal on the basis of territory limited to a single county should the Los Angeles LAFC disapprove

3 Conditions which the LAFC's attached to various approvals varied widely Minor boundary alterations were the most frequently mentioned conditions These were usually required in order to smooth initial boundary irregularities or to avoid the creation of strips or islands of unincorporated territory within the larger incorporated area In some instances more complicated and more substantive conditions have also been imposed In order to insure that the one area would receive necessary services, one LAFC required that it annex to two districts, rather than to a single district as had been originally requested Several LAFC's have sought to reduce the patchwork effect of many governmental units serving slightly different areas by requiring, whenever feasible, that the boundaries of newly formed districts coincide with those of existing districts Such a policy has the immediate result of easing the county's burden in administering a multitude of tax zones. It has the added effect of clarifying the relationship between voters and the districts in which they reside And finally, it alleviates many of the problems which might otherwise arise if the area subsequently annexes to a neighboring city

Marin County provided the most illustrative example of the broad authority which the LAFC's have to impose conditions on their approval There, the LAFC approved the formation of one new district only on the condition that the county board of supervisors would fail to create a county service area to serve the petitioning territory

4. In some cases several LAFC's have provided additional protection beyond that required by law to property owners who might be affected by annexation proceedings One LAFC has made it a general requirement that owners of property *adjacent* to the territory to be annexed should be notified of commission hearings, in addition to the property owners within the territory to be annexed In one instance another LAFC required mailed notice of a proposed district annexation rather than the usual newspaper notice, because of the large number of nonresident property owners in the area

Rather than cause taxpayers to contend with many small annexation proceedings, some LAFC's require that adjoining annexations be con-

[6] The LAFC's of Riverside and Imperial Counties approved the annexation of the Salton Sea Water District to the Coachella Valley County Water District

solidated into a single annexation. Other LAFC's have enlarged areas in proposed city annexations to include homogeneous areas rather than small parcels or single lots. Most important, in a number of instances they have enlarged the territory in annexation proposals to include residential areas along with more desirable, revenue producing commercial areas

A second part of the committee questionnaire requested an itemization of all proposals received by each LAFC from the time of its organization through September 30, 1964 This listing showed the type of proposals (inhabited city annexation, uninhabited city annexation, city incorporation, district annexation, and district formation), LAFC action on each proposal (approval, conditional approval, disapproval, withdrawal by the proponents of the proposal prior to a final decision by the LAFC, proposals awaiting final action by the LAFC), and various data about the territory in the proposal (land area, population, and assessed valuation) Collectively this information provides a good composite picture of the variety and scope of LAFC action in addition to indicating generally the way in which the LAFC's have acted to deter actions which may have compounded problems of urban sprawl.

The most significant information from this part of the questionnaire is summarized in Table II (See Appendix pp 65–69)

III. LAFC'S: QUALITATIVE EVALUATION—RECOMMENDATIONS FOR LEGISLATIVE CHANGES

As noted in the introduction to this report, the committee held several hearings in November 1964 to secure from the LAFC's, cities, counties, special districts, and other interested parties, some indication of substantive changes which might be advisable in the LAFC law Testimony presented at the hearings indicated a number of procedural and substantive points on which there was a broad consensus for change. The committee carefully reviewed all suggestions at its executive meeting in December and determined to recommend legislation which would embody the significant points of this consensus The committee recommendations follow

1. *Chapters 6 5 and 6 6 of Title 5, Division 2, Part 1 of the Government Code should be combined into a single chapter*

Together these two chapters provide for the local agency formation commissions Combining the two chapters will involve no substantive changes but will facilitate reading of the law and simplify the process of further amending the law.

2 *Clarify the objectives of the LAFC law with a preamble which would indicate the following:*

The LAFC has the general responsibility for judging the merits of proposed governmental agencies and proposed changes in existing governmental agencies. In so doing, the LAFC is expected to guide governmental changes in a manner which will facilitate reasonable and logical development of the community and of the county, especially in rapidly expanding and changing urban areas.

The LAFC's should be explicitly authorized, at their own discretion, to make general studies of local agencies (i e determining proposed service areas, service limitations, etc) to assist it in making sound judgments Especially in urban counties, LAFC's have expressed a need to get a "total picture" of the governmental framework within which to make their decisions The Sacramento County Local Agency Formation Commission, for example, has requested all special districts in the county to submit master plans The commission feels that such data is critically needed in order to provide a framework for their decisions Other LAFC's feel that they need explicit statutory authority to allow them to gather data relative to various governmental agencies. Such data or any plan developed from it should be available, upon request, to all governmental agencies within the county or to interested individuals or organizations

To give an added impetus to the LAFC's to gather such data and also to relieve the county general fund from the full cost of such additional activity, LAFC's (or the counties on behalf of this LAFC) should be specifically authorized to accept grants and assistance from federal or state governments or private institutions In this connection, Committee Chairman John Knox recently secured from the Federal Urban Renewal Administration a "clarification" of the federal policy authorized by Section 316 of the Housing Act of 1964 [7] This section generally authorizes the issuance of 701 Urban Planning Assistance Grants to counties for preparing comprehensive county plans As a result of several conferences with Chairman Knox, Urban Renewal Commissioner William L Slayton has ruled that such grants may be given to counties (and to LAFC's) to finance efforts to gather the type of data referred to above, whenever such data gathering is integrated with comprehensive county planning Several counties have already expressed interest in seeking federal aid for their LAFC's under this program To eliminate any impediments to these efforts, the LAFC statute should be amended to authorize LAFC's and counties to utilize such grants

3 *Eliminate the county boundary commission, (Government Code, Sections 58850–58861) and assign its functions, where applicable, to the Local Agency Formation Commission and otherwise to the county surveyor.*

Along with the LAFC in each county, there also exists a county boundary commission normally composed of the chairman of the board of supervisors, the county assessor, the county auditor, the county surveyor, and the county planning engineer [8] The Boundary Commission Law now requires that all proposals which will involve changes in the boundaries of local agencies within a county, such as annexations to cities or special districts, be submitted to the boundary commission for review Although the boundary commission is given broad powers of review, in actual practice its work tends to be chiefly ministerial without the policy aspects inherent in the LAFC operations For example, the boundary commission must consider such factors as the certainty and correctness of the proposed boundaries, the extent to which overlapping or conflicting boundaries may result from the proposal, the

[7] Letter from William L Slayton to Assemblyman John T Knox, Nov 24, 1964
[8] Government Code, Section 58850

nonconformance of proposed boundaries with lines of assessment or ownership, the creation of islands or corridors of unincorporated territory " In studying any proposal the boundary commission may hold public hearings In making its own review however, the LAFC must consider all these same factors Thus in practice there are two county agencies searching similar materials and possibly holding duplicate hearings

The boundary commission can be safely eliminated As its functions relate to proposals that are under the jurisdiction of the LAFC—and this would include most proposals—the functions of the boundary commission should be assigned to the county surveyor or some other county officer designated by the board of supervisors

4 *All actions for changes in governmental organization should initiate upon filing with the LAFC (Proponents of annexations to cities, however, should be required to obtain prior consent from the city council)*

Coupled with elimination of the boundary commission, this proposal would mean that all actions for changes in governmental organization would initiate upon filing notice of intention with the LAFC Such a procedure will reduce the delay and confusion which results from the present necessity to file in two places and wait for two reviews

5 *Eliminate the statutory protection periods for proposals in the annexation laws and place provisions in the LAFC law which would provide similar safeguards to proponents of annexation and incorporation*

The existing annexation laws contain provisions for protection periods which begin after an initial filing for annexation during which no other action involving such territory may be filed [10] Proceedings before the LAFC virtually nullify these protection periods, which may end before the LAFC has had its hearing The committee recommends that these protection periods be deleted from the annexation laws and that adequate protection periods be placed in the LAFC law Under the LAFC law, a protection period should be established which would begin with the initial filing of a notice of intention with the LAFC and to continue until the proceedings are either completed or abandoned The committee also recommends that a maximum time period for completing annexations be placed in the LAFC law, after which time proceedings would be considered abandoned if they have not been completed. This period should be long enough to allow proponents of a proposal ample time to circulate their petitions after the LAFC determination has been made This time period is especially necessary when the LAFC imposes conditions on its approval which require further consideration by the proponents of the proposal

6 *Any boundary changes made by the local legislative body after a proposal has been reviewed by the LAFC should be resubmitted to the LAFC for certification of the boundaries*

In some situations the local legislative body may change the boundaries in a proposal after the LAFC has made its determination [11] The committee recommends that the LAFC law expressly require that, if

[9] Government Code, Sections 34303 5 35002, 58856
[10] Government Code Sections 35002, 35113, 35308
[11] Government Code, Sections 35121 5, 35121 6, 35313 5, 35313 6

any such changes are made, the proposal be resubmitted to the LAFC for its approval Such a referral would give the LAFC a chance to check the certainty of the new boundaries, a function now performed by the boundary commission It would also guarantee that the initial decision of the LAFC was not being circumvented by a later boundary change

7 *The LAFC should be given the authority to review withdrawals from cities*

While the LAFC has the authority to review proposals for the annexation of territory to cities, it has no jurisdiction over withdrawals of territory from cities Such proceedings are actually very rare Nevertheless, the committee believes that withdrawals, when they do occur, should receive the same careful attention as that accorded to annexations and recommends that the LAFC be given authority to review such proposals.

8 Existing law provides that when a proposal has been disapproved by the LAFC, new proposals involving the "same or substantially the same territory" may not be filed for a year after LAFC action *This requirement should be changed to allow the filing of proposals involving "any of the same territory" with the consent of the LAFC for the same one-year period.*

In the case of all annexations, special district formations, and city incorporations, once a proposal has been disapproved by the LAFC, no new proposal "composed of the same or substantially the same territory" may be filed with the commission for at least one year after the date of disapproval [12] The phrase "substantially the same territory" has introduced some confusion into LAFC operations because little guidance is given to the LAFC for determining what constitutes "substantially the same territory " In Marin County, for example, after an initial annexation had been rejected by the LAFC a subsequent proposal was filed including part of the area which had been in the rejected proposal The LAFC felt that this was not "substantially the same territory" involved [13] The committee feels that the various LAFC's should be the best judges of proposals presented to them and thus recommends that they be granted full discretion for deciding situations such as that in Marin County

9. *Membership rules of the LAFC should be revised to permit greater use of the alternate members and to restrict county membership to supervisors*

The present LAFC law provides that an alternate city representative sit with the commission only when the LAFC is considering a proposal for the annexation of territory to a city of which one of the regular commission members is an officer [14] If a city member is absent for any other reason, the alternate member may not sit and the commission will have fewer than five members In order to have a full commission acting on proposals as often as possible, the committee

[12] Government Code, Sections 54767 and 54789
[13] See testimony of John Barrows in Transcript of Hearing, San Rafael, November 13, 1964, pp 6–7
[14] Government Code, Section 54759

recommends that the city alternate be permitted to take the place of the city member whenever the latter is absent or may disqualify himself

In addition, provisions should be made for an alternate county representative to take the place of a county member who is absent or disqualifies himself for good cause The latter case may not occur frequently, but it is possible that a supervisor may feel that he has interests in a particular situation which would prevent him from making the unbiased judgments which the LAFC requires At the same time, it is recommended that county representation on the LAFC be restricted to county supervisors rather than to "county officers" This means that the commission will be composed entirely of locally elected officers with the exception of the public representative chosen by the other four members With the exception of two counties, all county members on the various LAFC's have been supervisors, thus this change in law will largely solidify an existing practice

10 *The committee further recommends that the board of supervisors be allowed to authorize per diem for city members and the public member*

This would apply particularly to those city and public members who may be required to take time from other jobs and travel long distances to attend LAFC meetings The present law permits commission members to be reimbursed for their reasonable and necessary expenses incurred in attending meetings and in performing the duties of their offices [15] Provision of per diem payments would standardize and simplify reimbursement for these expenditures County supervisors may be considered salaried and serve with the LAFC as part of their regular duties.

11 *The city selection committee should meet at the call of the LAFC chairman or upon request of the city councils of 60 percent of the cities*

Present law requires the city selection committee of each county to meet on the second Monday in May of each year that it is necessary to make succeeding appointments to the LAFC [16] More flexibility would be provided if the city selection committee were to meet at the call of the LAFC chairman or upon request of the city councils of 60 percent of the cities This would enable the committee to fill vacancies as they arise

APPENDIX

Table I and Table II

MEETINGS OF THE LAFC's

TABLE I

County	How often does LAFC meet?	Number of meetings held since LAFC was organized	Average number of proposals considered of each meeting
ALAMEDA	2nd and 4th Thursdays of each month and special meetings	11	4
ALPINE	When there is business	1	0
AMADOR	When necessary	4	1
BUTTE	Once a month	12	3
CALAVERAS	On call of executive officer as required	6	1
COLUSA	When called by Executive Officer or Chairman	4	3
CONTRA COSTA	January to June 1964, twice monthly, July to present, once each month	16	6
DEL NORTE	Once a month—as necessary	10	0 (only had 1 proposal to study)
EL DORADO	Committee request unanswered		
FRESNO	Twice each month	21	2
GLENN	When petitions are presented	9	1 or 2
HUMBOLDT	Committee request unanswered		
IMPERIAL	Average of once a month	10	1
INYO	No scheduled meetings	2	0
KERN	2nd and 4th Tuesdays each month	18	1
KINGS	1st and 3rd Wednesdays of each month if LAFC matter is pending	7	1
LAKE	Regular meetings once a month and called meetings when necessary	22	2
LASSEN	When business requires	1	0
LOS ANGELES	2nd and 4th Wednesdays of each month	23	17
MADERA	Once a month	10	1
MARIN	Twice monthly	19	3
MARIPOSA	Twice a year unless more are necessary	2	0
MENDOCINO	1st Monday of each month	9	1
MERCED	Monthly, or at call of chairman	8	2
MODOC	As need arises	0	0
MONO	Committee request unanswered		
MONTEREY	2nd and 4th Wednesdays of month if there is business to be transacted	9	3

Information as of September 30, 1964

LETTER OF TRANSMITTAL

ASSEMBLY INTERIM COMMITTEE ON
ELECTIONS AND REAPPORTIONMENT
January 11, 1965

HON JESSE M UNRUH
Speaker of the Assembly, and
Members of the Assembly:

Dear Sirs·

Transmitted herewith is the report of the Assembly Interim Committee on Elections and Reapportionment for 1963–64

The report is divided into two parts. Part I contains a description of the committee's interim studies and staff activities from July of 1963 until the convening of the present session Part II contains the full text of the major court decisions bearing on reapportionment which form the background for the present legislative and judicial controversy on this vital and sensitive issue

Part I of the report contains no positive recommendations for legislation The committee looks with approval on the development of the policy within the Assembly Rules Committee of carefully screening subject matters prior to making a definite assignment to an interim committee of any particular legislative proposal For the most part, those subjects which were referred to this committee were of three classes First, an assignment to study a specific incident or subject area. In this class were our studies of vote-tabulating devices and the Imperial County vote fraud controversy The second group consisted of those bills and resolutions of the 1963 and 1964 sessions to which the committee gave careful attention but do not require a specific affirmative or negative recommendation or comment from the committee The third group consisted of those bills and resolutions—a fairly good number—which, despite the Rules Committee's commendable screening efforts, should never have been dignified with interim assignment at all.

Part II contains the complete text of decisions of the United States federal courts leading to the decision in *Reynolds* v *Sims* The dramatic and revolutionary doctrine announced in the *Sims* case was of such monumental significance to the California Legislature that the careful analysis and evaluation of that doctrine and its implications became—and remains—the principal task of this committee

The committee wishes to take this opportunity to express its sincere appreciation to Robert Moretti, committee consultant. His outstanding personal qualities were properly recognized last year when the people of the 42nd district elected him as their assemblyman.

The committee also wishes to thank the 58 county clerks of California. This truly dedicated group of men and women are the unsung heroes of the democratic process of free and fair elections.

Respectfully submitted,

DON A. ALLEN, SR., *Chairman*

GEORGE E DANIELSON, *Vice Chairman*

TABLE OF CONTENTS

PART I

INTERIM STUDIES AND ACTIVITIES

CHAPTER I

STATEWIDE SURVEY

The committee, desirous of developing a closer and more aware relationship with those people immediately concerned with elections and the procedures thereof, directed its consultant to visit as many counties of this state as possible The objective of the tour was to discuss with each county clerk or registrar of voters new developments, procedures and problems in the area of elections The consultant interviewed each of these people extensively, asking what new legislation is needed, what legislation, in their opinions, presently written into law needs to be amended or repealed, what implementation, if any, had been or was being accomplished in the field of electronic data processing, what type of voting machines or vote-tabulating devices would best suit their needs and purposes How were they coping with the problems of voter registration, was the necessary amount of energy being expended to see that as many people as possible were exercising their right to vote. What particular problems did their county have. For each answer given, the reasons were sought The results of the interviews were gathered together, the most prominently mentioned and important comments are listed below.

1 Far and away the legislative request considered most important and primary to the elimination of procedural difficulty is the development of one general elections code that would set up rules by which all types of elections would be governed At the present time there exists an elections code, but its procedures are augmented and superseded by specific laws included in, for example, the Education Code, the Water Code, the Health and Safety Code, etc. The result is that there presently exist approximately 300 different ways to conduct elections. The problems inherent in such a situation are obvious. For example there may be one method of processing absentee ballots in a general election, another method in a school election, and still another method for water elections. The consolidation of all these various laws regarding election method and procedure is the most ardent wish of those who are most closely and immediately affected This objective was expressed unanimously throughout the state

2. Because of its notoriously transient population, California has particularly acute problems with registration. Attempting to keep the registration roles accurate and in keeping with the laws of the state has become a major problem At the present time a person must completely reregister each time he moves, even if it be within the same county. It is felt that it would prove very helpful and less expensive if some method less involved were developed. Several suggestions have been made, one even passed into law and tried but none have provided an adequate solution.

3. The receipt and counting of absentee ballots varies with different types of elections. Recently a school election was held in this state, the outcome was very close and the absentee ballot count was needed before the results could be known. However, provisions of the Education Code did not allow counting of the ballots until the seventh day following the election Under the Elections Code, those ballots could have been counted immediately upon close of the polls
4. Rather than spending the time and cost of gathering the list of precinct board members to publish in the newspapers, the clerks would rather spend the same amount of money publicizing the election or printing the pros and cons of specific issues or explaining the propositions, etc The reason for this is that the list of precinct workers is obsolete by printing time and there exist serious doubts as to the need or value of publishing such lists at all
5. There exists generally a desire on the part of those in charge of elections in the counties that all elections be conducted under the jurisdiction of the county There are basically two reasons for this In many cases the smaller jurisdictions, whether they be cities or library districts, do not have expert people available because of a lack of activity in acquaintance with the field of elections Second, the trend has been for the smaller jurisdictions to arrange on a contract basis for the county to perform the procedures involved When not actually performing the procedures, the counties find themselves continually acting the role of consultant This proves to be a considerable burden. Many counties feel that it might be well for all elections to be conducted entirely by a central, expert office Many times the counties perform only specific functions of a particular election and yet are taken to task when a mishap occurs though it may be in an area over which they have had no control.
6. Notice of school elections must be sent out 30 days prior to the election This has proved unworkable because by the day of election very few electors remember it In addition, the notice of polling place address is sent at the same time, subsequently, those who do vote cannot recall where they must vote. The aim is to reduce the period of notice.
7. The board of supervisors of each county is the body which ultimately places the date of local elections In this capacity the board has traditionally been able to determine when special district elections could be consolidated with other elections This ability of the board to direct elections has in recent years been amended to allow hospital districts to direct the board in consolidation of hospital elections This is viewed as the possible beginning of a new problem area and should be ceased.
8. The matter of volunteer deputy registrars has caused a great deal of comment by the clerks Since there exists no regulatory legislation regarding this, the policy may well, and as a matter of fact, does differ from county to county. How the volunteer registrar program is conducted is actually determined by arbitrary decisions on the part of the clerk himself For example, the payment

per affidavit ranges from nothing to 25 cents The number of deputy registrars in ratio to number of voters varied tremendously from one county to another Many of the clerks would like to see enactment of legislation regulating activities and payment in this area.

9 The 1963 General Session of the Legislature enacted a law requiring polling places to remain open until 8 p m in counties having a population of 300,000 or more. This is opposed by the affected clerks The clerks records in the 1964 general election show that at best the additional hour added negligibly to the voter turnout In addition the extra hour delays counting of the ballots and adds to the physical burden already placed on the polling place officials

The foregoing represent the most prominently mentioned changes desired by the clerks There were many other suggestions, some of which will probably prove very worthy of examination and possibly enactment However, it is at this time the desire of the committee to reflect the comments of the county clerks or registrars of voters as a whole

This committee would be remiss if it did not pay special tribute to the clerks and registrars for their outstanding spirit and cooperation. The committee found the tour of its consultant was welcomed warmly and appreciatively For the first time information, advice and theory was sought from those most vitally working in the field of elections Their response and interest, and the possibility of progressive election legislation will prove to more than justify the committee's inquiry We believe that with the type of people California has conducting its elections we can be sure of honest, progressive and equitable determinations for the people of California In the committee's estimation the county clerks of California should be complimented for their work.

CHAPTER II

ELECTRONIC DATA PROCESSING IN ELECTION DEPARTMENTS

The use of electronic data processing equipment is growing rapidly in election departments throughout the state As experience with this equipment grows its value increases and its possibilities for elections work become more obvious. There are approximately 12 counties presently employing this type of equipment, many other counties will soon initiate the use of it and still others are exploring its possibility. Systems ranging from basic punched card to magnetic tape are in use and proving their practicality.

With this equipment counties are now able to keep on hand and extract at any given moment much greater and more concise information about voters and the particular districts in which they live Methods heretofore employed for filing, printing, tabulating, etc., are becoming obsolete in view of the abilities of data-processing equipment. In addition to internal procedural advantages there is apparently a considerable use for this equipment in connection with several vote-tabulating devices being introduced in California.

While the elections departments of most California counties are not able to justify the cost of this equipment solely for their own use, they have been able to participate in the use of central data-processing systems which are used for many departments within the county governmental structure Though there may seem to be problems inherent in this type of arrangement, a properly scheduled use of equipment time works out very well.

The committee reviews the advent and diversification of electronic data processing as the answer to increasing the speed and accuracy of procedures of election departments.

CHAPTER III

NEW VOTING MACHINES OR VOTE TABULATING USED IN THE 1964 ELECTION

Three new voting or vote-tabulating systems were employed on a countywide basis by five California counties this year. The new systems employed were the Coleman Electronic Vote Tabulating System, the Harris Votomatic System and the Votronics Vote Counter The Coleman was used in Contra Costa and Orange Counties, the Harris was used in San Joaquin County and the Votronic was used in Riverside and San Diego Counties.

Reports on the effectiveness and accuracy of this equipment were received from county clerks and are included in this report. In addition, county district attorneys were requested to advise the committee if grand jury investigations were conducted into the operation of this equipment subsequent to the election as a result of voter complaints Their replies are also included herein

REPORT

on the Comparative Costs

COLEMAN VOTE TALLY SYSTEM

as used in Contra Costa County

GENERAL ELECTION

November 3, 1964

Compiled by
W. T. PAASCH, *County Clerk*
Election and Registration Department

On August 11, 1964, the Board of Supervisors of Contra Costa County authorized the use of the Coleman Electronic Vote Tally System in tabulating the results of the November 3, 1964, general election.

In June 1964, 1,164 voting precincts were used with an average registration of 166 voters Due to growth of the county and the various special elections consolidated, we would have required 1,298 voting precincts with an average registration of 170 voters for the November 1964 general election

With the use of the Coleman system the burdensome task of hand-tallying the ballots was removed In conforming to the various district boundaries 720 voting precincts were established with an average registration of 306 voters Precincts actually varied in size from 76 to 448 voters State law allows up to 600 voters per precinct.

Significant savings in personnel, man-hours and costs were effected by use of the system The following tabulation reflects costs for June 1964 and November 1964 with and without the Coleman system as well as a projection for June 1966

The chart includes only items affected by adoption of procedures for electronic vote tabulation

From the reactions of election board members to the removal of the need for the long hours required to hand-tally ballots, automatic tallying is a necessity When this can be accomplished along with savings in manpower and expense it is apparent we cannot return to manual operation

In California of 7,233,067 ballots cast over 1,800,000 were counted by automatic methods Contra Costa County led the state with a 90 3-percent voter turnout

With the experience gained in this election, we now have a trained work force that would have no trouble in producing well-coordinated elections.

Contra Costa County had 67 different ballots with 43 ballot counts for special districts and 50 ballot counts for county, state and national offices. Fifteen special districts were represented, meaning considerable financial savings to the districts as well as providing $26,570 in revenue to the county

	June 1964 hand tally	*November 1964 using Coleman*	*November 1964 of hand tally*	*New costs*	*Savings*	*June 1966 hand tally*

OFFICE OF DISTRICT ATTORNEY
CONTRA COSTA COUNTY
HALL OF RECORDS, ROOM 512

January 29, 1965

DON A ALLEN, SR, *Chairman*
Assembly Committee on
Elections and Reapportionment
California Legislature
State Capitol, Room 4126
Sacramento, California

Dear Mr. Allen:

With reference to your communication of January 25, may I advise that in the official returns for Contra Costa County submitted by the election officer for the November general election, some differences were noted in a small number of precincts between vote casting for various offices and propositions As the differences could not seriously be explained, I obtained a subpoena requiring the presentation of these precinct ballots to the grand jury issued by the presiding judge of the superior court

The meeting of the grand jury was declared opened to the public to avoid problems incident to disclosure. A manual count was made of the two precincts presenting the most serious inconsistencies.

I enclose a copy of the grand jury report on the results for your further information

One contest was filed as to a supervisorial election and a sample canvass showed in that district satisfactory accuracy and the proceedings were dismissed

In order to provide legislation authorizing this type of inquiry which was admittedly questionable, I have proposed amendments to the Elections Code, a copy of which legislation is enclosed

Should it appear that I may be of further service, please advise

Very truly yours,

JOHN A. NEJEDLY
District Attorney

CONTRA COSTA COUNTY
1964–1965 GRAND JURY

December 18, 1964

HONORABLE EDMUND A. LINSCHEID
Chairman of the Board of Supervisors
County of Contra Costa
Martinez, California

Dear Mr Linscheid:

At the request of various individuals and groups, the grand jury has investigated the accuracy, in the November 3, 1964, general election, of the Coleman Vote Tally System

Considered specifically, at a meeting held on December 16, 1964, was information contained in the statement to the Board of Supervi-

sors of Contra Costa County by the Democratic Central Committee. Available to the grand jury at that meeting, upon the order of the Superior Court of Contra Costa County, were ballots cast in the precincts listed on the last page of the above-mentioned report

In a public session, the members of the grand jury reviewed the ballots cast in Pacheco Precinct No 6 pertaining to the total vote on Proposition No 14 It was evident that at least 90 percent of the voters had voted on this proposition, whereas the Coleman tally indicated a 1 percent vote or a total of 3 votes

The grand jury also conducted an actual count of the number of votes cast for President, Proposition No 14 and Proposition No 17 in Concord Precinct No 96 where a total of 251 votes had been cast This tally disclosed the following:

Total votes cast for President—245
Total votes cast for or against Proposition No 14—245
Total votes cast for or against Proposition No 17—241

The totals, as indicated by the Coleman Vote Tally System, were as follows:

Total votes cast for President—120
Total votes cast for or against Proposition No 14—135
Total votes cast for or against Proposition No 17—234

As the result of this survey, gross inaccuracies were apparent, and it is the recommendation of the grand jury that the County of Contra Costa does not purchase the Coleman Vote Tally System machine at this time.

It has been made apparent to the grand jury that there is a need for a review of present legislation establishing procedures for investigation of possible irregularities and inaccuracies in elections Therefore, the grand jury recommends that the board of supervisors take immediate steps to adopt proposed legislation to be presented to our State Legislature for emergency adoption in the immediate next session of the State Legislature providing for more effective means of review of election and canvassing of returns so that the public may have absolute confidence in the final determinations of elections

The grand jury should be pleased to meet with the board of supervisors to define precisely the terms of such proposed legislation which should be authorized by the board of supervisors and requested to be prepared by the district attorney This legislation should be approved by the board of supervisors and the grand jury without delay

Yours very truly,

RALPH HILL
Foreman

An act to amend the Elections Code by adding Section 15416 thereto concerning recounts

The people of the State of California do enact as follows:

SECTION 1 Section 15416 is added to Chapter 7 of Division 9 of the Elections Code, to read

15416. Notwithstanding any provision of law to the contrary, in any election in which devices provided for by this chapter are used, recounts of the ballots so tabulated shall be accomplished as provided herein

(a) Within 30 days after every such election, the presiding judge of the superior court of the county shall order the county clerk, chief elections officer or other officer conducting said election to conduct a public manual recount before the court, of the ballots tabulated by such devices cast in six percent (6%) of the precincts, but not less than six precincts or all the precincts whichever is less, selected by the judge

(b) When requested by the board of supervisors or the grand jury, the district attorney may petition the superior court for an order directing a public recount to be made of such ballots in such precincts in the county as it designates for any election occurring not over 90 days before such request Such request and petition shall be made only on one or more of the following grounds, and such order may be issued only with a finding that there exists probable cause to believe that one or more of the grounds exist

(1) Misconduct by anyone sufficient to make it likely that the result of the election was affected as to the successful candidates or propositions or the holders, including any of the conduct specified in Section 20021,

(2) Errors or failures, whether electronic, mechanical or otherwise, in the safekeeping, handling, tallying, counting, recording, or certification of the ballots or votes cast, sufficient to make it likely that the result of the election was affected as to the successful candidates or propositions or the holders, or sufficient to cast substantial doubt on the substantial accuracy of the results without regard to affecting any result.

The petition shall be set for hearing and may be opposed by any interested party

(c) The court may order such further recounts as it may deem proper based on the results of the recounts heretofore provided for, and shall declare the results of all such recounts; and shall adjudge and order corrected the results of any election affected thereby

(d) The court may order payment of the costs of any such recount in whole or in just proportion by any party appearing in the matter and/or any public agency concerning which the election was held, and in the case of public agencies the costs shall be provided for and paid pursuant to Section 15416

COUNTY OF ORANGE

W. E. ST JOHN, *County Clerk*
OFFICE OF THE COUNTY CLERK AND
CLERK OF THE SUPERIOR COURT

HONORABLE BOARD OF SUPERVISORS December 3, 1964
Administration Building
515 North Sycamore
Santa Ana, California

Gentlemen.

Attached is a comparison report of savings gained through the use of the Coleman Vote Tally system The categories shown bear a direct relation to the use of this equipment

The net recurring savings for the November 3, 1964, election is $230,248 This saving will increase in future elections in direct proportion to the increase in voter population

I *Precincts*

The greatest area for savings was through precinct consolidation This is dramatically evident by the comparison of the number which would have been required if hand counting had been continued As it was, just 1,021 precincts were required rather than 2,200; and because centralized voting equipment was used, the Election Code allowed for a four (4) man board rather than five (5). This resulted in a reduced need from 11,000 to just 4,084 election board members The savings in compensation is $128.025 Other benefits are evident as well With less personnel, training was better emphasized, and recruiting, which was becoming a serious problem, has been eased considerably, especially since board members no longer are required to count ballots In this regard, it became increasingly evident during the recruitment program for the June primary election that board members did not desire working until the next morning counting ballots They had knowledge that special counting boards were permitted under the law, and in fact, several counties, including Los Angeles County, were forced to use this system for the last several years

Item No 1 indicates the cost of the extra counting board which would have been necessary under the hand-count system, not only because of the fatigue factor, but also from the more important point of accuracy.

Polling place rental resulted in a savings of $17,685 in direct proportion to precinct consolidations A flat fee of $15 is provided for rent Tables, chairs and lighting are provided by the owner

The overall cost of precinct kits through consolidation was reduced with a saving of $12,392 The kit included all the necessary forms stationery, code books, etc, to set up a polling place

II *Tally Center*

The first large saving of $2,800 in one operation performed at the tally center is the elimination of canvass boards Because electronic vote-counting equipment was used, canvassing procedures were simplified and regular employees effected the reconciliation Orange County therefore, was able to certify the abstract

to the Secretary of State some two weeks earlier than ever before, and became the first large county in California to do so.

Absentee boards were reduced because hand counting of absentee ballots was eliminated In this regard, the use of pressure-sensitive dots, sent to the voter with his ballot, were completely successful, resulting in a saving of $1,280

The need for hand summarization at the center was eliminated, hence comptometer operators and machines were not required, resulting in a saving of $1,800

Tally forms and other peripheral forms needs were eclipsed with a saving of $4,381 However, I B M punch cards used in the new system cost $300

Tally center personnel (Item No 2), represents the one large operational cost of $12,845 for the new system This category represents the large staff of 125 persons who physically operated the equipment, handled ballots, off-loaded trucks, etc, during election night, as well as two prior rehearsals Future plans call for a reanalysis of needs and the probable reduction of this cost

III. *Printing*

Legal publications, based on precinct location notifications were reduced with a saving of $4,630. Because the number of precincts were reduced, the publication costs were proportionally reduced.

GENERAL

Other economies and efficiencies have been enjoyed, however not directly attributed to the Coleman system. Some 5,000 chairs and 700 folding tables are no longer required by this office, and have been declared surplus. In fact, these items are provided by the persons from whom polling places are rented, as part of the contract agreement. A recurring cost for trucks of $2,100 and operating personnel is hereby eliminated.

Therefore, this office hereby returns to the county the Fullerton warehouse as no longer required in its operation.

Electricians were paid $2,465 in the primary election to install lights and extension lines in precinct locations This amount is an additional saving because owners now provide this service through the precinct agreement contract.

Because of consolidation of precincts, some 1,500 old wood voting booths which needed replacement were sold to a neighboring county.

Furthermore, efficiencies in procurement have been enjoyed.

Attached are two invoices indicating a substantial saving in ballot costs. However, it must be pointed out that the June ballot costs represented some premium overtime pay to offset the delays in the Stassen and Yorty ballot changes. In addition, many more ballot groups were produced.

However, the November ballot costs do include a large, more complicated ballot as well as reruns due to an abbreviation commission in a candidate designation. Paper costs of approximately $5,000 should be added to printing costs. Hence, the November cost is approximately $36,000 as against the June cost of $76,844.

Respectfully submitted,

W. E. ST. JOHN, *County Clerk*

COMPARISON REPORT OF COSTS FOR NOVEMBER 3, 1964, GENERAL ELECTION WITH PREVIOUS ELECTION AND PROJECTED COSTS IF COLEMAN VOTE TALLY SYSTEM HAD NOT BEEN USED

Category	*June 2, 1964 (primary) (without Coleman)*	*November 3, 1964 (general) (with Coleman)*	*Projected November 3, 1964 (without Coleman)*	*Savings*

(Total of only those costs which can be compared with Coleman system)	$235,869	$118,428	$348,676	$230,248 net savings

COUNTY OF ORANGE

RECOMMENDED LEGISLATIVE CHANGES

1 Amend Elections Code Section 14009, and the "procedure applicable in the event of use of the Coleman Vote Tally System," Section II, election procedure, a Precinct polling place, to allow that marking devices shall be issued to the electors for use in marking the ballot, and to be returned to the election official with the voted ballot This would have the effect of discontinuing the requirement that stamps and ink pads are required at all times in the booths and in condition for proper use per Elections Code Section 14008

2 Selective manual counting of ballots as an audit of the electromechanical counting devices should be included as legislation to allow that sometime after the semiofficial tally has been completed and before the abstract is submitted to the Secretary of State, a counting board or boards shall be called to select one (1) precinct of each 100 counted electromechanically Said precincts would be selected by the counting board and at least two offices and two propositions, and two local issues, if any, may be counted at their option.

3 Suggest modification of Section 1603 of the Elections Code, paragraph E to allow for more than four (4) members of a precinct board where ballots are to be counted at a central place, instead of at the precincts It was our experience in Orange County that a fifth member of the election board would have proven very helpful in dealing with large consolidated precincts

4 Request legislation to authorize the use of electromechanical counting machines for any and all elections including schools and special districts.

5 Amend Section 14215 to allow for a combined roster and index as per form attached to make possible automatic purging by use of data processing equipment.

6. Suggest a modification to Section 10018 of the Elections Code to allow judges or clerks of special election boards to receipt for ballots and supplies On a prearranged schedule of delivery, the inability to deliver precisely to the inspector, who may be momentarily away from his or her home, adds to inefficiency and loss of time and greater cost

7. Recommend that Section 1561 be amended to allow for larger precincts for use in consolidations which can be achieved through the use of vote counting equipment

8 Request that the Secretary of State provide ballot paper in a color which will provide suitable contrast to marking ink and that this paper be procured earlier for proper aging and avoid paper shrinkage or expansion.

OFFICE OF
DISTRICT ATTORNEY
ORANGE COUNTY
212 HALL OF RECORDS
P.O BOX 1315

December 24, 1964

Gentlemen·

Herewith is presented our general findings respecting the breakage of the Coleman voting pens occurring on election day, November 3, 1964.

Materials used (1) field investigations, (2) interviews of affected areas and persons, (3) results of the Orange County crime laboratory tests, (4) statistical data received from precinct inspectors, (5) letters from voters as to personal experience, and (6) comparison surveys with Contra Costa County.

We are advised by the Coleman Company that all pens used in Orange County were of common lot with those used in Contra Costa County and Hamilton County, Ohio, employing the same inspection techniques and control procedures We are also advised that there was no opportunity to tamper with the pens while in the custody and control of the Coleman Company Investigation discloses nothing to the contrary.

The location of any precinct in Orange County was not significant Weather conditions were deemed not of significance because of prior experience of similar conditions in Kern County Since every possible type of breakage was committed upon the pen no definitive area was deemed significant.

We are frankly unable to explain the phenomenon of the damaged voting pens in the County of Orange as contrasted with the experience of Contra Costa and Hamilton County, Ohio, where no such unusual damage occurred, unless it can be said that difficulty, frustration and anger can be self-generating and contagious

We herewith attach a summary of the questionnaires sent to the precinct inspectors for such enlightenment and consideration that you may care to give We do not vouch for the accuracy of such data, we merely set forth what we receive

Summary

Investigation discloses no organized sabotage of the voting pens

Very truly yours,

KENNETH WILLIAMS
District Attorney

Name_____ Address of polling place_____

1 Did you have any difficulty with the ballot-marking pens? Yes___ No___

2 From your original supply, did you find any inoperative pens before placing them in the voting booths? Yes___No___ If so, how many?_____ Were they broken in pieces or merely did not print satisfactorily? _____

3. If you had any trouble with the pens, what time of day was it first brought to your attention?_____
4. What was the nature of the trouble?_____
5. During the day, how many pens were marking too light to see?____ Failed to mark?___ Were physically broken in pieces?___
6. Did the pen trouble appear to slack off? Yes___No __ If so, what time?____
7. Did you demonstrate the marking pens to each voter before he received the ballot? Yes___No___ If so, on paper the color of the ballot?___ White?___ Or other?___
8. Did any worker or voter, to your knowledge, attempt to repair pens? Yes___No___ If so, how?_____

If repairs were done at your poll, did you or other workers advise any other precinct how to repair the pens? Yes___No___

9. Do you know of anyone purposely breaking a voting pen? Yes___ No___ How many?_____
10. Did the voters object to the ballot box? Yes____No____ Voting booths? Yes___No___
11. Did you receive replacement pens? Yes___No___ If so, how many? ___ When?_____
12. As voters appeared at your poll, did they express doubt that their ballots would not be counted or that the voting machine would not operate accurately? Yes___No___.
13. Any suggestions on improvements?_____

Please make any additional comments on the back of this form.

SUMMARY OF COLEMAN VOTING PEN QUESTIONNAIRES

1,021	Questionnaires sent to poll inspectors.
895	Answered.
807	Had some difficulty with marking pens.
95	Reported no trouble.
829	Had NO broken or nonprinting pen at time of the opening of the polls (original supply).
72	Had defective pen(s) in original supply.
273	Had pens that were broken
661	Had pens that did not mark satisfactorily.
2,983	Pens reported marking too light to see
1,267	Pens reported failing to mark.
1,207	Pens reported physically broken.
330	Reported pen trouble did not slack off.
861	Reported pens were demonstrated to voters before entering voting booths.
417	Reported some attempt to repair pens.
475	Reported no attempt to repair pens.
874	Reported no knowledge of anyone purposely breaking a voting pen.
21	Reported pens purposely broken.
4,485	Replacement pens reported received.

PRELIMINARY REPORT
on the
VOTRONICS VOTE COUNTER
as used in
RIVERSIDE COUNTY
GENERAL ELECTION
November 3, 1964

DONALD D. SULLIVAN, *County Clerk*

On April 27, 1964, the Board of Supervisors of Riverside County authorized the negotiation for lease, with option to purchase, of 24 Votronics Vote Counters to be delivered for use in the November 3, 1964, general election. The transaction was finalized by lease executed in May, just prior to the primary election.

This new concept required changes in procedures, particularly from manual counting of ballots in the precincts to centralized counting. Because of mileage factors in Riverside County, local interest in city and special district candidates and measures, it was felt that decentralization of counting was desirable, and certainly feasible, with the Votronics Vote Counters The 24 vote counters leased by the county were supplemented with 3 additional machines (at no cost to the county) from Cubic Corporation, the manufacturer.

In the past, ballots, when counted, were delivered to 14 return centers, where the results of votes cast were transmitted by telephone to the counting center located at the county seat. Results, with polls closing at 7 p m, were received from smaller precincts beginning around 9:30 to 10 p m., with no appreciable volume until 11 to 11:30 p.m, and the main bulk being received between 1 a m. and 2:30 a.m. Under central counting procedures, with the polls closing at 8 p m., results of the absentee canvass and some of the smaller precincts were available to the press and radio by 9 p.m.

For the November 3rd general election, seven counting centers were established. These were located in the cities of Banning, Blyth, Corona, Hemet, Indio, Palm Springs and Riverside, with equipment assigned according to the number of precincts to be counted. From the outlying centers, results of votes cast in each precinct were transmitted over the county's microwave system and leased line commercial telephones already in existence to the Riverside counting center.

For the first time, election returns were transmitted to the county's data processing center for tabulation This provided for a faster and more accurate running tally of votes cast during the hours of greatest public interest, reduced costs of abstract forms, and, for the first time, a final count of *all* candidates and measures including those on the ballot through consolidation of city and special district elections. Significant savings in time were effected in completing the official canvass, since the statement of all votes cast was in our hands on Tuesday, November 10th, one week after the election, and only 3½ working days

COMPARISON OF PERSONNEL AND COSTS FOR NOVEMBER 3, 1964 GENERAL ELECTION WITH PREVIOUS ELECTIONS AND PROJECTED FIGURES IF VOTRONICS HAD NOT BEEN USED

	November 6, 1962 (General)	*June 2, 1964 (Primary)*	*November 3, 1964 (General)*	*November 3, 1964 (w/o Votronics)*	*New Costs*	*Savings*
Registered voters	138,563	140,728	166,413	166,413		
Total ballots cast (Includes absentee ballots)	109,305 (5,351)	100,585 (2,711)	146,517 (7,175)	146,517 (7,175)

Counting center costs	--	--	4,263[7]	--	4,263	
					$5,584	$88,210 Savings
Totals	$93,373	$80,698	$48,597	$131,223		5,584 New costs

Time factors				
Manual counting in precincts	7 hours × 5,748 = 40,236 hours	7 hours × 5,180 = 36,260 hours	1 5 hours × 1,580 = 2,370 hours	7 hours × 7,724 = 54,068 hours
Counting in seven centers (268 personnel)			11 75 hours × 268 = 3,149 hours	
			5,519 hours total	48,549 man-hours
Time completed				
Unofficial, to Secretary of State	3 10 p m , Nov 7	5 a m , June 3	9 a m , Nov 4 [8]	
Official canvass	Dec 3 (27 days)	June 22 (20 days)	Nov 16 (13 days)	

[1] Following the 1962 general election at the request of the board of supervisors and in accordance with a recommendation of the grand jury, the entire county was reprecincted Seven hundred twenty-seven precincts were reduced to 591 raising the average of registered voters per precinct from 190 to 239 Registration for the 1964 primary election necessitated the reestablishment of 66 precincts (or double boards), making a total of 657, with an average of 214 voters per precinct This was necessary since we are required to divide or double-board precincts where the voter registration exceeds 250

[2] Use of vote tabulating devices requires establishment of central counting procedures, and if savings are to be effected, the consolidation of precincts within legal limitations not to exceed 600 voters Careful consolidation of precincts planned for the general election resulted in 341 consolidated precincts or double boards, but registration figures at the September 10th closing date required 54 additional precincts or double boards to remain under the 600 limit Average voter registration in the consolidated precincts was 421 Riverside County has 19 precincts, which because of distance and lack of population density, remain under 100 voters, and reduce the overall average considerably The average for the remaining 376 consolidated precincts is 439 registered voters

[3] Section 1570 of the Elections Code requires that precinct boundaries for the general election shall be the same as those established for the primary election, except to the extent necessary to add or subtract precincts as the result of population change or division of precincts containing more than 250 voters, etc Had Riverside County continued with manual counting procedures in the precincts compliance with Section 1570 would have required the establishment of 975 precincts or double boards because of the number of basic precincts with an excess of 250 registered voters This is a rather startling increase but is based on actual records For this reason all projected costs are based upon this figure The restrictions of Section 1570 apply only to the limited period between the primary and general elections, and at any other time, reprecincting under careful study would reduce the total of 975 precincts considerably

[4] Ballot printing costs include all testing, programming and readout sheets required for instruction testing and official counting procedures

[5] $1,256 represents costs of Riverside County Data Processing Department for services in both unofficial tally on election night and the official canvass commenced at 1 p m , November 5th and completed on November 10 1964

[6] Costs of absentee canvass are absorbed in counting center costs as all 7,175 absentee ballots were machine counted between 8 p m and 8 45 p m on election night

[7] Counting center data

	Miles from county seat	Machines	Precincts to count	Counted	Ballots counted	Counting time (hours)	Staff	Cost
Banning	30	2	30	30	10 573	8½	27	$438
Blythe	175	1	11	11	3,905	5	13	204
Corona	14	3	47	47	16 260	9	30	471
Hemet	32	4	57	57	19,757	7½	38	609
Indio	75	2	34	34	10,959	6½	27	438
Palm Springs	52	3	39	28	9 057	8	37	594
Riverside	—	12	177	188	*33,456	11½	96	1,509
		27	395	395	152,967		268	$4,263

* Includes 8,000 special district ballots

[8] Unofficial returns tabulated on election night included only principal candidates and measures as designated by the Secretary of State and the board of supervisors These totals were available at 7 30 a m , Wednesday, November 4, 1964 Complete returns were available for all candidates and measures by 10 30 a m the same date

after the canvass was commenced. A study of unofficial returns compiled on election night against the official returns indicated that human error in transmitting the unofficial returns was reduced from a factor of 0.95 percent in the primary election to 0.19 percent in the general election.

Significant savings in personnel, man-hours and costs were effected through the use of the vote-tabulating devices, and the chart on the following pages provides a comparison with previous elections and estimated costs for the same election had Riverside County not used the Votronics Vote Counters The items shown on the chart include only those which are affected by adoption of procedures for vote-counting machines.

From our experience, we are pleased to report that.

1. The Votronics Vote Counter counts ballots with 100-percent accuracy. To resolve differences in readout figures discovered after the ballots were passed to the manual-counting board, several recounts of entire precincts were made to resolve the differences. In every instance totals for each candidate and measure on the ballot were exactly the same as when first counted, and the difference between the two result of votes-cast sheets were resolved by the second reading.
2. This equipment is simple in operation and little preliminary training is required. Only 25 percent of the machine-counting personnel had even seen the machine before election night, but they rapidly adjusted to the machine, and increased production was apparent as the counting progressed
3. This equipment provides flexibility desirable for decentralized counting as well as in the event of machine failure. While two machines failed and were unable to be restored to service, the ballots can be, and were in this instance, transported to Riverside, where the 11 remaining precincts were counted on 11 machines within 30 minutes after their arrival The manufacturer has now guaranteed modification of all machines to eliminate the particular machine failure mentioned.
4. While the machine will count ballots at the rate of 1,200 per hour, a more practical rate is 1,000 per hour, and a sustained rate allowing for interim accuracy testing and for relief of personnel would be more appropriate at 800
5. Voter reaction is favorable since there is no change in voting habits The only difference is in the mark made on the ballot—a solid black circle instead of a cross.
6. Election officer reaction is favorable since long, tedious hours of counting is eliminated for them. The only unfavorable reaction occurred where there were in excess of 500 voters to be processed in the polling place. Four-man boards, which is the size allowed by law, do not have the opportunity to get away for meals or rest periods as the flow of voters is fairly constant.
7. Central counting procedures require polling places to be open from 7 a.m. to 8 p.m. A sampling of 100 of the 395 precincts in Riverside

County indicates that an average of less than five voters appeared during the extra hour that the polls were open. Many precincts had no voters during that period

8. While there was no significant change in the time when the unofficial totals were available, early returns represented at least twice the number of ballots as would have been reported at the same hour using manual counting, and the early returns represented a better cross section of the county for those who are interested in "trends."
9. In addition to the savings in man-hours, a considerable amount, if not all, of the human error in counting is eliminated.
10. Savings in costs and man-hours well justify the purchase and continued use of this equipment.

OFFICE OF
DISTRICT ATTORNEY
COUNTY OF RIVERSIDE
COURT HOUSE

February 2, 1965

MR. DON A. ALLEN, SR., *Chairman*
Assembly Committee on Elections and Reapportionment
Room 110, 217 West First Street
Los Angeles, California 90012

Dear Sir:

We have your letter of January 25, 1965, asking whether any investigations have been made into the use of experimental vote tabulating devices.

There have been no irregularities reported concerning the use of experimental vote tabulating devices in this county and there have been no investigations that I know of.

I have been informed that our county clerk has made certain recommendations to Gordon Cologne, State Senator from this county and to W. Craig Biddle, our Assemblyman.

If there is any further assistance we can give you, please call upon us.

Yours very truly,

WILLIAM O. MACKEY
District Attorney

COUNTY OF SAN DIEGO

INTERDEPARTMENTAL CORRESPONDENCE

DATE: 16 November 1964

TO. BOARD OF SUPERVISORS

FROM: CHARLES J. SEXTON, *Registrar of Voters*

On November 3, 1964 this office conducted the presidential general election utilizing Cubic Corporation's Votronics Vote Counter The following is a summary of my observations regarding this operation based on the experience gained in this first-time use of the equipment, and an analysis of the documentation of the operation through machine logs, accuracy tests, etc It also includes information given to us from many of the persons who assisted us—machine operators and supervisors, and incorporates many very general observations from many sources This is of necessity a somewhat brief report; however, additional documentation is available and can be provided on request

1 The community of San Diego, including the county, the City of San Diego, the port, and other jurisdictions consolidating special elections, accrued a savings of approximately $255,000 from the use of the equipment Expenditures directly related to the use of the equipment, including the lease price, amounted to $208,000 The net savings from the use of this equipment will amount to about $47,000 In the event your board exercises its option on the lease to purchase of the advanced-type Cubic machines, an additional savings of $125,000 credit toward this purchase will also be realized

2. At 11 p m , Thursday, November 12, this office had final totals for all candidates for all offices, and votes for and against all measures While some printing of the official canvass still remains to be done, this puts us at least 10 days to 2 weeks ahead of any previous major election in point of time in completing the official canvass Results will be certified to your board next Thursday for appropriate action In the conduct of the semiofficial, a greater number of total votes were reported more rapidly than ever before This may be difficult to understand in view of some of the criticisms However, this information can be ascertained through a comparison of total votes reported in this and in previous elections at a comparable time following the close of the polls

3 In entering into this one-time lease contract, we were completely aware that we would be operating under certain difficulties

a The machine which was used is basically a small county machine and we would under no conditions enter into any sort of a permanent arrangement for the use of a device which would not have an automated output such as is contemplated in the advanced model of Cubic's device.

b We knew that we would be operating under a severe space handicap in our election night operation This did present many difficulties.

c This was a first-time use of this machine and we were completely without experience in an actual operation Decisions that were made as far back as July and August looked good at that time but hurt us severely in our election-night operation This included decisions relating to the processing of absentee ballots, and decisions regarding the number of manual tally ballots that would have to be handled in the course of the evening

4. The stamping device for marking the ballot used at this election will need improvement An improved device which can be relied upon to make consistent marks in all cases is considered to be an essential part of any system which the county intends using for the future

5 Cubic Corporation furnished 63 machines for our use on election night Two-thirds of these machines were accuracy checked and operated successfully until noon of the following day The remaining one-third of the machines experienced some difficulty in the course of the 17-hour period until the operation was terminated at noon on Wednesday. Cubic Corporation indicates that future units to be delivered will have a high degree of quality control and reliability that will insure against mechanical and electronic failures Their assurance of being able to provide these guarantees relates to the experience gained in the use of this equipment at this past election Additional requirements of this nature include checking circuitry to insure accuracy and reliability, and immediate knowledge of machine failure

6. Considerable difficulty was encountered on election night with torn and damaged ballots This problem can be reduced by redesign of ballot padding techniques and by better education of precinct workers

San Diego County made a large step forward in a complete conversion to a mechanized voting system at a major election and considerable experience has been gained in new areas of consolidations and central counting Mechanized voting concepts must be utilized in future elections and the experience gained in this operation, as well as the dollar savings, certainly indicate that this pioneering effort was a success There simply can be no reversion to formerly used manual tally systems I believe that we can safely say that Cubic Corporation gained as much by this experience as we did and would provide an acceptable device for the future lease-to-purchase contract

CHARLES J SEXTON
Registrar of Voters

COUNTY OF SAN DIEGO
OFFICE OF
DISTRICT ATTORNEY

January 27, 1965

HON. DON A ALLEN, SR., *Chairman*
Assembly Committee on
Elections and Reapportionment
Room 110
217 West First Street
Los Angeles, California 90012

Dear Mr. Allen:

Mechanical vote-tabulating devices were utilized for the first time in this county in the November 1964 election. Although delay and difficulty sufficient to engender rather substantial public comment occurred during the tabulating process, no complaint regarding irregularity was submitted to this office and to the best of our knowledge, no such complaint was received at any other agency of the county, including the grand jury.

Upon receipt of your letter, we reviewed the Final and Supplemental Reports of the 1964 San Diego County Grand Jury and we find no reference therein to vote-tabulating procedures

We trust that the foregoing is in satisfactory response to your letter of January 25.

Very truly yours,

JAMES DON KELLER
District Attorney

SAN JOAQUIN COUNTY

REPORT

on its use of

HARRIS VOTOMATIC VOTE RECORDER

in the

NOVEMBER 3, 1964

GENERAL ELECTION

prepared by the

REGISTRATION-ELECTION DEPARTMENT

RALPH W. EPPERSON, *County Clerk*

AL FLOR, *Supervisor of Elections*

COUNTY OF SAN JOAQUIN

RALPH W. EPPERSON, *County Clerk*

OFFICE OF THE

REGISTRATION-ELECTION DEPARTMENT

ALBERT FLOR, *Supervisor of Elections*

HON. BOARD OF SUPERVISORS
Courthouse
Stockton, California

Gentlemen:

We respectfully submit this report on the Harris Votomatic Vote Recorder as tested at the November 3, 1964, general election.

The intent of this report was to set forth our experiences, to evaluate our procedures and to recommend future changes. We feel that the test of Votomatic was most successful and that the value of this system is self-evidenced

We respectfully request that the board of supervisors appropriate funds for the purchase of 1,600 Votomatics for use in San Joaquin County. With the purchase of this quantity, we will have sufficient units for precinct demonstrations in the next election year, and they can then be absorbed into regular voting use as our registered voters increase

Very truly yours,

RALPH W EPPERSON
County Clerk

In April 1964, the Board of Supervisors of San Joaquin County appointed a citizens committee to study and finally recommend one of the voting systems available to California counties. This committee was composed of one member from each of the following organizations in San Joaquin County· League of Women Voters, Taxpayers Association, Democratic Central Committee, Republican Central Committee

and the Board of Supervisors The county clerk, county counsel and county administrator were named as ex officio members to the committee After four months of study, this committee recommended by a 4-1 vote, that the board of supervisors test the Harris Votomatic Vote Recorder in the November general election.

Briefly defined, the Harris Votomatic is a single punch-card marking device by which the voter inserts a prescored punch card into the Votomatic and then indicates his vote by "punching out" the candidate of his choice with a small stylus The punched cards are then brought to a central counting center to be counted on the county's existing data-processing equipment

After holding two public hearings on the committee's recommendation, the board of supervisors, on August 27, 1964, voted 5-0 to conduct the November 3, 1964, general election on Votomatic The following consideration lead to the board's November-test decision·

1 Use of Votomatic
   a. The least expensive system available
   b The highest possible savings to taxpayers
   c Apparent speed and accuracy of system
2 The opportunity of being the test county
   a In test runs the manufacturer frequently assumes burdens beyond those normally expected of a vendor
   b Offer of special price consideration
3 Highest possible voters participation
   a To test voters acceptance
   b To obtain maximum benefit from voter education programs
4 The least number of ballot changes
   a For easier computer programming in test election
5 A countywide election
   a To obtain maximum benefit from voter education programs

There were three principal factors to be proven in the test

1 Voters' acceptance
2 Votomatic's speed and accuracy
3 Lower election cost

VOTERS' ACCEPTANCE

Since the Harris system requires a change in voters' habits, from rubber stamping a paper ballot to "punching out" a punchcard, the major test would be voters' acceptance However, the results of the election proved that this was probably the least area of concern. Our total vote cast was 87 8 percent, which compares favorably with our all-time high of 88 7 percent. We have not received one written complaint about the Votomatic from any of the 93,047 voters who used it on election day (absentee ballots were on paper). In fact, the voters' acceptance was most enthusiastic

The various news services were completely satisfied with the test The local newspapers and radio stations gave excellent cooperation in the preelection voters' education program and most of them publicly supported the success of the Votomatic operation after the election.

Both political parties had some prior reservation as to the use of the Votomatic, i e, voters' education, voters' acceptance and election officers' training However, both parties were very satisfied with the conduct of the election and felt that their earlier concerns were satisfactorily resolved

The only complaints received, which warrants consideration, were that in some areas the voters had to stand in line longer than usual This was due to consolidation of precincts and the voters' unfamiliarity with the Votomatic We feel that the situation will resolve itself in part as the voters become more familiar with the use of the Votomatic and by establishing a ratio of 100 registered voters to each Votomatic unit, and also by better selection of polling places We find that a voter will take far less time marking his ballot in a voting booth located in a larger polling place such as a multipurpose room in a school building than they do in a smaller polling place, such as a private residence or a small garage

SPEED AND ACCURACY

The speed of the election's result was most satisfactory We released our first running total at 9 10 p m, and released our last precinct total at 2 08 a m (see Exhibit II attached). This compares most favorably with our last precinct report in the 1962 general election at 8 30 a m the following morning

The first precinct reported in to its receiving center at 8 45 p m, which is 45 minutes after the close of the polls The actual computer time for the 93,047 ballot cards ran that night was 3½ hours

While we cannot precisely state the accuracy of the total election result, it is safe to assume that the accuracy level of the Votomatic is absolute as compared to manual counts This assumption is based on recount records of manually tabulated paper ballot counts and the long history of accuracy on punchcard computers and the accuracy tests made election night However, we feel that we will never be able to make a precise accuracy statement until such time as we are petitioned for recount

ELECTION COSTS

In Exhibit 3 we have listed the cost comparisons between the 1962 general election paper ballot, the 1964 general election conducted on Votomatic and estimated costs of the 1964 general election had it been conducted on paper ballots Please bear in mind some of our expenses in this election could be accounted to some over precautionary measures, because of our first test election

The county rented 1,376 Votomatics (used for voting) from Harris at $25 each The rental fee included the ballot boxes, vote checkers and the ballot assemblies, except for the actual printing cost of the ballot pages In addition, Harris Votomatic furnished 369 demonstration units without charge The total rental charges, including freight, was $34,542 10 The actual unit rental of $34,400 will apply to the $200,000 purchase price if purchase is indicated prior to January 1, 1965

Including the rental fees in the total costs, the election cost the taxpayers $15,787 81 less than it would have on paper ballots Assuming

that the Votomatics were purchased, we would have reduced our cost per registered voter from $1 35 to $0.89 each or a total savings of $50,329 91

At the offer presented San Joaquin County by Harris Votomatic, we could write off the cost in four elections

In addition, we feel we will lower cost of future elections by eliminating the precinct demonstrators, heavier consolidation of precincts, revision of certain forms and in the fact that we have made some nonrecurring purchases (metal container, extension cords, etc)

FUNCTIONAL OPERATION

Almost every function relating to the conduct of elections was directly affected by the use of Votomatic We feel that some comment on these are pertinent to this report.

Voters' Education

Harris Votomatic was very helpful with the voters' education program They assumed what costs were involved, provided personnel to assist and gave many helpful suggestions based on their Georgia experiences There were two major education drives.

1 On election day, there was a paid demonstrator, with a demonstration unit, in each precinct The demonstrators were instructed to be quite insistent that every voter try out the Votomatic before obtaining a ballot from the precinct board.

2 On October 22nd we had paid demonstrators in every elementary school building throughout the county, from the hours of 2 p m. to 8 p m , for public demonstration All school students were given "fliers" to take home announcing the demonstrations and describing the Votomatics (We would like to point out that the county superintendent of schools office, many school administrators and teachers were most cooperative in these demonstrations). In addition to the public demonstrations, we made the Votomatics available to the high schools on the Monday and Tuesday preceding the 22nd for student education On Wednesday, they were made available to the junior high schools and on Thursday, the morning of the 22nd, they were made available to the elementary school teachers for demonstrations to their students.

We feel that the public demonstrations held in the school buildings were only somewhat successful The parent response was greater in the rural areas than in the metropolitan areas, but both were below our expectations However, we do feel that the student demonstrations were most rewarding. Because of the simplicity of the Votomatic operation, the students loved it and seemed to rush home to tell their parents how easy it was to vote.

Supplementing these two main drives, the Votomatics were demonstrated to almost every service club, civic organization, church group, labor unions and P T A organizations. They were loaned to candidates and political party organizations for demonstration The American Legion took the education program on as a unit project and opened a downtown store for Votomatic demonstrations where they gave "I pledge to vote" pins to every person they trained. The League of

Women Voters demonstrated the Votomatic as a part of their nonpartisan program on the ballot propositions

Overall, we feel our voter education program was at least 99+1/100 percent complete, if not pure.

Precincts

We reduced our general election precincts from 510 in the primary election to 295 in the general election on Votomatic. This done by consolidating general election precincts two to one in the heavily populated areas We left the rural area precincts unconsolidated because of distance to polling places We furnished five Votomatics per consolidated precinct and in the unconsolidated precincts, we furnished three This gave a ratio as low as 10 voters per unit to a high of 175 voters per unit. This was done primarily to gain experience as the number of registered voters per unit to determine our ratio in future elections. Under the punchcard system, precincts can range as high as 1,000 registered voters We felt that if Votomatics are purchased, the determining factor in establishing our precincts would be the number of registered voters which a precinct board of four could process during a rush hour We had precincts ranging in size from 29 registered voters to 883 Based on the general election experience, we feel that we can have precincts of about 600 registered voters each

Polling Places

Total rental of polling places was substantially reduced by the consolidation of precincts We use as many free rental locations as possible; i e, schools, firehouses, churches, etc. We pay $10 for those polling places which we must rent (principally private garages) Total cost for rentals were reduced from $3,450 in the 1962 general to $1,720 for the 1964 general

We found one rather interesting psychological fact about voter behavior, i.e., in polling places where the booths are located in a large area (school multipurpose) the voters take less time to mark their ballots than where they are located in smaller area, such as a private living room or small garage

In future elections, if we create precincts of 600 or more registered voters and furnish 8 to 10 Votomatics, we will have to have larger size polling places than some of our present garages and residences

Election Officers

With less precincts, we reduced our election-officer staff from 4,080 in the 1964 primary to 1,180 in the general There were four election officers per precinct—inspector ($21), assistant inspector and two judges ($18 each). Bearing in mind that the board of supervisors appropriated funds for increase of election officers' salaries only if paper ballots were to be used, the use of Votomatic reduced the election officers' salaries account from what would have been $75,990 to an actual expenditure of $24,162.

In training our election officers we established classes throughout the county, restricting attendance to only 10 precincts per class Our school of instructions lasted approximately two hours We assigned each precinct board to a given class period and had three classes per day. We furnished supply kits to each board for the class period and went over

each item that had varied from the paper ballot function In retrospect, we were over-concerned about the Votomatic precinct closeout changes. We do not feel that this restrictive of a class attendance was necessary We could have confined our attendance to inspectors only. However, we could have stressed the write-in canvass more completely

In addition to the school of instructions, we furnished each election officer with a step-by-step instruction sheet Harris Votomatic also furnished a pictorial instruction guide for each precinct board.

Very few precinct boards had any substantial problems in closing out their precincts and getting their voted ballot cards into the receiving centers However, it seems, from questionnaires submitted to inspectors, that the larger precincts (500 or more) had problems processing voters during the rush hours or else getting enough free time to allow the election officers lunch and dinner breaks The average maximum number of voters processed per hour was around 50 The slowest process appears to be the searching of the index to register and the book of official affidavits for the voter's name Therefore, in future elections, it may be necessary to provide for six-member boards in precincts of 500 or more.

Polling Place Equipment

1 *Chairs and tables:* With the reduced number of precincts and election officers, we now have sufficient chairs and tables to handle our future growth for some time to come

2 *Voting booths:* We used all three types of our existing booths without making any alterations for the use of Votomatic The Harris people had recommended that the units be bolted to the booth's shelf However, we felt this was undesirable since in the event Votomatic proved unsuccessful, we would not be left with booths having four holes in the shelves So we simply had the election officers set the Votomatics on the shelves when they set up their polling places. Out of 93,047 times that the Votomatics were used on election day, not once did one fall from the voting shelf Therefore, we feel that all three types of our booths are quite adequate for the Votomatic system. However, we would recommend that we continue our present policy of gradually replacing the old wooden booths with new metal ones—and that the new ones have the shelf built at an angle and recessed to hold the Votomatics

3 *Ballot boxes:* The problem of purchasing ballot boxes would be automatically taken care of with the purchase of Votomatic, since Harris ships each group of four units in a ballot box.

Receiving Centers

The receiving center operation was basically the same as in past elections We had the same four centers established throughout the county The farthest distance from receiving center to counting center was only 21 miles Two election officers were required to bring in the precinct returns to their assigned centers. The receiving centers then had the voted ballot card containers transported, under guard, to the counting center in the courthouse basement The only additional personnel required, due to Votomatic, was the guards.

Counting Center

The counting center was established in the courthouse basement where the data-processing equipment is located The counting-center personnel totaled 62 for election night They comprised the following boards.

1. *Seal and Container Inspecting Board* (Two Boards—Three Members Each)

As set forth in the State Voting Commission procedures, these two boards checked in the metal containers having the voted ballot cards They were required to certify to the condition of seal upon receipt We established a ratio of 150 precincts per board This proved very successful and could probably be increased to 200 or more

2 *Ballot Inspecting Board* (Ten Boards—Three Members Each Plus One Runner Each)

In accordance with the procedures, this board breaks the seal, opens the container and removes the voted ballot cards and the defective ballot cards, has the defective cards reproduced, places the header card on the voted-card stacks, notes the number of cards in the stack and then transfers them to the computer Based on our observations in the Georgia primary election, we felt we would establish a 30-precinct-per-board ratio for the ballot-inspecting board However, based on our operation election night, we feel this could be increased to 40–1 or 50–1 and higher

3 *Data Processing Board* (One Board—Four Members)

This board and its functions are set forth in the commission's procedures Ours was composed of county data-processing people We have no recommendation for change in this board Since this board actually operates the 1,400 family, there must be one for each system used

4 *Accuracy Board* (One Board—Three Members)

The function of this board is also set forth in the procedures Basically this board certifies to the accuracy of the total results For our own protection, we picked top data-processing people from outside county service (Data supervisors from Stanford Data Processing Corp, Diamond Walnut and Sharpes General Depot)

5 *Packaging and Sealing Board* (One Board—Three Members)

This board and its function is also provided in the procedures They package and seal the voted-ballot cards after they have been run through the computer and released by the accuracy board

6 *Header-Card Board* (One Board—2 Members)

Though not specifically provided for in the procedures, we established this board to control the prepunched header cards placed with the stack of voted-ballot cards from each precinct

7 *Duplicating Board* (One Board—Four Members)

Though this board is not specifically established in the procedures, its duties are to duplicate the defective cards received from the precincts We duplicated these cards on an IBM 519 and, upon the advice of the accuracy board, we made photocopies of all defective cards prior to putting them in the 519 One member of the board made the

photocopies, another operated the 519 and the other two compared the reproduced cards for accuracy. We reproduced 81 defective cards on the 519 None of these were mutilated by the 519. Therefore, we feel that photocopies of defective cards would not be necessary in future elections.

We also duplicated 124 defective cards detected in the computer room by the data-processing board. We did not endeavor to reproduce these cards election night, since it would hamper our assembly line functions (the 519 was located in the ballot-inspecting board room). They were reproduced the next day for the official canvass Out of the 93,047 ballot cards read, only 7 defective cards made it to the computer to cause downtime However, downtime was less than two minutes per card and none of the seven cards were mutilated.

Computer Equipment

All voted-ballot cards were read on our 1401 Column Binary Card System, with 4-K storage and a start-read attachment. By using this additional device, we were able to increase our card-read speed from 400 to 800 per minute. In addition, we had standby equipment under contract, in the event our county equipment failed

Our printout showed the precinct totals for each candidate and each measure, plus a countywide running total for each and also showed the percentage of vote received for each, at both precinct and countywide level We had to preprint the candidates and measures on our printout forms since practically all of the 4-K storage was used for the program Much of the storage was used because of the percentage of vote tabulation However, we are concerned about the capacity of 4-K storage in primary elections where we have as many as 36 different ballot types In the November election, we had only four ballot types, but we were able to get by with only one ballot program, and the one program required practically all of the 4-K storage, with the percentage computed It is quite possible that 4-K may be sufficient for more ballot types if we don't compute percentages and if we have some of the program (i e , party affiliation) prepunched in the ballot cards However, we would recommend that our 1401 storage be increased to 8-K.

Ballots and Supplies

The only significant increase in cost, due to the Votomatic operation, was in the ballots and precinct kits. Some of this increase can be accounted to overprecautionary measures, and some of it can be charged to the lack of statewide volume purchase

At the request of the board of supervisors, we used every other hole in the Votomatic assembly This practically doubled our ballot length as far as printing stock is concerned.

Our sample ballot, as opposed to Monterey County, was in booklet form to create a facsimile of the Votomatic's ballot assembly This created additional printing cost because of cutting, stapling and trimming We have not been able to obtain unit cost breakdown from our ballot supplies so we do not know the cost of our sample ballots, nor can we compare prices with the flat sheet sample used by Monterey At the present time we feel we will use the same sample ballot layout for future elections.

Absentee ballots were conducted on the old paper ballot form. Again, we do not have a unit price, however, we are sure that this was quite expensive since it required a separate ballot makeup for the paper ballot form Monterey County used a ballot similar to their sample ballot for absentee voting This saved a separate composition cost We would recommend in future elections that our absentee ballot format be the same as the sample ballot format in order to save composition cost.

Our write-in ballot envelope was less expensive than anticipated but we will have to make some modifications to insure that the voter inserts the ballot card properly. In addition, we hope to be able to have the ballot stub numbers removed from the write-in ballot envelopes

Our ballot cards were purchased through Secretary of State from IBM The commission's procedures require the precinct number to be punched or printed on the bottom of the cards We ordered the cards from IBM in reverse number order and had a local printer print the precinct numbers in accordance with our quantity order The local printing was 80¢ per thousand. IBM is in a position to offer the same service at 70¢ per thousand In future elections, we will have IBM do it, if we can anticipate our precinct quantities far enough in advance We purchased approximately 100 extra ballots per precinct in the anticipation of heavy spoilage due to the unfamiliarity of voters with Votomatic However, our spoilage was far below anticipation In fact, it was only slightly higher than normal ballots.

The precinct kits were $15 75 each which was higher than our $11 50 for the paper ballot kits Again, some of this can be accounted to our overprecautions Some of it can be accounted to the additional envelopes and seals required by the procedures However, we feel that most of it can be charged to lack of volume printing by the supplier. With our county using 295 precincts and Monterey County using 37, it doesn't provide for volume printing We feel the price will come down as more counties utilize Harris Votomatics.

Votomatics

1 *Preelection Day*

We found one major area of concern in this election We consolidated a junior college district trustee election with our general. The principal area is in Stanislaus County, but the district includes one of our high schools (seven precincts) There were 24 candidates who filed for election. The Votomatics will accept only 20 names per page Therefore, we were left with the choice of either rotating the names, as provided in the procedures, or furnishing paper ballots for the consolidated portion We decided to use the paper ballots However, if we are again faced with this problem, we will print the candidates' names on the reverse side of the second sheet This way a voter will be able to see all of the candidates' names at one time

The Votomatics and the ballot assemblies were shipped separately, prior to the day of election It was necessary, before delivery to precincts, to check the ballot assemblies; place them in the Votomatics, attach the wire seal; place the precinct number on the Votomatic container and on the ballot box holding the Votomatics for that precinct

It required four people two working days to perform this function on all 1,376 units used for voting.

The Votomatics were delivered to the polling places with the rest of the equipment. Since the procedures require the precinct number to appear on the ballot assemblies, the transfer companies were required to make guaranteed delivery to each polling place The ballot boxes holding four Votomatics were insufficient for convenient delivery within the consolidated precincts where we furnished five units We found it necessary to tie the extra Votomatic to the ballot box for that precinct to insure delivery. We hope to have the commission's procedures changed to allow for ballot-type designations on the ballot assemblies rather than the precinct number. This way, guaranteed precinct delivery would be less of a problem

2 *Election Day*

All the Votomatics performed very well on election day, particularly when one considers that this was the first time that our 93,047 voters used them Out of 61 trouble calls from precincts answered by our radio cars on election day, the following can be attributed to Votomatics·

18 jammed cards
13 request for additional Votomatics
9 new stylus
4 lights
2 damaged ballot assemblies

Most of the jammed card problems occurred early in the morning It was discovered that most of these were due to an old habit developed by the election officers in the use of paper ballots—in that they partially tore the perforation on the ballot card prior to handing it to the voter. Consequently, after the voter had punched his ballot, the perforation would give when the voter tried to remove it from the Votomatic, leaving the ballot card in the unit Since we had wire-sealed the ballot assemblies, it was necessary to send staff to remove the jammed cards and replace the metal seal

The stylus problem was created by the voters breaking the chain Only one of the replaced stylus was due to the bending of the point

Of the two damaged ballot assembly calls, one was due to the voter tearing a page out of the assembly The other was due to the voter punching the stylus through the arrow on the ballot pages

3. *Recommendations*

We have made the following recommendations to Harris Votomatic for changes in their units:

1. That in lieu of the metal hinging of the ballot pages, that a ballot assembly with plastic envelopes be made available to purchasers.

2. That the yellow mask be made for custom punching in convenient installation.

3. That the chain be made either longer or located in the center of the unit rather than on the right-hand side It appears that the present length is not convenient for left-handed voters

The Harris people have assured us that these changes are being provided in the new units.

Vote Checker

In addition to the ballot box furnished with each group of four units, Harris provides a vote checker This is a ballot assembly attached to a small card holder in which a voted ballot card, with the stub detached, can be inserted for checking the vote. We feel that the convenience of the vote checker is not worth the cost of printing the ballot assemblies We feel that a punched ballot card can be easily checked by the numerical comparison of the punched holes against the printed arrows on the ballot assembly Therefore, we feel that we will not furnish vote checkers to the precincts in future elections

EXHIBIT 1

SAN JOAQUIN COUNTY

OPERATIONAL COMPARISON BETWEEN 1962 AND 1964 GENERAL ELECTIONS

Item	*1962 general (paper ballot)*	*1964 general (Votomatic)*
Total registration	108,307	111,041

PART II

CASES ON REAPPORTIONMENT

KENNETH W. COLEGROVE, Peter J. Chamales and Kenneth C Sears, Appellants,

v.

DWIGHT H GREEN, as a Member ex officio of the Primary Certifying Board of the State of Illinois, et al.

(328 U S 549)
June 10, 1946

OPINION OF THE COURT

Mr Justice Frankfurter announced the judgment of the Court and an opinion in which Mr Justice Reed and Mr Justice Burton concur.

This case is appropriately here, under § 266 of the Judicial Code, 28 USCA § 380, 8 FCA title 28, § 380, on direct review of a judgment of the District Court of the Northern District of Illinois, composed of three judges, dismissing the complaint of these appellants Appellants are three qualified voters in Illinois districts which have much larger populations than other Illinois Congressional districts They brought this suit against the Governor, the Secretary of State, and the Auditor of the State of Illinois, as members ex officio of the Illinois Primary Certifying Board, to restrain them, in effect, from taking proceedings for an election in November 1946, under the provisions of Illinois law governing Congressional districts Ill L 1901, p 3 Formally, the appellants asked for a decree, with its incidental relief, § 274(d) Judicial Code, 28 USCA § 400, 8 FCA title 28, § 400, declaring these provisions to be invalid because they violated various provisions of the United States Constitution and § 3 of the Reapportionment Act of August 8, 1911, 37 Stat 13, c 5 as amended, 2 USCA § 2a, 2 FCA title 2, § 2a, in that by reason of subsequent changes in population the Congressional districts for the election of Representatives in the Congress created by the Illinois Laws of 1901 (Ill Rev Stat c 46, 1945, §§ 154–156) lacked compactness of territory and approximate equality of population. The District Court, feeling bound by this Court's opinion in Wood v Broom, 287 US 1, 77 L ed 131, 53 S Ct 1, dismissed the complaint (DC) 64 F Supp 632.

The District Court was clearly right in deeming itself bound by Wood v Broom, supra, and we could also dispose of this case on the authority of Wood v Broom The legal merits of this controversy were settled in that case, inasmuch as it held that the Reapportionment Act of June 18, 1929, 46 Stat 21, c 28, as amended, 2 USCA § 2a, 2 FCA title 2, § 2a, has no requirements "as to the compactness, contiguity and equality in population of districts" 287 US at 8, 77 L ed 135, 53 S Ct 1 The Act of 1929 still governs the districting for the election of Representatives It must be remembered that not only was the legislative history of the matter fully considered in Wood v Broom, but the question had been elaborately before the Court in Smiley v Holm, 285 US 355, 76 L ed 795, 52 S Ct 397; Koenig v Flynn, 285 US 375 76 L ed 805, 52 S Ct 403, and Carroll v Becker, 285 US 380, 76 L ed 807, 52 S Ct 402,

argued a few months before Wood v Broom was decided Nothing has now been adduced to lead us to overrule what this Court found to be the requirements under the Act of 1929, the more so since seven Congressional elections have been held under the Act of 1929 as construed by this Court. No manifestation has been shown by Congress even to question the correctness of that which seemed compelling to this Court in enforcing the will of Congress in Wood v Broom.

But we also agree with the four Justices (Brandeis, Stone, Roberts, and Cardozo, JJ.) who were of opinion that the bill in Wood v. Broom, supra, should be "dismissed for want of equity " To be sure, the present complaint, unlike the bill in Wood v Broom, was brought under the Federal Declaratory Judgment Act which, not having been enacted until 1934, was not available at the time of Wood v. Broom. But that Act merely gave the federal courts competence to make a declaration of rights even though no decree of enforcement be immediately asked It merely permitted a freer movement of the federal courts within the recognized confines of the scope of equity. The Declaratory Judgment Act "only provided a new form of procedure for the adjudication of rights in conformity" with "established equitable principles." Great Lakes Dredge & Dock Co. v Huffman, 319 US 293, 300, 87 L ed 1407, 1412, 63 S Ct 1070. And so, the test for determining whether a federal court has authority to make a declaration such as is here asked, is whether the controversy "would be justiciable in this Court if presented in a suit for injunction " Nashville, C & St L. R Co. v Wallace, 288 US 249, 262, 77 L ed 730, 735, 53 S Ct 345, 87 ALR 1191.

We are of opinion that the petitioners ask of this Court what is beyond its competence to grant. This is one of those demands on judicial power which cannot be met by verbal fencing about "jurisdiction." It must be resolved by considerations on the basis of which this Court, from time to time, has refused to intervene in controversies It has refused to do so because due regard for the effective working of our government revealed this issue to be of a peculiarly political nature and therefore not meet for judicial determination.

This is not an action to recover for damage because of the discriminatory exclusion of a plaintiff from rights enjoyed by other citizens. The basis for the suit is not a private wrong, but a wrong suffered by Illinois as a polity Compare Nixon v. Herndon, 273 US 536, 71 L ed 759, 47 S Ct 446, and Lane v Wilson, 307 US 268, 83 L ed 1281, 59 S Ct 872, with Giles v Harris, 189 US 475, 47 L ed 909, 23 S Ct 639. In effect this is an appeal to the federal courts to reconstruct the electoral process of Illinois in order that it may be adequately represented in the councils of the Nation. Because the Illinois Legislature has failed to revise its Congressional Representative districts in order to reflect great changes, during more than a generation, in the distribution of its population, we are asked to do this, as it were, for Illinois.

Of course no court can affirmatively re-map the Illinois districts so as to bring them more in conformity with the standards of fairness for a representative system. At best we could only declare the existing electoral system invalid. The result would be to leave Illinois undistricted and to bring into operation, if the Illinois legislature chose not to act, the choice of members for the House of Representatives on a state-wide ticket. The last stage may be worse than the first. The

upshot of judicial action may defeat the vital political principle which led Congress, more than a hundred years ago, to require districting. This requirement, in the language of Chancellor Kent, "was recommended by the wisdom and justice of giving, as far as possible, to the local subdivisions of the people of each state, a due influence in the choice of representatives, so as not to leave the aggregate minority of the people in a state, though approaching perhaps to a majority, to be wholly overpowered by the combined action of the numerical majority, without any voice whatever in the national councils." 1 Kent, Commentaries, 12th ed, 1873, *230–231, note (c) Assuming acquiescence on the part of the authorities of Illinois in the selection of its Represenatives by a mode that defies the direction of Congress for selection by districts, the House of Representatives may not acquiesce In the exercise of its power to judge the qualifications of its own members, the House may reject a delegation of Representatives-at-large Article I, § 5, Cl 1 For the detailed system by which Congress supervises the election of its members, see e g., 2 USCA §§ 201–226, 2 FCA title 2, §§ 201–226; Bartlett, Contested Elections in the House of Representatives (2 vols); Alexander, History of the Procedure of the House of Representatives (1916) c XVI Nothing is clearer than that this controversy concerns matters that bring courts into immediate and active relations with party contests From the determination of such issues this Court has traditionally held aloof It is hostile to a democratic system to involve the judiciary in the politics of the people. And it is not less pernicious if such judicial intervention in an essentially political contest be dressed up in the abstract phrases of the law.

The petitioners urge with great zeal that the conditions of which they complain are grave evils and offend public morality. The Constitution of the United States gives ample power to provide against these evils But due regard for the Constitution as a viable system precludes judicial correction Authority for dealing with such problems resides elsewhere. Article I, § 4 of the Constitution provides that "The Times, Places and Manner of holding Elections for . Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations, . ." The short of it is that the Constitution has conferred upon Congress exclusive authority to secure fair representation by the States in the popular House and left to that House determination whether States have fulfilled their responsibility. If Congress failed in exercising its powers, whereby standards of fairness are offended, the remedy ultimately lies with the people. Whether Congress faithfully discharges its duty or not, the subject has been committed to the exclusive control of Congress An aspect of government from which the judiciary, in view of what is involved, has been excluded by the clear intention of the Constitution cannot be entered by the federal courts because Congress may have been in default in exacting from States obedience to its mandate.

The one stark fact that emerges from a study of the history of Congressional apportionment is its embroilment in politics, in the sense of party contests and party interests The Constitution enjoins upon Con-

* These years were chosen at random.

gress the duty of apportioning Representatives "among the several States . according to their respective Numbers, . . ." Article 1, § 2 Yet, Congress has at times been heedless of this command and not apportioned according to the requirements of the Census It never occurred to anyone that this Court could issue mandamus to compel Congress to perform its mandatory duty to apportion "What might not be done directly by mandamus, could not be attained indirectly by injunction" Chafee, Congressional Reapportionment (1929) 42 Harvard L Rev 1015, 1019 Until 1842 there was the greatest diversity among the States in the manner of choosing representatives because Congress had made no requirement for districting [June 15, 1836] 5 Stat 49, c 99 Congress then provided for the election of Representatives by districts Strangely enough, the power to do so was seriously questioned, it was still doubted by a Committee of Congress as late as 1901 See e g, Speech of Mr [afterwards Mr Justice] Clifford, Cong Globe, April 28, 1842, 27th Cong, 2d Sess, Appx, p 347; 1 Bartlett, Contested Elections in the House of Representatives (1865) 47, 276, H R Rep No 3000, 56th Cong 2d Sess (1901); H R Doc No 2052, 64th Cong, 2d Sess (1917) 43; United States v Gradwell, 243 US 476, 482, 483, 61 L ed 857, 863, 37 S Ct 407 In 1850 Congress dropped the requirement [May 23, 1850] 9 Stat 428, 432, 433, c 11 The Reapportionment Act of 1862 required that the districts be of contiguous territory [June 14, 1862] 12 Stat 572, c 170 In 1872 Congress added the requirement of substantial equality of inhabitants, [February 2, 1872] 17 Stat 28, c 11 This was reinforced in 1911 [August 8, 1911] 37 Stat 13, 14, c 5, 2 USCA § 2, 2 FCA title 2, § 2 But the 1929 Act, as we have seen, dropped these requirements [June 18, 1929] 46 Stat 21, c 28, 2 USCA § 2a, 2 FCA title 2, § 2a Throughout our history, whatever may have been the controlling Apportionment Act, the most glaring disparities have prevailed as to the contours and the population of districts Appendix I summarizes recent disparities in the various Congressional Representative districts throughout the country and Appendix II gives fair samples of prevailing gerrymanders For other illustrations of glaring inequalities, see 71 Cong Rec 2278–79, 2480 et seq, 86 Cong Rec 4369, 4370–71, 76th Cong, 2d Sess (1940), H R Rep No 1695, 61st Cong, 2d Sess (1910), (1920) 24 Law Notes 124, (October 30, 1902) 75 The Nation 343, and see, generally, Schmeckebier, Congressional Apportionment (1941), and on gerrymandering, see Griffith, The Rise and Development of the Gerrymander (1907)

To sustain this action would cut very deep into the very being of Congress Courts ought not to enter this political thicket The remedy for unfairness in districting is to secure State legislatures that will apportion properly, or to invoke the ample powers of Congress The Constitution has many commands that are not enforceable by courts because they clearly fall outside the conditions and purposes that circumscribe judicial action Thus, "on demand of the executive authority," Art 4, § 2, of a State it is the duty of a sister State to deliver up a fugitive from justice But the fulfillment of this duty cannot be judicially enforced Kentucky v Dennison, 24 How(US) 66, 16 L ed 717 The duty to see to it that the laws are faithfully executed cannot be brought under legal compulsion, Mississippi v Johnson, 4 Wall (US)

475, 18 L ed 437 Violation of the great guaranty of a republican form of government in States cannot be challenged in the courts Pacific Teleph & Teleg Co v Oregon, 223 US 118, 56 L ed 377, 32 S Ct 224. The Constitution has left the performance of many duties in our governmental scheme to depend on the fidelity of the executive and legislative action and, ultimately, on the vigilance of the people in exercising their political rights

Dismissal of the complaint is affirmed.

Mr. Justice Jackson took no part in the consideration or decision of this case

For opinions of Rutledge and Black, JJ , see post, pp 1442, 1443.

Mr. Justice Rutledge:

I concur in the result. But for the ruling in Smiley v. Holm, 285 US 355, 76 L ed 795, 52 S Ct 397, I should have supposed that the provisions of the Constitution, Art 1, § 4, that "The Times, Places and Manner of holding Elections for . . . Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations . . . ;" Art I, § 2, vesting in Congress the duty of apportionment of representatives among the several states "according to their respective Numbers;" and Art I, § 5, making each house the sole judge of the Qualifications of its own Members, would remove the issues in this case from justiciable cognizance. But, in my judgment, the Smiley Case rules squarely to the contrary, save only in the matter of degree.

Moreover, we have but recently been admonished again that it is the very essence of our duty to avoid decision upon grave constitutional questions, especially when this may bring our function into clash with the political departments of the Government, if any tenable alternative ground for disposition of the controversy is presented [1]

I was unable to find such an alternative in that instance. There is one, however, in this case. And I think the gravity of the constitutional questions raised so great, together with the possibilities for collision above mentioned, that the admonition is appropriate to be followed here. Other reasons support this view, including the fact that, in my opinion, the basic ruling and less important ones in Smiley v. Holm (US) supra, would otherwise be brought into question.

Assuming that that decision is to stand, I think, with Mr. Justice Black, that its effect is to rule that this Court has power to afford relief in a case of this type as against the objection that the issues are not justiciable.

In the later case of Wood v Broom, 287 US 1, 77 L ed 131, 53 S Ct 1, the Court disposed of the cause on the ground that the 1929 Reapportionment Act, 46 Stat 21, c 28, 2 USCA § 2a, 2 FCA title 2, § 2a, did not carry forward the requirements of the 1911 Act, 37 Stat 13, c 5, 2 USCA § 2, 2 FCA title 2, § 2, and declined to decide whether there was equity in the bill. 287 US 1, 8, 77 L ed 131, 135, 53 S Ct 1. But, as the Court's opinion notes, four justices thought the bill should be dismissed for want of equity.[2]

In my judgment this complaint should be dismissed for the same reason. Assuming that the controversy is justiciable, I think the cause is of so delicate a character, in view of the considerations above noted, that the jurisdiction should be exercised only in the most compelling circumstances

As a matter of legislative attention, whether by Congress or the General Assembly, the case made by the complaint is strong But the

[1] United States v Lovett, 328 US 303, concurring opinion at 1261, ante, 1252, 66 S Ct 1073 "But the most fundamental principle of constitutional adjudication is not to face constitutional questions but to avoid them, if at all possible And so the 'Court developed for its own governance in the cases confessedly within its jurisdiction, a series of rules under which it has avoided passing upon a large part of all the constitutional questions pressed upon it for decision'"

[2] Want of equity jurisdiction does not go to the power of a court in the same manner as want of jurisdiction over the subject matter Thus, want of equity jurisdiction may be waived Matthews v Rodgers, 284 US 521, 524, 525, 76 L ed 447, 451, 452, 52 S Ct 217, and cases cited.

relief it seeks pitches this Court into delicate relation to the functions of state officials and Congress, compelling them to take action which heretofore they have declined to take voluntarily or to accept the alternative of electing representatives from Illinois at large in the forthcoming elections

The shortness of the time remaining makes it doubtful whether action could, or would, be taken in time to secure for petitioners the effective relief they seek To force them to share in an election at large might bring greater equality of voting right It would also deprive them and all other Illinois citizens of representation by districts which the prevailing policy of Congress commands 46 Stat 26, c 28, as amended, 2 USCA § 2a, 2 FCA title 2, § 2a

If the constitutional provisions on which appellants rely give them the substantive rights they urge, other provisions qualify those rights in important ways by vesting large measures of control in the political subdivisions of the government and the state There is not, and could not be except abstractly, a right of absolute equality in voting At best there could be only a rough approximation And there is obviously considerable latitude for the bodies vested with those powers to exercise their judgment concerning how best to attain this, in full consistency with the Constitution

The right here is not absolute And the cure sought may be worse than the disease.

I think, therefore, the case is one in which the Court may properly, and should, decline to exercise its jurisdiction [3] Accordingly, the judgment should be affirmed and I join in that disposition of the cause

Mr Justice Black, dissenting

The complaint alleges the following facts essential to the position I take Petitioners, citizens and voters of Illinois, live in Congressional election districts, the respective populations of which range from 612,000 to 914,000 Twenty other Congressional election districts have populations that range from 112,116 to 385,207 In seven of these districts the population is below 200,000 The Illinois Legislature established these districts in 1901 on the basis of the Census of 1900 The Federal Census of 1910, of 1920, of 1930, and of 1940, each showed a growth of population in Illinois and a substantial shift in the distribution of population among the districts established in 1901 But up to date, attempts to have the State Legislature reapportion Congressional election districts so as more nearly to equalize their population have been unsuccessful A contributing cause of this situation, according to petitioners, is the fact that the State Legislature is chosen on the basis of State election districts inequitably apportioned in a way similar to that of the 1901 Congressional election districts The implication is that the issues of State and Congressional apportionment are thus so interdependent that it is to the interest of State Legislators to perpetuate the inequitable apportionment of both State and Congressional election districts Prior to this proceeding a series of suits had been brought

[3] "The power of a court of equity to act is a discretionary one Where a federal court of equity is asked to interfere with the enforcement of state laws, it should do so only 'to prevent irreparable injury which is clear and imminent' " American Federation of Labor, Metal Trades Dept v Watson, 327 US 582, ante, 873, 66 S Ct 761, and cases cited.

in the State courts challenging the State's local and federal apportionment system In all these cases the Supreme Court of the State had denied effective relief [1]

In the present suit the complaint attacked the 1901 State Apportionment Act on the ground that it among other things violates Article I and the Fourteenth Amendment of the Constitution Petitioners claim that since they live in the heavily populated districts their vote is much less effective than the vote of those living in a district which under the 1901 Act is also allowed to choose one Congressman, though its population is sometimes only one-ninth that of the heavily populated districts Petitioners contend that this reduction of the effectiveness of their vote is the result of a wilful legislative discrimination against them and thus amounts to a denial of the equal protection of the laws guaranteed by the Fourteenth Amendment. They further assert that this reduction of the effectiveness of their vote also violates the privileges and immunities clause of the Fourteenth Amendment in abridging their privilege as citizens of the United States to vote for Congressmen, a privilege guaranteed by Article I of the Constitution They further contend that the State Apportionment Act directly violates Article I which guarantees that each citizen eligible to vote has a right to vote for Congressmen and to have his vote counted The assertion here is that the right to have their vote counted is abridged unless that vote is given approximately equal weight to that of other citizens It is my judgment that the District Court had jurisdiction; [2] that the complaint presented a justiciable case and controversy; [3] and that petitioners had standing to sue, since the facts alleged show that they have been injured as individuals [4] Unless previous decisions of this Court are to be overruled, the suit is not one against the State but against State officials as individuals [5] The complaint attacked the 1901 Apportionment Act as unconstitutional and alleged facts indicating that the Act denied petitioners the full right to vote and the equal protection of the laws These allegations have not been denied Under these circumstances, and since there is no adequate legal remedy for depriving a citizen of his right to vote, equity can and should grant relief

It is difficult for me to see why the 1901 State Apportionment Act does not deny petitioners equal protection of the laws The failure of the Legislature to reapportion the Congressional election districts for forty years, despite census figures indicating great changes in the distribution of the population, has resulted in election districts the populations of which range from 112,000 to 900,000 One of the petitioners

lives in a district of more than 900,000 people. His vote is consequently much less effective than that of each of the citizens living in the district of 112,000. And such a gross inequality in the voting power of citizens irrefutably demonstrates a complete lack of effort to make an equitable apportionment The 1901 State Apportionment Act if applied to the next election would thus result in a wholly indefensible discrimination against petitioners and all other voters in heavily populated districts The equal protection clause of the Fourteenth Amendment forbids such discrimination It does not permit the states to pick out certain qualified citizens or groups of citizens and deny them the right to vote at all. See Nixon v. Herndon, 273 US 536, 541, 71 L ed 759, 761, 47 S Ct 446; Nixon v Condon, 286 US 73, 76 L ed 984, 52 S Ct 484, 88 ALR 458 No one would deny that the equal protection clause would also prohibit a law that would expressly give certain citizens a half-vote and others a full vote The probable effect of the 1901 State Apportionment Act in the coming election will be that certain citizens, and among them the petitioners, will in some instances have votes only one-ninth as effective in choosing representatives to Congress as the votes of other citizens Such discriminatory legislation seems to me exactly the kind that the equal protection clause was intended to prohibit

The 1901 State Apportionment Act in reducing the effectiveness of petitioners' votes abridges their privilege as citizens to vote for Congressmen and violates Article I of the Constitution Article I provides that Congressmen "shall be . . . chosen . . . by the people of the several States" It thus gives those qualified a right to vote and a right to have their vote counted. Ex parte Yarbrough, 110 US 651, 28 L ed 274, 4 S Ct 152, United States v Mosley, 238 US 383, 59 L ed 1355, 35 S Ct 904 This Court in order to prevent "an interference with the effective choice of the voters" has held that this right extends to primaries United States v Classic, 313 US 299, 314, 85 L ed 1368, 1377, 61 S Ct 1031 While the Constitution contains no express provision requiring that Congressional election districts established by the states must contain approximately equal populations, the Constitutionally guaranteed right to vote and the right to have one's vote counted clearly imply the policy that state election systems, no matter what their form, should be designed to give approximately equal weight to each vote cast To some extent this implication of Article I is expressly stated by § (2) of the Fourteenth Amendment which provides that "Representatives shall be apportioned among the several States according to their respective numbers. . " The purpose of this requirement is obvious It is to make the votes of the citizens of the several States equally effective in the selection of members of Congress It was intended to make illegal a nation-wide "rotten borough" system as between the States. The policy behind it is broader than that. It prohibits as well Congressional "rotten boroughs" within the States, such as the ones here involved The policy is that which is laid down by all the Constitutional provisions regulating the election of members of the House of Representatives, including Article I which guarantees the right to vote and to have that vote effectively counted: All groups, classes, and individuals shall to the extent that it is practically feasible be given equal representation in the House of Representatives, which,

in conjunction with the Senate, writes the laws affecting the life, liberty, and property of all the people.

It is true that the States are authorized by § 2 of Article I of the Constitution to legislate on the subject of Congressional elections to the extent that Congress has not done so. Thus the power granted to the State Legislature on this subject is primarily derived from the Federal and not from the State Constitution. But this federally-granted power with respect to elections of Congressmen is not to formulate policy but rather to implement the policy laid down in the Constitution, that, so far as feasible, votes be given equally effective weight Thus, a state legislature cannot deny eligible voters the right to vote for Congressmen and the right to have their vote counted It can no more destroy the effectiveness of their vote in part and no more accomplish this in the name of "apportionment" than under any other name. For legislation which must inevitably bring about glaringly unequal representation in the Congress in favor of special classes and groups should be invalidated, "whether accomplished ingeniously or ingenuously" Smith v Texas, 311 US 128, 132, 85 L ed 84, 87, 61 S Ct 164 See also Lane v. Wilson, 307 US 268, 272, 83 L ed 1281, 1286, 59 S Ct 872

Had Illinois passed an Act requiring that all of its twenty-six Congressmen be elected by the citizens of one county, it would clearly have amounted to a denial to the citizens of the other counties of their Constitutionally guaranteed right to vote. And I cannot imagine that an Act that would have apportioned twenty-five Congressmen to the State's smallest county and one Congressman to all the others, would have been sustained by any Court Such an Act would clearly have violated the Constitutional policy of equal representation. The 1901 Apportionment Act here involved violates that policy in the same way The policy with respect to federal elections laid down by the Constitution, while it does not mean that the Courts can or should prescribe the precise methods to be followed by state legislatures and the invalidation of all Acts that do not embody those precise methods, does mean that state legislatures must make real efforts to bring about approximately equal representation of citizens in Congress Here the Legislature of Illinois has not done so. Whether that was due to negligence or was a wilful effort to deprive some citizens of an effective vote, the admitted result is that the Constitutional policy of equality of representation has been defeated Under these circumstances it is the Court's duty to invalidate the state law.

It is contended, however, that a court of equity does not have the power, or even if it has the power, that it should not exercise it in this case To do so, it is argued, would mean that the Court is entering the area of "political questions" I cannot agree with that argument There have been cases, such as Coleman v Miller, supra (307 US pp 454, 457, 83 L ed 1396, 1398, 59 S Ct 972, 122 ALR 695), where this Court declined to decide a question because it was political In the Miller Case, however, the question involved was ratification of a Constitutional amendment, a matter over which the Court believed Congress had been given final authority To have decided that question would have amounted to a trespass upon the Constitutional power of Congress Here we have before us a state law which abridges the Constitu-

tional rights of citizens to cast votes in such way as to obtain the kind of Congressional representation the Constitution guarantees to them

It is true that voting is a part of elections and that elections are "political" But as this Court said in Nixon v Herndon, 273 US 536, 71 L ed 759, 47 S Ct 446, supra, it is a mere "play on words" to refer to a controversy such as this as "political" in the sense that courts have nothing to do with protecting and vindicating the right of a voter to cast an effective ballot The Classic Case, among myriads of others, refutes the contention that courts are impotent in connection with evasions of all "political" rights Wood v. Broom, 287 US 1, 77 L ed 131, 53 S Ct 1, does not preclude the granting of equitable relief in this case There this Court simply held that the State Apportionment Act did not violate the Congressional Reapportionment Act of 1929, 46 Stat 21, 26, 27, c 28, 2 USCA § 2a, 2 FCA title 2, § 2a, since that Act did not require election districts of equal population The Court expressly reserved the question of "the right of the complainant to relief in equity" Giles v Harris, 189 US 475, 47 L ed 909, 23 S Ct 639, also did not hold that a Court of Equity could not, or should not, exercise its power in a case like this As we said with reference to that decision in Lane v Wilson, 307 US 268, 272, 273, 83 L ed 1281, 1286, 59 S Ct 872, it stands for the principle that Courts will not attempt to "supervise" elections Furthermore, the author of the Giles v Harris opinion also wrote the opinion in Nixon v Herndon, in which a voter's right to cast a ballot was held to give rise to a justifiable controversy

In this case, no supervision over elections is asked for What is asked is that this Court do exactly what it did in Smiley v. Holm, 285 US 255, 76 L ed 795, 52 S Ct 397, supra It is asked to declare a state apportionment bill invalid and to enjoin state officials from enforcing it. The only difference between this case and the Smiley Case is that there the case originated in the State Courts while here the proceeding originated in the Federal District Court The only type of case in which this Court has held that a federal district court should in its discretion stay its hand any more than a state court is where the question is one which state courts or administrative agencies have special competence to decide This is not that type of question What is involved here is the right to vote guaranteed by the Federal Constitution It has always been the rule that where a federally protected right has been invaded the federal courts will provide the remedy to rectify the wrong done Federal courts have not hesitated to exercise their equity power in cases involving deprivation of property and liberty Ex parte Young, 209 US 123, 52 L ed 714, 28 S Ct 441, 13 LRA (NS) 932, 14 Ann Cas 764, supra; Hague v Committee for Industrial Organization, 307 US 496, 83 L ed 1423, 59 S Ct 954 There is no reason why they should do so where the case involves the right to choose representatives that make laws affecting liberty and property

Nor is there any more difficulty in enforcing a decree in this case than there was in the Smiley Case It is true that declaration of invalidity of the State Act and the enjoining of State officials would result in prohibiting the State from electing Congressmen under the system of the old Congressional districts But it would leave the State free to elect them from the State at large, which, as we held in the Smiley Case, is a manner authorized by the Constitution It is said that it

would be inconvenient for the State to conduct the election in this manner But it has an element of virtue that the more convenient method does not have—namely, it does not discriminate against some groups to favor others, it gives all the people an equally effective voice in electing their representatives as is essential under a free government, and it is Constitutional.

Mr Justice Douglas and Mr Justice Murphy join in this dissent

CHARLES W. BAKER et al., Appellants,

v

JOE C. CARR et al.

(369 U.S. 186)

March 26, 1962.

OPINION OF THE COURT

Mr. Justice Brennan delivered the opinion of the Court:

This civil action was brought under 42 USC §§ 1983 and 1988 to redress the alleged deprivation of federal constitutional rights The complaint, alleging that by means of a 1901 statute of Tennessee apportioning the members *of the General Assembly* among the State's 95 counties,[1] "these plaintiffs and others similarly situated, are denied the equal protection of the laws accorded them by the Fourteenth Amendment to the Constitution of the United States by virtue of the debasement of their votes," was dismissed by a three-judge court convened under 28 USC § 2281 in the Middle District of Tennessee.[2] The court held that it lacked jurisdiction of the subject matter and also that no claim was stated upon which relief could be granted. 179 F Supp 824 We noted probable jurisdiction of the appeal 364 US 898, 5 L ed 2d 193, 81 S Ct 230 [3] We hold that the dismissal was error, and remand the cause to the District Court for trial and further proceedings consistent with this opinion.

The General Assembly of Tennessee consists of the Senate with 33 members and the House of Representatives with 99 members. The Tennessee Constitution provides in Art 2 as follows:

"Sec. 3 Legislative authority—Term of office—The Legislative authority of this State shall be vested in a General Assembly, which shall consist of a Senate and House of Representatives, both dependent on the people; who shall hold their offices for two years from the day of the general election

"Sec 4. Census.—An enumeration of the qualified voters, and an apportionment of the Representatives in the General Assembly, shall be made in the year one thousand eight hundred and seventy-one, and within every subsequent term of ten years.

"Sec. 5 Apportionment of representatives.—The number of Representatives shall, at the several periods of making the enumeration, be apportioned among the several counties or districts, according to the number of qualified voters in each; and shall not exceed seventy-five, until the population of the State shall be one million and a half, and shall never exceed ninety-nine; Provided, that any county having two-thirds of the ratio shall be entitled to one member

"Sec. 6. Apportionment of senators—The number of Senators, shall, at the several periods of making the enumeration, be appor-

[1] Public Acts of Tennessee, c 122 (1901), now Tenn Code Ann §§ 3-101 to 3-107 The full text of the 1901 Act as amended appears in an Appendix to this opinion

[2] The three-judge court was convened pursuant to the order of a single district judge, who, after he had reviewed certain decisions of this Court and found them distinguishable in features "that may ultimately prove to be significant," held that the complaint was not so obviously without merit that he would be justified in refusing to convene a three-judge court 175 F Supp 649, 652

[3] We heard argument first at the 1960 Term and again at this Term when the case was set over for reargument. 366 US 907, 81 S Ct 1082.

tioned among the several counties or districts according to the number of qualified electors in each, and shall not exceed one-third the number of representatives. In apportioning the Senators among the different counties, the fraction that may be lost by any county or counties, in the apportionment of members of the House of Representatives, shall be made up to such county or counties in the Senate, as near as may be practicable When a district is composed of two or more counties, they shall be adjoining, and no county shall be divided in forming a district."

Thus, Tennessee's standard for allocating legislative representation among her counties is the total number of qualified voters resident in the respective counties, subject only to minor qualifications [4] Decennial reapportionment in compliance with the constitutional scheme was effected by the General Assembly each decade from 1871 to 1901. The 1871 apportionment [5] was preceded by an 1870 statute requiring an enumeration [6] The 1881 apportionment involved three statutes, the first authorizing an enumeration, the second enlarging the Senate from 25 to 33 members and the House from 75 to 99 members, and the third apportioning the membership of both Houses.[7] In 1891 there

[4] A county having less than, but at least two-thirds of, the population required to choose a Representative is allocated one Representative See also Tenn Const, Art 2, § 6 A common and much more substantial departure from the number-of-voters or total-population standard is the guaranty of at least one seat to each county See, e g, Kansas Const, Art 2, § 2, NJ Const, Art 4, § 3, ¶ 1

While the Tennessee Constitution speaks of the number of "qualified voters," the exhibits attached to the complaint use figures based on the number of persons 21 years of age and over This basis seems to have been employed by the General Assembly in apportioning legislative seats from the outset The 1870 statute providing for the first enumeration, Acts of 1870 (1st Sess) c 107, directed the courts of the several counties to select a Commissioner to enumerate "all the male inhabitants of their respective counties, who are twenty-one years of age and upward, who shall be resident citizens of their counties on the first day of January 1871." Reports compiled in the several counties on this basis were submitted to the General Assembly by the Secretary of State and were used in the first apportionment Appendix to Tenn SJ, 1871, 41, 43 Yet such figures would not reflect the numbers of persons qualified to exercise the franchise under the then-governing qualifications (a) citizenship, (b) residence in the State 12 months, and in the county six months, (c) payment of poll taxes for the preceding year unless entitled to exemption Acts of 1870 (2d Sess) c 10, (These qualifications continued at least until after 1901. See Tenn Code Ann, §§ 1167, 1220 (1896, Supp 1904)) Still, when the General Assembly directed the Secretary of State to do all he could to obtain complete reports from the counties, the Resolution spoke broadly of the "impossibility of . [redistricting] without the census returns of the voting population from each county . . " Tenn SJ, 1871, pp 46, 47, 96 The figures also showed a correlation with Federal Census figures for 1870 The Census reported 259,016 male citizens 21 and upward in Tennessee Ninth Census of the United States, 1870, Statistics of the Population 635 (1872) The Tennessee Secretary of State's Report, with 15 counties not reported, gave a figure of 237,431 Using the numbers of actual votes in the last gubernatorial election for those 15 counties, the Secretary arrived at a total of 250,025 Appendix to Tenn SJ, 1871, 41–43 This and subsequent history indicate continued reference to Census figures and finally in 1901, abandonment of a state enumeration in favor of the use of Census figures See notes 7, 8, 9, infra See also Williams, Legislative Apportionment in Tennessee, 20 Tenn L Rev 235, 236, n 6 It would therefore appear that unless there is a contrary showing at the trial, appellants' current figures, taken from the United States Census Reports, are apposite.

[5] Acts of 1871 (1st Sess), c 146

[6] Acts of 1870 (1st Sess), c 107.

[7] The statute authorizing the enumeration was Acts of 1881 (1st Sess), c. 124. The enumeration commissioners in the counties were allowed "access to the U S Census Reports of the enumeration of 1880, on file in the offices of the County Court Clerks of the State, and a reference to said reports by said commissioners shall be legitimate as an auxiliary in the enumeration required . . . " Ibid, § 4

The United States Census reported 330,305 male citizens 21 and upward in Tennessee The Tenth Census of the United States, 1880, Compendium 596 (1883) The Tennessee Secretary of State's Report gave a figure of 343,817, Tenn HJ (1st Extra Sess), 1881, 12–14 (1882)

The General Assembly was enlarged in accordance with the constitutional mandate since the State's population had passed 1,500,000 Acts of 1881 (1st Extra Sess), c 5, and see, id, Res No 3, see also Tenth Census of the United States, 1880, Statistics of the Population 77 (1881) The statute apportioning the General Assembly was Acts of 1881 (1st Extra Sess), c. 6.

was both an enumeration and an apportionment.[8] In 1901 the General Assembly abandoned separate enumeration in favor of reliance upon the Federal Census and passed the Apportionment Act here in controversy.[9] In the more than 60 years since that action, all proposals in both Houses of the General Assembly for reapportionment have failed to pass.[10]

Between 1901 and 1961, Tennessee has experienced substantial growth and redistribution of her population. In 1901 the population was 2,020,616, of whom 487,380 were eligible to vote.[11] The 1960 Federal Census reports the State's population at 3,567,089, of whom 2,092,891 are eligible to vote.[12] The relative standings of the counties in terms of qualified voters have changed significantly. It is primarily the continued application of the 1901 Apportionment Act to this shifted and enlarged voting population which gives rise to the present controversy.

Indeed, the complaint alleges that the 1901 statute, even as of the time of its passage, "made no apportionment of Representatives and Senators in accordance with the constitutional formula . . . , but instead arbitrarily and capriciously apportioned representatives in the Senate and House without reference . . to any logical or reasonable formula whatever."[13] It is further alleged that "because of the population changes since 1900, and the failure of the legislature to reapportion itself since 1901," the 1901 statute became "unconstitutional and obsolete." Appellants also argue that, because of the composition of the legislature effected by the 1901 apportionment act, redress in the form of a state constitutional amendment to change the entire mechanism for reapportioning, or any other change short of that, is difficult or impossible.[14] The complaint concludes that "these plain-

[8] Acts of 1891, c. 22, Acts of 1891 (Extra Sess), c. 10. Reference to United States Census figures was allowed just as in 1881, see supra, note 7. The United States census reported 402,476 males 21 and over in Tennessee. The Eleventh Census of the United States, 1890, Population (Part I) 781 (1895). The Tennessee Secretary of State's report gave a figure of 399,575. I Tenn. SJ. 473–474 (1891).

[9] Acts of 1901, Sen. Jt. Res. No. 35. Acts of 1901, c. 122. The Joint Resolution said: "The Federal census of 1900 has been very recently taken and by reference to said Federal census an accurate enumeration of the qualified voters of the respective counties of the State of Tennessee can be ascertained and thereby save the expense of an actual enumeration . . ."

[10] For the history of legislative apportionment in Tennessee, including attempts made since 1901, see Tenn. SJ. 1959, pp. 909–930, and "A Documented Survey of Legislative Apportionment in Tennessee, 1870–1957," which is attached as exhibit 2 to the intervening complaint of Mayor West of Nashville, both prepared by the Tennessee State Historian, Dr. Robert H. White. Examples of preliminary steps are: In 1911, the Senate called upon the Redistricting Committee to make an enumeration of qualified voters and to use the Federal Census of 1910 as the basis. Acts of 1911, SJ. Res. No. 60, p. 315. Similarly, in 1961, the Senate called for appointment of a select committee to make an enumeration of qualified voters. Acts of 1961, SJ. Res. No. 47. In 1955, the Senate called for a study of reapportionment. Tenn. SJ. 224 (1955), but see id., at 1103. Similarly, in 1961, the House directed the State Legislative Council to study methods of reapportionment. Acts of 1961, HJ. Res. No. 65.

[11] Twelfth Census of the United States, 1900, Population (Part 1) 39 (1901), (Part 2) 202 (1902).

[12] United States Census of Population: 1960, General Population Characteristics—Tennessee, Table 16 (1961).

[13] In the words of one of the intervening complaints, the apportionment was "wholly arbitrary, . . . and, indeed, based upon no lawfully pertinent factor whatever."

[14] The appellants claim that no General Assembly constituted according to the 1901 Act will submit reapportionment proposals either to the people or to a Constitutional Convention. There is no provision for popular initiative in Tennessee. Amendments proposed in the Senate or House must first be approved by a majority of all members of each House and again by two-thirds of the members in the General Assembly next chosen. The proposals are then submitted to the people at the next general election in which a Governor is to be chosen. Alternatively, the legislature may submit to the people at any general election the question of calling a convention to consider specified proposals. Such as are

tiffs and others similarly situated, are denied the equal protection of the laws accorded them by the Fourteenth Amendment to the Constitution of the United States by virtue of the debasement of their votes." [15] They seek a declaration that the 1901 statute is unconstitutional and an injunction restraining the appellees from acting to conduct any further elections under it. They also pray that unless and until the General Assembly enacts a valid reapportionment, the District Court should either decree a reapportionment by mathematical application of the Tennessee constitutional formulae to the most recent Federal Census figures, or direct the appellees to conduct leg-

adopted at a convention do not, however, become effective unless approved by a majority of the qualified voters voting separately on each proposed change or amendment at an election fixed by the convention Conventions shall not be held oftener than once in six years Tenn Const, Art 11, § 3 Acts of 1951, c 139, § 3, and Acts of 1957, c 340, § 3, provided that delegates to the 1953 and 1959 conventions were to be chosen from the counties and floterial districts just as are members of the State House of Representatives The General Assembly's call for a 1953 Constitutional Convention originally contained a provision "relating to the appointment [sic] of Representatives and Senators" but this was excised Tenn HJ, 1951, p 784 A Resolution introduced at the 1959 Constitutional Convention and reported unfavorably by the Rules Committee of the Convention was as follows

'By Mr Chambliss (of Hamilton County), Resolution No 12—Relative to Convention considering reapportionment, which is as follows

'WHEREAS, there is a rumor that this Limited Convention has been called for the purpose of postponing for six years a Convention that would make a decision as to reapportionment, and

"WHEREAS, there is pending in the United States Courts in Tennessee a suit under which parties are seeking, through decree, to compel reapportionment, and

'WHEREAS, it is said that this Limited Convention, which was called for limited consideration, is yet a Constitutional Convention within the language of the Constitution as to Constitutional Conventions, forbidding frequent Conventions in the last sentence of Article Eleven, Section 3, second paragraph, more often than each six years, to-wit

" 'No such Convention shall be held oftener than once in six years'

"NOW, THEREFORE, BE IT RESOLVED, That it is the consensus of opinion of the members of this Convention that since this is a Limited Convention as hereinbefore set forth another Convention could be had if it did not deal with the matters submitted to this Limited Convention

"BE IT FURTHER RESOLVED, That it is the consensus of opinion of this Convention that a Convention should be called by the General Assembly for the purpose of considering reapportionment in order that a possibility of Court enforcement being forced on the Sovereign State of Tennessee by the Courts of the National Government may be avoided

"BE IT FURTHER RESOLVED, That this Convention be adjourned for two years to meet again at the same time set forth in the statute providing for this Convention, and that it is the consensus of opinion of this body that it is within the power of the next General Assembly of Tennessee to broaden the powers of this Convention and to authorize and empower this Convention to consider a proper amendment to the Constitution that will provide, when submitted to the electorate, a method of reapportionment" Tenn Constitutional Convention of 1959, The Journal and Debates, 55, 278

[16] It is clear that appellants' federal consutitional claims rest exclusively on alleged violation of the Fourteenth Amendment Their primary claim is that the 1901 statute violates the Equal Protection Clause of that amendment There are allegations invoking the Due Process Clause but from the argument and the exhibits it appears that the Due Process Clause argument is directed at certain tax statutes Insofar as the claim involves the validity of those statutes under the Due Process Clause we find it unnecessary to decide its merits And if the allegations regarding the tax statutes are designed as the framework for proofs as to the effects of the allegedly discriminatory apportionment, we need not rely upon them to support our holding that the complaint states a federal constitutional claim of violation of the Equal Protection Clause Whether, when the issue to be decided is one of the constitutional adequacy of this particular apportionment, taxation arguments and exhibits as now presented add anything, or whether they could add anything however presented, is for the District Court in the first instance to decide

The complaint, in addition to the claims under the Federal Constitution, also alleges rights, and the General Assembly's duties, under the Tennessee Constitution Since we hold that appellants have—if it develops at trial that the facts support the allegations—a cognizable federal constitutional cause of action resting in no degree on rights guaranteed or putatively guaranteed by the Tennessee Constitution, we do not consider, let alone enforce, rights under a State Constitution which go further than the protections of the Fourteenth Amendment Lastly, we need not assess the legal significance, in reaching our conclusion, of the statements of the complaint that the apportionment effected today under the 1901 Act is 'contrary to the philosophy of government in the United States and all Anglo-Saxon jurisprudence ."

islative elections, primary and general, at large. They also pray for such other and further relief as may be appropriate.

I.

The District Court's Opinion and Order of Dismissal.

Because we deal with this case on appeal from an order of dismissal granted on appellees' motions, precise identification of the issues presently confronting us demands clear exposition of the grounds upon which the District Court rested in dismissing the case The dismissal order recited that the court sustained the appellees' grounds "(1) that the Court lacks jurisdiction of the subject matter, and (2) that the complaint fails to state a claim upon which relief can be granted, ..."

In the setting of a case such as this, the recited grounds embrace two possible reasons for dismissal·

First: That the facts and injury alleged, the legal bases invoked as creating the rights and duties relied upon, and the relief sought, fail to come within that language of Article III of the Constitution and of the jurisdictional statutes which define those matters concerning which United States District Courts are empowered to act;

Second: That, although the matter is cognizable and facts are alleged which establish infringement of appellants' rights as a result of state legislative action departing from a federal constitutional standard, the court will not proceed because the matter is considered unsuited to judicial inquiry or adjustment

We treat the first ground of dismissal as "lack of jurisdiction of the subject matter " The second we consider to result in a failure to state a justiciable cause of action

The District Court's dismissal order recited that it was issued in conformity with the court's per curiam opinion The opinion reveals that the court rested its dismissal upon lack of subject-matter jurisdiction and lack of a justiciable cause of action without attempting to distinguish between these grounds. After noting that the plaintiffs challenged the existing legislative apportionment in Tennessee under the Due Process and Equal Protection Clauses, and summarizing the supporting allegations and the relief requested, the court stated that "the action is presently before the Court upon the defendants' motion to dismiss predicated upon three grounds. first, that the Court lacks jurisdiction of the subject matter; second, that the complaints fail to state a claim upon which relief can be granted; and third, that indispensable party defendants are not before the Court " 179 F Supp, at 826

The court proceeded to explain its action as turning on the case's presenting a "question of the distribution of political strength for legislative purposes " For, "from a review of [numerous Supreme Court] . decisions there can be no doubt that the federal rule, as enunciated and applied by the Supreme Court, is that the federal courts, whether from a lack of jurisdiction or from the inappropriateness of the subject matter for judicial consideration, will not intervene

in cases of this type to compel legislative reapportionment." 179 F Supp, at 826.

The court went on to express doubts as to the feasibility of the various possible remedies sought by the plaintiffs. 179 F Supp, at 827, 828 Then it made clear that its dismissal reflected a view not of doubt that violation of constitutional rights was alleged, but of a court's impotence to correct that violation·

"With the plaintiffs' argument that the legislature of Tennessee is guilty of a clear violation of the state constitution and of the rights of the plaintiffs the Court entirely agrees It also agrees that the evil is a serious one which should be corrected without further delay But even so the remedy in this situation clearly does not lie with the courts It has long been recognized and is accepted doctrine that there are indeed some rights guaranteed by the Constitution for the violation of which the courts cannot give redress." 179 F Supp, at 828

In light of the District Court's treatment of the case, we hold today only (a) that the court possessed jurisdiction of the subject matter; (b) that a justiciable cause of actions is stated upon which appellants would be entitled to appropriate relief; and (c) because appellees raise the issue before this Court, that the appellants have standing to challenge the Tennessee apportionment statutes [16] Beyond noting that we have no cause at this stage to doubt the District Court will be able to fashion relief if violations of constitutional rights are found, it is improper now to consider what remedy would be most appropriate if appellants prevail at the trial.

II.

Jurisdiction of the Subject Matter

The District Court was uncertain whether our cases withholding federal judicial relief rested upon a lack of federal jurisdiction or upon the inappropriateness of the subject matter for judicial consideration—what we have designated "nonjusticiability " The distinction between the two grounds is significant In the instance of nonjusticiability, consideration of the cause is not wholly and immediately foreclosed; rather, the Court's inquiry necessarily proceeds to the point of deciding whether the duty asserted can be judicially identified and its breach judicially determined, and whether protection for the right asserted can be judicially molded In the instance of lack of jurisdiction the cause either does not "arise under" the Federal Constitution, laws or treaties (or fall within one of the other enumerated categories of Art 3 § 2), or is not a "case or controversy" within the meaning of that section; or the cause is not one described by any jurisdictional statute Our conclusion, see pp 680–697, infra, that this cause presents no nonjusticiable "political question" settles the only possible doubt that it is a case or controversy Under the present heading of "Jurisdiction of the Subject Matter" we hold only that the matter set forth in the complaint does arise under the Constitution and is within 28 USC § 1343

[16] We need not reach the question of indispensable parties because the District Court has not yet decided it

Article 3 § 2 of the Federal Constitution provides that "the judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority, . . ." It is clear that the cause of action is one which "arises under" the Federal Constitution The complaint alleges that the 1901 statute effects an apportionment that deprives the appellants of the equal protection of the laws in violation of the Fourteenth Amendment Dismissal of the complaint upon the ground of lack of jurisdiction of the subject matter would, therefore, be justified only if that claim were "so attenuated and unsubstantial as to be absolutely devoid of merit," Newburyport Water Co. v Newburyport, 193 US 561, 579, 48 L ed 795, 801, 24 S Ct 553, or "frivolous," Bell v Hood, 327 US 678, 683, 90 L ed 939, 943, 66 S Ct 773, 13 ALR2d 383[17] That the claim is unsubstantial must be "very plain" Hart v B. F Keith Vaudeville Exch, 262 US 271, 274, 67 L ed 977, 979, 43 S Ct 540 Since the District Court obviously and correctly did not deem the asserted federal constitutional claim unsubstantial and frivolous, it should not have dismissed the complaint for want of jurisdiction of the subject matter. And of course no further consideration of the merits of the claim is relevant to a determination of the court's jurisdiction of the subject matter We said in an earlier voting case from Tennessee: "It is obvious . . that the court, in dismissing for want of jurisdiction, was controlled by what it deemed to be the want of merit in the averments which were made in the complaint as to the violation of the Federal right But as the very nature of the controversy was Federal, and, therefore, jurisdiction existed, whilst the opinion of the court as to the want of merit in the cause of action might have furnished ground for dismissing for that reason, it afforded no sufficient ground for deciding that the action was not one arising under the Constitution and laws of the United States" Swafford v Templeton, 185 US 487, 493, 46 L ed 1005, 1008, 22 S Ct 783 "For it is well settled that the failure to state a proper cause of action calls for a judgment on the merits and not for a dismissal for want of jurisdiction." Bell v Hood, 327 US 678, 682, 90 L ed 939, 943, 66 S Ct 773, 13 ALR2d 383 See also Binderup v Pathe Exch, 263 US 291, 305–308, 68 L ed 308, 314, 315, 44 S Ct 96

Since the complaint plainly sets forth a case arising under the Constitution, the subject matter is within the federal judicial power defined in Art 3 § 2, and so within the power of Congress to assign to the jurisdiction of the District Courts Congress has exercised that power in 28 USC § 1343(3):

"The district courts shall have original jurisdiction of any civil action authorized by law[18] to be commenced by any person . to redress the deprivation, under color of any State law, statute, ordi-

[17] The accuracy of calling even such dismissals "jurisdictional" was questioned in Bell v Hood See 327 US, at 683

[18] 42 USC § 1983 provides "Every person who, under color of any statute, ordinance, regulation, custom, or usage, of any State or Territory, subjects, or causes to be subjected, any citizen of the United States or other person within the jurisdiction thereof to the deprivation of any rights, privileges, or immunities secured by the Constitution and laws, shall be liable to the party injured in an action at law, suit in equity, or other proper proceeding for redress"

nance, regulation, custom or usage, of any right, privilege or immunity secured by the Constitution of the United States . . . ." [19]

An unbroken line of our precedents sustains the federal courts' jurisdiction of the subject matter of federal constitutional claims of this nature The first cases involved the redistricting of States for the purpose of electing Representatives to the Federal Congress. When the Ohio Supreme Court sustained Ohio legislation against an attack for repugnancy to Art 1 § 4, of the Federal Constitution, we affirmed on the merits and expressly refused to dismiss for want of jurisdiction "in view . . of the subject-matter of the controversy and the Federal characteristics which inhere in it . . . ." Ohio ex rel Davis v Hildebrant, 241 US 565 570, 60 L ed 1172, 1177, 36 S Ct 708. When the Minnesota Supreme Court affirmed the dismissal of a suit to enjoin the Secretary of State of Minnesota from acting under Minnesota redistricting legislation, we reviewed the constitutional merits of the legislation and reversed the State Supreme Court. Smiley v Holm, 285 US 355, 76 L ed 795, 52 S Ct 397. And see companion cases from the New York Court of Appeals and the Missouri Supreme Court, Koenig v Flynn, 285 US 375, 76 L ed 805, 52 S Ct 403; Carroll v Becker, 285 US 380, 76 L ed 807, 52 S Ct 402 When a three-judge District Court, exercising jurisdiction under the predecessor of 28 USC § 1343(3), permanently enjoined officers of the State of Mississippi from conducting an election of Representatives under a Mississippi redistricting act, we reviewed the federal questions on the merits and reversed the District Court Wood v Broom, 287 US 1, 77 L ed 131, 53 S Ct 1, revg 1 F Supp 134 A similar decree of a District Court, exercising jurisdiction under the same statute, concerning a Kentucky redistricting act, was reviewed and the decree reversed Mahan v Hume, 287 US 575, 77 L ed 505, 53 S Ct 223, revg 1 F Supp 142.[20]

The appellees refer to Colegrove v Green, 328 US 549, 90 L ed 1432, 66 S Ct 1198, as authority that the District Court lacked jurisdiction of the subject matter. Appellees misconceive the holding of that case. The holding was precisely contrary to their reading of it. Seven members of the Court participated in the decision Unlike many other cases in this field which have assumed without discussion that there was jurisdiction, all three opinions filed in Colegrove discussed the question. Two of the opinions expressing the views of four of the Justices, a majority, flatly held that there was jurisdiction of the subject matter. Mr Justice Black joined by Mr. Justice Douglas and Mr Justice Murphy stated: "It is my judgment that the District Court had jurisdiction . . ," citing the predecessor of 28 USC § 1343 (3), and Bell v Hood, 327 US 678, 90 L ed 939, 66 S Ct 773, 13 ALR2d 383, supra 328 US, at 568 Mr. Justice Rutledge, writing separately, expressed agreement with this conclusion 328 US, at 564, 565, note 2 Indeed,

[19] This Court has frequently sustained District Court jurisdiction under 28 USC § 1343(3) or its predecessors to entertain suits to redress deprivations of rights secured against state infringement by the Equal Protection and Due Process Clauses of the Fourteenth Amendment Douglas v Jeannette, 319 US 157, 87 L ed 1324, 63 S Ct 877, 882, Stefanelli v Minard, 342 US 117, 96 L ed 138, 72 S Ct 118, cf Nixon v Herndon, 273 US 536, 71 L ed 759, 47 S Ct 446, Nixon v Condon, 286 US 73, 76 L ed 984, 52 S Ct 484, 88 ALR 458, Snowden v Hughes, 321 US 1, 88 L ed 497, 64 S Ct 397, Smith v Allwright, 321 US 649, 88 L ed 987, 64 S Ct 757, 151 ALR 1110, Monroe v Pape, 365 US 167, 5 L ed 2d 492, 81 S Ct 473, Egan v Aurora, 365 US 514, 5 L ed 2d 741, 81 S Ct 684

[20] Since that case was not brought to the Court until after the election had been held, the Court cited not only Wood v Broom, but also directed dismissal for mootness, citing Brownlow v Schwartz, 261 US 216, 67 L ed 620, 43 S Ct 263

it is even questionable that the opinion of Mr. Justice Frankfurter, joined by Justices Reed and Burton, doubted jurisdiction of the subject matter Such doubt would have been inconsistent with the professed willingness to turn the decision on either the majority or concurring views in Wood v Broom, supra. 328 US, at 551.

Several subsequent cases similar to Colegrove have been decided by the Court in summary per curiam statements. None was dismissed for want of jurisdiction of the subject matter. Cook v Fortson, 329 US 675, 91 L ed 596, 67 S Ct 21; Turman v Duckworth, ibid ; Colegrove v Barrett, 330 US 804, 91 L ed 1262, 67 S Ct 973;[21] Tedesco v Board of Supervisors of Elections, 339 US 940, 94 L ed 1357, 70 S Ct 797; Remmey v Smith, 342 US 916, 96 L ed 685, 72 S Ct 368; Cox v Peters, 342 US 936, 99 L ed 697, 72 S Ct 559; Anderson v Jordan, 343 US 912, 96 L ed 1328, 72 S Ct 648; Kidd v McCanless, 352 US 920, 1 L ed 2d 157, 77 S Ct 223; Radford v Gary, 352 US 991, 1 L ed 2d 540, 77 S St 559; Hartsfield v Sloan, 357 US 916, 2 L ed 2d 1363, 78 S Ct 1363; Matthews v Handley, 361 US 127, 4 L ed 2d 180, 80 S Ct 256[22]

Two cases decided with opinions after Colegrove likewise plainly imply that the subject matter of this suit is within District Court jurisdiction In MacDougall v Green, 335 US 281, 93 L ed 3, 69 S Ct 1, the District Court dismissed for want of jurisdiction, which had been invoked under 28 USC § 1343(3), a suit to enjoin enforcement of the requirement that nominees for statewide elections be supported by a petition signed by a minimum number of persons from at least 50 of the State's 102 counties This Court's disagreement with that action is clear since the Court affirmed the judgment after a review of the merits and concluded that the particular claim there was without merit In South v Peters, 339 US 276, 94 L ed 834, 70 S Ct 641, we affirmed the dismissal of an attack on the Georgia "county unit" system but founded our action on a ground that plainly would not have been reached if the lower court lacked jurisdiction of the subject matter, which allegedly existed under 28 USC § 1343(3) The express words of our holding were that "federal courts consistently refuse to exercise their equity powers in cases posing political issues arising from a state's geographical distribution of electoral strength among its political subdivisions." 339 US, at 277.

We hold that the District Court has jurisdiction of the subject matter of the federal constitutional claim asserted in the complaint

III.

Standing

A federal court cannot "pronounce any statute, either of a State or of the United States, void, because irreconcilable with the Constitution, except as it is called upon to adjudge the legal rights of litigants in actual controversies " Liverpool, N. Y & P S S. Co v Emigration Comrs 113 US 33, 39, 28 L ed 899, 901, 5 S Ct 532. Have the appellants

[21] Compare Boeing Aircraft Co v King County, 330 US 803, 91 L ed 1262, 67 S Ct 972 ("the appeal is dismissed for want of jurisdiction") See Coleman v Miller, 307 US 433, 440, 83 L ed 1385, 1389, 59 S Ct 972, 122 ALR 695

[22] Matthews did affirm a judgment that may be read as a dismissal for want of jurisdiction (DC Ind) 179 F Supp 470 However, the motion to affirm also rested on the ground of failure to state a claim upon which relief could be granted Cf text following, on MacDougall v Green And see text, p 697

alleged such a personal stake in the outcome of the controversy as to assure that concrete adverseness which sharpens the presentation of issues upon which the court so largely depends for illumination of difficult constitutional questions? This is the gist of the question of standing. It is, of course, a question of federal law

The complaint was filed by residents of Davidson, Hamilton, Knox, Montgomery, and Shelby Counties. Each is a person allegedly qualified to vote for members of the General Assembly representing his county.[23] These appellants sued "on their own behalf and on behalf of all qualified voters of their respective counties, and further, on behalf of all voters of the State of Tennessee who are similarly situated . . . ."[24] The appellees are the Tennessee Secretary of State, Attorney General, Coordinator of Elections, and members of the State Board of Elections, the members of the State Board are sued in their own right and also as representatives of the County Election Commissioners whom they appoint[25]

[23] The Mayor of Nashville suing "on behalf of himself and all residents of the City of Nashville, Davidson County, " and the Cities of Chattanooga (Hamilton County) and Knoxville (Knox County), each suing on behalf of its residents, were permitted to intervene as parties plaintiff Since they press the same claims as do the initial plaintiffs, we find it unnecessary to decide whether the intervenors would have standing to maintain this action in their asserted representative capacities

[24] The complaint also contains an averment that the appellants sue "on their own behalf and *on behalf of all other voters* in the State of Tennessee" (Emphasis added) This may be read to assert a claim that voters in counties allegedly over-represented in the General Assembly also have standing to complain But it is not necessary to decide that question in this case

[25] The duties of the respective appellees are alleged to be as follows

"Defendant, Joe C Carr, is the duly elected, qualified and acting Secretary of State of the State of Tennessee, with his office in Nashville in said State, and as such he is charged with the duty of furnishing blanks, envelopes and information slips to the County Election Commissioners, certifying the results of elections and maintaining the records thereof, and he is further ex officio charged, together with the Governor and the Attorney General, with the duty of examining the election returns received from the County Election Commissioners and declaring the election results, by the applicable provisions of the Tennessee Code Annotated, and by Chapter 164 of the Acts of 1949, inter alia

"Defendant, George F McCanless, is the duly appointed and acting Attorney General of the State of Tennessee, with his office in Nashville in said State, and is charged with the duty of advising the officers of the State upon the law, and is made by Section 23–1107 of the Tennessee Code Annotated a necessary party defendant in any declaratory judgment action where the constitutionality of statutes of the State of Tennessee is attacked, and he is ex-officio charged, together with the Governor and the Secretary of State, with the duty of declaring the election results, under Section 2–140 of the Tennessee Code Annotated

Defendant, Jerry McDonald, is the duly appointed Coordinator of Elections in the State of Tennessee, with his office in Nashville, Tennessee, and as such official, is charged with the duties set forth in the public law enacted by the 1959 General Assembly of Tennessee creating said office

"Defendants, Dr Sam Coward, James Alexander, and Hubert Brooks are the duly appointed and qualified members constituting the State Board of Elections, and as such they are charged with the duty of appointing the Election Commissioners for all the counties of the State of Tennessee, the organization and supervision of the biennial elections as provided by the Statutes of Tennessee, Chapter 9 of Title 2 of the Tennessee Code Annotated, Sections 2–901, et seq

That this action is brought against the aforenamed defendants in their representative capacities, and that said Election Commissioners are sued also as representatives of all of the County Election Commissioners in the State of Tennessee, such persons being so numerous as to make it impracticable to bring them all before the court, that there is a common question of law involved, namely, the constitutionality of Tennessee laws set forth in the Tennessee Code Annotated, Section 3–101 through Section 3–105, inclusive, that common relief is sought against all members of said Election Commissions in their official capacities, it being the duties of the aforesaid County Election Commissioners, within their respective jurisdictions, to appoint the judges of elections, to maintain the registry of qualified voters of said County, certify the results of elections held in said County to the defendants State Board of Elections and Secretary of State, and of preparing ballots and taking other steps to prepare for and hold elections in said Counties by virtue of Sections 2–1201, et seq of Tennessee Code Annotated, and Section 2–301, et seq of Tennessee Code Annotated, and Chapter 164 of the Acts of 1949, inter alia"

The question whether the named defendants are sufficient parties remains open for consideration on remand

We hold that the appellants do have standing to maintain this suit. Our decisions plainly support this conclusion Many of the cases have assumed rather than articulated the premise in deciding the merits of similar claims [26] And Colegrove v Green, 328 US 549, 90 L ed 1432, 66 S Ct 1198, supra, squarely held that voters who allege facts showing disadvantage to themselves as individuals have standing to sue [27] A number of cases decided after Colegrove recognized the standing of the voters there involved to bring those actions [28]

These appellants seek relief in order to protect or vindicate an interest of their own, and of those similarly situated Their constitutional claim is, in substance, that the 1901 statute constitutes arbitrary and capricious state action, offensive to the Fourteenth Amendment in its irrational disregard of the standard of apportionment prescribed by the State's Constitution or of any standard, effecting a gross disproportion of representation to voting population. The injury which appellants assert is that this classification disfavors the voters in the counties in which they reside, placing them in a position of constitutionally unjustifiable inequality vis-à-vis voters in irrationally favored counties A citizen's right to a vote free of arbitrary impairment by state action has been judicially recognized as a right secured by the Constitution, when such impairment resulted from dilution by a false tally, cf United States v Classic, 313 US 299, 85 L ed 1368, 61 S Ct 1031, or by a refusal to count votes from arbitrarily selected precincts, cf United States v Mosley, 238 US 383, 59 L ed 1355, 35 S Ct 904, or by a stuffing of the ballot box, cf Ex parte Siebold, 100 US 371, 25 L ed 717; United States v Saylor, 322 US 385, 88 L ed 1341, 64 S Ct 1101.

It would not be necessary to decide whether appellants' allegations of impairment of their votes by the 1901 apportionment will, ultimately, entitle them to any relief, in order to hold that they have standing to seek it If such impairment does produce a legally cog-

[26] Smiley v Holm, 285 US 355, 76 L ed 795, 52 S Ct 397, supra ("citizen, elector and taxpayer of the State"), Koenig v Flynn, 285 US 375, 76 L ed 805, 52 S Ct 403, supra ("citizens and voters of the State"). Wood v Broom, 287 US 1, 77 L ed 131, 53 S Ct 1, supra ("citizen of Mississippi, a qualified elector under its laws, and also qualified to be a candidate for election as representative in Congress"), cf Carroll v Becker, 285 US 380, 76 L ed 807, 52 S Ct 402, supra (candidate for office)

[27] Mr Justice Rutledge was of the view that any question of standing was settled in Smiley v Holm, 285 US 355, 76 L ed 795, 52 S Ct 397, supra, Mr Justice Black stated "that appellants had standing to sue, since the facts alleged show that they have been injured as individuals" He relied on Coleman v Miller 307 US 433, 438, 467, 83 L ed 1385, 1388, 1404, 59 S Ct 972, 122 ALR 695 See 328 US 564, 568

Commentators have suggested that the following statement in Mr Justice Frankfurter's opinion might imply a view that appellants there had no standing "This is not an action to recover for damage because of the discriminatory exclusion of a plaintiff from rights enjoyed by other citizens The basis for the suit is not a private wrong, but a wrong suffered by Illinois as a polity " 328 US at 552 See Jaffe, Standing to Secure Judicial Review Public Actions, 74 Harv L Rev 1265, 1298 (1961), Lewis, Legislative Apportionment and the Federal Courts, 71 Harv L Rev 1057, 1081–1083 (1958) But since the opinion goes on to consider the merits, it seems that this statement was not intended to intimate any view that the plaintiffs in that action lacked standing Nor do the cases cited immediately after the above quotation deal with standing See especially Lane v Wilson, 307 US 268, 272, 273, 83 L ed 1281, 1286, 59 S Ct 872

[28] MacDougall v Green, 335 US 281, 92 L ed 3, 69 S Ct 1, supra ("the 'Progressive Party,' its nominees for United States Senator, Presidential Electors, and State offices, and several Illinois voters"), South v Peters, 339 US 276, 94 L ed 834, 70 S Ct 641, supra ("residents of the most populous county in the State"), Radford v Gary, 352 US 991, 1 L ed 2d 540, 77 S Ct 559, supra ("citizen of Oklahoma and resident and voter in the most populous county"), Matthews v Handley, 361 US 127, 4 L ed 2d 180, 80 S Ct 256, supra ("citizen of the State"), see also Hawke v Smith (No 1), 253 US 221, 64 L ed 871, 40 S Ct 495, 10 ALR 1504, Leser v Garnett, 258 US 130, 66 L ed 505, 42 S Ct 217, Coleman v Miller, 307 US 433, 437–446, 83 L ed 1385, 1387–1393, 59 S Ct 972, 122 ALR 695

nizable injury, they are among those who have sustained it They are asserting "a plain, direct and adequate interest in maintaining the effectiveness of their votes," Coleman v Miller, 307 US, at 438, not merely a claim of "the right, possessed by every citizen, to require that the Government be administered according to law " Fairchild v Hughes, 258 US 126, 129, 66 L ed 499, 504, 42 S Ct 274; compare Leser v Garnett, 258 US 130, 66 L ed 505, 42 S Ct 217 They are entitled to a hearing and to the District Court's decision on their claims "The very essence of civil liberty certainly consists in the right of every individual to claim the protection of the laws, whenever he receives an injury " Marbury v Madison (US) 1 Cranch 137, 163, 2 L ed 60, 69.

IV.

Justiciability.

In holding that the subject matter of this suit was not justiciable, the District Court relied on Colegrove v Green, 328 US 549, 90 L ed 1432, 66 S Ct 1198, supra, and subsequent per curiam cases[29] The court stated "From a review of these decisions there can be no doubt that the federal rule . is that the federal courts . will not intervene in cases of this type to compel legislative reapportionment " 179 F Supp, at 826 We understand the District Court to have read the cited cases as compelling the conclusion that since the appellants sought to have a legislative apportionment held unconstitutional, their suit presented a "political question" and was therefore nonjusticiable We hold that this challenge to an apportionment presents no nonjusticiable "political question " The cited cases do not hold the contrary

Of course the mere fact that the suit seeks protection of a political right does not mean it presents a political question Such an objection "is little more than a play upon words." Nixon v Herndon, 273 US 536, 540, 71 L ed 759, 761, 47 S Ct 446 Rather, it is argued that apportionment cases, whatever the actual wording of the complaint, can involve no federal constitutional right except one resting on the guaranty of a republican form of government,[30] and that complaints based on that clause have been held to present political questions which are nonjusticiable

We hold that the claim pleaded here neither rests upon nor implicates the Guaranty Clause and that its justiciability is therefore not foreclosed by our decisions of cases involving that clause The District Court misinterpreted Colegrove v Green and other decisions of this Court on which it relied Appellants' claim that they are being denied equal protection is justiciable, and if "discrimination is sufficiently shown, the right to relief under the equal protection clause is not diminished by the fact that the discrimination relates to political

[29] Cook v Fortson, 329 US 675, 91 L ed 596, 67 S Ct 21, Turman v Duckworth, ibid, Colegrove v Barrett, 330 US 804, 91 L ed 1262, 67 S Ct 973, MacDougall v Green, 335 US 281, 93 L ed 3, 69 S Ct 1, South v Peters, 339 US 276, 94 L ed 834, 70 S Ct 641, Remmey v Smith, 342 US 916, 96 L ed 685, 72 S Ct 368, Anderson v Jordan, 343 US 912, 96 L ed 1328, 72 S Ct 648, Kidd v McCanless, 352 US 920, 1 L ed 2d 157, 77 S Ct 223, Radford v Gary, 352 US 991, 1 L ed 2d 540, 77 S Ct 559

[30] "The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion, and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence" US Const, Art 4 § 4,

rights" Snowden v Hughes, 321 US 1, 11, 88 L ed 497, 504, 64 S Ct 397 To show why we reject the argument based on the Guaranty Clause, we must examine the authorities under it But because there appears to be some uncertainty as to why those cases did present political questions, and specifically as to whether this apportionment case is like those cases, we deem it necessary first to consider the contours of the "political question" doctrine.

Our discussion, even at the price of extending this opinion, requires review of a number of political question cases, in order to expose the attributes of the doctrine—attributes which, in various settings, diverge, combine, appear, and disappear in seeming disorderliness. Since that review is undertaken solely to demonstrate that neither singly nor collectively do these cases support a conclusion that this apportionment case is nonjusticiable, we of course do not explore their implications in other contexts That review reveals that in the Guaranty Clause cases and in the other "political question" cases, it is the relationship between the judiciary and the coordinate branches of the Federal Government, and not the federal judiciary's relationship to the States, which gives rise to the "political question."

We have said that "in determining whether a question falls within [the political question] category, the appropriateness under our system of government of attributing finality to the action of the political departments and also the lack of satisfactory criteria for a judicial determination are dominant considerations" Coleman v Miller, 307 US 433, 454, 455, 83 L ed 1385, 1396, 1397, 59 S Ct 972, 122 ALR 695. The nonjusticiability of a political question is primarily a function of the separation of powers Much confusion results from the capacity of the "political question" label to obscure the need for case-by-case inquiry Deciding whether a matter has in any measure been committed by the Constitution to another branch of government, or whether the action of that branch exceeds whatever authority has been committed, is itself a delicate exercise in constitutional interpretation, and is a responsibility of this Court as ultimate interpreter of the Constitution To demonstrate this requires no less than to analyze representative cases and to infer from them the analytical threads that make up the political question doctrine. We shall then show that none of those threads catches this case

Foreign relations: There are sweeping statements to the effect that all questions touching foreign relations are political questions[31] Not only does resolution of such issues frequently turn on standards that defy judicial application, or involve the exercise of a discretion demonstrably committed to the executive or legislature,[32] but many such questions uniquely demand single-voiced statement of the Government's views[33] Yet it is error to suppose that every case or controversy which touches foreign relations lies beyond judicial cognizance. Our cases in this field seem invariably to show a discriminating analy-

[31] E g, "The conduct of the foreign relations of our Government is committed by the Constitution to the Executive and Legislative—'the political'—Departments of the Government, and the propriety of what may be done in the exercise of this political power is not subject to judicial inquiry or decision" Oetjen v Central Leather Co 246 US 297, 302, 62 L ed 726, 732, 38 S Ct 309

[32] See Doe ex dem Clark v Braden (US) 16 How 635, 657, 14 L ed 1090, 1099; Taylor v Morton, 2 Curt CC 454, F Cas No 13799 (D Mass) (Mr Justice Curtis), affd (US) 2 Black 481, 17 L ed 277

[33] See Doe ex dem Clark v Braden (US) 16 How 635, 657, 14 L ed 1090, 1099,

sis of the particular question posed, in terms of the history of its management by the political branches, of its susceptibility to judicial handling in the light of its nature and posture in the specific case, and of the possible consequences of judicial action For example, though a court will not ordinarily inquire whether a treaty has been terminated, since on that question "governmental action . must be regarded as of controlling importance," if there has been no conclusive "governmental action" then a court can construe a treaty and may find it provides the answer Compare Terlinden v Ames, 184 US 270, 285, 46 L ed 534, 543, 22 S Ct 484, with Society for Propagation of Gospel v New Haven (US) 8 Wheat 464, 492–495, 5 L ed 662, 669, 670 [34] Though a court will not undertake to construe a treaty in a manner inconsistent with a subsequent federal statute, no similar hesitancy obtains if the asserted clash is with state law. Compare Whitney v Robertson, 124 US 190, 31 L ed 386, 8 S Ct 456, with Kolovrat v Oregon, 366 US 187, 6 L ed 2d 218, 81 S Ct 922.

While recognition of foreign governments so strongly defies judicial treatment that without executive recognition a foreign state has been called "a republic of whose existence we know nothing," [35] and the judiciary ordinarily follows the executive as to which nation has sovereignty over disputed territory,[36] once sovereignty over an area is politically determined and declared, courts may examine the resulting status and decide independently whether a statute applies to that area [37] Similarly, recognition of belligerency abroad is an executive responsibility, but if the executive proclamations fall short of an explicit answer, a court may construe them seeking, for example, to determine whether the situation is such that statutes designed to assure American neutrality have become operative. The Three Friends (United States v The Three Friends) 166 US 1, 63, 66, 41 L ed 897, 918, 919, 17 S Ct 495. Still again, though it is the executive that determines a person's status as representative of a foreign government, Ex parte Hitz, 111 US 766, 28 L ed 592, 4 S Ct 698, the executive's statements will be construed where necessary to determine the court's jurisdiction, Re Baiz, 135 US 403, 34 L ed 222, 10 S Ct 854. Similar judicial action in the absence of a recognizedly authoritative executive declaration occurs in cases involving the immunity from seizure of vessels owned by friendly foreign governments Compare Ex parte Peru, 318 US 578, 87 L ed 1014, 63 S Ct 793, with Mexico v Hoffman, 324 US 30, 34, 35, 89 L ed 729, 734, 735, 65 S Ct 530.

Dates of duration of hostilities: Though it has been stated broadly that "the power which declared the necessity is the power to declare its cessation, and what the cessation requires," Commercial Trust Co v Miller, 262 US 51, 57, 67 L ed 858, 862, 43 S Ct 486, here too analysis reveals isolable reasons for the presence of political questions, underlying this Court's refusal to review the political departments' determination of when or whether a war has ended Dominant is the need for finality in the political determination, for emergency's nature demands

[34] And see Clark v Allen, 331 US 503, 91 L ed 1633, 67 S Ct 1431, 170 ALR 953
[35] United States v Klintock (US) 5 Wheat 144, 149, 5 L ed 55, 56, see also United States v Palmer (US) 3 Wheat 610, 634, 635, 4 L ed 471, 478
[36] Foster v Neilson (US) 2 Pet 253, 307, 7 L ed 415, 434, and see Williams v Suffolk Ins Co (US) 13 Pet 415, 420, 10 L ed 226, 228
[37] Vermilya-Brown Co. v Connell, 335 US 377, 380, 93 L ed 76, 82, 69 S Ct 140, De Lima v Bidwell, 182 US 1, 180–200, 45 L ed 1041, 1049–1057, 21 S Ct 743

"a prompt and unhesitating obedience," Martin v Mott (US) 12 Wheat 19, 30, 6 L ed 537, 540 (calling up of militia) Moreover, "the cessation of hostilities does not necessarily end the war power It was stated in Hamilton v. Kentucky Distilleries & W. Co, 251 U S 146, 161, that the war power includes the power 'to remedy the evils which have arisen from its rise and progress' and continues during that emergency. Stewart v Kahn, 11 Wall 493, 507 " Fleming v Mohawk Wrecking Co. 331 US 111, 116, 91 L ed 1375, 1382, 67 S Ct 1129 But deference rests on reason, not habit.[38] The question in a particular case may not seriously implicate considerations of finality—e g, a public program of importance (rent control) yet not central to the emergency effort.[39] Further, clearly definable criteria for decision may be available. In such case the political question barrier falls away "[A] Court is not at liberty to shut its eyes to an obvious mistake, when the validity of the law depends upon the truth of what is declared. . . [It can] inquire whether the exigency still existed upon which the continued operation of the law depended." Chastleton Corp. v Sinclair, 264 US 543, 547, 548, 68 L ed 841, 843, 44 S Ct 405 [40] Compare Woods v Cloyd W Miller Co 333 US 138, 92 L ed 596, 68 S Ct 421 On the other hand, even in private litigation which directly implicates no feature of separation of powers, lack of judicially discoverable standards and the drive for even-handed application may impel reference to the political departments' determination of dates of hostilities' beginning and ending The Protector (Freeborn v The Protector) (US) 12 Wall 700, 20 L ed 463

Validity of enactments: In Coleman v Miller, 307 US 433, 83 L ed 1385, 59 S Ct 972, 122 ALR 695, supra, this Court held that the questions of how long a proposed amendment to the Federal Constitution remained open to ratification, and what effect a prior rejection had on a subsequent ratification, were committed to congressional resolution and involved criteria of decision that necessarily escaped the judicial grasp.[41] Similar considerations apply to the enacting process: "the respect due to coequal and independent departments," and the need for finality and certainty about the status of a statute contribute to judicial reluctance to inquire whether, as passed, it complied with all requisite formalities Marshall Field & Co v Clark, 143 US 649, 672, 676, 677, 36 L ed 294, 303–305, 12 S Ct 495; see Leser v Garnett, 258 US 130, 137, 66 L ed 505, 511, 42 S Ct 217 But it is not true that courts will never delve into a legislature's records upon such a quest · If the enrolled statute lacks an effective date, a court will not hesitate to seek it in the legislative journals in order to preserve the enactment. Gardner v Collector (Gardner v Barney) (US) 6 Wall 499, 18 L ed 890 The political question doctrine, a tool for maintenance of governmental order, will not be so applied as to promote only disorder.

The status of Indian tribes: This Court's deference to the political departments in determining whether Indians are recognized as a tribe, while it reflects familiar attributes of political questions,[42] United States

[38] See, e g, Home Bldg & L Asso v Blaisdell, 290 US 398, 426, 78 L ed 413, 422, 54 S Ct 231, 88 ALR 1481

[39] Contrast Martin v Mott (US) 12 Wheat 19, 6 L ed 537, supra

[40] But cf Dakota Cent Tel Co v South Dakota, 250 US 163, 184, 187, 63 L ed 910, 924, 925, 39 S Ct 507, 4 ALR 1623

[41] Cf Dillon v Gloss, 256 US 368, 65 L ed 994, 41 S Ct 510 See also United States v Sprague, 282 US 716, 732, 75 L ed 640, 644, 51 S Ct 220, 71 ALR 1381

[42] See also Fellows v Blacksmith (US) 19 How 366, 372, 15 L ed 684, 686, United States v Old Settlers, 148 US 427, 466, 37 L ed 509, 523, 13 S Ct 650, and compare Doe ex dem Clark v Braden (US) 16 How 635, 657, 14 L ed 1090, 1099.

v Holliday (US) 3 Wall 407, 419, 18 L ed 182, 186, also has a unique element in that "the relation of the Indians to the United States is marked by peculiar and cardinal distinctions which exist no where else . . [The Indians are] domestic dependent nations . . in a state of pupilage. Their relation to the United States resembles that of a ward to his guardian." Cherokee Nation v Georgia (US) 5 Pet 1, 16, 17, 8 L ed 25, 30, 31.[43] Yet, here too, there is no blanket rule While " 'It is for [Congress] . . . , and not for the courts, to determine when the true interests of the Indian require his release from [the] condition of tutelage,' . it is not meant by this that Congress may bring a community or body of people within the range of this power by arbitrarily calling them an Indian tribe . . ." United States v Sandoval, 231 US 28, 46, 58 L ed 107, 114, 34 S Ct 1. Able to discern what is "distinctly Indian," ibid , the courts will strike down any heedless extension of that label. They will not stand impotent before an obvious instance of a manifestly unauthorized exercise of power.

It is apparent that several formulations which vary slightly according to the settings in which the questions arise may describe a political question, although each has one or more elements which identifies it as essentially a function of the separation of powers Prominent on the surface of any case held to involve a political question is found a textually demonstrable constitutional commitment of the issue to a coordinate political department; or a lack of judicially discoverable and manageable standards for resolving it, or the impossibility of deciding without an initial policy determination of a kind clearly for nonjudicial discretion; or the impossibility of a court's undertaking independent

[43] This case, so frequently cited for the broad proposition that the status of an Indian tribe is a matter for the political departments, is in fact a noteworthy example of the limited and precise impact of a political question The Cherokees brought an original suit in this Court to enjoin Georgia's assertion of jurisdiction over Cherokee territory and abolition of Cherokee government and laws Unquestionably the case lay at the vortex of most fiery political embroilment See 1 Warren The Supreme Court in United States History (Rev ed), 729–779 But in spite of some broader language in separate opinions, all that the Court held was that it possessed no original jurisdiction over the suit for the Cherokees could in no view be considered either a State of this Union or a "foreign state" Chief Justice Marshall treated the question as one of de novo interpretation of words in the Constitution The Chief Justice did say that 'the acts of our government plainly recognize the Cherokee nation as a state, and the courts are bound by those acts," but here he referred to their existence "as a state, as a distinct political society, separated from others, " From there he went to "a question of much more difficulty Do the Cherokees constitute a foreign state in the sense of the constitution?" Id 5 Pet at 16 Thus, while the Court referred to "the political" for the decision whether the tribe was an entity, a separate polity, it held that whether being an entity the tribe had such status as to be entitled to sue originally was a judicially soluble issue criteria were discoverable in relevant phrases of the Constitution and in the common understanding of the times As to this issue, the Court was not hampered by problems of the management of unusual evidence or of possible interference with a congressional program Moreover, Chief Justice Marshall's dictum that "it savours too much of the exercise of political power to be within the proper province of the judicial department," id 5 Pet at 20, was not addressed to the issue of the Cherokees' status to sue, but rather to the breadth of the claim asserted and the impropriety of the relief sought Compare Georgia v Stanton (US) 6 Wall 50, 77, 18 L ed 721, 725 The Chief Justice made clear that if the issue of the Cherokees' rights arose in a customary legal context, "a proper case with proper parties," it would be justiciable Thus, where the same dispute produced a case properly brought, in which the right asserted was one of protection under federal treaties and laws from conflicting state law, and the relief sought was the voiding of a conviction under that state law, the Court did void the conviction Worcester v Georgia (US) 6 Pet 515, 8 L ed 483 There, the fact that the tribe was a separate polity served at a datum contributing to the result, and despite the consequences in a heated federal-state controversy and the opposition of the other branches of the National Government, the judicial power acted to reverse the State Supreme Court An example of similar isolation of a political question in the decision of a case is Luther v Borden (US) 7 How 1, 12 L ed 581, see infra

resolution without expressing lack of the respect due coordinate branches of government, or an unusual need for unquestioning adherence to a political decision already made; or the potentiality of embarrassment from multifarious pronouncements by various departments on one question.

Unless one of these formulations is inextricable from the case at bar, there should be no dismissal for nonjusticiability on the ground of a political question's presence The doctrine of which we treat is one of "political questions," not one of "political cases" The courts cannot reject as "no law suit" a bona fide controversy as to whether some action denominated "political" exceeds constitutional authority. The cases we have reviewed show the necessity for discriminating inquiry into the precise facts and posture of the particular case, and the impossibility of resolution by any semantic cataloguing

But it is argued that this case shares the characteristics of decisions that constitute a category not yet considered, cases concerning the Constitution's guaranty, in Art 4 § 4, of a republican form of government A conclusion as to whether the case at bar does present a political question cannot be confidently reached until we have considered those cases with special care We shall discover that Guaranty Clause claims involve those elements which define a "political question," and for that reason and no other, they are nonjusticiable In particular, we shall discover that the nonjusticiability of such claims has nothing to do with their touching upon matters of state governmental organization

Republican form of government: Luther v Borden (US) 7 How 1, 12 L ed 581, though in form simply an action for damages for trespass was, as Daniel Webster said in opening the argument for the defense, "an unusual case" [44] The defendants, admitting an otherwise tortious breaking and entering, sought to justify their action on the ground that they were agents of the established lawful government of Rhode Island, which State was then under martial law to defend itself from active insurrection; that the plaintiff was engaged in that insurrection; and that they entered under orders to arrest the plaintiff The case arose "out of the unfortunate political differences which agitated the people of Rhode Island in 1841 and 1842," 7 How at 34, which had resulted in a situation wherein two groups laid competing claims to recognition as the lawful government [45] The plaintiff's right to recover depended upon which of the two groups was entitled to such recognition, but the lower court's refusal to receive evidence or hear argument on that issue, its charge to the jury that the earlier established or "charter" government was lawful, and the verdict for the defendants, were affirmed upon appeal to this Court.

Chief Justice Taney's opinion for the Court reasoned as follows: (1) If a court were to hold the defendants' acts unjustified because the

[44] 7 How, at 29 And see 11 The Writings and Speeches of Daniel Webster 217 (1903)

[45] See Mowry, The Dorr War (1901), and its exhaustive bibliography And for an account of circumstances surrounding the decision here, see 2 Warren, The Supreme Court in United States History (Rev ed), 185–195

Dorr himself, head of one of the two groups and held in a Rhode Island jail under a conviction for treason, had earlier sought a decision from the Supreme Court that his was the lawful government His application for original habeas corpus in the Supreme Court was denied because the federal courts then lacked authority to issue habeas for a prisoner held under a state court sentence Ex parte Dorr (US) 3 How 103, 11 L ed 514

charter government had no legal existence during the period in question, it would follow that all of that government's actions—laws enacted, taxes collected, salaries paid, accounts settled, sentences passed—were of no effect; and that "the officers who carried their decisions into operation [were] answerable as trespassers, if not in some cases as criminals."[46] There was, of course, no room for application of any doctrine of de facto status to uphold prior acts of an officer not authorized de jure, for such would have defeated the plaintiff's very action. A decision for the plaintiff would inevitably have produced some significant measure of chaos, a consequence to be avoided if it could be done without abnegation of the judicial duty to uphold the Constitution.

(2) No state court had recognized as a judicial responsibility settlement of the issue of the locus of state governmental authority. Indeed, the courts of Rhode Island had in several cases held that "it rested with the political power to decide whether the charter government had been displaced or not," and that that department had acknowledged no change.[47]

(3) Since "the question relates, altogether, to the constitution and laws of [the] . . . State," the courts of the United States had to follow the state courts' decisions unless there was a federal constitutional ground for overturning them.

(4) No provision of the Constitution could be or had been invoked for this purpose except Art. 4, § 4, the Guaranty Clause. Having already noted the absence of standards whereby the choice between governments could be made by a court acting independently, Chief Justice Taney now found further textual and practical reasons for concluding that, if any department of the United States was empowered by the Guaranty Clause to resolve the issue, it was not the Judiciary.

"Under this article of the Constitution it rests with Congress to decide what government is the established one in a State. For as the United States guarantee to each State a republican government, Congress must necessarily decide what government is established in the State before it can determine whether it is republican or not. And when the senators and representatives of a State are admitted into the councils of the Union, the authority of the government under which they are appointed, as well as its republican character, is recognized by the proper constitutional authority. And its decision is binding on every other department of the government, and could not be questioned in a judicial tribunal. It is true that the contest in this case did not last long enough to bring the matter to this issue, and . . . Congress was not called upon to decide the controversy. Yet the right to decide is placed there, and not in the courts.

"So, too, as relates to the clause in the above-mentioned article of the Constitution, providing for cases of domestic violence. It rested with Congress, too, to determine upon the means proper to be adopted to fulfill this guarantee. . . . [B]y the act of February 28, 1795, [Congress] provided, that, 'in case of an insurrection in any State against the government thereof, it shall be lawful for the President of the United States, on application of the legislature of such State or of the executive (when the legislature cannot be convened), to call forth such

[46] 7 How., at 39.
[47] Ibid.

number of the militia of any other State or States, as may be applied for, as he may judge sufficient to suppress such insurrection '

"By this act, the power of deciding whether the exigency had arisen upon which the government of the United States is bound to interfere, is given to the President. .

"After the President has acted and called out the militia, is a Circuit Court of the United States authorized to inquire whether his decision was right? . . If the judicial power extends so far, the guarantee contained in the Constitution of the United States is a guarantee of anarchy, and not of order . .

"It is true that in this case the militia were not called out by the President But upon the application of the governor under the charter government, the President recognized him as the executive power of the State, and took measures to call out the militia to support his authority if it should be found necessary for the general government to interfere; . . [C]ertainly no court of the United States, with a knowledge of this decision, would have been justified in recognizing the opposing party as the lawful government, . . In the case of foreign nations, the government acknowledged by the President is always recognized in the courts of justice . . ." 7 How at 42–44

Clearly, several factors were thought by the Court in Luther to make the question there "political" the commitment to the other branches of the decision as to which is the lawful state government; the unambiguous action by the President, in recognizing the charter government as the lawful authority; the need for finality in the executive's decision; and the lack of criteria by which a court could determine which form of government was republican [48]

[48] Even though the Court wrote of unrestrained legislative and executive authority under this Guaranty, thus making its enforcement a political question, the Court plainly implied that the political question barrier was no absolute "Unquestionably a military government, established as a permanent government of the State, would not be a republican government, and it would be the duty of Congress to overthrow it." 7 How, at 45 Of course, it does not necessarily follow that if Congress did not act, the Court would For while the judiciary might be able to decide the limits of the meaning of "republican form," and thus the factor of lack of criteria might fall away, there would remain other possible barriers to decision because of primary commitment to another branch, which would have to be considered in the particular fact setting presented

That was not the only occasion on which this Court indicated that lack of criteria does not obliterate the Guaranty's extreme limits "The guaranty is of a republican form of government No particular government is designated as republican, neither is the exact form to be guaranteed, in any manner especially designated Here, as in other parts of the instrument, we are compelled to resort elsewhere to ascertain what was intended

"The guaranty necessarily implies a duty on the part of the States themselves to provide such a government All the States had governments when the Constitution was adopted In all the people participated to some extent, through their representatives elected in the manner specially provided These governments the Constitution did not change They were accepted precisely as they were, and it is, therefore, to be presumed that they were such as it was the duty of the States to provide Thus we have unmistakable evidence of what was republican in form, within the meaning of that term as employed in the Constitution " Minor v Happersett (US) 21 Wall 162, 175, 22 L ed 627, 630, 631 There, the question was whether a government republican in form could deny the vote to women

Re Duncan, 139 US 449, 35 L ed 219, 11 S Ct 573, upheld a murder conviction against a claim that the relevant codes had been invalidly enacted The Court there said

"By the Constitution, a republican form of government is guaranteed to every State in the Union, and the distinguishing feature of that form is the right of the people to choose their own officers for governmental administration, and pass their own laws in virtue of the legislative power reposed in representative bodies, whose legitimate acts may be said to be those of the people themselves, but, while the people are thus the source of political power, their governments, National and State, have been limited by written constitutions, and they have themselves thereby set bounds to their own power, as against the sudden impulses of mere majorities" 139 US, at 461 But the Court did not find any of these fundamental principles violated

But the only significance that Luther could have for our immediate purposes is in its holding that the Guaranty Clause is not a repository of judicially manageable standards which a court could utilize independently in order to identify a State's lawful government The Court has since refused to resort to the Guaranty Clause—which alone had been invoked for the purpose—as the source of a constitutional standard for invalidating state action See Taylor v Beckham (No. 1), 178 US 548, 44 L ed 1187, 20 S Ct 890, 1009 (claim that Kentucky's resolution of contested gubernatorial election deprived voters of republican government held nonjusticiable), Pacific States Tel & Tel Co v Oregon, 223 US 118, 56 L ed 377, 32 S Ct 224 (claim that initiative and referendum negated republican government held nonjusticiable); Kiernan v Portland, 223 US 151, 56 L ed 386, 32 S Ct 231 (claim that municipal charter amendment per municipal initiative and referendum negated republican government held nonjusticiable), Marshall v Dye, 231 US 250, 58 L ed 206, 34 S Ct 92 (claim that Indiana's constitutional amendment procedure negated republican government held nonjusticiable); O'Neill v Leamer, 239 US 244, 60 L ed 249, 36 S Ct 54 (claim that delegation to court of power to form drainage districts negated republican government held, "futile"); Ohio ex rel Davis v Hildebrant, 241 US 565, 60 L ed 1172, 36 S Ct 708 (claim that invalidation of state reapportionment statute per referendum negates republican government held nonjusticiable), [49] Mountain Timber Co v Washington, 243 US 219, 61 L ed 685, 37 S Ct 260, 13 NCCA 927, Ann Cas 1917D 642 (claim that workmen's compensation violates republican government held nonjusticiable); Ohio ex rel Bryant v Akron Metropolitan Park Dist 281 US 74, 74 L ed 710, 50 S Ct 228, 66 ALR 1460 (claim that rule requiring invalidation of statute by all but one justice of state court negated republican government held nonjusticiable), Highland Farms Dairy v Agnew, 300 US 608, 81 L ed 835, 57 S Ct 549 (claim that delegation to agency of power to control milk prices violated republican government, rejected).

Just as the Court has consistently held that a challenge to state action based on the Guaranty Clause presents no justiciable question so has it held, and for the same reasons, that challenges to congressional action on the ground of inconsistency with that clause present no justiciable question In Georgia v Stanton (US) 6 Wall 50, 18 L ed 721, the State sought by an original bill to enjoin execution of the Reconstruction Acts, claiming that it already possessed "a republican State, in every political, legal, constitutional, and juridical sense," and that enforcement of the new Acts "instead of keeping the guaranty against a forcible overthrow of its government by foreign invaders or domestic insurgents, . . . is destroying that very government by force" [50] Congress had clearly refused to recognize the republican character of the government of the suing State [51] It seemed to the Court that the only constitutional claim that could be presented was under

[49] But cf Hawke v Smith (No 1), 253 US 221, 64 L ed 871, 40 S Ct 495, 10 ALR 1504, National Prohibition Cases (Rhode Island v Palmer) 253 US 350, 64 L ed 946, 40 S Ct 486, 588

[50] 6 Wall at 65, 66

[51] The First Reconstruction Act opened "Whereas no legal State governments now exists [sic] in the rebel States of Georgia [and] Mississippi, . . . and whereas it is necessary that peace and good order should be enforced in said States until loyal and republican State governments can be legally established . . ." 14 Stat 428 And see 15 Stat 2, 14

the Guaranty Clause, and Congress having determined that the effects of the recent hostilities required extraordinary measures to restore governments of a republican form, this Court refused to interfere with Congress' action at the behest of a claimant relying on that very guaranty [52]

In only a few other cases has the Court considered Art 4, § 4, in relation to congressional action It has refused to pass on a claim relying on the Guaranty Clause to establish that Congress lacked power to allow the States to employ the referendum in passing on legislation redistricting for congressional seats Ohio ex rel Davis v Hildebrant, 241 US 565, 60 L ed 1172, 36 S Ct 708, supra And it has pointed out that Congress is not required to establish republican government in the territories before they become States, and before they have attained a sufficient population to warrant a popularly elected legislature Downes v Bidwell, 182 US 244, 278, 279, 45 L ed 1088, 1103, 21 S Ct 770 (dictum) [53]

We come, finally to the ultimate inquiry whether our precedents as to what constitutes a nonjusticiable "political question" bring the case before us under the umbrella of that doctrine A natural beginning is to note whether any of the common characteristics which we have been able to identify and label descriptively are present We find none The question here is the consistency of state action with the Federal Constitution. We have no question decided, or to be decided, by a political branch of government coequal with this Court Nor do we risk embarrassment of our government abroad, or grave disturbance at home [54] if we take issue with Tennessee as to the constitutionality of her action here challenged Nor need the appellants, in order to succeed in this action, ask the Court to enter upon policy determinations for which judicially manageable standards are lacking Judicial standards under the Equal Protection Clause are well developed and familiar, and it has been open to courts since the enactment of the Fourteenth Amendment to determine, if on the particular facts they must, that a discrimination reflects *no* policy, but simply arbitrary and capricious action.

This case does, in one sense, involve the allocation of political power within a State, and the appellants might conceivably have added a claim under the Guaranty Clause Of course, as we have seen, any

[52] In Mississippi v Johnson (US) 4 Wall 475, 18 L ed 437, the State sought to enjoin the President from executing the Acts, alleging that his role was purely ministerial The Court held that the duties were in no sense ministerial, and that although the State sought to compel inaction rather than action, the absolute lack of precedent for any such distinction left the case one in which "general principles forbid judicial interference with the exercise of Executive discretion" 4 Wall at 499 See also Mississippi v Stanton, 154 US 554, 18 L ed 725, 14 S Ct 1209, and see 2 Warren, The Supreme Court in United States History (Rev ed), 463

For another instance of congressional action challenged as transgressing the Guaranty Clause, see The Collector v Day (Buffington v Day) (US) 11 Wall 113, 125, 126, 20 L ed 122, 126, overruled, Graves v New York, 306 US 466, 83 L ed 927, 59 S Ct 595, 120 ALR 1466

[53] On the other hand, the implication of the Guaranty Clause in a case concerning congressional action does not always preclude judicial action It has been held that the clause gives Congress no power to impose restrictions upon a State's admission which would undercut the constitutional mandate that the States be on an equal footing Coyle v Smith, 221 US 559, 55 L ed 853, 31 S Ct 688 And in Texas v White (US) 7 Wall 700, 19 L ed 227, although Congress had determined that the State's government was not republican in form, the State's standing to bring an original action in this Court was sustained

[54] See, infra, p 896, considering Kidd v McCanless, 352 US 920, 1 L ed 2d 157, 77 S Ct 223

reliance on that clause would be futile But because any reliance on the Guaranty Clause could not have succeeded it does not follow that appellants may not be heard on the equal protection claim which in fact they tender True, it must be clear that the Fourteenth Amendment claim is not so enmeshed with those political question elements which render Guaranty Clause claims nonjusticiable as actually to present a political question itself But we have found that not to be the case here

In this connection special attention is due Pacific States Tel & Tel Co v Oregon, 223 US 118, 56 L ed 377, 32 S Ct 224 In that case a corporation tax statute enacted by the initiative was attacked ostensibly on three grounds. (1) due process; (2) equal protection; and (3) the Guaranty Clause But it was clear that the first two grounds were invoked solely in aid of the contention that the tax was invalid by reason of its passage:

"The defendant company does not contend there that it could not have been required to pay a license tax. It does not assert that it was denied an opportunity to be heard as to the amount for which it was taxed, or that there was anything inhering in the tax or involved intrinsically in the law which violated any of its constitutional rights If such questions had been raised they would have been justiciable, and therefore would have required the calling into operation of judicial power. Instead, however, of doing any of these things, the attack on the statute here made is of a wholly different character Its essentially political nature is at once made manifest by understanding that the assault which the contention here advanced makes it [sic] not on the tax as a tax, but on the State as a State It is addressed to the framework and political character of the government by which the statute levying the tax was passed It is the government, the political entity, which (reducing the case to its essence) is called to the bar of this court, not for the purpose of testing judicially some exercise of power assailed, on the ground that its exertion has injuriously affected the rights of an individual because of repugnancy to some constitutional limitation, but to demand of the State that it establish its right to exist as a State, republican in form " 223 US, at 150, 151

The due process and equal protection claims were held nonjusticiable in Pacific States not because they happened to be joined with a Guaranty Clause claim, or because they sought to place before the court a subject matter which might conceivably have been dealt with through the Guaranty Clause, but because the Court believed that they were invoked merely in verbal aid of the resolution of issues which, in its view, entailed political questions Pacific States may be compared with cases such as Mountain Timber Co v Washington, 243 US 219, 61 L ed 685, 37 S Ct 260, Ann Cas 1917D 642, 13 NCCA 927, wherein the Court refused to consider whether a workmen's compensation act violated the Guaranty Clause but considered at length, and rejected, due process and equal protection arguments advanced against it, and O'Neill v Leamer, 239 US 244, 60 L ed 249, 36 S Ct 54, wherein the Court refused to consider whether Nebraska's delegation of power to form drainage districts violated the Guaranty Clause, but went on to consider and reject the contention that the action against which an injunction was sought was not a taking for a public purpose.

We conclude then that the nonjusticiability of claims resting on the Guaranty Clause which arises from their embodiment of questions that were thought "political," can have no bearing upon the justiciability of the equal protection claim presented in this case Finally, we emphasize that it is the involvement in Guaranty Clause claims of the elements thought to define "political questions," and no other feature, which could render them nonjusticiable Specifically, we have said that such claims are not held nonjusticiable because they touch matters of state governmental organization Brief examination of a few cases demonstrates this.

When challenges to state action respecting matters of "the administration of the affairs of the State and the officers through whom they are conducted"[55] have rested on claims of constitutional deprivation which are amenable to judicial correction, this Court has acted upon its view of the merits of the claim. For example, in Boyd v Nebraska, 143 US 135, 36 L ed 103, 12 S Ct 375, we reversed the Nebraska Supreme Court's decision that Nebraska's Governor was not a citizen of the United States or of the State and therefore could not continue in office In Kennard v Louisiana, 92 US 480, 23 L ed 478, and Foster v Kansas, 112 US 201, 28 L ed 629, 5 S Ct 8, 97, we considered whether persons had been removed from public office by procedures consistent with the Fourteenth Amendment's due process guaranty, and held on the merits that they had And only last Term, in Gomillion v Lightfoot, 364 US 339, 5 L ed 2d 110, 81 S Ct 125, we applied the Fifteenth Amendment to strike down a redrafting of municipal boundaries which effected a discriminatory impairment of voting rights, in the face of what a majority of the Court of Appeals thought to be a sweeping commitment to state legislatures of the power to draw and redraw such boundaries[56]

Gomillion was brought by a Negro who had been a resident of the City of Tuskegee, Alabama, until the municipal boundaries were so recast by the State Legislature as to exclude practically all Negroes The plaintiff claimed deprivation of the right to vote in municipal elections. The District Court's dismissal for want of jurisdiction and failure to state a claim upon which relief could be granted was affirmed by the Court of Appeals This Court unanimously reversed This Court's answer to the argument that States enjoyed unrestricted control over municipal boundaries was

"Legislative control of municipalities, no less than other state power, lies within the scope of relevant limitations imposed by the United States Constitution The opposite conclusion, urged upon us by respondents, would sanction the achievement by a State of any impairment of voting rights whatever so long as it was cloaked in the garb of the realignment of political subdivisions 'It is inconceivable that guaranties embedded in the Constitution of the United States may thus be manipulated out of existence' " 364 US, at 344, 345

To a second argument, that Colegrove v Green, 328 US 549, 90 L ed 1432, 66 S Ct 1198, supra, was a barrier to hearing the merits of the case, the Court responded that Gomillion was lifted "out of the so-

[55] Boyd v Nebraska, 143 US 135, 183, 36 L ed 103, 117, 12 S Ct 375 (Field, J, dissenting)

[56] Gomillion v Lightfoot (CA5 Ala) 270 F2d 594, relying upon, inter alia, Hunter v Pittsburgh, 207 US 161, 52 L ed 151, 28 S Ct 40.

called 'political' arena and into the conventional sphere of constitutional litigation" because here was discriminatory treatment of a racial minority violating the Fifteenth Amendment.

"A statute which is alleged to have worked unconstitutional deprivations of petitioners' rights is not immune to attack simply because the mechanism employed by the legislature is a redefinition of municipal boundaries . . While in form this is merely an act redefining metes and bounds, if the allegations are established, the inescapable human effect of this essay in geometry and geography is to despoil colored citizens, and only colored citizens, of their theretofore enjoyed voting rights That was not Colegrove v Green

"When a State exercises power wholly within the domain of state interest, it is insulated from federal judicial review But such insulation is not carried over when state power is used as an instrument for circumventing a federally protected right " 364 US, at 347 [57]

We have not overlooked such cases as Re Sawyer, 124 US 200, 31 L ed 402, 8 S Ct 482, and Walton v House of Representatives, 265 US 487, 68 L ed 1115, 44 S Ct 628, which held that federal equity power could not be exercised to enjoin a state proceeding to remove a public officer But these decisions explicitly reflect only a traditional limit upon equity jurisdiction, and not upon federal courts' power to inquire into matters of state governmental organization This is clear not only from the opinions in those cases, but also from White v Berry, 171 US 366, 43 L ed 199, 18 S Ct 917, which, relying on Sawyer, withheld federal equity from staying removal of a *federal* officer Wilson v North Carolina, 169 US 586, 42 L ed 865, 18 S Ct 435, simply dismissal an appeal from an unsuccessful suit to upset a State's removal procedure, on the ground that the constitutional claim presented—that a jury trial was necessary if the removal procedure was to comport with due process requirements —was frivolous Finally, in Taylor v Beckham (No 1), 178 US 548, 44 L ed 1187, 20 S Ct 890, 1009, where losing candidates attacked the constitutionality of Kentucky's resolution of a contested gubernatorial election, the Court refused to consider the merits of a claim posited upon the Guaranty Clause, holding it presented a political question, but also held on the merits that the ousted candidates had suffered no deprivation of property without due process of law [58]

Since, as has been established, the equal protection claim tendered in this case does not require decision of any political question, and since the presence of a matter affecting state government does not render the case nonjusticiable, it seems appropriate to examine again the reasoning by which the District Court reached its conclusion that the case was nonjusticiable

We have already noted that the District Court's holding that the subject matter of this complaint was nonjusticiable relied upon Colegrove v Green, 328 US 549, 90 L ed 1432, 66 S Ct 1198, supra, and later cases Some of those concerned the choice of members of a state legis-

[57] The Court's opinion was joined by Mr Justice Douglas, noting his adherence to the dissents in Colegrove and South v Peters, 339 US 276, 94 L ed 834, 70 S Ct 641, supra, and the judgment was concurred in by Mr Justice Whittaker, who wrote that the decision should rest on the Equal Protection Clause rather than on the Fifteenth Amendment, since there had been not solely a denial of the vote (if there had been that at all) but also a "fencing out" of a racial group

[58] No holding to the contrary is to be found in Cave v Missouri, 246 US 650, 62 L ed 921, 38 S Ct 334, dismg a writ of error to the Supreme Court of Missouri, 272 Mo 653, 199 SW 1014, or in Snowden v Hughes, 321 US 1, 88 L ed 497, 64 S Ct 397

lature, as in this case; others, like Colegrove itself and earlier precedents, Smiley v Holm, 285 US 355, 76 L ed 795, 52 S Ct 397, Koenig v Flynn, 285 US 375, 76 L ed 805, 52 S Ct 403, and Carroll v Becker, 285 US 380, 76 L ed 807, 52 S Ct 402, concerned the choice of Representatives in the Federal Congress Smiley, Koenig and Carroll settled the issue in favor of justiciability of questions of congressional redistricting. The Court followed these precedents in Colegrove although over the dissent of three of the seven Justices who participate in that decision. On the issue of justiciability, all four Justices comprising a majority relied upon Smiley v Holm, but in two opinions, one for three Justices, 328 US, at 566, 568, and a separate one by Mr Justice Rutledge, 328 US, at 564 The argument that congressional redistricting problems presented a "political question" the resolution of which was confided to Congress might have been rested upon Art 1, § 4, Art 1, § 5, Art 1, § 2, and Amendment 14, § 2 Mr Justice Rutledge said "But for the ruling in Smiley v Holm, 285 US 355, 76 L ed 795, 52 S Ct 397, I should have supposed that the provisions of the Constitution, Art 1, § 4, that 'The Times, Places and Manner of holding Elections for Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations . '; Art 1, § 2 [but see Amendment 14, §2], vesting in Congress the duty of apportionment of representatives among the several states 'according to their respective Numbers'; and Art 1, § 5, making each House the sole judge of the qualifications of its own members, would remove the issues in this case from justiciable cognizance But, in my judgment, the Smiley Case rules squarely to the contrary, save only in the matter of degree . Assuming that that decision is to stand, I think . . that its effect is to rule that this Court has power to afford relief in a case of this type as against the objection that the issues are not justiciable" 328 US, at 564, 565 Accordingly, Mr Justice Rutledge joined in the conclusion that the case was justiciable, although he held that the dismissal of the complaint should be affirmed His view was that "The shortness of the time remaining [before forthcoming elections] makes it doubtful whether action could, or would, be taken in time to secure for petitioners the effective relief they seek . I think, therefore, the case is one in which the Court may properly, and should, decline to exercise its jurisdiction. Accordingly, the judgment should be affirmed and I join in that disposition of the cause" 328 US, at 565, 566 [59]

[59] The ground of Mr Justice Rutledge's vote to affirm is further explained in his footnote 3, 328 US at 566 "The power of a court of equity to act is a discretionary one Where a federal court of equity is asked to interfere with the enforcement of state laws, it should do so only "to prevent irreparable injury which is clear and imminent". American Federation of Labor v. Watson, 327 U S 582, 593 and cases cited".

No constitutional questions, including the question whether voters have a judicially enforceable constitutional right to vote at elections of congressmen from districts of equal population, were decided in Colegrove Six of the participating Justices reached the questions but divided three to three on their merits Mr Justice Rutledge believed that it was not necessary to decide them He said

There is [an alternative to constitutional decision] in this case And I think the gravity of the constitutional questions raised so great, together with the possibilities for collusion [with the political departments of the Government], that the admonition [against avoidable constitutional decision] is appropriate to be followed here Other reasons support this view, including the fact that, in my opinion, the basic ruling and less important ones in Smiley v Holm, supra, would otherwise be brought into question" 328 US at 584, 585 He also joined with his brethren who shared his view that the issues were justiciable in considering that Wood v Broom, 287 US 1, 77 L ed 131, 53 S Ct 1, decided no

Article 1 §§ 2, 4 and 5 and Amendment 14 § 2 relate only to congressional elections and obviously do not govern apportionment of state legislatures However, our decisions in favor of justiciability even in light of those provisions plainly afford no support for the District Court's conclusion that the subject matter of this controversy presents a political question Indeed, the refusal to award relief in Colegrove resulted only from the controlling view of a want of equity Nor is anything contrary to be found in those per curiams that came after Colegrove This Court dismissal the appeals in Cook v Fortson and Turman v Duckworth, 329 US 675, 91 L ed 596, 67 S Ct 21, as moot MacDougall v Green, 335 US 281, 93 L ed 3, 69 S Ct 1, held only that in that case equity would not act to void the State's requirement that there be at least a minimum of support for nominees for state-wide office, over at least a minimal area of the State Problems of timing were critical in Remmey v Smith, 342 US 916, 96 L ed 685, 72 S Ct 368, dismissing for want of a substantial federal question a three-judge court's dismissal of the suit as prematurely brought, 102 F Supp 708; and in Hartsfield v Sloan, 357 US 916, 2 L ed 2d 1363, 78 S Ct 1363, denying mandamus sought to compel the convening of a three-judge court—movants urged the Court to advance considerations of their case, "inasmuch as the mere lapse of time before this case can be reached in the normal course . . business may defeat the cause, and inasmuch as the time problem is due to the inherent nature of the case " South v Peters, 339 US 276, 94 L ed 834, 70 S Ct 641, like Colegrove appears to be a refusal to exercise equity's powers; see the statement of the holding, quoted, supra, p 677 And Cox v Peters, 342 US 936, 96 L ed 697, 72 S Ct 559, dismissed for want of a substantial federal question the appeal from the state court's holding that their primary elections implicated no "state action " See 208 Ga 498, 67 SE2d 579 But compare Terry v Adams, 345 US 461, 97 L ed 1152, 73 S Ct 809

Tedesco v Board of Supervisors of Elections, 339 US 940, 94 L ed 1357, 70 S Ct 797, indicates solely that no substantial federal question was raised by a state court's refusal to upset the districting of city council seats, especially as it was urged that there was a rational justification for the challenged districting See (La App) 43 So 2d 514 Similarly, in Anderson v Jordan, 343 US 912, 96 L ed 1328, 72 S Ct 648, it was certain only that the state court had refused to issue a discretionary writ, original mandamus in the Supreme Court That had been denied without opinion, and of course it was urged here that an adequate state ground barred this Court's review And in Kidd v McCanless, 200 Tenn 273, 292 SW2d 40, the Supreme Court of Tennessee held that it could not invalidate the very statute at issue in the case at bar, but its holding rested on its state law of remedies, i e, the state view of de facto officers,[60] and not on any view that the norm for legislative apportionment in Tennessee is not numbers of qualified voters resident in the several counties Of course this Court was there precluded by the adequate state ground, and in dismissing the appeal,

constitutional questions but "the Court disposed of the cause on the ground that the 1929 Reapportionment Act, 46 Stat 21, did not carry forward the requirements of the 1911 Act, 37 Stat 13, and declined to decide whether there was equity in the bill" 328 US at 565, see also, id 328 US at 573 We agree with this view of Wood v Broom

[60] See also Buford v State Board of Elections, 206 Tenn 480, 334 SW2d 726, State ex rel Sanborn v Davidson County Board of Election Comrs No 36, 391 Tenn Sup Ct, Oct 29, 1954 (unreported), 3 Vand L Rev 501

352 US 920, 1 L ed 2d 157, 77 S Ct 223, we cited Anderson (US) supra, as well as Colegrove. Nor does the Tennessee court's decision in that case bear upon this, for just as in Smith v Holm, 220 Minn 486, 19 NW2d 914, and Magraw v Donovan (DC Minn) 163 F Supp 184, 177 F Supp 803, a state court's inability to grant relief does not bar a federal court's assuming jurisdiction to inquire into alleged deprivation of federal constitutional rights Problems of relief also controlled in Radford v Gary, 352 US 991, 1 L ed 2d 540, 77 S Ct 559, affirming the District Court's refusal to mandamus the Governor to call a session of the legislature, to mandamus the legislature then to apportion, and if they did not comply, to mandamus the State Supreme Court to do so And Mathews v Handley, 361 US 127, 4 L ed 2d 180, 80 S Ct 256, affirmed a refusal to strike down the State's gross income tax statute—urged on the ground that the legislature was malapportioned—that had rested on the adequacy of available state legal remedies for suits involving that tax, including challenges to its constitutionality Lastly, Colegrove v Barrett, 330 US 804, 91 L ed 1262, 67 S Ct 973, in which Mr Justice Rutledge concurred in this Court's refusal to note the appeal from a dismissal for want of equity, is sufficiently explained by his statement in Cook v Fortson, 329 US 675, 91 L ed 596, 67 S Ct 21, supra "The discretionary exercise or nonexercise of equitable or declaratory judgment jurisdiction . in one case is not precedent in another case where the facts differ " 329 US, at 678, note 8 (Citations omitted)

We conclude that the complaint's allegations of a denial of equal protection present a justiciable constitutional cause of action upon which appellants are entitled to a trial and a decision The right asserted is within the reach of judicial protection under the Fourteenth Amendment.

The judgment of the District Court is reversed and the cause is remanded for further proceedings consistent with this opinion.

Reversed and remanded

Mr Justice Whittaker did not participate in the decision of this case

APPENDIX

The Tennessee Code Annotated provides for representation in the General Assembly as follows·

"3–101. *Composition—Counties electing one representative each* — The general assembly of the state of Tennessee shall be composed of thirty-three (33) senators and ninety-nine (99) representatives, to be apportioned among the qualified voters of the state as follows· Until the next enumeration and apportionment of voters each of the following counties shall elect one (1) representative, to wit Bedford, Blount, Cannon, Carroll, Chester, Cocke, Claiborne, Coffee, Crockett, DeKalb, Dickson, Dyer, Fayette, Franklin, Giles, Greene, Hardeman, Hardin, Henry, Hickman, Hawkins, Haywood, Jackson, Lake, Lauderdale, Lawrence, Lincoln, Marion, Marshall, Maury, Monroe, Montgomery, Moore, McMinn, McNairy, Obion, Overton, Putnam, Roane, Robertson, Rutherford, Sevier, Smith, Stewart, Sullivan, Sumner, Tipton, Warren, Washington, White, Weakley, Williamson and Wilson [Acts 1881 (E S) ch 5, § 1; 1881 (E S), ch 6, § 1; 1901, ch 122, § 2; 1907, ch. 178, §§ 1, 2; 1915, ch 145; Shan , § 123; Acts 1919, ch. 147, §§ 1,

2; 1925 Private, ch 472, § 1; Code 1932, § 140; Acts 1935, ch 150, § 1; 1941, ch 58, § 1; 1945, ch 68, § 1, C Supp 1950, § 140.]

"3-102 *Counties electing two representatives each*.—The following counties shall elect two (2) representatives each, to wit: Gibson and Madison [Acts 1901, ch 122, § 3; Shan., § 124; mod Code 1932, § 141.]

"3-103 *Counties electing three representatives each*.—The following counties shall elect three (3) representatives each, to wit: Knox and Hamilton [Acts 1901, ch 122, § 4; Shan., § 125, Code 1932, § 142.]

"3-104 *Davidson County*.—Davidson county shall elect six (6) representatives [Acts 1901, ch. 122, § 5; Shan., § 126; Code 1932, § 143.]

"3-105 *Shelby county*.—Shelby county shall elect eight (8) representatives. Said county shall consist of eight (8) representative districts, numbered one (1) through eight (8), each district co-extensive with the county, with one (1) representative to be elected from each district [Acts 1901, ch. 122, § 6, Shan., § 126a1; Code 1932, § 144, Acts 1957, ch 220, § 1; 1959, ch 213, § 1.]

"3-106 *Joint representatives*.—The following counties jointly, shall elect one representative, as follows, to wit:

"First district—Johnson and Carter

"Second district—Sullivan and Hawkins

"Third district—Washington, Greene and Unicoi

"Fourth district—Jefferson and Hamblen

"Fifth district—Hancock and Grainger

"Sixth district—Scott, Campbell, and Union

"Seventh district—Anderson and Morgan

"Eighth district—Knox and Loudon.

"Ninth district—Polk and Bradley.

"Tenth district—Meigs and Rhea.

"Eleventh district—Cumberland, Bledsoe, Sequatchie, Van Buren and Grundy

"Twelfth district—Fentress, Pickett, Overton, Clay and Putnam

"Fourteenth district—Sumner, Trousdale and Macon

"Fifteenth district—Davidson and Wilson

"Seventeenth district—Giles, Lewis, Maury and Wayne

"Eighteenth district—Williamson, Cheatham and Robertson

"Nineteenth district—Montgomery and Houston

"Twentieth district—Humphreys and Perry

"Twenty-first district—Benton and Decatur

"Twenty-second district—Henry, Weakley and Carroll

"Twenty-third district—Madison and Henderson.

"Twenty-sixth district—Tipton and Lauderdale [Acts 1901, ch 122, § 7; 1907, ch 178, §§ 1, 2, 1915, ch 145, §§ 1, 2; Shan., § 127; Acts 1919, ch 147, § 1; 1925 Private, ch 472, § 2; Code 1932, § 145; Acts 1933, ch 167, § 1, 1935, ch 150, § 2; 1941, ch 58, § 2; 1945, ch 68, § 2; C Supp 1950, § 145, Acts 1957, ch 220, § 2.]

"3-107 *State senatorial districts*.—Until the next enumeration and apportionment of voters, the following counties shall comprise the senatorial districts, to wit:

"First district—Johnson, Carter, Unicoi, Greene, and Washington

"Second district—Sullivan and Hawkins

"Third district—Hancock, Morgan, Grainger, Claiborne, Union, Campbell, and Scott

"Fourth district—Cocke, Hamblen, Jefferson, Sevier, and Blount

"Fifth district—Knox

"Sixth district—Knox, Loudon, Anderson, and Roane

"Seventh district—McMinn, Bradley, Monroe, and Polk

"Eighth district—Hamilton.

"Ninth district—Rhea, Meigs, Bledsoe, Sequatchie, Van Buren, White, and Cumberland

"Tenth district—Fentress, Pickett, Clay, Overton, Putnam, and Jackson

"Eleventh district—Marion, Franklin, Grundy and Warren

"Twelfth district—Rutherford, Cannon, and DeKalb

"Thirteenth district—Wilson and Smith

"Fourteenth district—Sumner, Trousdale and Macon

"Fifteenth district—Montgomery and Robertson

"Sixteenth district—Davidson

"Seventeenth district—Davidson

"Eighteenth district—Bedford, Coffee and Moore

"Nineteenth district—Lincoln and Marshall

"Twentieth district—Maury, Perry and Lewis

"Twenty-first district—Hickman, Williamson and Cheatham

"Twenty-second district—Giles, Lawrence and Wayne

"Twenty-third district—Dickson, Humphreys, Houston and Stewart

"Twenty-fourth district—Henry and Carroll

"Twenty-fifth district—Madison, Henderson and Chester

"Twenty-sixth district—Hardeman, McNairy, Hardin, Decatur and Benton.

"Twenty-seventh district—Gibson.

"Twenty-eighth district—Lake, Obion and Weakley

"Twenty-ninth District—Dyer, Lauderdale and Crockett

"Thirtieth district—Tipton and Shelby.

"Thirty-first district—Haywood and Fayette

"Thirty-second district—Shelby

"Thirty-third district—Shelby. [Acts 1901, ch. 122, § 1, 1907, ch. 3, § 1, Shan., § 128, Code 1932, § 146; Acts 1945, ch. 11, § 1; C. Supp. 1950, § 146.]"

Today's apportionment statute is as enacted in 1901, with minor changes For example

(1) In 1957, Shelby County was raised from 7½ to 8 representatives. Acts of 1957, c. 220. See also Acts of 1959, c. 213 The 1957 Act, § 2, abolished the Twenty-seventh Joint Representative District, which had included Shelby and Fayette Counties

(2) In 1907, Marion County was given a whole House seat instead of sharing a joint seat with Franklin County Acts of 1907, c. 178. Acts of 1915, c. 145, repealed that change, restoring the status quo ante. And that reversal was itself reversed, Acts of 1919, c. 147.

(3) James County was in 1901 one of five counties in the Seventh State Senate District and one of the three in the Ninth House District It appears that James County no longer exists but we are not advised when or how it was dissolved.

(4) In 1945, Anderson and Roane Counties were shifted to the Sixth State Senate District from the Seventh, and Monroe and Polk Counties were shifted to the Seventh from the Sixth. Acts of 1945, c. 11.

SEPARATE OPINION

Mr. Justice Douglas, concurring:

While I join the opinion of the Court and, like the Court, do not reach the merits, a word of explanation is necessary [1] I put to one side the problems of "political" questions involving the distribution of power between this Court, the Congress, and the Chief Executive. We have here a phase of the recurring problem of the relation of the federal courts to state agencies. More particularly, the question is the extent to which a State may weight one person's vote more heavily than it does another's.

So far as voting rights are concerned, there are large gaps in the Constitution. Yet the right to vote is inherent in the republican form of government envisaged by Article 4 § 4 of the Constitution. The House —and now the Senate—are chosen by the people. The time, manner, and place of elections of Senators and Representatives are left to the States (Article 1 § 4, cl 1; Amendment 17) subject to the regulatory power of Congress. A "republican form" of government is guaranteed each State by Article 4 § 4, and each is likewise promised protection against invasion.[2] Ibid That the States may specify the qualifications

[1] I feel strongly that many of the cases cited by the Court and involving so-called "political" questions were wrongly decided

In joining the opinion, I do not approve those decisions but only construe the Court's opinion in this case as stating an accurate historical account of what the prior cases have held

[2] The statements in Luther v Borden (US) 7 How 1, 42, 12 L ed 581, 599, that this guaranty is enforceable only by Congress or the Chief Executive is not maintainable Of course the Chief Executive, not the Court, determines how a State will be protected against invasion Of course each House of Congress, not the Court, is "the Judge of the Elections, Returns, and Qualifications of its own Members" Article 1, § 5, Clause 1 But the abdication of all judicial functions respecting voting rights (7 How, at 41), however justified by the peculiarities of the charter form of government in Rhode Island at the time of Dorr's Rebellion, states no general principle It indeed is contrary to the cases discussed in the body of this opinion—the modern decisions of the Court that give the full panoply of judicial protection to voting rights Today we would not say with Chief Justice Taney that it is no part of the judicial function to protect the right to vote of those "to whom it is denied by the written and established constitution and laws of the State" Ibid

Moreover, the Court's refusal to examine the legality of the regime of martial law which had been laid upon Rhode Island (id 7 How at 45, 46) is indefensible, as Mr Justice Woodbury maintained in his dissent Id 7 How at 59 et seq Today we would ask with him ' who could hold for a moment, when the writ of habeas corpus cannot be suspended by the legislature itself, either in the general government or most of the States, without an express constitutional permission, that all other writs and laws could be suspended, and martial law substituted for them over the whole State or country, without any express constitutional license to that effect, in any emergency'" Id 7 How at 67

Justice Woodbury went on to say

"It would be alarming enough to sanction here an unlimited power, exercised either by legislatures, or the executive, or courts, when all our governments are themselves governments of limitations and checks, and of fixed and known laws, and the people a race above all others jealous of encroachments by those in power

And it is far better that those persons should be without the protection of the ordinary laws of the land who disregard them in an emergency, and should look to a grateful country for indemnity and pardon, than to allow, beforehand, the whole frame of jurisprudence to be overturned, and every thing placed at the mercy of the bayonet

"No tribunal or department in our system of governments ever can be lawfully authorized to dispense with the laws, like some of the tyrannical Stuarts, or to repeal, or abolish, or suspend the whole body of them, or, in other words, appoint an unrestrained military dictator at the head of armed men

"Whatever stretches of such power may be ventured on in great crises, they cannot be upheld by the laws, as they prostrate the laws and ride triumphant over and beyond them, however the Assembly of Rhode Island, under the exigency, may have hastily supposed that such a measure in this instance was constitu-

for voters is implicit in Article 1 § 2, Clause 1, which provides that the House of Representatives shall be chosen by the people and that "the Electors (voters) in each State shall have the Qualifications requisite for Electors (voters) of the most numerous Branch of the State Legislature" The same provision, contained in the Seventeenth Amendment, governs the election of Senators Within limits those qualifications may be fixed by state law See Lassiter v Northampton County Board of Elections, 360 US 45, 50, 51, 3 L ed 2d 1072, 1076, 79 S Ct 985. Yet, as stated in Ex parte Yarbrough, 110 US 651, 663, 664, 28 L ed 274, 278, 4 S Ct 152, those who vote for members of Congress do not "owe their right to vote to the State law in any sense which makes the exercise of the right to depend exclusively upon the law of the State." The power of Congress to prescribe the qualifications for voters and thus override state law is not in issue here It is, however, clear that by reason of the commands of the Constitution there are several qualifications that a State may not require

Race, color, or previous condition of servitude are impermissible standards by reason of the Fifteenth Amendment, and that alone is sufficient to explain Gomillion v Lightfoot, 364 US 339, 5 L ed 2d 110, 81 S Ct 125 See Taper, Gomillion versus Lightfoot (1962), pp 12–17.

Sex is another impermissible standard by reason of the Nineteenth Amendment

There is a third barrier to a State's freedom in prescribing qualifications of voters and that is the Equal Protection Clause of the Fourteenth Amendment, the provision invoked here. And so the question is, may a State weight the vote of one county or one district more heavily than it weights the vote in another?

The traditional test under the Equal Protection Clause has been whether a State has made "an invidious discrimination," as it does when it selects "a particular race or nationality for oppressive treatment." See Skinner v Oklahoma, 316 US 535, 541, 86 L ed 1655, 1660, 62 S Ct 1110. Universal equality is not the test; there is room for weighting. As we stated in Williamson v Lee Optical of Okla, Inc 348 US 483, 489, 99 L ed 563, 573, 75 S Ct 461. "The prohibition of the Equal Protection Clause goes no further than the invidious discrimination."

I agree with my Brother Clark that if the allegations in the complaint can be sustained a case for relief is established We are told that a single vote in Moore County, Tennessee, is worth 19 votes in Hamilton County, that one vote in Stewart or in Chester County is worth nearly eight times a single vote in Shelby or Knox County. The opportunity to prove that an "invidious discrimination" exists should therefore be given the appellants

It is said that any decision in cases of this kind is beyond the competence of courts. Some make the same point as regards the problem of equal protection in cases involving racial segregation Yet the legality of claims and conduct is a traditional subject for judicial determina-

tional It is but a branch of the omnipotence claimed by Parliament to pass bills of attainder, belonging to the same dangerous and arbitrary family with martial law" Id 7 How at 69, 70

What he wrote was later to become the tradition, as expressed by Chief Justice Hughes in Sterling v Constantin, 287 US 378, 401, 77 L ed 375, 387, 53 S Ct 190 "What are the allowable limits of military discretion, and whether or not they have been overstepped in a particular case, are judicial questions."

tion Adjudication is often perplexing and complicated An example of the extreme complexity of the task can be seen in a decree apportioning water among the several States Nebraska v Wyoming, 325 US 589, 665, 89 L ed 1815, 1857, 65 S Ct 1332 The constitutional guide is often vague, as the decisions under the Due Process and Commerce Clauses show The problem under the Equal Protection Clause is no more intricate See Lewis, Legislative Apportionment and the Federal Courts, 71 Harv L Rev 1057, 1083–1084.

There are, of course, some questions beyond judicial competence Where the performance of a "duty" is left to the discretion and good judgment of an executive officer, the judiciary will not compel the exercise of his discretion one way or the other (Kentucky v Dennison (US) 24 How 66, 109, 16 L ed 717, 729), for to do so would be to take over the office Cf Federal Communications Com v Pottsville Broadcasting Co 309 US 134, 145, 84 L ed 656, 663, 60 S Ct 437.

Where the Constitution assigns a particular function wholly and indivisibly [3] to another department, the federal judiciary does not intervene Oetjen v Central Leather Co 246 US 297, 302, 62 L ed 726, 731, 38 S Ct 309 None of those cases is relevant here.

There is no doubt that the federal courts have jurisdiction of controversies concerning voting rights The Civil Rights Act gives them authority to redress the deprivation "under color of any state law" of any "right, privilege or immunity secured by the Constitution of the United States or by any Act of Congress providing for equal rights of citizens . . . ." 28 USC § 1343(3) And 28 USC § 1343(4) gives the federal courts authority to award damages or issue an injunction "to redress the violation of any Act of Congress providing for the protection of civil rights, including the *right to vote.*" (Italics added) The

[3] The category of the "political" question is in my view narrower than the decided cases indicate "Even the English courts have held that a resolution of one House of Parliament does not change the law (Stockdale v Hansard, [1839] 9A & E 1, and Bowles v Bank of England (No 2), [1913] 1 Ch 57), and these decisions imply that the House of Commons acting alone does not constitute the 'Parliament' recognised by the English courts" 103 Sol Jour 995, 996 The Court in Bowles v Bank of England, supra, pp 84–85, stated "By the statute 1 W & M, usually known as the Bill of Rights, it was finally settled that there could be no taxation in this country except under authority of an Act of Parliament The Bill of Rights still remains unrepealed, and no practice or custom, however prolonged, or however acquiesced in on the part of the subject, can be relied on by the Crown as justifying any infringement of its provisions It follows that, with regard to the powers of the Crown to levy taxation, no resolution, either of the Committee for Ways and Means or of the House itself, has any legal effect whatever Such resolutions are necessitated by a parliamentary procedure adopted with a view to the protection of the subject against the hasty imposition of taxes, and it would be strange to find them relied on as justifying the Crown in levying a tax before such tax is actually imposed by Act of Parliament"

In Pocket Veto Case (Okanogan Indians v United States) 279 US 655, 73 L ed 894, 49 S Ct 463, 64 ALR 1434, the Court undertook a review of the veto provisions of the Constitution and concluded that the measure in litigation had not become a law Cf Coleman v Miller, 307 US 433, 83 L ed 1385, 59 S Ct 972, 122 ALR 695

Georgia v Stanton (US) 6 Wall 50, 18 L ed 721, involved the application of the Reconstruction Acts to Georgia—laws which destroyed by force the internal regime of that State Yet the Court refused to take jurisdiction That question was no more "political" than a host of others we have entertained See, e g, Pennsylvania v West Virginia, 262 US 553, 67 L ed 1117, 43 S Ct 658, 32 ALR 300, Youngstown Sheet & Tube Co v Sawyer, 343 US 579, 96 L ed 1153, 72 S Ct 863, 26 ALR2d 1378, Alabama v Texas, 347 US 272, 98 L ed 689, 74 S Ct 481

Today would this Court hold nonjusticiable or "political" a suit to enjoin a Governor who, like Fidel Castro, takes everything into his own hands and suspends all election laws?

Georgia v Stanton (US) 6 Wall 50, 18 L ed 721, supra, expresses a philosophy at war with Ex parte Milligan, 4 Wall 2, and Duncan v Kahanamoku, 327 US 304, 90 L ed 688, 66 S Ct 606 The dominance of the civilian authority has been expressed from the beginning See Wise v Withers (US) 3 Cranch 331, 337, 2 L ed 457, Sterling v Constantin, 287 US 378, 77 L ed 375, 53 S Ct 100, supra, note 2

element of state action covers a wide range. For as stated in United States v Classic, 313 US 299, 326, 85 L ed 1368, 1383, 61 S Ct 1031:

"Misuse of power, possessed by virtue of state law and made possible only because the wrongdoer is clothed with the authority of state law, is action taken 'under color of' state law." And see Monroe v Pape, 365 US 167, 5 L ed 2d 492, 81 S Ct 473.

The right to vote in both federal and state elections was protected by the judiciary long before that right received the explicit protection it is now accorded by § 1343(4). Discrimination against a voter on account of race has been penalized (Ex parte Yarbrough, 110 US 651, 28 L ed 274, 4 S Ct 152) or struck down. Nixon v Herndon, 273 US 536, 71 L ed 759, 47 S Ct 446; Smith v Allwright, 321 US 649, 88 L ed 987, 64 S Ct 757, 151 ALR 1110; Terry v Adams, 345 US 461, 97 L ed 1152, 73 S Ct 809. Fraudulent acts that dilute the votes of some have long been held to be within judicial cognizance. Ex parte Siebold, 100 US 371, 25 L ed 717. The "right to have one's vote counted" whatever his race or nationality or creed was held in United States v Mosley, 238 US 383, 386, 59 L ed 1355, 1356, 35 S Ct 904, to be "as open to protection by Congress as the right to put a ballot in a box." See also United States v Classic, supra (313 US 324, 325); United States v Saylor, 322 US 385, 88 L ed 1341, 64 S Ct 1101.

Chief Justice Holt stated in Ashby v White, 2 Ld. Raym. 938, 956 (a suit in which damages were awared against election officials for not accepting the plaintiff's vote, 3 Ld Raym 320) that.

"To allow this action will make publick officers more careful to observe the constitution of cities and boroughs, and not to be so partial as they commonly are in all elections, which is indeed a great and growing mischief, and tends to the prejudice of the peace of the nation"

The same prophylactic effect will be produced here, as entrenched political regimes make other relief as illusory in this case as a petition to Parliament in Ashby v White would have been [4]

Intrusion of the Federal Government into the election machinery of the States has taken numerous forms—investigations (Hannah v Larche, 363 US 420, 4 L ed 2d 1307, 80 S Ct 1502); criminal proceedings (Ex parte Siebold; Ex parte Yarbrough; United States v Mosley; United States v Classic (US) all supra); collection of penalties (Smith v Allwright (US) supra), suits for declaratory relief and for an in-

[4] We are told by the National Institute of Municipal Law Officers in an amicus brief

"Regardless of the fact that in the last two decades the United States has become a predominantly urban country where well over two-thirds of the population now lives in cities or suburbs, political representation in the majority of state legislatures is 50 or more years behind the times Apportionments made when the greater part of the population was located in rural communities are still determining and undermining our elections

"As a consequence, the municipality of 1960 is forced to function in a horse and buggy environment where there is little political recognition of the heavy demands of an urban population These demands will become even greater by 1970 when some 150 million people will be living in urban areas

"The National Institute of Municipal Law Officers has for many years recognized the wide-spread complaint that by far the greatest preponderance of state representatives and senators are from rural areas which, in the main, fail to become vitally interested in the increasing difficulties now facing urban administrators

"Since World War II, the explosion in city and suburban population has created intense local problems in education, transportation, and housing Adequate handling of these problems has not been possible to a large extent, due chiefly to the political weakness of municipalities This situation is directly attributable to considerable under-representation of cities in the legislatures of most states" Amicus brief, pp 2–3.

junction (Terry v Adams (US) supra); suits by the United States under the Civil Rights Act to enjoin discriminatory practices. United States v Raines, 362 US 17, 4 L ed 2d 524, 80 S Ct 519

As stated by Judge McLaughlin in Dyer v Abe (DC Hawaii) 138 F Supp 220, 236 (an apportionment case in Hawaii which was reversed and dismissed as moot (CA9) 256 F2d 728):

"The whole thrust of today's legal climate is to end unconstitutional discrimination. It is ludicrous to preclude judicial relief when a mainspring of representative government is impaired Legislators have no immunity from the Constitution The legislatures of our land should be made as responsive to the Constitution of the United States as are the citizens who elect the legislators."

With the exceptions of Colegrove v Green, 328 US 549, 90 L ed 1432, 66 S Ct 1198; MacDougall v Green, 335 US 281, 93 L ed 3, 69 S Ct 1; South v Peters, 339 US 276, 94 L ed 834, 70 S Ct 641, and the decisions they spawned, the Court has never thought that protection of voting rights was beyond judicial cognizance. Today's treatment of those cases removes the only impediment to judicial cognizance of the claims stated in the present complaint

The justiciability of the present claims being established, any relief accorded can be fashioned in the light of well-known principles of equity.[5]

Mr. Justice Clark, concurring:

One emerging from the rash of opinions with their accompanying clashing of views may well find himself suffering a mental blindness. The Court holds that the appellants have alleged a cause of action. However, it refuses to award relief here—although the facts are undisputed—and fails to give the District Court any guidance whatever One

[5] The recent ruling by the Iowa Supreme Court that a legislature, though elected under an unfair apportionment scheme, is nonetheless a legislature empowered to act (Cedar Rapids v Cox, — Iowa —, 103 NW2d 253, 262, 263, cf Kidd v McCanless, 200 Tenn 273, 292 SW2d 40) is plainly correct.

There need be no fear of a more disastrous collision between federal and state agencies here than where a federal court enjoins gerrymandering based on racial lines See Gomillion v Lightfoot, 364 US 339, 5 L ed 2d 110, 81 S Ct 125, supra.

The District Court need not undertake a complete reapportionment It might possibly achieve the goal of substantial equality merely by directing respondent to eliminate the egregious injustices Or its conclusion that reapportionment should be made may in itself stimulate legislative action That was the result in Asbury Park Press, Inc v Woolley, 33 NJ 1, 161 A2d 705, where the state court ruled it had jurisdiction

"If by reason of passage of time and changing conditions the reapportionment statute no longer serves its original purpose of securing to the voter the full constitutional value of his franchise, and the legislative branch fails to take appropriate restorative action, the doors of the courts must be open to him The lawmaking body cannot by inaction alter the constitutional system under which it has its own existence" 33 NJ, at 14, 161 A2d, at 711 The court withheld its decision on the merits in order that the legislature might have an opportunity to consider adoption of a reapportionment act For the sequel see Application of Lamb, 67 NJ Super 39, 169 A2d 832, 835, 836

Reapportionment was also the result in Magraw v Donovan (DC Minn) 159 F Supp 901, where a federal three-judge District Court took jurisdiction, saying, 163 F Supp 184, 187

"Here it is the unmistakable duty of the State Legislature to reapportion itself periodically in accordance with recent population changes Early in January 1959 the 61st Session of the Minnesota Legislature will convene, all of the members of which will be newly elected on November 4th of this year The facts which have been presented to us will be available to them It is not to be presumed that the Legislature will refuse to take such action as is necessary to comply with its duty under the State Constitution We defer decision on all the issues presented (including that of the power of this Court to grant relief), in order to afford the Legislature full opportunity to 'heed the constitutional mandate to redistrict'"

See 177 F Supp 803, where the case was dismissed as moot, the State Legislature having acted.

dissenting opinion, bursting with words that go through so much and conclude with so little, contemns the majority action as "a massive repudiation of the experience of our whole past." Another describes the complaint as merely asserting conclusory allegations that Tennessee's apportionment is "incorrect," "arbitrary," "obsolete," and "unconstitutional." I believe it can be shown that this case is distinguishable from earlier cases dealing with the distribution of political power by a State, that a patent volation of the Equal Protection Clause of the United States Constitution has been shown, and that an appropriate remedy may be formulated.

I.

I take the law of the case from MacDougall v Green, 335 US 281, 93 L ed 3, 69 S Ct 1 (1948), which involved an attack under the Equal Protection Clause upon an Illinois election statute The Court decided that case on its merits without hindrance from the "political question" doctrine Although the statute under attack was upheld , it is clear that the Court based its decision upon the determination that the statute represented a rational state policy It stated·

"It would be strange indeed, and doctrinaire, for this Court applying such broad constitutional concepts as due process and equal protection of the laws, to deny a State the power to assure a *proper* diffusion of political initiative as between its thinly populated counties and those having concentrated masses, *in view of the fact that the latter have practical opportunities for exerting their political weight at the polls not available to the former* " Id 335 US at 284 (Emphasis supplied)

The other cases upon which my Brethren dwell are all distinguishable or inapposite The widely heralded case of Colegrove v Green, 328 US 549, 90 L ed 1432, 66 S Ct 1198 (1946), was one not only in which the Court was bob-tailed but in which there was no majority opinion. Indeed, even the "political question" point in Mr Justice Frankfurter's opinion was no more than an alternative ground [1] Moreover, the appellants did not present an equal protection argument [2] While it has served as a Mother Hubbard to most of the subsequent cases, I feel it was in that respect ill-cast and for all of these reasons put it to one side [3] Likewise, I do not consider the Guaranty Clause cases based on Art 1 §4, of the Constitution, because it is not invoked here and it involves different criteria, as the Court's opinion indicates. Cases resting on various other considerations not present here, such as Radford v Gary, 352 US 991, 1 L ed 2d 540, 77 S Ct 559 (1957) (lack of equity) ; Kidd v McCanless, 352 US 920, 1 L ed 2d 157, 77 S Ct 223 (1956) (adequate state grounds supporting the state judgment) ; Anderson v Jordan, 343 US 912, 96 L ed 1328, 72 S Ct 648 (1952) (adequate state grounds) ; Remmey v Smith, 342 US 916, 96 L ed 685, 72 S Ct 368 (1952) (failure to exhaust state procedures), are of course not controlling Finally, the Georgia

[1] The opinion stated that the Court "could also dispose of this case on the authority of Wood v Broom [287 US 1, 77 L ed 131, 53 S Ct 1 (1932)]" Wood v Broom involved only the interpretation of a congressional reapportionment Act

[2] Similarly, the Equal Protection Clause was not invoked in Tedesco v Board of Supervisors of Elections, 339 US 940, 94 L ed 1357, 70 S Ct 797 (1950)

[3] I do not read the later case of Colegrove v Barrett, 330 US 804, 91 L ed 1262, 67 S Ct 973 (1947), as having rejected the equal protection argument adopted here That was merely a dismissal of an appeal where the equal protection point was mentioned along with attacks under three other constitutional provisions, two congressional Acts, and three state constitutional provisions.

county unit system cases, such as South v Peters, 339 US 276, 94 L ed 834, 70 S Ct 641 (1950), reflect the viewpoint of MacDougall, i e, to refrain from intervening where there is some rational policy behind the State's system.[4]

II.

The controlling facts cannot be disputed It appears from the record that 37% of the voters of Tennessee elect 20 of the 33 Senators while 40% of the voters elect 63 of the 99 members of the House. But this might not on its face be an "invidious discrimination," Williamson v Lee Optical of Okla, Inc 348 US 483, 489, 99 L ed 563, 573, 75 S Ct 461 (1955), for a "statutory discrimination will not be set aside if any state of facts reasonably may be conceived to justify it" McGowan v Maryland, 366 US 420, 426, 6 L ed 2d 393, 399, 81 S Ct 1101 (1961)

It is true that the apportionment policy incorporated in Tennessee's Constitution, i e, state-wide numerical equality of representation with certain minor qualifications,[6] is a rational one On a county-by-county comparison a districting plan based thereon naturally will have disparities in representation due to the qualifications But this to my mind does not raise constitutional problems, for the overall policy is reasonable. However, the root of the trouble is not in Tennessee's Constitution, for admittedly its policy has not been followed The discrimination lies in the action of Tennessee's Assembly in allocating legislative seats to counties or districts created by it Try as one may, Tennessee's apportionment just cannot be made to fit the pattern cut by its Constitution This was the finding of the District Court The policy of the Constitution referred to by the dissenters, therefore, is of no relevance here. We must examine what the Assembly has done[6] The frequency and magnitude of the inequalities in the present districting admit of no policy whatever An examination of Table I accompanying this opinion conclusively reveals that the apportionment picture in Tennessee is a topsy-turvical of gigantic proportions. This is not to say that some of the disparity cannot be explained, but when the entire Table is examined—comparing the voting strength of counties of like population as well as contrasting that of the smaller with the larger counties —it leaves but one conclusion, namely that Tennessee's apportionment is a crazy quilt without rational basis At the risk of being accused of picking out a few of the horribles I shall allude to a series of examples that are taken from Table I.

As is admitted there is a wide disparity of voting strength between the large and small counties Some samples are: Moore County has a

[4] Georgia based its election system on a consistent combination of political units and population, giving six unit votes to the eight most populous counties, four unit votes to the 30 counties next in population, and two unit votes to each of the remaining counties

[5] See Part I of Appendix to Mr Justice Harlan's dissent

[6] It is suggested that the districting is not unconstitutional since it was established by a statute that was constitutional when passed some 60 years ago But many Assembly Sessions since that time have deliberately refused to change the original act, and in any event "a statute [constitutionally] valid when enacted may become invalid by change in the conditions to which it is applied" Nashville, C & St L R Co v Walters, 294 US 405, 415, 79 L ed 949, 955, 55 S Ct 486 (1935)

total representation of two[7] with a population (2,340) of only one-eleventh of Rutherford County (25,316) with the same representation; Decatur County (5,563) has the same representation as Carter (23,303) though the latter has four times the population; likewise, Loudon County (13,264), Houston (3,084), and Anderson County (33,990) have the same representation, i e, 1.25 each But it is said that in this illustration all of the underrepresented counties contain municipalities of over 10,000 population and they therefore should be included under the "urban" classification, rationalizing this disparity as an attempt to effect a rural-urban political balance. But in so doing one is caught up in the backlash of his own bull whip, for many counties have municipalities with a population exceeding 10,000, yet the same invidious discrimination is present. For example:

County	*Population*	*Representation*
Carter	23,303	1 10
Maury	24,556	2 25
Washington	36,967	1 93
Madison	37,245	3 50

Likewise, counties with no municipality of over 10,000 suffer a similar discrimination:

County	*Population*	*Representation*
Grundy	6,540	0 95
Chester	6,391	2 00
Cumberland	9,593	0 63
Crockett	9,676	2 00
Loudon	13,264	1 25
Fayette	13,577	2 50

This could not be an effort to give political balance between rural and urban populations. Since discrimination is present among counties of like population, the plan is neither consistent nor rational It discriminates horizontally creating gross disparities between rural areas themselves as well as between urban areas themselves,[8] still maintaining the wide vertical disparity already pointed out between rural and urban.

It is also insisted that the representation formula used above (see n 7) is "patently deficient" because "it eliminates from consideration the relative voting power of the counties that are joined together in a single election district " This is a strange claim coming from those who rely on the proposition that "the voice of every voter" need not have "approximate equality " Indeed, representative government, as they say, is not necessarily one of "bare numbers." The use of floterial districts in our political system is not ordinarily based on the theory that

[7] "Total representation" indicates the combined representation in the State Senate (33 members) and the State House of Representatives (99 members) in the Assembly of Tennessee Assuming a county has one representative, it is credited in this calculation with 1/99 Likewise, if the same county has one-third of a senate seat it is credited with another 1/99, and thus such a county, in our calculation, would have a "total representation" of two, if a county has one representative and one-sixth of a senate seat, it is credited with 1 5/99, or 1 50 It is this last figure that I use here in an effort to make the comparison clear The 1950 rather than the 1960 census of voting population is used to avoid the charge that use of 1960 tabulations might not have allowed sufficient time for the State to act However, the 1960 picture is even more irrational than the 1950 one

[8] Of course this was not the case in the Georgia county unit system, South v Peters, 339 US 276, 94 L ed 834, 70 S Ct 641, supra, or the Illinois initiative plan, MacDougall v Green, 335 US 281, 93 L ed 3, 69 S Ct 1, supra, where recognized political units having independent significance were given minimum political weight

the floterial representative is splintered among the counties of his district per relative population His function is to represent the whole district However, I shall meet the charge on its own ground and by use of its "adjusted 'total representation'" formula show that the present apportionment is loco. For example, compare some "urban" areas of like populations, using the Harlan formula·

County	*Population*	*Representation*
Washington	36,967	2 65
Madison	37,245	4 87
Carter	23,303	1 48
Greene	23,649	2 05
Maury	24,556	3 81
Coffee	13,406	2 32
Hamblen	14,090	1 07

And now, using the same formula, compare some so-called "rural" areas of like population:

County	*Population*	*Representation*
Moore	2,340	1 23
Pickett	2,565	22
Stewart	5,238	1 60
Cheatham	5,263	74
Chester	6,391	1 36
Grundy	6,540	69
Smith	8,731	2 04
Unicoi	8,787	40

And for counties with similar representation but with gross differences in population, take:

County	*Population*	*Representation*
Sullivan	55,712	4 07
Maury	24,556	3 81
Blount	30,353	2 12
Coffee	13,406	2 32

These cannot be "distorted effects," for here the same formula proposed by the dissenters is used and the result is even "a crazier" quilt

The truth is that—although this case has been here for two years and has had over six hours' argument (three times the ordinary case) and has been most carefully considered over and over again by us in Conference and individually—no one, not even the State nor the dissenters, has come up with any rational basis for Tennessee's apportionment statute

No one—except the dissenters advocating the Harlan "adjusted 'total representation'" formula—contends that mathematical equality among voters is required by the Equal Protection Clause But certainly there must be some rational design to a State's districting The discrimination here does not fit any pattern—as I have said, it is but a crazy quilt My Brother Harlan contends that other proposed apportionment plans contain disparities Instead of chasing those rabbits he should first pause long enough to meet appellants proof of discrimination by showing that in fact the present plan follows a rational policy. Not being able to do this, he merely counters with such generalities as "classic

legislative judgment," no "significant discrepancy," and "de minimis departures." I submit that even a casual glance at the present apportionment picture shows these conclusions to be entirely fanciful. If present representation has a policy at all, it is to maintain the status quo of invidious discrimination at any cost. Like the District Court, I conclude that appellants have met the burden of showing "Tennessee is guilty of a clear violation of the state constitution and of the [federal] rights of the plaintiffs. . . ."

III.

Although I find the Tennessee apportionment statute offends the Equal Protection Clause, I would not consider intervention by this Court into so delicate a field if there were any other relief available to the people of Tennessee. But the majority of the people of Tennessee have no "practical opportunities for exerting their political weight at the polls" to correct the existing "invidious discrimination." Tennessee has no initiative and referendum. I have searched diligently for other "practical opportunities" present under the law. I find none other than through the federal courts. The majority of the voters have been caught up in a legislative strait jacket. Tennessee has an "informed, civically militant electorate" and "an aroused popular conscience," but it does not sear "the conscience of the people's representatives." This is because the legislative policy has riveted the present seats in the Assembly to their respective constituencies, and by the votes of their incumbents a reapportionment of any kind is prevented. The people have been rebuffed at the hands of the Assembly; they have tried the constitutional convention route, but since the call must originate in the Assembly it, too, has been fruitless. They have tried Tennessee courts with the same result,[9] and Governors have fought the tide only to flounder. It is said that there is recourse in Congress and perhaps that may be, but from a practical standpoint this is without substance. To date Congress has never undertaken such a task in any State. We therefore must conclude that the people of Tennessee are stymied and without judicial intervention will be saddled with the present discrimination in the affairs of their state government.

IV.

Finally, we must consider if there are any appropriate modes of effective judicial relief. The federal courts are, of course, not forums for political debate, nor should they resolve themselves into state constitutional conventions or legislative assemblies. Nor should their jurisdiction be exercised in the hope that such a declaration, as is made today, may have the direct effect of bringing on legislative action and relieving the courts of the problem of fashioning relief. To my mind this would be nothing less than blackjacking the Assembly into reapportioning the State. If judicial competence were lacking to fashion an effective decree, I would dismiss this appeal. However, like the Solicitor General of the United States, I see no such difficulty in the position of this case. One plan might be to start with the existing as-

[9] It is interesting to note that state judges often rest their decisions on the ground that this Court has precluded adjudication of the federal claim. See, e. g., Scholle v. Hare, 360 Mich. 1, 104 N.W.2d 63 (1960).

sembly districts, consolidate some of them, and award the seats thus released to those counties suffering the most egregious discrimination. Other possibilities are present and might be more effective But the plan here suggested would be at least release the strangle hold now on the Assembly and permit it to redistrict itself

In this regard the appellants have proposed a plan based on the rationale of state-wide equal representation Not believing that numerical equality of representation throughout a State is constitutionally required, I would not apply such a standard albeit a permissive one Nevertheless, the dissenters attack it by the application of the Harlan "adjusted 'total representation'" formula The result is that some isolated inequalities are shown, but this in itself does not make the proposed plan irrational or place it in the "crazy quilt" category Such inequalities as the dissenters point out in attempting to support the present apportionment as rational, are explainable Moreover, there is no requirement that any plan have mathematical exactness in its application Only where, as here, the total picture reveals incommensurables of both magnitude and frequency can it be said that there is present an invidious discrimination

In view of the detailed study that the Court has given this problem, it is unfortunate that a decision is not reached on the merits The majority appears to hold, at least sub silentio, that an invidious discrimination is present, but it remands to the three-judge court for it to make what is certain to be that formal determination It is true that Tennessee has not filed a formal answer However, it has filed voluminous papers and made extended arguments supporting its position At no time has it been able to contradict the appellants' factual claims, it has offered no rational explanation for the present apportionment; indeed, it has indicated that there are none known to it As I have emphasized, the case proceeded to the point before the three-judge court that it was able to find an invidious discrimination factually present, and the State has not contested that holding here In view of all this background I doubt if anything more can be offered or will be gained by the State on remand, other than time Nevertheless, not being able to muster a court to dispose of the case on the merits, I concur in the opinion of the majority and acquiesce in the decision to remand However, in fairness I do think that Tennessee is entitled to have my idea of what it faces on the record before us and the trial court some light as to how it might proceed.

As John Rutledge (later Chief Justice) said 175 years ago in the course of the Constitutional Convention, a chief function of the Court is to secure the national rights [10] Its decision today supports the proposition for which our forebears fought and many died, namely that "to be fully conformable to the principle of right, the form of government must be representative" That is the keystone upon which our government was founded and lacking which no republic can survive It is well for this Court to practice self-restraint and discipline in constitutional adjudication, but never in its history have those principles received sanction where the national rights of so many have been so clearly

[10] I Farrand, The Records of the Federal Convention of 1787, 124

infringed for so long a time National respect for the courts is more enhanced through the forthright enforcement of those rights rather than by rendering them nugatory through the interposition of subterfuges In my view the ultimate decision today is in the greatest tradition of this Court.

TABLE I.

County	*1950 voting population*	*Present total representation using J Clark's formula*	*Present total representation using J Harlan's formula*	*Proposed total representation (appellant's plan), using J Harlan's formula*
Van Buren	2,039	63	.23	.11
Moore	2,340	2 00	1 23	.18

Mr Justice Stewart, concurring:

The separate writings of my dissenting and concurring Brothers stray so far from the subject of to day's decision as to convey, I think, a distressingly inaccurate impression of what the Court decides For that reason, I think it appropriate, in joining the opinion of the Court, to emphasize in a few words what the opinion does and does not say.

The Court today decides three things and no more "(a) that the court possessed jurisdiction of the subject matter, (b) that a justiciable cause of action is stated upon which appellants would be entitled to appropriate relief; and (c) . . . that the appellants have standing to challenge the Tennessee apportionment statutes." Supra, p. 674.

The complaint in this case asserts that Tennessee's system of apportionment is utterly arbitrary—without any possible justification in rationality The District Court did not reach the merits of that claim, and this Court quite properly expresses no view on the subject Contrary to the suggestion of my Brother Harlan, the Court does not say or imply that "state legislatures must be so structured as to reflect with approximate equality the voice of every voter" Infra, p 752 The Court does not say or imply that there is anything in the Federal Constitution "to prevent a State, acting not irrationally, from choosing any electoral legislative structure it thinks best suited to the interests, temper, and customs of its people" Infra, p 752 And contrary to the suggestion of my Brother Douglas, the Court most assuredly does not decide the question, "may a State weight the vote of one county or one district more heavily than it weights the vote in another?" Supra, p 701

In MacDougall v Green, 335 US 281, 93 L ed 3, 69 S Ct 1, the Court held that the Equal Protection Clause does not "deny a State the power to assure a proper diffusion of political initiative as between its thinly populated counties and those having concentrated masses, in view of the fact that the latter have practical opportunities for exerting their political weight at the polls not available to the former" 335 US, at 284 In case after case arising under the Equal Protection Clause the Court has said what it said again only last Term—that "the Fourteenth Amendment permits the States a wide scope of discretion in enacting laws which affect some groups of citizens differently than others" McGowan v Maryland, 366 US 420, 425, 6 L ed 2d 393, 399, 81 S Ct 1101 In case after case arising under that Clause we have also said that "the burden of establishing the unconstitutionality of a statute rests on him who assails it" Metropolitan Casualty Ins Co v Brownell, 294 US 580, 584, 79 L ed 1070, 1072, 55 S Ct 538.

Today's decision does not turn its back on these settled precedents I repeat, the Court today decides only, (1) that the District Court possessed jurisdiction of the subject matter, (2) that the complaint presents a justiciable controversy; (3) that the appellants have standing My Brother Clark has made a convincing prima facie showing that Tennessee's system of apportionment is in fact utterly arbitrary—without any possible justification in rationality My Brother Harlan has, with imagination and ingenuity, hypothesized possibly rational bases for Tennessee's system But the merits of this case are not before us now The defendants have not yet had an opportunity to be heard in defense of the State's system of apportionment; indeed, they have not yet even filed an answer to the complaint As in other cases, the proper place for the trial is in the trial court, not here

Mr Justice Frankfurter, whom Mr Justice Harlan joins, dissenting

The Court today reverses a uniform course of decision established by a dozen cases, including one by which the very claim now sustained was unanimously rejected only five years ago The impressive body of rulings thus cast aside reflected the equally uniform course of our political history regarding the relationship between population and legislative representation—a wholly different matter from denial of the franchise to individuals because of race, color, religion or sex Such a massive

repudiation of the experience of our whole past in asserting destructively novel judicial power demands a detailed analysis of the role of this Court in our constitutional scheme Disregard of inherent limits in the effective exercise of the Court's "judicial Power" not only presages the futility of judicial intervention in the essentially political conflict of forces by which the relation between population and representation has time out of mind been and now is determined It may well impair the Court's position as the ultimate organ of "the supreme Law of the Land" in that vast range of legal problems, often strongly entangled in popular feeling, on which this Court must pronounce The Court's authority—possessed neither of the purse nor the sword—ultimately rests on sustained public confidence in its moral sanction Such feeling must be nourished by the Court's complete detachment, in fact and in appearance, from political entanglements and by abstention from injecting itself into the clash of political forces in political settlements

A hypothetical claim resting on abstract assumptions is now for the first time made the basis for affording illusory relief for a particular evil even though it foreshadows deeper and more pervasive difficulties in consequence The claim is hypothetical and the assumptions are abstract because the Court does not vouchsafe the lower courts—state and federal—guide-lines for formulating specific, definite, wholly unprecedented remedies for the inevitable litigations that today's unprecedented disposition is bound to stimulate in connection with politically motivated reapportionments in so many States In such a setting, to promulgate jurisdiction in the abstract is meaningless It is devoid of reality as "a brooding omnipresence in the sky" for it conveys no intimation what relief, if any, a District Court is capable of affording that would not invite legislatures to play ducks and drakes with the judiciary For this Court to direct the District Court to enforce a claim to which the Court has over the years consistently found itself required to deny legal enforcement and at the same time to find it necessary to withhold any guidance to the lower court how to enforce this turnabout, new legal claim, manifests an odd—indeed an esoteric—conception of judicial propriety One of the Court's supporting opinions, as elucidated by commentary, unwittingly affords a disheartening preview of the mathematical quagmire (apart from divers judicially inappropriate and elusive determinants), into which this Court today catapults the lower courts of the country without so much as adumbrating the basis for a legal calculus as a means of extrication Even assuming the indispensable intellectual disinterestedness on the part of judges in such matters, they do not have accepted legal standards or criteria or even reliable analogies to draw upon for making judicial judgments To charge courts with the task of accommodating the incommensurable factors of policy that underlie these mathematical puzzles is to attribute, however flatteringly, omnicompetence to judges The Framers of the Constitution persistently rejected a proposal that embodied this assumption and Thomas Jefferson never entertained it.

Recent legislation, creating a district appropriately described as "an atrocity of ingenuity," is not unique Considering the gross inequality among legislative electoral units within almost every State, the Court naturally shrinks from asserting that in districting at least substantial

equality is a constitutional requirement enforceable by courts.† Room continues to be allowed for weighting. This of course implies that geography, economics, urban-rural conflict, and all the other nonlegal factors which have throughout our history entered into political districting are to some extent not to be ruled out in the undefined vista now opened up by review in the federal courts of state reapportionments To some extent—aye, there's the rub In effect, today's decision empowers the courts of the country to devise what should constitute the proper composition of the legislatures of the fifty States If state courts should for one reason or another find themselves unable to discharge this task, the duty of doing so is put on the federal courts or on this Court, if State views do not satisfy this Court's notion of what is proper districting

We were soothingly told at the bar of this Court that we need not worry about the kind of remedy a court could effectively fashion once the abstract constitutional right to have courts pass on a state-wide system of electoral districting is recognized as a matter of judicial rhetoric, because legislatures would heed the Court's admonition This is not only an euphoric hope It implies a sorry confession of judicial impotence in place of a frank acknowledgement that there is not under our Constitution a judicial remedy for every political mischief, for every undesirable exercise of legislative power The Framers carefully and with deliberate forethough refused so to enthrone the judiciary. In this situation, as in others of like nature, appeal for relief does not belong here Appeal must be to an informed, civically militant electorate In a democratic society like ours, relief must come through an aroused popular conscience that sears the conscience of the people's representatives In any event there is nothing judicially more unseemly nor more self-defeating than for this Court to make in terrorem pronouncements, to indulge in merely empty rhetoric, sounding a word of promise to the ear, sure to be disappointing to the hope

This is the latest in the series of cases in which the Equal Protection and Due Process Clauses of the Fourteenth Amendment have been invoked in federal courts as restrictions upon the power of the States to allocate electoral weight among the voting populations of their various geographical subdivisions.[1] The present action, which comes here on

† It is worth reminding that the problem of legislative apportionment is not one dividing North and South Indeed, in the present House of Representatives, for example, Michigan's congressional districts are far less representative of the numbers of inhabitants, according to the 1960 census, than are Louisiana's Michigan's Sixteenth District, which is 93 1% urban, contains 802,394 persons and its Twelfth, which is 47 6% urban, contains 177,421—one-fifth as many persons Louisiana's most populous district, the Sixth, is 53 6% urban and contains 536,029 persons, and its least populous, the Eighth, 36 7% urban, contains 263,850—nearly half Gross disregard of any assumption that our political system implies even approximation to the notion that individual votes in the various districts within a State should have equal weight is as true, e g, of California, Illinois, and Ohio as it is of Georgia See United States Department of Commerce, Census Release, February 24, 1962, CB 62–23

appeal from an order of a statutory three-judge District Court dismissing amended complaints seeking declaratory and injunctive relief, challenges the provisions of Tenn Code Ann, 1955, §§ 3–101 to 3–109, which apportion state representative and senatorial seats among Tennessee's ninety-five counties.

The original plaintiffs, citizens and qualified voters entitled to vote for members of the Tennessee Legislature in the several counties in which they respectively reside, bring this action in their own behalf and "on behalf of all other voters in the State of Tennessee," or, as they alternatively assert, "on behalf of all qualified voters of their respective counties, and further, on behalf of all voters of the State of Tennessee who are similarly situated." The cities of Knoxville and Chattanooga and the Mayor of Nashville—on his own behalf as a qualified voter and, pursuant to an authorizing resolution by the Nashville City Council, as a representative of all the city's residents —were permitted to intervene as parties plaintiff.[2] The defendants are executive officials charged with statutory duties in connection with state elections.[3]

The original plaintiffs' amended complaint avers, in substance, the following.[4] The Constitution of the State of Tennnessee declares that "elections shall be free and equal," provides that no qualifications other than age, citizenship and specified residence requirements shall be attached to the right of suffrage, and prohibits denying to any person the suffrage to which he is entitled except upon conviction of an infamous crime. Art 1 § 5; Art 4 § 1 It requires an enumeration of qualified voters within every term of ten years after 1871 and an apportionment of representatives and senators among the several coun-

US 912, 90 L ed 1328, 72 S Ct 648, Kidd v McCanless, 352 US 920, 1 L ed 2d 157, 77 S Ct 223, Radford v Gary, 352 US 991, 1 L ed 2d 540, 77 S Ct 559, Hartsfield v Sloan, 357 US 916, 2 L ed 2d 1363, 78 S Ct 1363, Matthews v Handley, 361 US 127, 4 L ed 2d 180, 80 S Ct 256, Perry v Folsom, 144 F Supp 874 (DC ND Ala), Magraw v Donovan, 163 F Supp 184 (DC D Minn), cf Dyer v Abe, 138 F Supp 220 (DC D Hawaii) And see Keogh v Neely, 50 F2d 685 (CA7th Cir)

[2] Although the motion to intervene by the Mayor of Nashville asserted an interest in the litigation in only a representative capacity, the complaint which he subsequently filed set forth that he was a qualified voter who also sued in his own behalf The municipalities of Knoxville and Chattanooga purport to represent their residents Since the claims of the municipal intervenors do not differ materially from those of the parties who sue as individual voters, the Court need not now determine whether the municipalities are proper parties to this proceeding See, e g, Stewart v Kansas City, 249 US 14, 60 L ed 120, 36 S Ct 15

[3] The original complaint named as defendants Tennessee's Secretary of State, Attorney General, Coordinator of Elections, and the three members of the State Board of Elections, seeking to make the Board members representatives of all the State's County Election Commissioners The prayer in an intervening complaint by the City of Knoxville, that the Commissioners of Elections of Knox County be added as parties defendant seems not to have been acted on by the court below Defendants moved to dismiss, inter alia, on the ground of failure to join indispensable parties, and they argue in this Court that only the County Election Commissioners of the ninety-five counties are the effective administrators of Tennessee's elections laws, and that none of the defendants have substantial duties in connection therewith The District Court deferred ruling on this ground of the motion Inasmuch as it involves questions of local law more appropriately decided by judges sitting in Tennessee than by this Court, and since in any event the failure to join County Election Commissioners in this action looking to prospective relief could be corrected, if necessary, by amendment of the complaints, the issue does not concern the Court on this appeal

[4] Jurisdiction is predicated upon RS § 1979, 42 USC § 1983, and 28 USC § 1343 (3)

ties or districts according to the number of qualified voters in each[5] at the time of each decennial enumeration. Art 2 §§ 4, 5, 6. Notwithstanding these provisions, the State Legislature has not reapportioned itself since 1901. The Reapportionment Act of that year, Tenn Acts 1901, c. 122, now Tenn Code Ann, 1955, §§ 3–101 to 3–109,[6] was unconstitutional when enacted, because not preceded by the required enumeration of qualified voters and because it allocated legislative seats arbitrarily, unequally and discriminatorily, as measured by the 1900 federal census Moreover, irrespective of the question of its validity in 1901, it is asserted that the Act became "unconstitutional and obsolete" in 1911 by virtue of the decennial reapportionment requirement of the Tennessee Constitution Continuing a "purposeful and systematic plan to discriminate against a geographic class of persons," recent Tennessee Legislatures have failed, as did their predecessors, to enact reapportionment legislation, although a number of bills providing for reapportionment have been introduced Because of population shifts since 1901, the apportionment fixed by the Act of that year and still in effect is not proportionate to population, denies to the counties in which the plaintiffs live an additional number of representatives to which they are entitled, and renders plaintiffs' votes "not as effective as the votes of the voters residing in other senatorial and representative districts . . ." Plaintiffs "suffer a debasement of their votes by virtue of the incorrect, arbitrary, obsolete and unconstitutional apportionment of the General Assembly . . . ," and the totality of the malapportionment's effect—which permits a minority of about thirty-seven percent of the voting population of the State to control twenty of the thirty-three members of Tennessee's Senate, and a minority of forty percent of the voting population to control sixty-three of the ninety-nine members of the House—results in "a distortion of the constitutional system" established by the Federal and State Constitutions, prevents the General Assembly "from being a body representative of the people of the State of Tennessee, . . ." and is "contrary to the basic principle of representative government . . . ," and "contrary to the philosophy of government in the United States and all Anglo-Saxon jurisprudence . . . ."

[5] However, counties having two-thirds of the ratio required for a Representative are entitled to seat one member in the House, and there are certain geographical restrictions upon the formation of Senate districts The applicable provisions of Article 2 of the Tennessee Constitution are

"*Sec 4 Census*.—An enumeration of the qualified voters, and an apportionment of the Representatives in the General Assembly, shall be made in the year one thousand eight hundred and seventy-one, and within every subsequent term of ten years"

"*Sec 5 Apportionment of representatives*.—The number of Representatives shall, at the several periods of making the enumeration, be apportioned among the several counties or districts, according to the number of qualified voters in each, and shall not exceed seventy-five, until the population of the State shall be one million and a half, and shall never exceed ninety-nine, Provided that any county having two-thirds of the ratio shall be entitled to one member"

"*Sec 6 Apportionment of senators*.—The number of Senators shall, at the several periods of making the enumeration, be apportioned among the several counties or districts according to the number of qualified electors in each, and shall not exceed one-third the number of representatives In apportioning the Senators among the different counties, the fraction that may be lost by any county or counties, in the apportionment of members to the House of Representatives, shall be made up to such county or counties in the Senate, as near as may be practicable When a district is composed of two or more counties, they shall be adjoining, and no county shall be divided in forming a district

[6] It is alleged that certain amendments to the Act of 1901 made only minor modifications of that Act, adjusting the boundaries of individual districts in a manner not material to plaintiffs' claims

Exhibits appended to the complaint purport to demonstrate the extent of the inequalities of which plaintiffs complain Based upon "approximate voting population,"[7] these set forth figures showing that the State Senator from Tennessee's most populous senatorial district represents five and two-tenths times the number of voters represented by the Senator from the least populous district, while the corresponding ratio for most and least populous House districts is more than eighteen to one The General Assembly thus apportioned has discriminated against the underrepresented counties and in favor of the overrepresented counties in the collection and distribution of various taxes and tax revenues, notably in the distribution of school and highway-improvement funds,[8] this discrimination being "made possible and effective" by the Legislature's failure to reapportion itself Plaintiffs conclude that election of the State Legislature pursuant to the apportionment fixed by the 1901 Act violates the Tennessee Constitution and deprives them of due process of law and of the equal protection of the laws guaranteed by the Fourteenth Amendment. Their prayer below was for a declaratory judgment striking down the Act, an injunction restraining defendants from any acts necessary to the holding of elections in the districts prescribed by Tenn Code Ann, 1955, §§ 3–101 to 3–109, until such time as the legislature is reapportioned "according to the Constitution of the State of Tennessee," and an order directing defendants to declare the next primary and general elections for members of the Tennessee Legislature on an at-large basis—the thirty-three senatorial candidates and the ninety-nine representative candidates receiving the highest number of votes to be declared elected[9]

Motions to dismiss for want of jurisdiction of the subject matter and for failure to state a claim were made and granted, 179 F Supp 824, the District Court relying upon this Court's series of decisions beginning with Colegrove v Green, 328 US 549, 90 L ed 1432, 66 S Ct 1198, reh den 329 US 825, 91 L ed 701, 67 S Ct 118, motion for rearg before the full bench den 329 US 828, 91 L ed 703, 67 S Ct 199 The original and intervening plaintiffs bring the case here on appeal 364 US 898, 5 L ed 2d 193, 81 S Ct 230 In this Court they

[7] The exhibits do not reveal the source of the population figures which they set forth, but it appears that the figures were taken from the United States Census of Population, 1950, Volume II, Part 42 (Tennessee), Table 41, at 78–91 These census figures represent the total population over twenty-one years of age in each Tennessee county they do not purport to enumerate "qualified voters" or "qualified electors" the measure of apportionment prescribed by the Tennessee Constitution See note 5, supra To qualify to vote in Tennessee, in addition to fulfilling the age requirement, an individual must be a citizen of the United States, a resident of the State for twelve months and of the county where he offers his vote for six months next preceding the election, and must not be under the disqualification attaching to conviction for certain offenses Tenn Code Ann, 1955, §§ 2–201, 2–205 The statistics found in the United States Census of Population, 1950, Volume II, Part 42 (Tennessee), Table 42, at 92–97, suggest that the residence requirement, in particular, may be an unknown variable of considerable significance Appellants do not suggest a means by which a court, on the basis of the federal census figures, can determine the number of qualified voters in the various Tennessee counties

[8] The "county aid funds" derived from a portion of a state gasoline privilege tax, for example, are distributed among the counties as follows one-half equally among the ninety-five counties, one-quarter on the basis of area, one-quarter on the basis of population, to be used by county authorities in the building, repairing and improving of county roads and bridges Tenn Code Ann, 1955 § 54–403 Appellants urge that this distribution is discriminatory

[9] Plaintiffs also suggested, as an alternative to at-large elections, that the District Court might itself redistrict the State They did not, however, expressly pray such relief

have altered their request for relief, suggesting a "step-by-step approach." The first step is a remand to the District Court with directions to vacate the order dismissing the complaint and to enter an order retaining jurisdiction, providing "the necessary spur to legislative action . . " If this proves insufficient, appellants will ask the "additional spur" of an injunction prohibiting elections under the 1901 Act, or a declaration of the Act's unconstitutionality, or both. Finally, all other means failing, the District Court is invited by the plaintiffs, greatly daring, to order an election at large or redistrict the State itself or through a master. The Solicitor General of the United States, who has filed a brief amicus and argued in favor of reversal, asks the Court on this appeal to hold only that the District Court has "jurisdiction" and may properly exercise it to entertain the plaintiffs' claims on the merits This would leave to that court after remand the questions of the challenged statute's constitutionality and of some undefined, unadumbrated relief in the event a constitutional violation is found After an argument at the last Term, the case was set down for reargument, 366 US 907, 81 S Ct 1082, and heard this Term.

I.

In sustaining appellants' claim, based on the Fourteenth Amendment, that the District Court may entertain this suit, this Court's uniform course of decision over the years are overruled or disregarded. Explicitly it begins with Colegrove v Green (US) supra, decided in 1946, but its roots run deep in the Court's historic adjudicatory process.

Colegrove held that a federal court should not entertain an action for declaratory and injunctive relief to adjudicate the constitutionality, under the Equal Protection Clause and other federal constitutional and statutory provisions, of a state statute establishing the respective districts for the State's election of Representatives to the Congress. Two opinions were written by the four Justices who composed the majority of the seven sitting members of the Court. Both opinions joining in the result in Colegrove v Green agreed that considerations were controlling which dictated denial of jurisdiction though not in the strict sense of want of power While the two opinions show a divergence of view regarding some of these considerations, there are important points of concurrence Both opinions demonstrate a predominant concern, first, with avoiding federal judicial involvement in matters traditionally left to legislative policymaking, second, with respect to the difficulty—in view of the nature of the problems of apportionment and its history in this country—of drawing on or devising judicial standards for judgment, as opposed to legislative determinations, of the part which mere numerical equality among voters should play as a criterion for the allocation of political power; and, third, with problems of finding appropriate modes of relief—particularly, the problem of resolving the essentially political issue of the relative merits of at-large elections and elections held in districts of unequal population

The broad applicability of these considerations—summarized in the loose shorthand phrase, "political question" in cases involving a State's

apportionment of voting power among its numerous localities has led the Court, since 1946, to recognize their controlling effect in a variety of situations (In all these cases decision was by a full Court) The "political question" principle as applied in Colegrove has found wide application commensurate with its function as "one of the rules basic to the federal system and this Court's appropriate place within that structure" Rescue Army v Municipal Court, 331 US 549, 570, 91 L ed 1666, 1679, 67 S Ct 1409. In Colegrove v Barrett, 330 US 804, 91 L ed 1262, 67 S Ct 973, litigants brought suit in a Federal District Court challenging as offensive to the Equal Protection Clause Illinois' state legislative apportionment laws They pointed to state constitutional provisions requiring decennial reapportionment and allocation of seats in proportion to population, alleged a failure to reapportion for more than forty-five years—during which time extensive population shifts had rendered the legislative districts grossly unequal—and sought declaratory and injunctive relief with respect to all elections to be held thereafter After the complaint was dismissed by the District Court, this court dismissed an appeal for want of a substantial federal question A similar District Court decision was affirmed here in Radford v Gary, 352 US 991, 1 L ed 2d 540, 77 S Ct 559 And cf Remmey v Smith, 342 US 916, 96 L ed 685, 72 S Ct 368 In Tedesco v Board of Supervisors of Elections, 339 US 940, 94 L ed 1357, 70 S Ct 797, the Court declined to hear, for want of a substantial federal question, the claim that the division of a municipality into voting districts of unequal population for the selection for councilmen fell afoul of the Fourteenth Amendment, and in Cox v Peters, 342 US 936, 96 L ed 697, 72 S Ct 559, reh den 343 US 921, 96 L ed 1334, 72 S Ct 675, it found no substantial federal question raised by a state court's dismissal of a claim for damages for "devaluation" of plaintiff's vote by application of Georgia's county-unit system in a primary election for the Democratic gubernatorial candidate. The same Georgia system was subsequently attacked in a complaint for declaratory judgment and an injunction; the federal district judge declined to take the requisite steps for the convening of a statutory three-judge court, and this Court, in Hartfield v Sloan, 357 US 916, 2 L ed 2d 1363, 78 S Ct 1363, denied a motion for leave to file a petition for a writ of mandamus to compel the district judge to act. In MacDougall v Green, 335 US 281, 283, 93 L ed 3, 7, 69 S Ct 1, the Court noted that "To assume that political power is a function exclusively of numbers is to disregard the practicalities of government," and, citing the Colegrove cases, declined to find in "such broad constitutional concepts as due process and equal protection of the laws," id 335 US at 284, a warrant for federal judicial invalidation of an Illinois statute requiring as a condition for the formation of a new political party the securing of at least two hundred signatures from each of fifty counties. And in South v Peters, 339 US 276, 94 L ed 834, 70 S Ct 641, another suit attacking Georgia's county-unit law, it affirmed a District Court dismissal, saying

"Federal courts consistently refuse to exercise their equity powers in cases posing political issues arising from a state's geographical distribution of electoral strength among its political subdivisions" Id. 339 US at 277.

Of course it is important to recognize particular, relevant diversities among comprehensively similar situations Appellants seek to distinguish several of this Court's prior decisions on one or another ground —Colegrove v Green on the ground that congressional, not state legislative, apportionment was involved, Remmey v Smith on the ground that state judicial remedies had not been tried, Radford v Gary on the ground that Oklahoma has the initiative, whereas Tennessee does not It would only darken counsel to discuss the relevance and significance of each of these assertedly distinguishing factors here and in the context of this entire line of cases Suffice it that they do not serve to distinguish Colegrove v Barrett, 330 US 804, 91 L ed 1262, 67 S Ct 973, supra, which is on all fours with the present case, or to distinguish Kidd v McCanless, 352 US 920, 1 L ed 2d 157, 77 S Ct 223, in which the full Court without dissent, only five years ago, dismissed on authority of Colegrove v Green and Anderson v Jordan, 343 US 912, 96 L ed 1328, 72 S Ct 648, and appeal from the Supreme Court of Tennessee in which a precisely similar attack was made upon the very statute now challenged If the weight and momentum of an unvarying course of carefully considered decisions are to be respected, appellants' claims are foreclosed not only by precedents governing the exact facts of the present case but are themselves supported by authority the more persuasive in that it gives effect to the Colegrove principle in distinctly varying circumstances in which state arrangements allocating relative degrees of political influence among geographic groups of voters were challenged under the Fourteenth Amendment

II.

The Colegrove doctrine, in the form in which repeated decisions have settled it, was not an innovation It represents long judicial thought and experience From its earliest opinions this Court has consistently recognized a class of controversies which do not lend themselves to judicial standards and judicial remedies To classify the various instances as "political questions" is rather a form of stating this conclusion than revealing of analysis[10] Some of the cases so labelled have no relevance here But from others emerge unifying considerations that are compelling

1 The cases concerning war or foreign affairs, for example, are usually explained by the necessity of the country's speaking with one voice in such matters While this concern alone undoubtedly accounts for many of the decisions,[11] others do not fit the pattern It would hardly embarrass the conduct of war were this Court to determine, in connec-

[10] See Bickel, Foreword The Passive Virtues, 75 Harv L Rev 40, 45 et seq (1961)

[11] See, e g, United States v Palmer (US) 3 Wheat 610, 634, 635, 4 L ed 471, 478, The Divina Pastora (US) 4 Wheat 52, 4 L ed 512 Williams v Suffolk Ins Co (US) 13 Pet 415, 10 L ed 226, Kennett v Chambers (US) 14 How 38, 14 L ed 316, Doe ex dem Clark v Braden (US) 16 How 635, 14 L ed 1090 Jones v United States, 137 US 202, 34 L ed 691, 11 S Ct 80 Terlinden v Ames, 184 US 270, 46 L ed 534, 22 S Ct 484 Charlton v Kelly, 229 US 447, 57 L ed 1274, 33 S Ct 945, 46 LRA NS 337, Ostgen v Central Leather Co 246 US 297, 62 L ed 726, 38 S Ct 306, Ex parte Peru, 318 US 578, 87 L ed 1014, 63 S Ct 793 Clark v Allen, 331 US 503, 91 L ed 1633, 67 S Ct 1431, 170 ALR 957 Compare Foster v Neilson (US) 2 Pet 253, 7 L ed 415, with United States v Arredondo (US) 6 Pet 691, 8 L ed 547 Of course judgment concerning the 'political' nature of even a controversy affecting the nation's foreign affairs is not a simple mechanical matter, and certain of the Court's decisions have accorded scant weight to the consideration of unity of action in the conduct of external relations Compare Vermilya-Brown Co v Connell, 335 US 377, 93 L ed 76, 69 S Ct 140, with United States v Pink, 315 US 203, 86 L ed 796, 62 S Ct 552

tion with private transactions between litigants, the date upon which war is to be deemed terminated But the Court has refused to do so See, e g, The Protector (US) (Freeborn v The Protector) 12 Wall 700, 20 L ed 463, Brown v Hiatts (US) 15 Wall 177, 21 L ed 128, Adger v Alston (US) 15 Wall 555, 21 L ed 234, Williams v Bruffy, 96 US 176, 192, 193, 24 L ed 716, 720 It does not suffice to explain such cases as Ludecke v Watkins, 335 US 160, 92 L ed 1881, 68 S Ct 1429—deferring to political determination the question of the duration of war for purposes of the Presidential power to deport alien enemies—that judicial intrusion would seriously impede the President's power effectively to protect the country's interests in time of war Of course, this is true, but the precise issue presented is the duration of the time of war which demands the power Cf Martin v Mott (US) 12 Wheat 19, 6 L ed 537, Lamar v Browne, 92 US 187, 193 23 L ed 650, 652, Hamilton v Kentucky Distilleries & Warehouse Co 251 US 146, 64 L ed 194, 40 S Ct 106; Kahn v Anderson, 255 US 1, 65 L ed 469, 41 S Ct 224. And even for the purpose of determining the extent of congressional regulatory power over the tribes and dependent communities of Indians, it is ordinarily for Congress, not the Court, to determine whether or not a particular Indian group retains the characteristics constitutionally requisite to confer the power [12] E g, United States v Holliday (US) 3 Wall 407, 18 L ed 182, Tiger v Western Invest Co 221 US 286, 55 L ed 738, 31 S Ct 578, United States v Sandoval, 231 US 28, 58 L ed 107, 34 S Ct 1 A controlling factor in such cases is that, decision respecting these kinds of complex matters of policy being traditionally committed not to courts but to the political agencies of government for determination by criteria of political expediency, there exists no standard ascertainable by settled judicial experience or process by reference to which a political decision affecting the question at issue between the parties can be judged Where the question arises in the course of a litigation involving primarily the adjudication of other issues between the litigants, the Court accepts as a basis for adjudication the political departments' decision of it But where its determination is the sole function to be served by the exercise of the judicial power, the Court will not entertain the action See Chicago & S Air Lines, Inc v Waterman S S Corp 333 US 103, 92 L ed 568, 68 S Ct 431 The dominant consideration is "the lack of satisfactory criteria for a judicial determination " Mr Chief Justice Hughes, for the Court, in Coleman v Miller, 307 US 433, 454, 455 83 L ed 1385, 1396, 1397, 59 S Ct 972, 122 ALR 695 Compare United States v Rogers (US) 4 How 567, 572, 11 L ed 1105, 1107, with Worcester v George (US) 6 Pet 515, 8 L ed 483 [13]

This may be, like so many questions of law, a matter of degree. Questions have arisen under the Constitution to which adjudication gives answer although the criteria for decision are less than unwavering

[12] Obviously, this is the equivalent of saying that the characteristics are not "constitutionally requisite" in a judicially enforceable sense The recognition of their necessity as a condition of legislation is left, as is observance of certain other constitutional commands, to the conscience of the non-judicial organs Cf Kentucky v Dennison (US) 24 How 66, 16 L ed 717

[13] Also compare the Colemand Case and United States v Sprague, 282 US 716, 75 L ed 640 51 S Ct 220, 71 ALR 1501, with Hawke v Smith (No 1), 253 US 221, 64 L ed 871, 40 S Ct 495, 10 ALR 1504 See the National Prohibition Cases (Rhode Island v Palmer) 253 US 350, 64 L ed 946, 40 S Ct 486, 538, and consider the Court's treatment of the several contentions in Lever v Garnett, 258 US 130, 66 L ed 505, 42 S Ct 217

bright lines Often in these cases illumination was found in the federal structures established by, or the underlying presuppositions of, the Constitution. With respect to such questions, the Court has recognized that, concerning a particular power of Congress put in issue, ". . . effective restraints on its exercise must proceed from political rather than judicial processes" Wickard v Filburn, 317 US 11, 120, 87 L ed 122, 132, 63 S Ct 82. It is also true that even regarding the duration of war and the status of Indian tribes, referred to above as subjects ordinarily committed exclusively to the nonjudicial branches, the Court has suggested that some limitations exist upon the range within which the decisions of those branches will be permitted to go unreviewed. See United States v Sandoval, supra (231 US at 46), cf Chastleton Corp v Sinclair, 264 US 543, 68 L ed 841, 44 S Ct 405 But this is merely to acknowledge that particular circumstances may differ so greatly in degree as to differ thereby in kind, and that, although within a certain range of cases on a continuum, no standard of distinction can be found to tell between them, other cases will fall above or below the range The doctrine of political questions, like any other, is not to be applied beyond the limits of its own logic, with all the quiddities and abstract disharmonies it may manifest See the disposition of contentions based on logically distorting views of Colegrove v Green and Hunter v Pittsburgh, 207 US 161, 52 L ed 151, 28 S Ct 40, in Gomillion v Lightfoot, 364 US 339, 5 L ed 2d 110, 81 S Ct 125.

2 The Court has been particularly unwilling to intervene in matters concerning the structure and organization of the political institutions of the States The abstention from judicial entry into such areas has been greater even than that which marks the Court's ordinary approach to issues of state power challenged under broad federal guarantees "We should be very reluctant to decide that we had jurisdiction in such case, and thus in an action of this nature to supervise and review the political administration of a state government by its own officials and through its own courts The jurisdiction of this court would only exist in case there had been . such a plain and substantial departure from the fundamental principles upon which our government is based that it could with truth and propriety be said that if the judgment were suffered to remain, the party aggrieved would be deprived of his life, liberty or property in violation of the provisions of the Federal Constitution" Wilson v North Carolina, 169 US 586, 596, 42 L ed 865, 871, 18 S Ct 435 See Taylor v Beckham, No 1), 178 US 548, 44 L ed 1187, 20 S Ct 890, 1009; Walton v House of Representatives, 265 US 487, 68 L ed 1115, 44 S Ct 628; Snowden v Hughes, 321 US 1, 88 L ed 497, 64 S Ct 397 Cf Re Sawyer, 124 US 200, 220, 221, 31 L ed 402, 409, 8 S Ct 482.

Where, however, state law has made particular federal questions determinative of relations within the structure of state government, not in challenge of it, the Court has resolved such narrow, legally defined questions in proper proceedings. See Boyd v Nebraska, 143 US 135, 36 L ed 103, 12 S Ct 375 In such instances there is no conflict between state policy and the exercise of federal judicial power. This distinction explains the decisions in Smiley v Holm, 285 US 355, 76 L ed 795, 52 S Ct 397; Koenig v Flynn, 285 US 375, 76 L ed 805, 52 S Ct 403; and Carroll v Becker, 285 US 380, 76 L ed 807, 52 S Ct 402, in

which the Court released state constitutional provisions prescribing local lawmaking procedures from misconceived restriction of superior federal requirements Adjudication of the federal claim involved in those cases was not one demanding the accommodation of conflicting interests for which no readily accessible judicial standards could be found See McPherson v Blacker, 146 US 1, 36 L ed 869, 13 S Ct 3, in which, in a case coming here on writ of error from the judgment of a state court which had entertained it on the merits, the Court treated as justiciable the claim that a State could not constitutionally select its presidential electors by districts, but held that Art 2 § 1, cl 2, of the Constitution left the mode of choosing electors in the absolute discretion of the States Cf Pope v Williams, 193 US 621, 48 L ed 817, 24 S Ct 573, Breedlove v Suttles, 302 US 277, 82 L ed 252, 58 S Ct 205 To read with literalness the abstracted jurisdictional discussion in the McPherson opinion reveals the danger of conceptions of "justiciability" derived from talk and not from the effective decision in a case In probing beneath the surface of cases in which the Court has declined to interfere with the actions of political organs of government, of decisive significance is whether in each situation the ultimate decision has been to intervene or not to intervene Compare the reliance in South v Peters, 339 US 276, 94 L ed 834, 70 S Ct 641, on MacDougall v Green, 335 US 281, 93 L ed 3, 69 S Ct 1, and the "jurisdictional" form of the opinion in Wilson v North Carolina, 169 US 586, 596, 42 L ed 865, 871, 18 S Ct 435, supra

3 The cases involving Negro disfranchisement are no exception to the principle of avoiding federal judicial intervention into matters of state government in the absence of an explicit and clear constitutional imperative For here the controlling command of Supreme Law is plain and unequivocal An end of discrimination against the Negro was the compelling motive of the Civil War Amendments The Fifteenth expresses this in terms, and it is no less true of the Equal Protection Clause of the Fourteenth Slaughter-House Cases (US) 16 Wall 36, 67–72, 21 L ed 394, 405–407, Strauder v West Virginia, 100 US 303, 306, 307, 25 L ed 664, 665; Nixon v Herndon, 273 US 536, 541, 71 L ed 759, 761, 47 S Ct 446 Thus the Court, in cases involving discrimination against the Negro's right to vote, has recognized not only the action at law for damages,[14] but, in appropriate circumstances, the extraordinary remedy of declaratory or injunctive relief [15] Schnell v Davis, 336 US 933, 93 L ed 1093, 69 S Ct 749, Terry v Adams, 345 US 461, 97 L ed 1152, 73 S Ct 809 [16] Injunctions in these cases, it should be noted, would

[14] E g, Myers v Anderson, 238 US 368, 59 L ed 1349, 35 S Ct 932, Nixon v Condon, 286 US 73, 76 L ed 984, 52 S Ct 484, 88 ALR 458, Lane v Wilson, 307 US 268, 83 L ed 1281, 59 S Ct 872, Smith v Allwright, 321 US 649, 88 L ed 987, 64 S Ct 757, 151 ALR 1110 The action for damages for improperly rejecting an elector's vote had been given by the English law since the time of Ashby v White, 1 Brown's Cases in Parliament 62, 2 Ld Raym 938, 3 Ld Raym 320, a case which in its own day precipitated an intra-parliamentary war of major dimensions See 6 Hansard, Parliamentary History of England (1810), 225–324, 3176–4136 prior to the racial discrimination cases, this Court had recognized the action, by implication, in dictum in Swafford v Templeton, 185 US 487, 46 L ed 1005, 22 S Ct 783, and Wiley v Sinkler, 179 US 58, 45 L ed 84, 21 S Ct 17, both respecting federal elections

[15] Cf Gomillion v Lightfoot, 364 US 339, 5 L ed 2d 110, 81 S Ct 125

[16] By statute an action for preventive relief is now given the United States in certain voting cases 71 Stat 637, 42 USC §1971(c), amending RS §2004 See United States v Raines, 362 US 17, 4 L ed 524, 80 S Ct 519, United States v Thomas, 362 US 58, 4 L ed 2d 535, 80 S Ct 613

not have restrained state-wide general elections Compare Giles v Harris, 189 US 475, 47 L ed 909, 23 S Ct 639.

4 The Court has refused to exercise its jurisdiction to pass on "abstract questions of political power of sovereignty, of government" Massachusetts v Mellon, 262 US 447, 485, 67 L ed 1078, 1084, 43 S Ct 597 See Texas v Interstate Commerce Com 258 US 158, 162, 66 L ed 531, 537, 42 S Ct 261, New Jersey v Sargent, 269 US 328, 337, 70 L ed 289, 293, 46 S Ct 122 The "political question" doctrine, in this aspect, reflects the policies underlying the requirement of "standing"· that the litigant who would challenge official action must claim infringement of an interest particular and personal to himself, as distinguished from a cause of dissatisfaction with the general frame and functioning of government—a complaint that the political institutions are awry See Stearns v Wood, 236 US 75, 59 L ed 475, 35 S Ct 229, Fairchild v Hughes, 258 US 126, 66 L ed 499, 42 S Ct 274, United Public Workers v Mitchell, 330 US 75, 89–91, 91 L ed 754, 766–768, 67 S Ct 556 What renders cases of this kind non-justiciable is not necessarily the nature of the parties to them, for the Court has resolved other issues between similar parties;[17] nor is it the nature of the legal questions involved, for the same type of question has been adjudicated when presented in other forms of controversy[18] The crux of the matter is that courts are not fit instruments of decision where what is essentially at stake is the composition of those large contests of policy traditionally fought out in non-judicial forums, by which governments and the actions of governments are made and unmade See Texas v White (US) 7 Wall 700, 19 L ed 227, White v Hart (US) 13 Wall 646, 20 L ed 685, Phillips v Payne, 92 US 130, 23 L ed 649, Marsh v Burroughs (CC Ga) 1 Woods 463, 471, 472, F Cas No 9112 (Bradley, Circuit Justice); cf Wilson v Shaw, 204 US 24, 51 L ed 351, 27 S Ct 233, but see Coyle v Smith, 221 US 559, 55 L ed 853, 31 S Ct 688 Thus, where the Cherokee Nation sought by an original motion to restrain the State of Georgia from the enforcement of laws which assimilated Cherokee territory to the State's counties, abrogated Cherokee law, and abolished Cherokee government, the Court held that such a claim was not judicially cognizable Cherokee Nation v Georgia (US) 5 Pet 1, 8 L ed 25[19] And in Georgia v Stanton (US) 6 Wall 50, 18 L ed 721, the Court dismissed for want of jurisdiction a bill by the State of Georgia seeking to enjoin enforcement of the Reconstruction Acts on the ground that the command by military districts which they established extinguished existing state government and replaced it with a form of government unauthorized by the Constitution[20]

---

[17] Compare Rhode Island v Massachusetts (US) 12 Pet 657, 9 L ed 1233, and cases following, with Georgia v Stanton (US) 6 Wall 50, 18 L ed 721

[18] Compare Worcester v Georgia (US) 6 Pet 515, 8 L ed 483, with Cherokee Nation v Georgia (US) 5 Pet 1, 20, 28 [8 L ed 25, 32, 34] (Mr Justice Johnson, concurring), 51 and 75 (Mr Justice Thompson, dissenting)

[19] This was an alternative ground of Chief Justice Marshall's opinion for the Court Id, 5 Pet at 20 The question which Marshall resolved as "unnecessary to decide," ibid, was not the justiciability of the bill in this aspect, but the 'more doubtful" question whether that 'part of the bill which respects the land occupied by the Indians, and prays the aid of the court to protect their possession," might be entertained Ibid Mr Justice Johnson, concurring, found the controversy non-justiciable and would have put the ruling solely on this ground, id, 5 Pet at 28, and Mr Justice Thompson, in dissent, agreed that much of the matter in the bill was not fit for judicial determination Id 5 Pet at 51, 75

[20] Cf Mississippi v Johnson (US) 4 Wall 475, 18 L ed 437

"That these matters, both as stated in the body of the bill, and, in the prayers for relief, call for the judgment of the court upon political questions, and, upon rights, not of persons or property, but of a political character, will hardly be denied For the rights for the protection of which our authority is invoked, are the rights of sovereignty, of political jurisdiction, of government, of corporate existence as a State, with all its constitutional powers and privileges No case of private rights or private property infringed, or in danger of actual or threatened infringement, is presented by the bill, in a judicial form, for the judgment of the court" Id 6 Wall at 77 [21]

5 The influence of these converging considerations—the caution not to undertake decision where standards meet for judicial judgment are lacking, the reluctance to interfere with matters of state government in the absence of an unquestionable and effectively enforceable mandate, the unwillingness to make courts arbiters of the broad issues of political organization historically committed to other institutions and for whose adjustment the judicial process is ill-adapted—has been decisive of the settled line of cases, reaching back more than a century, which holds that Art 4 § 4, of the Constitution, guaranteeing to the States "a Republican Form of Government," [22] is not enforceable through the courts E g, O'Neill v Leamer, 239 US 244, 60 L ed 249, 36 S Ct 54, Mountain Timber Co v Washington, 243 US 219, 61 L ed 685, 37 S Ct 260, 13 NCCA 927, Ann Cas 1917D 642; Cochran v Louisiana State Board of Education, 281 US 370, 74 L ed 913, 50 S Ct 335, Highland Farms Dairy, Inc. v Agnew, 300 US 608, 81 L ed 835, 57 S Ct 549 [23] Claims resting on this specific guarantee of the Constitution have been held nonjusticiable which challenged state distribution of powers

[21] Considerations similar to those which determined the Cherokee Nation Case and Georgia v Stanton no doubt explain the celebrated decision in Nabob of the Carnatic v East India Company, 1 Vesey Jr *371, 2 Vesey Jr *56, rather than any attribution of a portion of British sovereignty, in respect of Indian affairs, to the company The reluctance of the English Judges to involve themselves in contests of factional political power is of ancient standing In The Duke of York's Claim to the Crown, 5 Rotuli Parl 375, printed in Wambaugh, Cases on Constitutional Law (1915), 1, the role which the Judges were asked to play appears to have been rather that of advocates than of judges, but the answer which they returned to the Lords relied on reasons equally applicable to either role

[22] "The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion, and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence"

[23] Cf the cases holding that the Fourteenth Amendment imposes no such restriction upon the form of a State's governmental organization as will permit persons affected by government action to complain that in its organization principles of separation of powers have been violated E g Dreyer v Illinois, 187 US 71, 47 L ed 79, 23 S Ct 28, Soliah v Heskin, 222 US 522, 56 L ed 294, 32 S Ct 103, Houck v Little River Drainage Dist 239 US 254, 60 L ed 266, 36 S Ct 58 The same consistent refusal of this Court to find that the federal Constitution restricts state power to design the structure of state political institutions is reflected in the cases rejecting claims arising out of the States' creation, alteration, or destruction of local subdivisions or their powers, insofar as these claims are made by the subdivisions themselves, see Laramie County v Albany County, 92 US 307, 23 L ed 552, Pawhuska v Pawhuska Oil & Gas Co 250 US 394, 63 L ed 1054, 39 S Ct 526 Trenton v New Jersey, 262 US 182, 67 L ed 937, 43 S Ct 534, 29 ALR 1471, Risty v Chicago, R I & P R Co 270 US 378, 389, 390, 70 L ed 641, 650, 651, 46 S Ct 296, Williams v Baltimore, 289 US 36, 77 L ed 1015, 53 S Ct 431, or by the whole body of their residents who share only a general, undifferentiated interest in their preservation See Hunter v Pittsburgh, 207 US 161, 52 L ed 151, 28 S Ct 40 The policy is also given effect by the denial of 'standing' to persons seeking to challenge state action as infringing the interest of some separate unit within the State's administrative structure—a denial which precludes the adjudgment by federal courts of what are only disputes over the local allocation of government functions and powers See, e g, Smith v Indiana, 191 US 138, 48 L ed 125, 24 S Ct 51, Braxton County Court v West Virginia, 208 US 192, 52 L ed 460, 28 S Ct 275, Marshall v Dye, 231 US 250, 58 L ed 206, 34 S Ct 92, Stewart v Kansas City, 239 US 14, 60 L ed 120, 36 S Ct 15

between the legislative and judicial branches, Ohio ex rel Bryant v Akron Metropolitan Park Dist 281 US 74, 74 L ed 710, 50 S Ct 228, 66 ALR 1460, state delegation of power to municipalities, Kiernan v Portland, 223 US 151, 56 L ed 386, 32 S Ct 231, state adoption of the referendum as a legislative institution, Ohio ex rel. Davis v Hildebrandt, 241 US 565, 569, 60 L ed 1172, 1177, 36 S Ct 708, and state restriction upon the power of state constitutional amendment, Marshall v Dye, 231 US 250, 256, 257, 58 L ed 206–208, 34 S Ct 92 The subject was fully considered in Pacific States Tel. & Tel. Co. v Oregon, 223 US 118, 56 L ed 377, 32 S Ct 224, in which the Court dismissed for want of jurisdiction a writ of error attacking a state license tax statute enacted by the initiative, on the claim that this mode of legislation was inconsistent with a Republican Form of Government and violated the Equal Protection Clause and other federal guarantees. After noting " . the ruinous destruction of legislative authority in matters purely political which would necessarily be occasioned by giving sanction to the doctrine which underlies and would be necessarily involved in sustaining the propositions contended for," [24] the Court said:

" [The] essentially political nature [of this claim] is at once made manifest by understanding that the assault which the contention here advanced makes it [sic] not on the tax as a tax, but on the State as a State It is addressed to the framework and political character of the government by which the statute levying the tax was passed It is the government, the political entity, which (reducing the case to its essence) is called to the bar of this court, not for the purpose of testing judicially some exercise of power assailed, on the ground that its exertion has injuriously affected the rights of an individual because of repugnancy to some constitutional limitation, but to demand of the State that it establish its right to exist as a State, republican in form " Id 223 US at 150, 151.

The starting point of the doctrine applied in these cases is, of course, Luther v Borden (US) 7 How 1, 12 L ed 581 The case arose out of the Dorr Rebellion in Rhode Island in 1841–1842. Rhode Island, at the time of the separation from England, had not adopted a new constitution but had continued, in its existence as an independent State, under its original royal Charter, with certain statutory alterations This frame of government provided no means for amendment of the fundamental law; the right of suffrage was to be prescribed by legis-

[24] 223 US, at 141 " [T]he contention, if held to be sound, would necessarily affect the validity, not only of the particular statute which is before us, but of every other statute passed in Oregon since the adoption of the initiative and referendum And indeed the propositions go further than this, since in their essence they assert that there is no governmental function legislative or judicial, in Oregon, because it cannot be assumed, if the proposition be well founded, that there is at one and the same time one and the same government which is republican in form and not of that character" Compare Luther v Borden (US) 7 How 1, 38, 39, 12 L ed 581, 597

" For if this court is authorized to enter upon this inquiry as proposed by the plaintiff, and it should be decided that the charter government had no legal existence during the period of time above mentioned,—if it had been annulled by the adoption of the opposing government,—then the laws passed by its legislature during that time were nullities, its taxes wrongfully collected, its salaries and compensation to its officers illegally paid, its public accounts improperly settled, and the judgments and sentences of its courts in civil and criminal cases null and void, and the officers who carried their decisions into operation answerable as trespassers, if not in some cases as criminals

"When the decision of this court might lead to such results, it becomes its duty to examine very carefully its own powers before it undertakes to exercise jurisdiction "

lation, which limited it to freeholders In the 1830's, largely because of the growth of towns in which there developed a propertied class whose means were not represented by freehold estates, dissatisfaction arose with the suffrage qualifications of the charter government. In addition, population shifts had caused a dated apportionment of seats in the lower house to yield substantial numerical inequality of political influence, even among qualified voters The towns felt themselves underrepresented and agitation began for electoral reform When the charter government failed to respond, popular meetings of those who favored the broader suffrage were held and elected delegates to a convention which met and drafted a state constitution This constitution provided for universal manhood suffrage (with certain qualifications); and it was to be adopted by vote of the people at elections at which a similarly expansive franchise obtained. This new scheme of government was ratified at the polls and declared effective by the convention, but the government elected and organized under it, with Dorr at its head, never came to power. The charter government denied the validity of the convention, the constitution and its government and, after an insignificant skirmish, routed Dorr and his followers. It meanwhile provided for the calling of its own convention, which drafted a constitution that went peacefully into effect in 1843 [25]

Luther v Borden was a trespass action brought by one of Dorr's supporters in a United States Circuit Court to recover damages for the breaking and entering of his house The defendants justified under military orders pursuant to martial law declared by the charter government, and plaintiff, by his reply, joined issue on the legality of the charter government subsequent to the adoption of the Dorr constitution. Evidence offered by the plaintiff tending to establish that the Dorr government was the rightful government of Rhode Island was rejected by the Circuit Court; the court charged the jury that the charter government was lawful; and on a verdict for defendants, plaintiff brought a writ of error to this Court.

The Court, through Mr. Chief Justice Taney, affirmed. After noting that the issue of the charter government's legality had been resolved in that government's favor by the state courts of Rhode Island —that the state courts, deeming the matter a political one unfit for judicial determination, had declined to entertain attacks upon the existence and authority of the charter government—the Chief Justice held that the courts of the United States must follow those of the State in this regard. Id., 7 How at 39, 40. It was recognized that the compulsion to follow state law would not apply in a federal court in the face of a superior command found in the federal constitution, ibid, but no such command was found. The Constitution, the Court said—referring to the Guarantee Clause of the Fourth Article—". . . as far as it has provided for an emergency of this kind, and authorized the general government to interfere in the domestic concerns of a State, has treated the subject as political in its nature, and placed the power in the hands of that department." Id 7 How at 42.

[25] See Bowen, The Recent Contest in Rhode Island (1844), Frieze, A Concise History of the Efforts to Obtain an Extention of Suffrage in Rhode Island, From the Year 1811 to 1842 (2d ed 1842), Mowry, The Dorr War (1901), Wayland, The Affairs of Rhode Island (2d ed 1842)

"Under this article of the Constitution it rests with Congress to decide what government is the established one in a State For as the United States guarantee to each State a republican government, Congress must necessarily decide what government is established in the State before it can determine whether it is republican or not And when the senators and representatives of a State are admitted into the councils of the Union, the authority of the government under which they are appointed, as well as its republican character, is recognized by the proper constitutional authority And its decision is binding on every other department of the government, and could not be questioned in a judicial tribunal It is true that the contest in this case did not last long enough to bring the matter to this issue; and as no senators or representatives were elected under the authority of the government of which Mr. Dorr was the head, Congress was not called upon to decide the controversy Yet the right to decide is placed there, and not in the courts." Ibid.[26]

In determining this issue nonjusticiable, the Court was sensitive to the same considerations to which its later decisions have given the varied applications already discussed It adverted to the delicacy of judicial intervention into the very structure of government[27] It acknowledged that tradition had long entrusted questions of this nature to non-judicial processes,[28] and that judicial processes were unsuited to their decision[29] The absence of guiding standards for judgment was critical, for the question whether the Dorr constitution had been rightfully adopted depended, in part, upon the extent of the franchise to be recognized—the very point of contention over which rebellion had been fought

" . [I]f the Circuit Court had entered upon this inquiry, by what rule could it have determined the qualification of voters upon the adoption or rejection of the proposed constitution, unless there was some previous law of the State to guide it? It is the province of a court to expound the law, not to make it And certainly it is no part of the judicial functions of any court of the United States to prescribe the qualification of voters in a State, giving the right to those to whom it is denied by the written and established constitution and laws of the State, or taking it away from those to whom it is given, nor has it the right to determine what political privileges the citizens of a State are entitled to, unless there is an established constitution or law to govern its decision" Id 7 How at 41

Mr Justice Woodbury (who dissented with respect to the effect of martial law) agreed with the Court regarding the inappropriateness of judicial inquiry into the issues·

"But, fortunately for our freedom from political excitements in judicial duties, this court can never with propriety be called on officially to be the umpire in questions merely political The adjustment of these

[28] The Court reasoned, with respect to the guarantee against domestic violence also contained in Art 4 § 4, that this, too, was an authority committed solely to Congress., that Congress had empowered the President, not the courts, to enforce it, and that it was inconceivable that the courts should assume a power to make determinations in the premises which might conflict with those of the Executive It noted further that, in fact, the President had recognized the governor of the charter government as the lawful authority in Rhode Island, although it had been unnecessary to call out the militia in his support

[27] See note 24, supra

[29] Id, 7 How at 41, 42

questions belongs to the people and their political representatives, either in the State or general government These questions relate to matters not to be settled on strict legal principles They are adjusted rather by inclination,—or prejudice or compromise, often Some of them succeed or are defeated even by public policy alone, or mere naked power, rather than intrinsic right .

"Another evil, alarming and little foreseen, involved in regarding these as questions for the final arbitrament of judges would be, that in such an event all political privileges and rights would, in a dispute among the people, depend on our decision finally [D]isputed points in making constitutions, depending often, as before shown, on policy, inclination, popular resolves, and popular will, if the people, in the distribution of powers under the constitution, should ever think of making judges supreme arbiters in political controversies, when not selected by nor, frequently, amenable to them, nor at liberty to follow such various considerations in their judgments as belong to mere political questions, they will dethrone themselves and lose one of their own invaluable birthrights; building up in this way—slowly, but surely —a new sovereign power in the republic, in most respects irresponsible and unchangeable for life, and one more dangerous, in theory at least, than the worst elective oligarchy, in the worst of times ." Id 7 How at 51, 53 [30]

III.

The present case involves all of the elements that have made the Guarantee Clause cases non-justiciable It is, in effect, a Guarantee Clause claim masquerading under a different label But it cannot make the case more fit for judicial action that appellates invoke the Fourteenth Amendment rather than Art 4 § 4, where, in fact, the gist of their complaint is the same—unless it can be found that the Fourteenth Amendment speaks with greater particularity to their situation We have been admonished to avoid "the tyranny of labels" Snyder v Massachusetts, 291 US 97, 114, 78 L ed 674, 682, 54 S Ct 330, 90 ALR 575 Art 4 § 4, is not committed by express constitutional terms to Congress It is the nature of the controversies arising under it, nothing else, which has made it judicially unenforceable Of course, if a controversy falls within judicial power, it depends "on how he [the plaintiff] casts his action," Pan American Petroleum Corp v Superior Court of Delaware, 366 US 656, 662, 6 L ed 2d 584, 588, 81 S Ct 1303, whether he brings himself within a jurisdictional statute But where judicial competence is wanting, it cannot be created by invoking one clause of the Constitution rather than another When what was essentially a Guarantee Clause claim was sought to be laid, as well under the Equal Protection Clause in Pacific States Tel & Tel Co v Oregon, 223 US 118, 56 L ed 377, 32 S Ct 224, supra, the Court had no difficulty in "dispelling any mere confusion resulting from forms of expression and considering the substance of things " 223 US, at 140

Here appellants attack "the State as a State," precisely as it was perceived to be attacked in the Pacific States Case, id 223 US at 150

[30] In evaluating the Court's determination not to inquire into the authority of the charter government, it must be remembered that, throughout the country, Dorr "had received the sympathy of the Democratic press His cause, therefore, became distinctly a party issue" 2 Warren, The Supreme Court in United States History (Rev ed 1937), 186

Their complaint is that the basis of representation of the Tennessee Legislature hurts them They assert that "a minority now rules in Tennessee," that the apportionment statute results in a "distortion of the constitutional system," that the General Assembly is no longer "a body representative of the people of the State of Tennessee," all "contrary to the basic principle of representative government . . ." Accepting appellants' own formulation of the issue, one can know this handsaw from a hawk Such a claim would be nonjusticiable not merely under Art 4 § 4, but under any clause of the Constitution, by virtue of the very fact that a federal court is not a forum for political debate. Massachusetts v Mellon, 262 US 447, 67 L ed 1078, 43 S Ct 597, supra.

But appellants, of course, do not rest on this claim simpliciter. In invoking the Equal Protection Clause, they assert that the distortion of representative government complained of is produced by systematic discrimination against them, by way of "a debasement of their votes . . ." Does this characterization, with due regard for the facts from which it is derived, add anything to appellants' case? [31]

At first blush, this charge of discrimination based on legislative underrepresentation is given the appearance of a more private, less impersonal claim, than the assertion that the frame of government is askew Appellants appear as representatives of a class that is prejudiced as a class, in contradistinction to the polity in its entirety. However, the discrimination relied on is the deprivation of what appellants conceive to be their proportionate share of political influence. This, of course, is the practical effect of any allocation of power within the institutions of government Hardly any distribution of political authority that could be assailed as rendering government nonrepublican would fail similarly to operate to the prejudice of some groups, and to the advantage of others, within the body politic It would be ingenuous not to see, or consciously blind to deny, that the real battle over the initiative and referendum, or over a delegation of power to local rather than state-wide authority, is the battle between forces whose influence is disparate among the various organs of government to whom power may be given No shift of power but works a corresponding shift in political influence among the groups composing a society.

What, then, is this question of legislative apportionment? Appellants invoke the right to vote and to have their votes counted [32] But they are permitted to vote and their votes are counted They go to the polls, they cast their ballots, they send their representatives to the state councils. Their complaint is simply that the representatives are not suf-

[31] Appellants also allege discrimination in the legislature's allocation of certain tax burdens and benefits Whether or not such discrimination would violate the Equal Protection Clause if the tax statutes were challenged in a proper proceeding, see Dane v Jackson, 256 US 589, 65 L ed 1107, 41 S Ct 566, cf Nashville, C & St L R Co v Wallace, 288 US 249, 268, 77 L ed 730, 738, 53 S Ct 345, 87 ALR 1191, these recitative allegations do not affect the nature of the controversy which appellants' complaints present

[32] Appellants would find a "right" to have one's ballot counted on authority of United States v Mosley, 238 US 383, 59 L ed 1355, 35 S Ct 904, United States v Classic, 313 US 299, 85 L ed 1368, 61 S Ct 1031, United States v Saylor, 322 US 385, 88 L ed 1341, 64 S Ct 1101 All that these cases hold is that conspiracies to commit certain sharp election practices which, in a federal election, cause ballots not to receive the weight which the law has in fact given them, may amount to deprivations of the constitutionally secured right to vote for federal officers But see United States v Bathgate, 246 US 220, 62 L ed 676, 38 S Ct 269 The cases do not so much as suggest that there exists a constitutional limitation upon the relative weight to which the law might properly entitle respective ballots, even in federal elections

ficiently numerous or powerful—in short, that Tennessee has adopted a basis of representation with which they are dissatisfied Talk of "debasement" or "dilution" is circular talk One cannot speak of "debasement" or "dilution" of the value of a vote until there is first defined a standard of reference as to what a vote should be worth. What is actually asked of the Court in this case is to choose among competing bases of representation—ultimately, really, among competing theories of political philosophy—in order to establish an appropriate frame of government for the State of Tennessee and thereby for all the States of the Union.

In such a matter, abstract analogies which ignore the facts of history deal in unrealities, they betray reason This is not a case in which a State has, through a device however oblique and sophisticated, denied Negroes or Jews or redheaded persons a vote, or given them only a third or a sixth of a vote That was Gomillion v Lightfoot, 364 US 339, 5 L ed 2d 110, 81 S Ct 125, supra What Tennessee illustrates is an old and still widespread method of representation—representation by local geographical division, only in part respective of population—in preference to others, others, forsooth, more appealing Appellants contest this choice and seek to make this Court the arbiter of the disagreement They would make the Equal Protection Clause the charter of adjudication, asserting that the equality which it guarantees comports, if not the assurance of equal weight to every voter's vote, at least the basic conception that representation ought to be proportionate to population, a standard by reference to which the reasonableness of apportionment plans may be judged

To find such a political conception legally enforceable in the broad and unspecific guarantee of equal protection is to rewrite the constitution See Luther v Borden (US) 7 How 1, 12 L ed 581, supra Certainly, "equal protection" is no more secure a foundation for judicial judgment of the permissibility of varying forms of representative government than is "Republican Form " Indeed since "equal protection of the laws" can only mean an equality of persons standing in the same relation to whatever governmental action is challenged, the determination whether treatment is equal presupposes a determination concerning the nature of the relationship This, with respect to apportionment, means an inquiry into the theoretic base of representation in an acceptably republican state For a court could not determine the equal-protection issue without in fact first determining the Republican-Form issue, simply because what is reasonable for equal protection purposes will depend upon what frame of government, basically, is allowed. To divorce "equal protection" from "Republican Form" is to talk about half a question

The notion that representation proportioned to the geographic spread of population is so universally accepted as a necessary element of equality between man and man that it must be taken to be the standard of a political equality preserved by the Fourteenth Amendment—that it is, in appellants' words "the basic principle of representative government"—is, to put it bluntly, not true However desirable and however desired by some among the great political thinkers and framers of our government, it has never been generally practiced, today or in the past. It was not the English system, it was not the colonial system, it

was not the system chosen for the national government by the Constitution, it was not the system exclusively or even predominantly practiced by the States at the time of adoption of the Fourteenth Amendment, it is not predominantly practiced by the States today Unless judges, the judges of this Court, are to make their private views of political wisdom the measure of the Constitution—views which in all honesty cannot but give the appearance, if not reflect the reality, of involvement with the business of partisan politics so inescapably a part of apportionment controversies—the Fourteenth Amendment, "itself a historical product," Jackman v Rosenbaum Co 260 US 22, 31, 67 L ed 107, 112, 43 S Ct 9, provides no guide for judicial oversight of the representation problem

1 Great Britain Writing in 1958, Professor W J M Mackenzie aptly summarized the British history of the principle of representation proportioned to population "'Equal electoral districts' formed part of the programme of radical reform in England in the 1830s, the only part of that programme which has not been realised" [33] Until the late nineteenth century, the sole base of representation (with certain exceptions not now relevant) was the local geographical unit each county or borough returned its fixed number of members, usually two for the English units, regardless of population [34] Prior to the Reform Act of 1832, this system was marked by the almost total disfranchisement of the populous northern industrial centers, which had grown to significant size at the advent of the Industrial Revolution and had not been granted borough representation, and by the existence of the rotten borough, playing its substantial part in the Crown's struggle for continued control of the Commons [35] In 1831, ten southernmost English counties, numbering three and a quarter million people, had two hundred and thirty-five parliamentary representatives, while the six northernmost counties, with more than three and a half-million people, had sixty-eight [36] It was said that one hundred and eighty persons appointed three hundred and fifty members in the Commons [37] Less than a half-century earlier, Madison in the Federalist had remarked that half the House was returned by less than six thousand of the eight million people of England and Scotland [38]

The Act of 1832, the product of a fierce partisan political struggle and the occasion of charges of gerrymandering not without foundation,[39] effected eradication of only the most extreme numerical inequalities of the unreformed system It did not adopt the principle of representation based on population, but merely disfranchised certain among the rotten borough and enfranchised most of the urban centers—still quite without regard to their relative numbers [40] In the wake of the Act there remained substantial electoral inequality the boroughs of

Cornwall were represented sixteen times as weightily, judged by population, as the county's eastern division; the average ratio of seats to population in ten agricultural counties was four and a half times that in ten manufacturing divisions; Honiton, with about three thousand inhabitants, was equally represented with Liverpool, which had four hundred thousand [41] In 1866 apportionment by population began to be advocated generally in the House, but was not made the basis of the redistribution of 1867, although the act of that year did apportion representation more evenly, gauged by the population standard [42] Population shifts increased the surviving inequalities, by 1884 the representation ratio in many small boroughs was more than twenty-two times that of Birmingham or Manchester, forty-to-one disparities could be found elsewhere, and, in sum, in the '70's and '80's, a fourth of the electorate returned two-thirds of the members of the House [43]

The first systematic English attempt to distribute seats by population was the Redistribution Act of 1885 [44] The statute still left ratios of inequality of as much as seven to one,[45] which had increased to fifteen to one by 1912 [46] In 1918 Parliament again responded to "shockingly bad" conditions of inequality,[47] and to partisan political inspiration,[48] by redistribution [49] In 1944, redistribution was put on a periodic footing by the House of Commons (Redistribution of Seats) Act of that year,[50] which committed a continuing primary responsibility for reapportioning the Commons to administrative agencies (Boundary Commissions for England, Scotland, Wales and Northern Ireland, respectively) [51] The Commissions, having regard to certain rules prescribed for their guidance, are to prepare at designated intervals reports for the Home Secretary's submission to Parliament, along with the draft of an Order in Council to give effect to the Commissions' recommendations The districting rules adopt the basic principle of representation by population, although the principle is significantly modified by directions to respect local geographic boundaries as far as practicable, and by discretion to take account of special geographical conditions, including the size, shape and accessibility of constituencies. Under the original 1944 Act, the rules provided that (subject to the exercise of the discretion respecting special geographical conditions and to regard for the total size of the House of Commons as prescribed by the Act) so far as practicable, the single-member districts should not deviate more than twenty-five percent from the electoral quota (population divided by number of constituencies). However, apparently at the recommendation of the Boundary Commission for England, the twenty-five percent standard was eliminated as too restrictive in 1947, and replaced by the flexible provision that constituencies are to be as near

the electoral quota as practicable, a rule which is expressly subordinated both to the consideration of special geographic conditions and to that of preserving local boundaries.[52] Free of the twenty-five percent rule, the Commissions drew up plans of distribution in which inequalities among the districts run, in ordinary cases, as high as two to one and, in the case of a few extraordinary constituencies, three to one.[53] The action of the Boundary Commission for England was twice challenged in the courts in 1954—the claim being that the Commission had violated statutory rules prescribing the standards for its judgment—and in both cases the Judges declined to intervene. In Hammersmith Borough Council v Boundary Commission for England,[54] Harmon, J., was of opinion that the nature of the controversy and the scheme of the Acts made the matter inappropriate for judicial interference, and in Harper v Secretary,[55] the Court of Appeal, per Evershed, M. R., quoting Harman, J., with approval, adverting to the wide range of discretion entrusted to the Commission under the Acts, and remarking the delicate character of the parliamentary issues in which it was sought to engage the court, reached the same conclusion.[56]

The House of Commons (Redistribution of Seats) Act, 1958,[57] made two further amendments to the law. Responsive to the recommendation of the Boundary Commission for England,[58] the interval permitted between Commission reports was more than doubled, to a new maximum of fifteen years.[59] And at the suggestion of the same Commission that "It would ease the future labours of the Commission and remove much local irritation if Rule 5 [requiring that the electorate of each constituency be as near the electoral quota as practicable] were to be so amended as to allow us to make recommendations preserving the status quo in any area where such a course appeared to be desirable and not inconsistent with the broad intention of the Rules,"[60] the Commissions were directed to consider the inconveniences attendant upon the alteration of constituencies, and the local ties which such alteration might break. The Home Secretary's view of this amendment was that it worked to erect "a presumption against making changes unless there is a very strong case for them."[61]

2 The Colonies and the Union. For the guiding political theorists of the Revolutionary generation, the English system of representation, in its most salient aspects of numerical inequality, was a model to be avoided, not followed.[62] Nevertheless, the basic English principle of apportioning representatives among the local governmental entities, towns

[52] See note 50, supra. However, Commissions are given discretion to depart from the strict application of the local boundary rule to avoid excessive disparities between the electorate of a constituency and the electoral quota, or between the electorate of a constituency and that of neighboring constituencies. For detailed discussion, see Craig, Parliament and Boundary Commissions, [1959] Public Law 23. See also Butler, supra, note 51, at 127.

or counties, rather than among units of approximately equal population, had early taken root in the colonies [63] In some, as in Massachusetts and Rhode Island, numbers of electors were taken into account, in a rough fashion, by allotting increasing fixed quotas of representatives to several towns or classes of towns graduated by population, but in most of the colonies delegates were allowed to the local units without respect to numbers [64] This resulted in grossly unequal electoral units [65] The presentation ratio in one North Carolina county was more than eight times that in another [66] Moreover, American rotten boroughs had appeared,[67] and apportionment was made an instrument first in the political struggles between the King or the royal governnors and the colonial legislatures,[68] and, later, between the older tidewater regions in the colonies and the growing interior.[69] Madison in the Philadelphia Convention adverted to the "inequality of the Representation in the Legislatures of particular States, . . ." [70] arguing that it was necessary to confer on Congress the power ultimately to regulate the times, places and manner of selecting Representatives,[71] in order to forestall the over-represented counties' securing themselves a similar overrepresentation in the national councils The example of South Carolina, where Charleston's overrepresentation was a continuing bone of contention between the tidewater and the back-country, was cited by Madison in the Virginia Convention and by King in the Massachusetts Convention, in support of the same power, and King also spoke of the extreme numerical inequality arising from Connecticut's town-representation system [72]

Such inequalities survived the constitutional period. The United States Constitution itself did not largely adopt the principle of numbers Apportionment of the national legislature among the States was one of the most difficult problems for the Convention; [73] its solution—involving State representation in the Senate [74] and the three-fifths compromise in the House [75]—left neither chamber apportioned proportionately to population Within the States, electoral power continued to be allotted to favor the tidewater.[76] Jefferson, in his Notes on Virginia, recorded the "very unequal" representation there · individual counties differing in population by a ratio of more than seventeen to one elected the same number of representatives, and those nineteen thousand of Virginia's fifty thousand men who lived between the falls of the rivers and the sea-coast returned half the State's senators and almost half its delegates [77] In South Carolina in 1790, the three lower districts, with a white population of less than twenty-nine thousand elected twenty senators and seventy assembly members; while in the uplands

more than one hundred and eleven thousand white persons elected seventeen senators and fifty-four assemblymen [78]

In the early nineteenth century, the demands of the interior became more insistent The apportionment quarrel in Virginia was a major factor in precipitating the calling of a constitutional convention in 1829. Bitter animosities racked the convention, threatening the State with disunion At last a compromise which gave the three hundred and twenty thousand people of the west thirteen senators, as against the nineteen senators returned by the three hundred sixty-three thousand people of the east, commanded agreement It was adopted at the polls but left the western counties so dissatisfied that there were threats of revolt and realignment with the State of Maryland [79]

Maryland, however, had her own numerical disproportions In 1820, one representative vote in Calvert County was worth five in Frederick County, and almost two hundred thousand people were represented by eighteen members, while fifty thousand others elected twenty [80] This was the result of the county-representation system of allotment And, except for Massachusetts which, after a long struggle, did adopt representation by population at the mid-century, a similar town-representation principle continued to prevail in various forms throughout New England, with all its attendant, often gross inequalities [81]

3 The States at the time of ratification of the Fourteenth Amendment, and those later admitted. The several state conventions throughout the first half of the nineteenth century were the scenes of fierce sectional and party strifes respecting the geographic allocation of representation [82] Their product was a wide variety of apportionment methods which recognized the element of population in differing ways and degrees Particularly pertinent to appraisal of the contention that the Fourteenth Amendment embodied a standard limiting the freedom of the States with regard to the principles and bases of local legislative apportionment is an examination of the apportionment provisions of the thirty-three states which ratified the Amendment between 1866 and 1870, at their respective times of ratification These may be considered in two groups (A) the ratifying States other than the ten Southern States whose constitutions, at the time of ratification or shortly thereafter, were the work of the Reconstruction Act conventions, [83] and (B) the ten Reconstruction-Act States All thirty-three are significant, because they demonstrate how unfounded is the assumption that the ratifying States could have agreed on a standard apportionment theory or practice, and how baseless the suggestion that by voting for the Equal Protection Clause they sought to establish a test mold for apportionment which—if appellants' argument is sound—struck down sub silentio not a few of their own state constitutional provisions But the constitutions of the ten Reconstruction-Act States have an added importance, for it is scarcely to be thought that the Congress which was so solicitous for the adoption of the Fourteenth Amendment as to make

the readmission of the late rebel States to Congress turn on their respective ratifications of it, would have approved constitutions which —again, under appellants' theory—contemporaneously offended the Amendment.

A Of the twenty-three ratifying States of the first group, seven or eight had constitutions which demanded or allowed apportionment of both houses on the basis of population,[84] unequalifiedly or with only qualifications respecting the preservation of local boundaries.[85] Three more apportioned on what was essentially a population base, but provided that in one house counties having a specified fraction of a ratio—a moiety or two-thirds—should have a representative.[86] Since each of these three States limited the size of their chambers, the fractional rule could operate—and, at least in Michigan, has in fact operated[87]—to produce substantial numerical inequalities in favor of the sparsely populated counties.[88] Iowa favored her small counties by the rule that no more than four counties might be combined in a representative district,[89] and New York and Kansas compromised population and county-representation principles by assuring every county, regardless of the number of its inhabitants, at least one seat in their respective Houses.[90]

Ohio and Maine recognized the factor of numbers by a different device. The former gave a House representative to each county having half a ratio, two representatives for a ratio and three quarters, three representatives for three ratios, and a single additional representative

[84] Various indices of population were employed among the States which took account of the factor of numbers. Some counted all inhabitants, e. g., NJ Const, 1844, Art 4 § 3; some, only white inhabitants, e. g., Ill Const, 1848, Art 3 § 8; some, male inhabitants over twenty-one, e. g., Ind Const, 1851, Art 4 §§ 4, 5; some qualified voters, e. g., Tenn Const, 1834, Art 2 §§ 4 to 6; some excluded aliens, e. g., NY Const, 1846, Art 3 §§ 4, 5 (and untaxed persons of color); some excluded untaxed Indians and military personnel, e. g., Neb Const 1866–1867, Art 2 § 3. For present purposes these differences, although not unimportant as revealing fundamental divergences in representation theory, will be disregarded.

[85] Ore Const, 1857, Art 4 §§ 5, 6, 7; Ill Const, 1848, Art 3 §§ 8, 9; Ind Const, 1851, Art 4 §§ 4, 6, 8; Minn Const, 1857, Art 4 § 2; Wis Const, 1848, Art 4 §§ 3 to 5; Mass Const, 1780, Amends 21, 22; Neb Const, 1866–1867, Art 2 § 3. All of these but Minnesota made provision for periodic reapportionment. Nevada's Constitution of 1864, Art 15 § 13, provided that the federal censuses and interim state decennial enumerations should serve as the bases of representation for both houses, but did not expressly require either numerical equality or reapportionment at fixed intervals.

Several of these constitutions contain provisions which forbid splitting counties or which otherwise require recognition of local boundaries. See, e. g., the severe restriction in Ill Const, 1848, Art 3 § 9. Such provisions will almost inevitably produce numerical inequalities. See, for example, University of Oklahoma, Bureau of Government Research, Legislative Apportionment in Oklahoma (1956), 21–23. However, because their effect in this regard will turn on idiosyncratic local factors, and because other constitutional provisions are a more significant source of inequality, these provisions are here disregarded.

[86] Tenn Const, 1834, Art 2 §§ 4 to 6 (two-thirds of a ratio entitles a county to one representative in the House); W Va Const, 1861–1863, Art 4 §§ 4, 5, 7, 8, 9 (one-half of a ratio entitles a county to one representative in the House); Mich Const, 1850, Art 4 §§ 2 to 4 (one-half of a ratio entitles each county thereafter organized to one representative in the House). In Oregon and Iowa a major-fraction rule applied which gave a House seat not only to counties having a moiety of a single ratio, but to all counties having more than half a ratio in excess of the multiple of a ratio. Ore Const, 1857, Art 4 § 6, note 85, supra; Iowa Const, 1857, Art 3 §§ 33, 34, 35, 37, note 89, infra.

[87] See Bone, States Attempting to Comply with Reapportionment Requirements, 17 Law & Contemp Prob 387, 391 (1952).

[88] It also appears, although the section is not altogether clear, that the provisions of West Virginia's Constitution controlling apportionment of senators would operate in favor of the State's less populous regions by limiting any single county to a maximum of two senators. W Va Const, 1861–1863, Art 4 § 4.

[89] Iowa Const, 1857, Art 3 §§ 33, 34, 35, 37.

[90] NY Const, 1846, Art 3 §§ 4, 5 (except Hamilton County); Kan Const, 1859, Art 2 § 2, Art 10. The Kansas provisions require periodic apportionment based on censuses, but do not in terms demand equal districts.

for each additional ratio [91] The latter, after apportioning among counties on a population base, gave each town of fifteen hundred inhabitants one representative, each town of three thousand, seven hundred and fifty inhabitants two representatives, and so on in increasing intervals to twenty-six thousand, two hundred and fifty inhabitants—towns of that size or larger receiving the maximum permitted number of representatives: seven [92] The departure from numerical equality under these systems is apparent: in Maine, assuming the incidence of towns in all categories, representative ratios would differ by factors of two and a half to one, at a minimum Similarly, Missouri gave each of its counties, however small, one representative, two representatives for three ratios, three representatives for six ratios, and one additional representative for each three ratios above six [93] New Hampshire alloted a representative to each town of one hundred and fifty ratable male polls of voting age and one more representative for each increment of three hundred above that figure; [94] its Senate was not apportioned by population but among districts based on the proportion of direct taxes paid [95] In Pennsylvania, the basis of apportionment in both houses was taxable inhabitants; and in the House every county of at least thirty-five hundred taxables had a representative, nor could more than three counties be joined in forming a representative district; while in the Senate no city or county could have more than four of the State's twenty-five to thirty-three senators [96]

Finally, four States apportioned at least one House with no regard whatever to population In Connecticut [97] and Vermont [98] representation in the House was on a town basis; Rhode Island gave one senator to each of its towns or cities,[99] and New Jersey, one to each of its counties.[100] Nor, in any of these States, was the other house apportioned on a strict principle of equal numbers Connecticut gave each of its counties a minimum of two senators [101] and Vermont, one; [102] New Jersey assured each county a representative, [103] and in Rhode Island, which gave at least one representative to each town or city, no town or city could have more than one-sixth of the total number in the House [104]

B Among the ten late Confederate States affected by the Reconstruction Acts, in only four did it appear that apportionment of both state legislative houses would or might be based strictly on population [105] In North Carolina,[106] South Carolina,[107] Louisiana,[108] and Ala-

[105] Ark Const, 1868, Art 5 §§ 8, 9, Va Const 1864, Art 4 § 6 (this constitution was in effect when Virginia ratified the Fourteenth Amendment), Va Const, 1870, Art 5 § 4 (this was Virginia's Reconstruction-Act convention constitution), Miss Const, 1868, Art 4, §§ 33 to 35, Tex Const, 1868, Art 3 §§ 11, 34 The Virginia Constitutions and Texas' provisions for apportioning its lower chamber do not

bama,[100] each county (in the case of Louisiana, each parish) was assured at least one seat in the lower house irrespective of numbers—a distribution which exhausted, respectively, on the basis of the number of then-existing counties, three-quarters, one-quarter, two-fifths and three-fifths of the maximum possible number of representatives, before a single seat was available for assignment on a population basis; and in South Carolina, moreover, the Senate was composed of one member elected from each county, except that Charleston sent two [110] In Florida's House, each county had one seat guaranteed and an additional seat for every thousand registered voters up to a maximum of four representatives; [111] while Georgia, whose Senate seats were distributed among fourty-four single-member districts each composed of three contiguous counties,[112] assigned representation in its House as follows three seats to each of the six most populous counties, two to each of the thirty-one next most populous, one to each of the remaining ninety-five [113] As might be expected, the one-representative-per-county-minimum pattern has proved incompatible with numerical equality,[114] and Georgia's county-clustering system has produced representative-ratio disparities, between the largest and smallest counties, of more than sixty to one [115]

C The constitutions [116] of the thirteen States which Congress admitted to the Union after the ratification of the Fourteenth Amendment showed a similar pattern Six of them required or permitted apportionment of both houses by population, subject only to qualifications concerning local boundaries [117] Wyoming, apportioning by population,

in terms require equality of numbers, although they call for reapportionment following a census In Arkansas, the legislature was authorized, but not commanded, to reapportion periodically, it is not clear that equality was required

[116] The constitutions discussed are those under which the new States entered the Union

[117] Colo Const, 1876, Art 5 §§ 45, 47, ND Const, 1889 Art 2 §§ 29, 35, SD Const, 1889, Art 3 § 5, Wash Const, 1889, Art 2 §§ 3, 6, Utah Const, 1895, Art 9 §§ 2, 4, NM Const 1911, Art 4, following § 41 The Colorado and Utah Constitutions provide for reapportionment "according to ratios to be fixed by law" after periodic census and enumeration In New Mexico the legislature is authorized, but not commanded, to reapportion periodically North Dakota does not in terms demand equality in House representation, members are to be assigned among the several senatorial districts which are of equal population

guaranteed to each of its counties at least one seat in each house,[118] and Idaho, which prescribed (after the first legislative session) that apportionment should be "as may be provided by law," gave each county at least one representative [119] In Oklahoma, House members were apportioned among counties so as to give one seat for half a ratio, two for a ratio and three quarters, and one for each additional ratio up to a maximum of seven representatives per county [120] Montana required reapportionment of its House on the basis of periodic enumerations according to ratios to be fixed by law [121] but its counties were represented as counties in the Senate, each county having one senator [122] Alaska [123] and Hawaii [124] each appointed a number of senators among constitutionally fixed districts, their respective Houses were to be periodically reapportioned by population, subject to a moiety rule in Alaska [125] and to Hawaii's guarantee of one representative to each of four constitutionally designated areas [126] The Arizona Constitution assigned representation to each county in each house, giving one or two senators and from one to seven representatives to each, and making no provision for reapportionment [127]

4 Contemporary apportionment. Detailed recent studies are available to describe the present-day constitutional and statutory status of apportionment in the fifty States [128] They demonstrate a decided twentieth-century trend away from population as the exclusive base of representation Today, only a dozen state constitutions provide for periodic legislative reapportionment of both houses by a substantially unqualified application of the population standard,[129] and only about a dozen more prescribe such reapportionment for even a single chamber "Specific provision for county representation in at least one house of the state legislature has been increasingly adopted since the end of the 19th century. . . " [130] More than twenty States now guarantee each county at least one seat in one of their houses regardless of population, and in nine others county or town units are given equal representation in one legislative branch, whatever the number of each unit's inhabitants. Of course, numerically considered, "These provisions invariably result in

[130] Greenfield, Ford and Emery, supra, note 128, at 7

over-representation of the least populated areas. . . ."[131] And in an effort to curb the political dominance of metropolitan regions, at least ten States now limit the maximum entitlement of any single county (or, in some cases, city) in one legislative house—another source of substantial numerical disproportion[132]

Moreover, it is common knowledge that the legislatures have not kept reapportionment up to date, even where state constitutions in terms require it[133] In particular, the pattern of according greater per capita representation to rural, relatively sparsely populated areas—the same pattern which finds expression in various state constitutional provisions,[134] and which has been given effect in England and elsewhere[135]—has, in some of the States, been made the law by legislative inaction in the face of population shifts[136] Throughout the country, urban and suburban areas tend to be given higher representation ratios than do rural areas.[137]

The stark fact is that if among the numerous widely varying principles and practices that control state legislative apportionment today there is any generally prevailing feature, that feature is geographic inequality in relation to the population standard[138] Examples could

be endlessly multiplied In New Jersey, counties of thirty-five thousand and of more than nine hundred and five thousand inhabitants respectively each have a single senator [139] Representative districts in Minnesota range from 7,290 inhabitants to 107,246 inhabitants [140] Ratios of senatorial representation in California vary as much as two hundred and ninety-seven to one [141] In Oklahoma, the range is ten to one for House constituencies and roughly sixteen to one for Senate constituencies.[142] Colebrook, Connecticut—population 592—elects two House representatives, Hartford—population 177,397—also elects two.[143] The first, third and fifth of these examples are the products of constitutional provisions which subordinate population to regional considerations in apportionment; the second is the result of legislative inaction, the fourth derives from both constitutional and legislative sources A survey made in 1955, in sum, reveals that less than thirty percent of the population inhabit districts sufficient to elect a House majority in thirteen States and a Senate majority in nineteen States [144] These figures show more than individual variations from a generally accepted standard of electoral equality They show that there is not—as there has never been—a standard by which the place of equality as a factor in apportionment can be measured.

Manifestly, the Equal Protection Clause supplies no clearer guide for judicial examination of apportionment methods than would the Guarantee Clause itself Apportionment, by its character, is a subject of extraordinary complexity, involving—even after the fundamental theoretical issues concerning what is to be represented in a representative legislature have been fought out or compromised—considerations of geography, demography, electoral convenience, economic and social cohesions or divergencies among particular local groups, communications, the practical effects of political institutions like the lobby and the city machine, ancient traditions and ties of settled usage, respect for proven incumbents of long experience and senior status, mathematical mechanics, censuses compiling relevant data, and a host of others [145]

[139] Baker, supra, note 137, at 11 Recent New Jersey legislation provides for reapportionment of the State's lower house by executive action following each United States census subsequent to that of 1960 NJ Laws 1961, c 1 The apportionment is to be made on the basis of population, save that each county is assured at least one House seat In the State's Senate, however, by constitutional command, each county elects a single senator, regardless of population NJ Const, 1947, Art 4 § 2 ¶ 1

Legislative responses throughout the country to the reapportionment demands of the 1960 Census have glaringly confirmed that these are not factors that lend themselves to evaluations of a nature that are the staple of judicial determinations or for which judges are equipped to adjudicate by legal training or experience or native wit And this is the more so true because in every strand of this complicated, intricate web of values meet the contending forces of partisan politics [146] The practical significance of apportionment is that the next election results may differ because of it Apportionment battles are overwhelmingly party or intra-party contests [147] It will add a virulent source of friction and tension in federal-state relations to embroil the federal judiciary in them [148]

IV.

Appellants, however, contend that the federal courts may provide the standard which the Fourteenth Amendment lacks by reference to the provisions of the constitution of Tennessee The argument is that although the same or greater disparities of electoral strength may be suffered to exist immune from federal judicial review in States where they result from apportionment legislation consistent with state constitutions, the Tennessee legislature may not abridge the rights which, on its face, its own constitution appears to give, without by that act denying equal protection of the laws It is said that the law of Tennessee, as expressed by the words of its written constitution, has made the basic choice among policies in favor of representation proportioned to population, and that it is no longer open to the State to allot its voting power on other principles

This reasoning does not bear analysis Like claims invoking state constitutional requirement have been rejected here and for good reason It is settled that whatever federal consequences may derive from a discrimination worked by a state statute must be the same as if the same

changed conditions" Report of the Joint Committee on the Re-apportionment of the State into Senatorial and House Districts, Virginia General Assembly, House of Delegates, H Doc No 9 (1922), 1–2 And the Tennessee State Planning Commission, concerning the problem of congressional redistricting in 1950, spoke of a "tradition [which] relates to the sense of belonging—loyalties to groups and items of common interest with friends and fellow citizens of like circumstance, environment or region" Tennessee State Planning Commission, Pub No 222, Redistricting for Congress (1950), First page

"[T]he reapportionment process is, by its very nature, political

There will be politics in reapportionment as long as a representative form of government exists

"It is impossible to draw a district boundary line without that line's having some political significance"

[147] See, e g, Celler, Congressional Apportionment—Past, Present, and Future, 17 Law & Contemp Prob 268 (1952), speaking of the history of congressional apportionment

"A mere reading of the debates [from the Constitutional Convention down to contemporary Congresses] on this question of apportionment reveals the conflicting interests of the large and small states and the extent to which partisan politics permeates the entire problem"

[148] See Standards for Congressional Districts (Apportionment), Hearings Before Subcommittee No 2 of the Committee on the Judiciary, House of Representatives, 86th Cong, 1st Sess 23, concerning a proposed provision for judicial enforcement of certain standards in the laying out of districts

"Mr KASEM You do not think that that [a provision embodying the language 'in as compact form as practicable'] might result in a decision depending upon the political inclinations of the judge"

"Mr CELLER Are you impugning the integrity of our Federal judiciary?

"Mr KASEM No, I just recognize their human frailties"

For an instance of a court torn, in fact or fancy, over the political issues involved in reapportionment, see State ex rel Lashly v Becker, 290 Mo 560, 235 SW 1017, and especially the dissenting opinion of Higbee, J, 290 Mo at 613, 235 SW at 1037

discrimination were written into the State's fundamental law. Nashville, C & St L R Co v Browning, 310 US 362, 84 L ed 1254, 60 S Ct 968 And see Castillo v McConnico, 168 US 674, 42 L ed 622, 18 S Ct 229, Coulter v Louisville & N. R Co 196 US 599, 608, 609, 49 L ed 615, 617, 618, 25 S Ct 342, Owensboro Waterworks Co v Owensboro, 200 US 38, 50 L ed 361, 26 S Ct 249; Herbert v Louisiana, 272 US 312, 316, 317, 71 L ed 270, 272, 273, 47 S Ct 103, 48 ALR 1102; Snowden v Hughes, 321 US 1, 11, 88 L ed 497, 504, 64 S Ct 397 Appellants complain of a practice which, by their own allegations, has been the law of Tennessee for sixty years They allege that the apportionment act of 1901 created unequal districts when passed and still maintains unequal districts They allege that the Legislature has since 1901 purposely retained unequal districts And the Supreme Court of Tennessee has refused to invalidate the law establishing these unequal districts Kidd v McCanless, 200 Tenn 273, 292 SW2d 40, app dismd here in 352 US 920, 1 L ed 2d 157, 77 S Ct 223 In these circumstances, what was said in the Browning Case, supra (310 US at 369), clearly governs this case

" . Here, according to petitioner's own claim, all the organs of the state are conforming to a practice, systematic, unbroken for more than forty years, and now questioned for the first time It would be a narrow conception of jurisprudence to confine the notion of 'laws' to what is found written on the statute books, and to disregard the gloss which life has written upon it. Settled state practice cannot supplant constitutional guarantees, but it can establish what is state law The Equal Protection Clause did not write an empty formalism into the Constitution Deeply embedded traditional ways of carrying out state policy, such as those of which petitioner complains, are often tougher and truer law than the dead words of the written text [T]he Equal Protection Clause is not a command of candor. . . ."

Tennessee's law and its policy respecting apportionment are what 60 years of practice show them to be, not what appellants cull from the unenforced and, according to its own judiciary, unenforceable words of its Constitution The statute comes here on the same footing, therefore, as would the apportionment laws of New Jersey, California or Connecticut,[149] and is unaffected by its supposed repugnance to the state constitutional language on which appellants rely [150]

In another aspect, however, the Kidd v McCanless Case (Tenn) supra, introduces a factor peculiar to this litigation, which only emphasizes the duty of declining the exercise of federal judicial jurisdiction In all of the apportionment cases which have come before the Court, a consideration which has been weighty in determining their nonjusticiability has been the difficulty or impossibility of devising effective judicial remedies in this class of case. An injunction restraining a general election unless the legislature reapportions would paralyze the critical

[149] See text at notes 139–143, supra

[150] Decisions of state courts which have entertained apportionment cases under their respective state constitutions do not, of course, involve the very different considerations relevant to federal judicial intervention State-court adjudication does not involve the delicate problems of federal-state relations which would inhere in the exercise of federal judicial power to impose restrictions upon the States' shaping of their own governmental institutions Moreover, state constitutions generally speak with a specificity totally lacking in attempted utilization of the generalities of the Fourteenth Amendment to apportionment matters Some expressly commit apportionment to state judicial review, see, e g, NY Const, 1938, Art 3 § 5, and even where they do not, they do precisely fix the criteria for judicial judgment respecting the allocation of representative strength within the electorate See, e g, Asbury Park Press, Inc v Woolley, 33 NJ 1, 161 A2d 705

centers of a State's political system and threaten political dislocation whose consequences are not foreseeable A declaration devoid of implied compulsion of injunctive or other relief would be an idle threat.[151] Surely a Federal District Court could not itself remap the State the same complexities which impede effective judicial review of apportionment a fortiori make impossible a court's consideration of these imponderables as an original matter And the choice of elections at large as opposed to elections by district, however unequal the districts, is a matter of sweeping political judgment having enormous political implications, the nature and reach of which are certainly beyond the informed understanding of, and capacity for appraisal by, courts

In Tennessee, moreover, the McCanless Case has closed off several among even these unsatisfactory and dangerous modes of relief That case was a suit in the state courts attacking the 1901 Reapportionment Act and sending a declaration and an injunction of the Act's enforcement or, alternatively, a writ of mandamus compelling state election officials to hold the elections at large, or, again alternatively, a decree of the court reapportioning the State The Chancellor denied all coercive relief, but entertained the suit for the purpose of rendering a declaratory judgment It was his view that despite an invalidation of the statute under which the present legislature was elected, that body would continue to possess de facto authority to reapportion, and that therefore the maintaining of the suit did not threaten the disruption of the government The Tennessee Supreme Court agreed that no coercive relief could be granted, in particular, it said, "There is no provision of law for election of our General Assembly by an election at large over the State " 200 Tenn, at 277, 292 SW2d, at 42 Thus, a legislature elected at large would not be the legally constituted legislative authority of the State The court reversed, however, the Chancellor's determination to give declaratory relief, holding that the ground of demurrer which asserted that a striking down of the statute would disrupt the orderly process of government should have been sustained

"(4) It seems obvious and we therefore hold that if the Act of 1901 is to be declared unconstitutional, then the de facto doctrine cannot be applied to maintain the present members of the General Assembly in office If the Chancellor is correct in holding that this statute has expired by the passage of the decade following its enactment then for the same reason all prior apportionment acts have expired by a like lapse of time and are nonexistent Therefore we would not only not have any existing members of the General Assembly but we would have no apportionment act whatever under which a new election could be held for the election of members to the General Assembly

. . . .

"The ultimate result of holding this Act unconstitutional by reason of the lapse of time would be to deprive us of the present Legislature and the means of electing a new one and ultimately bring about the destruction of the State itself " Id , 200 Tenn, at 281, 282, 292 SW2d, at 44

[151] Appellants' suggestion that, although no relief may need be given, jurisdiction ought to be retained as a "spur" to legislative action does not merit discussion.

A federal court enforcing the Federal Constitution is not, to be sure, bound by the remedial doctrines of the state courts. But it must consider as pertinent to the propriety or impropriety of exercising its jurisdiction those state-law effects of its decree which it cannot itself control. A federal court cannot provide the authority requisite to make a legislature the proper governing body of the State of Tennessee. And it cannot be doubted that the striking down of the statute here challenged on equal protection grounds, no less than on grounds of failure to reapportion decennially, would deprive the State of all valid apportionment legislation and—under the ruling in McCanless—deprive the State of an effective law-based legislative branch. Just such considerations, among others here present, were determinative in Luther v. Borden and the Oregon initiative cases.[152]

Although the District Court had jurisdiction in the very restricted sense of power to determine whether it could adjudicate the claim, the case is of that class of political controversy which, by the nature of its subject, is unfit for federal judicial action. The judgment of the District Court, in dismissing the complaint for failure to state a claim on which relief can be granted, should therefore be affirmed.

Dissenting opinion of Mr. Justice Harlan, whom Mr. Justice Frankfurter joins.

The dissenting opinion of Mr. Justice Frankfurter, in which I join, demonstrates the abrupt departure the majority makes from judicial history by putting the federal courts into this area of state concerns—an area which, in this instance the Tennessee state courts themselves have refused to enter.

It does not detract from his opinion to say that the panorama of judicial history it unfolds, though evincing a steadfast underlying principle of keeping the federal courts out of these domains, has a tendency, because of variants in expression, to becloud analysis in a given case. With due respect to the majority, I think that has happened here.

Once one cuts through the thicket of discussion devoted to "jurisdiction," "standing," "justiciability" and "political question," there emerges a straightforward issue which, in my view, is determinative of this case. Does the complaint disclose a violation of a federal constitutional right, in other words, a claim over which a United States District Court would have jurisdiction under 28 USC § 1343(3) and 42 USC § 1983? The majority opinion does not actually discuss this basic question, but, as one concurring Justice observes, seems to decide it "sub silentio." Ante, p. 711. However, in my opinion, appellants' allegations, accepting all of them as true, do not, parsed down or as a whole, show an infringement by Tennessee of any rights assured by the Fourteenth Amendment. Accordingly, I believe the complaint should have been dismissed for "failure to state a claim upon which relief can be granted." Fed. Rules Civ. Proc. 12(b) (6).

It is at once essential to recognize this case for what it is. The issue here relates not to a method of state electoral apportionment by which seats in the *federal* House of Representatives are allocated, but solely to the right of a State to fix the basis of representation in its *own*

[152] See note 24, supra.

legislature Until it is first decided to what extent that right is limited by the Federal Constitution, and whether what Tennessee has done or failed to do in this instance runs afoul of any such limitation, we need not reach the issues of "justiciability" or "political question" or any of the other considerations which in such cases as Colegrove v Green, 328 US 549, 90 L ed 1432, 66 S Ct 1198, led the Court to decline to adjudicate a challenge to a state apportionment affecting seats in the federal House of Representatives, in the absence of a controlling Act of Congress See also Wood v Broom, 287 US 1, 77 L ed 131, 53 S Ct 1.

The appellants' claim in this case ultimately rests entirely on the Equal Protection Clause of the Fourteenth Amendment It is asserted that Tennessee has violated the Equal Protection Clause by maintaining in effect a system of apportionment that grossly favors in legislative representation the rural sections of the State as against its urban communities. Stripped to its essentials the complaint purports to set forth three constitutional claims of varying breadth

(1) The Equal Protection Clause requires that each vote cast in state legislative elections be given approximately equal weight.

(2) Short of this, the existing apportionment of state legislators is so unreasonable as to amount to an arbitrary and capricious act of classification on the part of Tennessee Legislature, which is offensive to the Equal Protection Clause

(3) In any event, the existing apportionment is rendered invalid under the Fourteenth Amendment because it flies in the face of the Tennessee Constitution.

For reasons given in Mr Justice Frankfurter's opinion, ante, pp 748, 749, the last of these propositions is manifestly untenable, and need not be dealt with further I turn to the other two

I.

I can find nothing in the Equal Protection Clause or elsewhere in the Federal Constitution which expressly or impliedly supports the view that state legislatures must be so structured as to reflect with approximate equality the voice of every voter Not only is that proposition refuted by history, as shown by my Brother Frankfurter, but it strikes deep into the heart of our federal system Its acceptance would require us to turn our backs on the regard which this Court has always shown for the judgment of state legislatures and courts on matters of basically local concern

In the last analysis, what lies at the core of this controversy is a difference of opinion as to the function of representative government It is surely beyond argument that those who have the responsibility for devising a system of representation may permissibly consider that factors other than bare numbers should be taken into account The existence of the United States Senate is proof enough of that To consider that we may ignore the Tennessee Legislature's judgment in this instance because that body was the product of an asymmetrical electoral apportionment would in effect be to assume the very conclusion here disputed Hence we must accept the present form of the Tennessee Legislature as the embodiment of the State's choice, or, more realistically, its compromise, between competing political philos-

ophies The federal courts have not been empowered by the Equal Protection Clause to judge whether this resolution of the State's internal political conflict is desirable or undesirable, wise or unwise

With respect to state tax statutes and regulatory measures, for example, it has been said that the "day is gone when this Court uses the Fourteenth Amendment to strike down state laws because they may be unwise, improvident, or out of harmony with a particular school of thought" Williamson v Lee Optical of Okla, Inc 348 US 483, 488, 99 L ed 563, 572, 75 S Ct 461 I would think it all the more compelling for us to follow this principle of self-restraint when what is involved is the freedom of a State to deal with so intimate a concern as the structure of its own legislative branch The Federal Constitution imposes no limitation on the form which a state government may take other than generally committing to the United States the duty to guarantee to every State "a Republican Form of Government" And, as my Brother Frankfurter so conclusively proves (ante, pp 738–743), no intention to fix immutably the means of selecting representatives for state governments could have been in the minds of either the Founders or the draftsmen of the Fourteenth Amendment

In short, there is nothing in the Federal Constitution to prevent a State, acting not irrationally, from choosing any electoral legislative structure it thinks best suited to the interests, temper, and customs of its people I would have thought this proposition settled by MacDougall v Green, 335 US 281 [93 L ed 3, 69 S Ct 1], in which the Court observed (at p 283) that to "assume that political power is a function exclusively of numbers is to disregard the practicalities of government," and reaffirmed by South v Peters, 339 US 276, 94 L ed 834, 70 S Ct 641 A State's choice to distribute electoral strength among geographical units, rather than according to a census of population, is certainly no less a rational decision of policy than would be its choice to levy a tax on property rather than a tax on income Both are legislative judgments entitled to equal respect from this Court

II.

The claim that Tennessee's system of apportionment is so unreasonable as to amount to a capricious classification of voting strength stands up no better under dispassionate analysis

The Court has said time and again that the Equal Protection Clause does not demand of state enactments either mathematical identity or rigid equality E g, Allied Stores of Ohio, Inc v Bowers, 358 US 522, 527, 528, 3 L ed 2d 480, 484, 485, 79 S Ct 437, and authorities there cited, McGowan v Maryland, 366 US 420, 425, 426, 6 L ed 2d 393, 398, 399, 81 S Ct 1101 All that is prohibited is "invidious discrimination" bearing no rational relation to any permissible policy of the State Williamson v Lee Optical of Okla, Inc supra (348 US at 489) And in deciding whether such discrimination has been practiced by a State, it must be borne in mind that a "statutory discrimination will not be set aside if any state of facts reasonably may be conceived to justify it" McGowan v Maryland (US) supra It is not inequality alone that calls for a holding of unconstitutionality, only if the inequality is based on an impermissible standard may this Court condemn it

What then is the basis for the claim made in this case that the distribution of state senators and representatives is the product of capriciousness or of some constitutionally prohibited policy? It is not that Tennessee has arranged its electoral districts with a deliberate purpose to dilute the voting strength of one race. cf Gomillion v Lightfoot, 364 US 339, 5 L ed 2d 110, 81 S Ct 125, or that some religious group is intentionally underrepresented Nor is it a charge that the legislature has indulged in sheer caprice by allotting representatives to each county on the basis of a throw of the dice, or of some other determinant bearing no rational relation to the question of apportionment Rather, the claim is that the State Legislature has unreasonably retained substantially the same allocation of senators and representatives as was established by statute in 1901, refusing to recognize the great shift in the population balance between urban and rural communities that has occurred in the meantime

It is further alleged that even as of 1901 the apportionment was invalid, in that it did not allocate state legislators among the counties in accordance with the formula set out in Art 2 § 5, of the Tennessee Constitution In support of this the appellants have furnished a Table which indicates that as of 1901 six counties were overrepresented and 11 were underrepresented But that Table in fact shows nothing in the way of significant discrepancy, in the instance of each county it is only one representative who is either lacking or added And it is further perfectly evident that the variations are attributable to nothing more than the circumstance that the then enumeration of voters resulted in fractional remainders with respect to which the precise formula of the Tennessee Constitution was in some instances slightly disregarded Unless such de minimis departures are to be deemed of significance, these statistics certainly provide no substantiation for the charge that the 1901 apportionment was arbitrary and capricious Indeed, they show the contrary

Thus reduced to its essentials, the charge of arbitrariness and capriciousness rests entirely on the consistent refusal of the Tennessee Legislature over the past 60 years to alter a pattern of apportionment that was reasonable when conceived

A Federal District Court is asked to say that the passage of time has rendered the 1901 apportionment obsolete to the point where its continuance becomes vulnerable under the Fourteenth Amendment But is not this matter one that involves a classic legislative judgment? Surely it lies within the province of a state legislature to conclude that an existing allocation of senators and representatives constitutes a desirable balance of geographical and demographical representation, or that in the interest of stability of government it would be best to defer for some further time the redistribution of seats in the state legislature

Indeed, I would hardly think it unconstitutional if a state legislature's expressed reason for establishing or maintaining an electoral imbalance between its rural and urban population were to protect the State's agricultural interests from the sheer weight of numbers of those residing in its cities A State may, after all, take account of the interests of its rural population in the distribution of tax burdens, e g , American Sugar Ref Co v Louisiana, 179 US 89, 45 L ed 102, 21 S Ct 43, and rec-

ognition of the special problems of agricultural interests has repeatedly been reflected in federal legislation, e g, Capper-Volstead Act, 42 Stat 388, Agricultural Adjustment Act of 1938, 52 Stat 31 Even the exemption of agricultural activities from state criminal statutes of otherwise general application has not been deemed offensive to the Equal Protection Clause Tigner v Texas, 310 US 141, 84 L ed 1124, 60 S Ct 879, 130 ALR 1321. Does the Fourteenth Amendment impose a stricter limitation upon a State's apportionment of political representatives to its central government? I think not These are matters of local policy, on the wisdom of which the federal judiciary is neither permitted nor qualified to sit in judgment

The suggestion of my Brother Frankfurter that courts lack standards by which to decide such cases as this, is relevant not only to the question of "justiciability," but also, and perhaps more fundamentally, to the determination whether any cognizable constitutional claim has been asserted in this case Courts are unable to decide when it is that an apportionment originally valid becomes void because the factors entering into such a decision are basically matters appropriate only for legislative judgment And so long as there exists a possible rational legislative policy for retaining an existing apportionment, such a legislative decision cannot be said to breach the bulwark against arbitrariness and caprice that the Fourteenth Amendment affords Certainly, with all due respect, the facile arithmetical argument contained in Part II of my Brother Clark's separate opinion (ante, pp 707–709) provides no tenable basis for considering that there has been such a breach in this instance (See the Appendix to this opinion)

These conclusions can hardly be escaped by suggesting that capricious state action might be found were it to appear that a majority of the Tennessee legislators, in refusing to consider reapportionment, had been actuated by self-interest in perpetuating their own political offices or by other unworthy or improper motives Since Fletcher v Peck (US) 6 Cranch 87, 3 L ed 162, was decided many years ago, it has repeatedly been pointed out that it is not the business of the federal courts to inquire into the personal motives of legislators E g, Arizona v California, 283 US 423, 455, and note 7, 75 L ed 1154, 1165, 1166, 51 S Ct 522 The function of the federal judiciary ends in matters of this kind once it appears, as I think it does here on the undisputed facts, that the state action complained of could have rested on some rational basis (See the Appendix to this opinion)

It is my view that the majority opinion has failed to point to any recognizable constitutional claim alleged in this complaint Indeed, it is interesting to note that my Brother Stewart is at pains to disclaim for himself, and to point out that the majority opinion does not suggest, that the Federal Constitution requires of the States any particular kind of electoral apportionment, still less that they must accord to each voter approximately equal voting strength Concurring opinion, ante, p 713 But that being so, what, may it be asked, is left of this complaint? Surely the bare allegations that the existing Tennessee apportionment is "incorrect," "arbitrary," "obsolete" and "unconstitutional"—amounting to nothing more than legal conclusions—do not themselves save the complaint from dismissal See Snowden v Hughes,

321 US 1, 88 L ed 497, 64 S Ct 397, Collins v Hardyman, 341 US 651, 95 L ed 1253, 71 S Ct 937 Nor do those allegations shift to the appellees the burden of proving the *constitutionality* of this state statute, as is so correctly emphasized by my Brother Stewart (ante, p. 714), this Court has consistently held in cases arising under the Equal Protection Clause that " 'the burden of establishing the *unconstitutionality* of a statute rests on him who assails it,' Metropolitan Ins Co v Brownell, 294 U S 581, 584 " (Emphasis added) Moreover, the appellants do not suggest that they could show at a trial anything beyond the matters previously discussed in this opinion, which add up to nothing in the way of a supportable constitutional challenge against this statute And finally, the majority's failure to come to grips with the question whether the complaint states a claim recognizable under the Federal Constitution—an issue necessarily presented by appellee's motion to dismiss —does not of course furnish any ground for permitting this action to go to trial.

From a reading of the majority and concurring opinions one will not find it difficult to catch the premises that underlie this decision The fact that the appellants have been unable to obtain political redress of their asserted grievances appears to be regarded as a matter which should lead the Court to stretch to find some basis for judicial intervention While the Equal Protection Clause is invoked, the opinion for the Court notably eschews explaining how, consonant with past decisions, the undisputed facts in this case can be considered to show a violation of that constitutional provision The majority seems to have accepted the argument, pressed at the bar, that if this Court merely asserts authority in this field, Tennessee and other "malapportioning" States will quickly respond with appropriate political action, so that this Court need not be greatly concerned about the federal courts becoming further involved in these matters At the same time the majority has wholly failed to reckon with what the future may hold in store if this optimistic prediction is not fulfilled Thus, what the Court is doing reflects more an adventure in judicial experimentation than a solid piece of constitutional adjudication Whether dismissal of this case should have been for want of jurisdiction or, as is suggested in Bell v Hood, 327 US 678, 682, 683, 90 L ed 939, 943, 66 S Ct 773, 13 ALR2d 383, for failure of the complaint to state a claim upon which relief could be granted, the judgment of the District Court was correct

In conclusion, it is appropriate to say that one need not agree, as a citizen, with what Tennessee has done or failed to do, in order to deprecate, as a judge, what the majority is doing today Those observers of the Court who see it primarily as the last refuge for the correction of all inequality or injustice, no matter what its nature or source, will no doubt applaud this decision and its break with the past Those who consider that continuing national respect for the Court's authority depends in large measure upon its wise exercise of self-restraint and discipline in constitutional adjudication, will view the decision with deep concern

I would affirm

Appendix

THE INADEQUACY OF ARITHMETICAL FORMULAS AS MEASURES OF THE RATIONALITY OF TENNESSEE'S APPORTIONMENT

Two of the three separate concurring opinions appear to concede that the Equal Protection Clause does not guarantee to each state voter a vote of approximately equal weight for the State Legislature Whether the existing Tennessee apportionment is constitutional is recognized to depend only on whether it can find "any possible justification in rationality" (ante, p 713); it is to be struck down only if "the discrimination here does not fit any pattern" (ante, p 709)

One of the concurring opinions, that of my Brother Stewart, suggests no reasons which would justify a finding that the present distribution of state legislators is unconstitutionally arbitrary The same is true of the majority opinion My Brother Clark, on the other hand, concludes that "the apportionment picture in Tennessee is a topsy-turvical of gigantic proportions" (ante, p 707), solely on the basis of certain statistics presented in the text of his separate opinion and included in a more extensive Table appended thereto In my view, that analysis is defective not only because the "total representation" formula set out in footnote 7 of the opinion (ante, p 707), rests on faulty mathematical foundations, but, more basically, because the approach taken wholly ignores all other factors justifying a legislative determination of the sort involved in devising a proper apportionment for a State Legislature.

In failing to take any of such other matters into account and in focusing on a particular mathematical formula which, as will be shown, is patently unsound, my Brother Clark's opinion has, I submit, unwittingly served to bring into bas-relief the very reasons that support the view that this complaint does not state a claim on which relief could be granted For in order to warrant holding a state electoral apportionment invalid under the Equal Protection Clause, a court, in line with well-established constitutional doctrine, must find that *none* of the permissible policies and *none* of the possible formulas on which it might have been based could rationally justify particular inequalities

I.

At the outset, it cannot be denied that the apportionment rules explicitly set out in the Tennessee Constitution are rational These rules are based on the following obviously permissible policy determinations (1) to utilize counties as electoral units, (2) to prohibit the division of any county in the composition of electoral districts, (3) to allot to each county that has a substantial voting population—at least two-thirds of the average voting population per county—a separate "direct representative"; (4) to create "floterial" districts (multicounty representative districts) made up of more than one county; and (5) to

require that such districts be composed of adjoining counties[1] Such a framework unavoidably leads to unreliable arithmetic inequalities under any mathematical formula whereby the counties' "total representation" is sought to be measured It particularly results in egregiously deceptive disparities if the formula proposed in my Brother Clark's opinion is applied

That formula computes a county's "total representation" by adding (1) the number of "direct representatives" the county is entitled to elect; (2) a fraction of any other seats in the Tennessee House which are allocated to that county jointly with one or more others in a "floterial district", (3) triple the number of senators the county is entitled to elect alone, and (4) triple a fraction of any seats in the Tennessee Senate which are allocated to that county jointly with one or more others in a multicounty senatorial district The fractions used for items (2) and (4) are computed by allotting to each county in a combined district an equal share of the House or Senate seat, *regardless* of the voting population of each of the counties that make up the election district[2]

This formula is patently deficient in that it eliminates from consideration the relative voting power of the counties that are joined together in a single election district As a result, the formula unrealistically assigns to Moore County one-third of a senator, in addition to its direct representative (ante, pp 707, 708), although it must be obvious that Moore's voting strength in the Eighteenth Senatorial District is almost negligible Since Moore County could cast only 2,340 votes of a total eligible vote of 30,478 in the senatorial district, it should in truth be considered as represented by one-fifteenth of a senator Assuming, arguendo, that any "total representation" figure is of significance, Moore's "total representation" should be 1 23, not 2[3]

The formula suggested by my Brother Clark must be adjusted regardless whether one thinks, as I assuredly do not, that the Federal Constitution requires that each vote be given equal weight The correc-

[1] The relevant provisions of the Tennessee Constitution are Art 2 §§ 5 and 6

"Sec 5 The number of Representatives shall, at the several periods of making the enumeration, be apportioned among the several counties or districts according to the number of qualified voters in each, and shall not exceed seventy-five, until the population of the State shall be one million and a half, and shall never exceed ninety-nine, Provided, That any county having two-thirds of the ratio shall be entitled to one member

"Sec 6 The number of Senators shall, at the several periods of making the enumeration, be apportioned among the several counties or districts, according to the number of qualified voters in each, and shall not exceed one-third the number of Representatives In apportioning the Senators among the different counties, the fraction that may be lost by any county or counties, in the apportionment of members of the House of Representatives, shall be made up to such county or counties in the Senate as near as may be practicable When a district is composed of two or more counties they shall be adjoining, and no counties shall be divided in forming a district"

[2] This formula is not clearly spelled out in the opinion, but it is necessarily inferred from the figures that are presented Knox County, for example, is said to have a "total representation" of 7 25 It elects (1) three direct representatives (value 3 00), (2) one representative from a two-county district (value 50), (3) one direct senator (value 3 00), and (4) one senator in a four-county district (value 75) See Appendix, ante, pp 753, 759

[3] If this "adjusted" formula for measuring "total representation" is applied to the other "horribles" cited in the concurring opinion (ante, pp 707, 708), it reveals that these counties—which purportedly have equal "total representation" but distinctly unequal voting population—do not have the same "total representation" at all Rather than having the same representation as Rutherford County, Moore County has only about 40% of what Rutherford has Decatur County has only 55% of the representation of Carter County While Loudon and Anderson Counties are substantially underrepresented, this is because of their proximity to Knox County, which outweighs their votes in the Sixth Senatorial District and in the Eighth Floterial District

tion is necessary simply to reflect the real facts of political life It may, of course, be true that the floterial representative's "function is to represent the whole district" (ante, pp. 708, 709) But can it be gainsaid that so long as elections within the district are decided not by a county-unit system, in which each county casts one vote, but by adding the total number of individual votes cast for each candidate, the concern of the elected representatives will primarily be with the most populous counties in the district?

II.

I do not mean to suggest that *any* mathematical formula, albeit an "adjusted" one, would be a proper touchstone to measure the rationality of the present or of appellants' proposed apportionment plan. For, as the Table appended to my Brother Clark's opinion so conclusively shows, whether one applies the formula he suggests or one that is adjusted to reflect proportional voting strength within an election district, no plan of apportionment consistent with the principal policies of the Tennessee Constitution could provide proportionately equal "total representation" for each of Tennessee's 95 counties.

The pattern suggested by the appellants in Exhibits "A" and "B" attached to their complaint is said to be a "fair distribution" which accords with the Tennessee Constitution, and under which each of the election districts represents approximately equal voting population But even when tested by the "adjusted" formula, the plan reveals gross "total representation" disparities that would make it appear to be a "crazy quilt" For example, Loudon County, with twice the voting population of Humphreys County would have *less* representation than Humphreys, and about one-third the representation of Warren County, which has only 73 more voters Among the more populous counties, similar discrepancies would appear Although Anderson County has only somewhat over 10% more voters than Blount County, it would have approximately 75% more representation. And Blount would have approximately two-thirds the representation of Montgomery County, which has about 13% *less* voters [4]

III.

The fault with a purely statistical approach to the case at hand lies not with the particular mathematical formula used, but in the failure to take account of the fact that a multitude of legitimate legislative policies, along with circumstances of geography and demography, could account for the seeming electoral disparities among counties The principles set out in the Tennessee Constitution are just some of those that were deemed significant Others may have been considered and accepted by those entrusted with the responsibility for Tennessee's apportionment And for the purposes of judging constitutionality under the Equal Protection Clause it must be remembered that what is controlling

[4] These disparities are as serious, if not more so, when my Brother Clark's formula is applied to the appellants' proposal For example, if the nine counties chosen by him as illustrative are examined as they would be represented under the appellants' distribution, Moore County, with a voting population of 2,340, is given more electoral strength than Decatur County, with a voting population of 5,663 Carter County (voting population 33,302) has 20% *more* "total representation" than Anderson County (voting population 33,990), and 33% *more* than Rutherford County (voting population 25,316)

on the issue of "rationality" is not what the State Legislature may *actually* have considered but what it may be *deemed* to have considered

For example, in the list of "horribles" cited by my Brother Clark (ante, pp 707, 708), *all* the "underrepresented" counties are semi-urban all contain municipalities of over 10,000 population [5] This is not to say, however, that the presence of any such municipality within a county necessarily demands that its proportional representation be reduced in order to render it consistent with an "urban versus rural" plan of apportionment. Other considerations may intervene and outweigh the Legislature's desire to distribute seats so as to achieve a proper balance between urban and rural interests The size of a county, in terms of its total area, may be a factor [6] Or the location within a county of some major industry may be thought to call for dilution of voting strength [7] Again, the combination of certain smaller counties with their more heavily populated neighbors in senatorial or "floterial" districts may result in apparent arithmetic inequalities [8]

More broadly, the disparities in electoral strength among the various counties in Tennessee, both those relied upon by my Brother Clark and others, may be accounted for by various economic,[9] political,[10] and geographic [11] considerations No allegation is made by the appellants that the existing apportionment is the result of any other forces than are always at work in any legislative process; and the record, briefs, and arguments in this Court themselves attest to the fact that the appellants could put forward nothing further at a trial.

By disregarding the wide variety of permissible legislative considerations that may enter into a state electoral apportionment my Brother Clark has turned a highly complex process into an elementary arith-

[5] Murfreesboro, Rutherford County (pop 16,017), Elizabethton, Carter County (pop 10,754), Oak Ridge, Anderson County (pop 27,387) Tennessee Blue Book, 1960, pp 143–149

[6] For example, Carter and Washington Counties are each approximately 60% as large as Maury and Madison Counties in terms of square miles, and this may explain the disparity between their "total representation" figures

[7] For example, in addition to being "semi-urban," Blount County is the location of the City of Alcoa, where the Aluminum Company of America has located a large aluminum smelting and rolling plant This may explain the difference between its "total representation" and that of Gibson County, which has no such large industry and contains no municipality as large as Maryville

[8] For example, Chester County (voting population 6,391) is one of those that is presently said to be overrepresented But under the appellants' proposal, Chester would be combined with populous Madison County in a "floterial district" and with four others, including Shelby County, in a senatorial district Consequently, its total representation according to the Appendix to my Brother Clark's opinion would be 19 (Ante, pp 711–713) This would have the effect of disenfranchising all the county's voters Similarly, Rhea County's almost 9,000 voters would find their voting strength so diluted as to be practically nonexistent

[9] For example, it is primarily the eastern portion of the State that is complaining of malapportionment (along with the Cities of Memphis and Nashville) But the eastern section is where industry is principally located and where population density, even outside the larger cities, is highest Consequently, if Tennessee is apportioning in favor of its agricultural interests, as constitutionally it was entitled to do, it would necessarily reduce representation from the east

[10] For example, sound political reasons surely justify limiting the legislative chambers to workable numbers, in Tennessee, the House is set at 99 and the Senate at 33 It might have been deemed desirable, therefore, to set a ceiling on representation from any single county so as not to deprive others of individual representation The proportional discrepancies among the four counties with large urban centers may be attributable to a conscious policy of limiting representation in this manner

[11] For example, Moore County is surrounded by four counties each of which have sufficient voting population to exceed two-thirds of the average voting population per county (which is the standard prescribed by the Tennessee Constitution for the assignment of a direct representative), thus qualifying for direct representatives Consequently Moore County must be assigned a representative of its own despite its small voting population because it cannot be joined with any of its neighbors in a multicounty district, and the Tennessee Constitution prohibits combining it with nonadjacent counties See note 1, supra

metical puzzle It is only by blinking reality that such an analysis can stand and that the essentially legislative determination can be made the subject of judicial inquiry

IV.

Apart from such policies as those suggested which would suffice to justify particular inequalities, there is a further consideration which could rationally have led the Tennessee Legislature, in the exercise of a deliberate choice, to maintain the status quo Rigidity of an apportionment pattern may be as much a legislative policy decision as is a provision for periodic reapportionment In the interest of stability, a State may write into its fundamental law a permanent distribution of legislators among its various election districts, thus forever ignoring shifts in population Indeed, several States have achieved this result by providing for minimum and maximum representation from various political subdivision such as counties, districts, cities, or towns See Harvey, Reapportionments of State Legislatures—Legal Requirements, 17 Law & Contemp Probs (1952), 364, 368–372

It is said that one "cannot find any rational standard" in what the Tennessee Legislature has failed to do over the past 60 years But surely one need not search far to find rationality in the Legislature's continued refusal to recognize the growth of the urban population that has accompanied the development of industry over the past half decade The existence of slight disparities between rural areas does not overcome the fact that the foremost apparent legislative motivation has been to preserve the electorate strength of the rural interests notwithstanding shifts in population And I understand it to be conceded by at least some of the majority that this policy is not rendered unconstitutional merely because it favors rural voters

Once the electoral apportionment process is recognized for what it is —the product of legislative give-and-take and of compromise among policies that often conflict—the relevant constitutional principles at once put these appellants out of the federal courts

JAMES H. GRAY et al., Appellants,

v

JAMES O'HEAR SANDERS

(372 U.S. 368)

March 18, 1963.

OPINION OF THE COURT

Mr Justice Douglas delivered the opinion of the Court

I.

This suit was instituted by appellee, who is qualified to vote in primary and general elections in Fulton County, Georgia, to restrain appellants from using Georgia's county unit system as a basis for counting votes in a Democratic primary for the nomination of a United States Senator and statewide officers, and for declaratory relief Appellants are the Chairman and Secretary of the Georgia State Democratic Executive Committee, and the Secretary of State of Georgia Appellee alleges that the use of the county unit system in counting, tabulating, consolidating, and certifying votes cast in primary elections for statewide offices violates the Equal Protection Clause and the Due Process Clause of the Fourteenth Amendment and the Seventeenth Amendment As the constitutionality of a state statute was involved and the question was a substantial one, a three-judge court was properly convened See 28 USC § 2281, United States v Georgia Public Service Com 371 US 285, 9 L ed 2d 317, 83 S Ct 397, decided January 14, 1963.

Appellants moved to dismiss, and they also filed an answer denying that the county unit system was unconstitutional and alleging that it was designed "to achieve a reasonable balance as between urban and rural electoral power"

Under Georgia law each county is given a specified number of representatives in the lower House of the General Assembly [1] This county unit system at the time this suit was filed was employed as follows in statewide primaries [2] (1) Candidates for nominations who received the highest number of popular votes in a county were considered to have carried the county and to be entitled to two votes for each representative to which the county is entitled in the lower House of the General Assembly; (2) the majority of the county unit vote nominated a United States Senator and Governor, the plurality of the county unit vote nominated the others.

[1] Ga Const, 1945, Art 3, § 8, ¶ 1

'The House of Representatives shall consist of representatives apportioned among the several counties of the State as follows To the eight counties having the largest population, three representatives each, to the thirty counties having the next largest population, two representatives each, and to the remaining counties, one representative each"

[2] Ga Code Ann, §§ 34-3212, 34-3213 (1936)

Appellee asserted that the total population of Georgia in 1960 was 3,943,116; that the population of Fulton County, where he resides, was 556,326; that the residents of Fulton County comprised 14 11% of Georgia's total population, but that, under the county unit system, the six unit votes of Fulton County constituted 1 46% of the total of 410 unit votes, or one-tenth of Fulton County's percentage of statewide population The complaint further alleged that Echols County, the least populous county in Georgia, had a population in 1960 of 1,876, or 05% of the State's population, but the unit vote of Echols County was 48% of the total unit vote of all counties in Georgia, or 10 times Echols County's statewide percentage of population One unit vote in Echols County represented 938 residents, whereas one unit vote in Fulton County represented 92,721 residents Thus, one resident in Echols County had an influence in the nomination of candidates equivalent to 99 residents of Fulton County.

On the same day as the hearing in the District Court, Georgia amended the statutes challenged in the complaint This amendment [3] modified the county unit system by allocating units to counties in accordance with a "bracket system" instead of doubling the number of representatives of each county in the lower House of the Georgia Assembly Counties with from 0 to 15,000 people were allotted two units; an additional one unit was allotted for the next 5,000 persons, an additional unit for the next 10,000 persons, another unit for each of the next two brackets of 15,000 persons; and, thereafter, two more units for each increase of 30,000 persons Under the amended Act, all candidates for statewide office (not merely for Senator and Governor as under the earlier Act) are required to receive a majority of the county unit votes to be entitled to nomination in the first primary In addition, in order to be nominated in the first primary, a candidate has to receive a majority of the popular votes unless there are only two candidates for the nomination and each receives an equal number of unit votes, in which event the candidate with the popular majority wins If no candidate receives both a majority of the unit votes and a majority of the popular votes, a second runoff primary is required between the candidate receiving the highest number of unit votes and the candidate receiving the highest number of popular votes In the second primary, the candidate receiving the highest number of unit votes is to prevail But again, if there is a tie in unit votes the candidate with the popular majority wins.

Appellee was allowed to amend his complaint so as to challenge the amended Act The District Court held that the amended Act had some of the vices of the prior Act It stated that under the amended Act "the vote of each citizen counts for less and less as the population of the county of his residence increases" 203 F Supp 158, 170, note 10 It went on to say:

"There are 97 two-unit counties, totalling 194 unit votes, and 22 counties totalling 66 unit votes, altogether 260 unit votes, within 14 of a majority, but no county in the above has as much as 20,000 population The remaining 40 counties range in population from 20,481 to

[3] Ga Laws 1962, Ex Sess, p 1217, Ga Code Ann §§ 34–3212, 34–3213 (1962)

556,326, but they control altogether only 287 county unit votes Combination of the units from the counties having the smallest population gives counties having population of one-third of the total in the state a clear majority of county units " Ibid

The District Court held that as a result of Baker v Carr, 369 US 186, 7 L ed 2d 663, 82 S Ct 691, it had jurisdiction, that a justiciable case was stated, that appellee had standing, and that the Democratic primary in Georgia is "state" action within the meaning of the Fourteenth Amendment It held that the county unit system as applied violates the Equal Protection Clause, and it issued an injunction,[4] not against conducting any party primary election under the county unit system, but against conducting such an election under a county unit system that does not meet the requirements specified by the court[5] 203 F Supp 158. In other words, the District Court did not proceed on the basis that in a statewide election every qualified person was entitled to one vote and that all weighted voting was outlawed Rather, it allowed a county unit system to be used in weighting the votes if the system showed no greater disparity against a county than exists against any State in the conduct of national elections[6] Thereafter the Democratic Committee voted to hold the 1962 primary election for the statewide offices mentioned on a popular vote basis We noted probable jurisdiction 370 US 921, 8 L ed 2d 502, 82 S Ct 1564

II.

We agree with the District Court that the action of this party in the conduct of its primary constitutes state action within the meaning of the Fourteenth Amendment Judge Sibley, writing for the court in Chapman v King (CA5 Ga) 154 F2d 460, showed with meticulous detail the manner in which Georgia regulates the conduct of party primaries (id. 154 F2d pp 463, 464) and he concluded

"We think these provisions show that the State, through the managers it requires, collaborates in the conduct of the primary, and puts its power behind the rules of the party It adopts the primary as a part of the public election machinery The exclusions of voters made by the party by the primary rules become exclusions enforced by the State " Id 154 F2d p 464

We agree with that result and conclude that state regulation of this preliminary phase of the election process makes it state action See United States v Classic, 313 US 299, 85 L ed 1368, 61 S Ct 1031, Smith v Allwright, 321 US 649, 88 L ed 987, 64 S Ct 757, 151 ALR 1110

[4] The order, dated April 28, 1962, was not restricted to the party primary of September 12, 1962, nor was the relief asked so restricted

[5] The District Court in its order defined the type of county unit system which violated the Equal Protection Clause as follows

"A county unit system for use in a party primary is invidiously discriminatory if any unit has less than its share to the nearest whole number proportionate to population, or to the whole of the vote in a recent party gubernatorial primary, or to the vote for electors of the party in the most recent presidential election, provided, no discrimination is deemed to be invidious under such system if the disparity against any county is not in excess of the disparity that exists as against any state in the most recent electoral college allocation, or under the equal proportions formula for representation of the several states in the Congress of the United States, and, provided provision is made for allocations to be adjusted to accord with changes in the basis at least once each ten years "

[6] See note 5, supra

We also agree that appellee, like any person whose right to vote is impaired (Smith v Allwright (US) supra, Baker v Carr, supra (369 US pp. 204–208)) has standing to sue [7]

Moreover, we think the case is not moot by reason of the fact that the Democratic Committee voted to hold the 1962 primary on a popular vote basis But for the injunction issued below, the 1962 Act remains in force; and if the complaint were dismissed it would govern future elections In addition the voluntary abandonment of a practice does not relieve a court of adjudicating its legality, particularly where the practice is deeply rooted and long-standing For if the case were dismissed as moot appellants would "be free to return to . [their] old ways " United States v W. T. Grant Co 345 US 629, 632, 97 L ed 1303, 1309, 73 S Ct 894.

III.

On the merits we take a different view of the nature of the problem than did the District Court

This case, unlike Baker v Carr, 369 US 186, 7 L ed 2d 663, 82 S Ct 691, supra, does not involve a question of the degree to which the Equal Protection Clause of the Fourteenth Amendment limits the authority of a State Legislature in designing the geographical districts from which representatives are chosen either for the State Legislature or for the Federal House of Representatives Nor does it include the related problems of Gomillion v Lightfoot, 364 US 339, 5 L ed 2d 110, 81 S Ct 125, where "gerrymandering" was used to exclude a minority group from participation in municipal affairs Nor does it present the question, inherent in the bicameral form of our Federal Government, whether a State may have one house chosen without regard to population The District Court, however, analogized Georgia's use of the county unit system in determining the results of a statewide election to phases of our federal system It pointed out

[7] Chief Justice Holt stated over 250 years ago

"A right that a man has to give his vote at the election of a person to represent him in parliament, there to concur to the making of laws, which are to bind his liberty and property, is a most transcendent thing, and of a high nature [I]t is a great injury to deprive [him] of it

"It would look very strange, when the commons of *England* are so fond of their right of sending representatives to parliament, that it should be in the power of a sheriff, or other officer, to deprive them of that right, and yet that they should have no remedy This right of voting is a right in the plaintiff by the common law, and consequently he shall maintain an action for the obstruction of it

"But in the principle case my brother says, we cannot judge of this matter, because it is a parliamentary thing O' by all means be very tender of that Besides it is intricate, and there may be contrariety of opinions To allow this action will make publick officiers more careful to observe the constitution of cities and boroughs, and not to be so partial as they commonly are in all elections, which is indeed a great and growing mischief, and tends to the prejudice of the peace of the nation But they say, that this is a matter out of our jurisdiction, and we ought not to inlarge it I agree we ought not to incroach or inlarge our jurisdiction, but sure we may determine on a charter granted by the king, or on a matter of custom or prescription, when it comes before us without incroaching on the parliament And if it be a matter within our jurisdiction, we are bound by our oaths to judge of it This is a matter of property determinable before us Was ever such a petition heard of in parliament, as that a man was hindered of giving his vote, and praying them to give him a remedy" The parliament undoubtedly would say, take your remedy at law It is not like the case of determining the right of election between the candidates" Ashby v White, 2 Ld Raym 938, 953, 954, 956 (1702)

that under the electoral college,[8] required by Art 2, § 1 of the Constitution and the Twelfth Amendment in the election of the President voting strength "is not in exact proportion to population Recognizing that the electoral college was set up as a compromise to enable the formation of the Union among the several sovereign states, it still could hardly be said that such a system used in a state among its counties, assuming rationality and absence of arbitrariness in end result, could be termed invidious" 203 F Supp 169

Accordingly the District Court as already noted[9] held that use of the county unit system in counting the votes in a statewide election was permissible "if the disparity against any county is not in excess of the disparity that exists against the state in the most recent electoral college allocation" 203 F Supp 170 Moreover the District Court held that use of the county unit system in counting the votes in a statewide election was permissible "if the disparity against any county is not in excess of the disparity that exists under the equal proportions formula for representation of the several States in the Congress" Ibid The assumption implicit in these conclusions is that since equality is not inherent in the electoral college and since precise equality among blocs of votes in one State or in the several States when it comes to the election of members of the House of Representatives is never possible, precise equality is not necessary in statewide elections

We think the analogies to the electoral college, to districting and redistricting, and to other phases of the problems of representation in state or federal legislatures or conventions[10] are inapposite The inclusion of the electoral college in the Constitution as the result of specific historical concerns,[11] validated the collegiate principle despite its inherent numerical inequality, but implied nothing about the use of an analogous system by a state in a statewide election No such specific accommodation of the latter was ever undertaken, and therefore no validation of its numerical inequality ensued Nor does the

[8] The electoral college was designed by men who did not want the election of the President to be left to the people See S Doc No 97, Survey of the Electoral College in the Political System of the United States, 79th Cong, 1st Sess "George Washington was elected to the office of Chief Magistrate of the Nation, by 69 votes—the total number cast by the electors At that time, three States did not vote New York had not yet passed an electoral law, and North Carolina and Rhode Island had not yet ratified the Constitution Therefore, of an estimated population of 4,000,000 people, a President was chosen by 69 voters, who had not been selected by the people, but appointed by State legislatures, save in the instances of Maryland and Virginia" Id, p 4

Hamilton expressed the philosophy behind the electoral college in The Federalist No 68 "This process of election affords a moral certainty, that the office of president, will seldom fall to the lot of any man, who is not in an eminent degree endowed with the requisite qualifications Talents for low intrigue and the little arts of popularity may alone suffice to elevate a man to the first honors in a single state, but it will require other talents and a different kind of merit to establish him in the esteem and confidence of the whole union, or of so considerable a portion of it as would be necessary to make him a successful candidate for the distinguished office of president of the United States It will not be too strong to say, that there will be a constant probability of seeing the station filled by characters pre-eminent for ability and virtue And this will be thought no inconsiderable recommendation of the constitution, by those, who are able to estimate the share which the executive in every government must necessarily have in its good or ill administration"

Passage of the Fifteenth, Seventeenth, and Nineteenth Amendments shows that this conception of political equality belongs to a bygone day, and should not be considered in determining what the Equal Protection Clause of the Fourteenth Amendment requires in statewide elections

[9] See note 5, supra

[10] We do not reach here the questions that would be presented were the convention system used for nominating candidates in lieu of the primary system

[11] See note 8, supra.

question here have anything to do with the composition of the state or federal legislature. And we intimate no opinion on the constitutional phases of that problem beyond what we said in Baker v Carr, 369 US 186, 7 L ed 2d 663, 82 S Ct 691, supra The present case is only a voting case Cf Nixon v Herndon, 273 US 536, 71 L ed 759, 47 S Ct 446, Nixon v Condon, 286 US 73, 76 L ed 984, 52 S Ct 484, 88 ALR 458; Smith v Allwright, 321 US 649, 88 L ed 987, 64 S Ct 757, 151 ALR 1110, supra Georgia gives every qualified voter one vote in a statewide election, but in counting those votes she employs the county unit system which in end result weights the rural vote more heavily than the urban vote and weights some small rural counties heavier than other larger rural counties

States can within limits specify the qualifications of voters both in state and federal elections, the Constitution indeed makes voters' qualifications rest on state law even in federal elections. Art 1, § 2. As we held in Lassiter v Northampton County Election Board, 360 US 45, 3 L ed 2d 1072, 79 S Ct 985, a State may if it chooses require voters to pass literacy tests, provided of course that literacy is not used as a cloak to discriminate against one class or group But we need not determine all the limitations that are placed on this power of a State to determine the qualifications of voters, for appellee is a qualified voter.

The Fifteenth Amendment prohibits a State from denying or abridging a Negro's right to vote. The Nineteenth Amendment does the same for women If a State in a statewide election weighted the male vote more heavily than the female vote or the white vote more heavily than the Negro vote, none could successfully contend that that discrimination was allowable See Terry v Adams, 345 US 461, 97 L ed 1152, 73 S Ct 809 How then can one person be given twice or 10 times the voting power of another person in a statewide election merely because he lives in a rural area or because he lives in the smallest rural county? Once the geographical unit for which a representative is to be chosen is designated, all who participate in the election are to have an equal vote—whatever their race, whatever their sex, whatever their occupation, whatever their income, and wherever their home may be in that geographical unit. This is required by the Equal Protection Clause of the Fourteenth Amendment. The concept of "we the people" under the Constitution visualizes no preferred class of voters but equality among those who meet the basic qualifications The idea that every voter is equal to every other voter in his State, when he casts his ballot in favor of one of several competing candidates, underlies many of our decisions

The Court has consistently recognized that all qualified voters have a constitutionally protected right "to cast their ballots and have them counted at Congressional elections " United States v Classic, 313 US 299, 315, 85 L ed 1368, 1377, 61 S Ct 1031; see Ex parte Yarbrough, 110 US 651, 28 L ed 274, 4 S Ct 152, Wiley v Sinkler, 179 US 58, 45 L ed 84, 21 S Ct 17; Swafford v Templeton, 185 US 487, 46 L Ed 1005, 22 S Ct 783 Every voter's vote is entitled to be counted once It must be correctly counted and reported As stated in United States v Mosley, 238 US 383, 386, 59 L Ed 1355, 1357, 35 S Ct 904, "the right to have one's vote counted" has the same dignity as "the right

to put a ballot in a box." It can be protected from the diluting effect of illegal ballots Ex parte Siebold, 100 US 371, 25 L ed 717; United States v Saylor, 322 US 385, 88 L ed 1341, 64 S Ct 1101 And these rights must be recognized in any preliminary election that in fact determines the true weight a vote will have See United States v Classic, 313 US 299, 85 L ed 1368, 61 S Ct 1031, supra; Smith v Allwright, 321 US 649, 88 L ed 987, 64 S Ct 757, 151 ALR 1110, supra The concept of political equality in the voting booth contained in the Fifteenth Amendment extends to all phases of state elections, see Terry v Adams, 345 US 461, 97 L ed 1152, 73 S Ct 809, supra; and, as previously noted, there is no indication in the Constitution that homesite or occupation affords a permissible basis for distinguishing between qualified voters within the State

The only weighting of votes sanctioned by the Constitution concerns matters of representation, such as the allocation of Senators irrespective of population and the use of the electoral college in the choice of a President Yet when Senators are chosen, the Seventeenth Amendment states the choice must be made "by the people." Minors, felons, and other classes may be excluded. See Lassiter v Northampton County Election Board, supra (360 US p 51). But once the class of voters is chosen and their qualifications specified, we see no constitutional way by which equality of voting power may be evaded As we stated in Gomillion v Lightfoot, supra (364 US p 347)

"When a State exercises power wholly within the domain of state interest, it is insulated from federal judicial review But such insulation is not carried over when state power is used as an instrument for circumventing a federally protected right"

The conception of political equality from the Declaration of Independence, to Lincoln's Gettysburg Address, to the Fifteenth, Seventeenth, and Nineteenth Amendments can mean only one thing—one person, one vote

While we agree with the District Court on most phases of the case and think it was right in enjoining the use of the county unit system [12] in tabulating the votes, we vacate its judgment and remand the case so that a decree in conformity with our opinion may be entered.

It is so ordered.

Mr Justice Stewart, whom Mr Justice Clark joins, concurring

In joining the opinion and judgment of the Court, I emphasize what —but for my Brother Harlan's dissent—I should have thought would be apparent to all who read the Court's opinion This case does not involve the validity of a State's apportionment of geographic constituencies from which representatives to the State's legislative assembly are chosen, nor any of the problems under the Equal Protection Clause which such litigation would present We do not deal here with "the basic ground rules implementing Baker v Carr" This case, on the contrary, involves statewide elections of a United States Senator

[12] The county unit system, even in its amended form (see note 3, supra) would allow the candidate winning the popular vote in the county to have the entire unit vote of that county Hence the weighting of votes would continue, even if unit votes were allocated strictly in proportion to population Thus if a candidate won 6,000 of 10,000 votes in a particular county, he would get the entire unit vote, the 4,000 other votes for a different candidate being worth nothing and being counted only for the purpose of being discarded

and of state executive and judicial officers responsible to a statewide constituency. Within a given constituency, there can be room for but a single constitutional rule—one voter, one vote United States v Classic, 313 US 299, 85 L ed 1368, 61 S Ct 1031

Mr Justice Harlan, dissenting

When Baker v Carr, 369 US 186, 7 L ed 2d 663, 82 S Ct 691, was argued at the last Term we were assured that if this Court would only remove the roadblocks of Colegrove v Green, 328 US 549, 90 L ed 1432, 66 S Ct 1198, and its predecessors to judicial review in "electoral" cases this Court in all likelihood would never have to get deeper into such matters State legislatures, it was predicted, would be prodded into taking satisfactory action by the mere prospect of legal proceedings

These predictions have not proved true As of November 1, 1962, the apportionment of seats in at least 30 state legislatures had been challenged in state and federal courts,[1] and, besides this one, 10 electoral cases of one kind or another are already on this Court's docket[2] The present case is the first of these to reach plenary consideration

Preliminary, it is symptomatic of the swift pace of current constitutional adjudication that the majority opinion should have failed to mention any of the four occasions on which Georgia's County Unit System has previously been unsuccessfully challenged in this Court Cook v Fortson, decided with Turman v Duckworth, 329 US 675, 91 L ed 596, 67 S Ct 21 (1946); South v Peters, 339 US 276, 94 L ed 834, 70 S Ct 641 (1950); Cox v Peters, 342 US 936, 96 L ed 697, 72 S Ct 559 (1952); and Hartsfield v Sloan, 357 US 916, 2 L ed 2d 1363, 78 S Ct 1363 (1958).

It is true that none of these cases reached the stage of full plenary consideration but, in light of the judicial history recounted by Mr Justice Frankfurter in his dissenting opinion in Baker v Carr, supra (369 US at 266, 278 et seq), only the guileless could fail to recognize that the prevailing view then was that the validity of this County Unit System was not open to serious constitutional doubt[3] This estimate of the earlier situation is highlighted by the dissenting opinion of Justices Black and Douglas in South v Peters, supra (339 US at 277), in which they unsuccessfully espoused the very views which now become the law Presumably my two Brothers also reflected these same views in noting their dissents in the Cox and Hartsfield Cases See also Cook v Fortson, 329 US 675, 91 L ed 596, 67 S Ct 21, etc , supra, in which Mr Justice Black also noted his dissent.

But even if the Court's present silence about these cases can be deemed justified on the premise that their summary disposition can be

[1] Advisory Commission on Intergovernmental Relations, Report on Apportionment of State Legislatures, December 1962, p A-21 I have been informed by the Administrative Office of the United States Courts that, by December 31, 1962, over 25 suits had been filed in the federal courts alone

[2] No 469, WMCA, Inc , v Simon, No 507, Wesberry v Sanders, No 508, Reynolds v Sims, No 517, Beadle v Scholle, No 540, Vann v Frink, No 554, Maryland Comm for Fair Representation v Tawes, No 610, McConnell v Frink, No 688, Price v Moss, No 689, Oklahoma Farm Bureau v Moss, No 797, Davis v Mann

[3] Although the Solicitor General, as amicus, suggests that the Court's action in South v Peters rested simply on a refusal to exercise federal equity power, it should be noted that the first case cited in the Court's per curiam affirmance is MacDougall v Green, 335 US 281, 93 L ed 3, 69 S Ct 1 See infra, p 833

satisfactorily accounted for on grounds not involving the merits, I consider today's decision not supportable

In the context of a nominating primary respecting candidates for statewide office, the Court construes the Equal Protection Clause of the Fourteenth Amendment as requiring that each person's vote be given equal weight The majority says "The conception of political equality from the Declaration of Independence, to Lincoln's Gettysburg Address, to the Fifteenth, Seventeenth, and Nineteenth Amendments can mean only one thing—one person, one vote" Ante, pp. 830, 831. The Court then strikes down Georgia's County Unit System *as such*, a holding which the District Court declined to make 203 F Supp, at 170

The Court's holding surely flies in the face of history For, as impressively shown by the opinion of Frankfurter, J , in Baker v Carr (369 US, at 301–324), "one person, one vote" has never been the universally accepted political philosophy in England, the American Colonies, or in the United States The significance of this historical fact seems indeed to be recognized by the Court, for it implies that its new-found formula might not obtain in a case involving the apportionment of seats in the "State Legislature or for the Federal House of Representatives" Ante, pp 827, 828

But, independently of other reasons that will be discussed in a moment, any such distinction finds persuasive refutation in the Federal Electoral College whereby the President of the United States is chosen on principles wholly opposed to those now held constitutionally required in the electoral process for statewide office. One need not close his eyes to the circumstance that the Electoral College was born in compromise, nor take sides in the various attempts that have been made to change the system,[4] in order to agree with the court below that it "could hardly be said that such a system used in a state among its counties, assuming rationality and absence of arbitrariness in end result, could be termed invidious." 203 F Supp, at 169

Indeed this Court itself some 15 years ago rejected, in a comparable situation, the notion of political equality now pronounced. In MacDougall v Green, 335 US 281, 93 L ed 3, 69 S Ct 1, challenge was made to an Illinois law requiring that nominating petitions of a new political party be signed by at least 25,000 voters, including a minimum of 200 voters from each of at least 50 of the 102 counties in the State The claim was that the "200 requirement" made it possible for "the voters of the less populous counties . to block the nomination of candidates whose support is confined to geographically limited areas" Id. 335 US at 283 In disallowing this claim, the Court said (Id 335 US at 283, 284):

"To assume that political power is a function exclusively of numbers is to disregard the practicalities of government Thus, the Constitution protects the interests of the smaller against the greater by giving in the Senate entirely unequal representation to populations. It would be strange indeed, and doctrinaire, for this Court, applying such broad constitutional concepts as due process and equal protection of the laws, to deny a State the power to assure a proper diffusion of political initiative as between its thinly populated counties and those having

[4] See Wechsler, Presidential Elections and the Constitution A Comment on Proposed Amendment, 35 ABAJ 181 (1949).

concentrated masses, in view of the fact that the latter have practical opportunities for exerting their political weight at the polls not available to the former The Constitution—a practical instrument of government—makes no such demands on the States."

Certainly no support for this equal protection doctrine can be drawn from the Fifteenth, Seventeenth, or Nineteenth Amendments The Fifteenth Amendment simply assures that the right to vote shall not be impaired "on account of race, color, or previous condition of servitude" The Seventeenth Amendment provides that Senators shall be "elected by the people," with no indication that all people must be accorded a vote of equal weight The Nineteenth Amendment merely gives the vote to women And it is hard to take seriously the argument that "dilution" of a vote in consequence of a legislatively sanctioned electoral system can, without more, be analogized to an impairment of the political franchise by ballot box stuffing or other criminal activity, e g , United States v Mosley, 238 US 383, 59 L ed 1355, 35 S Ct 904, United States v Classic, 313 US 299, 85 L ed 1368, 61 S Ct 1031, United States v Saylor, 322 US 385, 88 L ed 1341, 64 S Ct 1101, or to the disenfranchisement of qualified voters on purely racial grounds, Gomillion v Lightfoot, 364 US 339, 5 L ed 2d 110, 81 S Ct 125

A violation of the Equal Protection Clause thus cannot be found in the *mere* circumstance that the Georgia County Unit System results in disproportionate vote weighting It "is important for this court to avoid extracting from the very general language of the Fourteenth Amendment a system of delusive exactness . " Louisville & N R Co v Barber Asphalt Paving Co 197 US 430, 434, 49 L ed 819, 821, 25 S Ct 466 (Holmes, J). What then remains of the equal protection claim in this case?

At the core of Georgia's diffusion of voting strength which favors the small as against the large counties is the urban-rural problem, so familiar in the American political scene In my dissent in Baker v Carr, 369 US, at 336, I expressed the view that a State might rationally conclude that its general welfare was best served by apportioning more seats in the legislature to agricultural communities than to urban centers, lest the legitimate interests of the former be submerged in the stronger electoral voice of the latter. In my opinion, recognition of the same factor cannot be deemed irrational in the present situation, even though all of the considerations supporting its use in a legislative apportionment case are not present here

Given the undeniably powerful influence of a state governor on law and policy making,[5] I do not see how it can be deemed irrational for a State to conclude that a candidate for such office should not be one whose choice lies with the numerically superior electoral strength of urban voters By like token, I cannot consider it irrational for Georgia to apply its County Unit System to the selection of candidates for other

[5] The Georgia Constitution vests in the Governor the State's "executive power," and authorizes him to recommend legislation, make reports to and call extraordinary sessions of the State General Assembly, issue writs of election to fill vacancies in the General Assembly, veto or approve bills and resolutions, and require reports from the various departments of the State Ga Const of 1945, Art 5 §§ 2–3001 to 2–3017 Also, by statute, payments cannot be made from the state treasury without a warrant issued by the Governor, Ga Code Ann § 40–204, and in the event of a public emergency the Governor is authorized to promulgate and enforce such rules and regulations as are necessary to prevent, control, or quell violence, threatened or actual, Ga Code Ann § 40–213

statewide offices[6] in order to assure against a predominantly "city point of view" in the administration of the State affairs

On the existing record, this leaves the question of "irrationality" in this case to be judged on the basis of pure arithmetic The Court by its "one person, one vote" theory in effect avoids facing up to that problem, but the District Court did face it, holding that the disparities in voting strength between the largest county (Fulton) and the four smallest counties (Webster, Glascock, Quitman, and Echols), running respectively 8 to 1, 10 to 1, 11 to 1, and 14 to 1 in favor of the latter,[7] were invidiously discriminatory But it did not tell us why I do not understand how, on the basis of these mere numbers, unilluminated as they are by any of the complex and subtle political factors involved, a court of law can say, except by judicial fiat, that these disparities are in themselves constitutionally invidious

The disproportions in the Georgia County Unit System are indeed not greatly out of line with those existing under the Electoral College count for the Presidency The disparity in population per Electoral College vote between New York (the largest State in the 1960 census) and Alaska (the smallest) was about 5 to 1[8] There are only 15 Georgia counties, out of a total of 159, which have a greater disparity per unit vote, and of these 15 counties 4 have disparity of less than 6 to 1 It is thus apparent that a slight modification of the Georgia plan could bring it within the tolerance permitted in the federal scheme

It was of course imponderables like these that lay at the root of the Court's steadfast pre-Baker v Carr refusal "to enter [the] political thicket" Colegrove v Green supra (328 US at 556) Having turned its back on this wise chapter in its history, the Court, in my view, can no longer escape the necessity of coming to grips with the thorny problems it so studiously strove to avoid in Baker v Carr (see concurring opinion of Stewart, J , 369 US 265, and dissenting opinion of Harlan, J., id 369 US at 339) and in two subsequent cases, Scholle v Hare, 369 US 429, 430, 8 L ed 2d 1, 2, 82 S Ct 910 (concurring opinion of Clark, J , and Stewart, J), 430–435 (dissenting opinion of Harlan J), W M C A , Inc v Simon, 370 US 190, 191–194, 8 L ed 2d 430, 431–433, 82 S Ct 1234 (dissenting opinion of Harlan, J) To regard this case as being outside the general stream of electoral cases because only two other States, Maryland and Mississippi, have county unit systems, is to hide one's head in the sand

What then should be the test of "rationality" in this judicially unfamiliar field? My Brother Clark has perhaps given us a clue in the "legislative inactivity—absence of any other remedy—crazy quilt" ap-

[6] Those involved in this case, besides Governor, are United States Senator, Lieutenant Governor, Secretary of State, Justice of the Supreme Court, Judge of the Court of Appeals, Attorney General, Comptroller General, Commissioner of Labor, and Treasurer The Governor has a general power to fill vacancies in such offices, unless otherwise provided by law Ga Const of 1945, Art 5 § 2–3013

[8] Statistical Abstract of the United States 10, 366 (1962).

proach contained in his concurring opinion in Baker v Carr, supra, (369 US at 253–262) But I think a formulation of the basic ground rules in this untrod area of judicial competence should await a fully developed record This case is here at an interlocutory stage The temporary injunction before us issued upon a record consisting only of the pleadings, answers to interrogatories, affidavits, statistical material, and what the lower court described as a "liberal use of our right to take judicial notice of matters of common knowledge and public concern " 203 F Supp, at 160 note 1 No full-dress exploration of any of the many intricate questions involved in establishing criteria for judging "rationality" took place, the opinion and decree below issued the day following the hearing, and the District Court observed that, while its standards of equal protection (which this Court now puts aside) "may appear doctrinaire to some extent," it was constrained to act as it did because of the then (but no longer existing)[9] urgency of the situation 203 F Supp, at 170

Surely, if the Court's "one person, one vote" ideology is constitutionally untenable, as I think it clearly is, the basic ground rules implementing Baker v Carr should await the trial of this or some other case in which we have before us a fully developed record Only then can we know what we are doing Cf White Motor Co v United States, — US —, No 54, 9 L ed 2d 738, 83 S Ct 696, decided March 4, 1963 A matter which so profoundly touches the barriers between federal judicial and state legislative authority demands nothing less

I would vacate the judgment of the District Court and remand the case for trial

[9] Following the District Court's injunction, a statewide direct primary was held

JAMES P. WESBERRY, JR., et al., Appellants,

v

CARL E. SANDERS, etc., et al.

(375 U.S. 1)

February 17, 1964.

OPINION OF THE COURT

Mr. Justice Black delivered the opinion of the Court

Appellants are citizens and qualified voters of Fulton County, Georgia, and as such are entitled to vote in congressional elections in Georgia's Fifth Congressional District That district, one of ten created by a 1931 Georgia statute,[1] includes Fulton, DeKalb, and Rockdale Counties and has a population according to the 1960 census of 823,680. The average population of the ten districts is 394,312, less than half that of the Fifth One district, the Ninth, has only 272,154 people, less than one-third as many as the Fifth Since there is only one Congressman for each district, this inequality of population means that the Fifth District's Congressman has to represent from two to three times as many people as do Congressmen from some of the other Georgia districts.

Claiming that these population disparities deprived them and voters similarly situated of a right under the Federal Constitution to have their votes for Congressmen given the same weight as the votes of other Georgians, the appellants brought this action under 42 USC §§ 1983 and 1988 and 28 USC § 1343 (3) asking that the Georgia statute be declared invalid and that the appellees, the Governor and Secretary of State of Georgia, be enjoined from conducting elections under it The complaint alleged that appellants were deprived of the full benefit of their right to vote, in violation of (1) Art I, § 2, of the Constitution of the United States, which provides that "The House of Representatives shall be composed of Members chosen every second year by the People of the several States ", (2) the Due Process, Equal Protection, and Privileges and Immunities Clauses of the Fourteenth Amendment; and (3) that part of Section 2 of the Fourteenth Amendment which provides that "Representatives shall be apportioned among the several States according to their respective numbers "

The case was heard by a three-judge District Court, which found unanimously, from facts not disputed, that

"It is clear by any standard . that the population of the Fifth District is grossly out of balance with that of the other nine congressional districts of Georgia and in fact, so much so that the removal of DeKalb and Rockdale Counties from the District, leaving only Fulton with a population of 556,326, would leave it exceeding the average by slightly more than forty per cent "[2]

[1] Ga Code, § 34-2301

[2] Wesberry v Vandiver, 206 F Supp 276, 279-280

Notwithstanding these findings, a majority of the court dismissed the complaint, citing as their guide Mr Justice Frankfurter's minority opinion in Colegrove v Green, 328 US 549, 90 L ed 1432, 66 S Ct 1198, an opinion stating that challenges to apportionment of congressional districts raised only "political" questions, which were not justiciable. Although the majority below said that the dismissal here was based on "want of equity" and not on non-justiciability, they relied on no circumstances which were peculiar to the present case, instead, they adopted the language and reasoning of Mr Justice Frankfurter's Colegrove opinion in concluding that the appellants had presented a wholly "political" question [3] Judge Tuttle, disagreeing with the court's reliance on that opinion, dissented from the dismissal, though he would have denied an injunction at that time in order to give the Georgia Legislature ample opportunity to correct the "abuses" in the apportionment He relied on Baker v Carr, 369 US 186, 7 L ed 2d 663, 82 S Ct 691, which, after full discussion of Colegrove and all the opinions in it, held that allegations of disparities of population in state legislative districts raise justiciable claims on which courts may grant relief We noted probable jurisdiction 374 US 802, 10 L ed 2d 1029, 83 S Ct 1691. We agree with Judge Tuttle that in debasing the weight of appellants' votes the State has abridged the right to vote for members of Congress guaranteed them by the United States Constitution, that the District Court should have entered a declaratory judgment to that effect, and that it was therefore error to dismiss the suit The question of what relief should be given we leave for further consideration and decision by the District Court in light of existing circumstances

I.

Baker v Carr, supra, considered a challenge to a 1901 Tennessee statute providing for apportionment of State Representatives and Senators under the State's constitution, which called for apportionment among counties or districts "according to the number of qualified voters in each." The complaint there charged that the State's constitutional command to apportion on the basis of the number of qualified voters had not been followed in the 1901 statute and that the districts were so discriminatorily disparate in number of qualified voters that the plaintiffs and persons similarly situated were, "by virtue of the debasement of their votes," denied the equal protection of the laws guaranteed them by the Fourteenth Amendment [4] The cause there of the alleged "debasement" of votes for state legislators—districts containing widely varying numbers of people—was precisely that which was alleged to debase votes for Congressmen in Colegrove v Green, supra, and in the present case. The Court in Baker pointed out that the opinion of Mr. Justice Frankfurter in Colegrove, upon the reasoning of which the

[3] "We do not deem [Colegrove v Green] to be a precedent for dismissal based on the nonjusticiability of a political question involving the Congress as here, but we do deem it to be strong authority for dismissal for want of equity when the following factors here involved are considered on balance a political question involving a coordinate branch of the federal government, a political question posing a delicate problem difficult of solution without depriving others of the right to vote by district, unless we are to redistrict for the state, relief may be forthcoming from a properly apportioned state legislature, and relief may be afforded by the Congress" 206 F Supp, at 285 (footnote omitted)

[4] 369, US, at 188, 7 L ed 2d at 668

majority below leaned heavily in dismissing "for want of equity," was approved by only three of the seven Justices sitting.[5] After full consideration of Colegrove, the Court in Baker held (1) that the District Court had jurisdiction of the subject matter, (2) that the qualified Tennessee voters there had standing to sue, and (3) that the plaintiffs had stated a justiciable cause of action on which relief could be granted.

The reasons which led to these conclusions in Baker are equally persuasive here. Indeed, as one of the grounds there relied on to support our holding that state apportionment controversies are justiciable we said:

"... Smiley v Holm, 285 US 355 [76 L ed 795, 52 S Ct 397], Koenig v Flynn, 285 US 375 [76 L ed 805, 52 S Ct 405], and Carroll v Becker, 285 US 380 [76 L ed 807, 52 S Ct 402], concerned the choice of Representatives in the Federal Congress. Smiley, Koenig and Carroll settled the issue in favor of justiciability on questions of congressional redistricting. The Court followed the precedents in Colegrove although over the dissent of three of the seven Justices who participated in that decision."[6]

This statement in Baker, which referred to our past decisions holding congressional apportionment cases to be justiciable, we believe was wholly correct and we adhere to it. Mr. Justice Frankfurter's Colegrove opinion contended that Art I, § 4, of the Constitution[7] had given Congress "exclusive authority" to protect the right of citizens to vote for Congressmen,[8] but we made it clear in Baker that nothing in the language of that article gives support to a construction that would immunize state congressional apportionment laws which debase a citizen's right to vote from the power of courts to protect the constitutional rights of individuals from legislative destruction, a power recognized at least since our decision in Marbury v Madison, 1 Cranch 137, 2 L ed 60, in 1803. Cf. Gibbons v Ogden, 9 Wheat 1, 6 L ed 23. The right to vote is too important in our free society to be stripped of judicial protection by such an interpretation of Article I. This dismissal can no more be justified on the ground of "want of equity" than on the ground of "non-justiciability." We therefore hold that the District Court erred in dismissing the complaint.

II.

This brings us to the merits. We agree with the District Court that the 1931 Georgia apportionment grossly discriminates against voters in the Fifth Congressional District. A single Congressman represents from two to three times as many Fifth District voters as are represented by each of the Congressmen from the other Georgia congressional districts.

[5] Mr. Justice Rutledge in Colegrove believed that the Court should exercise its equitable discretion to refuse relief because "The shortness of the time remaining [before the next election] makes it doubtful whether action could, or would, be taken in time to secure for petitioners the effective relief they seek." 328 US, at 565, 90 L ed at 1443. In a later separate opinion he emphasized that his vote in Colegrove had been based on the "particular circumstances" of that case. Cook v Fortson, 329 US 675, 678, 91 L ed 596, 598, 67 S Ct 21.

[6] 369 US, at 232, 7 L ed 2d at 694. Cf. also Wood v Broom, 287 US 1, 77 L ed 131, 53 S Ct 1.

[7] "The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof, but the Congress may at any time by Law make or alter such Regulations, except as to the Places of chusing Senators." US Const, Art I, § 4.

[8] 328 US, at 554, 90 L ed at 1435.

The apportionment statute thus contracts the value of some votes and expands that of others If the Federal Constitution intends that when qualified voters elect members of Congress each vote be given as much weight as any other vote, then this statute cannot stand

We hold that, construed in its historical context, the command of Art I, § 2, that Representatives be chosen "by the People of the several States" [9] means that as nearly as is practicable one man's vote in a congressional election is to be worth as much as another's [10] This rule is followed automatically, of course, when Representatives are chosen as a group on a statewide basis, as was a widespread practice in the first 50 years of our Nation's history [11] It would be extraordinary to suggest that in such statewide elections the votes of inhabitants of some parts of a State, for example, Georgia's thinly populated Ninth District, could be weighted at two or three times the value of the votes of people living in more populous parts of the State, for example, the Fifth District around Atlanta Cf Gray v Sanders, 372 US 368, 9 L ed 2d 821, 83 S Ct 801 We do not believe that the Framers of the Constitution intended to permit the same vote-diluting discrimination to be accomplished through the device of districts containing widely varied numbers of inhabitants. To say that a vote is worth more in one district than in another would not only run counter to our fundamental ideas of democratic government, it would cast aside the principle of a House of Representatives elected "by the People," a principle tenaciously fought for and established at the Constitutional Convention The history of the Constitution, particularly that part of it relating to the adoption of Art I, § 2, reveals that those who framed the Constitution meant that, no matter what the mechanics of an election, whether statewide or by districts, it was population which was to be the basis of the House of Representatives

During the Revolutionary War the rebelling colonies were loosely allied in the Continental Congress, a body with authority to do little more than pass resolutions and issue requests for men and supplies. Before the war ended the Congress had proposed and secured the ratification by the States of a somewhat closer association under the Articles of Confederation. Though the Articles established a central government for the United States, as the former colonies were even then called, the States retained most of their sovereignty, like inde-

[9] "The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature

"Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed three fifths of all other Persons The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, in such Manner as they shall by Law direct The Number of Representatives shall not exceed one for every thirty Thousand, but each State shall have at Least one Representative " US Const, Art 1 § 2

The provisions for apportioning Representatives and direct taxes have been amended by the Fourteenth and Sixteenth Amendments, respectively

[10] We do not reach the arguments that the Georgia statute violates the Due Process, Equal Protection, and Privileges and Immunities Clauses of the Fourteenth Amendment

[11] As late as 1842, seven States still conducted congressional elections at large See Paschal, "The House of Representatives 'Grand Depository of the Democratic Principle'?" 17 Law & Contemprt Prob 276, 281 (1952)

pendent nations bound together only by treaties There were no separate judicial or executive branches: only a Congress consisting of a single house. Like the members of an ancient Greek league, each State, without regard to size or population, was given only one vote in that house. It soon became clear that the Confederation was without adequate power to collect needed revenues or to enforce the rules its Congress adopted. Far sighted men felt that a closer union was necessary if the States were to be saved from foreign and domestic dangers

The result was the Constitutional Convention of 1787, called for "the sole and express purpose of revising the Articles of Confederation "[12] When the Convention met in May, this modest purpose was soon abandoned for the greater challenge of creating a new and closer form of government than was possible under the Confederation Soon after the Convention assembled, Edmund Randolph of Virginia presented a plan not merely to amend the Articles of Confederation but to create an entirely new National Government with a National Executive, National Judiciary, and a National Legislature of two Houses, one house to be elected by "the people," the second house to be elected by the first.[13]

The question of how the legislature should be constituted precipitated the most bitter controversy of the Convention. One principle was uppermost in the minds of many delegates that, no matter where he lived, each voter should have a voice equal to that of every other in electing members of Congress. In support of this principle, George Mason of Virginia "argued strongly for an election of the larger branch by the people It was to be the grand depository of the democratic principle of the Govt." [14]

James Madison agreed, saying "If the power is not immediately derived from the people, in proportion to their numbers, we may make a paper confederacy, but that will be all "[15] Repeatedly, delegates rose to make the same point. that it would be unfair, unjust, and contrary to common sense to give a small number of people as many Senators or Representatives as were allowed to much larger groups[16] —in short, as James Wilson of Pennsylvania put it, "equal numbers of people ought to have an equal no of representatives . . ." and representatives "of different districts ought clearly to hold the same proportion to each other, as their respective constituents hold to each other "[17]

Some delegates opposed election by the people The sharpest objection arose out of the fear on the part of small States like Delaware

[12] 3 The Records of the Federal Convention of 1787 (Farrand ed 1911) 14 (hereafter cited as "Farrand")

James Madison, who took careful and complete notes during the Convention, believed that in interpreting the Constitution later generations should consider the history of its adoption

"Such were the defects, the deformities, the diseases and the ominous prospects, for which the Convention were to provide a remedy, and which ought never to be overlooked in expounding & appreciating the Constitutional Charter the remedy that was provided" Id, at 549

that if population were to be the only basis of representation the populous States like Virginia would elect a large enough number of representatives to wield overwhelming power in the National Government.[18] Arguing that the Convention had no authority to depart from the plan of the Articles of Confederation which gave each State an equal vote in the National Congress, William Paterson of New Jersey said, "If the sovereignty of the States is to be maintained, the Representatives must be drawn immediately from the States, not from the people; and we have no power to vary the idea of equal sovereignty "[19] To this end he proposed a single legislative chamber in which each State, as in the Confederation, was to have an equal vote.[20] A number of delegates supported this plan[21]

The delegates who wanted every man's vote to count alike were sharp in their criticism of giving each State, regardless of population, the same voice in the National Legislature. Madison entreated the Convention "to renounce a principle wch was confessedly unjust,"[22] and Rufus King of Massachusetts "was prepared for every event, rather than sit down under a Govt founded in a vicious principle of representation and which must be as shortlived as it would be unjust "[23]

The dispute came near ending the Convention without a Constitution Both sides seemed for a time to be hopelessly obstinate Some delegations threatened to withdraw from the Convention if they did not get their way[24] Seeing the controversy growing sharper and emotions rising, the wise and highly respected Benjamin Franklin arose and pleaded with the delegates on both sides to "part with some of their demands, in order that they may join in some accomodating proposition "[25] At last those who supported representation of the people in both houses and those who supported it in neither were brought together, some expressing the fear that if they did not reconcile their differences, "some foreign sword will probably do the work for us "[26] The deadlock was finally broken when a majority of the States agreed to what has been called the Great Compromise.[27] based on a proposal which had been repeatedly advanced by Roger Sherman and other delegates from Connecticut[28] It provided on the one hand that each State, including little Delaware and Rhode Island, was to have two Senators. As a further guarantee that these Senators would be considered state emissaries, they were to be elected by the state legislatures, Art I, § 3, and

[18] Luther Martin of Maryland declared "that the States being equal cannot treat or confederate so as to give up an equality of votes without giving up their liberty that the propositions on the table were a system of slavery for 10 States that as Va Masts & Pa have 42/90 of the votes they can do as they please without a miraculous Union of the other ten that they will have nothing to do, but to gain over one of the ten to make them compleat masters of the rest ." it was specially provided in Article V that no State should ever be deprived of its equal representation in the Senate The other side of the compromise was that, as provided in Art I, § 2, members of the House of Representatives should be chosen "by the People of the several States" and should be "apportioned among the several States . . according to their respective Numbers" While those who wanted both houses to represent the people had yielded on the Senate, they had not yielded on the House of Representatives William Samuel Johnson of Connecticut had summed it up well· "in *one* branch the *people*, ought to be represented; in the *other*, the *States*" [29]

The debates at the Convention make at least one fact abundantly clear: that when the delegates agreed that the House should represent "people" they intended that in allocating Congressmen the number assigned to each State should be determined solely by the number of the State's inhabitants.[30] The Constitution embodied Edmund Randolph's proposal for a periodic census to ensure "fair representation of the people," [31] an idea endorsed by Mason as assuring that "numbers of inhabitants" should always be the measure of representation in the House of Representatives [32] The Convention also overwhelmingly agreed to a resolution offered by Randolph to base future apportionment squarely on numbers and to delete any reference to wealth [33] And the delegates defeated a motion made by Elbridge Gerry to limit the number of Representatives from newer Western States so that it would never exceed the number from the original States.[34]

It would defeat the principle solemnly embodied in the Great Compromise—equal representation in the House for equal numbers of people—for us to hold that, within the States, legislatures may draw the lines of congressional districts in such a way as to give some voters a greater voice in choosing a Congressman than others The House of Representatives, the Convention agreed, was to represent the people as individuals, and on a basis of complete equality for each voter The delegates were quite aware of what Madison called the "vicious representation" in Great Britain [35] whereby "rotton boroughs" with few inhabitants were represented in Parliament on or almost on a par with cities of greater population Wilson urged that people must be represented as individuals, so that America would escape the evils of the English system under which one man could send two members to Parliament to represent the borough of Old Sarum while London's million

people sent but four [36] The delegates referred to rotton borough apportionments in some of the state legislatures as the kind of objectionable governmental action that the Constitution should not tolerate in the election of congressional representatives [37]

Madison in The Federalist described the system of division of States into congressional districts, the method which he and others [38] assumed States probably would adopt "The city of Philadelphia is supposed to contain between fifty and sixty thousand souls It will therefore form nearly two districts for the choice of Federal Representatives" [39] "[N]umbers," he said, not only are a suitable way to represent wealth but in any event "are the only proper scale of representation" [40] In the state convention, speakers urging ratification of the Constitution emphasized the theme of equal representation in the House which had permeated the debates in Philadelphia [41] Charles Cotesworth Pinckney told the South Carolina Convention, "the House of Representatives will be elected immediately by the people, and represent them and their personal rights individually" [42] Speakers at the ratifying conventions emphasized that the House of Representatives was meant to be free of the malapportionment then existing in some of the state legislatures—such as those of Connecticut, Rhode Island, and South Carolina—and argued that the power given Congress in Art I, § 4,[43] was meant to be used to vindicate the people's right to equality of representation in the House [44] Congress' power, said John Steele at the North Carolina convention, was not to be used to allow Congress to create rotten boroughs; in answer to another delegate's suggestion that Congress might use its power to favor people living near the seacoast, Steele said that Congress "most probably" would "lay the state off into districts," and if it made laws "inconsistent with the Constitution, independent judges will not uphold them, nor will the people obey them." [45]

Soon after the Constitution was adopted, James Wilson of Pennsylvania, by then an Associate Justice of this Court, gave a series of lectures at Philadelphia in which, drawing on his experience as one of the most active members of the Constitutional Convention, he said

[36] Id, at 457 "Rotten boroughs" have long since disappeared in Great Britain Today permanent parliamentary Boundary Commissions recommend periodic changes in the size of constituencies, as population shifts For the statutory standards under which these commissions operate, see House of Commons (Redistribution of Seats) Acts of 1949, 12 & 13 Geo 6, c 66, Second Schedule, and of 1958, 6 & 7 Eliz 2, c 26, Schedule

[45] 4 id, at 71

"[A]ll elections ought to be equal Elections are equal, when a given number of citizens, in one part of the state, choose as many representatives, as are chosen by the same number of citizens, in any other part of the state In this manner, the proportion of the representatives and of the constituents will remain invariably the same." [46]

It is in the light of such history that we must construe Art I, § 2, of the Constitution, which, carrying out the ideas of Madison and those of like views, provides that Representatives shall be chosen "by the People of the several States" and shall be "apportioned among the several States according to their respective Numbers " It is not surprising that our Court has held that this Article gives persons qualified to vote a constitutional right to vote and to have their votes counted United States v Mosley, 238 US 383, 59 L ed 1355, 35 S Ct 904; Ex parte Yarbrough, 110 US 651, 28 L ed 274, 4 S Ct 152 Not only can this right to vote not be denied outright, it cannot, consistently with Article I, be destroyed by alteration of ballots, see United States v Classic, 313 US 299, 85 L ed 1368, 61 S Ct 1031, or diluted by stuffing of the ballot box, see United States v Saylor, 322 US 385, 88 L ed 1341, 64 S Ct 1101 No right is more precious in a free country than that of having a voice in the election of those who make the laws under which, as good citizens, we must live Other rights, even the most basic, are illusory if the right to vote is undermined Our Constitution leaves no room for classification of people in a way that unnecessarily abridges this right In urging the people to adopt the Constitution, Madison said in No 57 of The Federalist.

"Who are to be the electors of the Fœderal Representatives? Not the rich more than the poor; not the learned more than the ignorant, not the haughty heirs of distinguished names more than the humble sons of obscure and unpropitious fortune The electors are to be the great body of the people of the United States " [47]

Readers surely could have fairly taken this to mean, "one person, one vote." Cf Gray v Sanders, 372 US 368, 381, 9 L ed 821, 831, 83 S Ct 801

While it may not be possible to draw congressional districts with mathematical precision, that is no excuse for ignoring our Constitution's plain objective of making equal representation for equal numbers of people the fundamental goal for the House of Representatives That is the high standard of justice and common sense which the Founders set for us

Reversed and remanded.

SEPARATE OPINION

Mr Justice Clark, concurring in part and dissenting in part

Unfortunately I can join neither the opinion of the Court nor the dissent of my Brother Harlan It is true that the opening sentence of Art I, § 2, of the Constitution provides that Representatives are to be chosen by the People of the several States " However, in my view, Brother Harlan has clearly demonstrated that both the historical background and language preclude a finding that Art I, § 2, lays down the ipse dixit "one person, one vote" in congressional elections.

[46] 2 The Works of James Wilson (Andrews ed 1896) 15.
[47] The Federalist, No. 57 (Cooke ed 1961), at 385.

On the other hand, I agree with the majority that congressional districting is subject to judicial scrutiny This Court has so held ever since Smiley v Holm, 285 US 355, 76 L ed 795, 52 S Ct 397 (1932), which is buttressed by two companion cases, Koenig v Flynn, 285 US 375, 76 L ed 805 52 S Ct 403 (1932), and Carroll v Becker, 285 US 380, 76 L ed 807, 52 S Ct 402 (1932) A majority of the Court in Colegrove v Green felt, upon the authority of Smiley, that the complaint presented a justiciable controversy not reserved exclusively to Congress Colegrove v Green, 328 US 549, 564, and 568 note 3, 90 L ed 1432, 1442, 1444, 66 S Ct 1198 (1946) Again, in Baker v Carr, 369 US 186, 232, 7 L ed 663, 694, 82 S Ct 691 (1962), the opinion of the Court recognized that Smiley "settled the issue in favor of justiciability of questions of congressional redistricting" I therefore cannot agree with Brother Harlan that the supervisory power granted to Congress under Art I, §4, is the exclusive remedy

I would examine the Georgia congressional districts against the requirements of the Equal Protection Clause of the Fourteenth Amendment As my Brother Black said in his dissent in Colegrove v Green, supra, the "equal protection clause of the Fourteenth Amendment forbids discrimination It does not permit the States to pick out certain qualified citizens or groups of citizens and deny them the right to vote at all No one would deny that the equal protection clause would also prohibit a law that would expressly give certain citizens a half-vote and others a full vote Such discriminatory legislation seems to me exactly the kind that the equal protection clause was intended to prohibit" 328 US at 569, 90 L ed at 1445

The trial court, however, did not pass upon the merits of the case, although it does appear that it did make a finding that the Fifth District of Georgia was "grossly out of balance" with other congressional districts of the State. Instead of proceeding on the merits, the court dismissed the case for lack of equity I believe that the court erred in so doing In my view we should therefore vacate this judgment and remand the case for a hearing on the merits At that hearing the court should apply the standards laid down in Baker v Carr, supra.

I would have an additional caveat The General Assembly of the Georgia Legislature has been recently reapportioned [1] as a result of the order of the three-judge District Court in Toombs v Fortson, 205 F Supp 248 (1962) In addition, the Assembly has created a Joint Congressional Redistricting Study Committee which has been working on the problem of congressional redistricting for several months The General Assembly is currently in session If on remand the trial court is of the opinion that there is likelihood of the General Assembly reapportioning the State in an appropriate manner, I believe that coercive relief should be deferred until after the General Assembly has had such an opportunity

Mr. Justice Harlan, dissenting.

I had not expected to witness the day when the Supreme Court of the United States would render a decision which cast grave doubt on the constitutionality of the composition of the House of Representatives

[1] Georgia Laws, Sept -Oct 1962, Extra Sess 7–31

It is not an exaggeration to say that such is the effect of today's decision. The Court's holding that the Constitution requires States to select Representatives either by elections at large or by elections in districts composed "as nearly as is practicable" of equal population places in jeopardy the seats of almost all the members of the present House of Representatives

In the last congressional election, in 1962, Representatives from 42 States were elected from congressional districts [1] In all but five of those States, the difference between the populations of the largest and smallest districts exceeded 100,000 persons [2] A difference of this magnitude in the size of districts the average population of which in each State is less than 500,000 [3] is presumably not equality among districts "as nearly as is practicable," although the Court does not reveal its definition of that phrase [4] Thus, today's decision impugns the validity of the election of 398 Representatives from 37 States, leaving a "constitutional" House of 37 members now sitting [5]

Only a demonstration which could not be avoided would justify this Court in rendering a decision the effect of which, inescapably as I see it, is to declare constitutionally defective the very composition of a coordinate branch of the Federal Government The Court's opinion not only fails to make such a demonstration It is unsound logically on its face and demonstrably unsound historically.

[1] Representatives were elected at large in Alabama (8), Alaska (1), Delaware (1), Hawaii (2), Nevada (1), New Mexico (2), Vermont (1), and Wyoming (1) In addition, Connecticut, Maryland, Michigan, Ohio, and Texas each elected one of their Representatives at large

[2] The five States are Iowa, Maine, New Hampshire, North Dakota, and Rhode Island Together, they elect 15 Representatives

The populations of the largest and smallest districts in each State and the difference between them is contained in an Appendix to this opinion

[3] The only State in which the average population per district is greater than 500,000 is Connecticut, where the average population per district is 507,047 (one Representative being elected at large) The difference between largest and smallest districts in Connecticut is, however, 370,613

[4] The Court's "as nearly as is practicable" formula sweeps a host of questions under the rug How great a difference between the populations of various districts within a state is tolerable? Is the standard an absolute or relative one, and if the latter to what is the difference in population to be related? Does the number of districts within the State have any relevance? Is the number of voters or the number of inhabitants controlling? Is the relevant statistic the greatest disparity between any two districts in the State or the average departure from the average population per district, or a little of both? May the State consider factors such as area or natural boundaries (rivers, mountain ranges) which are plainly relevant to the practicability of effective representation?

There is an obvious lack of criteria for answering questions such as these, which points up the impropriety of the Court's whole-hearted but heavy-footed entrance into the political arena

[5] The 37 "constitutional" Representatives are those coming from the eight States which elected their Representatives at large (plus one each elected at large in Connecticut, Maryland, Michigan, Ohio, and Texas) and those coming from States in which the difference between the populations of the largest and smallest districts was less than 100,000 See notes 1 and 2, supra Since the difference between largest and smallest districts in Iowa is 89,250, and the average population per district in Iowa is only 392,934, Iowa's 7 Representatives might well lose their seats as well This would leave a house of Representatives composed of the 22 Representatives elected at large plus eight elected in congressional districts

These conclusions presume that all the Representatives from a State in which any part of the congressional districting is found invalid would be affected Some of them, of course, would ordinarily come from districts the populations of which were about that which would result from an apportionment based solely on population But a court cannot erase only the districts which do not conform to the standard announced today, since invalidation of those districts would require that the lines of all the districts within the State be redrawn In the absence of a reapportionment, *all* the Representatives from a State found to have violated the standard would presumably have to be elected at large

I.

Before coming to grips with the reasoning that carries such extraordinary consequences, it is important to have firmly in mind the provisions of Article I of the Constitution which control this case

"Section 2 The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature

. . . . . .

"Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other Persons The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, in such Manner as they shall by Law direct The Number of Representatives shall not exceed one for every thirty Thousand, but each State shall have at Least one Representative .

"Section 4. The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof, but the Congress may at any time by Law make or alter such Regulations, except as to the Places of chusing Senators.

. . . . . .

"Section 5 Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members "

As will be shown, these constitutional provisions and their "historical context," ante, p. 486, establish·

1 that congressional Representatives are to be apportioned among the several States largely, but not entirely, according to population,

2 that the States have plenary power to select their allotted Representatives in accordance with any method of popular election they please, subject only to the supervisory power of Congress; and

3 that the supervisory power of Congress is exclusive

In short, in the absence of legislation providing for equal districts by the Georgia Legislature or by Congress, these appellants have no right to the judicial relief which they seek It goes without saying that it is beyond the province of this Court to decide whether equally populated districts is the preferable method for electing Representatives, whether state legislatures would have acted more fairly or wisely had they adopted such a method, or whether Congress has been derelict in not requiring state legislatures to follow that course Once it is clear that there is no *constitutional* right at stake, that ends the case

II.

Disclaiming all reliance on other provisions of the Constitution, in particular those of the Fourteenth Amendment on which the appellants

relied below and in this Court, the Court holds that the provision in Art I, § 2, for election of Representatives "by the People" *means* that congressional districts are to be "as nearly as is practicable" equal in population, ante, pp 486, 487 Stripped of rhetoric and a "historical context," ante, p 486, which bears little resemblance to the evidence found in the pages of history, see infra pp 499, 505, the Court's opinion supports its holding only with the bland assertion that "the principle of a House of Representatives elected 'by the People'" would be "cast aside" if "a vote is worth more in one district than in another," ante, p 487, i e, if congressional districts within a State, each electing a single Representative, are not equal in population The fact is, however, that Georgia's 10 Representatives *are* elected "by the People" of Georgia, just as Representatives from other States are elected "by the People of the several States" This is all that the Constitution requires [6]

Although the Court finds necessity for its artificial construction of Article I in the undoubted importance of the right to vote, that right is not involved in this case All of the appellants do vote The Court's talk about "debasement" and "dilution" of the vote is a model of circular reasoning, in which the premises of the argument feed on the conclusion Moreover, by focusing exclusively on numbers in disregard of the area and shape of a congressional district as well as party affiliations within the district, the Court deals in abstractions which will be recognized even by the politically unsophisticated to have little relevance to the realities of political life

In any event, the very sentence of Art I, § 2, on which the Court exclusively relies confers the right to vote for Representatives only on those whom *the State* has found qualified to vote for members of "the most numerous Branch of the State Legislature" Supra, p 495 So far as Article I is concerned, it is within the State's power to confer that right only on persons of wealth or of a particular sex or, if the State chose, living in specified areas of the State [7] Were Georgia to find the residents of the Fifth District unqualified to vote for Representatives

[6] Since I believe that the Constitution expressly provides that state legislatures and the Congress shall have exclusive jurisdiction over problems of congressional apportionment of the kind involved in this case, there is no occasion for me to consider whether, in the absence of such provision, other provisions of the Constitution, relied on by the appellants, would confer on them the rights which they assert

[7] Although it was held in Ex parte Yarbrough, 110 US 651, 28 L ed 274, 4 S Ct 152, and subsequent cases, that the right to vote for a member of Congress depends on the Constitution, the opinion noted that the legislatures of the States prescribe the qualifications for electors of the legislatures and thereby for electors of the House of Representatives 110 US, at 663, 28 L ed at 278 See ante, p 492, and infra, pp 507, 508

The States which ratified the Constitution exercised their power A property or taxpaying qualification was in effect almost everywhere See, e g, the New York Constitution of 1777, Art VII, which restricted the vote to freeholders "possessing a freehold of the value of twenty pounds, or [who] have rented a tenement of the yearly value of forty shillings, and been rated and actually paid taxes to this State" The constitutional and statutory qualifications for electors in the various States are set out in tabular form in 1 Thorpe, A Constitutional History of the American People 1776–1850 (1898), 92–96 The progressive elimination of the property qualification is described in Salt, American Parties and Elections (Penniman ed, 1952), 16–17 At the time of the Revolution, "no serious inroads had yet been made upon the privileges of property, which, indeed maintained in most states a second line of defense in the form of high personal-property qualifications required for membership in the legislature" Id, at 16 (footnote omitted)

Women were not allowed to vote Thorpe, op cit, supra, 93–96 See generally Salt, op cit, supra, 49–54 New Jersey apparently allowed women, as "inhabitants," to vote until 1807 See Thorpe, op cit, supra, 93 Compare N J Const, 1776, Art XIII, with the N J Const, 1844, Art II, ¶ 1

to the State House of Representatives, they could not vote for Representatives to Congress, according to the express words of Art I, § 2. Other provisions of the Constitution would, of course, be relevant, *but, so far as Art I, § 2, is concerned,* the disqualification would be within Georgia's power. How can it be, then, that this very same sentence prevents Georgia from apportioning its Representatives as it chooses? The truth is that it does not.

The Court purports to find support for its position in the third paragraph of Art I, § 2, which provides for the apportionment of Representatives among the States The appearance of support in that section derives from the Court's confusion of two issues: direct election of Representatives within the States and the apportionment of Representatives among the States Those issues are distinct, and were separately treated in the Constitution The fallacy of the Court's reasoning in this regard is illustrated by its slide, obscured by intervening discussion (see ante, pp 489, 490), from the intention of the delegates at the Philadelphia Convention "that in allocating Congressmen the number assigned to each State should be determined solely by the number of the State's inhabitants," ante, pp. 489, 490, to a "principle solemnly embodied in the Great Compromise—equal representation in the House for equal numbers of people," ante, p 490 The delegates did have the former intention and made clear provision for it[8] Although many, perhaps most, of them also believed generally—but assuredly not in the precise, formalistic way of the majority of the Court[9]—that within the States representation should be based on population, they did not surreptitiously slip their belief into the Constitution in the phrase "by the People," to be discovered 175 years later like a Shakespearian anagram

Far from supporting the Court, the apportionment of Representatives among the States shows how blindly the Court has marched to its decision Representatives were to be apportioned among the States on the basis of free population plus three-fifths of the slave population. *Since no slave voted, the inclusion of three-fifths of their number in the basis of apportionment gave the favored States representation far in excess of their voting population* If, then, slaves were intended to be without representation, Article I did exactly what the Court now says it prohibited · it "weighted" the vote of voters in the slave States Alternatively, it might have been thought that Representatives elected by free men of a State would speak also for the slaves But since the slaves added to the representation only of their own State, Representatives from the slave States could have been thought to speak only for the slaves of their own States, indicating both that the Convention believed it possible for a Representative elected by one group to speak for an-

[8] Even that is not strictly true unless the word "solely" is deleted The "three-fifths compromise" was a departure from the principle of representation according to the number of inhabitants of a State Cf The Federalist, No 54, discussed infra, pp 604, 605 A more obvious departure was the provision that each State shall have a Representative regardless of its population See infra, pp 498, 499

[9] The fact that the delegates were able to agree on a Senate composed entirely without regard to population and on the departures from a population-based House, mentioned in note 8, supra, indicates that they recognized the possibility that alternative principles combined with political reality might dictate conclusions inconsistent with an abstract principle of absolute numerical equality

On the apportionment of the state legislatures at the time of the Constitutional Convention, see Luce, Legislative Principles (1930), 331–364, Hacker, Congressional Districting (1963), 5

other nonvoting group and that Representatives were in large degree still thought of as speaking for the whole population *of a State*.[10]

There is a further basis for demonstrating the hollowness of the Court's assertion that Article I requires "one man's vote in a congressional election . . to be worth as much as another's, ante, pp 486, 487. Nothing that the Court does today will disturb the fact that although in 1960 the population of an average congressional district was 410,481,[11] the States of Alaska, Nevada, and Wyoming each have a Representative in Congress, although their respective populations are 226,167, 285,278, and 330,066.[12] In entire disregard of population, Art I, § 2, guarantees each of these States and every other State "at Least one Representative." It is whimsical to assert in the face of this guarantee that an absolute principle of "equal representation in the House for equal numbers of people" is solemnly embodied" in Article I. All that there is is a provision which bases representation in the House, generally but not entirely, on the population of the States. The provision for representation of *each State* in the House of Representatives is not a mere exception to the principle framed by the majority; it shows that no such principle is to be found.

Finally in this array of hurdles to its decision which the Court surmounts only by knocking them down is § 4 of Art I which states simply:

"The Times, Places and *Manner* of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof, but the Congress may at any time by Law make or alter such Regulations, except as to the Places of chusing Senators." (Emphasis added.)

The delegates were well aware of the problem of "rotten boroughs," as material cited by the Court, ante, pp. 490, 491, and hereafter makes plain. It cannot be supposed that delegates to the Convention would have labored to establish a principle of equal representation only to bury it, one would have thought beyond discovery, in § 2, and omit all mention of it from § 4, which deals explicitly with the conduct of elections. Section 4 states without qualification that the state legislatures shall prescribe regulations for the conduct of elections for Representatives and, equally without qualification, that Congress may make or alter such regulations. There is nothing to indicate any limitation whatsoever on this grant of plenary initial and supervisory power. The Court's holding is, of course, derogatory not only of the power of the state legislatures but also of the power of Congress, both theoretically

[10] It is surely beyond debate that the Constitution did not require the slave States to apportion their Representatives according to the dispersion of slaves within their borders. The above implications of the three-fifths compromise were recognized by Madison. See The Federalist, No. 54, discussed infra, pp. 504, 505.
Luce points to the "quite arbitrary grant of representation proportionate to three fifths of the number of slaves" as evidence that even in the House "the representation of men as men" was not intended. He states "There can be no shadow of question that populations were accepted as a measure of material interests—landed, agricultural, industrial, commercial, in short, property." Legislative Principles (1930), 356–357.

[11] U. S. Bureau of the Census, Census of Population: 1960 (hereafter, Census), xiv. The figure is obtained by dividing the population base (which excludes the population of the District of Columbia, the population of the Territories, and the number of Indians not taxed) by the number of Representatives. In 1960, the population base was 178,559,217, and the number of Representatives was 435.

[12] Census, 1–16.

and as they have actually exercised their power See infra, pp 505–507 [13] It freezes upon both, for no reason other than that it seems wise to the majority of the present Court, a particular political theory for the selection of Representatives

III.

There is dubious propriety in turning to the "historical context" of constitutional provisions which speak so consistently and plainly But, as one might expect when the Constitution itself is free from ambiguity, the surrounding history makes what is already clear even clearer

As the Court repeatedly emphasizes, delegates to the Philadelphia Convention frequently expressed their view that representation should be based on population There were also, however, many statements favoring limited monarchy and property qualifications for suffrage and expressions of disapproval for unrestricted democracy [14] Such expressions prove as little on one side of this case as they do on the other Whatever the dominant political philosophy at the Convention, one thing seems clear, it is in the last degree unlikely that most or even many of the delegates would have subscribed to the principle of "one person, one vote," ante, p 492 [15] Moreover, the statements approving population-based representation were focused on the problem of how representation should be apportioned among the States in the House of Representatives The Great Compromise concerned representation *of the States* in the Congress In all of the discussion surrounding the basis of representation of the House and all of the discussion whether Representatives should be elected by the legislatures or the people of the States, there is nothing which suggests even remotely that the delegates had in mind the problem of districting within a State [16]

The subject of districting within the States is discussed explicitly with reference to the provisions of Art I, § 4, which the Court so pointedly neglects The Court states "The delegates referred to rotten bor-

[13] Section 5 of Article I, which provides that "Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members," also points away from the Court's conclusion This provision reinforces the evident constitutional scheme of leaving to the Congress the protection of federal interests involved in the selection of members of the Congress

[14] I Farrand, Records of the Federal Convention (1911) (hereafter Farrand), 48, 86–87, 134–136, 288–289, 299, 533, 534, II Farrand 202

[15] "The assemblage at the Philadelphia Convention was by no means committed to popular government, and few of the delegates had sympathy for the habits or institutions of democracy Indeed, most of them interpreted democracy as mob rule and assumed that equality of representation would permit the spokesmen for the common man to outvote the beleagured deputies of the uncommon man" Hacker, Congressional Districting (1963), 7–8 See Luce, Legislative Principles (1930), 356–357 With respect to apportionment of the House, Luce states "Property was the basis not humanity" Id, at 357

Contrary to the Court's statement, ante, p 492, no leader of The Federalist "could have fairly taken [it] to mean" that the Constitutional Convention had adopted a principle of "one person one vote" in contravention of the qualifications for electors which the States imposed In No 54, Madison said "It is a fundamental principle of the proposed Constitution, that as the aggregate number of representatives allotted to the several States, is to be determined by a federal rule founded on the aggregate number of inhabitants, *so the right of choosing thus allotted number in each State is to be exercised by such part of the inhabitants, as the State itself may designate* In every State, a certain proportion of inhabitants are deprived of this right by the Constitution of the State, who will be included in the census by which the Federal Constitution apportions the representatives" (Cooke ed 1961) 369 (Italics added) The passage from which the Court quotes, ante, p 492, concludes with the following, overlooked by the Court "They [the electors] are to be the same who exercise the right in every State of electing the correspondent branch of the Legislature of the State" Id, at 385

[16] References to Old Sarum (ante pp 490, 491), for example, occurred during the debate on the method of apportionment of Representatives *among* the States 1 Farrand 449–450, 457

ough apportionments in some of the state legislatures as the kind of objectionable governmental action that the Constitution should not tolerate in the election of congressional representatives" Ante, pp. 490, 491 The remarks of Madison cited by the Court are as follows

"The necessity of a Genl Govt supposes that the State Legislatures will sometimes fail or refuse to consult the common interest at the expense of their local convenience or prejudices The policy of referring the appointment of the House of Representatives to the people and not to the Legislatures of the States, supposes that the result will be somewhat influenced by the mode. [sic] This view of the question seems to decide that the Legislatures of the States ought not to have the uncontrouled right of regulating the times places & manner of holding elections These were words of great latitude It was impossible to foresee all the abuses that might be made of the discretionary power Whether the electors should vote by ballot or viva voce, should assemble at this place or that place, should be divided into districts or all meet at one place, shd all vote for all the representatives; or all in a district vote for a number allotted to the district; *these & many other points would depend on the Legislatures* [sic] and might materially affect the appointments Whenever the State Legislatures had a favorite measure to carry, they would take care so to mould their regulations as to favor the candidates they wished to succeed Besides, the inequality of the Representation in the Legislatures of particular States, would produce a like inequality in their representation in the Natl Legislature, as it was presumable that the Counties having the power in the former case would secure it to themselves in the latter *What danger could there be in giving a controuling power to the Natl Legislature?*" [17] (Emphasis added)

These remarks of Madison were in response to a proposal to strike out the provision for congressional supervisory power over the regulation of elections in Art I, § 4 Supported by others at the Convention,[18] and not contradicted in any respect, they indicate as clearly as may be that the Convention understood the state legislatures to have plenary power over the conduct of elections for Representatives, including the power to district well or badly, subject only to the supervisory power of Congress How, then, can the Court hold that Art I, § 2, prevents the state legislatures from districting as they choose? If the Court were correct, Madison's remarks would have been pointless One would expect, at the very least, some reference to Art I, § 2, as a limiting factor on the States This is the "historical context" which the Convention debates provide

Materials supplementary to the debates are as unequivocal In the ratifying conventions, there was no suggestion that the provisions of Art I, § 2, restricted the power of the States to prescribe the conduct of elections conferred on them by Art I, § 4 None of the Court's references to the ratification debates supports the view that the provision for election of Representatives "by the People" was intended to have any application to the apportionment of Representatives within the States, in each instance, the cited passage merely repeats what the

[17] II Farrand 240–241
[18] Ibid

Constitution itself provides. that Representatives were to be elected by the people of the States.[19]

In sharp contrast to this unanimous silence on the issue of this case when Art I, § 2, was being discussed, there are repeated references to apportionment and related problems affecting the States' selection of Representatives in connection with Art. I, § 4. The debates in the ratifying conventions, as clearly as Madison's statement at the Philadelphia Convention, supra, pp. 500, 501, indicate that under § 4, the state legislatures, subject only to the ultimate control of Congress, could district as they chose.

At the Massachusetts convention, Judge Dana approved § 4 because it gave Congress power to prevent a state legislature from copying Great Britain, where "a borough of but two or three cottages has a right to send two representatives to *Parliament*, while Birmingham, a large and populous manufacturing town, lately sprung up, cannot send one" [20] He noted that the Rhode Island Legislature was "about adopting" a plan which would "deprive the towns of Newport and Providence of their weight" [21] Mr King noted the situation in Connecticut, where "Hartford, one of their largest towns, sends no more delegates than one of their smallest corporations," and in South Carolina. "The back parts of Carolina have increased greatly since the adoption of their constitution, and have frequently attempted an alteration of this unequal mode of representation but the members from Charleston, having the balance so much in their favor, will not consent to an alteration, and we see that the delegates from Carolina in Congress have always been chosen by the delegates of that city." [22] King stated that the power of Congress under § 4 was necessary to "control in this case"; otherwise, he said, "The representatives . . . from that state [South Carolina], will not be chosen *by the people*, but will be the representatives of a faction of that state." [23]

Mr. Parsons was as explicit.

"Mr. Parsons contended for vesting in Congress the powers contained in the 4th section [of Art. I], not only as those powers were necessary for preserving the union, but also for securing to the people their equal rights of election. . . [State legislatures] might make an unequal and partial division of the states into districts for the election of representatives, or they might even disqualify one third of the electors. Without these powers in Congress, the people can have no remedy, but the 4th section provides a remedy, a controlling power in a legislature, composed of senators and representatives of twelve states, without the influence of our commotions and factions, who will hear impartially, and preserve and restore to the people their equal and sacred rights of election Perhaps it then will be objected, that from

[19] See the materials cited in notes 41–42, 44–45 of the Court's opinion, ante, p 491 Ames' remark at the Massachusetts convention is typical "The representatives are to represent the people" II Elliot's Debates on the Federal Constitution (2d ed 1836) (hereafter Elliot's Debates). 11 In the South Carolina Convention, Pinckney stated that the House would "be so chosen as to represent in due proportion the people of the Union " IV Elliot's Debates 257 But he had in mind only that other clear provision of the Constitution that representation would be apportioned *among* the States according to population None of his remarks bears on apportionment *within* the States Id, at 256–257

[20] II Elliot's Debates 49.

[21] Ibid

[22] Id, at 50–51

[23] Id, at 51

the supposed opposition of interests in the federal legislature, they may never agree upon any regulations; but regulations necessary for the interests of the people can never be opposed to the interests of either of the branches of the federal legislature; because that the interests of the people require that the mutual powers of that legislature should be preserved unimpaired, in order to balance the government Indeed, if the Congress could never agree on any regulations, then certainly no objection to the 4th section can remain; for *the regulations introduced by the state legislatures will be the governing rule of elections, until Congress can agree upon alterations* "[24] (Emphasis added)

In the New York convention, during the discussion of § 4, Mr. Jones objected to congressional power to regulate elections because such power "might be so construed as to deprive the states of an essential right, which, in the true design of the Constitution, was to be reserved to them "[25] He proposed a resolution explaining that Congress had such power only if a state legislature neglected or refused or was unable to regulate elections itself[26] Mr. Smith proposed to add to the resolution ". . . that each state shall be divided into as many districts as the representatives it is entitled to, and that each representative shall be chosen by a majority of votes "[27] He stated that his proposal was designed to prevent elections at large, which might result in all the representatives being "taken from a small part of the state "[28] He explained further that his proposal was not intended to impose a requirement on the other States but "to enable the states to act their discretion, without the control of Congress "[29] After further discussion of districting, the proposed resolution was modified to read as follows.

"[Resolved] . . that nothing in this Constitution shall be construed to prevent the legislature of any state to pass laws, from time to time, to divide such state into as many convenient districts as the state shall be entitled to elect representatives for Congress, nor to prevent such legislature from making provision, that the electors in each district shall choose a citizen of the United States, who shall have been an inhabitant of the district, for the term of one year immediately preceding the time of his election, for one of the representatives of such state "[30]

Despite this careful, advertent attention to the problem of congressional districting, Art I, § 2, was never mentioned Equally significant is the fact that the proposed resolution expressly empowering the States to establish congressional districts contains no mention of a requirement that the districts be equal in population

In the Virginia convention, during the discussion of § 4, Madison again stated unequivocally that he looked solely to that section to prevent unequal districting:

". . . [I]t was thought that the regulation of time, place, and manner, of electing the representatives, should be uniform throughout the continent. Some states might regulate the elections on the principles of equality, and others might regulate them otherwise. This diversity

would be obviously unjust Elections are regulated now unequally in some states, particularly South Caroina, with respect to Charleston, which is represented by thirty members Should the people of any state by any means be deprived the right of suffrage, it was judged proper that it should be remedied by the general government. *It was found impossible to fix the time, place, and manner, of the election of representatives, in the Constitution It was found necessary to leave the regulation of these, in the first place, to the state governments, as being best acquainted with the situation of the people, subject to the control of the general government, in order to enable it to produce uniformity, and prevent its own dissolution* And, considering the state governments and general government as distinct bodies, acting in different and independent capacities for the people, it was thought the particular regulations should be submitted to the former, and the general regulations to the latter Were they exclusively under the control of the state governments, the general government might easily be dissolved But if they be regulated properly by the state legislatures, the congressional control will very probably never be exercised The power appears to me satisfactory, and as unlikely to be abused as any part of the Constitution "[31] (Emphasis added)

Despite the apparent fear that § 4 would be abused, no one suggested that it could safely be deleted because § 2 made it unnecessary

In the North Carolina convention, again during discussion of § 4, Mr Steele pointed out that the state legislatures had the initial power to regulate elections, and that the North Carolina legislature would regulate the first election at least "as they think proper "[32] Responding to the suggestion that *the Congress* would favor the seacoast, he asserted that the courts would not uphold nor the people obey "laws inconsistent with the Constitution "[33] (The particular possibilities that Steele had in mind were apparently that Congress might attempt to prescribe the qualifications for electors or "to make the place of elections inconvenient "[34]) Steele was concerned with the danger of *congressional* usurpation under the authority of § 4, of power *belonging to the States* Section 2 was not mentioned

In the Pennsylvania convention, James Wilson described Art I, § 4, as placing "into the hands of the state legislatures" the power to regulate elections, but retaining for Congress "self-preserving power" to make regulations lest "the general government lie prostrate at the mercy of the legislatures of the several states "[35] Without such power, Wilson stated, the state governments might "make improper regulations" or "make no regulations at all "[36] Section 2 was not mentioned.

Neither of the numbers of the Federalist from which the Court quotes, ante, pp 491, 492, fairly supports its holding In No 57, Madison merely stated his assumption that Philadelphia's population would entitle it to two Representatives in answering the argument that congressional constituencies would be too large for good government[37] In No 54, he discussed the inclusion of slaves in the basis of apportion-

[31] III Elliot's Debates 367

[33] Ibid
[34] Ibid
[35] II Elliot's Debates 440–441
[36] Id , at 441
[37] The Federalist, No 57 (Cooke ed 1961), 389

ment He said "It is agreed on all sides, that numbers are the best scale of wealth and taxation, as they are the only proper scale of representation "[38] This statement was offered simply to show that the slave population could not reasonably be included in the basis of apportionment of direct taxes and excluded from the basis of apportionment of representation Further on in the same number of The Federalist, Madison pointed out the fundamental cleavage which Article I made between apportionment of Representatives among the States and the selection of Representatives within each State

"It is a fundamental principle of the proposed Constitution, that as the aggregate number of representatives allotted to the several States is to be determined by a federal rule founded on the aggregate number of inhabitants, so the right of choosing this allotted number in each State is to be exercised by such part of the inhabitants, as the State itself may designate The qualifications on which the right of suffrage depend, are not perhaps the same in any two States In some of the States the difference is very material In every State, a certain proportion of inhabitants are deprived of this right by the Constitution of the State, who will be included in the census by which the Federal Constitution apportions the representatives In this point of view, the southern States might retort the complaint, by insisting, that the principle laid down by the Convention required that no regard should be had to the policy of particular States towards their own inhabitants, and consequently, that the slaves as inhabitants should have been admitted into the census according to their full number, in like manner with other inhabitants, who by the policy of other States, are not admitted to all the rights of citizens "[39]

In The Federalist, No 59, Hamilton discussed the provision of § 4 for regulation of elections He justified Congress' power with the "plain proposition, that *every government ought to contain in itself the means of its own preservation* "[40] Further on, he said

"It will not be alleged that an election law could have been framed and inserted into the Constitution, which would have been always applicable to every probable change in the situation of the country, and it will therefore not be denied that a discretionary power over elections ought to exist somewhere *It will, I presume, be as readily conceded, that there were only three ways, in which this power could have been reasonably modified and disposed, that it must either have been lodged wholly in the National Legislature, or wholly in the State Legislatures, or primarily in the latter, and ultimately in the former The last mode has with reason been preferred by the Convention* They have submitted the regulation of elections for the Federal Government in the first instance to the local administrations, which in ordinary cases, and when no improper views prevail, may be both more convenient and more satisfactory, but they have reserved to the national authority a right to interpose, *whenever extraordinary circumstances might render that interposition necessary to its safety* "[41] (Emphasis added)

Thus, in the number of The Federalist which does discuss the regulation of elections, the view is unequivocally stated that the state legis-

[38] Id, at 368.
[39] Id, at 369
[40] Id, at 398
[41] Id, at 398–399

latures have plenary power over the conduct of congressional elections subject only to such regulations as Congress itself might provide.

The upshot of all this is that the language of Art. I, §§ 2 and 4, the surrounding text, and the relevant history are all in strong and consistent direct contradiction of the Court's holding. The constitutional scheme vests in the States plenary power to regulate the conduct of elections for Representatives, and, in order to protect the Federal Government, provides for congressional supervision of the States' exercise of their power. Within this scheme, the appellants do not have the right which they assert, in the absence of provision for equal districts by the Georgia Legislature or the Congress. The constitutional right which the Court creates is manufactured out of whole cloth

IV.

The unstated premise of the Court's conclusion quite obviously is that the Congress has not dealt, and the Court believes it will not deal, with the problem of congressional apportionment in accordance with what the Court believes to be sound political principles Laying aside for the moment the validity of such a consideration as a factor in constitutional interpretation, it becomes relevant to examine the history of congressional action under Art I, § 4 This history reveals that the Court is not simply undertaking to exercise a power which the Constitution reserves to the Congress, it is also overruling congressional judgment

Congress exercised its power to regulate elections for the House of Representatives for the first time in 1842, when it provided that Representatives from States "entitled to more than one Representative" should be elected by districts of contiguous territory, "no one district electing more than one Representative "[42] The requirement was later dropped,[43] and reinstated[44] In 1872, Congress required that Representatives "be elected by districts composed of contiguous territory, and containing as nearly as practicable an equal number of inhabitants, . . . no one district electing more than one Representative "[45] This provision for equal districts which the Court exactly duplicates in effect, was carried forward in each subsequent apportionment statute through 1911.[46] There was no reapportionment following the 1920 census The provision for equally populated districts was dropped in 1929,[47] and has not been revived, although the 1929 provisions for apportionment have twice been amended and, in 1941, were made generally applicable to subsequent censuses and apportionments.[48]

The legislative history of the 1929 Act is carefully reviewed in Wood v Broom, 287 US 1, 77 L ed 131, 53 S Ct 1 As there stated

"It was manifestly the intention of the Congress not to re-enact the provision as to compactness, contiguity, and equality in population with respect to the districts to be created pursuant to the reapportionment under the Act of 1929.

[42] Act of June 25, 1842, § 2, 5 Stat 491
[43] Act of May 23, 1850, 9 Stat 428
[44] Act of July 14, 1862, 12 Stat 572
[45] Act of Feb 2, 1872, § 2, 17 Stat 28
[46] Act of Feb 25, 1882, § 3, 22 Stat 5, 6, Act of Feb 7, 1891, § 3, 26 Stat 735, Act of Jan 16, 1901, § 3, 31 Stat 733, 734, Act of Aug. 8, 1911, § 3, 37 Stat 13, 14
[47] Act of June 18, 1929, 46 Stat 21
[48] Act of Apr 25, 1940, 54 Stat 162, Act of Nov 15, 1941, 55 Stat 761

"This appears from the terms of the act, and its legislative history shows that the omission was deliberate The question was up, and considered " 287 US, at 7, 77 L ed at 134

Although there is little discussion of the reasons for omitting the requirement of equally populated districts, the fact that such a provision was included in the bill as it was presented to the House,[49] and was deleted by the House after debate and notice of intention to do so,[50] leaves no doubt that the omission was deliberate The likely explanation for the omission is suggested by a remark on the floor of the House that "the States ought to have their own way of making up their apportionment when they know the number of Congressmen they are going to have " [51]

Debates over apportionment in subsequent Congresses are generally unhelpful to explain the continued rejection of such a requirement; there are some intimations that the feeling that districting was a matter exclusively for the States persisted [52] Bills which would have imposed on the States a requirement of equally or nearly equally populated districts were regularly introduced in the House.[53] None of them became law

For a period of about 50 years, therefore, Congress, by repeated legislative act, imposed on the States the requirement that congressional districts be equal in population (This, of course, is the very requirement which the Court now declares to have been constitutionally required of the States all along without implementing legislation) Subsequently, after giving express attention to the problem, Congress eliminated that requirement, with the intention of permitting the States to find their own solutions. Since then, despite repeated efforts to obtain congressional action again, Congress has continued to leave the problem and its solution to the States It cannot be contended, therefore, that the Court's decision today fills a gap left by the Congress On the contrary, the Court substitutes its own judgment for that of the Congress

Typical of recent proposed legislation is HR 841, 87th Cong, 1st Sess, which amends 2 USC § 2a to provide

"(c) Each State entitled to more than one Representative in Congress under the apportionment provided in subsection (a) of this section, shall establish for each Representative a district composed of contiguous and compact territory, and the number of inhabitants contained within any district so established shall not vary more than 10 per centum from the number obtained by dividing the total population of such States, as established in the last decennial census, by the number of Representatives apportioned to such State under the provisions of subsection (a) of this section

"(d) Any Representative elected to the Congress from a district which does not conform to the requirements set forth in subsection (c) of this section shall be denied his seat in the House of Representatives and the Clerk of the House shall refuse his credentials"

Similar bills introduced in the current Congress are HR 1128, HR 2836, HR 4340, and HR 7343, 88th Cong, 1st Sess.

V.

The extent to which the Court departs from accepted principles of adjudication is further evidenced by the irrelevance to today's issue of the cases on which the Court relies.

Ex parte Yarbrough, 110 US 651, 28 L ed 274, 4 S Ct 152, was a habeas corpus proceeding, in which the Court sustained the validity of a conviction of a group of persons charged with violating federal statutes [54] which made it a crime to conspire to deprive a citizen of his federal rights, and in particular the *right to vote*. The issue before the Court was whether or not the Congress had power to pass laws protecting "the right to vote for a member of Congress from fraud and violence, the Court relied expressly on Art. I, § 4, in sustaining this power. Id., 110 US at 660, 28 L ed at 277. Only in this context, in order to establish that the right to vote in a congressional election was a right protected by federal law, did the Court hold that the right was dependent on the Constitution and not on the law of the States. Indeed, the Court recognized that the Constitution "adopts the qualification" furnished by the States "as the qualification of its own electors for members of Congress." Id., 110 US at 663, 28 L ed at 278. Each of the other three cases cited by the Court, ante, p. 492, similarly involved acts which were prosecuted as violations of federal statutes. The acts in question were filing false election returns, United States v. Mosley, 238 US 383, 59 L ed 1355, 35 S Ct 904, alteration of ballots and false certification of votes, United States v. Classic, 313 US 299, 85 L ed 1368, 61 S Ct 1031, and stuffing the ballot box, United States v. Saylor, 322 US 385, 88 L ed 1341, 64 S Ct 1101. None of those cases has the slightest bearing on the present situation.[55]

The Court gives scant attention, and that not on the merits, to Colegrove v. Green, 328 US 549, 90 L ed 1432, 66 S Ct 1198, which is directly in point; the Court there affirmed dismissal of a complaint alleging that "by reason of subsequent changes in population the Congressional districts for the election of Representatives in the Congress created by the Illinois Laws of 1901 . . . lacked compactness of territory and approximate equality of population." Id., 328 US at 550–551, 90 L ed at 1433. Leaving to another day the question of what Baker v. Carr, 369 US 186, 7 L ed 2d 663, 82 S Ct 691, did actually decide, it can hardly be maintained on the authority of Baker

[54] RS § 5508. RS § 5520.

* [370 US 467]

[55] Smiley v. Holm, 285 US 355, 76 L ed 795, 52 S Ct 397, and its two companion cases, Koenig v. Flynn, 285 US 375, 76 L ed 805, 52 S Ct 403, Carroll v. Becker, 285 US 380, 76 L ed 807, 52 S Ct 402, on which my Brother Clark relies in his separate opinion, ante, pp. 492, 493, are equally irrelevant. Smiley v. Holm presented two questions: the first, answered in the negative, was whether the provision in Art. I, § 4, which empowered the "Legislature" of a State to prescribe the regulations for congressional elections meant that a State could not by law provide for a Governor's veto over such regulations as had been prescribed by the legislature. The second question, which concerned two congressional apportionment measures, was whether the Act of June 18, 1929, 46 Stat. 21, had repealed certain provisions of the Act of Aug. 8, 1911, 37 Stat. 13. In answering this question, the Court was concerned to *carry out the intention of Congress in enacting the 1929 Act*. See id., 285 US at 374, 76 L ed at 804. Quite obviously, therefore, Smiley v. Holm does *not* stand for the proposition which my Brother Clark derives from it. There was not the slightest intimation in that case that Congress' power to prescribe regulations for elections was subject to judicial scrutiny, ante, p. 493, such that this Court could itself prescribe regulations for congressional elections in disregard and even in contradiction of congressional purpose. The companion cases to Smiley v. Holm presented no different issues and were decided wholly on the basis of the decision in that case.

or anything else, that the Court does not today invalidate Mr Justice Frankfurter's eminently correct statement in Colegrove that "the Constitution has conferred upon Congress exclusive authority to secure fair representation by the States in the popular House If Congress failed in exercising its powers, whereby standards of fairness are offended, the remedy ultimately lies with the people." 328 US, at 554, 90 L ed at 1435 The problem was described by Mr Justice Frankfurter as "an aspect of government from which the judiciary, in view of what is involved, has been excluded by the clear intention of the Constitution. . " Ibid Mr Justice Frankfurter did not, of course, speak for a majority of the Court in Colegrove; but refusal for that reason to give the opinion precedential effect does not justify refusal to give appropriate attention to the views there expressed.[56]

VI.

Today's decision has portents for our society and the Court itself which should be recognized This is not a case in which the Court vindicates the kind of individual rights that are assured by the Due Process Clause of the Fourteenth Amendment, whose "vague contours," Rochin v California, 342 US 165. 170, 96 L ed 183, 189, 72 S Ct 205, 25 ALR2d 1396, of course leave much room for constitutional developments necessitated by changing conditions in a dynamic society Nor is this a case in which an emergent set of facts requires the Court to frame new principles to protect recognized constitutional rights The claim for judicial relief in this case strikes at one of the fundamental doctrines of our system of government, the separation of powers In upholding that claim, the Court attempts to effect reforms in a field which the Constitution, as plainly as can be, has committed exclusively to the political process

This Court, no less than all other branches of the Government, is bound by the Constitution The Constitution does not confer on the Court blanket authority to step into every situation where the political branch may be thought to have fallen short The stability of this institution ultimately depends not only upon its being alert to keep the other branches of government within constitutional bounds but equally upon recognition of the limitations on the Court's own functions in the constitutional system.

What is done today saps the political process The promise of judicial intervention in matters of this sort cannot but encourage popular inertia in efforts for political reform through the political process, with the inevitable result that the process is itself weakened By yielding to the demand for a judicial remedy in this instance, the Court in my view does a disservice both to itself and to the broader values of our system of government

Believing that the complaint fails to disclose a constitutional claim, I would affirm the judgment below dismissing the complaint

[56] The Court relies in part on Baker v Carr, supra, to immunize its present decision from the force of Colegrove But nothing in Baker is contradictory to the view that, political question and other objections to "justiciability" aside, the Constitution vests exclusive authority to deal with the problem of this case in the state legislatures and the Congress

[2] 435 in all.

Mr. Justice Stewart:

I think it is established that "this Court has power to afford relief in a case of this type as against the objection that the issues are not justiciable,"[1] and I cannot subscribe to any possible implication to the contrary which may lurk in Mr Justice Harlan's dissenting opinion. With this single qualification I join the dissent because I think Mr Justice Harlan has unanswerably demonstrated that Art I, § 2, of the Constitution gives no mandate to this Court or to any court to ordain that congressional districts within each State must be equal in population.

B. A. Reynolds, etc., et al.,
Appellants,

v.

M. O. Sims et al.

[June 15, 1964.]

MR CHIEF JUSTICE WARREN delivered the opinion of the Court:

Involved in these cases are an appeal and two cross-appeals from a decision of the Federal District Court for the Middle District of Alabama holding invalid, under the Equal Protection Clause of the Federal Constitution, the existing and two legislatively proposed plans for the apportionment of seats in the two houses of the Alabama Legislature, and ordering into effect a temporary reapportionment plan comprised of parts of the proposed but judicially disapproved measures [1]

I

On August 26, 1961, the original plaintiffs (appellees in No 23), residents, taxpayers and voters of Jefferson County, Alabama, filed a complaint in the United States District Court for the Middle District of Alabama, in their own behalf and on behalf of all similarly situated Alabama voters, challenging the apportionment of the Alabama Legislature Defendants below (appellants in No 23), sued in their representative capacities, were various state and political party officials charged with the performance of certain duties in connection with state elections [2] The complaint alleged a deprivation of rights under the Alabama Constitution and under the Equal Protection Clause of the Fourteenth Amendment, and asserted that the District Court had jurisdiction under provisions of the Civil Rights Act, 42 U S C. §§ 1983, 1988, as well as under 28 U. S C § 1343 (3)

The complaint stated that the Alabama Legislature was composed of a Senate of 35 members and a House of Representatives of 106 members It set out relevant portions of the 1901 Alabama Constitution, which prescribe the number of members of the two bodies of the State Legislature and the method of apportioning the seats among the State's 67 counties, and provide as follows·

> "Art IV, Sec 50 The legislature shall consist of not more than thirty-five senators, and not more than one hundred and five members of the house of representatives, to be apportioned among the several districts and counties, as prescribed in this Constitution; provided that in addition to the above number of representatives, each new county hereafter created shall be entitled to one representative

[1] *Sims* v *Frink*, 208 F Supp 431 (D C M D Ala 1962) All decisions of the District Court in this litigation are reported *sub nom Sims* v *Frink*

[2] Included among the defendants were the Secretary of State and the Attorney General of Alabama, the Chairmen and Secretaries of the Alabama State Democratic Executive Committee and the State Republican Executive Committee, and three Judges of Probate of three counties, as representatives of all the probate judges of Alabama

"Art. IX, Sec 197 The whole number of senators shall be not less than one-fourth or more than one-third of the whole number of representatives

"Art IX, Sec 198 The house of representatives shall consist of not more than one hundred and five members, unless new counties shall be created, in which event each new county shall be entitled to one representative The members of the house of representatives shall be apportioned by the legislature among the several counties of the state, according to the number of inhabitants in them, respectively, as ascertained by the decennial census of the United States, which apportionment, when made, shall not be subject to alteration until the next session of the legislature after the next decennial census of the United States shall have been taken

"Art IX, Sec. 199 It shall be the duty of the legislature at its first session after the taking of the decennial census of the United States in the year nineteen hundred and ten, and after each subsequent decennial census, to fix by law the number of representatives and apportion them among the several counties of the state, according to the number of inhabitants in them, respectively, provided, that each county shall be entitled to at least one representative

"Art IX, Sec 200 It shall be the duty of the legislature at its first session after taking of the decennial census of the United States in the year nineteen hundred and ten, and after each subsequent decennial census, to fix by law the number of senators, and to divide the state into as many senatorial districts as there are senators, which districts shall be as nearly equal to each other in the number of inhabitants as may be, and each shall be entitled to one senator, and no more; and such districts, when formed, shall not be changed until the next apportioning session of the legislature, after the next decennial census of the United States shall have been taken; provided, that counties created after the next preceding apportioning session of the legislature may be attached to senatorial districts No county shall be divided between two districts, and no district shall be made up of two or more counties not contiguous to each other

"Art XVIII, Sec 284 Representation in the legislature shall be based upon population, and such basis of representation shall not be changed by constitutional amendments"

The maximum size of the Alabama House was increased from 105 to 106 with the creation of a new county in 1903, pursuant to the constitutional provision which states that, in addition to the prescribed 105 House seats, each county thereafter created shall be entitled to one representative Article IX, §§ 202 and 203, of the Alabama Constitution established precisely the boundaries of the State's senatorial and representative districts until the enactment of a new reapportionment plan by the legislature These 1901 constitutional provisions specifically describing the composition of the senatorial districts and detailing the number of House seats allocated to each county, were periodically enacted as statutory measures by the Alabama Legislature,

as modified only by the creation of an additional county in 1903, and provided the plan of legislative apportionment existing at the time this litigation was commenced [3]

Plaintiffs below alleged that the last apportionment of the Alabama Legislature was based on the 1900 federal census, despite the requirement of the State Constitution that the legislature be reapportioned decennially. They asserted that, since the population growth in the State from 1900 to 1960 had been uneven, Jefferson and other counties were now victims of serious discrimination with respect to the allocation of legislative representation. As a result of the failure of the legislature to reapportion itself, plaintiffs asserted, they were denied "equal suffrage in free and equal elections . . and the equal protection of the laws" in violation of the Alabama Constitution and the Fourteenth Amendment to the Federal Constitution The complaint asserted that plaintiffs had no other adequate remedy, and that they had exhausted all forms of relief other than that available through the federal courts. They alleged that the Alabama Legislature had established a pattern of prolonged inaction from 1911 to the present which "clearly demonstrates that no reapportionment shall be effected"; that representation at any future constitutional convention would be established by the legislature, making it unlikely that the membership of any such convention would be fairly representative, and that, while the Alabama Supreme Court had found that the legislature had not complied with the State Constitution in failing to reapportion according to population decennially, that court had nevertheless indicated that it would not interfere with matters of legislative reapportionment.[5]

Plaintiffs requested that a three-judge District Court be convened.[6] With respect to relief, they sought a declaration that the existing constitutional and statutory provisions, establishing the present apportionment of seats in the Alabama Legislature, were unconstitutional under the Alabama and Federal Constitutions, and an injunction against the holding of future elections for legislators until the legislature reapportioned itself in accordance with the State Constitution They further requested the issuance of a mandatory injunction, effective until such time as the legislature properly reapportioned, requiring the conducting of the 1962 election for legislators at large over the entire State, and any other relief which "may seem just, equitable and proper "

A three-judge District Court was convened, and three groups of voters, taxpayers and residents of Jefferson, Mobile, and Etowah Coun-

[3] Provisions virtually identical to those contained in Art IX, §§ 202 and 203, were enacted into the Alabama Codes of 1907 and 1923, and were most recently reenacted as statutory provisions in §§ 1 and 2 of Tit 32 of the 1940 Alabama Code (as recompiled in 1958)

[5] See *Ex Parte Rice*, 143 So 2d 848 (Ala Sup Ct 1962), where the Alabama Supreme Court, on May 9, 1962, subsequent to the District Court's preliminary order in the instant litigation as well as our decision in *Baker* v *Carr*, 369 U S 186, refused to review a denial of injunctive relief sought against the conducting of the 1962 primary election until after reapportionment of the Alabama Legislature, stating that "this matter is a legislative function, and the Court has no jurisdiction ' And in *Ward* v *Poole*, 255 Ala 441, 51 So 2d 869 (1951), the Alabama Supreme Court, in a similar suit, had stated that the lower court had properly refused to grant injunctive relief because "appellants are seeking interference by the judicial department of the state in respect to matters committed by the constitution to the legislative deparment " 255 Ala , at 442, 51 So 2d, at 870

[6] Under 28 U S C §§ 2281 and 2284

ties were permitted to intervene in the action as intervenor-plaintiffs. Two of the groups are cross-appellants in Nos 27 and 41 With minor exceptions, all of the intervenors adopted the allegations of and sought the same relief as the original plaintiffs

On March 29, 1962, just three days after this Court had decided *Baker* v. *Carr*, 369 U.S. 186, plaintiffs moved for a preliminary injunction requiring defendants to conduct at large the May 1962 Democratic primary election and the November 1962 general election for members of the Alabama Legislature The District Court set the motion for hearing in an order stating its tentative views that an injunction was not required before the May 1962 primary election to protect plaintiffs' constitutional rights, and that the Court should take no action which was not "absolutely essential" for the protection of the asserted constitutional rights, before the Alabama Legislature had had a "further reasonable but prompt opportunity to comply with its duty" under the Alabama Constitution.

On April 14, 1962, the District Court, after reiterating the views expressed in its earlier order, reset the case for hearing on July 16, noting that the importance of the case, together with the necessity for effective action within a limited period of time, required an early announcement of its views 205 F Supp 245 Relying on our decision in *Baker* v *Carr*, the Court found jurisdiction, justiciability and standing It stated that it was taking judicial notice of the facts that there had been population changes in Alabama's counties since 1901, that the present representation in the State Legislature was not on a population basis, and that the legislature had never reapportioned its membership as required by the Alabama Constitution [7] Continuing, the Court stated that if the legislature complied with the Alabama constitutional provision requiring legislative representation to be based on population there could be no objection on federal constitutional grounds to such an apportionment The Court further indicated that, if the legislature failed to act, or its actions did not meet constitutional standards, it would be under a "clear duty" to take some action on the matter prior to the November 1962 general election. The District Court stated that its "present thinking" was to follow an approach suggested by MR JUSTICE CLARK in his concurring opinion in *Baker* v *Carr* [8]—awarding seats released by the consolidation or revamping of existing districts to counties suffering "the most egregious discrimination," thereby releasing the strangle hold on the legislature sufficiently so as to permit the newly elected body to enact a constitutionally valid and permanent reapportionment plan, and allowing eventual dismissal of the case Subsequently, plaintiffs were permitted to amend their complaint by adding a further prayer for relief, which asked the District Court to reapportion the Alabama Legislature provisionally so that the rural strangle hold would be relaxed enough to permit it to reapportion itself

On July 12, 1962, an extraordinary session of the Alabama Legislature adopted two reapportionment plans to take effect for the 1966 elections. One was a proposed constitutional amendment, referred to

[7] During the over 60 years since the last substantial reapportionment in Alabama, the State's population increased from 1,828,697 to 3,244,286 Virtually all of the population gain occurred in urban counties, and many of the rural counties incurred sizable losses in population

[8] See 369 U S, at 260 (CLARK, J, concurring)

as the "67-Senator Amendment" [9] It provided for a House of Representatives consisting of 106 members, apportioned by giving one seat to each of Alabama's 67 counties and distributing the others according to population by the "equal proportions" method [10] Using this formula, the constitutional amendment specified the number of representatives allotted to each county until a new apportionment could be made on the basis of the 1970 census The Senate was to be composed of 67 members, one from each county The legislation provided that the proposed amendment should be submitted to the voters for ratification at the November 1962 general election

The other reapportionment plan was embodied in a statutory measure adopted by the legislature and signed into law by the Alabama Governor, and was referred to as the "Crawford-Webb Act." [11] It was enacted as standby legislation to take effect in 1966 if the proposed constitutional amendment should fail of passage by a majority of the State's voters, or should the federal courts refuse to accept the proposed amendment (though not rejected by the voters) as effective action in compliance with the requirements of the Fourteenth Amendment The act provided for a Senate consisting of 35 members, representing 35 senatorial districts established along county lines, and altered only a few of the former districts In apportioning the 106 seats in the Alabama House of Representatives, the statutory measure gave each county one seat, and apportioned the remaining 39 on a rough population basis, under a formula requiring increasingly more population for a county to be accorded additional seats The Crawford-Webb Act also provided that it would be effective "until the legislature is reapportioned according to law," but provided no standards for such a reapportionment Future apportionments would presumably be based on the existing provisions of the Alabama Constitution which the statute, unlike the proposed constitutional amendment, would not affect

The evidence adduced at trial before the three-judge panel consisted primarily of figures showing the population of each Alabama county and senatorial district according to the 1960 census, and the number of representatives allocated to each county under each of the three plans at issue in the litigation—the existing apportionment (under the 1901 constitutional provisions and the current statutory measures substantially reenacting the same plan), the proposed 67-Senator constitutional amendment, and the Crawford-Webb Act Under all three plans, each senatorial district would be represented by only one senator

On July 21, 1962, the District Court held that the inequality of the existing representation in the Alabama Legislature violated the Equal Protection Clause of the Fourteenth Amendment, a finding which the Court noted had been "generally conceded" by the parties to the litigation, since population growth and shifts had converted the 1901 scheme, as perpetuated some 60 years later, into an invidiously discrim-

[9] Proposed Constitutional Amendment No 1 of 1962, Alabama Senate Bill No 29, Act No 93, Acts of Alabama, Special Session, 1962, p 124 The text of the proposed amendment is set out as Appendix B to the lower court's opinion. 208 F Supp, at 443–444

[10] For a discussion of this method of apportionment, used in distributing seats in the Federal House of Representatives among the States, and other commonly used apportionment methods see Schmeckebier, The Method of Equal Proportions, 17 Law and Contemp Prob 302 (1952)

[11] Alabama Reapportionment Act of 1962, Alabama House Bill No 59, Act No 91, Acts of Alabama, Special Session, 1962, p 121 The text of the act is reproduced as Appendix C to the lower court's opinion 208 F Supp, at 445–446.

inatory plan completely lacking in rationality 208 F Supp 431 Under the existing provisions, applying 1960 census figures, only 25 1% of the State's total population resided in districts represented by a majority of the members of the Senate, and only 25 7% lived in counties which could elect a majority of the members of the House of Representatives Population-variance ratios of up to about 41-to-1 existed in the Senate, and up to about 16-to-1 in the House Bullock County, with a population of only 13,462, and Henry County, with a population of only 15,286, each were allocated two seats in the Alabama House, whereas Mobile County, with a population of 314,301, was given only three seats, and Jefferson County, with 634,864 people, had only seven representatives [12] With respect to senatorial apportionment, since the pertinent Alabama constitutional provisions had been consistently construed as prohibiting the giving of more than one Senate seat to any one county,[13] Jefferson County, with over 600,000 people, was given only one senator, as was Lowndes County, with a 1960 population of only 15,417, and Wilcox County, with only 18,739 people [14]

The Court then considered both the proposed constitutional amendment and the Crawford-Webb Act to ascertain whether the legislature had taken effective action to remedy the unconstitutional aspects of the existing apportionment. In initially summarizing the result which it had reached, the Court stated

> "This Court has reached the conclusion that neither the '67-Senator Amendment' nor the 'Crawford-Webb Act' meets the necessary constitutional requirements We find that each of the legislative acts, when considered as a whole, is so obviously discriminatory, arbitrary and irrational that it becomes unnecessary to pursue a detailed development of each of the relevant factors of the [federal constitutional] test " [15]

The Court stated that the apportionment of one senator to each county, under the proposed constitutional amendment, would "make the discrimination in the Senate even more invidious than at present " Under the 67-Senator Amendment, as pointed out by the court below, "the present control of the Senate by members representing 25 1% of the people of Alabama would be reduced to control by members representing 19 4% of the people of the State," the 34 smallest counties,

[12] A comprehensive chart showing the representation by counties in the Alabama House of Representatives under the existing apportionment provisions is set out as Appendix D to the lower court's opinion 208 F Supp, at 447–449 This chart includes the number of House seats given to each county, and the populations of the 67 Alabama counties under the 1900, 1950, and 1960 censuses

[13] Although cross-appellants in No 27 assert that the Alabama Constitution forbids the division of a county, in forming senatorial districts, only when one or both pieces will be joined with another county to form a multicounty district, this view appears to be contrary to the language of Art IX, § 200, of the Alabama Constitution and the practice under it Cross-appellants contend that counties entitled by population to two or more senators can be split into the appropriate number of districts, and argue that prior to the adoption of the 1901 provisions the Alabama Constitution so provided and there is no reason to believe that the language of the present provision was intended to effect any change However, the only apportionments under the 1901 Alabama Constitution—the 1901 provisions and the Crawford-Webb Act—gave no more than one seat to a county even though by population several counties would have been entitled to additional senatorial representation

[14] A chart showing the composition, by counties, of the 35 senatorial districts provided for under the existing apportionment, and the population of each according to the 1900, 1950, and 1960 censuses, is reproduced as Appendix E to the lower court's opinion 208 F Supp, at 450

[15] 208 F Supp, at 437

with a total population of less than that of Jefferson County, would have a majority of the senatorial seats, and senators elected by only about 14% of the State's population could prevent the submission to the electorate of any future proposals to amend the State Constitution (since a vote of two-fifths of the members of one house can defeat a proposal to amend the Alabama Constitution) Noting that the "only conceivable rationalization" of the senatorial apportionment scheme is that it was based on equal representation of political subdivisions within the State and is thus analogous to the Federal Senate, the District Court rejected the analogy on the ground that Alabama counties are merely involuntary political units of the State created by statute to aid in the administration of state government In finding the so-called federal analogy irrelevant, the District Court stated:

> "The analogy cannot survive the most superficial examination into the history of the requirement of the Federal Constitution and the diametrically opposing history of the requirement of the Alabama Constitution that representation shall be based on population Nor can it survive a comparison of the different political natures of states and counties." [16]

The Court also noted that the senatorial apportionment proposal "may not have complied with the State Constitution," since not only is it explicitly provided that the population basis of legislative representation "shall not be changed by constitutional amendments," [17] but the Alabama Supreme Court had previously indicated that that requirement could probably be altered only by constitutional convention.[18] The Court concluded, however, that the apportionment of seats in the Alabama House, under the proposed constitutional amendment, was "based upon reason, with a rational regard for known and accepted standards of apportionment" [19] Under the proposed apportionment of representatives, each of the 67 counties was given one seat and the remaining 39 were allocated on a population basis. About 43% of the State's total population would live in counties which could elect a majority in that body. And, under the provisions of the 67-Senator Amendment, while the maximum population-variance ratio was increased to about 59-to-1 in the Senate, it was significantly reduced to about 4.7-to-1 in the House of Representatives Jefferson County was given 17 House seats, an addition of 10, and Mobile County was allotted eight, an increase of five The increased representation of the urban counties was achieved primarily by limiting the State's 55 least populous counties to one House seat each, and the net effect was to

[16] *Id.*, at 438.

[17] According to the District Court, in the interval between its preliminary order and its decision on the merits, the Alabama Legislature, despite adopting this constitutional amendment proposal, "refused to inquire of the Supreme Court of the State of Alabama whether this provision in the Constitution of the State of Alabama could be changed by constitutional amendment as the '67-Senator Amendment proposes" 208 F Supp, at 437

[18] At least this is the reading of the District Court of two somewhat conflicting decisions by the Alabama Supreme Court, resulting in a "manifest uncertainty of the legality of the proposed constitutional amendment, as measured by State standards " 208 F Supp, at 438 Compare *Opinion of the Justices*, 254 Ala 133, 184, 47 So 2d 713, 714 (1950) with *Opinion of the Justices*, 263 Ala 158, 164, 81 So 2d 881, 887 (1955)

[19] See the later discussion, *infra* at —, and note 68, *infra* where we reject the lower court's apparent conclusion that the apportionment of the Alabama House, under the 67-Senator Amendment, comported with the requirements of the Equal Protection Clause

take 19 seats away from rural counties and allocate them to the more populous counties Even so, serious disparities from a population-based standard remained. Montgomery County, with 169,210 people, was given only four seats, while Coosa County, with a population of only 10,726, and Cleburne County, with only 10,911, were each allocated one representative.

Turning next to the provisions of the Crawford-Webb Act, the District Court found that its apportionment of the 106 seats in the Alabama House of Representatives, by allocating one seat to each county and distributing the remaining 39 to the more populous counties in diminishing ratio to their populations, was "totally unacceptable" [20] Under this plan, about 37% of the State's total population would reside in counties electing a majority of the members of the Alabama House, with a maximum population-variance ratio of about 5-to-1 Each representative from Jefferson and Mobile Counties would represent over 52,000 persons while representatives from eight rural counties would each represent less than 20,000 people The Court regarded the senatorial apportionment provided in the Crawford-Webb Act as "a step in the right direction, but an extremely short step," and but a "slight improvement over the present system of representation" [21] The net effect of combining a few of the less populous counties into two-county districts and splitting up several of the larger districts into smaller ones would be merely to increase the minority which would be represented by a majority of the members of the Senate from 25 1% to only 27 6% of the State's population [22] The Court pointed out that, under the Crawford-Webb Act, the vote of a person in the senatorial district consisting of Bibb and Perry Counties would be worth 20 times that of a citizen in Jefferson County, and that the vote of a citizen in the six smallest districts would be worth 15 or more times that of a Jefferson County voter The Court concluded that the Crawford-Webb Act was "totally unacceptable" as a "piece of permanent legislation" which, under the Alabama Constitution, would have remained in effect without alteration at least until after the next decennial census

Under the detailed requirements of the various constitutional provision relating to the apportionment of seats in the Alabama Senate and House of Representatives, the Court found, the membership of neither house can be apportioned solely on a population basis, despite the provision in Art XVIII, § 284, which states that "representation in the legislature shall be based upon population" In dealing with the conflicting and somewhat paradoxical requirements (under which the number of seats in the House is limited to 106 but each of the 67 coun-

[20] While no formula for the statute's apportionment of representatives is expressly stated, one can be extrapolated Counties with less than 45,000 people are given one seat, those with 45,000 to 90,000 receive two seats, counties with 90,000 to 150,000, three seats, those with 150,000 to 300,000, four seats, counties with 300,000 to 600,000, six seats, and counties with over 600,000 are given 12 seats

[21] Appendix F to the lower court's opinion sets out a chart showing the populations of the 35 senatorial districts provided for under the Crawford-Webb Act and the composition, by counties, of the various districts 208 F Supp, at 451

[22] Cross-appellants in No 27 assert that the Crawford-Webb Act was a "minimum-change measure" which merely redrew new senatorial district lines around the nominees of the May 1962 Democratic primary so as to retain the seats of 34 of the 35 nominees, and resulted, in practical effect, in the shift of only one Senate seat from an overrepresented district to another underpopulated, newly created district

ties is required to be given at least one representative, and the size of the Senate is limited to 35 but it is required to have at least one-fourth of the members of the House, although no county can be given more than one senator), the District Court stated its view that "the controlling or dominant provision of the Alabama Constitution on the subject of representation in the Legislature" is the previously referred to language of § 284. The Court stated that the detailed requirements of Art IX, §§ 197–200,

> "make it obvious that in *neither* the House nor the Senate can representation be based strictly and entirely upon population . . . The result may well be that representation according to population *to some extent* must be required in *both* Houses if invidious discrimination in the legislative systems as a whole is to be avoided Indeed, . . . it is the policy and theme of the Alabama Constitution to require representation according to population in both Houses as nearly as may be, while still complying with more detailed provisions" [23]

The District Court then directed its concern to the providing of an effective remedy It indicated that it was adopting and ordering into effect for the November 1962 election a provisional and temporary reapportionment plan composed of the provisions relating to the House of Representatives contained in the 67-Senator Amendment and the provisions of the Crawford-Webb Act relating to the Senate The Court noted, however, that "the proposed reapportionment of the Senate in the 'Crawford-Webb Act,' unacceptable as a piece of permanent legislation, may not even break the strangle hold" Stating that it was retaining jurisdiction and deferring any hearing on plaintiffs' motion for a permanent injunction "until the Legislature, as provisionally reapportioned , has an opportunity to provide for a true reapportionment of both Houses of the Alabama Legislature," the Court emphasized that its "moderate" action was designed to break the strangle hold by the smaller counties on the Alabama Legislature and would not suffice as a permanent reapportionment On July 25, 1962, the Court entered its decree in accordance with its previously stated determinations, concluding that "plaintiffs are denied equal protection by virtue of the debasement of their votes since the Legislature of the State of Alabama has failed and continues to fail to reapportion itself as required by law" It enjoined the defendant state officials from holding any future elections under any of the apportionment plans that it had found invalid, and stated that the 1962 election of Alabama legislators could validly be conducted only under the apportionment scheme specified in the Court's order

After the District Court's decision, new primary elections were held pursuant to legislation enacted in 1962 at the same special session as the proposed constitutional amendment and the Crawford-Webb Act, to be effective in the event the Court itself ordered a particular reapportionment plan into immediate effect The November 1962 general election was likewise conducted on the basis of the District Court's ordered apportionment of legislative seats, as MR JUSTICE BLACK refused to stay the District Court's order Consequently, the present Alabama Legis-

[23] 208 F Supp, at 439

lature is apportioned in accordance with the temporary plan prescribed by the District Court's decree All members of both houses of the Alabama Legislature serve four-year terms, so that the next regularly scheduled election of legislators will not be held until 1966 The 1963 regular session of the Alabama Legislature produced no legislation relating to legislative apportionment, [24] and the legislature, which meets biennially, will not hold another regular session until 1965

No effective political remedy to obtain relief against the alleged malapportionment of the Alabama Legislature appears to have been available [25] No initiative procedure exists under Alabama law Amendment of the State Constitution can be achieved only after a proposal is adopted by three-fifths of the members of both houses of the legislature and is approved by a majority of the people, [26] or as a result of a constitutional convention convened after approval by the people of a convention call initiated by a majority of both houses of the Alabama Legislature [27]

Notices of appeal to this Court from the District Court's decision were timely filed by defendants below (appellants in No 23) and by two groups of intervenor-plaintiffs (cross-appellants in Nos 27 and 41) Appellants in No 23 contend that the District Court erred in holding the existing and the two proposed plans for the apportionment of seats in the Alabama Legislature unconstitutional, and that a federal court lacks the power to affirmatively reapportion seats in a state legislature Cross-appellants in No 27 assert that the court below erred in failing to compel reapportionment of the Alabama Senate on a population basis as allegedly required by the Alabama Constitution and the Equal Protection Clause of the Federal Constitution Cross-appellants in No 41 contend that the District Court should have required and ordered into effect the apportionment of seats in both houses of the Alabama Legislature on a population basis We noted probable jurisdiction on June 10, 1963 374 U S 802

II.

Undeniably the Constitution of the United States protects the right of all qualified citizens to vote, in state as well as in federal elections. A consistent line of decisions by this Court in cases involving attempts to deny or restrict the right of suffrage has made this indelibly clear It has been repeatedly recognized that all qualified voters have a constitutionally protected right to vote, *Ex parte Yarbrough*, 110 U S 651, and to have their votes counted, *United States* v *Mosely*, 238 U S 383 In *Mosely* the Court stated that it is "as equally unquestionable that the right to have one's vote counted is as open to protection as the right to put a ballot in a box" 238 U S, at 386 The right to vote can neither be denied outright *Guinn* v *United States*, 238 U S 347,

[24] Possibly this resulted from an understandable desire on the part of the Alabama Legislature to await a final determination by this Court in the instant litigation before proceeding to enact a permanent apportionment plan

[25] However, a proposed constitutional amendment, which would have made the Alabama House of Representatives somewhat more representative of population but the Senate substantially less so was rejected by the people in a 1956 referendum, with the more populous counties accounting for the defeat

See the discussion in *Lucas* v *The Forty-Fourth General Assembly of the State of Colorado*, — U S —, — — —, decided also this date, with respect to the lack of federal constitutional significance of the presence or absence of an available political remedy

[26] Ala Const, Art XVIII, § 284

[27] Ala Const, Art XVIII, § 286

Lane v *Wilson*, 307 U S 268, nor can it be destroyed by alteration of ballots, see *United States* v *Classic*, 313 U S 299, 315, nor diluted by ballot-box stuffing, *Ex parte Siebold*, 100 U. S 371, *United States* v *Saylor*, 322 U S 385 As the Court stated in *Classic*, "Obviously included within the right to choose, secured by the Constitution, is the right of qualified voters within a State to cast their ballots and have them counted . . " 313 U. S , at 315 Racially based gerrymandering, *Gomillion* v *Lightfoot*, 364 U S 339, and the conducting of white primaries *Nixon* v *Herndon*, 273 U S 536, *Nixon* v. *Condon*, 286 U. S 73, *Smith* v. *Allwright*, 321 U. S 649, *Terry* v *Adams*. 345 U S 461, both of which result in denying to some citizens their right to vote, have been held to be constitutionally impermissible And history has seen a continuing expansion of the scope of the right of suffrage in this country.[28] The right to vote freely for the candidate of one's choice is of the essence of a democratic society, and any restrictions on that right strike at the heart of representative government And the right of suffrage can be denied by a debasement or dilution of the weight of a citizen's vote just as effectively as by wholly prohibiting the free exercise of the franchise [29]

In *Baker* v *Carr*, 369 U. S 186, we held that a claim asserted under the Equal Protection Clause challenging the constitutionality of a State's apportionment of seats in its legislature, on the ground that the right to vote of certain citizens was effectively impaired since debased and diluted in effect, presented a justiciable controversy subject to adjudication by federal courts The spate of similar cases filed and decided by lower courts since our decision in *Baker* amply shows that the problem of state legislative malapportionment is one that is perceived to exist in a large number of the States [30] In *Baker*, a suit involving an attack on the apportionment of seats in the Tennessee Legislature, we remanded to the District Court, which had dismissed the action, for consideration on the merits. We intimated no view as to the proper constitutional standards for evaluating the validity of a state legislative apportionment scheme Nor did we give any consideration to the question of appropriate remedies Rather, we simply stated.

> "Beyond noting that we have no cause at this stage to doubt the District Court will be able to fashion relief if violations of constitutional rights are found, it is improper now to consider what remedy would be most appropriate if appellants prevail at trial " [31]

---

[28] The Fifteenth, Seventeenth, Nineteenth, Twenty-third and Twenty-fourth Amendments to the Federal Constitution all involve expansions of the right of suffrage Also relevant, in this regard, is the civil rights legislation enacted by Congress in 1957 and 1960

[29] As stated by MR JUSTICE DOUGLAS in *South* v *Peters*, 339 U S 276, 279
"There is more to the right to vote than the right to mark a piece of paper and drop it in a box or the right to pull a lever in a voting booth The right to vote includes the right to have the ballot counted It also includes the right to have the vote counted at full value without dilution or discount That federally protected right suffers substantial dilution [where a] favored group has full voting strength [and] the groups not in favor have their votes discounted" (DOUGLAS J , dissenting)

[30] Litigation challenging the constitutionality of state legislative apportionment schemes had been instituted in at least 34 States prior to end of 1962—within nine months of our decision in *Baker* v *Carr* See McKay, Political Thickets and Crazy Quilts Reapportionment and Equal Protection, 61 Mich L Rev 645, 706–710 (1963), which contains an appendix summarizing reapportionment litigation through the end of 1962 See also David and Eisenberg, Devaluation of the Urban and Suburban Vote (1961), Goldberg, The Statistics of Malapportionment, 72 Yale L J 90 (1962)

[31] 369 U S , at 198

We indicated in *Baker*, however, that the Equal Protection Clause provides discoverable and manageable standards for use by lower courts in determining the constitutionality of a state legislative apportionment scheme, and we stated:

> "Nor need the appellants, in order to succeed in this action, ask the Court to enter upon policy determinations for which judicially manageable standards are lacking. Judicial standards under the Equal Protection Clause are well developed and familiar, and it has been open to courts since the enactment of the Fourteenth Amendment to determine, if on the particular facts they must, that a discrimination reflects *no* policy, but simply arbitrary and capricious action." [32]

Subsequent to *Baker*, we remanded several cases to the courts below for reconsideration in light of that decision.[33]

In *Gray* v. *Sanders*, 372 U. S. 368, we held that the Georgia county unit system, applicable in statewide primary elections, was unconstitutional since it resulted in a dilution of the weight of the votes of certain Georgia voters merely because of where they resided. After indicating that the Fifteenth and Nineteenth Amendments prohibit a State from overweighting or diluting votes on the basis of race or sex, we stated:

> "How then can one person be given twice or ten times the voting power of another person in a statewide election merely because he lives in a rural area or because he lives in the smallest rural county? Once the geographical unit for which a representative is to be chosen is designated, all who participate in the election are to have an equal vote—whatever their race, whatever their sex, whatever their occupation, whatever their income, and wherever their home may be in that geographical unit. This is required by the Equal Protection Clause of the Fourteenth Amendment. The concept of 'we the people' under the Constitution visualizes no preferred class of voters but equality among those who meet the basic qualifications. The idea that every voter is equal to every other voter in his State, when he casts his ballot in favor of one of several competing candidates, underlies many of our decisions." [34]

Continuing, we stated that "there is no indication in the Constitution that homesite or occupation affords a permissible basis for distinguishing between qualified voters within the State." And, finally, we concluded: "The conception of political equality from the Declaration of Independence, to Lincoln's Gettysburg Address, to the Fifteenth, Seventeenth and Nineteenth Amendments can mean only one thing—one person, one vote." [35]

We stated in *Gray*, however, that that case,

> "unlike *Baker* v *Carr*, . . . does not involve a question of the degree to which the Equal Protection Clause of the Fourteenth

[32] *Id.*, at 226.
[33] *Scholle* v *Hare*, 369 U. S. 429 (Michigan); *WMCA, Inc.*, v *Simon*, 370 U. S. 190 (New York).
[34] 372 U. S., at 379–380.
[35] *Id.*, at 381.

> Amendment limits the authority of a State legislature in designing the geographical districts from which representatives are chosen either for the State Legislature or for the Federal House of Representatives . . . Nor does it present the question, inherent in the bicameral form of our Federal Government, whether a State may have one house chosen without regard to population "[36]

Of course, in these cases we are faced with the problem not presented in *Gray*—that of determining the basic standards and stating the applicable guidelines for implementing our decision in *Baker* v. *Carr*

In *Wesberry* v *Sanders*, 376 U S 1, decided earlier this Term, we held that attacks on the constitutionality of congressional districting plans enacted by state legislatures do not present nonjusticiable questions and should not be dismissed generally for "want of equity." We determined that the constitutional test for the validity of congressional districting schemes was one of substantial equality of population among the various districts established by a state legislature for the election of members of the Federal House of Representatives

In that case we decided that an apportionment of congressional seats which "contracts the value of some votes and expands that of others" is unconstitutional since "the Federal Constitution intends that when qualified voters elect members of Congress each vote be given as much weight as any other vote " We concluded that the constitutional prescription for election of members of the House of Representatives "by the People," construed in its historical context, "means that as nearly as is practicable one man's vote in a congressional election is to be worth as much as another's " We further stated

> "It would defeat the principle solemnly embodied in the Great Compromise—equal representation in the House for equal numbers of people—for us to hold that, within the States, legislatures may draw the lines of congressional districts in such a way as to give some voters a greater voice in choosing a Congressman than others "[37]

We found further, in *Wesberry*, that "our Constitution's plain objective" was that "of making equal representation for equal numbers of people the fundamental goal " We concluded by stating·

> "No right is more precious in a free country than that of having a voice in the election of those who make the laws under which, as good citizens, we must live. Other rights, even the most basic, are illusory if the right to vote is undermined Our Constitution leaves no room for classification of people in a way that unnecessarily abridges this right."[38]

Gray and *Wesberry* are of course not dispositive of or directly controlling on our decision in these cases involving state legislative apportionment controversies Admittedly, those decisions, in which we held that, in statewide and in congressional elections, one person's vote must

---

[36] *Id*, at 376 Later in the opinion we again stated
"Nor does the question here have anything to do with the composition of the state or federal legislature And we intimate no opinion on the constitutional phases of that problem beyond what we said in *Baker* v *Carr* " *Id*, at 378

[37] 376 U S, at 14

[38] *Id*, at 17–18

be counted equally with those of all other voters in a State, were based on different constitutional considerations and were addressed to rather distinct problems But neither are they wholly inapposite *Gray*, though not determinative here since involving the weighting of votes in statewide elections, established the basic principle of equality among voters within a State, and held that voters cannot be classified, constitutionally, on the basis of where they live, at least with respect to voting in statewide elections. And our decision in *Wesberry* was of course grounded on that language of the Constitution which prescribes that members of the Federal House of Representatives are to be chosen "by the People," while attacks on state legislative apportionment schemes, such as that involved in the instant cases, are principally based on the Equal Protection Clause of the Fourteenth Amendment Nevertheless, *Wesberry* clearly established that the fundamental principle of representative government in this country is one of equal representation for equal numbers of people, without regard to race, sex, economic status, or place of residence within a State Our problem, then, is to ascertain, in the instant cases, whether there are any constitutionally cognizable principles which would justify departures from the basic standard of equality among voters in the apportionment of seats in state legislatures

III.

A predominant consideration in determining whether a State's legislative apportionment scheme constitutes an invidious discrimination violative of rights asserted under the Equal Protection Clause is that the rights allegedly impaired are individual and personal in nature. As stated by the Court in *United States* v *Bathgate*, 246 U S. 220, 227, "the right to vote is personal . . ."[39] While the result of a court decision in a state legislative apportionment controversy may be to require the restructuring of the geographical distribution of seats in a state legislature, the judicial focus must be concentrated upon ascertaining whether there has been any discrimination against certain of the State's citizens which constitutes an impermissible impairment of their constitutionally protected right to vote Like *Skinner* v *Oklahoma*, 316 U. S 535, such a case "touches a sensitive and important area of human rights," and "involves one of the basic civil rights of man," presenting questions of alleged "invidious discriminations against groups or types of individuals in violation of the constitutional guaranty of just and equal laws" 316 U. S , at 536, 541 Undoubtedly, the right of suffrage is a fundamental matter in a free and democratic society Especially since the right to exercise the franchise in a free and unimpaired manner is preservative of other basic civil and political rights, any alleged infringement of the right of citizens to vote must be carefully and meticulously scrutinized Almost a century ago, in *Yick Wo* v *Hopkins*, 118 U. S. 356, the Court referred to "the political franchise of voting" as "a fundamental political right, because preservative of all rights" 118 U S , at 370.

Legislators represent people, not trees or acres Legislators are elected by voters, not farms or cities or economic interests As long are ours

[39] As stated by MR JUSTICE DOUGLAS, the rights sought to be vindicated in a suit challenging an apportionment scheme are "personal and individual," *South* v *Peters* 339 U S , at 280, and are "important political rights of the people," *MacDougall* v *Green*, 335 U S 281, 288. (DOUGLAS, J , dissenting)

is a representative form of government, and our legislatures are those instruments of government elected directly by and directly representative of the people, the right to elect legislators in a free and unimpaired fashion is a bedrock of our political system It could hardly be gainsaid that a constitutional claim had been asserted by an allegation that certain otherwise qualified voters had been entirely prohibited from voting for members of their state legislature. And, if a State should provide that the votes of citizens in one part of the State should be given two times, or five times, of 10 times the weight of votes of citizens in another part of the State, it could hardly be contended that the right to vote of those residing in the disfavored areas had not been effectively diluted It would appear extraordinary to suggest that a state could be constitutionally permitted to enact a law providing that certain of the state's voters could vote two, five, or 10 times for their legislative representatives, while voters living elsewhere could vote only once. And it is inconceivable that a state law to the effect that, in counting votes for legislators, the votes of citizens in one part of the State would be multiplied by two, five, or 10, while the votes of persons in another area would be counted only at face value, could be constitutionally sustainable Of course, the effect of state legislative districting schemes which give the same number of representatives to unequal numbers of constituents is identical [40] Overweighting and overevaluation of the votes of those living here has the certain effect of dilution and undervaluation of the votes of those living there. The resulting discrimination against those individual voters living in disfavored areas is easily demonstrable mathematically Their right to vote is simply not the same right to vote as that of those living in a favored part of the State Two, five, or 10 of them must vote before the effect of their voting is equivalent to that of their favored neighbor Weighting the votes of citizens differently, by any method or means, merely because of where they happen to reside, hardly seems justifiable One must be ever aware that the Constitution forbids "sophisticated as well as simple-minded modes of discrimination" *Lane* v *Wilson*, 307 U S 268, 275 *Gomillion* v *Lightfoot*, 364 U S 339, 342 As we stated in *Wesberry* v *Sanders*, *supra:*

> "We do not believe that the Framers of the Constitution intended to permit the same vote-diluting discrimination to be accomplished through the device of districts containing widely varied numbers of inhabitants To say that a vote is worth more in one district than in another would . . run counter to our fundamental ideas of democratic government . . ." [41]

[40] As stated by MR JUSTICE BLACK in *Colegrove* v *Green*, 328 U S 549, 569–571
"No one would deny that the equal protection clause would prohibit a law that would expressly give certain citizens a half-vote and others a full vote [T]he constitutionally guaranteed right to vote and the right to have one's vote counted clearly imply the policy that state election systems, no matter what their form, should be designed to give approximately equal weight to each vote cast [A] state legislature cannot deny eligible voters the right to vote for Congressmen and the right to have their vote counted It can no more destroy the effectiveness of their vote in part and no more accomplish this in the name of 'apportionment' than under any other name" (BLACK, J., dissenting)

[41] 376 U S., at 8 See also *id.*, at 17, quoting from James Wilson, a delegate to the Constitutional Convention and later an Associate Justice of this Court, who stated
"[A]ll elections ought to be equal Elections are equal, when a given number of citizens, in one part of the state, choose as many representatives, as are chosen by the same number of citizens, in any other part of the state In this manner,

State legislatures are, historically, the fountainhead of representative government in this country. A number of them have their roots in colonial times, and substantially antedate the creation of our Nation and our Federal Government. In fact, the first formal stirrings of American political independence are to be found, in large part, in the views and actions of several of the colonial legislative bodies. With the birth of our National Government, and the adoption and ratification of the Federal Constitution, state legislatures retained a most important place in our Nation's governmental structure. But representative government is in essence self-government through the medium of elected representatives of the people, and each and every citizen has an inalienable right to full and effective participation in the political processes of his State's legislative bodies Most citizens can achieve this participation only as qualified voters through the election of legislators to represent them. Full and effective participation by all citizens in state government requires, therefore, that each citizen has an equally effective voice in the election of members of his state legislature. Modern and viable state government needs, and the Constitution demands, no less.

Logically, in a society ostensibly grounded on representative government, it would seem reasonable that a majority of the people of a State could elect a majority of that State's legislators To conclude differently, and to sanction minority control of state legislative bodies, would appear to deny majority rights in a way that far surpasses any possible denial of minority rights that might otherwise be thought to result. Since legislatures are responsible for enacting laws by which all citizens are to be governed, they should be bodies which are collectively responsive to the popular will And the concept of equal protection has been traditionally viewed as requiring the uniform treatment of persons standing in the same relation to the governmental action questioned or challenged. With respect to the allocation of legislative representation, all voters, as citizens of a State, stand in the same relation regardless of where they live. Any suggested criteria for the differentiation of citizens are insufficient to justify any discrimination, as to the weight of their votes, unless relevant to the permissible purposes of legislative apportionment. Since the achieving of fair and effective representation for all citizens is concededly the basic aim of legislative apportionment, we conclude that the Equal Protection Clause guarantees the opportunity for equal participation by all voters in the election of state legislators Diluting the weight of votes because of place of residence impairs basic constitutional rights under the Fourteenth Amendment

---

the proportion of the representatives and of the constituents will remain invariably the same" 2 The Works of James Wilson (Andrews ed 1896) 15

And, as stated by MR JUSTICE DOUGLAS in *MacDougall v Green*, 335 U S, at 288, 290

"[A] regulation . [which] discriminates against the residents of the populous counties of the state in favor of rural section lacks the equality to which the exercise of political rights is entitled under the Fourteenth Amendment

"Free and honest elections are the very foundation of our republican form of government Discrimination against any group or class of citizens in the exercise of these constitutionally protected rights of citizenship deprives the electoral process of integrity

"None would deny that a state law giving some citizens twice the vote of other citizens in either the primary or general election would lack that equality which the Fourteenth Amendment guarantees . The theme of the Constitution is equality among citizens in the exercise of their political rights The notion that one group can be granted greater voting strength than another is hostile to our standards for popular representative government." (DOUGLAS, J, dissenting)

just as much as invidious discriminations based upon factors such as race. *Brown* v. *Board of Education,* 347 U S 483, or economic status. *Griffin* v *Illinois,* 351 U S 12, *Douglas* v *California,* 372 U. S. 353. Our constitutional system amply provides for the protection of minorities by means other than giving them majority control of state legislatures. And the democratic ideals of equality and majority rule, which have served this Nation so well in the past, are hardly of any less significance for the present and the future.

We are told that the matter of apportioning representation in a state legislature is a complex and many-faceted one We are advised that States can rationally consider factors other than population in apportioning legislative representation. We are admonished not to restrict the power of the States to impose differing views as to political philosophy on their citizens We are cautioned about the dangers of entering into political thickets and mathematical quagmires Our answer is this: a denial of constitutionally protected rights demands judicial protection; our oath and our office require no less of us As stated in *Gomillion* v *Lightfoot, supra:*

> "When a State exercises power wholly within the domain of state interest, it is insulated from federal judicial review But such insulation is not carried over when state power is used as an instrument for circumventing a federally protected right" [42]

To the extent that a citizen's right to vote is debased, he is that much less a citizen. The fact that an individual lives here or there is not a legitimate reason for overweighting or diluting the efficacy of his vote. The complexions of societies and civilizations change, often with amazing rapidity A nation once primarily rural in character becomes predominantly urban [43] Representation schemes once fair and equitable become archaic and outdated. But the basic principle of representative government remains, and must remain, unchanged—the weight of a citizen's vote cannot be made to depend on where he lives Population is, of necessity, the starting point for consideration and the controlling criterion for judgment in legislative apportionment controversies [44] A citizen, a qualified voter, is no more nor no less so because he lives in the city or on the farm This is the clear and strong command of our Constitution's Equal Protection Clause. This is an essential part of

[42] 364 U S, at 347

[43] Although legislative apportionment controversies are generally viewed as involving urban-rural conflicts, much evidence indicates that presently it is the fast-growing suburban areas which are probably the most seriously underrepresented in many of our state legislatures And, while currently the thrust of state legislative malapportionment results, in most states, in underrepresentation of urban and suburban areas, in earlier times cities were in fact overrepresented in a number of States In the early 19th century, certain of the seaboard cities in some of the Eastern and Southern States possessed and struggled to retain legislative representation disproportionate to population, and bitterly opposed according additional representation to the growing inland areas Conceivably, in some future time, urban areas might again be in a situation of attempting to acquire or retain legislative representation in excess of that to which, on a population basis, they are entitled Malapportionment can, and has historically, run in various directions However and whenever it does, it is constitutionally impermissible under the Equal Protection Clause

[44] The British experience in eradicating "rotten boroughs" is interesting and enlightening Parliamentary representation is now based on districts of substantially equal population, and periodic reapportionment is accomplished through independent Boundary Commissions For a discussion of the experience and difficulties in Great Britain in achieving fair legislative representation, see Edwards, Theoretical and Comparative Aspects of Reapportionment and Redistricting With Reference to Baker v Carr, 15 Vand L Rev 1265, 1275 (1962) See also the discussion in *Baker* v *Carr* 369 U S, at 302–307 (Frankfurter, J, dissenting)

the concept of a government of laws and not men This is at the heart of Lincoln's vision of "government of the people, by the people, [and] for the people." The Equal Protection Clause demands no less than substantially equal state legislative representation for all citizens, of all places as well as of all races

IV.

We hold that, as a basic constitutional standard, the Equal Protection Clause requires that the seats in both houses of a bicameral state legislature must be apportioned on a population basis Simply stated, an individual's right to vote for state legislators is unconstitutionally impaired when its weight is in a substantial fashion diluted when compared with votes of citizens living in other parts of the State Since, under neither the existing apportionment provisions nor under either of the proposed plans was either of the houses of the Alabama Legislature apportioned on a population basis, the District Court correctly held that all three of these schemes were constitutionally invalid. Furthermore, the existing apportionment, and also to a lesser extent the apportionment under the Crawford-Webb Act, presented little more than crazy quilts, completely lacking in rationality, and could be found invalid on that basis alone [45] Although the District Court presumably found the apportionment of the Alabama House of Representatives under the 67-Senator Amendment to be acceptable, we conclude that the deviations from a strict population basis are too egregious to permit us to find that that body, under this proposed plan, was apportioned sufficiently on a population basis so as to permit the arrangement to be constitutionally sustained. Although about 43% of the State's total population would be required to comprise districts which could elect a majority in that body, only 39 of the 106 House seats were actually to be distributed on a population basis, as each of Alabama's 67 counties was given at least one representative, and population-variance ratios of close to 5-to-1 would have existed. While mathematical nicety is not a constitutional requisite, one could hardly conclude that the Alabama House, under the proposed constitutional amendment, had been apportioned sufficiently on a population basis to be sustainable under the requirements of the Equal Protection Clause And none of the other apportionments of seats in either of the bodies of the Alabama Legislature, under the three plans considered by the District Court, came nearly as close to approaching the required constitutional standard as did that of the House of Representatives under the 67-Senator Amendment

Legislative apportionment in Alabama is signally illustrative and symptomatic of the seriousness of this problem in a number of the States At the time this litigation was commenced, there had been no reapportionment of seats in the Alabama Legislature for over 60

[45] Under the existing scheme, Marshall County, with a 1960 population of 48,018, Baldwin County, with 49,088, and Houston County, with 50,713, are each given only one seat in the Alabama House while Bullock County, with only 13,462, Henry County, with 15 286, and Lowndes County, with 15,417, are alloted two representatives each And in the Alabama Senate, under the existing apportionment, a district comprising Lauderdale and Limestone Counties had a 1960 population of 98,135, and another composed of Lee and Russell Counties had 96,105 Conversely, Lowndes County, with only 15,417, and Wilcox County, with 18,739, are nevertheless single-county senatorial districts given one Senate seat each

years [46] Legislative inaction, coupled with the unavailability of any political or judicial remedy,[47] had resulted, with the passage of years, in the perpetuated scheme becoming little more than an irrational anachronism Consistent failure by the Alabama Legislature to comply with state constitutional requirements as to the frequency of reapportionment and the bases of legislative representation resulted in a minority strangle hold on the State Legislature. Inequality of representation in one house added to the inequality in the other With the crazy-quilt existing apportionment virtually conceded to be invalid, the Alabama Legislature offered two proposed plans for consideration by the District Court, neither of which was to be effective until 1966 and neither of which provided for the apportionment of even one of the two houses on a population basis We find that the court below did not err in holding that neither of these proposed reapportionment schemes, considered as a whole, "meets the necessary constitutional requirements." And we conclude that the District Court acted properly in considering these two proposed plans, although neither was to become effective until the 1966 election and the proposed constitutional amendment was scheduled to be submitted to the State's voters in November 1962.[48] Consideration by the court below of the two proposed plans was clearly necessary in determining whether the Alabama Legislature had acted effectively to correct the admittedly existing malapportionment, and in ascertaining what sort of judicial relief, if any, should be afforded.

V.

Since neither of the houses of the Alabama Legislature, under any of the three plans considered by the District Court, was apportioned on a population basis, we would be justified in proceeding no further However, one of the proposed plans, that contained in the so-called 67-Senator Amendment, at least superficially resembles the scheme of legislative representation followed in the Federal Congress Under this plan, each of Alabama's 67 counties is allotted one senator, and no counties are given more than one Senate seat. Arguably, this is analogous to the allocation of two Senate seats, in the Federal Congress, to each of the 50 States, regardless of population. Seats in the Alabama House, under the proposed constitutional amendment, are distributed by giving each of the 67 counties at least one, with the remaining 39 seats being allotted among the more populous counties on a population basis. This scheme, at least at first glance, appears to resemble that prescribed for the Federal House of Representatives, where the 435 seats are distributed among the States on a population basis, although each State, regardless of its population, is given at least one Congressman Thus, although there are substantial differences in underlying rationale

[46] An interesting pre-*Baker* discussion of the problem of legislative malapportionment in Alabama is provided in Comment, Alabama's Unrepresentative Legislature, 14 Ala L Rev 403 (1962)

[47] See the cases cited and discussed in notes 5–6, *supra*, where the Alabama Supreme Court refused even to consider the granting of relief in suits challenging the validity of the apportionment of seats in the Alabama Legislature, although it stated that the legislature had failed to comply with the requirements of the State Constitution with respect to legislative reapportionment

[48] However, since the District Court found the proposed constitutional amendment prospectively invalid, it was never in fact voted upon by the State's electorate

and result,[49] the 67-Senator Amendment, as proposed by the Alabama Legislature, at least arguably presents for consideration a scheme analogous to that used for apportioning seats in Congress

Much has been written since our decision in *Baker* v *Carr* about the applicability of the so-called federal analogy to state legislative apportionment arrangements.[50] After considering the matter, the court below concluded that no conceivable analogy could be drawn between the federal scheme and the apportionment of seats in the Alabama Legislature under the proposed constitutional amendment.[51] We agree with the District Court, and find the federal analogy inapposite and irrelevant to state legislative districting schemes. Attempted reliance on the federal analogy appears often to be little more than an after-the-fact rationalization offered in defense of maladjusted state apportionment arrangements. The original constitutions of 36 of our States provided that representation in both houses of the state legislatures would be based completely, or predominantly, on population.[52] And the Founding Fathers clearly had no intention of establishing a pattern or model for the apportionment of seats in state legislatures when the system of representation in the Federal Congress was adopted.[53] Demonstrative of this is the fact that the Northwest Ordinance, adopted in the same year, 1787, as the Federal Constitution, provided for the apportionment of seats in territorial legislatures solely on the basis of population.[54]

[49] Resemblances between the system of representation in the Federal Congress and the apportionment scheme embodied in the 67-Senator Amendment appear to be more superficial than actual. Representation in the Federal House of Representatives is apportioned by the Constitution among the States in conformity with population. While each State is guaranteed at least one seat in the House, as a feature of our unique federal system, only four States have less than 1/435 of the country's total population, under the 1960 census. Thus, only four seats in the Federal House are distributed on a basis other than strict population. In Alabama, on the other hand, 40 of the 67 counties have less than 1/106 of the State's total population. Thus, under the proposed amendment, over ⅓ of the total number of seats in the Alabama House would be distributed on a basis other than strict population. States with almost 50% of the Nation's total population are required in order to elect a majority of the members of the Federal House, though unfair districting within some of the States presently reduces to about 42% the percentage of the country's population which reside in districts electing individuals comprising a majority in the Federal House. Cf *Wesberry* v *Sanders*, *supra*, holding such congressional districting unconstitutional. Only about 43% of the population of Alabama would live in districts which could elect a majority in the Alabama House, under the proposed constitutional amendment. Thus, it could hardly be argued that the proposed apportionment of the Alabama House was based on population in a way comparable to the apportionment of seats in the Federal House among the States.

[50] For a thorough statement of the arguments against holding the so-called federal analogy applicable to state legislative apportionment matters, see, *e. g.*, McKay, Reapportionment and the Federal Analogy (National Municipal League pamphlet 1963), McKay, The Federal Analogy and State Apportionment Standards, 38 Notre Dame Law. 487 (1963). See also Merrill, Blazes for a Trail Through the Thicket of Reapportionment, 16 Okla. L. Rev. 59, 67–70 (1963).

[51] 208 F. Supp., at 438. See the discussion of the District Court's holding as to the applicability of the federal analogy earlier in this opinion, *ante*, at ____.

[52] Report of Advisory Commission on Intergovernmental Relations, Apportionment of State Legislatures 10–11, 35, 69 (1962).

[53] Thomas Jefferson repeatedly denounced the inequality of representation provided for under the 1776 Virginia Constitution and frequently proposed changing the State Constitution to provide that both houses be apportioned on the basis of population. In 1816 he wrote that "a government is republican in proportion as every member composing it has his equal voice in the direction of its concerns, by representatives chosen by himself. . . ." Letter to Samuel Kercheval, 10 Writings of Thomas Jefferson (Ford ed. 1899) 38. And a few years later, in 1819, he stated: "Equal representation is so fundamental a principle in a true republic that no prejudice can justify its violation because the prejudices themselves cannot be justified." Letter to William King, Jefferson Papers, Library of Congress, Vol. 216, p. 38616.

[54] Article II, § 14, of the Northwest Ordinance of 1787 stated quite specifically: "The inhabitants of the said territory shall always be entitled to the benefits of a proportional representation of the people in the Legislature."

The system of representation in the two Houses of the Federal Congress is one ingrained in our Constitution, as part of the law of the land It is one conceived out of compromise and concession indispensable to the establishment of our federal republic [55] Arising from unique historical circumstances, it is based on the consideration that in establishing our type of federalism a group of formerly independent States bound themselves together under one national government Admittedly, the original 13 States surrendered some of their sovereignty in agreeing to join together "to form a more perfect Union" But at the heart of our constitutional system remains the concept of separate and distinct governmental entities which have delegated some, but not all, of their formerly held powers to the single national government The fact that almost three-fourths of our present States were never in fact independently sovereign does not detract from our view that the so-called federal analogy is inapplicable as a sustaining precedent for state legislative apportionments The developing history and growth of our republic cannot cloud the fact that, at the time of the inception of the system of representation in the Federal Congress, a compromise between the larger and smaller States on this matter averted a deadlock in the constitutional convention which had threatened to abort the birth of our Nation In rejecting an asserted analogy to the federal electoral college in *Gray* v *Sanders*, *supra*, we stated·

> "We think the analogies to the electoral college, to districting and redistricting, and to other phases of the problems of representation in state or federal legislatures or conventions are inapposite The inclusion of the electoral college in the Constitution, as the result of specific historical concerns, validated the collegiate principle despite its inherent numerical inequality, but implied nothing about the use of an analogous system by a State in a statewide election No such specific accommodation of the latter was ever undertaken, and therefore no validation of its numerical inequality ensued." [56]

Political subdivisions of States—counties, cities, or whatever—never were and never have been considered as sovereign entities Rather, they have been traditionally regarded as subordinate governmental instrumentalities created by the State to assist in the carrying out of state governmental functions As stated by the Court in *Hunter* v *City of Pittsburgh*, 207 U S 161, 178, these governmental units are "created as convenient agencies for exercising such of the governmental powers of the State as may be entrusted to them," and the "number, nature and duration of the powers conferred upon [them] . . and the territory over which they shall be exercised rests in the absolute discretion of the State" The relationship of the States to the Federal Government could hardly be less analogous

Thus, we conclude that the plan contained in the 67-Senator Amendment for apportioning seats in the Alabama Legislature cannot be sustained by recourse to the so-called federal analogy Nor can any other inequitable state legislative apportionment scheme be justified on such an asserted basis This does not necessarily mean that such a plan is

[55] See the discussion in *Wesberry* v *Sanders*, 376 U S , at 9–14
[56] 372 U S , at 378

irrational or involves something other than a "republican form of government" We conclude simply that such a plan is impermissible for the States under the Equal Protection Clause, since perforce resulting, in virtually every case, in submergence of the equal-population principle in at least one house of a state legislature

Since we find the so-called federal analogy inapposite to a consideration of the constitutional validity of state legislative apportionment schemes, we necessarily hold that the Equal Protection Clause requires both houses of a state legislature to be apportioned on a population basis. The right of a citizen to equal representation and to have his vote weighted equally with those of all other citizens in the election of members of one house of a bicameral state legislature would amount to little if States could effectively submerge the equal-population principle in the apportionment of seats in the other house If such a scheme were permissible, an individual citizen's ability to exercise an effective voice in the only instrument of state government directly representative of the people might be almost as effectively thwarted as if neither house were apportioned on a population basis Deadlock between the two bodies might result in compromise and concession on some issues But in all too many cases the more probable result would be frustration of the majority will through minority veto in the house not apportioned on a population basis, stemming directly from the failure to accord adequate overall legislative representation to all of the State's citizens on a nondiscriminatory basis In summary, we can perceive no constitutional difference, with respect to the geographical distribution of state legislative representation, between the two houses of a bicameral state legislature

We do not believe that the concept of bicameralism is rendered anachronistic and meaningless when the predominant basis of representation in the two state legislative bodies is required to be the same—population A prime reason for bicameralism, modernly considered, is to insure mature and deliberate consideration of, and to prevent precipitate action on, proposed legislative measures Simply because the controlling criterion for apportioning representation is required to be the same in both houses does not mean that there will be no differences in the composition and complexion of the two bodies Different constituencies can be represented in the two houses One body could be composed of single-member districts while the other could have at least some multimember districts The length of terms of the legislators in the separate bodies could differ The numerical size of the two bodies could be made to differ, even significantly, and the geographical size of districts from which legislators are elected could also be made to differ And apportionment in one house could be arranged so as to balance off minor inequities in the representation of certain areas in the other house. In summary, these and other factors could be, and are presently in many States, utilized to engender differing complexions and collective attitudes in the two bodies of a state legislature, although both are apportioned substantially on a population basis

VI.

By holding that as a federal constitutional requisite both houses of a state legislature must be apportioned on a population basis, we mean

that the Equal Protection Clause requires that a State make an honest and good faith effort to construct districts, in both houses of its legislature, as nearly of equal population as is practicable We realize that it is a practical impossibility to arrange legislative districts so that each one has an identical number of residents, or citizens, or voters Mathematical exactness or precision is hardly a workable constitutional requirement [57]

In *Wesberry* v. *Sanders, supra,* the Court stated that congressional representation must be based on population as nearly as is practicable. In implementing the basic constitutional principle of representative government as enunciated by the Court in *Wesberry*—equality of population among districts—some distinctions may well be made between congressional and state legislative representation Since, almost invariably, there is a significantly larger number of seats in state legislative bodies to be distributed within a State than congressional seats, it may be feasible to use political subdivision lines to a greater extent in establishing state legislative districts than in congressional districting while still affording adequate representation to all parts of the State To do so would be constitutionally valid, so long as the resulting apportionment was one based substantially on population and the equal-population principle was not diluted in any significant way Somewhat more flexibility may therefore be constitutionally permissible with respect to state legislative apportionment than in congressional districting. Lower courts can and assuredly will work out more concrete and specific standards for evaluating state legislative apportionment schemes in the context of actual litigation For the present, we deem it expedient not to attempt to spell out any precise constitutional tests. What is marginally permissible in one State may be unsatisfactory in another, depending on the particular circumstances of the case. Developing a body of doctrine on a case-by-case basis appears to us to provide the most satisfactory means of arriving at detailed constitutional requirements in the area of state legislative apportionment Cf. *Slaughter-House Cases,* 16 Wall 36, 78–79 Thus, we proceed to state here only a few rather general considerations which appear to us to be relevant.

A State may legitimately desire to maintain the integrity of various political subdivisions, insofar as possible, and provide for compact districts of contiguous territory in designing a legislative apportionment scheme. Valid considerations may underlie such aims Indiscriminate districting, without any regard for political subdivision or natural or historical boundary lines, may be little more than an open invitation to partisan gerrymandering Single-member districts may be the rule in one State, while another State might desire to achieve some flexibility by creating multimember [58] or floterial districts [59] Whatever the means of accomplishment, the overriding objective must be substantial equality of population among the various districts, so that the vote of any

[57] As stated by the Court in *Bain Peanut Co* v *Pinson,* 282 U S 499, 501, "We must remember that the machinery of government would not work if it were not allowed a little play in its joints."

[58] But cf the discussion of some of the practical problems inherent in the use of multimember districts in *Lucas* v *The Forty-Fourth General Assembly of the State of Colorado,* __ U S, at __, decided also this date

[59] See the discussion of the concept of floterial districts in *Davis* v *Mann,* ___ U S ___, ___ ___, n 2, decided also this date

citizen is approximately equal in weight to that of any other citizen in the State.

History indicates, however, that many States have deviated, to a greater or lesser degree, from the equal-population principle in the apportionment of seats in at least one house of their legislatures.[60] So long as the divergences from a strict population standard are based on legitimate considerations incident to the effectuation of a rational state policy, some deviations from the equal-population principle are constitutionally permissible with respect to the apportionment of seats in either or both of the two houses of a bicameral state legislature. But neither history alone,[61] nor economic or other sorts of group interests, are permissible factors in attempting to justify disparities from population-based representation. Citizens, not history or economic interests, cast votes. Considerations of area alone provide an insufficient justification for deviations from the equal-population principle. Again, people, not land or trees or pastures, vote. Modern developments and improvements in transportation and communications make rather hollow, in the mid-1960's, most claims that deviations from population-based representation can validly be based solely on geographical considerations. Arguments for allowing such deviations in order to insure effective representation for sparsely settled areas and to prevent legislative districts from becoming so large that the availability of access of citizens to their representatives is impaired are today, for the most part, unconvincing.

A consideration that appears to be of more substance in justifying some deviations from population-based representation in state legislatures is that of insuring some voice to political subdivisions, as political subdivisions. Several factors make more than insubstantial claims that a State can rationally consider according political subdivisions some independent representation in at least one body of the state legislature, as long as the basic standard of equality of population among districts is maintained. Local governmental entities are frequently charged with various responsibilities incident to the operation of state government. In many States much of the legislature's activity involves the enactment of so-called local legislation, directed only to the concerns of particular political subdivisions. And a State may legitimately desire to construct districts along political subdivision lines to deter the possibilities of gerrymandering. However, permitting deviations from population-based representation does not mean that each local governmental unit or political subdivision can be given separate representation, regardless of population. Carried too far, a scheme of giving at least one seat in one house to each political subdivision (for example, to each county) could easily result, in many States, in a total subver-

[60] For a discussion of the formal apportionment formulae prescribed for the allocation of seats in state legislatures, see Dixon, Apportionment Standards and Judicial Power, 38 Notre Dame Law. 367, 398–400 (1963). See also The Council of State Governments, The Book of the States 1962–1963, 58–62 (1962).

[61] In rejecting a suggestion that the representation of the newer Western States in Congress should be limited so that it would never exceed that of the original States, the Constitutional Convention plainly indicated its view that history alone provided an unsatisfactory basis for differentiations relating to legislative representation. See *Wesberry v. Sanders*, 376 U. S., at 14. Instead, the Northwest Ordinance of 1787, in explicitly providing for population-based representation of those living in the Northwest Territory in their territorial legislatures, clearly implied that, as early as the year of the birth of our federal system, the proper basis of legislative representation was regarded as being population.

sion of the equal-population principle in that legislative body.[62] This would be especially true in a State where the number of counties is large and many of them are sparsely populated, and the number of seats in the legislative body being apportioned does not significantly exceed the number of counties.[63] Such a result, we conclude, would be constitutionally impermissible. And careful judicial scrutiny must of course be given, in evaluating state apportionment schemes, to the character as well as the degree of deviations from a strict population basis. But if, even as a result of a clearly rational state policy of according some legislative representation to political subdivisions, population is submerged as the controlling consideration in the apportionment of seats in the particular legislative body, then the right of all of the State's citizens to cast an effective and adequately weighted vote would be unconstitutionally impaired.

VII.

One of the arguments frequently offered as a basis for upholding a State's legislative apportionment arrangement, despite substantial disparities from a population basis in either or both houses, is grounded on congressional approval, incident to admitting States into the Union, of state apportionment plans containing deviations from the equal-population principle. Proponents of this argument contend that congressional approval of such schemes, despite their disparities from population-based representation, indicate that such arrangements are plainly sufficient as establishing a "republican form of government." As we stated in *Baker* v *Carr*, some questions raised under the Guaranty Clause are nonjusticiable, where "political" in nature and where there is a clear absence of judicially manageable standards.[64] Nevertheless, it is not inconsistent with this view to hold that, despite congressional approval of state legislative apportionment plans at the time of admission into the Union, even though deviating from the equal-population principle here enunciated, the Equal Protection Clause can and does require more. And an apportionment scheme in which both houses are based on population can hardly be considered as failing to satisfy the Guaranty Clause requirement. Congress presumably does not assume, in admitting States into the Union, to pass on all constitutional questions relating to the character of state governmental organization. In any event, congressional approval, however well-considered, could hardly validate an unconstitutional state legislative apportionment. Congress simply lacks the constitutional power to insulate States from attack with respect to alleged deprivations of individual constitutional rights.

VIII.

That the Equal Protection Clause requires that both houses of a state legislature be apportioned on a population basis does not mean that States cannot adopt some reasonable plan for periodic revision of

[62] See McKay, Political Thickets and Crazy Quilts: Reapportionment and Equal Protection, 61 Mich. L. Rev. 645, 698–699 (1963).

[63] Determining the size of its legislative bodies is of course a matter within the discretion of each individual State. Nothing in this opinion should be read as indicating that there are any federal constitutional maximums or minimums on the size of state legislative bodies.

[64] See 369 U. S., at 217–232, discussing the nonjusticiability of malapportionment claims asserted under the Guaranty Clause.

their apportionment schemes Decennial reapportionment appears to be a rational approach to readjustment of legislative representation in order to take into account population shifts and growth. Reallocation of legislative seats every 10 years coincides with the prescribed practice in 41 of the States,[65] often honored more in the breach than the observance, however. Illustratively, the Alabama Constitution requires decennial reapportionment, yet the last reapportionment of the Alabama Legislature, when this suit was brought, was in 1901 Limitations on the frequency of reapportionment are justified by the need for stability and continuity in the organization of the legislative system, although undoubtedly reapportioning no more frequently than every 10 years leads to some imbalance in the population of districts toward the end of the decennial period and also to the development of resistance to change on the part of some incumbent legislators In substance, we do not regard the Equal Protection Clause as requiring daily, monthly, annual or biennial reapportionment, so long as a State has a reasonably conceived plan for periodic readjustment of legislative representation While we do not intend to indicate that decennial reapportionment is a constitutional requisite, compliance with such an approach would clearly meet the minimal requirements for maintaining a reasonably current scheme of legislative representation And we do not mean to intimate that more frequent reapportionment would not be constitutionally permissible or practicably desirable But if reapportionment were accomplished with less frequency, it would assuredly be constitutionally suspect.

IX.

Although general provisions of the Alabama Constitution provide that the apportionment of seats in both houses of the Alabama Legislature should be on a population basis, other more detailed provisions clearly make compliance with both sets of requirements impossible With respect to the operation of the Equal Protection Clause, it makes no difference whether a State's apportionment scheme is embodied in its constitution or in statutory provisions In those States where the alleged malapportionment has resulted from noncompliance with state constitutional provisions which, if complied with, would result in an apportionment valid under the Equal Protection Clause, the judicial task of providing effective relief would appear to be rather simple We agree with the view of the District Court that state constitutional provisions should be deemed violative of the Federal Constitution only when validly asserted constitutional rights could not otherwise be protected and effectuated Clearly, courts should attempt to accommodate the relief ordered to the apportionment provisions of state constitutions insofar as is possible But it is also quite clear that a state legislative apportionment scheme is no less violative of the Federal Constitution when it is based on state constitutional provisions which have been consistently complied with than when resulting from a noncompliance with state constitutional requirements When there is an unavoidable

[65] Report of Advisory Commission on Intergovernmental Relations, Apportionment of State Legislatures 56 (1962) Additionally, the constitutions of seven other States either require or permit reapportionment of legislative representation more frequently than every 10 years See also The Council of State Governments, The Book of the States 1962–1963, 58–62 (1962)

conflict between the Federal and a State Constitution, the Supremacy Clause of course controls

X.

We do not consider here the difficult question of the proper remedial devices which federal courts should utilize in state legislative apportionment cases.[66] Remedial technique in this new and developing area of the law will probably often differ with the circumstances of the challenged apportionment and a variety of local conditions It is enough to say now that, once a State's legislative apportionment scheme has been found to be unconstitutional, it would be the unusual case in which a court would be justified in not taking appropriate action to insure that no further elections are conducted under the invalid plan. However, under certain circumstances, such as where an impending election is imminent and a State's election machinery is already in progress, equitable considerations might justify a court in withholding the granting of immediately effective relief in a legislative apportionment case, even though the existing apportionment scheme was found invalid In awarding or withholding immediate relief, a court is entitled to and should consider the proximity of a forthcoming election and the mechanics and complexities of state election laws, and should act and rely upon general equitable principles. With respect to the timing of relief, a court can reasonably endeavor to avoid a disruption of the election process which might result from requiring precipitate changes that could make unreasonable or embarrassing demands on a State in adjusting to the requirements of the court's decree As stated by MR JUSTICE DOUGLAS, in concurring in *Baker* v. *Carr*, "any relief accorded can be fashioned in the light of well-known principles of equity."[67]

We feel that the District Court in this case acted in a most proper and commendable manner. It initially acted wisely in declining to stay the impending primary election in Alabama, and properly refrained from acting further until the Alabama Legislature had been given an opportunity to remedy the admitted discrepancies in the State's legislative apportionment scheme, while initially stating some of its views to provide guidelines for legislative action And it correctly recognized that legislative reapportionment is primarily a matter for legislative consideration and determination, and that judicial relief becomes appropriate only when a legislature fails to reapportion according to federal constitutional requisites in a timely fashion after having had an adequate quate opportunity to do so Additionally, the court below acted with proper judicial restraint, after the Alabama Legislature had failed to act effectively in remedying the constitutional deficiencies in the State's legislative apportionment scheme, in ordering its own temporary reapportionment plan into effect, at a time sufficiently early to permit the holding of elections pursuant to that plan without great difficulty, and in prescribing a plan admittedly provisional in purpose so as not to usurp the primary responsibility for reapportionment which rests with the legislature.

We find, therefore, that the action taken by the District Court in this case, in ordering into effect a reapportionment of both houses of

[66] Cf *Baker* v *Carr*, 369 U S 186, 198 See also 369 U S, at 250–251 (DOUGLAS, J., concurring), and passages from *Baker* quoted in this opinion, *ante* at ___, and *infra* at ___

[67] 369 U S, at 250

the Alabama Legislature for purposes of the 1962 primary and general elections, by using the best parts of the two proposed plans which it had found, as a whole, to be invalid,[68] was an appropriate and well-considered exercise of judicial power Admittedly, the lower court's ordered plan was intended only as a temporary and provisional measure and the District Court correctly indicated that the plan was invalid as a permanent apportionment In retaining jurisdiction while deferring a hearing on the issuance of a final injunction in order to give the provisionally reapportioned legislature an opportunity to act effectively, the court below proceeded in a proper fashion. Since the District Court evinced its realization that its ordered reapportionment could not be sustained as the basis for conducting the 1966 election of Alabama legislators, and avowedly intends to take some further action should the reapportioned Alabama Legislature fail to enact a constitutionally valid, permanent apportionment scheme in the interim, we affirm the judgment below and remand the cases for further proceedings consistent with the views stated in this opinion

It is so ordered

MR. JUSTICE CLARK, concurring in the reversal

The Court goes much beyond the necessities of this case in laying down a new "equal population" principle for state legislative apportionment. This principle seems to be an offshoot of *Gray* v *Sanders*, 372 U. S. 368, 381 (1963), *i. e.*, "one person, one vote," modified by the "nearly as is practicable" admonition of *Wesberry* v *Sanders*, 376 U. S 1, 8 (1964).* Whether "nearly as is practicable" means "one person, one vote" qualified by "approximately equal" or "some deviations" or by the impossibility of "mathematical nicety" is not clear from the majority's use of these vague and meaningless phrases But whatever the standard, the Court applies it to each house of the State Legislature

It seems to me that all that the Court need say in this case is that each plan considered by the trial court is "a crazy quilt," clearly revealing invidious discrimination in each house of the Legislature and therefore violative of the Equal Protective Clause See my concurring opinion in *Baker* v *Carr*, 369 U. S. 186, 253–258 (1962).

I, therefore, do not reach the question of the so-called "federal analogy." But in my view, if one house of the State Legislature meets the population standard, representation in the other house might include some departure from it so as to take into account, on a rational basis, other factors in order to afford some representation to the various elements of the State. See my dissenting opinion in *Lucas* v. *The Forty-fourth General Assembly of Colorado*, —— U. S. ——, decided this date

[68] Although the District Court indicated that the apportionment of the Alabama House under the 67-Senator Amendment was valid and acceptable, we of course reject that determination, which we regard as merely precatory and advisory since the court below found the overall plan, under the proposed constitutional amendment, to be unconstitutional See 208 F Supp., at 440–441 See the discussion earlier in this opinion *ante* at

* Incidentally, neither of these cases, upon which the Court bases its opinion, is apposite *Gray* involved the use of Georgia's county unit rule in the election of United States Senators and *Wesberry* was a congressional apportionment case

MR JUSTICE STEWART:

In this case all of the parties have agreed with the District Court's finding that legislative inaction for some 60 years in the face of growth and shifts in population has converted Alabama's legislative apportionment plan enacted in 1901 into one completely lacking in rationality. Accordingly, for the reasons stated in my dissenting opinion in *Lucas* v *The Forty-Fourth General Assembly of the State of Colorado, ante,* p ——, I would affirm the judgment of the District Court holding that this apportionment violated the Equal Protection Clause.

I also agree with the Court that it was proper for the District Court, in framing a remedy, to adhere as closely as practicable to the apportionments approved by the representatives of the people of Alabama, and to afford the State of Alabama full opportunity, consistent with the requirements of the Federal Constitution, to devise its own system of legislative apportionment.

WMCA, Inc., et al.,
Appellants,

v.

John P. Lomenzo, Secretary of State of the State of New York, et al.

[June 15, 1964]

MR CHIEF JUSTICE WARREN delivered the opinion of the Court.

At issue in this litigation is the constitutional validity, under the Fourteenth Amendment to the Federal Constitution, of the apportionment of seats in the New York Legislature.

I.

Appellants initially brought this action on May 1, 1961, in the Federal District Court for the Southern District of New York. Plaintiffs below included individual citizens and voters residing in five of the six most populous New York counties (Bronx, Kings, Nassau, New York and Queens), suing in their own behalf and on behalf of all New York citizens similarly situated. Appellees, sued in their representative capacities, are various state and local officials charged with duties in connection with reapportionment and the conducting of state elections. The complaint claimed rights under the Civil Rights Act, 42 U. S. C. §§ 1983, 1988, and asserted jurisdiction under 28 U. S. C. § 1343 (3).

Plaintiffs below sought a declaration that those provisions of the State Constitution which establish the formulas for apportioning seats in the two houses of the New York Legislature, and the statutes implementing them, are unconstitutional since violative of the Fourteenth Amendment to the Federal Constitution. The complaint further asked the District Court to enjoin defendants from performing any acts or duties in compliance with the allegedly unconstitutional legislative apportionment provisions. Plaintiffs asserted that they had no adequate remedy other than the judicial relief sought, and requested the court to retain jurisdiction until the New York Legislature, "freed from the fetters imposed by the Constitutional provisions invalidated by this

Court, provides for such apportionment of the State legislature as will insure to the urban voters of New York State the rights guaranteed them by the Constitution of the United States."

In attacking the existing apportionment of seats in the New York Legislature, plaintiffs below stated, more particularly, that:

> "The provisions of the New York State Constitution, Article III, §§ 2–5, violate the XIV Amendment of the Constitution of the United States because the apportionment formula contained therein results, and must necessarily result, when applied to the population figures of the State in a grossly unfair weighting of both houses in the State legislature in favor of the lesser populated rural areas of the state to the great disadvantage of the densely populated urban centers of the state . . .
>
> "As a result of the constitutional provisions challenged herein, the Plaintiffs' votes are not as effective in either house of the legislature as the votes of other citizens residing in rural areas of the state. Plaintiffs and all others similarly situated suffer a debasement of their votes by virtue of the arbitrary, obsolete and unconstitutional apportionment of the legislature and they and all others similarly situated are denied the equal protection of the laws required by the Constitution of the United States."

The complaint asserted that the legislative apportionment provisions of the 1894 New York Constitution, as amended, are not only presently unconstitutional, but also were invalid and violative of the Fourteenth Amendment at the time of their adoption, and that "the population growth in the State of New York and the shifts of population to urban areas have aggravated the violation of Plaintiffs' rights under the XIV Amendment."

As requested by plaintiffs, a three-judge District Court was convened [1] The New York City defendants admitted the allegations of the complaint and requested the Court to grant plaintiffs the relief they were seeking. The remaining defendants moved to dismiss On January 11, 1962, the District Court announced its initial decision It held that it had jurisdiction but dismissed the complaint, without reaching the merits, on the ground that it failed to state a claim upon which relief could be granted, since the issues raised were nonjusticiable. 202 F. Supp. 741. In discussing the allegations made by plaintiffs, the Court stated:

> "The complaint specifically cites as the cause of this allegedly unconstitutional distribution of state legislative representation the New York Constitutional provisions requiring that
>
> "(a) '. . . the total of fifty Senators established by the Constitution of 1894 shall be increased by those Senators to which any of the larger counties become entitled in addition to their allotment as of 1894, but without effect for decreases in other large counties . . .'
>
> "(b) no county may have 'four or more Senators unless it has a full ratio for each Senator . . .' and

[1] See 196 F Supp 758, where the District Court concluded that the suit presented issues warranting the convening of a three-judge court, over defendants' motions to dismiss the complaint for lack of jurisdiction and for failure to state a claim on which relief could be granted

"(c) ' . . every county except Hamilton shall always be entitled [in the Assembly] to one member coupled with the limitation of the entire membership to 150 members . . . .' "[2]

Noting that the 1894 Constitution, containing the present apportionment provisions, was approved by a majority of the State's electorate before becoming effective, and that subsequently the voters had twice disapproved proposals for a constitutional convention to amend the constitutional provisions relating to legislative apportionment, the District Court concluded that, in any event, there was a "want of equity in the relief sought, or, to view it slightly differently, want of justiciability, [which] clearly demands dismissal."

Plaintiffs appealed to this Court from the District Court's dismissal of their complaint. On June 11, 1962, we vacated the judgment below and remanded for further consideration in the light of *Baker* v. *Carr*, 369 U. S. 186, which had been decided subsequent to the District Court's dismissal of the suit below. 370 U. S. 190. In vacating and remanding, we stated:

"Our well-established practice of a remand for consideration in light of a subsequent decision therefore applies . . . . [W]e believe that the court below should be the first to consider the merits of the federal constitutional claim, free from any doubts as to its justiciability and as to the merits of alleged arbitrary and invidious geographical discrimination."[3]

On August 16, 1962, the District Court, after conducting a hearing,[4] dismissed the complaint on the merits, concluding that plaintiffs had not shown by a preponderance of the evidence that there was any invidious discrimination, that the apportionment provisions of the New York Constitution were rational and not arbitrary, that they were of historical origin and contained no improper geographical discrimination, that they could be amended by an electoral majority of the citizens of New York, and that therefore the apportionment of seats in the New York Senate and Assembly was not unconstitutional.

[2] 202 F. Supp., at 748. All decisions of the District Court, and also this Court's initial decision in this litigation, are reported *sub nom. WMCA, Inc.* v. *Simon*.

[3] 370 U. S., at 191. Shortly after we remanded the case, the District Court ordered defendants to answer or otherwise move in respect to the complaint. Another of the defendants, a Nassau County official, joined the New York City defendants in admitting most of the allegations, and requested the Court to grant plaintiffs the relief which they were seeking. The remaining defendants, presently appellees, denied the material allegations of the complaint and asserted varied defenses.

[4] At the hearing on the merits a large amount of statistical evidence was introduced showing the population and citizen population of New York under various censuses, including the populations of the State's 62 counties and the Senate and Assembly districts established under the various apportionments. The 1953 apportionment of Senate and Assembly seats under the 1950 census was shown, and other statistical computations showing the apportionment to be made by the legislature under the 1960 census figures, as a result of applying the pertinent constitutional provisions, were also introduced into evidence.

The District Court refused to receive evidence showing the effect of the alleged malapportionment on citizens of several of the most populous counties with respect to financial matters such as the collection of state taxes and the disbursement of state assistance. The Court also excluded evidence offered to show that the State Constitution's apportionment formulas were devised for the express purpose of creating a class of citizens whose representation was inferior to that of a *more preferred* class, and that there had *been intentional discrimination against* the citizens of New York City in the designing of the legislative apportionment provisions of the 1894 Constitution. Since we hold that the court below erred in finding the New York legislative apportionment scheme here challenged to be constitutionally valid, we express no view on the correctness of the District Court's exclusion of this evidence.

208 F. Supp. 368 Finding no failure by the New York Legislature to comply with the state constitutional provisions requiring and establishing the formulas for periodic reapportionment of Senate and Assembly seats, the court below relied on the presumption of constitutionality attaching to a state constitutional provision and the necessity for a clear violation "before a federal court of equity will lend its power to the disruption of the state election processes ." After postulating a number of "tests" for invidious discrimination, including the "rationality of state policy and whether or not the system is arbitrary," "whether or not the present complexion of the legislature has a historical basis," whether the electorate has an available political remedy, and "geography, including accessibility of legislative representatives to their electors," the Court concluded that none of the relevant New York constitutional provisions were arbitrary or irrational in giving weight to, in addition to population, "the ingredient of area, accessibility and character of interest" Stating that in New York "the county is a classic unity of governmental organization and administration," the District Court found that the allocation of one Assembly seat to each county was grounded on a historical basis The Court noted that the 1957 vote on whether to call a constitutional convention was "heralded as an issue of apportionment" by the then Governor, but that nevertheless a majority of the State's voters chose not to have a constitutional convention convened The Court also noted that "if strict population standards were adopted certain undesirable results might follow such as an increase in the size of the legislature to such an extent that effective debate may be hampered or an increase in the size of districts to such an extent that contacts between the individual legislator and his constituents may become impracticable" [5] As a result of the District Court's dismissal of the complaint, the November 1962 election of New York legislators was conducted pursuant to the existing apportionment scheme A timely appeal to this Court was filed, and we noted probable jurisdiction on June 10, 1963 374 U S 802.

II.

Apportionment of seats in the two houses of the New York Legislature is prescribed by certain formulas contained in the 1894 State Constitution, as amended Reapportionment is effected periodically by statutory provisions,[6] enacted in compliance with the constitutionally established formulas The county is the basic unit of area for apportionment purposes, except that two sparsely populated counties, Fulton and Hamilton, are treated as one New York uses citizen population instead of total population, excluding aliens from consideration, for purposes of legislative apportionment The number of assemblymen is fixed at 150, while the size of the Senate is prescribed as not less than 50 and may vary with each apportionment [7] All members of both houses

[5] A concurring opinion stated that, while the six counties where plaintiffs reside contain 56 2% of the State's population, they comprise only 3 1% of its area, and, if legislative apportionment were "based solely on population, 8% of the State's area would dominate the rest of New York"

[6] The existing plan of apportionment of Senate and Assembly seats is provided for in McKinney's N Y Laws, 1962 (Supp 1963), State Law, §§ 120–124, enacted by the New York Legislature in 1953

[7] Article III, § 2, of the 1894 New York Constitution provided for a 50-member Senate and a 150-member Assembly Article III, § 3, of the 1894 Constitution prescribed a detailed plan for the apportionment of the 50 Senate seats, subject to periodic alteration by the legislature under the formula provided for in Art III, § 4

of the New York Legislature are elected for two-year terms only, in even-numbered years

With respect to the Senate, after providing that that body should initially have 50 seats and creating 50 senatorial districts, the New York Constitution, in Art III, § 4, as amended, provides for decennial readjustment of the size of the Senate and reapportionment of senatorial seats, beginning in 1932 and every decade thereafter, in the following manner:

> "Such districts shall be so readjusted or altered that each senate district shall contain as nearly as may be an equal number of inhabitants, excluding aliens, and be in as compact form as practicable, and shall remain unaltered until the first year of the next decade as above defined, and shall at all times consist of contiguous territory, and no county shall be divided in the formation of a senate district except to make two or more senate districts wholly in such county . . .
>
> "No county shall have four or more senators unless it shall have a full ratio for each senator No county shall have more than one-third of all the senators, and no two counties or the territory thereof as now organized, which are adjoining counties, or which are separated only by public waters, shall have more than one-half of all the senators
>
> "The ratio for apportioning senators shall always be obtained by dividing the number of inhabitants, excluding aliens, by fifty, and the senate shall always be composed of fifty members, except that if any county having three or more senators at the time of any apportionment shall be entitled on such ratio to an additional senator or senators, such additional senator or senators shall be given to such county in addition to the fifty senators, and the whole number of senators shall be increased to that extent "[8]

As interpreted by practice and judicial decision, reapportionment and readjustment of senatorial representation is accomplished in several stages First, the total population of the State, excluding aliens, as determined by the last federal census, is divided by 50 (the minimum number of Senate seats) in order to obtain a so-called "ratio" figure The counties on account of which the size of the Senate might have to be increased are then ascertained—counties having three or more ratios, *i e*, more than 6% of the State's total citizen population each Under the existing apportionment, only five counties are in the 6%-or-more class, four of New York City's five counties and upstate Erie County (Buffalo and environs). Nassau County (suburban New York City) will be added to this class in the pending reapportionment based on the 1960 census After those counties that come within the "populous" category, so defined, have been ascertained they are then allocated one senatorial seat for each full ratio Fractions of a ratio are disregarded, and each populous county is thereafter divided into the appropriate number of Senate districts In ascertaining the size of the Senate, the total number of additional seats resulting from the growth of the populous counties since 1894 is added to the 50 original seats And, while the total number of seats which any of the populous counties has gained

[8] N Y Const, Art III, § 4,

since 1894 is added to the 50 original seats, the number of seats which any of them has lost since 1894 is not deducted from the total number of seats to be added. Currently the New York Senate, as reapportioned in 1953, has 58 seats From that total, the number allocated to the populous counties is subtracted—27 under the 1953 apportionment—and the remaining seats—31 under the 1953 scheme—are then apportioned among the less populous counties When reapportioned on the basis of 1960 census figures, the Senate will have 57 seats, with 26 allotted to the populous counties, as a result of applying the constitutionally prescribed ratio and the requirement of a full ratio in order for a populous county to be given more than three Senate seats.

The second stage of applying the senatorial apportionment formula involves the allocation of seats to the less populous counties, *i. e.*, those having less than 6% of the State's total citizen population (less than three full ratios) After the number of Senate seats allocated to the populous counties (and thus the size of the Senate) has been determined, a second population ratio figure is obtained by dividing the number of seats available for distribution to the less populous counties, 31 under both the 1950 and 1960 censuses, into the total citizen population of the less populous counties Less populous counties which are entitled to two or three seats, as determined by comparing a county's population with the second ratio figure thus ascertained, are then divided into senatorial districts A less populous county is entitled to three seats if it has less than three full first ratios, but has more than three, or has two and a large fraction, second ratios Since the first ratio is significantly larger than the second, a county can have less than three first ratios but more than three second ratios Finally, counties with substantially less than one second ratio are combined into multicounty districts

The result of applying this complicated apportionment formula is to give the populous counties markedly less senatorial representation, when compared with respective population figures, than the less populous counties Under the 1953 apportionment, based on the 1950 census, a senator from one of the less populous counties represented, on the average, 195,859 citizens, while a senator from a populous county represented an average of 301,178. The constitutionally prescribed first ratio figure was 284,069, while the second ratio was, of course, only 195,859 Under the pending apportionment based on the 1960 census, the first ratio figure is 324,816, and the average population of the senatorial districts in the populous counties will be 366,128 On the other hand, the second ratio, and the average population of the senatorial districts in the less populous counties, is only 216,822 Thus, a citizen in a less populous county had, under the 1953 apportionment, over 1 5 times the representation, on the average, of a citizen in a populous county, and, under the apportionment based on the 1960 census, this ratio will be about 1 7-to-1 [9]

The 1894 New York Constitution also provided for an Assembly composed of 150 members, in Art III, § 2 Under the formula pre-

[9] For an extended discussion of the apportionment of seats in the New York Senate under the pertinent state constitutional provisions, see Silva, Apportionment of the New York Senate, 30 Ford L Rev 595 (1962) See also Silva, Legislative Representation—With Special Reference to New York, 27 Law & Contemp Prob 408 (1962)

scribed by Art. III, § 5, of the New York Constitution, each of the State's 62 counties, except Hamilton County which is combined with Fulton County for purposes of Assembly representation, is initially given one Assembly seat. The remaining 89 seats are then allocated among the various counties in accordance with a "ratio" figure obtained by dividing the total number of seats, 150, into the State's total citizen population Applying the constitutional formula, a county whose population is at least 1½ times this ratio (1% of the total citizen population) is given one additional assemblyman The remaining Assembly seats are then apportioned among those counties whose citizen populations total two or more whole ratios, with any remaining seats being allocated among the counties on the basis of "highest remainders" Finally, those counties receiving more than one seat are divided into the appropriate number of Assembly districts In allocating 61 of the 150 Assembly seats on a basis wholly unrelated to population, and in establishing three separate categories of counties for the apportionment of Assembly representation, the constitutional provisions relating to the apportionment of Assembly seats plainly result in a favoring of the less populous counties Under the new reapportionment based on 1960 census figures, the smallest 44 counties will each be given one seat for an average of 62,765 citizen inhabitants per seat, three counties will receive two seats each, with a total of six assemblymen representing an average of 93,478 citizen inhabitants, and the 14 most populous counties will be given the remaining 100 seats, resulting in an average representation figure of 129,183 citizen inhabitants each [10]

Although the New York Legislature has not yet reapportioned on the basis of 1960 census figures,[11] the outlines of the forthcoming apportionment can be predicted with assurance Since the rules prescribed in the New York Constitution for apportioning the Senate are so explicit and detailed, the New York Legislature has little discretion, in decennially enacting implementing statutory reapportionment provisions, except in determining which of the less populous counties are to be joined together in multicounty districts and in districting within counties having more than one senator Similarly, the legislature has little discretion in reapportioning Assembly seats [12] A number of other rather detailed rules, some mandatory and some only directive, are included in the constitutional provisions prescribing the system for ap-

[10] For a thorough discussion of the apportionment of seats in the New York Assembly pursuant to the relevant state constitutional provisions, see Silva, Apportionment of the New York Assembly, 21 Pol L Rev 1 (1962)

[11] Article III, § 4, of the New York Constitution requires the legislature to reapportion and redistrict Senate seats no later than 1966, and Art III, § 5, provides that the members of the Assembly shall be chosen by single districts and shall be apportioned by the legislature at each regular session at which the senate districts are readjusted or altered, and by the same law, as nearly as may be according to the number of their respective inhabitants, excluding aliens"

[12] While the legislature has the sole power to apportion Assembly seats among the State's counties, in accordance with the constitutional formula, the New York Constitution gives local governmental authorities the exclusive power to divide their respective counties into Assembly districts A county having only one assemblyman constitutes one Assembly district by itself, of course, and therefore cannot be divided into Assembly districts But, with respect to counties given more than one Assembly seat the New York Constitution, Art III, § 5, provides "In any county entitled to more than one member [of the Assembly], the board of supervisors, and in any city embracing an entire county and having no board of supervisors, the common council, or if there be none, the body exercising the powers of a common council, shall divide such counties into assembly districts as nearly equal in number of inhabitants, excluding aliens, as may be . . . "

portioning seats in the two houses of the New York Legislature, and are set out in Art. III, §§ 2–5, of the New York Constitution [15]

When the New York Legislature was reapportioned in 1953, on the basis of 1950 census figures, assemblymen representing 37 1% of the State's citizens constituted a majority in that body, and senators representing 40 9% of the citizens comprised a majority in the Senate Under the still effective 1953 apportionment, applying 1960 census figures, assemblymen representing 34 7% of the citizens constitute a majority in the Assembly, and senators representing 41 8% of the citizens constitute a majority in that body If reapportionment were carried out under the existing constitutional formulas, applying 1960 census figures, 37 5% of the State's citizens would reside in districts electing a majority in the Assembly, and 38 1% would live in areas electing a majority of the members of the Senate When the State was reapportioned in 1953 on the basis of the 1950 census, the most populous Assembly district had 11 9 as many citizens as the least populous one, and a similar ratio in the Senate was about 2 4-to-1 Under the current apportionment, applying 1960 census figures, the citizen population-variance ratio between the most populous and least populous Assembly districts is about 21-to-1, and a similar ratio in the Senate is about 3 9-to-1 If the Assembly were reapportioned under the existing constitutional formulas, the most populous Assembly district would have about 12 7 times as many citizens as the least populous one, and a similar ratio in the Senate would be about 2 6-to-1

According to 1960 census figures, the six counties where the six individual appellants reside had a citizen population of 9,129,780, or 56 2% of the State's total citizen population of 16,240,786 They are currently represented by 72 assemblymen and 28 senators—48% of the Assembly and 48 3% of the Senate When the legislature reapportions on the basis of the 1960 census figures, these six counties will have 26 Senate seats and 69 Assembly seats, or 45 6% and 46%, respectively, of the seats in the two houses The 10 most heavily populated counties in New York, with about 73 5% of the total citizen population, are given, under the current apportionment, 38 Senate seats, 65 5% of the membership of that body, and 93 Assembly seats, 62% of the seats in that house When the legislature reapportions on the basis of the 1960 census figures, these same 10 counties will be given 37 Senate seats and 92 Assembly seats, 64 9% and 61 3%, respectively, of the membership of the two houses The five counties comprising New York City have 45 7% of the State's total citizen population, and are given, under the current apportionment, 43 1% of the Senate seats and 43 3% of the seats in the Assembly When the legislature reapportions on the basis of the 1960 census figures, these same counties will be given 36 8% and 37 3%, respectively, of the membership of the two houses

[15] Under these specific provisions, while more than one Senate or Assembly district can be contained within the whole of a single county, and while a Senate district may consist of more than one county, no county border line can be broken in the formation of either type of district Both Senate and Assembly districts are required to consist of contiguous territory, and each Assembly district is required to be wholly within the same senatorial district Each Assembly district in the same county shall contain, as nearly as may be, an equal number of citizen inhabitants, and shall consist of "convenient" territory and be as compact as practicable Further detailed provisions relate to the division of towns between adjoining districts, and the equalization of population among Senate districts in the same county and Assembly districts in the same Senate district

Under the existing senatorial apportionment, applying 1960 census figures, Suffolk County's one senator represents a citizen population of 650,112, and Nassau County's three senators represent an average of 425,267 citizens each The least populous senatorial district, on the other hand, comprising Saratoga, Warren, and Essex Counties, has a total population of only 166,715 [14] Under the forthcoming reapportionment based on the 1960 census, Nassau County will again be allocated only three Senate seats, with an average population of 425,267, while the least populous senatorial district, which will probably comprise Putnam and Rockland Counties, will have a citizen population of only 162,840 [15] Onondaga County, with a total citizen population of 414,770, less than the average population of *each* Nassau County district, will nevertheless be given *two* Senate seats Because of the effect of the full-ratio requirement applicable only to the populous counties, Nassau County, despite the fact that its citizen population increased from 655,690 to 1,275,801, will not obtain a single additional senatorial seat as a result of the reapportionment based on 1960 census figures And Monroe County, with a citizen population of 571,029, since not having more than 6% of the State's total citizen population, will have the same number of senators under the new apportionment, three, as Nassau County, although it has less than half that county's population New York City's 20 senators will represent an average citizen population of 360,193, while the 15 multicounty senatorial districts to be created upstate will have an average of only 207,528 citizens per district Because of the operation of the full-ratio rule with respect to counties having more than 6% of the State's total citizen population each, the unrepresented remainders (above a full first ratio but short of another full first ratio which is required for an additional Senate seat) in three of the urban counties will be as follows: Nassau, 301,353; New York, 284,805, and Kings, 244,798 Thus, over 800,000 citizens will not be counted in the apportionment of Senate seats, even though the unrepresented remainders in two of these three counties equal or exceed the statewide average population of 284,926 citizens per district Furthermore, the effect of the rule requiring an increase in the number of Senate seats because of the entitlement of populous counties to added senatorial representation, coupled with the failure to reduce the size of the Senate because of reductions in the number of seats to which a populous county is entitled (as compared with its senatorial representation in 1894), is that the comparative voting power of the populous counties in the Senate decreases as their share of the State's total population increases

With respect to the Assembly, the six assemblymen currently elected from Nassau County represent an average citizen population of 212,634, and one of that county's current Assembly districts has a citizen population of 314,721 Suffolk County's three assemblymen presently represent an average of 216,704 citizens On the other hand, the least

[14] Included as Appendix D to the District Court's opinion on the merits is a map of the State of New York showing the 58 senatorial districts under the existing apportionment 208 F Supp, at 383 Appendix E contains a chart which includes census figures showing the 1960 population of each of New York's 62 counties *Id*, at 384

[15] Appendix A to the District Court's opinion of the merits is a chart showing the apportionment of senatorial seats which would result if the Senate were reapportioned on the basis of the present constitutional formula, using 1960 census figures, including the citizen populations of the 13 most populous counties, the number of senators to be allocated to each, and the average citizen population per senator in each of the projected senatorial districts 208 F Supp, at 380

populous Assembly district, Schuyler County, has a citizen population, according to the 1960 census, of only 14,974, and yet, in accordance with the constitutional formula, is allocated one Assembly seat [16] Under the new apportionment, Schuyler County will again be given one Assembly seat, while one projected Monroe County district will have a citizen population of 190,343 and an Assembly district in Suffolk County will have over 170,000 citizens [17] Additionally, the average population of the 54 Assembly districts in New York City's four populous counties will be in excess of 132,000 citizens each

Under the 1953 apportionment, based on 1950 census figures, the most populous Assembly district, in Onondaga County, had a citizen population of 167,226, while the least populous district was that comprising Schuyler County, with only 14,066 citizens In the Senate, the most populous districts were the four in Bronx County, averaging 344,545 citizens each, while the least populous district had a citizen population of only 146,666

No adequate political remedy to obtain relief against alleged legislative malapportionment appears to exist in New York [18] No initiative procedure exists under New York law A proposal to amend the State Constitution can be submitted to a vote by the State's electorate only after approval by a majority of both houses of two successive sessions of the New York Legislature [19] A majority vote of both houses of the legislature is also required before the electorate can vote on the calling of a constitutional convention [20] Additionally, under New York law the question of whether a constitutional convention should be called must be submitted to the electorate every 20 years, commencing in 1957 [21] But even if a constitutional convention were convened, the same alleged discrimination which currently exists in the apportionment of Senate seats against each of the counties having 6% or more of a State's citizen population would be perpetrated in the election of convention delegates [22] And, since the New York Legislature has rather consistently complied with the state constitutional requirement for decennial legislative reapportionment in accordance with the rather explicit constitutional rules, enacting effective apportionment statutes

[16] Included as Appendix C to the District Court's opinion on the merits is a map of the State of New York showing the number of Assembly seats apportioned to each county under the existing apportionment 208 F Supp, at 333 Appendix E contains a chart which includes census figures showing the 1960 population of each of New York's 62 counties *Id*, at 384

[17] Appendix B to the District Court's opinion on the merits is a chart showing the apportionment of Assembly seats which would result if the Assembly were reapportioned under the present constitutional formula, using 1960 census figures, including the number of Assembly seats to be given to each county and the approximate citizen population in each projected Assembly district 208 F Supp, at 381–382

[18] For a discussion of the lack of federal constitutional significance of the presence or absence of an available political remedy, see *Lucas v The Forty-Fourth General Assembly of the State of Colorado*, — U S —, — — —, decided also this date

[19] Under Art XIX, § 1, of the New York Constitution

[20] According to Art XIX, § 2, of the New York Constitution, which provides that the question of whether a constitutional convention should be called can be submitted to the electorate 'at such times as the legislature may by law provide '

[21] Pursuant to Art XIX, § 2, of the New York Constitution In 1957 the State's electorate, by a close vote, disapproved the calling of a constitutional convention, and the question is not required to be submitted to the people again until 1977

[22] Under Art XIX, § 2, of the New York Constitution, delegates to a constitutional convention are elected three per senatorial district, plus 15 delegates elected at large

in 1907, 1917, 1943, and 1953, judicial relief in the state courts to remedy the alleged malapportionment was presumably unavailable.[23]

III.

In *Reynolds* v *Sims*, 377 U S 695, decided also this date, we held that the Equal Protection Clause requires that seats in both houses of a bicameral state legislature must be apportioned substantially on a population basis. Neither house of the New York Legislature, under the state constitutional formulas and the implementing statutory provisions here attacked, is presently or, when reapportioned on the basis of 1960 census figures, will be apportioned sufficiently on a population basis to be constitutionally sustainable. Accordingly, we hold that the District Court erred in upholding the constitutionality of New York's scheme of legislative apportionment.

We have examined the state constitutional formulas governing legislative apportionment in New York in a detailed fashion in order to point out that, as a result of following these provisions, the weight of the votes of those living in populous areas is of necessity substantially diluted in effect. However complicated or sophisticated an apportionment scheme might be, it cannot, consistent with the Equal Protection Clause, result in a significant undervaluation of the weight of the votes of certain of a State's citizens merely because of where they happen to reside. New York's constitutional formulas relating to legislative apportionment demonstrably include a built-in bias against voters living in the State's more populous counties. And the legislative representation accorded to the urban and suburban areas becomes proportionately less as the population of those areas increases. With the size of the Assembly fixed at 150, with a substantial number of Assembly seats distributed to sparsely populated counties without regard to population, and with an additional seat given to counties having 1½ population ratios, the population-variance ratios between the more populous and the less populous counties will continually increase so long as population growth proceeds at a disparate rate in various areas of the State. With respect to the Senate, significantly different population ratio figures are used in determining the number of Senate seats to be given to the more populous and the less populous counties, and the more populous counties are required to have full first ratios in order to be entitled to additional senatorial representation. Also, in ascertaining the size of the Senate, the number of seats by which the senatorial representation of the more populous counties has increased since 1894 is added to 50, but the number of Senate seats that some of the more populous counties have lost since 1894 is not subtracted from that figure. Thus, an increasingly smaller percentage of the State's population will, in all probability, reside in senatorial districts electing a majority of the members of that body. Despite the opaque intricacies of New York's constitutional formulas relating to legislative apportionment, when the effect of these provisions, and the statutes implementing them, on the right to vote of those individuals living in the disfavored areas of the

[23] Decisions by the New York Court of Appeals indicate that state courts will do no more than determine whether the New York Legislature has properly complied with the state constitutional provisions relating to legislative apportionment in enacting implementing statutory provisions. See, *e. g.*, *In re Sherrill*, 188 N Y 185, 81 N E 124 (1907), *In re Dowling*, 219 N Y 44, 113 N E 545 (1916), and *In re Fay*, 291 N Y 198, 52 N E 2d 97 (1943).

State is considered, we conclude that neither the existing scheme nor the forthcoming one can be constitutionally condoned

We find it inappropriate to discuss questions relating to remedies at the present time, beyond what we said in our opinion in *Reynolds*.[24] Since all members of both houses of the New York Legislature will be elected in November 1964, the court below, acting under equitable principles, must now determine whether, because of the imminence of that election and in order to give the New York Legislature an opportunity to fashion a constitutionally valid legislative apportionment plan, it would be desirable to permit the 1964 election of legislators to be conducted pursuant to the existing provisions, or whether under the circumstances the effectuation of appellants' right to a properly weighted voice in the election of state legislators should not be delayed beyond the 1964 election We therefore reverse the decision below and remand the case to the District Court for further proceedings consistent with the views stated here and in our opinion in *Reynolds* v. *Sims*

It is so ordered

Andres Lucas et al., etc.,
Appellants,
v.
The Forty-Fourth General Assembly of the State of Colorado et al.
[June 15, 1964.]

MR. CHIEF JUSTICE WARREN delivered the opinion of the Court:

Involved in this case is an appeal from a decision of the Federal District Court for the District of Colorado upholding the validity, under the Equal Protection Clause of the Fourteenth Amendment to the Federal Constitution, of the apportionment of seats in the Colorado Legislature pursuant to the provisions of a constitutional amendment approved by the Colorado electorate in 1962

I.

Appellants, voters, taxpayers and residents of counties in the Denver metropolitan area, filed two separate actions, consolidated for trial and disposition, on behalf of themselves and all others similarly situated, in March and July 1962, challenging the constitutionality of the apportionment of seats in both houses of the Colorado General Assembly. Defendants below, sued in their representative capacities, included various officials charged with duties in connection with state elections Plaintiffs below asserted that Art V, §§ 45, 46, and 47, of the Colorado Constitution, and the statutes [1] implementing those constitutional provisions, result in gross inequities and disparities with respect to their voting rights They alleged that "one of the inalienable rights of citizenship . . is equality of franchise and vote, and that the concept of

[24] See *Reynolds* v *Sims*,
[1] Colo Rev Stat 1953, c 63, §§ 63-1-1—63-1-6

equal protection of the laws requires that every citizen be equally represented in the legislature of his State" Plaintiffs sought declaratory and injunctive relief, and also requested the court to order a constitutionally valid apportionment plan into effect for purposes of the 1962 election of Colorado legislators. Proponents of the current apportionment scheme, which was then to be voted upon in a November 1962 referendum as proposed Amendment No. 7 to the Colorado Constitution, were permitted to intervene A three-judge court was promptly convened.

On August 10, 1962, the District Court announced its initial decision.[2] *Lisco* v *McNichols*, 208 F. Supp 471. After holding that it had jurisdiction, that the issues presented were justiciable, and that grounds for abstention were lacking,[3] the court below stated that the population disparities among various legislative districts under the existing apportionment "are of sufficient magnitude to make out a *prima facie* case of invidious discrimination . . . ." However, because of the imminence of the primary and general elections, and since two constitutional amendments, proposed through the initiative procedure and prescribing rather different schemes for legislative apportionment, would be voted upon in the impending election, the District Court continued the cases without further action until after the November 1962 election Colorado legislators were thus elected in 1962 pursuant to the provisions of the existing apportionment scheme

At the November 1962 general election, the Colorado electorate adopted proposed Amendment No 7 by a vote of 305,700 to 172,725, and defeated proposed Amendment No 8 by a vote of 311,749 to 149,822 Amendment No 8, rejected by a majority of the voters, prescribed an apportionment plan pursuant to which seats in both houses of the Colorado Legislature would purportedly be apportioned on a

[2] The District Court wisely refrained from acting at all until a case pending in the Colorado Supreme Court was decided without that court passing on the federal constitutional questions relating to Colorado's scheme of legislative apportionment which were raised in that suit *In re Legislative Reapportionment* 374 P 2d 66 (Colo Sup Ct 1962) After accepting jurisdiction, the Colorado Supreme Court, over a vigorous dissent, ignored the federal constitutional issues and instead discussed only the matter of when the Colorado Legislature was required, pursuant to the State Constitution, to reapportion seats in the General Assembly The Court concluded that a reapportionment measure enacted during the 1963 session of the Colorado Legislature, on the basis of 1960 census figures, would, if neither of the proposed constitutional amendments relating to legislative apportionment was approved by the voters in November 1962, be in sufficient compliance with the constitutional requirement of periodic legislative reapportionment See also 208 F Supp, at 474, discussing the Colorado Supreme Court's decision in that case

[3] In its initial opinion, the District Court properly concluded that the argument that "the Colorado Supreme Court has preempted jurisdiction by first hearing the controversy, is without merit in view of the fact that the Supreme Court of Colorado has refrained from even considering the issue of the plaintiffs' federally-guaranteed constitutional rights." 208 F Supp, at 475 Continuing, the court below correctly held that, under the circumstances, it was not required to abstain, and stated

"The considerations which demand abstinence are not present in the instant case Here, the General Assembly of the State of Colorado has repeatedly refused to perform the mandate imposed by the Colorado Constitution to apportion the legislature The likelihood that the unapportioned General Assembly will ever apportion itself now appears remote The Supreme Court of Colorado, while retaining jurisdiction of the subject matter of the controversy presented to it, has postponed further consideration of the cause until June, 1963 Under these circumstances, we must conclude that the parties do not, at least at present, have an adequate, speedy and complete remedy apart from that asserted in the case at bar and thus grounds for abstention are at this time lacking" 208 F Supp, at 476 See also *Davis* v *Mann*, ___ U S ___, ___ ___, decided also this date, where we discussed the question of abstention by a federal court in a state legislative apportionment controversy

population basis [4] Amendment No 7, on the other hand, provided for the apportionment of the House of Representatives on the basis of population, but essentially maintained the existing apportionment in the Senate, which was based on a combination of population and various other factors

After the 1962 election the parties amended their pleadings so that the cases involved solely a challenge to the apportionment scheme established in the newly adopted Amendment No 7 Plaintiffs below requested a declaration that Amendment No 7 was unconstitutional under the Fourteenth Amendment since resulting in substantial disparities from population-based representation in the Senate, and asked for a decree reapportioning both houses of the Colorado Legislature on a population basis After an extended trial, at which a variety of statistical and testimonial evidence regarding legislative apportionment in Colorado, past and present, was introduced, the District Court, on July 16, 1963, announced its decision on the merits *Lisco* v *Love*, 219 F Supp. 922 Splitting 2-to-1, the court below concluded that the apportionment scheme prescribed by Amendment No 7 comported with the requirements of the Equal Protection Clause, and thus dismissed the consolidated actions In sustaining the validity of the senatorial apportionment provided for in Amendment No 7, despite deviations from population-based representation, the District Court stated that the Fourteenth Amendment does not require "equality of population within representation districts for each house of a bicameral state legislature" Finding that the disparities from a population basis in the apportionment of Senate seats were based upon rational considerations, the court below stated that the senatorial apportionment under Amendment No 7 "recognizes population as a prime, but not controlling, factor and gives effect to such important considerations as geography, compactness and contiguity of territory, accessibility, observance of natural boundaries, [and] conformity to historical divisions such as county lines and prior representation districts" [5] Stressing also

[4] As stated succinctly by the District Court, in its opinion on the merits,

"The defeated Amendment No 8 proposed a three-man commission to apportion the legislature periodically The commission was to have the duty of delineating, revising and adjusting senatorial and representative districts Its actions were to be reviewed by the Colorado Supreme Court The districting was to be on a strict population ratio for both the Senate and the House with limited permissible variations therefrom" 219 F Supp, at 935

Additionally, under proposed Amendment No 8, the commission would determine a strict population ratio for both the Senate and the House by dividing the State's total population, as ascertained in each decennial federal census, by the number of seats assigned to the Senate and the House, respectively No legislative district should contain a population per senator or representative of 33⅓% more or less than the strict population ratio, except certain mountainous senatorial districts of more than 5,500 square miles in area, but no senatorial district was to contain a population of less than 50% of the strict population ratio Senatorial districts should consist of one county or two or more contiguous counties, but no county should be divided in the formation of a senatorial district Representative districts should consist of one county or two or more contiguous counties Any county apportioned two or more representatives could be divided into representative subdistricts, but only after a majority of the voters in the county had approved, in a general election, the exact method of subdivision and the specific apportionment of representatives among the subdistricts and the county at large A proposal to divide a county into subdistricts could be placed on the ballot only by initiative petition in accordance with state law, and only at the general elections in 1966 and 1974, and at the general elections held each 10 years thereafter Amendment No 8, like Amendment No 7, would have required implementing legislation and would not have become effective, if adopted, until the 1964 elections

[5] 219 F Supp, at 932

that the apportionment plan had been recently adopted by popular vote in a statewide referendum, the Court stated:

> "[Plaintiffs'] argument that the apportionment of the Senate by Amendment No. 7 is arbitrary, invidiously discriminatory, and without any rationality . [has been answered by] the voters of Colorado . . . By adopting Amendment No. 7 and by rejecting Amendment No 8, which proposed to apportion the legislature on a per capita basis, the electorate has made its choice between the conflicting principles "[6]

Concluding, the District Court stated:

> "We believe that no constitutional question arises as to the actual, substantive nature of apportionment if the popular will has expressed itself. . . In Colorado the liberal provisions for initiation of constitutional amendments permit the people to act—and they have done so If they become dissatisfied with what they have done, a workable method of change is available The people are free, within the framework of the Federal Constitution, to establish the governmental forms which they desire and when they have acted the courts should not enter the political wars to determine the rationality of such action."[7]

In dissenting, District Judge Doyle stated that he regarded the senatorial apportionment under Amendment No 7 as irrational and invidiously discriminatory, and that the constitutional amendment had not sufficiently remedied the gross disparities previously found by the District Court to exist in Colorado's prior apportionment scheme. Instead, he stated, the adopted plan freezes senatorial apportionment and merely retains the former system with certain minor changes Equality of voting power in both houses is constitutionally required, the dissent stated, since there is no logical basis for distinguishing between the two bodies of the Colorado Legislature In rejecting the applicability of the so-called federal analogy, Judge Doyle relied on this Court's decision in *Gray* v. *Sanders*, 372 U S 368 He concluded that, although ab-

[6] *Ibid* Continuing, the court below stated

"The initiative gives the people of a state no power to adopt a constitutional amendment which violates the Federal Constitution Amendment No 7 is not valid just because the people voted for it [But] the traditional and recognized criteria of equal protection are arbitrariness, discrimination, and lack of rationality The actions of the electorate are material to the application of the criteria The contention that the voters have discriminated against themselves appalls rather than convinces Difficult as it may be at times to understand mass behavior of human beings, a proper recognition of the judicial function precludes a court from holding that the free choice of the voters between two conflicting theories of apportionment is irrational or the result arbitrary

"The electorate of every county from which the plaintiffs come preferred Amendment No 7 In the circumstances it is difficult to comprehend how the plaintiffs can sue to vindicate a public right At the most they present a political issue which they lost On the questions before us we shall not substitute any views which we may have for the decision of the electorate [W]e decline to act as a superelectorate to weigh the rationality of a method of legislative apportionment adopted by a decisive vote of the people" *Id*, at 932–933

And, earlier in its opinion on the merits, the District Court stated "With full operation of the one-man, one-vote principle, the Colorado electorate by an overwhelming majority approved a constitutional amendment creating a Senate, the membership of which is not apportioned on a strict population basis By majority process the voters have said that minority process in the Senate is what they want A rejection of their choice is a denial of the will of the majority If the majority becomes dissatisfied with that which it has created, it can make a change at an election in which each vote counts the same as every other vote" *Id*, at 926–927

[7] *Id*, at 933

solute equality is a practical impossibility, legislative districting based substantially on population is constitutionally required, and that the disparities in the apportionment of Senate seats under Amendment No 7's provisions cannot be rationalized [8]

Notices of appeal from the District Court's decision were timely filed, and we noted probable jurisdiction on December 9, 1963 375 U S 938

II.

When this litigation was commenced, apportionment of seats in the Colorado General Assembly was based on certain provisions of the State Constitution and statutory provisions enacted to implement them. Article V, § 45, of the Colorado Constitution provided that the legislature "shall revise and adjust the apportionment for senators and representatives . . according to ratios to be fixed by law," at the sessions following the state enumeration of inhabitants in 1885 and every 10 years thereafter, and following each decennial federal census Article V, § 46, as amended in 1950, stated that "the senate shall consist of not more than thirty-five and the house of not more than sixty-five members" Article V, § 47, provided that

> "Senatorial and representative districts may be altered from time to time, as public convenience may require When a senatorial or representative district shall be composed of two or more counties, they shall be contiguous, and the district as compact as may be No county shall be divided in the formation of a senatorial or representative district."

Article V, § 3, provides that senators shall be elected for four-year terms, staggered so that approximately one-half of the members of the Senate are elected every two years, and that all representatives shall be elected for two-year terms.

Pursuant to these general constitutional provisions, the Colorado General Assembly has periodically enacted detailed statutory provisions establishing legislative districts and prescribing the apportionment to such districts of seats in both houses of the Colorado Legislature Since the adoption of the Colorado Constitution in 1876, the General Assembly has been reapportioned or redistricted in the following years 1881, 1891, 1909, 1913, 1932, 1953, and, with the adoption of Amendment

[8] Additionally, Judge Doyle correctly stated that "a properly apportioned state legislative body must at least approximate by bonafide attempt the creation of districts substantially related to population" 219 F Supp, at 941 With respect to the relatively easy availability of the initiative procedure in Colorado, the dissent perceptively pointed out that "it is of little consolation to an individual voter who is being deprived of his rights that he can start a popular movement to change the Constitution This possible remedy is not merely questionable, it is for practical purposes impossible" *Id*, at 942 Judge Doyle referred to Amendment No 7 s provisions relating to senatorial apportionment as "the product of a mechanical and arbitrary freezing accomplished by adoption, with slight modification, of the unlawful alignments which had existed in the previous statute" *Id*, at 943 Discussing the majority's view that geographic and economic considerations were relevant in explaining the disparities from population-based senatorial representation, he discerningly stated that geographic and area factors carry "little weight when considered in the light of modern methods of electronic communication, modern highways, automobiles and airplanes,' and, with regard to economic considerations, that "economic interests are remarkably well represented without special representation," that "it is dangerous to build into a political system a favored position for a segment of the population of the state," that "there exists no practical method of ridding ourselves of them," and that, "long after the institutions pass, the built-in advantage remains even though it is at last only a vestige of the dead past" *Ibid*

No 7, in 1962[9] The 1932 reapportionment was an initiated measure, adopted because the General Assembly had neglected to perform its duty under the State Constitution In 1933 the legislature attempted to thwart the initiated measure by enacting its own legislative reapportionment statute, but the latter measure was held unconstitutional by the Colorado Supreme Court[10]

The 1953 apportionment scheme, implementing the existing state constitutional provisions and in effect immediately prior to the adoption of Amendment No 7, was contained in several statutory provisions which provided for a 35-member Senate and a 65-member House of Representatives Section 63–1–2 of the Colorado Revised Statutes established certain population "ratio" figures for the apportionment of Senate and House seats among the State's 63 counties One Senate seat was to be allocated to each senatorial district for the first 19,000 population, with one additional senator for each senatorial district for each additional 50,000 persons or fraction over 48,000 One House seat was to be given to each representative district for the first 8,000 population, with one additional representative for each House district for each additional 25,000 persons or fraction over 22,400 Sections 63–1–3 and 63–1–6 established 25 senatorial districts and 35 representative districts, respectively, and allocated the 35 Senate seats and 65 House seats among them according to the prescribed population ratios No counties were divided in the formation of senatorial or representative districts, in compliance with the constitutional prescription Thus, senators and representatives in those counties entitled to more than one seat in one or both bodies were elected at large by all of the county's voters The City and County of Denver was given eight Senate seats and 17 House seats, and Pueblo County was allocated two Senate seats and four House seats Other populous counties were also given more than one Senate and House seat each Certain counties were entitled to separate representation in either or both of the houses, and were given one seat each Sparsely populated counties were combined in multicounty districts

Under the 1953 apportionment scheme, applying 1960 census figures, 29 8% of the State's total population lived in districts electing a majority of the members of the Senate, and 32 1% resided in districts electing a majority of the House members. Maximum population-variance ratios of approximately 8-to-1 existed between the most populous and least populous districts in both the Senate and the House One senator represented a district containing 127,520 persons, while another senator had only 17,481 people in his district The smallest representa-

[9] Admittedly, the Colorado Legislature has never complied with the state constitutional provision requiring the conducting of a decennial state census in 1885 and every 10 years thereafter, and of course has never reapportioned seats in the legislature based upon such a census Under Amendment No 7, sole reliance is placed on the federal census, and there is no longer any requirement for the conducting of a decennial state census

In its initial opinion, the District Court stated that there had been only a "modicum of apportionment, either real or purported," as well as "several abortive attempts," since Colorado first achieved statehood However, in its later opinion on the merits, the court below viewed the situation rather differently, and stated that "apportionment of the Colorado legislature has not remained static" As indicated by the District Court, in addition to the reapportionments which were effected, "in 1954 the voters rejected a referred apportionment measure and in 1956 rejected an initiated constitutional amendment proposing the reapportionment of both chambers of the legislature on a straight population basis" 219 F Supp , at 930

[10] *Armstrong* v *Mitten*, 95 Colo 426, 37 P 2d 757 (1934) See note 24, *infra*

tive district had a population of only 7,867, while another district was given only two House seats for a population of 127,520 In discussing the 1953 legislative apportionment scheme, the District Court, in its initial opinion, stated that "factual data presented at the trial reveals the existence of gross and glaring disparity in voting strength as between the several representative and senatorial districts," and that "the inevitable effect [of the existing apportionment provisions] has been to develop severe disparities in voting strength with the growth and shift of population " [11]

Amendment No 7 provides for the establishment of a General Assembly composed of 39 senators and 65 representatives, with the State divided geographically into 39 senatorial and 65 representative districts, so that all seats in both houses are apportioned among single-member districts [12] Responsibility for creating House districts "as nearly equal in population as may be" is given to the legislature Allocation of senators among the counties follows the existing scheme of districting and apportionment, except that one sparsely populated county is detached from populous Arapahoe County and joined with four others in forming a senatorial district, and one additional senator is apportioned to each of the counties of Adams, Arapahoe, Boulder and Jefferson. Within counties given more than one Senate seat, senatorial districts are to be established by the legislature "as nearly equal in population as may be " [13] Amendment No 7 also provides for a revision of representative districts, and of senatorial districts within counties given more than one Senate seat, after each federal census, in order to maintain conformity with the prescribed requirements [14] Pursuant to this constitutional mandate, the Colorado Legislature, in early 1963, enacted a statute establishing 65 representative districts and creating senatorial districts in counties given more than one Senate seat [15] Under the newly adopted House apportionment plan, districts in which about 45 1% of the State's total population reside are represented by a majority of the members of that body The maximum population-variance ratio, between the most populous and least populous House districts, is approximately 1 7-to-1 The court below concluded that the

[11] 208 F Supp, at 474, 475

[12] Amendment No 7 is set out as Appendix A to the District Court's opinion on the merits, 219 F Supp, at 932–934, and provides for the repeal of the existing Art V, § § 45, 46 and 47, and the adoption of "new Sections 45, 46, 47 and 48 of Article V" which are set out verbatim in the Appendix to this opinion

Additionally, the provisions of proposed Amendment No 8, rejected by the Colorado electorate, are set out as Appendix B to the District Court's opinion on the merits 219 F Supp, at 934–935 See the discussion of Amendment No 8's provisions in note 4 *supra*

[13] In addition to establishing House districts, the legislation enacted by the Colorado General Assembly in early 1963, in implementation of Amendment No 7's provisions also divided counties apportioned more than one Senate seat into single-member districts Amendment No 7, in contrast to Amendment No 8, explicitly provided for districting, with respect to both Senate and House seats, in multi-member counties The rejected amendment, on the other hand, made no provision at all for districting within counties given more than one Senate seat, and allowed subdistricting of House seats only upon specific approval of such a plan by a county's voters Thus, Amendment No 8 would at least in part have perpetuated the extremely objectionable feature of the existing apportionment scheme, under which legislators in multimember counties were elected at large from the county as a whole

[14] As stated by the District Court, "Mandatory provisions [of Amendment No 7] require the revisions of representative districts and of senatorial districts within counties apportioned more than one senator after each Federal Census" 219 F Supp, at 925 Under the provisions of Amendment No 7, eight counties are given more than one Senate seat, and 14 of the 39 senatorial districts are comprised of more than one county

[15] Colo Laws 1963, c 143, pp 520–532, referred to as House Bill No, 65,

House was apportioned as nearly on a population basis as was practicable, consistent with Amendment No 7's requirement that "no part of one county shall be added to another county or part of another county" in the formation of a legislative district, and directed its concern solely to the question of whether the deviations from a population basis in the apportionment of Senate seats were rationally justifiable.[16]

Senatorial apportionment, under Amendment No 7, involves little more than adding four new Senate seats and distributing them to four populous counties in the Denver area, and in substance perpetuates the existing senatorial apportionment scheme.[17] Counties containing only 33 2% of the State's total population elect a majority of the 39-member Senate under the provisions of Amendment No 7 Las Animas County, with a 1960 population of only 19,983, is given one Senate seat, while El Paso County, with 143,742 persons, is alloted only two Senate seats Thus the maximum population-variance ratio, under the revised senatorial apportionment, is about 3 6-to-1.[18] Denver and the three adjacent suburban counties contain about one-half of the State's total 1960 population of 1,753 947, but are given only 14 out of 39 senators The Denver, Pueblo, and Colorado Springs metropolitan areas, containing 1,191,832 persons, about 68%, or over two-thirds of Colorado's population, elect only 20 of the State's 39 senators, barely a majority The average population of Denver's eight senatorial districts, under Amendment No 7, is 61,736, while the five least populous districts contain less than 22,000 persons each Divergences from population-based representation in the Senate are growing continually wider since the underrepresented districts in the Denver, Pueblo, and Colorado Springs metropolitan areas are rapidly gaining in population, while many of the overrepresented rural districts have tended to decline in population continuously in recent years.[19]

[16] As stated by the court below, "The Colorado legislature met in January, 1963, and passed a statute H B 65, implementing Amendment No 7 No question is raised concerning the implementing legislation" 219 F Supp , at 924–925 Again the District Court stated 'The cases now before the court do not present the issues as they existed prior to the apportionment made by Amendment No 7 [T]he then-existing disparities in each chamber were severe, the defendants presented no evidence to sustain the rationality of the apportionment, and witnesses for the intervenors, while defending the apportionment of the Senate, recognized the malapportionment of the House The change by Amendment No 7 was such as to require a trial de novo and we are concerned with the facts as finally presented" *Id* at 928

[17] Appendix C to the District Court's opinion on the merits contains a chart of the senatorial districts created under Amendment No 7's provisions, showing the population of and the counties included in each 219 F Supp, at 935–938

[18] Included as Appendix D to the District Court's opinion on the merits is a chart showing the ratios of population per senator in each district to the population of the least populous senatorial district, as established by Amendment No 7 and the implementing statutory provisions dividing counties given more than one Senate seat into separate senatorial districts 219 F Supp , at 939

[19] Appellants have repeatedly asserted that equality of population among districts has been the traditional basis of legislative apportionment in both houses of the Colorado General Assembly They pointed out that both houses of the territorial legislature established by Congress in the organic act creating the territory of Colorado in 1861 were expressly required to be apportioned on a population basis And, they contended, the legislative districts established for the apportionment of the 26 Senate and 49 House seats in the first General Assembly after Colorado became a State were virtually all substantially equal in population Referring to the language of the Colorado Supreme Court in *Armstrong* v *Mitten*, 95 Colo 425, 37 P 2d 757 (1934), they urged that no basis other than population has ever been recognized for apportioning representation in either house of the Colorado Legislature Appellees, on the other hand, have consistently contended that population "ratio" figures have been used in apportioning seats in both houses since 1881, requiring proportionately more population to obtain additional legislative representation Since the Colorado Supreme Court's statements in *Armstrong* regarding population as the basis of legislative representation plainly assumed the existence of an underlying population ratio scheme, its language can hardly be read

III.

Several aspects of this case serve to distinguish it from the other cases involving state legislative apportionment also decided this date Initially, one house of the Colorado Legislature is at least arguably apportioned substantially on a population basis under Amendment No 7 and the implementing statutory provisions Under the apportionment schemes challenged in the other cases, on the other hand, clearly neither of the houses in any of the state legislatures is apportioned sufficiently on a population basis so as to be constitutionally sustainable Additionally, the Colorado scheme of legislative apportionment here attacked is one adopted by a majority vote of the Colorado electorate almost contemporaneously with the District Court's decision on the merits in this litigation Thus, the plan at issue did not result from prolonged legislative inaction. However, the Colorado General Assembly, in spite of the state constitutional mandate for periodic reapportionment, has enacted only one effective legislative apportionment measure in the past 50 years [20]

As appellees have correctly pointed out, a majority of the voters in every county of the State voted in favor of the apportionment scheme embodied in Amendment No 7's provisions, in preference to that contained in proposed Amendment No 8, which, subject to minor deviations, would have based the apportionment of seats in both houses on a population basis. However, the choice presented to the Colorado electorate, in voting on these two proposed constitutional amendments, was hardly as clear-cut as the court below regarded it One of the most undesirable features of the existing apportionment scheme was the requirement that, in counties given more than one seat in either or both of the houses of the General Assembly, all legislators must be elected at large from the county as a whole Thus, under the existing plan, each Denver voter was required to vote for eight senators and 17 representatives. Ballots were long and cumbersome, and an intelligent choice among candidates for seats in the legislature was made quite difficult. No identifiable constituencies *within* the populous counties resulted, and the residents of those areas had no single member of the Senate or House elected specifically to represent them Rather, each legislator elected from a multimember county represented the county as a whole [21] Amendment No 8, as distinguished from Amendment

out of context to support the proposition that absolute equality of population among districts has been the historical basis of legislative apportionment in Colorado For a short discussion of legislative apportionment in Colorado, including the adoption of Amendment No 7 and the instant litigation, see Note, 35 U of Colo L Rev 431 (1963)

[20] In 1953 the Colorado General Assembly enacted the legislative apportionment scheme in effect when this litigation was commenced Prior to 1953, the last effective apportionment of legislative representation by the General Assembly itself was accomplished in 1913 The 1932 measure was an initiated act, adopted by a vote of the Colorado electorate Although the legislature enacted a statutory plan in 1933, in an attempt to nullify the effect of the 1932 initiated act, that measure was held invalid and unconstitutional as a matter of state law, by the Colorado Supreme Court See note 24 *infra* And the 1962 adoption of the apportionment scheme contained in proposed constitutional Amendment No 7 resulted, of course, not from legislative action, but from a vote of the Colorado electorate approving the initiated measure The 1963 statutory provisions were enacted by the General Assembly simply in order to comply with Amendment No 7's mandate for legislative implementation

[21] We do not intimate that apportionment schemes which provide for the at-large election of a number of legislators from a county, or any political subdivision, are constitutionally defective Rather, we merely point out that there are certain aspects of electing legislators at large from a county as a whole that might well make the adoption of such a scheme undesirable to many voters residing in multimember counties.

No 7, while purportedly basing the apportionment of seats in both houses on a population basis, would have perpetuated, for all practical purposes, this debatable feature of the existing scheme Under Amendment No 8, senators were to be elected at large in those counties given more than one Senate seat, and no provision was made for subdistricting within such counties for the purpose of electing senators Representatives were also to be elected at large in multimember counties pursuant to the provisions of Amendment No 8, at least initially, although subdistricting for the purpose of electing House members was permitted if the voters of a multimember county specifically approved a representative subdistricting plan for that county Thus, neither of the proposed plans was, in all probability, wholly acceptable to the voters in the populous counties, and the assumption of the court below that the Colorado voters made a definitive choice between two contrasting alternatives and indicated that "minority process in the Senate is what they want" does not appear to be factually justifiable

Finally, this case differs from the others decided this date in that the initiative device provides a practicable political remedy to obtain relef against alleged legislative malapportionment in Colorado [22] An initiated measure proposing a constitutional amendment or a statutory enactment is entitled to be placed on the ballot if the signatures of 8% of those voting for the Secretary of State in the last election are obtained No geographical distribution of petition signers is required Initiative and referendum has been frequently utilized throughout Colorado's history [23] Additionally, Colorado courts have traditionally not been hesitant about adjudicating controversies relating to legislative apportionment [24] However, the Colorado Supreme Court, in its 1962

[22] Article V, § 1, of the Colorado Constitution provides that "the people reserve to themselves the power to propose laws and amendments to the constitution and to enact or reject the same at the polls independent of the general assembly ," and further establishes the specific procedures for initiating proposed constitutional amendments or legislation

Twenty-one States make some provision for popular initiative Fourteen States provide for the amendment of state constitutional provisions through the process of initiative and referendum See The Council of State Governments, The Book of the States, 1962–1963, 14 (1962) Seven States allow the use of popular initiative for the passage of legislation but not constitutional amendments Both types of initiative and referendum may, of course, be relevant to legislative reapportionment See Report of Advisory Commission on Intergovernmental Relations, Apportionment of State Legislatures 57 (1962) In some States the initiative process is ineffective and cumbersome, while in others, such as Colorado, it is a practicable and frequently utilized device

In addition to the initiative device, Art V §1, of the Colorado Constitution provides that, upon the timely filing of a petition signed by 5% of the State's voters or at the instance of the legislature, the Colorado electorate reserves the power of voting upon legislative enactments in a statewide referendum at the next general election

[23] Amendment of the Colorado Constitution can be accomplished, in addition to resort to the initiative and referendum device, through a majority vote of the electorate on an amendment proposed by the General Assembly following a favorable vote thereon "by two-thirds of all the members elected to each house" of the Colorado Legislature, pursuant to Art XIX, § 2, of the Colorado Constitution Additionally, a constitutional convention can be convened, upon the favorable recommendation of two-thirds of the members elected to each house of the General Assembly, if the electorate approves of the calling of such a convention to "revise, alter or amend" the State Constitution, under Art XIX § 1, of the Colorado Constitution Pursuant to Art XIX, § 1, "the number of members of the convention shall be twice that of the senate and they shall be elected in the same manner, at the same places, and in the same districts"

[24] See *Armstrong v Matton*, 95 Colo 425, 37 P 2d 757 (1934), where the Colorado Supreme Court held that a 1923 statute, enacted by the legislature to effectively nullify the 1932 initiated act reapportioning legislative representation, was void under the state constitutional provisions In finding the legislative measure invalid, the Colorado court stated that 'redistricting must be done with due regard to the requirement that representation in the General Assembly shall be based upon population,' and that "the legislative act in question is void because it violates section 45 of article 5 of the Constitution, which requires the reappor-

decision discussed previously in this opinion,[25] refused to consider or pass upon the federal constitutional questions, but instead held only that the Colorado General Assembly was not required to enact a reapportionment statute until the following legislative session.[26]

IV.

In *Reynolds* v. *Sims*, decided also this date, we held that the Equal Protection Clause requires that both houses of a bicameral state legislature must be apportioned substantially on a population basis. Of course, the court below assumed, and the parties apparently conceded, that the Colorado House of Representatives, under the statutory provisions enacted by the Colorado Legislature in early 1963 pursuant to Amendment No 7's dictate that the legislature should create 65 House districts "as nearly equal in population as may be," is now apportioned sufficiently on a population basis to comport with federal constitutional requisites We need not pass on this question, since the apportionment of Senate seats, under Amendment No 7, clearly involves departures from population-based representation too extreme to be constitutionally permissible, and there is no indication that the apportionment of the two houses of the Colorado General Assembly, pursuant to the 1962 constitutional amendment, is severable.[27] We therefore conclude that the District Court erred in holding the legislative apportionment plan embodied in Amendment No 7 to be constitutionally valid Under neither Amendment No 7's plan, nor, of course, the previous statutory scheme, is the overall legislative representation in the two houses of the Colorado Legislature sufficiently grounded on population to be constitutionally sustainable under the Equal Protection Clause.[28]

tionment to be made on the basis of population, as disclosed by the census, and according to ratios to be fixed by law ' Stating that "it is clear that ratios, after having been fixed under section 45, cannot be changed until after the next census," the Colorado Supreme Court concluded that "the legislative act attempts to confer upon some districts a representation that is greater, and upon others a representation that is less, than they are entitled to under the Constitution" *Id*., at 438, 37 P 2d, at 758

[25] See note 2, *supra*

[26] *In re Legislative Reapportionment*, 374 P 2d 66 (Colo Sup Ct 1962) Even so, the Colorado court stated that "it is abundantly clear that this court has jurisdiction " *Id*., at 69 See note 2, *supra*

[27] See *The Maryland Committee for Fair Representation* v *Tawes*, ___ U S ___ ___, decide also this date, where we discussed the need for considering the apportionment of seats in both houses of an bicameral state legislature in evaluating the constitutionality of a state legislative apportionment scheme, regardless of what matters were raised by the parties and decided by the court below Consistent with this approach, in determining whether a good faith effort to establish districts substantially equal in population has been made, a court must necessarily consider a State's legislative apportionment scheme as a whole Only after an evaluation of an opportionment plan in its totality can a court determine whether there has been sufficient compliance with the requisites of the Equal Protection Clause Deviations from a strict population basis, so long rationally justifiable, may be utilized to balance a slight overrepresentation of a particular area in one house with a minor underrepresentation of that area in the other house But on the other hand, disparities from population-based representation, though minor, may be cumulative instead of offsetting where the same areas are disadvantaged in both houses of a state legislature, and may therefore render the apportionment scheme at least constitutionally suspect Of course, the court below can properly take into consideration the present apportionment of seats in the House in determining what steps must be taken in order to achieve a plan of legislative apportionment in Colorado that sufficiently comports with federal constitutional requirements

[28] See *Reynolds* v *Sims* ___ U S, at ___, where we discussed some of the underlying reasons for our conclusion that the Equal Protection Clause requires that seats in both houses of a state legislature must be apportioned substantially on a population basis in order to comport with federal constitutional requisites

Except as an interim remedial procedure justifying a court in staying its hand temporarily, we find no significance in the fact that a nonjudicial, *political* remedy may be available for the effectuation of asserted rights to equal representation in a state legislature Courts sit to adjudicate controversies involving alleged denials of constitutional rights While a court sitting as a court of equity might be justified in temporarily reframing from the issuance of injunctive relief in an apportionment case in order to allow for resort to an available political remedy, such as initiative and referendum, individual constitutional rights cannot be deprived, or denied judicial effectuation, because of the existence of a nonjudicial remedy through which relief against the alleged malapportionment, which the individual voters seek, might be achieved An individual's constitutionally protected right to cast an equally weighted vote cannot be denied even by a vote of a majority of a State's electorate, if the apportionment scheme adopted by the voters fails to measure up to the requirements of the Equal Protection Clause Manifestly, the fact that an apportionment plan is adopted in a popular referendum is insufficient to sustain its constitutionality or to induce a court of equity to refuse to act As stated by this Court in *West Virginia State Bd of Educ* v *Barnette*, 319 U S 624, 638, "One's right to life, liberty, and property and other fundamental rights may not be submitted to vote; they depend on the outcome of no elections " [29] A citizen's constitutional rights can hardly be infringed simply because a majority of the people choose to do so [30] We hold *that the fact that* a challenged legislative apportionment plan was approved by the electorate is without federal constitutional significance, if the scheme adopted fails to satisfy the basic requirements of the Equal Protection Clause, as delineated in our opinion in *Reynolds* v *Sims* And we conclude that the fact that a practicably available political remedy, such as initiative and referendum, exists under state law provides justification only for a court of equity to stay its hand temporarily while recourse to such a remedial device is attempted or while proposed initiated measures relating to legislative apportionment are pending and will be submitted to the State's voters at the next election

[29] And, as stated by the court in *Hall* v *St Helena Parish School Bd*, 197 F Supp 649, 659 (D C E D La 1961), aff'd, 368 U S 515, "No plebiscite can legalize an unjust discrimination "

[30] In refuting the majority's reliance on the fact that Amendment No 7 had been adopted by a vote of the Colorado electorate, Judge Doyle, in dissenting below, stated

"The protection of constitutional rights is not to be approached either pragmatically or expediently, and though the fact of enactment of a constitutional provision by heavy vote of the electorate produces pause and generates restraint we can not, true to our oath, uphold such legislation in the face of palpable infringement of rights Thus, state racial legislation would unquestionably enjoy overwhelming electorate approval in certain of our states, yet no one would argue that this factor could compensate for manifest inequality It is too clear for argument that constitutional law is not a matter of majority vote Indeed, the entire philosophy of the Fourteenth Amendment teaches that it is personal rights which are to be protected against the will of the majority The rights which are here asserted are the rights of the individual plaintiffs to have their votes counted equally with those of other voters [T]o say that a majority of the voters today indicate a desire to be governed by a minority, is to avoid the issue which this court is asked to resolve It is no answer to say that the approval of the polling place necessarily evidences a rational plan The plaintiffs have a right to expect that the cause will be determined in relation to the standards of equal protection Utilization of other or different standards denies them full measure of justice " 219 F Supp, at 944

Because of the imminence of the November 1962 election, and the fact that two initiated proposals relating to legislative apportionment would be voted on by the State's electorate at that election, the District Court properly stayed its hand and permitted the 1962 election of legislators to be conducted pursuant to the existing statutory scheme But appellees' argument, accepted by the court below, that the apportionment of the Colorado Senate, under Amendment No 7, is rational because it takes into account a variety of geographical, historical, topographic and economic considerations fails to provide an adequate justification for the substantial disparities from population-based representation in the allocation of Senate seats to the disfavored populous areas [31] And any attempted reliance on the so-called federal analogy is factually as well as constitutionally without merit.[32]

Since the apportionment of seats in the Colorado Legislature, under the provisions of Amendment No 7, fails to comport with the requirements of the Equal Protection Clause, the decision below must be reversed Beyond what we said in our opinion in *Reynolds*,[33] we express no view on questions relating to remedies at the present time On remand, the District Court must now determine whether the imminence of the 1964 primary and general elections requires that utilization of the apportionment scheme contained in the constitutional amendment be permitted, for purposes of those elections, or whether the circumstances in Colorado are such that appellants' right to cast adequately weighted votes for members of the State Legislature can practicably be effectuated in 1964. Accordingly, we reverse the decision of the court below and remand the case for further proceedings consistent with the views stated here and in our opinion in *Reynolds* v *Sims*

It is so ordered

---

[31] In its opinion on the merits, the District Court stated "By the admission of states into the Union with constitutions creating bicameral legislatures, membership to which is not apportioned on a population basis, Congress has rejected the principle of equal representation as a constitutional requirement" 219 F Supp, at 927–928 For the reasons stated in our opinion in *Reynolds* v *Sims*, ___ U S, at ___, we find this argument unpersuasive as a justification for the deviations from population in the apportionment of seats in the Colorado Senate under the provisions of Amendment No 7 Also, the court below stated that the disparities from population-based senatorial representation were necessary in order to protect "insular minorities" and to accord recognition to "the state's heterogeneous characteristics" Such rationales are, of course, insufficient to justify the substantial deviations from population in the apportionment of seats in the Colorado Senate under Amendment in No 7, under the views stated in our opinion in *Reynolds*

[32] See *Reynolds* v *Sims*, ___ U S at ___ ___, discussing and rejecting the applicability of the so-called federal analogy to state legislative apportionment matters As stated in the dissent below, "It would appear that there is no logical basis for distinguishing between the lower and the upper house—that the equal protection clause applies to both since no valid analogy can be drawn between the United States Congress" and state legislatures 219 F Supp, at 940–941 Additionally, the apportionment scheme embodied in the provisions of Amendment No 7 differs significantly from the plan for allocating congressional representation among the states Although the Colorado House of Representatives is arguably apportioned on a population basis, and therefore resembles the Federal House, senatorial seats are not apportioned to counties or political subdivisions in a manner that at all compares with the allocation of two seats in the Federal Senate to each state

[33] See *Reynolds* v *Sims*, ___ U S at ___

APPENDIX

Amendment No 7, approved by a vote of the Colorado electorate in November 1962, appears in Colo Laws 1963, c 312, p 1045 *et seq*, and, in relevant part, provides as follows

"Sections 45, 46, and 47 of Article V of the Constitution of Colorado are hereby repealed and new sections 45, 46, 47 and 48 of Article V are adopted, to read as follows

"Section 45 GENERAL ASSEMBLY The general assembly shall consist of 39 members of the senate and 65 members of the house, one to be elected from each senatorial and representative district Districts of the same house shall not overlap All districts shall be as compact as may be and shall consist of contiguous whole general election precincts No part of one county shall be added to another county or part of another county in forming a district When a district includes two or more counties they shall be contiguous

"Section 46 HOUSE OF REPRESENTATIVES The state shall be divided into 65 representative districts which shall be as nearly equal in population as may be

"Section 47 SENATE The state shall be divided into 39 senatorial districts The apportionment of senators among the counties shall be the same as now provided by 63–1–3 of Colorado Revised Statutes 1953, which shall not be repealed or amended other than in numbering districts, except that the counties of Cheyenne, Elbert, Kiowa, Kit Carson and Lincoln shall form one district, and one additional senator is hereby apportioned to each of the counties of Adams, Arapahoe, Boulder and Jefferson Within a county to which there is apportioned more than one senator, senatorial districts shall be as nearly equal in population as may be

"Section 48 REVISION OF DISTRICTS At the regular session of the general assembly of 1963 and each regular session next following official publication of each Federal enumeration of the population of the State, the general assembly shall immediately alter and amend the boundaries of all representative districts and of those senatorial districts within any county to which there is apportioned more than one senator to conform to the requirements of Sections 45, 46 and 47 of this Article V After 45 days from the beginning of each such regular session, no member of the general assembly shall be entitled to or earn any compensation or receive any payments on account of salary or expenses, and the members of any general assembly shall be ineligible for election to succeed themselves in office, until such revisions have been made Until the completion of the terms of the representatives elected at the general election held in November of 1962 shall have expired, the apportionment of senators and representatives and the senatorial and representative districts of the general assembly shall be as provided by law."

[June 15, 1964.]

MR JUSTICE STEWART, whom MR JUSTICE CLARK joins, dissenting

It is important to make clear at the outset what these cases are not about. They have nothing to do with the denial or impairment of any person's right to vote. Nobody's right to vote has been denied. Nobody's right to vote has been restricted. Nobody has been deprived of the right to have his vote counted. The voting right cases which the Court cites are, therefore, completely wide of the mark.[1] Secondly, these cases have nothing to do with the "weighting" or "diluting" of votes cast within any electoral unit. The rule of *Gray* v *Sanders*, 372 U. S. 368, is, therefore, completely without relevance here.[2] Thirdly, these cases are not concerned with the election of members of the Congress of the United States, governed by Article I of the Constitution. Consequently, the Court's decision in *Wesberry* v *Sanders*, 376 U. S. 1, throws no light at all on the basic issue now before us.[3]

The question involved in these cases is quite a different one. Simply stated, the question is to what degree, if at all, the Equal Protection Clause of the Fourteenth Amendment limits each sovereign State's freedom to establish appropriate electoral constituencies from which representatives to the State's bicameral legislative assembly are to be chosen. The Court's answer is a blunt one, and, I think, woefully wrong. The Equal Protection Clause, says the Court, "requires that the seats in both houses of a bicameral state legislature must be apportioned on a population basis."[4]

After searching carefully through the Court's opinions in these and their companion cases, I have been able to find but two reasons offered in support of this rule. First, says the Court, it is "established that the fundamental principle of representative government in this country is

[1] See *Reynolds* v *Sims*, *ante*, pp. ___–___, citing *Ex parte Yarbrough*, 110 U. S. 651; *United States* v *Mosley*, 238 U. S. 383; *Guinn* v *United States*, 238 U. S. 347; *Lane* v *Wilson*, 307 U. S. 268; *United States* v *Classic*, 313 U. S. 299; *Ex parte Siebold*, 100 U. S. 371; *United States* v *Saylor*, 322 U. S. 385; *Gomillion* v *Lightfoot*, 364 U. S. 339; *Nixon* v *Herndon*, 273 U. S. 536; *Nixon* v *Condon*, 286 U. S. 73; *Smith* v *Allwright*, 321 U. S. 649; *Terry* v *Adams*, 345 U. S. 461.

[2] "Once the geographical unit for which a representative is to be chosen is designated, all who participate in the election are to have an equal vote. . . ." *Gray* v *Sanders*, 372 U. S., at 379. The Court carefully emphasized in *Gray* that the case did *not* "involve a question of the degree to which the Equal Protection Clause of the Fourteenth Amendment limits the authority of a State Legislature in designing the geographical districts from which representatives are chosen for the State Legislature. . . ." 372 U. S., at 376.

[3] In *Wesberry* v *Sanders* the Court held that Article I of the Constitution (which ordained that members of the United States Senate shall represent grossly disparate constituencies in terms of numbers, U. S. Const., Art. I, § 3, cl. 1, see U. S. Const., Amend. XVII) ordained that members of the United States House of Representatives shall represent constituencies as nearly as practicable of equal size in terms of numbers. U. S. Const., Art. I, § 2.

[4] See *Reynolds* v *Sims*, *ante*, p. ___.

one of equal representation for equal numbers of people ..."[5] With all respect, I think that this is not correct, simply as a matter of fact. It has been unanswerably demonstrated before now that this "was not the colonial system, it was not the system chosen for the national government by the Constitution, it was not the system exclusively or even predominantly practiced by the States at the time of adoption of the Fourteenth Amendment, it is not predominantly practiced by the States today."[6] Secondly, says the Court, unless legislative districts are equal in population, voters in the more populous districts will suffer a "debasement" amounting to a constitutional injury. As the Court explains it, "To the extent that a citizen's right to vote is debased, he is that much less a citizen."[7] We are not told how or why the vote of a person in a more populated legislative district is "debased," or how or why he is less a citizen, nor is the proposition self-evident. I find it impossible to understand how or why a voter in California, for instance, either feels or is less a citizen than a voter in Nevada, simply because, despite their population disparities, each of those States is represented by two United States Senators.[8]

To put the matter plainly, there is nothing in all the history of this Court's decisions which supports this constitutional rule. The Court's draconian pronouncement, which makes unconstitutional the legislatures of most of the 50 States, finds no support in the words of the Constitution, in any prior decision of this Court, or in the 175-year political history of our Federal Union.[9] With all respect, I am convinced these

[6] *Baker* v *Carr*, 369 U. S. 186, 266, 301 (Frankfurter, J., dissenting).
See also the excellent analysis of the relevant historical materials contained in MR. JUSTICE HARLAN'S dissenting opinion filed this day in these and their companion cases, *ante*, p. ___.

[7] *Reynolds* v *Sims*, *ante*, p. ___.

[8] On the basis of the 1960 Census, each Senator from Nevada represents fewer than 150,000 constituents, while each Senator from California represents almost 8,000,000. As will become clear later in this opinion, I do not mean to imply that a state legislative apportionment system modeled precisely upon the Federal Congress would necessarily be constitutionally valid in every State.

[9] It has been the broad consensus of the state and federal courts which, since *Baker* v *Carr*, 369 U. S. 186, have been faced with the basic question involved in these cases, that the rule which the Court announces today has no basis in the Constitution and no root in reason. See, *e. g.*, *Sobel* v *Adams*, 208 F. Supp. 316, 214 F. Supp. 811; *Thigpen* v *Meyers*, 211 F. Supp. 826; *Sims* v *Frink*, 205 F. Supp. 245, 208 F. Supp. 431, *ante*, p. ___; *W. M. C. A., Inc.* v *Simon*, 208 F. Supp. 368, *ante*, p. ___; *Baker* v *Carr*, 206 F. Supp. 341; *Mann* v *Davis*, 213 F. Supp. 577, *ante*, p. ___; *Toombs* v *Fortson*, 205 F. Supp. 248; *Davis* v *Synhorst*, 217 F. Supp. 492; *Nolan* v *Rhodes*, 218 F. Supp. 953; *Moss* v *Burkhart*, 207 F. Supp. 885; *Lisco* v *Love*, 219 F. Supp. 922, *ante*, p. ___; *Wisconsin* v *Zimmerman*, 209 F. Supp. 133; *Marshall* v *Hare*, 227 F. Supp. 980; *Hearne* v *Smylie*, 225 F. Supp. 645; *Land* v *Mathas*, 145 So. 2d 871 (Fla.); *Caesar* v *Williams*, 84 Idaho 254, 371 P. 2d 241; *Maryland Committee for Fair Representation* v *Tawes*, 228 Md. 412, 180 A. 2d 656, 182 A. 2d 877, 229 Md. 406, 184 A. 2d 715, *ante*, p. ___; *Levitt* v *Maynard*, 182 A. 2d 807 (N. H.); *Jackman* v *Bodine*, 78 N. J. Super. 414, 188 A. 2d 642; *Sweeney* v *Notte*, 183 A. 2d 296 (R. I.); *Mikell* v *Rousseau*, 183 A. 2d 817 (Vt.).
The writings of scholars and commentators have reflected the same view. See, *e. g.*, De Grazia, Apportionment and Representative Government; Neal, Baker v. decisions mark a long step backward into that unhappy era when a majority of the members of this Court were thought by many to have convinced themselves and each other that the demands of the Constitution were to be measured not by what it says, but by their own notions of wise political theory. The rule announced today is at odds with long-established principles of constitutional adjudication under the Equal Protection Clause, and it stifles values of local individuality and initiative vital to the character of the Federal Union which it was the genius of our Constitution to create

I.

What the Court has done is to convert a particular political philosophy into a constitutional rule, binding upon each of the 50 States, from Maine to Hawaii, from Alaska to Texas, without regard and without respect for the many individualized and differentiated characteristics of each State, characteristics stemming from each State's distinct history, distinct geography, distinct distribution of population, and distinct political heritage My own understanding of the various theories of representative government is that no one theory has ever commanded unanimous assent among political scientists, historians, or others who have considered the problem [10] But even if it were thought that the rule announced today by the Court is, as a matter of political theory, the most desirable general rule which can be devised as a basis for the make-up of the representative assembly of a typical State, I could not join in the fabrication of a constitutional mandate which imports and forever freezes one theory of political thought into our Constitution, and forever denies to every State any opportunity for enlightened and progressive innovation in the design of its democratic institutions, so as to accommodate within a system of representative government the interests and aspirations of diverse groups of people, without subjecting any group or class to absolute domination by a geographically concentrated or highly organized majority

Representative government is a process of accommodating group interests through democratic institutional arrangements Its function is to channel the numerous opinions, interests, and abilities of the people of a State into the making of the State's public policy Appropriate legislative apportionment, therefore, should ideally be designed to insure effective representation in the State's legislature, in cooperation with other organs of political power, of the various groups and interests making up the electorate. In practice, of course, this ideal is approximated in the particular apportionment system of any State by a realistic accommodation of the diverse and often conflicting political forces operating within the State.

I do not pretend to any specialized knowledge of the myriad of individual characteristics of the several States, beyond the records in the cases before us today But I do know enough to be aware that a system of legislative apportionment which might be best for South Dakota, might be unwise for Hawaii with its many islands, or Michigan with its Northern Peninsula I do know enough to realize that

[10] See, *e g*, DeGrazia, Apportionment and Representative Government, pp 19–63, Ross, Elections and Electors, pp 21–127, Lakeman and Lambert, Voting in Democracies, pp 19–37, 149–156, Hogan, Election and Representation, Dahl, A Preface to Democratic Theory

Montana with its vast distances is not Rhode Island with its heavy concentrations of people I do know enough to be aware of the great variations among the several States in their historic manner of distributing legislative power—of the Governors' Councils in New England, of the broad powers of initiative and referendum retained in some States by the people, of the legislative power which some States give to their Governors, by the right of veto or otherwise, of the widely autonomous home rule which many States give to their cities.[11] The Court today declines to give any recognition to these considerations and countless others, tangible and intangible, in holding unconstitutional the particular systems of legislative apportionment which these States have chosen Instead, the Court says that the requirements of the Equal Protection Clause can be met in any State only by the uncritical, simplistic, and heavy-handed application of sixth-grade arithmetic

But legislators do not represent faceless numbers They represent people, or, more accurately, a majority of the voters in their districts—people with identifiable needs and interests which require legislative representation, and which can often be related to the geographical areas in which these people live The very fact of geographic districting, the constitutional validity of which the Court does not question, carries with it an acceptance of the idea of legislative representation of regional needs and interests Yet if geographical residence is irrelevant, as the Court suggests, and the goal is solely that of equally "weighted" votes, I do not understand why the Court's constitutional rule does not require the abolition of districts and the holding of all elections at large[12]

The fact is, of course, that population factors must often to some degree be subordinated in devising a legislative apportionment plan which is to achieve the important goal of ensuring a fair, effective, and balanced representation of the regional, social, and economic interests within a State And the further fact is that throughout our history the apportionments of State Legislatures have reflected the strongly felt American tradition that the public interest is composed of many diverse interests, and that in the long run it can better be expressed by a medley of component voices than by the majority's monolithic command What constitutes a rational plan reasonably designed to achieve this objective will vary from State to State, since each State is unique, in terms of topography, geography, demography, history, heterogeneity and concentration of population, variety of social and economic interests, and in the operation and interrelation of its political institutions But so long as a State's apportionment plan reasonably achieves, in the light of the State's own characteristics, effective and balanced repre-

[11] See, *e g*, Sandalow, The Limits of Municipal Power Under Home Rule A Role for the Courts, 43 Minnesota L Rev 643, Klemme, The Powers of Home Rule Cities in Colorado, 36 U of Colo L Rev 321

[12] Even with legislative districts of exactly equal voter population, 26% of the electorate (a bare majority of the voters in a bare majority of the districts) can, as a matter of the kind of theoretical mathematics embraced by the Court, elect a majority of the legislature under our simple majority electoral system Thus, the Court's constitutional rule permits minority rule

Students of the mechanics of voting systems tell us that if all that matters is that votes count equally, the best vote-counting electoral system is proportional representation in state-wide elections See, *e g*, Lakeman and Lambert, *supra*, n 10 It is just because electoral systems are intended to serve functions other than satisfying mathematical theories, however, that the system of proportional representation has not been widely adopted. *Ibid.*

sentation of all substantial interests, without sacrificing the principle of effective majority rule, that plan cannot be considered irrational.

II.

This brings me to what I consider to be the proper constitutional standards to be applied in these cases. Quite simply, I think the cases should be decided by application of accepted principles of constitutional adjudication under the Equal Protection Clause A recent expression by the Court of these principles will serve as a generalized compendium

> "[T]he Fourteenth Amendment permits the States a wide scope of discretion in enacting laws which affect some groups of citizens differently than others The constitutional safeguard is offended only if the classification rests on grounds wholly irrelevant to the achievement of the State's objective. State legislatures are presumed to have acted within their constitutional power despite the fact that, in practice, their laws result in some inequality A statutory discrimination will not be set aside if any state of facts reasonably may be conceived to justify it " *McGowan* v *Maryland*, 366 U. S. 420, 425–426.

These principles reflect an understanding respect for the unique values inherent in the Federal Union of States established by our Constitution They reflect, too, a wise perception of this Court's role in that constitutional system. The point was never better made than by Mr Justice Brandeis, dissenting in *New State Ice Co* v. *Liebmann*, 285 U S 262, 280 The final paragraph of that classic dissent is worth repeating here:

> "To stay experimentation in things social and economic is a grave responsibility. Denial of the right to experiment may be fraught with serious consequences to the Nation It is one of the happy incidents of the federal system that a single courageous State may, if its citizens choose, serve as a laboratory; and try novel social and economic experiments without risk to the rest of the country. This Court has the power to prevent an experiment. We may strike down the statute which embodies it on the ground that, in our opinion, the measure is arbitrary, capricious or unreasonable. . . . But in the exercise of this high power, we must be ever on our guard, lest we erect our prejudices into legal principles If we would guide by the light of reason, we must let our minds be bold." 285 U. S , at 311.

That cases such as the ones now before us were to be decided under these accepted Equal Protection Clause standards was the clear import of what was said on this score in *Baker* v. *Carr*, 369 U S. 186, 226.

> "Nor need the appellants, in order to succeed in this action, ask the Court to enter upon policy determinations for which judicially manageable standards are lacking Judicial standards under the Equal Protection Clause are well developed and familiar, and it has been open to courts since the enactment of the Fourteenth Amendment to determine, if on the particular facts they must, that

a discrimination reflects *no* policy, but simply arbitrary and capricious action."

It is to be remembered that the Court in *Baker* v. *Carr* did not question what had been said only a few years earlier in *MacDougall* v. *Green*, 335 U S 281, 284:

"It would be strange indeed, and doctrinaire, for this Court, applying such broad constitutional concepts as due process and equal protection of the laws, to deny a State the power to assure a proper diffusion of political initiative as between its thinly populated counties and those having concentrated masses, in view of the fact that the latter have practical opportunities for exerting their political weight at the polls not available to the former. The Constitution—a practical instrument of government—makes no such demands on the States."

Moving from the general to the specific, I think that the Equal Protection Clause demands but two basic attributes of any plan of state legislative apportionment First, it demands that, in the light of the State's own characteristics and needs, the plan must be a rational one. Secondly, it demands that the plan must be such as not to permit the systematic frustration of the will of a majority of the electorate of the State [13] I think it is apparent that any plan of legislative apportionment which could be shown to reflect no policy, but simply arbitrary and capricious action or inaction, and that any plan which could be shown systematically to prevent ultimate effective majority rule, would be invalid under accepted Equal Protection Clause standards But, beyond this, I think there is nothing in the Federal Constitution to prevent a State from choosing any electoral legislative structure it thinks best suited to the interests, temper, and customs of its people. In the light of these standards, I turn to the Colorado and New York plans of legislative apportionment.

III.

COLORADO.

The Colorado plan creates a General Assembly composed of a Senate of 39 members and a House of 65 members The State is divided into 65 equal population representative districts, with one representative to be elected from each district, and 39 senatorial districts, 14 of which include more than one county In the Colorado House, the majority unquestionably rules supreme, with the population factor untempered by other considerations In the Senate rural minorities do not have effective control, and therefore do not have even a veto power over the will of the urban majorities It is true that, as a matter of theoretical arithmetic, a minority of 36% of the voters could elect a majority of

[13] In *Baker* v *Carr*, 369 U S 186, it was alleged that a substantial numerical majority had an effective voice in neither legislative house of Tennessee Failure to reapportion for 60 years in flagrant violation of the Tennessee Constitution and in the face of intervening population growth and movement had created enormous disparities among legislative districts—even among districts seemingly identical in composition—which, it was alleged, perpetuated minority rule and could not be justified on any rational basis It was further alleged that all other means of modifying the apportionment had proven futile, and that the Tennessee legislators had such a vested interest in maintaining the *status quo* that reapportionment by the legislature was not a practical possibility See generally, the concurring opinion of MR JUSTICE CLARK, 369 U. S 261.

the Senate, but this percentage has no real meaning in terms of the legislative process [14] Under the Colorado plan, no possible combination of Colorado senators from rural districts, even assuming *arguendo* that they would vote as a bloc, could control the Senate To arrive at the 36% figure, one must include with the rural districts a substantial number of urban districts, districts with substantially dissimilar interests There is absolutely no reason to assume that this theoretical majority would ever vote together on any issue so as to thwart the wishes of the majority of the voters of Colorado Indeed, when we eschew the world of numbers, and look to the real world of effective representation, the simple fact of the matter is that Colorado's three metropolitan areas, Denver, Pueblo, and Colorado Springs, elect a majority of the Senate.

The State of Colorado is not an economically or geographically homogeneous unit The Continental Divide crosses the State in a meandering line from north to south, and Colorado's 104,247 square miles of area are almost equally divided between high plains in the east and rugged mountains in the west. The State's population is highly concentrated in the urbanized eastern edge of the foothills, while farther to the east lies that agricultural area of Colorado which is a part of the Great Plains The area lying to the west of the Continental Divide is largely mountainous, with two-thirds of the population living in communities of less than 2,500 inhabitants or on farms Livestock raising, mining and tourism are the dominant occupations This area is further subdivided by a series of mountain ranges containing some of the highest peaks in the United States, isolating communities and making transportation from point to point difficult and in some places during the winter months almost impossible The fourth district region of the State is the South Central region, in which is located the most economically depressed area in the State A scarcity of water makes a state-wide water policy a necessity, with each region affected differently by the problem.

The District Court found that the people living in each of these four regions have interests unifying themselves and differentiating them from those in other regions Given these underlying facts, certainly it was not irrational to conclude that effective representation of the interests of the residents of each of these regions was unlikely to be achieved if the rule of equal population districts were mechanically imposed, that planned departures from a strict per capita standard of representation were a desirable way of assuring some representation of distinct localities whose needs and problems might have passed unnoticed if districts had been drawn solely on a per capita basis; a desirable way of assuring that districts should be small enough in area, in a mountainous State like Colorado, where accessibility is affected by configuration as well as compactness of districts, to enable each

[14] The theoretical figure is arrived at by placing the legislative districts for each house in rank order of population and by counting down the smallest population end of the list a sufficient distance to accumulate the minimum population which could elect a majority of the house in question It is a meaningless abstraction as applied to a multimembered body because the factors of political party alignment and interest representation make such theoretical bloc voting a practical impossibility For example, 31 000,000 people in the 26 least populous States representing only 17% of United States population having 52% of the Senators in the United States Senate But no one contends that this bloc controls the Senate's legislative process

senator to have firsthand knowledge of his entire district and to maintain close contact with his constituents; and a desirable way of avoiding the drawing of district lines which would submerge the needs and wishes of a portion of the electorate by grouping them in districts with larger numbers of voters with wholly different interests.

It is clear from the record that if per capita representation were the rule in both houses of the Colorado Legislature, counties having small populations would have to be merged with larger counties having totally dissimilar interests Their representatives would not only be unfamiliar with the problems of the smaller county, but the interests of the smaller counties might well be totally submerged to the interests of the larger counties with which they are joined Since representatives representing conflicting interests might well pay greater attention to the views of the majority, the minority interests could be denied any effective representation at all Its votes would not be merely "diluted," an injury which the Court considers of constitutional dimensions, but rendered totally nugatory

The findings of the District Court speak for themselves:

> "The heterogeneous characteristics of Colorado justify geographic districting for the election of the members of one chamber of the legislature In no other way may representation be afforded to insular minorities. Without such districting the metropolitan areas could theoretically, and no doubt practically, dominate both chambers of the legislature.
>
> . . . . .
>
> "The realities of topographic conditions with their resulting effect on population may not be ignored. For an example, if [the rule of equal population districts] was to be accepted, Colorado would have one senator for approximately every 45,000 persons Two contiguous Western Region senatorial districts, Nos 29 and 37, have a combined population of 51,675 persons inhabiting an area of 20,514 square miles The division of this area into two districts does not offend any constitutional provisions Rather, it is a wise recognition of the practicalities of life.
>
> "We are convinced that the apportionment of the Senate by Amendment No 7 recognizes population as a prime, but not controlling, factor and gives effect to such important considerations as geography, compactness and contiguity of territory, accessibility, observance of natural boundaries, conformity to historical divisions such as county lines and prior representation districts, and 'a proper diffusion of political initiative as between a state's thinly populated counties and those having concentrated masses ' " 219 F. Supp., at 932

From 1954 until the adoption of Amendment 7 in 1962, the issue of apportionment had been the subject of intense public debate The present apportionment was proposed and supported by many of Colorado's leading citizens. The factual data underlying the apportionment were prepared by the wholly independent Denver Research Institute of the University of Denver Finally, the apportionment was adopted by a popular referendum in which not only a 2–1 majority of all the voters

in Colorado, but a majority in each county, including those urban counties allegedly discriminated against, voted for the present plan in preference to an alternative proposal providing for equal representation per capita in both legislative houses. As the District Court said.

> "The contention that the voters have discriminated against themselves appalls rather than convinces Difficult as it may be at times to understand mass behaviour of human beings, a proper recognition of the judicial function precludes a court from holding that the free choice of the voters between two conflicting theories of apportionment is irrational or the result arbitrary " *Ibid*

The present apportionment, adopted overwhelmingly by the people in a 1962 popular referendum as a state constitutional amendment, is entirely rational, and the amendment by its terms provides for keeping the apportionment current [15] Thus the majority has consciously chosen to protect the minority's interests, and under the liberal initiative provisions of the Colorado Constitution, it retains the power to reverse its decision to do so. Therefore, there can be no question of frustration of the basic principle of majority rule.

IV.
NEW YORK.

"Constitutional statecraft often involves a degree of protection for minorities which limits the principle of majority rule Perfect numerical equality in voting rights would be achieved if an entire State legislature were elected at large but the danger is too great that the remote and less populated sections would be neglected or that, in the event of a conflict between two parts of the State, the more populous region would elect the entire legislature and in its councils the minority would never be heard.

"Due recognition of geographic and other minority interests is also a comprehensible reason for reducing the weight of votes in great cities If seventy percent of a State's population lived in a single city and the remainder was scattered over wide country areas and small towns, it might be reasonable to give the city voters somewhat smaller representation than that to which they would be entitled by a strictly numerical apportionment in order to reduce the danger of total neglect of the needs and wishes of rural areas "

The above two paragraphs are from the brief which the United States filed in *Baker* v *Carr*, 369 U S 186 [16] It would be difficult to find words more aptly to describe the State of New York, or more clearly to justify the system of legislative apportionment which that State has chosen

[15] Within the last 12 years, the people of Michigan, California, Washington, and Nebraska (unicameral legislature) have expressed their will in popular referenda in favor of apportionment plans departing from the Court's rule See Dixon, 38 Notre Dame Lawyer *supra*, at 383–385

[16] Brief for the United States as *amicus curiae* on reargument, No 6, 1961 Term, pp 29–30

The Solicitor General, appearing as *amicus* in the present cases, declined to urge this Court to adopt the rule of per capita equality in both houses, stating that "[s]uch an interpretation would press the Equal Protection Clause to an extreme, as applied to State legislative apportionment, would require radical changes in three-quarters of the State governments, and would eliminate the opportunities for local variation " Brief for the United States as *amicus curiae*, No 508, 1963 Term, p 32

Legislative apportionment in New York follows a formula which is written into the New York Constitution and which has been a part of its fundamental law since 1894. The apportionment is not a crazy quilt; it is rational, it is applied systematically, and it is kept reasonably current The formula reflects a policy which accords major emphasis to population, some emphasis to region and community, and a reasonable limitation upon massive overcentralization of power In order to effectuate this policy, the apportionment formula provides that each county shall have at least one representative in the Assembly, that the smaller counties shall have somewhat greater representation in the legislature than representation based solely on numbers would accord, and that some limits be placed on the representation of the largest counties in order to prevent one megalopolis from completely dominating the legislature.

New York is not unique in considering factors other than population in its apportionment formula Indeed, the inclusion of such other considerations is more the rule than the exception throughout the states Two-thirds of the States have given effect to factors other than population in apportioning representation in both houses of their legislatures, and over four-fifths of the States give effect to nonpopulation factors in at least one house [17] The typical restrictions are those like New York's affording minimal representation to certain political subdivisions, or prohibiting districts composed of parts of two or more counties, or requiring districts to be composed of contiguous and compact territory, or fixing the membership of the legislative body All of these factors tend to place practical limitations on apportionment according to population, even if the basic underlying system is one of equal population districts for representation in one or both houses of the legislature

That these are rational policy considerations can be seen from even a cursory examination of New York's political makeup In New York many of the interests which a citizen may wish to assert through the legislative process are interests which touch on his relation to the government of his county as well as to that of the State, and consequently these interests are often peculiar to the citizens of one county As the District Court found, counties have been an integral part of New York's governmental structure since early colonial times, and the many functions performed by the counties today reflect both the historic gravitation toward the county as the central unit of political activity and the realistic fact that the county is usually the most efficient and practical unit for carrying out many governmental programs [18]

[17] See Dixon, 38 Notre Dame Lawyer, *supra*, at 399

[18] The following excerpts from the brief of the Attorney General of New York in this case are instructive

"For example, state aid is administered by the counties in the following areas educational extension work (N Y Education Law §§ 6301, 6302, 6304), assistance to physically handicapped children (N Y Education Law § 4403), social welfare such as medical and other aid for the aged, the blind, dependent children, the disabled, and other needy persons (N Y Social Welfare Law §§ 154, 154, 257, 499), public health (N Y Public Health Law §§ 608, 620, 636, 650, 660), mental health (N Y Mental Hygiene Law, Art 8-A, § 191-a), probation work (N Y Correction Law § 14-a), highway construction, improvement and maintenance (N Y Highway Law §§ 12, 112, 112-a, 279), conservation (N Y County Law § 214, 293-w, N Y Conservation Law §§ 205, 879), and civil defense preparations (State-Defense Emergency Act §§ 23-b, 25-a)

"County governments, are, of course, far more than instrumentalities for the administration of state aid They have extensive powers to adopt, amend or repeal local laws affecting the county (N Y. County Law §§ 301–308), and also

A policy guaranteeing minimum representation to each county is certainly rational, particularly in a State like New York It prevents less densely populated counties from being merged into multi-county districts where they would receive no effective representation at all Further, it may be only by individual county representation that the needs and interests of all the areas of the State can be brought to the attention of the legislative body The rationality of individual county representation becomes particularly apparent in States where legislative action applicable only to one or more particular counties is the permissible tradition

Despite the rationality of according at least one representative to each county, it is clear that such a system of representation, coupled with a provision fixing the maximum number of members in the legislative body—a necessity if the body is to remain small enough for manageably effective action—has the result of creating some population disparities among districts But since the disparity flows from the effectuation of a rational state policy, the mere existence of the disparity itself can hardly be considered an invidious discrimination

In addition to ensuring minimum representation to each county, the New York apportionment formula, by allocating somewhat greater representation to the smaller counties while placing limitations on the representation of the largest counties, is clearly designed to protect against overcentralization of power To understand fully the practical importance of this consideration in New York, one must look to its unique characteristics New York is one of the few States in which the central cities can elect a majority of representatives to the legislature As the District Court found, the 10 most populous counties in the State control both houses of the legislature under the existing apportionment system. Each of these counties is heavily urban, each is in a metropolitan area Together they contain 73 5% of the citizen population, and are represented by 65 5% of the seats in the Senate and 62% of the seats in the Assembly Moreover, the nine counties comprising one metropolitan area—New York City, Nassau, Rockland, Suffolk and Westchester—contain 63 2% of the total citizen population and elect a clear majority of both houses of the legislature under the existing system which the Court today holds invalid Obviously, therefore, the existing system of apportionment clearly guarantees effective majority representation and control in the State Legislature

But this is not the whole story New York City, with its seven million people and a budget larger than that of the State, has, by virtue of its concentration of population, homogeneity of interest, and political cohesiveness, acquired an institutional power and political influence of its own hardly measureable simply by counting the number of its representatives in the legislature Elihu Root, a delegate to the New York Constitutional Convention of 1894, which formulated the basic structure of the present apportionment plan, made this very point at that time

play a vital part in the enactment of state laws which affect only a particular county or counties (see N Y Const, Art IX, §§ 1, 2) The enactment in 1959 of a new County Charter Law (N Y County Law, Art 6-A), providing opportunity for the fundamental reorganization of county governments by county residents, has given the counties an even greater role to play in the social, economic and political life of modern New York." Brief for appellees Secretary of State and Attorney General, No 20, 1963 Term, pp 42–43

> "The question is whether thirty separate centers of 38,606 each scattered over the country are to be compared upon the basis of absolute numerical equality with one center of thirty times 38,606 in one city, with all the multiplications of power that comes from representing a single interest, standing together on all measures against a scattered and disunited representation from the thirty widely separated single centers of 38,606 Thirty men from one place owing their allegiance to one political organization representing the interest of one community, voting together, acting together solidly, why they are worth double the scattered elements of power coming from hundreds of miles apart" 3 Revised Record of the New York State Constitutional Convention of 1894, p 1215

Surely it is not irrational for the State of New York to be justifiably concerned about balancing such a concentration of political power, and certainly there is nothing in our Federal Constitution which prevents a State from reasonably translating such a concern into its apportionment formula See *MacDougall* v *Green*, 335 U. S 281

The State of New York is large in area and diverse in interests The Hudson and Mohawk Valleys, the farm communities along the southern belt, the many suburban areas throughout the State, the upstate urban and industrial centers, the Thousand Islands, the Finger Lakes, the Berkshire Hills, the Adirondacks—the people of all these and many other areas, with their aspirations and their interests, just as surely belong to the State as does the giant metropolis which is New York City What the State has done is to adopt a plan of legislative apportionment which is designed in a rational way to ensure that minority voices may be heard, but that the will of the majority shall prevail

V.

In the allocation of representation in their State Legislature, Colorado and New York have adopted completely rational plans which reflect an informed response to their particularized characteristics and needs The plans are quite different, just as Colorado and New York are quite different But each State, while clearly ensuring that in its legislative councils the will of the majority of the electorate shall rule, has sought to provide that no identifiable minority shall be completely silenced or engulfed The Court today holds unconstitutional the considered governmental choices of these two Sovereign States By contrast, I believe that what each State has achieved fully comports with the letter and the spirit of our constitutional traditions

I would affirm the judgments in both cases

MR JUSTICE CLARK, dissenting:

While I join my Brother STEWART'S opinion, it is well that additional observations be recorded with reference to the Colorado case

The parties concede that the Colorado House of Representatives is now apportioned "as nearly equal in population as may be" The Court does not disturb this stipulation though it seems to accept it in niggardly fashion. The fact that 45 1% of the State's population resides in the area which selects a majority of the House indicates

rather conclusively that the apportionment comes within the test laid down in *Reynolds* v *Sims,* 377 U. S. 695, decided this date, *viz* : " 'one person, one vote.' " that is, "approximately equal" or " 'as nearly as is practicable' " with only "some deviations ." Indeed, the Colorado House is within 4.9% of being perfect. Moreover, the fact that the apportionment follows political subdivision lines to some extent is also a teaching of *Reynolds* v *Sims, supra.* But the Court strikes down Colorado's apportionment, which was adopted by the majority vote of every political subdivision in the State, because the Senate's majority is elected by 33.2% of the population, a much higher percentage than that which elects a majority of the Senate of the United States.

I would refuse to interfere with this apportionment for several reasons. First, Colorado enjoys the initiative and referendum system which it often utilizes and which, indeed, produced the present apportionment. As a result of the action of the Legislature and the use of initiative and referendum, the State Assembly has been reapportioned eight times since 1881. This indicates the complete awareness of the people of Colorado to apportionment problems and their continuing efforts to solve them. The courts should not interfere in such a situation. See my concurring opinion in *Baker* v *Carr,* 369 U. S. 186, 258–259 (1962). Next, as my Brother STEWART has pointed out, there are rational and most persuasive reasons for some deviations in the representation in the Colorado Assembly. The State has mountainous areas which divide it into four regions, some parts of which are almost impenetrable. There are also some depressed areas, diversified industry and varied climate, as well as enormous recreational regions and difficulties in transportation. These factors give rise to problems indigenous to Colorado, which only its people can intelligently solve. This they have done in the present apportionment.

Finally, I cannot agree to the arbitrary application of the "one man, one vote" principle for both houses of a State Legislature. In my view, if one house is fairly apportioned by population (as is admitted here) then the people should have some latitude in providing, on a rational basis, for representation in the other house. The Court seems to approve the federal arrangement of two Senators from each State on the ground that it was a compromise reached by the framers of our Constitution and is a part of the fabric of our national charter. But what the Court overlooks is that Colorado, by an overwhelming vote, has likewise written the organization of its legislative body into its Constitution,* and our dual federalism requires that we give it recognition. After all, the Equal Protection Clause is not an algebraic formula. Equal protection does not rest on whether the practice assailed "results in some inequality" but rather on whether "any state of facts reasonably can be conceived that would sustain it"; and one who attacks it must show "that it does not rest upon any reasonable basis, but is essentially arbitrary." Mr. Justice Van Devanter in *Lindsley* v. *Natural Carbonic Gas Co.,* 220 U. S. 61, 78–79 (1911). Certainly Colorado's arrangement is not arbitrary. On the contrary, it rests on

* The Court says that the choice presented to the electorate was hardly "clear-cut." The short answer to this is that if the voters had desired other choices, they could have accomplished this easily by filing initiative petitions, since in Colorado 8% of the voters can force an election.

reasonable grounds which, as I have pointed out, are peculiar to that State It is argued that the Colorado apportionment would lead only to a legislative stalemate between the two houses, but the experience of the Congress completely refutes this argument Now in its 176th year, the federal plan has worked well It is further said that in any event Colorado's apportionment would substitute compromise for the legislative process. But most legislation is the product of compromise between the various forces acting for and against its enactment.

In striking down Colorado's plan of apportionment, the Court, I believe, is exceeding its powers under the Equal Protection Clause, it is invading the valid functioning of the procedures of the States, and thereby commits a grievous error which will do irreparable damage to our federal-state relationship I dissent

The Maryland Committee for Fair Representation et al , Appellants, v. J. Millard Tawes, Governor, et al.
[June 15, 1964.]

MR CHIEF JUSTICE WARREN delivered the opinion of the Court:

This case involves an appeal from a decision of the Maryland Court of Appeals upholding the validity, under the Equal Protection Clause of the Fourteenth Amendment to the Federal Constitution, of the apportionment of seats in the Maryland Senate

I.

Appellants, residents, taxpayers and voters in four populous Maryland counties (Anne Arundel, Baltimore, Montgomery and Prince George's) and the City of Baltimore, and an unincorporated association, originally brought an action in the Circuit Court of Anne Arundel County, in August 1960, challenging the apportionment of the Maryland Legislature Defendants below, sued in their representative capacities, were various officials charged with duties in connection with state elections Plaintiffs below alleged that the apportionment of both houses of the Maryland Legislature, pursuant to Art III, §§ 2 and 5, of the 1867 Maryland Constitution, as amended, discriminated against inhabitants of the more populous counties and the City of Baltimore by according these persons substantially less representation than that given to persons residing in other areas of the State They contended that the alleged legislative malapportionment violated the Equal Protection Clause of the Fourteenth Amendment since that provision prohibits any State from "denying, diluting or restricting the equality of voting rights or privileges among classes of otherwise eligible voters similarly situated," and asserted that there was no political remedy practicably available under Maryland law to obtain the relief sought.

Plaintiffs below sought a declaratory judgment that Art III, §§ 2 and 5, of the Maryland Constitution deny them and those similarly situated rights protected under the Equal Protection Clause, and that

the failure of the Maryland Legislature to reapportion its membership in accordance with a formula which would reasonably reflect present population figures deprived them of their constitutional rights Plaintiffs also requested a declaration that the failure of the Maryland General Assembly to convene a constitutional convention as approved by a majority of the State's voters in the general election of 1950 violated various provisions of the State Constitution

Plaintiffs requested that, unless the November 1962 election and elections thereafter were conducted on an at-large basis, the Court enjoin defendants from performing various election duties until such time as the General Assembly should submit for a referendum vote by eligible state voters an amendment to Art. III, §§ 2 and 5, which would reapportion the membership of the Maryland Legislature on a population basis in conformity with the requirements of the Fourteenth Amendment Plaintiffs also asked the court to retain jurisdiction of the case until the General Assembly submitted such a constitutional amendment to the State's voters

On February 21, 1961, the Circuit Court sustained defendants' demurrers to plaintiffs' complaint and dismissed the complaint without leave to amend On appeal, the Maryland Court of Appeals, on April 25, 1962, splitting 5-to-2, reversed the order of the Circuit Court and remanded the case for a hearing on the merits 228 Md 412, 180 A 2d 656 Finding that the federal questions raised were not nonjusticiable in a Maryland state court, the Maryland Court of Appeals, after discussing this Court's decision in *Baker* v *Carr*, 369 U S. 186, stated that

> "if any action needs to be taken in order to bring the State's system of legislative apportionment into conformity with the requirements of the Fourteenth Amendment . . , it is preferable from the point of view of responsible self-government that the State's own duly constituted officials and the people themselves undertake the task, rather than leave to the Federal judiciary the delicate and perhaps unwelcome task of doing so "[1]

While recognizing that "there was no need in *Baker* v. *Carr* . . for the Supreme Court to pass upon the power of a State court to deal with questions of State legislative apportionment," the Maryland Court of Appeals found "implicit in the vacation of the judgment and remand by the Supreme Court of the United States to the Supreme Court of Michigan of the case of *Scholle* v *Hare*" this Court's view that cases challenging the constitutionality of state legislative apportionments are "appropriate for consideration by a State court . . "[2] Finding "a strong implication in the *Baker* decision that there must be some reasonable relationship of population, or eligible voters, to representation in the General Assembly, if an apportionment is to escape the label of constitutionally-prohibited invidious discrimination," the Maryland court nevertheless stated that it was not "possible (or advisable if it were possible) to state a precise, inflexible and intractable formula for constitutional representation in the General Assembly."[3] In remanding to the lower state court to "receive evi-

[1] 228 Md., at 419, 180 A 2d, at 659
[2] *Id.*, at 428, 180 A 2d, at 664
[3] *Id.*, at 433–434, 180 A 2d, at 667–668.

dence to determine whether or not an invidious discrimination does exist with respect to representation in either or both houses" of the Maryland Legislature, the Court of Appeals stated that, if the Maryland constitutional provisions relating to legislative apportionment were held invalid as to the November 1962 election, the Circuit Court should "also declare that the Legislature has the power, if called into Special Session by the Governor and such action be deemed appropriate by it, to enact a bill reapportioning its membership for purposes" of that election

On May 24, 1962, the Circuit Court, after receiving various exhibits and hearing argument, held that the apportionment of the Maryland House of Delegates invidiously discriminated against the people of Baltimore, Montgomery and Prince George's Counties, but not against the people of Baltimore City or Anne Arundel County, and that therefore Art III, § 5, of the Maryland Constitution, which apportions seats in the House of Delegates, violates the Equal Protection Clause of the Fourteenth Amendment Although stating that the apportionment of the Maryland Senate might be "constitutionally based upon area and geographical location regardless of population or eligible voters," the Circuit Court refrained from formally passing on the validity of the senatorial apportionment The lower court also stated that the Maryland Legislature had the power to enact a statute providing for the reapportionment of the House of Delegates as well as to propose a constitutional amendment providing for such a reapportionment It withheld the granting of injunctive relief but retained jurisdiction to do so before the November 1962 election if such became appropriate.

On May 31, 1962, the Maryland Legislature, called into special session by the Governor, enacted temporary "stop-gap" legislation reapportioning seats in the House of Delegates, by allocating 19 added seats to the more populous areas of the State [4] However, the legislature failed to pass a proposed constitutional amendment reapportioning the Maryland House The newly enacted apportionment statute expires automatically on January 1, 1966, except that, if a constitutional amendment superseding the statutory provisions is submitted to the voters at the 1964 general election and is rejected, the statute will continue in force until January 1, 1970 The statute further provides that upon its expiration the House of Delegates shall again be apportioned according to Art III, § 5, which the Circuit Court had previously held unconstitutional No appeal was taken from the Circuit Court's decision holding invalid the existing apportionment of the Maryland House of Delegates

Following the Circuit Court's failure to rule upon the validity of the senatorial apportionment, plaintiffs appealed this question to the Maryland Court of Appeals On June 8, 1962, the Court of Appeals ordered the case remanded to the Circuit Court for a prompt decision on whether Art III, § 2, of the Maryland Constitution, apportioning seats in the Senate, was valid or invalid under the Equal Protection Clause On June 28, 1962, the Circuit Court held that the apportionment of the Maryland Senate did not violate the Federal Constitution because it felt that an apportionment based upon area and geographi-

[4] Md Ann Code (1962 Supp), Art 43, § 40

cal location, without regard to population, served to protect minorities, preserve legislative checks and balances, and prevent hasty, though temporarily popular, legislation, and accorded with history, tradition and reason, placing considerable reliance on a comparison of that body of the Maryland Legislature with the Federal Senate

On July 23, 1962, the Maryland Court of Appeals, splitting 5-to-3, in a *per curiam* order affirmed the Circuit Court's decision holding valid the apportionment of the Maryland Senate, noting that its reasons would be stated in an opinion to be filed at a later date Plaintiffs' motion for reargument, calling attention to recent decisions and developments relating to legislative apportionment, was denied by the Maryland Court of Appeals on September 11, 1962 On September 25, 1962, the Court of Appeals filed its opinion 229 Md 406, 184 A 2d 715 It stated initially that the appeal did not question the apportionment of the Maryland House Continuing, the Maryland court indicated that it was affirming the decision below and upholding the constitutionality of the senatorial apportionment, on the grounds that (1) Each Maryland county has since 1837 had the same number of Senate seats, except that Baltimore City had periodically been given additional representation, and Maryland counties "have always been an integral part of state government" and have consistently possessed and maintained "distinct individualities", (2) Since the idea of a bicameral legislature assumes two different methods of apportionment in the two Houses to check "hasty and ill-conceived legislation," one house can be constitutionally apportioned on a nonpopulation, geographical basis, and (3) Geographical representation in the Maryland Senate, based on political subdivisions, is closely analagous to the representation of the States in the Federal Senate The dissenting judges pointed out that the House of Delegates, even as reapportioned, was still not apportioned on a population basis, and that gross disparities from population-based representation existed in the senatorial apportionment The dissenters found that neither history nor reliance on the so-called federal analogy provided a rational basis for such gross disparities from population-based representation as were found in the apportionment of the Maryland Legislature, before and after the 1962 reapportionment Since the Maryland Court of Appeals upheld the senatorial apportionment plan, the November 1962 election of senators was conducted pursuant thereto, and delegates were elected under the scheme provided by the 1962 legislation Notice of appeal to this Court from the Maryland Court of Appeals' decision was timely filed, and we noted probable jurisdiction on June 10, 1963 374 U S 804

II.

The Maryland Constitution of 1867 vests legislative power in a bicameral General Assembly consisting of a Senate and a House of Delegates According to official census figures, Maryland had a 1960 population of 3,100,689, and the combined population of the five most populous political subdivisions of Maryland—the counties of Anne Arundel, Baltimore, Montgomery and Prince George's, and the City of Baltimore—was 2,336,409 Thus, about 75 3% of the State's total population lived in these five most populous subdivisions, as of 1960, while about 24 7% lived in the remaining 19 counties of the State

Under Art III, § 2, of the Maryland Constitution, each of the State's 23 counties is allocated one seat in the Maryland Senate, and each of the six legislative districts of the City of Baltimore is also entitled to one Senate seat—resulting in a total of 29 seats in the Maryland Senate Thus, the five most populous political subdivisions, with over three-fourths of the State's total 1960 population, are represented by only 10 senators, or slightly over one-third of the membership of that body. On the other hand, the remaining 19 counties, with an aggregate population of less than one-fourth of the State's population, are nevertheless represented by 19 senators, almost two-thirds of the members of that body [5] And the 15 least populous counties, with only 14 1% of the total state population, can elect a controlling majority of the members of the Maryland Senate A maximum population-variance ratio of almost 32-to-1 exists between the most populous and least populous counties. Kent County, with a 1960 population of 15,481, and Calvert County, where only 15,826 resided, are each entitled to one Senate seat, while Baltimore County, with a 1960 population of 492,428, is likewise entitled to only one senator

As to the apportionment of the Maryland House of Delegates, Art. III, § 5, of the Maryland Constitution, in force when this litigation was commenced but subsequently held unconstitutional by the Maryland courts and superseded by the temporary legislation enacted in 1962, prescribed the representation accorded to each of the State's political subdivisions in the Maryland House The membership of the House was numerically fixed at 123 by this constitutional provision, with each county being given at least two House seats. Seven counties were given two seats each, five counties were allocated three seats, and four counties were given four House members The remaining seven counties, including all of those four populous counties where appellants reside, were each alloted six House seats, and the six legislative districts of the City of Baltimore were given six delegates each.[6] Under the existing House apportionment, the five most populous political subdivisions, with 75 3% of the State's 1960 population, elected only 60 delegates, or less than one-half of the members of the House of Delegates, while the other 19 counties, with only 24 7% of the population, were represented by 63 delegates, or 51 3% of the total membership A maximum population-variance ratio of over 12-to-1 existed between the most populous and least populous counties Baltimore County, with a 1960 population of 492,428, had only the same number of House seats, six, as did Garrett and Somerset Counties, whose combined 1960 population was 40,043

[5] Included as Appendix B to the dissenting opinion of the Maryland Court of Appeals is a chart comparing the senatorial representation of the City of Baltimore and the four most populous counties with that of the other counties in the State 229 Md, at 430, 184 A 2d at 730

[6] Article III, § 4, of the 1867 Maryland Constitution provided for a minimum of two delegates per county, with increases proportional to population up to a total of six when a county's population reached 55,000, but made no provision for additional delegates after a county's population reached and exceeded 55,000 In 1950, Art III § 5, was adopted as a constitutional amendment freezing the representation in the House of Delegates on the basis of the allocation of House seats under the 1940 federal census The purpose of this amendment was to prevent the smaller counties from continuing to receive increased House representation at the expense of the larger political subdivisions which, under the 1867 formula, were not entitled to any more than six delegates after their population had reached 55,000, regardless of how much it might increase thereafter Additionally, Art III, § 4, of the Maryland Constitution, as amended, provides for altering the boundaries of the legislative districts of the City of Baltimore to provide for approximately equal population among the six districts

Under the 1962 temporary legislation reapportioning the Maryland House of Delegates, the only practical effect is to add 19 House seats, increasing the membership of that body from 123 to 142, for the four-year terms of delegates elected in November 1962 Seven seats were added for Baltimore County, four delegates each were added for Montgomery and Prince George's Counties, two of Baltimore City's legislative districts were given two and one additional seats, respectively, and one seat was added for Anne Arundel County. The basic scheme embodied in the temporary legislation is to allocate two House seats to each county and to each of the six Baltimore City legislative districts, and then to distribute the remaining seats, out of a fixed number of 123, among the counties on a population basis The new law provided, however, that during the initial four-year period of its operation, "and for any additional period during which . [it] may be extended," each county and legislative district would be entitled, as a minimum, to the number of House seats that it had on January 1, 1962 Thus, this means that in actuality there will be more than 123 delegates and that the counties and legislative districts which were allegedly overrepresented under the old constitutional provisions will retain much of their former relative power Under the new legislation, the five most populous subdivisions, with 75 3% of the State's 1960 population, elect 79 delegates, or 55 6% of the members in the Maryland House The remaining 19 counties, with less than one-fourth of the State's population, elect 44 4% of the members of the House of Delegates Counties with only 35 6% of the State's total population elect a majority of the members of the House under the 1962 legislation A maximum population-variance ratio of almost 6-to-1 still exists between the most populous and least populous House districts A delegate from Somerset County represents an average of 6,541 persons, whereas a delegate from Baltimore County represents an average of 37,879 Under both the previous and present apportionment provisions, members of both the Senate and the House of Delegates in Maryland are all elected to serve four-year terms [7] None of the Maryland counties, under either the old or revised House apportionment schemes, were divided into districts for the purpose of electing delegates Rather, all House members are elected at large within each county (and legislative district), regardless of the number of seats allocated thereto [8]

Maryland law makes no provision for the initiation of legislation or constitutional amendments by the people [9] Certain constitutional pro-

[7] According to the provisions of Art III, §§ 2, 6 and 7, of the Maryland Constitution

[8] Appendix A to the dissenting opinion of the Maryland Court of Appeals contains a chart showing the populations, according to 1960 census figures, and representation of Maryland's 23 counties and the City of Baltimore in the two houses of the Maryland General Assembly, including figures relating to the apportionment of seats in the House of Delegates both before and after the 1962 reapportionment legislation Also included in this chart are figures showing the number of persons represented by each delegate, and computations of the relative values of votes for delegates and senators in each of the State's political subdivisions. 229 Md , at 429, 184 A 2d, at 728–729

[9] Article XVI, §§ 2–5, of the Maryland Constitution provides a procedure for the conducting of a referendum vote by the people on certain types of legislative enactments, however, upon the filing of a petition signed by at least 3% of the State's qualified voters

For a discussion of the lack of federal constitutional significance of the presence or absence of an available political remedy, see *Lucas* v *The Forty-Fourth General Assembly of the State of Colorado*, —— US ——, ——, decided also this date

visions provide, however, for the taking, at a general election each 20 years, of "the sense of the People in regard to calling a Convention for altering this Constitution" [10] Pursuant to these provisions, a statewide referendum on whether a constitutional convention, which would have the power to propose amendments to the Maryland Constitution, including amendments relating to the reapportionment of representation in the General Assembly, should be called was submitted to the State's voters at the general election in 1950 An overwhelming majority of the voters (by a vote of 200,439 to 56,998) indicated their approval of the calling of a constitutional convention Nevertheless, even though numerous bills providing for the convening of a constitutional convention were introduced into the General Assembly between 1951 and 1962, the General Assembly repeatedly refused to enact the necessary enabling legislation [11] Thus, despite the favorable vote of the State's electorate, no constitutional convention has ever been convened. The next such vote will not be taken until 1970, and, even if the people again approve the calling of a constitutional convention, it cannot be actually convened without the enactment of enabling legislation by the Maryland General Assembly.

Although over 10 reapportionment bills were introduced into the General Assembly between 1951 and 1960, all failed to pass because of opposition by legislators from the less populous counties Both houses of the General Assembly, during its 1960 regular session, declined to pass bills incorporating the limited reapportionment recommendations of a special commission created by the Governor in 1959 to investigate and report on the matter of legislative reapportionment. Numerous proposed reapportionment amendments and reapportionment bills were introduced at the regular session of the Maryland Legislature in 1961 and 1962, but all failed of passage Relief from the allegedly discriminatory apportionment through constitutional amendment was also apparently unavailable, as a practical matter, to appellants Article XIV, § 1, of the Maryland Constitution requires a three-fifths affirmative vote of the membership of both houses of the General Assembly in order to have proposed constitutional amendments submitted to the State's voters at a referendum Admittedly, legislators from the less populous counties controlled each house of the Maryland Legislature And even if a constitutional convention were convened, representation at the convention would be based on the allocation of seats in the allegedly malapportioned General Assembly [12] Significantly, the Maryland Court of Appeals, in its initial opinion in this litigation, stated that "the chances of the appellants' obtaining relief from the infringement upon their alleged constitutional rights, other than from the courts, is so remote as to be practically nil" [13]

[10] Md Const, Art XIV, § 2

[11] Despite the clear mandate of Art XIV, § 2, of the State Constitution, which states that 'if a majority of voters at each election or elections shall vote for a Convention, the General Assembly, at its next session, shall provide by Law for the assembling of such convention, and for the election of Delegates thereto" Compare the situation existing in Colorado, with respect to the availability of a political remedy, as discussed in our opinion in *Lucas*, —— U S, at ——

[12] Pursuant to Art XIV, § 2, of the Maryland Constitution, which provides "Each County, and Legislative District of the City of Baltimore, shall have in such Convention a number of Delegates equal to its representation in both Houses at the time at which the Convention is called"

[13] 228 Md, at 432–433, 180 A 2d, at 667.

Neither in the Maryland Constitution nor in the state statutes is there any provision relating to the reapportionment of representation in the General Assembly Apart from the limited and temporary reapportionment of the House enacted at the 1962 special session of the Maryland Legislature, following the holding of the Circuit Court that the House apportionment provisions of the Maryland Constitution were invalid, all efforts since 1867 to achieve a substantial reapportionment of seats in the General Assembly, with two rather minor exceptions, have been futile [14] In 1900, the City of Baltimore, because of its expanding population, was given an additional Senate seat and an additional legislative district, bringing its total to four senators and legislative districts. Two additional senators and two more legislative districts were added to Baltimore City's representation in 1922 Apart from these increases in the legislative representation of the City of Baltimore, membership in the Maryland Senate remains as provided for in the 1867 Constitution And, until 19 additional House seats were created and distributed among the five most populous political subdivisions in 1962, representation in the House of Delegates had been based, for a period of 95 years, on the limited-population formula embodied in the 1867 Maryland Constitution [15]

III.

In its unreported opinion holding the Maryland senatorial apportionment valid, the Circuit Court, after referring to the reapportionment of seats in the House of Delegates by the Maryland Legislature, stated: "It appears, therefore, and the Petitioners have conceded, that the Lower House has been legally reapportioned according to population." And the Maryland Court of Appeals, in its opinion upholding the Circuit Court's decision that the senatorial apportionment was constitutionally valid, pointed out that the instant appeal was from the lower court's decision on remand of the previously undecided question as to the validity of the senatorial apportionment, and stated: "No question is presented as to the validity of the 'stop-gap' legislation or the reapportionment of the House of Delegates" [16] Questioning the validity of the majority's assumption in this regard, the dissenters stated:

> "The majority of this Court in the present case seems to accept tacitly, if not expressly, the view that if one house of the Maryland General Assembly (the Senate) may be apportioned on a basis which ignores disparities of population, the other house (the House of Delegates) must be apportioned with due regard to population, and assumes that the House of Delegates now is so apportioned It is true that the apportionment of the House is not under attack on this appeal and no question with regard thereto is

[14] In fact, there has been no substantial change in the scheme of legislative representation in Maryland since 1837, when the system of indirect election of senators was abolished In 1864 the City of Baltimore was given additional representation in the form of three legislative districts, with one senator for each of the three districts A constitutional convention in 1867, which adopted the existing Maryland Constitution, confirmed the increased representation accorded the City of Baltimore, but otherwise based the legislative apportionment provisions which it adopted on the 1837 scheme

[15] For a discussion of various aspects of the Maryland legislative apportionment situation, including the instant litigation, see Note, Senate Reapportionment —The Maryland Experience, 31 Geo Wash. L Rev. 812 (1963).

[16] 229 Md., at 410, 184 A 2d, at 716

now before us. It is also true, however, that even as reapportioned by the May 1962 Special Session of the General Assembly, considerable disparities still exist in a number of instances, though previous disparities have been materially reduced. . . . There is no such close relationship between population and representation as in the case of the Michigan House . Surely, the present Maryland apportionment is not so closely related to population as is that of the House of Representatives of the Congress of the United States In that respect the Federal analogy is far from perfect "[17]

Appellants have continually asserted that not only is the constitutional validity of the apportionment of the Maryland Senate at issue in this appeal, but that also presented for decision is the sufficiency, under the Fourteenth Amendment to the Federal Constitution, of "the combined total representation provided for in both Houses of the Maryland General Assembly " Appellees, on the other hand, have repeatedly contended that the sole question presented in this appeal is whether one house of a bicameral state legislature, *i. e.*, the Maryland Senate, can be apportioned on a basis other than population, where the other house is presumably apportioned on a strict population basis Appellees have argued that, since the courts below assumed and appellants allegedly conceded that the Maryland House of Delegates, as reapportioned in 1962, is apportioned on a population basis, and since the decisions of the state courts below here appealed from considered only the validity of the apportionment of the Maryland Senate, this Court is precluded from considering the validity of the apportionment of the Maryland House and is required to assume that that body is now apportioned on a population basis

Regardless of possible concessions made by the parties and the scope of the consideration of the courts below, in reviewing a state legislative apportionment case this Court must of necessity consider the challenged scheme as a whole in determining whether the particular State's apportionment plan, in its entirety, meets federal constitutional requisites. It is simply impossible to decide upon the validity of the apportionment of one house of a bicameral legislature in the abstract, without also evaluating the actual scheme of representation employed with respect to the other house Rather, the proper, and indeed indispensable, subject for judicial focus in a legislative apportionment controversy is the overall representation accorded to the State's voters, in both houses of a bicameral state legislature We therefor reject appellees' contention that the Court is precluded from considering the validity of the apportionment of the Maryland House of Delegates We cannot be compelled to assume that the Maryland House is presently apportioned on a population basis, when that is in fact plainly not so Furthermore, whether or not the House is apportioned on a population basis, the scheme of legislative representation in Maryland cannot be sustained under the Equal Protection Clause of the Federal Constitution, because of the gross disparities from population-based representation in the apportionment of seats in the Maryland Senate

[17] *Id.*, at 421–422, 184 A. 2d, at 723–724

IV.

In *Reynolds* v. *Sims*, 377 U. S. 695, decided also this date, we held that seats in both houses of a bicameral state legislature are required, under the Equal Protection Clause, to be apportioned substantially on a population basis. Neither house of the Maryland Legislature, even after the 1962 legislation reapportioning the House of Delegates, is apportioned sufficiently on a population basis to be constitutionally sustainable. Thus, we conclude that the Maryland Court of Appeals erred in holding the Maryland legislative apportionment valid, and that the decision below must be reversed.

We applaud the willingness of state courts to assume jurisdiction and render decision in cases involving challenges to state legislative apportionment schemes.[18] However, in determining the validity of a State's apportionment plan, the same federal constitutional standards are applicable whether the matter is litigated in a federal or a state court. Maryland's plan is plainly insufficient under the requirements of the Equal Protection Clause as spelled out in our opinion in *Reynolds*.[19]

For the reasons stated in *Reynolds*,[20] appellees' reliance on the so-called federal analogy as a sustaining principle for the Maryland apportionment scheme, despite significant deviations from population-based representation in both houses of the General Assembly, is clearly misplaced.[21] And considerations of history and tradition, relied upon by appellees, do not, and could not, provide a sufficient justification for the substantial deviations from population-based representation in both houses of the Maryland Legislature.

In view of the circumstances of this case, we feel it inappropriate to discuss remedial questions at the present time.[22] Since all members of both houses of the Maryland General Assembly were elected in 1962, and since all Maryland legislators are elected to serve four-year terms, the next election of legislators in Maryland will not be conducted until 1966. Thus, sufficient time exists for the Maryland Legislature to enact legislation reapportioning seats in the General Assembly prior to the 1966 primary and general elections. With the Maryland constitutional provisions relating to legislative apportionment hereby held unconstitutional, the Maryland Legislature presumably has the inherent power to enact at least temporary reapportionment

[18] A commendable example of an exercise of judicial responsibility by a state court in a case involving state legislative apportionment is provided by the action of the Kansas Supreme Court in *Harris* v. *Shanahan*, 387 P. 2d 771 (Kan. Sup. Ct. 1963). In that case the Kansas Supreme Court held that the statutory provisions apportioning seats in both houses of the Kansas Legislature were constitutionally invalid, but afforded the legislature a further opportunity to enact a constitutionally valid plan prior to the 1964 primary and general elections. Of course, this decision by the Kansas Supreme Court is not presently before us, and we indicate no view as to the merits in that case.

[19] The pattern of prolonged legislative inaction with respect to legislative apportionment matters and the existence of a rural stranglehold on the legislature in Maryland closely parallels the situation existing in Alabama, although Maryland, unlike Alabama, has no state constitutional provision requiring decennial legislative reapportionment.

[20] See *Reynolds* v. *Sims*, ____ U. S., at ____.

[21] Additionally, the Maryland legislative apportionment scheme here attacked fails to resemble the plan of representation in the Federal Congress in at least two important respects: the Maryland House, even as reapportioned in 1962, is clearly not apportioned on a population basis, and political subdivisions are not accorded the same number of senatorial seats, since, although each of Maryland's 23 counties is given only one Senate seat, six senators are allotted to the City of Baltimore.

[22] See *Reynolds* v. *Sims*, ____ U. S., at ____.

legislation pending adoption of state constitutional provisions relating to legislative apportionment which comport with federal constitutional requirements.[23]

Since primary responsibility for legislative apportionment rests with the legislature itself, and since adequate time exists in which the Maryland General Assembly can act, the Maryland courts need feel obliged to take further affirmative action only if the legislature fails to enact a constitutionally valid state legislative apportionment scheme in a timely fashion after being afforded a further opportunity by the courts to do so. However, under no circumstances should the 1966 election of members of the Maryland Legislature be permitted to be conducted pursuant to the existing or any other unconstitutional plan. We therefore reverse the judgment of the Maryland Court of Appeals, and remand the case to that Court for further proceedings not inconsistent with the views stated here and in our opinion in *Reynolds* v. *Sims*.

It is so ordered.

MR. JUSTICE CLARK concurs in the reversal for the reasons stated in his separate opinion in *Reynolds* v *Sims*, 377 U.S. 695, decided this date.

MR JUSTICE STEWART

In this case there is no finding by this Court or by the Maryland Court of Appeals that Maryland's apportionment plan reflects "no policy, but simply arbitrary and capricious action or inaction." Nor do I think such a finding on the record before us would be warranted. Consequently, on the basis of the constitutional views expressed in my dissenting opinion in *Lucas* v. *The Forty-Fourth General Assembly of the State of Colorado*, *ante*, p ___ I would affirm the judgment of the Maryland Court of Appeals unless the Maryland apportionment "could be shown systematically to prevent ultimate effective majority rule." The Maryland court did not address itself to this question. Accordingly, I would vacate the judgment and remand this case to the state court for full consideration of this issue.

Levin Nock Davis, Secretary, State Board of Elections, et al., Appellants,

v.

Harrison Mann et al.

[June 15, 1964.]

MR CHIEF JUSTICE WARREN delivered the opinion of the Court

Presented for decision in this case is the validity, under the Equal Protection Clause of the Fourteenth Amendment to the Federal Con-

[23] See 228 Md., at 438–440, 180 A. 2d, at 670–671, where the Maryland Court of Appeals stated that, if the Maryland constitutional provisions relating to legislative apportionment were found invalid by the lower court, the Maryland Legislature would have the power to enact reapportionment legislation, "because the powers of the General Assembly of Maryland are plenary, except as limited by constitutional provisions." See also the reference to this matter earlier in this opinion, *ante*, at ____

stitution, of the apportionment of seats in the legislature of the Commonwealth of Virginia.

I.

Plaintiffs below, residents, taxpayers and qualified voters of Arlington and Fairfax Counties, filed a complaint on April 9, 1962, in the United States District Court for the Eastern District of Virginia, in their own behalf and on behalf of all voters in Virginia similarly situated, challenging the apportionment of the Virginia General Assembly. Defendants, sued in their representative capacities, were various officials charged with duties in connection with state elections Plaintiffs claimed rights under provisions of the Civil Rights Act, 42 U. S C §§ 1983, 1988, and asserted jurisdiction under 28 U S C § 1343 (3)

The complaint alleged that the present statutory provisions apportioning seats in the Virginia Legislature, as amended in 1962, results in invidious discrimination against plaintiffs and "all other voters of the State Senatorial and House districts" in which they reside, since voters in Arlington and Fairfax Counties are given substantially less representation than voters living in other parts of the State Plaintiffs asserted that the discrimination was violative of the Fourteenth Amendment as well as the Virginia Constitution, and contended that the requirements of the Equal Protection Clause of the Federal Constitution, and of the Virginia Constitution, could be met only by a redistribution of legislative representation among the counties and independent cities of the State "substantially in proportion to their respective populations" Plaintiffs asserted that they "possess an inherent right to vote for members of the General Assembly and to cast votes that are equally effective with the votes of every other citizen" of Virginia, and that this right was being diluted and effectively denied by the discriminatory apportionment of seats in both houses of the Virginia Legislature under the statutory provisions attacked as being unconstitutional. Plaintiffs contended that the alleged inequalities and distortions in the allocation of legislative seats prevented the Virginia Legislature from "being a body representative of the people of the Commonwealth," and resulted in a minority of the people of Virginia controlling the General Assembly

The complaint requested the convening of a three-judge District Court With respect to relief, plaintiffs sought a declaratory judgment that the statutory scheme of legislative apportionment in Virginia, prior as well as subsequent to the 1962 amendments, contravenes the Equal Protection Clause of the Fourteenth Amendment and is thus unconstitutional and void Plaintiffs also requested the issuance of a prohibitory injunction restraining defendants from performing their official duties relating to the election of members of the General Assembly pursuant to the present statutory provisions Plaintiffs further sought a mandatory injunction requiring defendants to conduct the next primary and general elections for legislators on an at-large basis throughout the State

A three-judge District Court was promptly convened Residents and voters of the City of Norfolk were permitted to intervene as plaintiffs against the original defendants and against certain additional defendants, election officials in Norfolk. On June 20, 1962, all of the plaintiffs obtained leave to amend the complaint by adding an additional

prayer for relief which requested that, unless the General Assembly "promptly and fairly" reapportioned the legislative districts, the Court should reapportion the districts by its own order so as to accord the parties and others similarly situated "fair and proportionate" representation in the Virginia Legislature.

Evidence presented to the District Court by plaintiffs included basic figures showing the populations of the various districts from which senators and delegates are elected and the number of seats assigned to each From that data various statistical comparisons were derived Since the 1962 reapportionment measures were enacted only two days before the complaint was filed and made only small changes in the statutory provisions relating to legislative apportionment, which had been last amended in 1958, the evidence submitted covered both the present and the last previous apportionments Defendants introduced various exhibits showing the numbers of military and military-related personnel in the City of Norfolk and in Arlington and Fairfax Counties, disparities from population-based representation among the various States in the Federal Electoral College, and results of a comparative study of state legislative apportionment which show Virginia as ranking eighth among the States in population-based legislative representativeness, as reapportioned in 1962

On November 28, 1962, the District Court, with one judge dissenting, sustained plaintiffs' claim and entered an interlocutory order holding the apportionment of the Virginia Legislature violative of the Federal Constitution 213 F Supp 577 The Court refused to dismiss the case or stay its action on the ground, asserted by defendants, that plaintiffs should be required first to procure the views of the state courts on the validity of the apportionment scheme Instead, it held that, since neither the 1962 legislation nor the relevant state constitutional provisions were ambiguous, no question of state law necessitating abstention by the Federal District Court was presented In applying the Equal Protection Clause to the Virginia apportionment scheme, the Court stated that, although population is the predominant consideration, other factors may be of some relevance "in assaying the justness of the apportionment " Stating that the Federal Constitution requires a state legislative apportionment to "accord the citizens of the State substantially equal representation," the Court held that the inequalities found in the statistical information relating to the population of the State's various legislative districts, if unexplained, sufficiently showed an "invidious discrimination" against plaintiffs and those similarly situated The Court rejected any possibility of different bases of representation being applicable in the two houses of the Virginia Legislature, stating that, in Virginia, each house has "a direct, indeed the same, relation to the people," and that the principal present-day justification for bicameralism in state legislatures is to insure against precipitate action by imposing greater deliberation upon proposed legislation Because of the gross inequalities in representation among various districts, in both houses of the Virginia Legislature, the Court put the burden of explanation on defendants, and found that they had failed to meet it Consequently, the Court concluded that the discrimination against Arlington and Fairfax Counties and the City of Norfolk was a grave and "constitutionally impermissible" depriva-

tion, violative of the Equal Protection Clause of the Fourteenth Amendment.

With respect to relief, the Court stated that, while it would have preferred that the General Assembly itself correct the unconstitutionality of the 1962 apportionment legislation, it would not defer deciding the case until after the next regular session of the Virginia Legislature in January 1964, because senators elected in November 1963 would hold office until 1968 and delegates elected in 1963 would serve until 1966. Deferring action would thus result in unreasonable delay in correcting the injustices in the apportionment of the Senate and the House of Delegates, concluded the Court

The District Court's interlocutory order declared that the 1962 apportionment violated the Equal Protection Clause and accordingly was void and of no effect It also restrained and enjoined defendants from proceeding with the conducting of elections under the 1962 legislation, but stayed the operation of the injunction until January 31, 1963, so that either the General Assembly could act or an appeal could be taken to this Court, provided that, if neither of these steps were taken, plaintiffs might apply to the District Court for further relief. Finally, the court below retained jurisdiction of the case for the entry of such orders as might be required.

An appeal to this Court was timely noted by defendants On application by appellants, THE CHIEF JUSTICE, on December 15, 1962, granted a stay of the District Court's injunction pending final disposition of the case by this Court Because of this stay, the November 1963 election of members of the Virginia Legislature was conducted under the existing statutory provisions. We noted probable jurisdiction on June 10, 1963. 374 U.S. 803.

II.

The Virginia Constitution provides for a Senate of not more than 40 nor less than 33 members, in Art IV, § 41, and for a House of Delegates of not more than 100 nor less than 90 seats, in Art IV, § 42 Senators are elected quadrennially and delegates biennially At all relevant times, state statutes have fixed the number of senators at 40 and the number of delegates at 100 Pursuant to the state constitutional requirement of legislative reapportionment at least decennially, contained in Art IV, § 43, the General Assembly has reapportioned senatorial and House seats in 1932, 1942, and 1952, as well as in 1962, and in 1958 the apportionment statutes were amended [1]

[1] Reapportionment in 1952 was accomplished only after the Governor convened a special session of the Virginia Legislature for that purpose, since the legislature had adjourned without enacting any statutes reallocating representation In anticipation of the constitutional mandate to reapportion in 1962, the Virginia Governor, in January 1961, appointed a commission on redistricting In doing its work, this commission employed the assistance of the Bureau of Public Administration of the University of Virginia Suggesting that Senate and House districts should be, as nearly as practicable, equal in population, the Bureau submitted two alternative plans for the apportionment of the House and three alternative plans for the apportionment of Senate seats These plans all followed the various criteria traditionally considered in previous apportionments and complied with the constitutionally prescribed size limitations on both of the houses In late 1961, the commission filed its report recommending a redistricting plan different from any of the plans submitted by the Bureau Its plan based more on political compromise than any of the Bureau's suggested plans deviated further from population-based representation than any of the Bureau's proposals At its 1962 regular session, the Virginia General Assembly completely disregarded both the commission report and the plans prepared by the Bureau, and

The Virginia Constitution contains no express standards, however, for the apportionment of legislative representation, and leaves the task of establishing districts solely up to the discretion of the legislature.

With respect to political subdivisions, Virginia has 98 counties and 32 independent cities Despite the absence of any specific provisions in the State Constitution, population has generally been traditionally regarded as the most important factor for legislative consideration in reapportioning and redistricting. Because cities and counties have consistently not been split or divided for purposes of legislative representation, multimember districts have been utilized for cities and counties whose populations entitle them to more than a single representative, resulting in there always being less than 100 delegate districts and less than 40 senatorial districts And, because of a tradition of respecting the integrity of the boundaries of cities and counties in drawing district lines, districts have been constructed only of combinations of counties and cities and not by pieces of them. This has resulted in the periodic utilization of floterial districts [2] where contiguous cities or counties cannot be combined to yield population totals reasonably close to a population ratio figure determined by dividing the State's total population by the number of seats in the particular legislative body Various other factors, in addition to population, which have historically been considered by Virginia Legislatures in enacting apportionment statutes include compactness and contiguity of territory in forming districts, geographic and topographic features, and community of interests among people in various districts.

Section 24–14 of the Virginia Code, as amended in 1962, provides for the apportionment of the Virginia Senate, and divides the State into 36 senatorial districts for the allocation of the 40 seats in that body With a total state population of 3,966,949, according to the 1960 census, and 40 Senate seats, the ideal ratio would be one senator for each 99,174 persons Under the 1962 statute, however, Arlington County is given but one senator for its 163,401 persons, only .61 of the representation to which it would be entitled on a strict population basis. The City of Norfolk has only 65 of its ideal share of senatorial representation, with two senators for a population of 305,872. And Fairfax County (including the cities of Fairfax and Falls Church),

adopted apportionment schemes of its own for each house, in practical effect making only minimal changes in the existing statutory provisions These enactments, of course, are the ones principally complained of by appellees in this litigation

[2] The term "floterial district" is used to refer to a legislative district which includes within its boundaries several separate districts or political subdivisions which independently would not be entitled to additional representation but whose conglomerate population entitles the entire area to another seat in the particular legislative body being apportioned See *Baker* v *Carr*, 369 U S 186, 256 (CLARK, J., concurring) As an example, the City of Lynchburg, with a 1960 population of only 54,790, is itself allocated one seat in the Virginia House of Delegates under the 1962 apportionment plan Amherst County, with a population of only 22,953, is not given any independent representation in the Virginia House But the City of Lynchburg and Amherst County are combined in a floteral district with a total population of 77,743 Presumably, it was felt that Lynchburg was entitled to some additional representation in the Virginia House, since its population significantly exceeded the ideal House district size of 36,669 However, since Lynchburg's population did not approach twice that figure, it was apparently decided that Lynchburg was not entitled, by itself, to an added seat Adjacent Amherst County, with a population substantially smaller than the ideal district size, was presumably felt not to be entitled to a separate House seat The solution was the creation of a floterial district comprised of the two political subdivisions, thereby according Lynchburg additional representation and giving Amherst County a voice in the Virginia House, without having to create separate additional districts for each of the two political subdivisions

with two senators for 285,194 people, has but .70 of its ideal representation in the Virginia Senate In comparison, the smallest senatorial district, with respect to population, has only 61,730, and the next smallest 63,703 [3] Thus, the maximum population-variance ratio between the most populous and least populous senatorial districts is 2 65-to-1. Under the 1962 senatorial apportionment, applying 1960 population figures, approximately 41 1% of the State's total population reside in districts electing a majority of the members of that body.[4]

Apportionment of seats in the Virginia House of Delegates is provided for in § 24–12 of the Virginia Code, as amended in 1962, which creates 70 House districts and distributes the 100 House seats among them Dividing the State's total 1960 population by 100 results in an ideal ratio of one delegate for each 39,669 persons Fairfax County, with a population of 285,194, is allocated only three House seats under the 1962 apportionment provisions, however, thus being given only 42 of its ideal representation While the average population per delegate in Fairfax County is 95,064. Whythe County, with only 21,975 persons, and Shenandoah County, with a population of only 21,825, are each given one seat in the Virginia House [5] The maximum population-variance ratio, between the most populous and least populous House districts, is thus 4 36-to-1. The City of Norfolk, with 305,872 people, is given only six House seats, and Arlington County, with a population of 163,401, is allocated only three Under the 1962 reapportionment of the House of Delegates, 40 5% of the State's population live in districts electing a majority of the House members Twenty-seven House districts have more than three times the representation of the people of Fairfax County, 12 districts have twice the representation of Arlington County, and six, twice that of Norfolk.

No adequate political remedy to obtain legislative reapportionment appears to exist in Virginia [6] No initiative procedure is provided for under Virginia law. Amendment of the State Constitution or the calling of a constitutional convention initially requires the vote of a majority of both houses of the Virginia General Assembly.[7] Only after such legislative approval is obtained is such a measure submitted to the people for a referendum vote Legislative apportionment questions do not appear to have been traditionally regarded as nonjusticiable

[3] In illustrating the disparities from population-based representation in the apportionment of Senate seats, the District Court included in its opinion a chart showing the composition (by counties and cities) and populations of, and the number of senators allotted to, the various senatorial districts and comparing these figures with the senatorial representation given Arlington, Fairfax and Norfolk 213 F Supp , at 581–582

[4] Appellees have pointed out, however, that, since seats in the Virginia Legislature are reapportioned decennially, and since the allegedly underrepresented districts are those whose populations are increasing more rapidly than the allegedly overrepresented ones, the disparities from population-based representation, in both houses of the Virginia Legislature, will continually increase throughout the 10-year period until the next reapportionment

[5] In discussing deviations from population-based representation in the allocation of seats in the House of Delegates, the District Court included, as part of its opinion, a chart showing the populations of and the number of seats given to certain House districts, and comparing these figures with the House representation accorded Arlington, Fairfax and Norfolk 213 F Supp , at 582–584

[6] For a discussion of the lack of federal constitutional significance of the presence or absence of an available political remedy, see *Lucas* v *The Forty-Fourth General Assembly of the State of Colorado*, ___U S ___–___, decided also this date

[7] Va Const , Art XV, §§ 196, 197

by Virginia state courts, however,[8] and appellees could possibly have sought and obtained relief in a state court as well as in a Federal District Court.[9]

III.

In *Reynolds* v. *Sims*, 377 U. S. 695, decided also this date, we held that the Equal Protection Clause requires that seats in both houses of a bicameral state legislature must be apportioned substantially on a population basis. Neither of the houses of the Virginia General Assembly, under the 1962 statutory provisions here attacked, is apportioned sufficiently on a population basis to be constitutionally sustainable. Accordingly, we hold that the District Court properly found the Virginia legislative apportionment invalid.

Appellants' contention that the court below should have abstained so as to permit a state court to decide the questions of state law involved in this litigation is without merit. Where a federal court's jurisdiction is properly invoked, and the relevant state constitutional and statutory provisions are plain and unambiguous, there is no necessity for the federal court to abstain pending determination of the state law questions in a state court. *McNeese* v. *Board of Education*, 373 U. S. 668. This is especially so where, as here, no state proceeding had been instituted or was pending when the District Court's jurisdiction was invoked. We conclude that the court below did not err in refusing to dismiss the proceeding or stay its action pending recourse to the state courts.

Undoubtedly, the situation existing in Virginia, with respect to legislative apportionment, differs not insignificantly from that in Alabama. In contrast to Alabama, in Virginia the legislature has consistently reapportioned itself decennially as required by the State Constitution. Nevertheless, state legislative malapportionment, whether resulting from prolonged legislative inaction or from failure to comply sufficiently with federal constitutional requisites, although reapportionment is accomplished periodically, falls equally within the proscription of the Equal Protection Clause.

We reject appellants' argument that the underrepresentation of Arlington, Fairfax and Norfolk is constitutionally justifiable since it allegedly resulted in part from the fact that those areas contain large numbers of military and military-related personnel. Discrimination against a class of individuals, merely because of the nature of their

[8] In *Brown* v. *Saunders*, 159 Va. 28, 166 S. E. 105 (1932), the Supreme Court of Appeals of Virginia held that a congressional districting statute enacted by the Virginia Legislature was invalid since it conflicted with Art. IV, § 55, of the State Constitution, which requires congressional districts to have "as nearly as practicable, an equal number of inhabitants." Of course, involved in that case was a specific state constitutional requirement relating to congressional districting, whereas no such detailed state requirements exist with respect to apportionment of seats in the Virginia Legislature. Appellants have argued, however, that this decision indicates that Virginia courts will also adjudicate questions relating to the validity of the State's legislative apportionment scheme under the provisions of the Federal Constitution.

[9] However, in *Tyler* v. *Davis*, a case involving a suit instituted on March 26, 1963, almost four months after the District Court's decision in the instant case, the Circuit Court of the City of Richmond dismissed, on the merits, an action challenging the apportionment of seats in the Virginia Legislature. Although the state court found that it had jurisdiction and that the questions raised were justiciable in nature, it dismissed the complaint on the ground that plaintiffs had failed to show that the scheme for apportioning seats in the Virginia Legislature was an invidiously discriminatory one violative of the Equal Protection Clause.

employment, without more being shown, is constitutionally impermissible Additionally, no showing was made that the Virginia Legislature in fact took such a factor into account in allocating legislative representation [10] And state policy, as evidenced by Virginia's election laws, actually favors and fosters voting by military and military-related personnel [11] Furthermore, even if such persons were to be excluded in determining the populations of the various legislative districts, the discrimination against the disfavored areas would hardly be satisfactorily explained, because, after deducting military and military-related personnel, the maximum population-variance ratios would still be 2 22-to-1 in the Senate and 3 53-to-1 in the House

We also reject appellants' claim that the Virginia apportionment is sustainable as involving at attempt to balance urban and rural power in the legislature Not only does this explanation lack legal merit, but it also fails to conform to the facts. Some Virginia urban areas, such at Richmond, by comparison with Arlington, Fairfax and Norfolk, appear to be quite adequately represented in the General Assembly And, for the reasons stated in *Reynolds*,[12] in rejecting the so-called federal analogy, and in *Gray* v *Sanders*, 372 U. S. 368, 378, appellants' reliance on an asserted analogy to the deviations from population in the Federal Electoral College is misplaced The fact that the maximum variances in the populations of various state legislative districts are less than the extreme deviations from a population basis in the composition of the Federal Electoral College fails to provide a constitutionally cognizable basis for sustaining a state apportionment scheme under the Equal Protection Clause

We find it unnecessary and inappropriate to discuss questions relating to remedies at the present time [13] Since the next election of Virginia legislators will not occur until 1965, ample time remains for the Virginia Legislature to enact a constitutionally valid reapportionment scheme for purposes of that election After the District Court has provided the Virginia Legislature with an adequate opportunity to enact a valid plan, it can then proceed, should it become necessary, to grant relief under equitable principles to insure that no further elections are held under an unconstitutional scheme Since the District Court stated that it was retaining jurisdiction and that plaintiffs could seek further appropriate relief, the court below presumably intends to take further action should the Virginia Legislature fail to act promptly in remedying the constitutional defects in the State's legislative apportionment plan We therefore affirm the judgment of the District Court on the merits of this litigation, and remand the case for further pro-

[10] See 213 F Supp, at 584

[11] Virginia's election laws enable persons in the armed forces to vote without registration or payment of poll tax Va Code Ann, 1950 (Repl Vol 1964) § 24-23 1 While the literal language of this provision grants the privilege to those "on active service in time of war," the Virginia State Board of Electors is applying it currently Although the mere stationing of military personnel in the State does not give them residence, Virginia election officials interpret the applicable statutory provisions to mean that residence for military personnel is determined in the same manner as for all other citizens. Military personnel and members of their families who have been residents of Virginia for a year, residents of a county, city or town for six months, and residents of a precinct for 30 days are entitled to vote Military personnel are not included in the categories of persons disabled from voting Va Code Ann, 1950 (Repl Vol 1964) § 24-18

[13] See *id*, at ___

ceedings consistent with the views stated here and in our opinion in *Reynolds* v. *Sims*.

It is so ordered.

MR. JUSTICE CLARK concurs in the reversal for the reasons stated in his separate opinion in *Reynolds* v. *Sims*, 377 U. S. 695, decided this date.

MR. JUSTICE STEWART:

In this case, the District Court recognized that "population is not . . . the sole or definitive measure of districts when taken by the Equal Protection Clause" 213 F. Supp., at 584 In reaching its decision the court made clear that it did not "intend to say that there cannot be wide differences of population in districts if a sound reason can be advanced for the discrepancies." *Id.*, at 585 The District Court, however, could find "no rational basis for the disfavoring of Arlington, Fairfax and Norfolk." *Ibid.* In my opinion the appellants have failed to show that the trial court erred in reaching this conclusion. Accordingly, in keeping with the view expressed in my dissenting opinion in *Lucas* v. *The Forty-Fourth General Assembly of The State of Colorado*, I would affirm the District Court's judgment holding that to the extent a state legislative apportionment plan is conclusively shown to have no rational basis, such a plan violates the Equal Protection Clause

---

Mabel V. Roman, Clerk, etc., et al.,
Appellants,
v.
Richard Sincock et al.
[June 15, 1964.]

MR. CHIEF JUSTICE WARREN delivered the opinion of the Court:

Presented for decision in this case is the constitutional validity, under the Equal Protection Clause of the Fourteenth Amendment to the Federal Constitution, of the apportionment of seats in the Delaware General Assembly.

I.

Shortly after this Court's decision in *Baker* v *Carr*, 369 U. S. 186, plaintiffs below residents, taxpayers and qualified voters of New Castle County, Delaware, filed a complaint in the United States District Court for the District of Delaware, in their own behalf and on behalf of all persons similarly situated, challenging the apportionment of the Delaware Legislature. Defendants, sued in their representative capacities, were various officials charged with the performance of certain duties in connection with state elections The complaint alleged deprivation of rights under the Equal Protection Clause of the Fourteenth Amendment, and asserted that the District Court had jurisdiction under the Fourteenth Amendment, 42 U. S C. §§ 1983 and 1988, and 28 U S. C. §§ 1343 and 2201.

Plaintiffs below alleged that the apportionment of seats in the Delaware Legislature resulted in an "invidious discrimination as to the in-

habitants of New Castle County and the City of Wilmington," operated to deny them the right to cast votes for Delaware legislators "that are of equal effect with that of every other citizen of the State of Delaware," and was arbitrary and capricious in failing to provide a reasonable classification of those voting for members of the Delaware General Assembly.[1] Plaintiffs also asserted that they were without any other adequate remedy since the existing legislative apportionment was frozen into the 1897 Delaware Constitution; that the present legislature was dominated by legislators representing the two less populous counties, that it was, as a practical matter, impossible to amend the State Constitution or convene a constitutional convention for the purpose of reapportioning the General Assembly, and that the Delaware Legislature had consistently fail to tak appropriate action with respect to reapportionment

Plaintiffs below sought a declaration that Art II, § 2, of the Delaware Constitution, which established the apportionment of seats in both houses of the Delaware Legislature, is unconstitutional, and an injunction against defendants to prevent the holding of any further elections under the existing apportionment scheme Plaintiffs also requested that the District Court either reapportion the Delaware Legislature on a population basis or, alternatively, direct that the November 1962 general election be conducted on an at-large basis A three-judge District Court was asked for by plaintiffs, and was promptly convened

On July 25, 1962, the District Court entered an order staying the proceedings until August 7, 1962, in order to permit the Delaware Legislature to take "some appropriate action" 207 F Supp 205 The Court noted that, since publication of any proposed constitutional amendment at least three months prior to the next general election was required under Delaware law,[2] it would serve no useful purpose to grant a stay beyond August 7, 1962

On July 30, 1962, the General Assembly approved a proposed amendment to the legislative apportionment provisions of the Delaware Constitution,[3] based upon recommendations of a bipartisan reapportionment committee appointed by the Delaware Governor Under Delaware law this amendment could not, however, become effective unless again approved during the next succeeding session of the General Assembly.[4]

On August 7, 1962, the District Court entered an order refusing to dismiss the suit, and stated that, while it had no desire to substitute its judgment for the collective wisdom of the Delaware General Assembly in matters of legislative apportionment, it had no alternative but to proceed promptly in deciding the case 210 F Supp 395 Some of the defendants applied for a further stay of proceedings so that the General Assembly coming into office in January 1963 would have an opportunity to approve the proposed constitutional amendment On August 8, 1962, plaintiffs applied for a preliminary injunction against the

[1] Interestingly, Art I, § 3, of the Delaware Constitution provides "All elections shall be free and equal"

[2] Sec 207 F Supp, at 207 All of the decisions of the court below are reported *sub nom Sincock v Duffy*

[3] By the requisite two-thirds vote in both houses of the General Assembly, pursuant to Art XVI, § 1, of the Delaware Constitution

[4] Under Art XVI, § 1, of the Delaware Constitution, a constitutional amendment must be passed by a two-thirds vote of both houses of successive General Assemblies before becoming part of the State Constitution

conducting of the November 1962 general election under the existing apportionment provisions Plaintiffs were thereafter permitted to amend their complaint to request that the proposed constitutional amendment also be declared unconstitutional and that the Court order a provisional reapportionment of the Delaware Legislature.

On October 16, 1962, the District Court denied both the applications for a preliminary injunction and for a further stay 210 F. Supp 396. Denial of a preliminary injunction effectively permitted the holding of the November 1962 general election pursuant to the legislative apportionment provisions of the 1897 Delaware Constitution After extended pretrial proceedings, the Court, on November 27, 1962, entered a pretrial order in which the parties agreed to the accuracy of a series of exhibits, statistics and various statistical computations In early January 1963, the Delaware General Assembly, elected in November 1962, approved the proposed constitutional amendment by the requisite two-thirds vote As a result, the amendment to the legislative apportionment provisions of Art II, § 2, became effective on January 17, 1963, since having been passed by two successive General Assemblies [5] Trial before the District Court ensued, with the expert testimony of various political scientists being presented

On April 17, 1963, the District Court, in an opinion by Circuit Judge Biggs, held that Art II, § 2, of the Delaware Constitution, both before and after the 1963 amendment, resulted in gross and invidious discrimination against the plaintiffs and others similarly situated, in violation of the Equal Protection Clause of the Fourteenth Amendment 215 F. Supp 169 Stating that "the fundamental issue presented for . . . adjudication is whether or not the apportioning of members of the General Assembly of the State of Delaware offends the electors of the State because of an alleged debasement of their voting rights," the Court indicated that it would pass upon the constitutional validity of both the provisions of the 1897 Constitution and the provisions of the 1963 constitutional amendment After considering in detail the apportionment of legislature seats under the provisions of the 1897 Delaware Constitution, the court below concluded that "the uneven growth of the different areas of the State created a condition because of which the numbers of inhabitants in representative and senatorial districts differed not only on an intercounty but also on an intracounty basis" After discussing the effect of the 1963 reapportionment amendment, the District Court turned to a consideration of plaintiffs' claim under the Federal Constitution Stating that the rights asserted by plaintiffs are "personal civil rights" of great importance, the court below continued:

> " . Section 2 of Article II of the Constitution of Delaware as it existed prior to the 1963 Amendment and as it exists today creates such an inequality in voting power, resulting in invidious discrimination, as to bring it within the proscription of the Fourteenth Amendment of the Constitution of the United States . . This is true as to the apportionment of the Senate as well as to the apportionment of the House of Representatives of the General Assembly of Delaware While mathematical exactitude in

[5] 53 Del Laws, c 425 (1962), 54 Del Laws, c 1 (1963)

apportionment cannot be expected, and indeed is not possible in an absolute sense, disparities created by Section 2 of Article II, as it was prior to the 1963 Amendment and as it is now, are of such a startling nature as to demonstrate a debasement of franchise of individual electors of this State which the Equal Protection Clause of the Federal Constitution cannot tolerate." [6]

After holding that the apportionment of at least one house of a bicameral state legislature must be based substantially on population, the District Court rejected the relevancy of the so-called federal analogy as a justification for departures from a population-based apportionment scheme in the other house of a state legislature. Although finding no rational or reasonable basis for the Delaware apportionment, either as it previously existed or as amended, the Court nevertheless concluded that reapportionment was basically a legislative function, and that a further opportunity should be given to the General Assembly to reapportion itself properly in accordance with the requirements of the Fourteenth Amendment. After attempting to delineate some guidelines for the Delaware Legislature to follow in reapportioning, the court below, with an eye toward the impending 1964 elections, gave the General Assembly until October 1, 1963, to adopt a constitutionally valid plan.[7] The District Court entered a decree declaring Art. II, § 2, of the Delaware Constitution to be unconstitutional, and retained jurisdiction to order injunctive or other relief if it became necessary to do so.

On May 6, 1963, the Supreme Court of Delaware advised the Delaware Governor that, notwithstanding the holding of the District Court, he should proceed according to the provisions of the invalidated 1963 constitutional amendment to proclaim a redistricting plan for House of Representatives seats. The Delaware Supreme Court's opinion was predicated on the view that the District Court's decision was not a final one, since it was appealable and since no injunctive relief had been granted. Acting on this device, while making reference to the District Court's decision, the Governor, on May 17, 1963, proclaimed a plan providing for the redistricting of certain House districts in accordance with the provisions of the 1963 reapportionment amendment. Under these circumstances, on May 20, 1963, the District Court entered an injunction against the holding of any elections for General Assembly seats under Art. II, § 2, of the Delaware Constitution, either as it had previously existed or as amended, and again reserved jurisdiction to make such further orders as it might deem necessary. The District Court denied a motion to stay its injunction pending appeal, but, on application by

[6] 215 F. Supp., at 184.

[7] The other two judges both wrote short opinions. Chief District Judge Wright indicated that he concurred in the view that Art. II, § 2, of the Delaware Constitution, before and after amendment, was unconstitutional, since at least one house of a state legislature must be apportioned strictly on a population basis. He indicated that he also agreed with the "precatory" observation" of Judge Biggs that the other house must also be apportioned substantially on a population basis.

District Judge Layton concurred in the result reached, finding that Art. II § 2, of the Delaware Constitution, prior to as well as after the 1963 amendment, was unconstitutional with respect to the House of Representatives. He stated that, since the 1963 amendment contained no severability clause, the whole amendment was unconstitutional because of the provisions relating to the House, and that therefore there was no need to consider whether the senatorial provisions were valid. He indicated, however, that he thought that it was permissible to apportion one house on a nonpopulation, area basis where the other house was apportioned strictly on population, since such a system would be patterned on the scheme of representation in the Federal Congress.

defendants below, MR JUSTICE BRENNAN, on June 27, 1963, stayed the operation of the District Court's injunction pending final disposition of the case by this Court Notices of appeal from the District Court's final decree, and from its injunction and denial of the motion for a stay, were timely filed by defendants Pursuant to this Court's Rule 15(3), both appeals have been treated as a single case When appellees filed a motion to affirm, appellants countered with a motion to advance On October 21, 1963, we noted probable jurisdiction and granted appellants' motion to advance. 375 U S. 877

II.

Under the provisions of the 1897 Delaware Constitution relating to legislative apportionment, in force when this litigation was commenced, the State was geographically divided into 17 Senate and 35 House districts for the purpose of electing members of the Delaware Legislature Delaware senators serve four-year terms, with approximately half of the senators elected every two years, and all representatives are elected for two-year terms Qualified voters in each Senate and House district elect one senator and one representative, under the 1897 Constitution's apportionment plan Delaware is comprised of only three counties, and only one sizable metropolitan area—Wilmington Under the 1897 apportionment, five senatorial districts and 10 representative districts were allocated to Kent County, to Sussex County, and to "rural" New Castle County (that part of the county outside of the City of Wilmington), and Wilmington was given two senatorial and five representative districts The number and boundaries of both the senatorial and representative districts were specifically fixed and described in the constitutional provisions, and no provision was made for their alteration When the constitutional provisions were adopted, the population of the State of Delaware was approximately 180,000, with about 32,000 living in Kent County, 38,000 residing in Sussex County, and 105,000 living in New Castle County (of whom about 70,000 lived in the City of Wilmington) By 1960, the total population of Delaware had increased to 446,292, of which 307,446 resided in New Castle County, 95,827 in Wilmington and 211,619 in "rural" New Castle County. And, under the 1960 census figures, 65,651 lived in Kent County and 73,195 resided in Sussex County.

Under the 1897 apportionment scheme, as perpetuated over 65 years later, Senate districts ranged in population from 4,177 to 64,820, resulting in a maximum population-variance ratio, between the most populous and least populous Senate districts, of about 15-to-1 Senatorial districts in Kent and Sussex Counties were consistently much smaller in population than those in New Castle County, with the exception of one New Castle County district which, with a population of only 4,177, was the smallest senatorial district in the State [8] Only 22% of the State's total population resided in districts electing a majority of the members of the 17-member Senate applying 1960 census figures to the senatorial apportionment scheme existing when this litigation was commenced.

[8] *Included in the District Court's opinion is a chart showing the population of the 17 senatorial districts established by Art II, § 2, of the 1897 Delaware Constitution, and tracing the population changes in each during the period 1930–1960* 215 F Supp, at 176

Representative districts ranged in population, as of 1960, from 1,643 to 58,228, under Art II, § 2, of the 1897 Delaware Constitution, resulting in a maximum population-variance ratio, in the Delaware House, of about 35-to-1 Again, the average population of House districts in Kent and Sussex Counties was significantly smaller than that of those in New Castle County, although several of the "rural" New Castle County districts were among the smallest in the State Applying 1960 census figures to the 1897 apportionment scheme, with respect to the Delaware House, the 18 most sparsely populated representative districts, containing only about 18 5% of the State's total 1960 population, elected a majority of the members of the House of Representatives [9] Persons living in the six most populous representative districts, 233,718, more than one-half of the total state population, had only the same voting power, under the 1897 Constitution's scheme, as those 16,552 persons living in the six least populous districts, with respect to electing members of the Delaware House [10] Serious disparities in the population of districts, both House and Senate, *within* each county were also presented in the district population figures considered by the District Court [11]

Evidence before the District Court showed that, despite repeated attempts to reapportion the legislature or to call a constitutional convention for that purpose, the Delaware Legislature had consistently failed to take any action to change the existing apportionment of legislative seats. No initiative and referendum procedure exists in Delaware [12] Legislative apportionment has been traditionally provided for wholly by constitutional provisions in Delaware, and a concurrence of two-thirds of both houses of two consecutive state legislatures is required in order to amend the State Constitution [13] The Delaware General Assembly may also, by a two-thirds vote, submit to the State's voters the question of whether to hold a constitutional convention,[14]

Under the 1963 amendment to Art II, § 2, of the Delaware Constitution, the size of the Senate is increased from 17 to 21 members, and the four added seats are allotted equally to Kent and Sussex Counties, giving each of the State's three counties seven senators [15] The added senators are to be elected at large from districts comprising about one-half of the House districts in each of the two counties As a result of

[9] A chart showing the population of the 35 representative districts established by Art II, § 2, of the 1897 Delaware Constitution, and tracing the population changes in each during the period 1890–1960, is included in the District Court's opinion 215 F Supp, at 174–175

[10] And, as pointed out by the court below, under the apportionment of House seats contained in Art II, § 2, of the Delaware Constitution, "The inhabitants of the 18 least populated representative districts are less in number than those of the two districts having the heaviest concentration of population, nonetheless, the former elect 18 representatives in the House of Representatives, while the latter elect 2 representatives in the House of Representatives of the Delaware General Assembly" 215 F Supp, at 176

[11] The 35 representative districts tended to follow generally the boundaries of a "hundred," a geographical subdivision of counties in Delaware since its founding, and the 17 senatorial districts, which were also described in a detailed fashion in Art II, § 2, of the 1897 Delaware Constitution, were composed either of two representative districts each or two or more hundreds or portions of hundreds

[12] For a discussion of the lack of federal constitutional significance of the presence or absence of an available political remedy, see *Lucas v The Forty-Fourth General Assembly of the State of Colorado*, ____ U S ____ — ____, decided also this date

[13] Under Art XVI, § 1, of the Delaware Constitution

[14] Under Art XVI, § 2, of the Delaware Constitution

[15] A chart showing the composition of the Senate and the population of each of the 21 senatorial districts under the 1963 amendment is included in the District Court's opinion 215 F Supp, at 181

this change, each voter in Kent and Sussex Counties is entitled to vote for two senators and one representative With respect to the House of Representatives, the amendment provides that each existing representative district with a population in excess of 15,000 persons is to be allotted an additional representative for each additional 15,000 persons or major fraction thereof. The boundaries of the original 35 representative districts are not affected, and districts receiving additional representatives are to be divided, by a redistricting commission headed by the Governor, so that each of the new districts elects one representative [16] The net effect of the 1963 amendment, as regards immediate changes in House representation, is to allot 10 additional representatives to various districts in New Castle County, increasing the size of the House to 45 members Representation of Kent and Sussex Counties is to be unaffected. Under the revised apportionment, the maximum population-variance ratio is reduced to about 12-to-1 with respect to the House, but remains about 15-to-1 in the Senate. A majority of the members of the House would be elected, under the 1963 amendment, from districts with only about 28% of the State's total population. And, since the 1963 amendment added two Senate seats each for the two smaller counties, the change in senatorial apportionment would result in two-thirds of the Senate being elected from districts where only about 31% of the State's population reside. About 21% of the State's population would be represented by a majority of the members of the Delaware Senate, under the 1963 reapportionment.

The 1963 amendment also provided that, if a constitutional convention were to be called, the number of delegates and the method of their election were not to be affected by the amended apportionment provisions, and, for the purpose of any future constitutional convention, the representative districts were to elect delegates on the basis of the apportionment provided by Art II, § 2, as it existed prior to the amendment Thus, the number of constitutional convention delegates would continue to be 41, one from each of the 35 representative districts provided for under the 1897 scheme, with two elected at large from each of the three counties.[17]

III.

In *Reynolds* v. *Sims,* 377 U S 695, decided also this date, we held that the Equal Protection Clause requires that seats in both houses of a bicameral state legislature must be apportioned substantially on a population basis Neither of the houses of the Delaware General Assembly, either before or after the 1963 constitutional amendment, was so apportioned. Thus, we hold that the District Court correctly found the Delaware legislative apportionment constitutionally invalid, and affirm the decisions below.

For the reasons stated in our opinion in *Reynolds,*[18] appellants' reliance upon the so-called federal analogy to justify the deviations from a population basis in the apportionment of seats in the Delaware Legis-

[16] Included in the District Court's opinion are charts indicating the effect of the 1963 amendment on the representation of New Castle County in the House of Representatives and showing the composition of the Delaware House, as reapportioned, including the population of each of its 45 districts under 1960 census figures 215 F Supp., at 179–180

[17] Under Art XVI, § 2, of the Delaware Constitution

[18] See *Reynolds* v *Sims,* —— U S., at ——.

lature is misplaced [19] And appellants' argument that the Delaware apportionment scheme should be upheld since Congress has admitted various States into the Union although the apportionment of seats in their legislatures was based on factors other than population is also unconvincing [20] In giving the Delaware Legislature an opportunity to adopt a constitutionally valid plan of legislative apportionment, and in deferring decision until after the November 1962 general election, because of the imminence of that election and the disruptive effect which its decision might have had, the District Court acted in a wise and temperate manner And the court below did not err in granting injunctive relief after it had become apparent that, despite its decree holding that the 1963 constitutional amendment reapportioning seats in the Delaware Legislature failed to comply with federal constitutional requirements, no further reapportionment by the Delaware General Assembly was probable.

Our affirmance of the decision below is not meant to indicate approval of the District Court's attempt to state in mathematical language the constitutionally pemissible bounds of discretion in deviating from apportionment according to population [21] In our view the problem does not lend itself to any such uniform formula, and it is neither practicable nor desirable to establish rigid mathematical standards for evaluating the constitutional validity of a state legislative apportionment scheme under the Equal Protection Clause. Rather, the proper judicial approach is to ascertain whether, under the particular circumstances existing in the individual State whose legislative apportionment is at issue, there has been a faithful adherence to a plan of population-based representation, with such minor deviations only as may occur in recognizing certain factors that are free from any taint of arbitrariness or discrimination

Apart from what we said in *Reynolds,* we express no view on questions relating to remedies at the present time [22] Regardless of the re-

[19] That the three Delaware counties may have possessed some attributes of limited sovereignity prior to the inception of Delaware at a State provides no basis for applying the federal analogy to legislative apportionment in Delaware while holding it inapplicable in other States Whatever the rule of counties in Delaware during the colonial period, they never have had those aspects of sovereignty which the States possessed when our federal system of government was adopted And it could hardly be contended that Delaware's counties retained any elements of sovereign power, when the State was formed, that at all compare with those retained by the States under our Federal Constitution See 215 F Supp, at 126, where the District Court stated that "there never was much and there is now no sovereignty in the Counties of Delaware "

Additionally, the Delaware legislative apportionment scheme here challenged, even after the 1963 constitutional amendment, fails to resemble the plan of representation in the Federal Congress in several significant respects the Delawaie House of Representatives is plainly not apportioned in accordance with population, and senators in Delaware are not chosen as representatives of counties Although, under the 1963 amendment, each county is given an equal number of senators, the 21 senators are chosen one each from the 21 senatorial districts, seven per county, established solely for the purpose of their election Each Delaware senator represents his district and not the county in which the district is located Members of the Federal Senate are of course elected from a State at large, and represent the entire State

[20] See the discussion of and the reasons for rejecting this argument in *Reynolds* v *Sims,* —— U S, at ——

[21] The court below suggested that population-variance ratios smaller than 1½-to-1 would presumably comport with minimal constitutional requisites, while ratios in excess thereof would necessarily involve deviations from population-based apportionment too extreme to be constitutionally sustainable See 215 F Supp, at 190

[22] See *Reynolds* v *Sims,* —— U S, at ——

quirements of the Delaware Constitution [23] and the fact that legislative apportionment has traditionally been considered a constitutional matter in Delaware, the delay inherent in following the state constitutional prescription for approval of constitutional amendments by two successive General Assemblies cannot be allowed to result in an impermissible deprivation of appellees' right to an adequate voice in the election of legislators to represent them. Acting under general equitable principles, the court below must now determine whether it would be advisable, so as to avoid a possible disruption of state election processes and permit additional time for the Delaware Legislature to adopt a constitutionally valid apportionment scheme, to allow the 1964 election of Delaware legislators to be conducted pursuant to the provisions of the 1963 constitutional amendment, or whether those factors are insufficient to justify any further delay in the effectuation of appellants' constitutional rights. We therefore affirm the decisions of the District Court here appealed from, and remand the case for further proceedings consistent with the views stated here and in our opinion in *Reynolds* v *Sims*.

It is so ordered.

MR. JUSTICE CLARK concurs in the reversal for the reasons stated in his separate opinion in *Reynolds* v. *Sims*, 377 U. S. 695, decided this date.

MR. JUSTICE STEWART:

In the case the appellees showed that the apportionment of seats among the districts represented in the Delaware House of Representatives and within the counties represented in the Delaware Senate, apparently reflects "no policy, but simply arbitrary and capricious action." The appellants have failed to dispel this showing by suggesting any possible rational explanation for these aspects of Delaware's system of legislative apportionment. Accordingly, for the reasons stated in my dissenting opinion in *Lucas* v. *The Forty-Fourth General Assembly of the State of Colorado, ante*, p. ____, I would affirm the judgment of the District Court insofar as it holds that Delaware's system of apportionment violates the Equal Protection Clause.

[23] Particularly Art. XVI, § 1, which requires the approval by successive state legislatures before a proposed constitutional amendment can be adopted.
In its initial opinion, incident to its order granting a limited stay, the District Court suggested that the Delaware Legislature might desire to amend the State Constitution so as to make legislative apportionment a statutory instead of a constitutional matter, in order to obviate the delay inherently involved in complying with the requirement of the Delaware Constitution that constitutional amendments must be approved by two successive General Assemblies before becoming effective. 207 F. Supp., at 206–207. In this manner, the District Court suggested, if the Delaware Legislature's attempt at reapportionment should be found deficient under the Federal Constitution, the General Assembly elected in November 1962 would be free, under state law, to proceed expeditiously with the enactment of a revised statutory reapportionment plan consonant with the requirements of the Equal Protection Clause. Unfortunately, the Delaware Legislature failed to act on the Court's suggestion, and instead proposed the constitutional amendment hereinbefore discussed, which was approved by two consecutive state legislatures in late 1962 and in early 1963. However, in its opinion on the merits, the District Court intimated that, with the Delaware constitutional provisions relating to legislative apportionment declared invalid, the Delaware Legislature could "then proceed to pass an apportionment statute meeting the requirements of the Fourteenth Amendment . . ." 215 F. Supp., at 191.

MR JUSTICE HARLAN, dissenting.

In these cases the Court holds that seats in the legislatures of six States [1] are apportioned in ways that violate the Federal Constitution Under the Court's ruling it is bound to follow that the legislatures in

[1] Alabama, Colorado, Delaware, Maryland, New York, Virginia

all but a few of the other 44 States will meet the same fate.[2] These decisions, with *Wesberry* v *Sanders*, 376 U S 1, involving congressional districting by the States, and *Gray* v *Sanders*, 372 U. S. 368, relating to elections for statewide office, have the effect of placing basic aspects of state political systems under the pervasive overlordship of the federal judiciary. Once again,[3] I must register my protest.

PRELIMINARY STATEMENT.

Today's holding is that the Equal Protection Clause of the Fourteenth Amendment requires every State to structure its legislature so that all the members of each house represent substantially the same number of people; other factors may be given play only to the extent that they do not significantly encroach on this basic "population" principle. Whatever may be thought of this holding as a piece of political ideology—and even on that score the political history and practices of this country from its earliest beginnings leave wide room for debate (see the dissenting opinion of Frankfurter, J., in *Baker* v *Carr*, 369 U. S. 186, 266, 301–323)—I think it demonstrable that the Fourteenth Amendment does not impose this political tenet on the States or authorize this Court to do so.

The Court's constitutional discussion, found in its opinion in the Alabama cases (Nos. 23, 27, 41, *ante*, p. ——) and more particularly at pages 26–33 thereof, is remarkable (as, indeed, is that found in the separate opinions of my Brothers STEWART and CLARK, *ante*, pp. ——, ——) for its failure to address itself at all to the Fourteenth Amendment as a whole or to the legislative history of the Amendment pertinent to the matter at hand. Stripped of aphorisms, the Court's argument boils down to the assertion that petitioners' right to vote has been invidiously "debased" or "diluted" by systems of apportionment which entitle them to vote for fewer legislators than other voters, an assertion which is tied to the Equal Protection Clause only by the constitutionally frail tautology that "equal" means "equal."

Had the Court paused to probe more deeply into the matter, it would have found that the Equal Protection Clause was never intended to inhibit the States in choosing any democratic method they pleased for the apportionment of their legislatures. This is shown by the language of the Fourteenth Amendment taken as a whole, by the understanding of those who proposed and ratified it, and by the political practices of the States at the time the Amendment was adopted. It is confirmed by numerous state and congressional actions since the adoption of the Fourteenth Amendment, and by the common understanding of the Amendment as evidenced by subsequent constitutional amendments and decisions of this Court before *Baker* v. *Carr*, *supra*, made an abrupt break with the past in 1962.

---

[2] In the Virginia case, *Davis* v *Mann*, *post*, p. ——, the defendants introduced an exhibit prepared by the staff of the Bureau of Public Administration of the University of Virginia in which the Virginia Legislature, now held to be unconstitutionally apportioned, was ranked eighth among the 50 States in "representativeness," with population taken as the basis of representation. The Court notes that before the end of 1962, litigation attacking the apportionment of state legislatures had been instituted in at least 34 States. *Ante*, p. 21, note 30. See *infra*, p. 24.

[3] See *Baker* v *Carr*, 369 U. S. 186, 330, and the dissenting opinion of Frankfurter, J., in which I joined, *id.*, at 266; *Gray* v. *Sanders*, 372 U. S. 368, 382; *Wesberry* v. *Sanders*, 376 U. S. 1, 20.

The failure of the Court to consider any of these matters cannot be excused or explained by any concept of "developing" constitutionalism It is meaningless to speak of constitutional "development" when both the language and history of the controlling provisions of the Constitution are wholly ignored Since it can, I think, be shown beyond doubt that state legislative apportionments, as such, are wholly free of constitutional limitations, save such as may be imposed by the Republican Form of Government Clause (Const, Art IV, § 4),[4] the Court's action now bringing them within the purview of the Fourteenth Amendment amounts to nothing less than an exercise of the amending power by this Court.

So far as the Federal Constitution is concerned, the complaints in these cases should all have been dismissed below for failure to state a cause of action, because what has been alleged or proved shows no violation of any constitutional right

Before proceeding to my argument it should be observed that nothing done in *Baker* v. *Carr*, *supra*, or in the two cases that followed in its wake, *Gray* v. *Sanders* and *Wesberry* v. *Sanders*, *supra*, from which the Court quotes at some length, forecloses the conclusion which I reach

Baker decided only that claims such as those made here are within the competence of the federal courts to adjudicate Although the Court stated as its conclusion that the allegations of a denial of equal protection presented "a justiciable constitutional cause of action," 369 U. S., at 237, it is evident from the Court's opinion that it was concerned all but exclusively with *justiciability* and gave no serious attention to the question whether the Equal Protection Clause touches state legislative apportionments.[5] Neither the opinion of the Court nor any of the concurring opinions considered the relevant text of the Fourteenth Amendment or any of the historical materials bearing on that question. None of the materials was briefed or otherwise brought to the Court's attention.[6]

In the *Gray* case the Court expressly laid aside the applicability to state legislative apportionments of the "one person, one vote" theory there found to require the striking down of the Georgia county unit system. See 372 U. S, at 376, and the concurring opinion of STEWART, J., joined by CLARK, J., *id*, at 381–382.

In *Wesberry*, involving congressional districting, the decision rested on Art. I, § 2, of the Constitution The Court expressly did not reach the arguments put forward concerning the Equal Protection Clause See 376 U. S, at 8, note 10

[4] That clause, which manifestly has no bearing on the claims made in these cases, see V Elliot's Debates on the Adoption of the Federal Constitution (1845), 322–323, could not in any event be the foundation for judicial relief *Luther* v *Borden*, 7 How 1, 42–44, *Ohio ex rel Bryant* v *Akron Metropolitan Park District*, 281 U S 74, 79–80, *Highland Farms Dairy, Inc.* v *Agnew*, 300 U S 608, 612 In *Baker* v *Carr*, *supra*, at 227, the Court stated that reliance on the Republican Form of Government Clause "would be futile."

[5] It is fair to say that, beyond discussion of a large number of cases having no relevance to this question, the Court's views on this subject were fully stated in the compass of a single sentence Judicial standards under the Equal Protection Clause are well developed and familiar, and it has been open to courts since the enactment of the Fourteenth Amendment to determine, if on the particular facts they must, that a discrimination reflects no policy, but simply arbitrary and capricious action" 369 U S, at 226

Except perhaps for the "crazy quilt' doctrine of my Brother CLARK, 369 U S, at 251, nothing is added to this by any of the concurring opinions, *id*, at 241, 265

[6] The cryptic remands in *Scholle* v *Hare*, 369 U S 429, and *WMCA, Inc*, v *Simon*, 370 U S 190, on the authority of *Baker*, had nothing to say on the question now before the Court

Thus it seems abundantly clear that the Court is entirely free to deal with the cases presently before it in light of materials now called to its attention for the first time. To these I now turn

I.

A. *The Language of the Fourteenth Amendment.*

The Court relies exclusively on that portion of § 1 of the Fourteenth Amendment which provides that no State shall "deny to any person within its jurisdiction the equal protection of the laws," and disregards entirely the significance of § 2, which reads:

> "Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. *But when the right to vote at any election for* the choice of electors for President and Vice President of the United States, Representatives in Congress, *the Executive and Judicial officers of a State, or the members of the Legislature thereof, is denied* to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, *or in any way abridged*, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State " (Emphasis added.)

The Amendment is a single text It was introduced and discussed as such in the Reconstruction Committee,[7] which reported it to the Congress It was discussed as a unit in Congress and proposed as a unit to the States,[8] which ratified it as a unit A proposal to split up the Amendment and submit each section to the States as a separate amendment was rejected by the Senate.[9] Whatever one might take to be the application to these cases of the Equal Protection Clause if it stood alone, I am unable to understand the Court's utter disregard of the second section which expressly recognizes the States' power to deny "or in any way" abridge the right of their inhabitants to vote for "the members of the [State] Legislature," and its express provision of a remedy for such denial or abridgement The comprehensive scope of the second section and its particular reference to the state legislatures precludes the suggestion that the first section was intended to have the result reached by the Court today If indeed the words of the Fourteenth Amendment speak for themselves, as the majority's disregard of history seems to imply, they speak as clearly as may be against the construction which the majority puts on them But we are not limited to the language of the Amendment itself.

B. *Proposal and Ratification of the Amendment.*

The history of the adoption of the Fourteenth Amendment provides conclusive evidence that neither those who proposed nor those who ratified the Amendment believed that the Equal Protection Clause

[7] See the Journal of the Committee, reprinted in Kendrick, The Journal of the Joint Committee of Fifteen on Reconstruction (1914), 83–117

[8] See the debates in Congress, Cong Globe, 39th Cong, 1st Sess, 2459–3149, *passim* (1866) (hereafter Globe)

[9] Globe 3040

limited the power of the States to apportion their legislatures as they saw fit Moreover, the history demonstrates that the intention to leave this power undisturbed was deliberate and was widely believed to be essential to the adoption of the Amendment

(i) *Proposal of the amendment in Congress.*—A resolution proposing what became the Fourteenth Amendment was reported to both houses of Congress by the Reconstruction Committee of Fifteen on April 30, 1866.[10] The first two sections of the proposed amendment read

> "SEC 1 No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process or law; nor deny to any person within its jurisdiction the equal protection of the laws
>
> "SEC. 2 Representatives shall be apportioned among the several States which may be included within this Union, according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed But whenever, in any State, the elective franchise shall be deemed to any portion of its male citizens not less than twenty-one years of age, or in any way abridged except for participation in rebellion or other crime, the basis of representation in such State shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens not less than twenty-one years of age "[11]

In the House, Thaddeus Stevens introduced debate on the resolution on May 8 In his opening remarks, Stevens explained why he supported the resolution although it fell "far short" of his wishes

> "I believe it is all that can be obtained in the present state of public opinion Not only Congress but the several States are to be consulted Upon a careful survey of the whole ground, we did not believe that nineteen of the loyal States could be induced to ratify any proposition more stringent than this "[12]

In explanation of this belief, he asked the House to remember "that three months since, and more, the committee reported and the House adopted a proposed amendment fixing the basis of representation in such way as would surely have secured the enfranchisement of every citizen at no distant period," but that proposal had been rejected by the Senate.[13]

He then explained the impact of the first section of the proposed Amendment, particularly the Equal Protection Clause.

[11] As reported in the House Globe 2286 For prior versions of the Amendment in the Reconstruction Committee, see Kendrick, *op cit*, *supra*, note 7, 83–117 The work of the Reconstruction Committee is discussed in Kendrick, *supra*, and Flack, The Adoption of the Fourteenth Amendment (1908), 55–139, *passim*

[12] Globe 2459

[13] *Ibid* Stevens was referring to a proposed amendment to the Constitution which provided that "whenever the elective franchise shall be denied or abridged in any State on account of race or color, all persons therein of such race or color shall be excluded from the basis of representation" Globe 535 It passed the House. *id*, at 533, but did not muster the necessary two-thirds vote in the Senate, *id*, at 1289.

> "This amendment . . . allows Congress to correct the unjust legislation of the States, so far that the law which operates upon one man shall operate *equally* upon all Whatever law punishes a white man for a crime shall punish the black man precisely in the same way and to the same degree Whatever law protects the white man shall afford 'equal' protection to the black man Whatever means of redress is afforded to one shall be afforded to all Whatever law allows the white man to testify in court shall allow the man of color to do the same. These are great advantages over their present codes Now different degrees of punishment are inflicted, not on account of the magnitude of the crime, but according to the color of the skin Now color disqualifies a man from testifying in courts, or being tried in the same way as white men I need not enumerate these partial and oppressive laws Unless the Constitution should restrain them those States will all, I fear, keep up this discrimination, and crush to death the hated freedmen "[14]

He turned next to the second section, which he said he considered "the most important in the article "[15] Its effect, he said, was to fix "the basis of representation in Congress "[16] In unmistakable terms, he recognized the power of a State to withhold the right to vote·

> If any State shall exclude any of her adult male citizens from the elective franchise, or abridge that right, she shall forfeit her right to representation in the same proportion The effect of this provision will be either to compel the States to grant universal suffrage or so to shear them of their power as to keep them forever in a hopeless minority in the national Government, both legislative and executive "[17]

Closing his discussion of the second section, he noted his dislike for the fact that it allowed "the States to discriminate [with respect to the right to vote] among the same class, and receive proportionate credit in representation "[18]

Toward the end of the debate three days later, Mr. Bingham, the author of the first section in the Reconstruction Committee and its leading proponent,[19] concluded his discussion of it with the following.

> "Allow me, Mr Speaker, in passing, to say that this amendment takes from no State any right that ever pertained to it No State ever had the right, under the forms of law or otherwise, to deny to any freeman the equal protection of the laws or to abridge the privileges or immunities of any citizen of the Republic, although many of them have assumed and exercised the power, and that without remedy *The amendment does not give, as the second section shows, the power to Congress of regulating suffrage in the several States* "[20] (Emphasis added) He immediately continued
>
> *"The second section excludes the conclusion that by the first section suffrage is subjected to congressional law;* save, indeed, with

[19] Kendrick, *op cit , supra,* note 7, 87, 106, Flack, *op cit , supra,* note 11, 60–68, 71
[20] Globe 2542.

this exception, that as the right in the people of each State to a republican government and to choose their Representatives in Congress is one of the guarantees of the Constitution, by this amendment a remedy might be given directly for a case supposed by Madison, where treason might change a State government from a republican to a despotic government, and thereby deny suffrage to the people "[21] (Emphasis added)

He stated at another point in his remarks:

"To be sure we all agree, and the great body of the people of this country agree, and the committee thus far in reporting measures of reconstruction agree, that *the exercise of the elective franchise, though it be one of the privileges of a citizen of the Republic, is exclusively under the control of the States* "[22] (Emphasis added)

In the three days of debate which separate the opening and closing remarks, both made by members of the Reconstruction Committee, every speaker on the resolution, with a single doubtful exception,[23] assumed without question that, as Mr. Bingham said, *supra*, "the second section excludes the conclusion that by the first section suffrage is subjected to congressional law" The assumption was neither inadvertent nor silent. Much of the debate concerned the change in the basis of representation effected by the second section, and the speakers stated repeatedly, in express terms or by unmistakable implication, that the States retained the power to regulate suffrage within their borders Attached as Appendix A hereto are some of those statements. The resolution was adopted by the House without change on May 10.[24]

Debate in the Senate began on May 23, and followed the same pattern Speaking for the Senate Chairman of the Reconstruction Committee, who was ill, Senator Howard, also a member of the Committee, explained the meaning of the Equal Protection Clause as follows:

"The last two clauses of the first section of the amendment disable a State from depriving not merely a citizen of the United States, but any person, whoever he may be, of life, liberty, or property without due process of law, or from denying to him the equal protection of the laws of the State This abolishes all class legislation in the States and does away with the injustice of subjecting one caste of persons to a code not applicable to another. It prohibits the hanging of a black man for a crime for which the white man is not to be hanged It protects the black man in his fundamental rights as a citizen with the same shield which it throws over the white man Is it not time, Mr. President, that we extend to the black man, I had almost called it the poor privilege of the equal protection of the law? . . .

[21] *Ibid.* It is evident from the context of the reference to a republican government that Bingham did not regard limitations on the right to vote or the denial of the vote to specified categories of individuals as violating the guarantee of a republican form of government

[22] *Ibid.*

[23] Representative Rogers, who voted against the resolution, Globe 2545, suggested that the right to vote might be covered by the Privileges and Immunities Clause Globe 2538 But immediately thereafter he discussed the possibility that the southern States might "refuse to allow the negroes to vote" *Ibid.*

[24] Globe 2545

> *"But, sir, the first section of the proposed amendment does not give to either of these classes the right of voting* The right of suffrage is not, in law, one of the privileges or immunities thus secured by the Constitution It is merely the creature of law. It has always been regarded in this country as the result of positive local law, not regarded as one of those fundamental rights lying at the basis of all society and without which a people cannot exist except as slaves, subject to a depotism [*sic*] "[25] (Emphasis added.)

Discussing the second section, he expressed his regret that it did "not recognize the authority of the United States over the question of suffrage in the several States at all . . ."[26] He justified the limited purpose of the Amendment in this regard as follows.

> "But, sir, it is not the question here what will we do, it is not the question what you, or I, or half a dozen other members of the Senate may prefer in respect to colored suffrage; it is not entirely the question what measure we can pass through the two Houses, but the question really is, what will the Legislatures of the various States to whom these amendments are to be submitted do in the premises, what is it likely will meet the general approbation of the people who are to elect the Legislatures, three fourths of whom must ratify our propositions before they have the force of constitutional provisions?
>
> . . . . . .
>
> "The committee were of opinion that the States are not yet prepared to sanction so fundamental a change as would be the concession of the right of suffrage to the colored race. We may as well state it plainly and fairly, so that there shall be no misunderstanding on the subject It was our opinion that three fourths of the States of this Union could not be induced to vote to grant the right of suffrage, even in any degree or under any restriction, to the colored race . . .
>
> *"The second section leaves the right to regulate the elective franchise still with the States, and does not meddle with that right."*[27] (Emphasis added.)

There was not in the Senate, as there had been in the House, a closing speech in explanation of the Amendment But because the Senate considered, and finally adopted, several changes in the first and second sections, even more attention was given to the problem of voting rights there than had been given in the House In the Senate, it was fully understood by everyone that neither the first nor the second section interfered with the right of the States to regulate the elective franchise Attached as Appendix B hereto are representative statements from the debates to that effect After having changed the proposed amendment to the form in which it was adopted, the Senate passed the resolution on June 8, 1866[28] As changed, it passed in the House on June 13[29]

[29] Globe 3149

(11) *Ratification by the "loyal" States*—Reports of the debates in the state legislatures on the ratification of the Fourteenth Amendment are not generally available [30] There is, however, compelling indirect evidence Of the 23 loyal States which ratified the Amendment before 1870, five had constitutional provisions for apportionment of at least one house of their respective legislatures which wholly disregarded the spread of population [31] Ten more had constitutional provisions which gave primary emphasis to population, but which applied also other principles, such as partial ratios and recognition of political subdivisions, which were intended to favor sparsely settled areas [32] Can it be seriously contended that the legislatures of these States, almost two-thirds of those concerned, would have ratified an amendment which might render their own States' constitutions unconstitutional

Nor were these state constitutional provisions merely theoretical In New Jersey, for example, Cape May County, with a population of 8,349, and Ocean County, with a population of 13,628, each elected one State Senator, as did Essex and Hudson Counties, with populations of 143,839 and 129,067, respectively [33] In the House, each county was entitled to one representative, which left 39 seats to be apportioned according to population [34] Since there were 12 counties besides the two already mentioned which had populations over 30,000,[35] it is evident that there were serious disproportions in the House also In New York, each of the 60 counties except Hamilton County was entitled to one of the 128 seats in the Assembly [36] This left 69 seats to be distributed among counties the populations of which ranged from 15,420 to 942,-292 [37] With seven more counties having populations over 100,000 and 13 others having populations over 50,000,[38] the disproportion in the Assembly was necessarily large In Vermont, after each county had been allocated one Senator, there were 16 seats remaining to be dis-

[30] Such evidence as there is, mostly committee reports and messages to the legislatures from Governors of the States, is to the same effect as the evidence from the debates in the Congress See Ark House J 288 (1866–1867), Fla Sen J 8–10 (1868), Ind House J 47–48, 50–51 (1867), Mass. tributed among the larger counties [39] The smallest county had a population of 4,082, the largest had a population of 40,651 and there were 10 other counties with populations over 20,000 [40]

(iii) *Ratification by the "reconstructed" States*—Each of the 10 "reconstructed" States was required to ratify the Fourteenth Amendment before it was readmitted to the Union.[41] The Constitution of each was scrutinized in Congress.[42] Debates over readmission were extensive [43] In at least one instance, the problem of state legislative apportionment was expressly called to the attention of Congress. Objecting to the inclusion of Florida in the Act of June 25, 1868, Mr Farnsworth stated on the floor of the House:

> "I might refer to the apportionment of representatives By this constitution representatives in the Legislature of Florida are apportioned in such a manner as to give to the sparsely-populated portions of the State the control of the Legislature The sparsely-populated parts of the State are those where there are very few negroes, the parts inhabited by the white rebels, the men who, coming in from Georgia, Alabama, and other States, control the fortunes of their several counties By this constitution every county in that State is entitled to a representative There are in that State counties that have not thirty registered voters; yet, under this constitution, every one of those counties is entitled to a representative in the Legislature, while the populous counties are entitled to only one representative each, with an additional representative for every thousand inhabitants " [44]

The response of Mr. Butler is particularly illuminating:

> "All these arguments, all these statements, all the provisions of this constitution have been submitted to the Judiciary Committee of the Senate, and they have found the constitution republican

[39] There were 14 counties, Census 67, each of which was entitled to at least one out of a total of 30 seats Vt Const, 1793, Amend 23

and proper This constitution has been submitted to the Senate, and they have found it republican and proper It has been submitted to your own Committee on Reconstruction, and they have found it republican and proper, and have reported it to this House." [45]

The Constitutions of six of the 10 States contained provisions departing substantially from the method of apportionment now held to be required by the Amendment [46] And, as in the North, the departures were as real in fact as in theory In North Carolina, 90 of the 120 representatives were apportioned among the counties without regard to population, leaving 30 seats to be distributed by numbers [47] Since there were seven counties with populations under 5,000 and 26 counties with populations over 15,000, the disproportions must have been widespread and substantial [48] In South Carolina, Charleston, with a population of 88,863, elected two Senators; each of the other counties, with populations ranging from 10,269 to 42,486 elected one Senator.[49] In Florida, each of the 39 counties was entitled to elect one Representative, no county was entitled to more than four [50] These principles applied to Dade County with a population of 85 and to Alachua County and Leon County, with populations of 17,328 and 15,236, respectively [51]

It is incredible that Congress would have exacted ratication of the Fourteenth Amendment as the price of readmission, would have studied the State Constitutions for compliance with the Amendment, and would then have disregarded violations of it

The facts recited above show beyond any possible doubt.

(1) that Congress, with full awareness of and attention to the possibility that the States would not afford full equality in voting rights to all their citizens, nevertheless deliberately chose not to interfere with the States' plenary power in this regard when it proposed the Fourteenth Amendment,

(2) that Congress did not include in the Fourteenth Amendment restrictions on the States' power to control voting rights because it believed that if such restrictions were included, the Amendment would not be adopted.

(3) that at least a substantial majority, if not all, of the States which ratified the Fourteenth Amendment did not consider that in so doing, they were accepting limitations on their freedom, never before questioned, to regulate voting rights as they chose

Even if one were to accept the majority's belief that it is proper entirely to disregard the unmistakable implications of the second section of the Amendment in construing the first section, one is confounded by its disregard of all this history There is here none of the difficulty which may attend the application of basic principles to situations not

[45] *Id.*, at 3092

contemplated or understood when the principles were framed The problems which concern the Court now were problems when the Amendment was adopted. By the deliberate choice of those responsible for the Amendment, it left those problems untouched

C. *After 1868.*

The years following 1868, far from indicating a developing awareness of the applicability of the Fourteenth Amendment to problems of apportionment, demonstrate the reverse; that the States retained and exercised the power independently to apportion their legislatures In its Constitutions of 1875 and 1901, Alabama carried forward earlier provisions guaranteeing each county at least one representative and fixing an upper limit to the number of seats in the House [52] Florida's Constitution of 1885 continued the guarantee of one representative for each county and reduced the maximum number of representatives per county from four to three [53] Georgia, in 1877, continued to favor the smaller counties [54] Louisiana, in 1879, guaranteed each parish at least one representative in the House [55] In 1890, Mississippi guaranteed each county one representative, established a maximum number of representatives, and provided that specified groups of counties should each have approximately one-third of the seats in the House, whatever the spread of population [56] Missouri's Constitution of 1875 gave each county one representative and otherwise favored less populous areas [57] Montana's original Constitution of 1889 apportioned the State Senate by counties [58] In 1877, New Hampshire amended its Constitution's provisions for apportionment, but continued to favor sparsely settled areas in the House and to apportion seats in the Senate according to direct taxes paid; [59] the same was true of New Hampshire's Constitution of 1902 [60]

In 1894, New York adopted a Constitution the peculiar apportionment provisions of which were obviously intended to prevent representation according to population no county was allowed to have more than one-third of all the senators, no two counties which were adjoining or "separated only by public waters" could have more than one-half of all the senators, and whenever any county became entitled to more than three senators, the total number of senators was increased, thus preserving to the small counties their original number of seats [61] In addition, each county except Hamilton was guaranteed a seat in the Assembly [62] The North Carolina Constitution of 1876 gave each county at least one representative and fixed a maximum number of representatives for the whole House [63] Oklahoma's Constitution at the time of its admission to the Union (1907) favored small counties by the use of partial ratios and a maximum number of seats in the House; in addition, no county was permitted to "take part" in the election of more

than seven representatives [64] Pennsylvania, in 1873, continued to guarantee each county one representative in the House [65] The same was true of South Carolina's Constitution of 1895, which provided also that each county should elect one and only one Senator [66] Utah's original Constitution of 1895 assured each county of one representative in the House [67] Wyoming, when it entered the Union in 1889, guaranteed each county at least one senator and one representative [68]

D. *Today*

Since the Court now invalidates the legislative apportionments in six States, and has so far upheld the apportionment in none, it is scarcely necessary to comment on the situation in the States today, which is, of course, as fully contrary to the Court's decision as is the record of every prior period in this Nation's history As of 1961, the Constitutions of all but 11 States, roughly 20% of the total, recognized bases of apportionment other than geographic spread of population, and to some extent favored sparsely populated areas by a variety of devices, ranging from straight area representation or guaranteed minimum area representation to complicated schemes of the kind exemplified by the provisions of New York's Constitution of 1894, still in effect until struck down by the Court today in No 20, *post*, p —— [69] Since Tennessee, which was the subject of *Baker* v *Carr*, and Virginia, scrutinized and disapproved today in No 69, *post*, p ——, are among the 11 States whose own Constitutions are sound from the standpoint of the Federal Constitution as construed today, it is evident that the actual practice of the States is even more uniformly than their theory opposed to the Court's view of what is constitutionally permissible

E. *Other Factors.*

In this summary of what the majority ignores, note should be taken of the Fifteenth and Nineteenth Amendments The former prohibited the States from denying or abridging the right to vote "on account of race, color, or previous condition of servitude" The latter, certified as part of the Constitution in 1920, added sex to the prohibited classifications In *Minor* v *Happersett*, 21 Wall. 162, this Court considered the claim that the right of women to vote was protected by the Privileges and Immunities Clause of the Fourteenth Amendment The Court's discussion there of the significance of the Fifteenth Amendment is fully applicable here with respect to the Nineteenth Amendment as well

> "And still again, after the adoption of the fourteenth amendment, it was deemed necessary to adopt a fifteenth, as follows 'The right of citizens of the United States to vote shall not be denied or abridged by the United States, or by any State, on account of

[64] Okla Const, 1907, Art V, § 10,
[65] Pa Const, 1873, Art II, § 17
[66] S C Const, 1895, Art III, §§ 4, 6
[67] Utah Const, 1895, Art IX, § 4
[68] Wyo Const 1889, Art III, § 3
[69] A tabular presentation of constitutional provisions for apportionment as of Nov 1, 1961, appears in XIV Book of the States (1962–1963) 58–62 Using this table, but disregarding some deviations from a pure population base, the Advisory Commission on Intergovernmental Relations states that there are 15 States in which the legislatures are apportioned solely according to population Apportionment of State Legislatures (1962), 12

race, color, or previous condition of servitude' The fourteenth amendment had already provided that no State should make or enforce any law which should abridge the privileges or immunities of citizens of the United States If suffrage was one of these privileges or immunities, why amend the Constitution to prevent its being denied on account of race, &c ? Nothing is more evident than that the greater must include the less, and if all were already protected why go through with the form of amending the Constitution to protect a part?'' *Id*, at 175

In the present case, we can go still further If constitutional amendment was the only means by which all men and, later, women, could be guaranteed the right to vote at all, even for *federal* officers, how can it be that the far less obvious *right* to a particular kind of apportionment of *state* legislatures—a right to which is opposed a far more plausible conflicting interest of the State than the interest which opposes the general right to vote—can be conferred by judicial construction of the Fourteenth Amendment? [10] Yet, unless one takes the highly implausible view that the Fourteenth Amendment controls methods of apportionment but leaves the right to vote itself unprotected, the conclusion is inescapable that the Court has, for purposes of these cases, relegated the Fifteenth and Nineteenth Amendments to the same limbo of constitutional anachronisms to which the second section of the Fourteenth Amendment has been assigned.

Mention should be made finally of the decisions of this Court which are disregarded or, more accurately, silently overruled today *Minor* v *Happersett*, *supra*, in which the Court held that the Fourteenth Amendment did *not* confer the right to vote on anyone, has already been noted Other cases are more directly in point In *Colegrove* v *Barrett*, 330 U S 804, this Court dismissed "for want of a substantial federal question" an appeal from the dismissal of a complaint alleging that the Illinois legislative apportionment resulted in "gross inequality in voting power" and "gross and arbitrary and atrocious discrimination in voting" which denied the plaintiffs equal protection of the laws [11] In *Remmey* v *Smith*, 102 F Supp 708 (D C E D Pa), a three-judge District Court dismissed a complaint alleging that the apportionment of the Pennsylvania Legislature deprived the plaintiffs of "constitutional rights guaranteed to them by the Fourteenth Amendment" *Id*, at 709 The District Court stated that it was aware that the plaintiffs' allegations were "notoriously true" and that "the practical disenfranchisement of qualified electors in certain of the election districts in Philadelphia County is a matter of common knowledge" *Id*, at 710 This Court dismissed the appeal "for the want of a substantial federal question" 342 U. S 916.

[10] Compare the Court's statement in *Guinn* v *United States*, 238 U S 347, 362

> Beyond doubt the [Fifteenth] Amendment does not take away from the state governments in a general sense the power over suffrage which has belonged to those governments from the beginning and without the possession of which power the whole fabric upon which the division of state and national authority under the Constitution and the organization of both governments rest would be without support and both the authority of the nation and the State would fall to the ground In fact, the very command of the Amendment recognizes the possession of the general power by the State, since the Amendment seeks to regulate its exercise as to the particular subject with which it deals'

[11] The quoted phrases are taken from the Jurisdictional Statement, pp 13, 19

In *Kidd* v *McCanless*, 292 S. W 2d 40, the Supreme Court of Tennessee dismissed an action for a declaratory judgment that the Tennessee Apportionment Act of 1901 was unconstitutional The complaint alleged that "a minority of approximately 37% of the voting population of the State now elects and controls 20 of the 33 members of the Senate, that a minority of 40% of the voting population of the State now controls 63 of the 99 members of the House of Representatives" *Id*, at 42. Without dissent, this Court granted the motion to dismiss the appeal 352 U. S 920 In *Radford* v *Gary*, 145 F. Supp 541 (D C W. D. Okla), a three-judge District Court was convened to consider "the complaint of the plaintiff to the effect that the existing apportionment statutes of the State of Oklahoma violate the plain mandate of the Oklahoma Constitution and operate to deprive him of the equal protection of the laws guaranteed by the Fourteenth Amendment to the Constitution of the United States" *Id*, at 542 The plaintiff alleged that he was a resident and voter in the most populous county of the State, which had about 15% of the total population of the State but only about 2% of the seats in the State Senate and less than 4% of the seats in the House The complaint recited the unwillingness or inability of the branches of the state government to provide relief and alleged that there was no state remedy available The District Court granted a motion to dismiss This Court affirmed without dissent 352 U. S 991.

Each of these recent cases is distinguished on some ground or other in *Baker* v *Carr* See 369 U S at 235–236 Their summary dispositions prevent consideration whether these after-the-fact distinctions are real or imaginary. The fact remains, however, that between 1947 and 1957, four cases raising issues precisely the same as those decided today were presented to the Court Three were dismissed because the issues presented were thought insubstantial and in the fourth the lower court's dismissal was affirmed.[72]

I have tried to make the catalogue complete, yet to keep it within the manageable limits of a judicial opinion In my judgment, today's decisions are refuted by the language of the Amendment which they construe and by the inference fairly to be drawn from subsequently enacted Amendments They are unequivocally refuted by history and by consistent theory and practice from the time of the adoption of the Fourteenth Amendment until today

[72] In two early cases dealing with party primaries in Texas, the Court indicated that the Equal Protection Clause did afford some protection of the right to vote *Nixon* v *Herndon*, 273 U S 536, *Nixon* v *Condon*, 286 U S 73 Before and after these cases, two cases dealing with the qualifications for electors in Oklahoma had gone off on the Fifteenth Amendment, *Guinn* v *United States*, 238 U S 347, *Lane* v *Wilson*, 307 U S 268 The rationale of the Texas cases is almost certainly to be explained by the Court's reluctance to decide that party primaries were a part of the electoral process for purposes of the Fifteenth Amendment See *Newberry* v *United States*, 256 U S 232 Once that question was laid to rest in *United States* v *Classic* 313 U S 299, the Court decided subsequent cases involving Texas party primaries on the basis of the Fifteenth Amendment *Smith* v *Allwright*, 321 U S 649, *Terry* v *Adams* 345 U S 461

The recent decision in *Gomillion* v *Lightfoot*, 364 U S 339, that a constitutional claim was stated by allegations that municipal lines had been redrawn with the intention of depriving Negroes of the right to vote in municipal elections was based on the Fifteenth Amendment Only one Justice, in a concurring opinion, relied on the Equal Protection Clause of the Fourteenth Amendment *Id*, at 349

II.

The Court's elaboration of its new "constitutional" doctrine indicates how far—and how unwisely—it has strayed from the appropriate bounds of its authority The consequence of today's decision is that in all but the handful of States which may already satisfy the new requirements the local District Court or, it may be, the state courts, are given blanket authority and the constitutional duty to supervise apportionment of the State Legislatures It is difficult to imagine a more intolerable and inappropriate interference by the judiciary with the independent legislatures of the States

In the *Alabama* cases (Nos 23, 27, 41), the District Court held invalid not only existing provisions of the State Constitution—which this Court lightly dismisses with a wave of the Supremacy Clause and the remark that "it makes no difference whether a State's apportionment scheme is embodied in its constitution or in statutory provisions," *ante*, p 49—but also a proposed amendment to the Alabama Constitution which had never been submitted to the voters of Alabama for ratification, and "standby" legislation which was not to become effective unless the amendment was rejected (or declared unconstitutional) and in no event before 1966 *Sims* v *Frank*, 208 F Supp 431 See *ante*, pp 8–16 Both of these measures had been adopted only nine days before,[73] at an Extraordinary Session of the Alabama Legislature, convened pursuant to what was very nearly a directive of the District Court see *Sims* v *Frank*, 205 F Supp 245, 248 The District Court formulated its own plan for the apportionment of the Alabama Legislature, by picking and choosing among the provisions of the legislative measures 208 F Supp , at 441–442 See *ante*, p 17 Beyond that, the court warned the legislature that there would be still further judicial reapportionment unless the legislature, like it or not, undertook the task for itself 208 F Supp , at 442 This Court now states that the District Court acted in "a most proper and commendable manner," *ante*, p 51, and approves the District Court's avowed intention of taking "some further action" unless the State Legislature acts by 1966. *ante*, p 52

In the *Maryland* case (No 29, *post*, p ___), the State Legislature was called into Special Session and enacted a temporary reapportionment of the House of Delegates, under pressure from the state courts[74] Thereafter, the Maryland Court of Appeals held that the Maryland Senate was constitutionally apportioned *Maryland Committee for Fair Representation* v *Tawes*, 229 Md 406 This Court now holds that neither branch of the State Legislature meets constitutional requirements *Post*, p 17 The Court *presumes* that since "the Maryland constitutional provisions relating to legislative apportionment [are]

[73] The measures were adopted on July 12, 1962 The District Court handed down its opinion on July 21, 1962

[74] In reversing an initial order of the Circuit Court for Anne Arundel County dismissing the plaintiffs complaint, the Maryland Court of Appeals directed the lower court to hear evidence on and determine the plaintiffs' constitutional claims, and, if it found provisions of the Maryland Constitution to be invalid, to declare that the Legislature has the power, if called into Special Session by the Governor and such action be deemed appropriate by it, to enact a bill reapportioning its membership for purposes of the November 1962 election *Maryland Committee for Fair Representation* v *Tawes* 228 Md 412, 438–439 On remand, the opinion of the Circuit Court included such a declaration The opinion was filed on May 24, 1962 The Maryland Legislature in Special Session adopted the "emergency" measures now declared unconstitutional seven days later, on May 31, 1962

hereby held unconstitutional, the Maryland Legislature has the inherent power to enact at least temporary reapportionment legislation pending adoption of state constitutional provisions" which satisfy the Federal Constitution. *Id.*, at 18. On this premise, the Court concludes that the Maryland courts need not "feel obliged to take further affirmative action" now, but that "under no circumstances should the 1966 election of members of the Maryland Legislature be permitted to be conducted pursuant to the existing or any other unconstitutional plan." *Id.*, at 19.

In the *Virginia* case (No. 69, *post*, p. ...) the State Legislature in 1962 complied with the state constitutional requirement of regular reapportionment.[75] Two days later, a complaint was filed in the District Court.[76] Eight months later the legislative reapportionment was declared unconstitutional. *Mann* v. *Davis*, 213 F. Supp. 577. The District Court gave the State Legislature two months within which to reapportion itself in special session, under penalty of being reapportioned by the court.[77] Only a stay granted by a member of this Court, slowed the process,[78] it is plain that no stay will be forthcoming in the future. The Virginia Legislature is to be given "an adequate opportunity to enact a valid plan", but if it fails "to act promptly in remedying the constitutional defects in the State's legislative apportionment plan," the District Court is to "take further action." *Post*, p. 14.

In *Delaware* (No. 307, *post*, p. ...), the District Court entered an order on July 25, 1962, which stayed proceedings until August 7, 1962, "in the hope and expectation" that the General Assembly would take "some appropriate action" in the intervening 13 days. *Sincock* v. *Terry*, 207 F. Supp. 205, 207. By way of prodding, presumably, the court noted that if no legislative action were taken and the court sustained the plaintiffs' claim, "the present General Assembly and any subsequent General Assembly, the members of which were elected pursuant to Section 2 of Article 2 [the challenged provisions of the Delaware Constitution], might be held not to be a *de jure* legislature and its legislative acts might be held invalid and unconstitutional." *Id.*, at 205–206. Five days later, on July 30, 1962, the General Assembly approved a proposed amendment to the State Constitution. On August 7, 1962, the District Court entered an order denying the defendants' motion to dismiss. The court said that it did not wish to substitute its judgment "for the collective wisdom of the General Assembly of Delaware," but that "in the light of all the circumstances," it had to proceed promptly. 210 F. Supp. 395, 396. On October 16, 1962, the court declined to enjoin the conduct of elections in November. 210 F. Supp. 396. The court went on to express its regret that the General Assembly had not adopted the court's suggestion, see 207 F. Supp., at 206–207, that the Delaware Constitution

[75] The Virginia Constitution, Art. IV, § 43, requires that a reapportionment be made every 10 years.

[76] The 1962 reapportionment acts were approved on Apr. 7, 1962. The complaint was filed on Apr. 9, 1962.

[77] The District Court handed down its opinion on Nov. 28, 1962, and gave the Virginia General Assembly until Jan. 31, 1963, "to enact appropriate reapportionment laws." 213 F. Supp., at 585–586. The court stated that failing such action or an appeal to this Court, the plaintiffs might apply to it "for such further orders as may be required." *Id.*, at 586.

[78] On Dec. 15, 1962, THE CHIEF JUSTICE granted a stay pending final disposition of the case in this Court.

be amended to make apportionment a statutory rather than a constitutional matter, so as to facilitate further changes in apportionment which might be required 210 F Supp 401 In January 1963, the General Assembly again approved the proposed amendment of the apportionment provisions of the Delaware Constitution, which thereby became effective on January 17, 1963 [79] Three months later, on April 17, 1963, the District Court reached "the reluctant conclusion" that Art II, § 2, of the Delaware Constitution was unconstitutional, with or without the 1963 amendment *Sincock* v *Duffy*, 215 F Supp 169, 189 Observing that "the State of Delaware, the General Assembly, and this court all seem to be trapped in a kind of box of time," *id*, at 191, the court gave the General Assembly until October 1, 1963, to adopt acceptable provisions for apportionment On May 20, 1963, the District Court enjoined the defendants from conducting any elections, including the general election scheduled for November 1964, pursuant to the old or the new constitutional provisions [80] This Court now approves all these proceedings noting particularly that in allowing the 1962 elections to go forward, "the District Court acted in a wise and temperate manner" *Post*, p 14 [81]

Records such as these in the cases decided today are sure to be duplicated in most of the other States if they have not already They present a jarring picture of courts threatening to take action in an area which they have no business entering, inevitably on the basis of political judgments which they are incompetent to make They show legislatures of the States meeting in haste and deliberating and deciding in haste to avoid the threat of judicial interference So far as I can tell, the Court's only response to this unseemly state of affairs is ponderous insistence that "a denial of constitutionally protected rights demands judicial protection," *ante*, p 31 By thus refusing to recognize the bearing which a potential for conflict of this kind may have on the question whether the claimed rights are in fact constitutionally entitled to judicial protection, the Court assumes, rather than supports, its conclusion

It should by now be obvious that these cases do not mark the end of reapportionment problems in the courts Predictions once made that the courts would never have to face the problem of actually working out an apportionment have proved false This Court, however,

[79] The Delaware Constitution, Art XVI, § 1 requires that amendments be approved by the necessary two-thirds vote in two successive General Assemblies

[80] The District Court thus nailed the lid on the "box of time" in which everyone seemed to it 'to be trapped" The lid was temporarily opened a crack on June 27, 1963, when MR JUSTICE BRENNAN granted a stay of the injunction until disposition of the case by this Court Since the Court states that "the delay inherent in following the state constitutional prescription for approval of constitutional amendments by two successive General Assemblies cannot be allowed to result in an impermissible deprivation of appellees' right to an adequate voice in the election of legislators to represent them," *post* pp 15–16, the lid has presumably been slammed shut again

[81] In New York and Colorado, this pattern of conduct has thus far been avoided In the *New York* case (No 20, *post* p ——), the District Court twice dismissed the complaint, once without reaching the merits, *WMCA, Inc* v *Simon* 202 F Supp 741, and once, after this Court's remand following *Baker* v *Carr*, *supra* 370 U S 190, on the merits, 208 F Supp 368 In the *Colorado* case (No 508 *post* p ——), the District Court first declined to interfere with a forthcoming election at which reapportionment measures were to be submitted to the voters, *Lisco* v *McNichols* 208 F Supp 471, and, after the election, upheld the apportionment provisions which had been adopted, 219 F Supp 922

In view of the action which this Court now takes in both of these cases, there is little doubt that the legislatures of these two States will now be subjected to the same kind of pressures from the federal judiciary as have the other States

continues to avoid the consequences of its decisions, simply assuring us that the lower courts "can and will work out more concrete and specific standards," *ante*, p 43. Deeming it "expedient" not to spell out "precise constitutional tests," the Court contents itself with stating "only a few rather general considerations " *Ibid*

Generalities cannot obscure the cold truth that cases of this type are not amenable to the development of judicial standards No set of standards can guide a court which has to decide how many legislative districts a State shall have, or what the shape of the districts shall be, or where to draw a particular district line No judicially manageable standard can determine whether a State should have single-member districts or multimember districts or some combination of both No such standard can control the balance between keeping up with population shifts and having stable districts In all these respects, the courts will be called upon to make particular decisions with respect to which a principle of equally populated districts will be of no assistance whatsoever Quite obviously, there are limitless possibilities for districting consistent with such a principle. Nor can these problems be avoided by judicial reliance on legislative judgments so far as possible Reshaping or combining one or two districts, or modifying just a few district lines, is no less a matter of choosing among many possible solutions, with varying political consequences, than reapportionment broadside.[82]

The Court ignores all this, saying only that "what is marginally permissible in one State may be unsatisfactory in another, depending on the particular circumstances of the case." *ante*, p 43 It is well to remember that the product of today's decisions will not be readjustment of a few districts in a few States which most glaringly depart from the principle of equally populated districts It will be a redetermination, extensive in many cases, of legislative districts in all but a few States

Although the Court—necessarily, as I believe—provides only generalities in elaboration of its main thesis, its opinion nevertheless fully demonstrates how far removed these problems are from fields of judicial competence Recognizing that "indiscriminate districting" is an invitation to "partisan gerrymandering," *ante*, pp. 43–44, the Court nevertheless excludes virtually every basis for the formation of electoral districts other than "indiscriminate districting " In one or another of today's opinions, the Court declares it unconstitutional for a State to give effective consideration to any of the following in establishing legislative districts:

(1) history;[83]

(2) "economic or other sorts of group interests";[84]

(3) area;[85]

(4) geographical considerations;[86]

[82] It is not mere fancy to suppose that in order to avoid problems of this sort, the Court may one day be tempted to hold that all state legislators must be elected in statewide elections

[83] *Ante*, p 44

[84] *Ante*, pp 44–45.

[85] *Ante*, p 45

[86] *Ibid*

(5) a desire "to insure effective representation for sparsely settled areas", [87]

(6) "availability of access of citizens to their representatives"; [88]

(7) theories of bicameralism (except those approved by the Court); [89]

(8) occupation; [90]

(9) "an attempt to balance urban and rural power" [91]

(10) the preference of a majority of voters in the State.[92]

So far as presently appears, the *only* factor which a State may consider, apart from numbers, is political subdivisions. But even "a clearly rational state policy" recognizing this factor is unconstitutional if "population is submerged as the controlling consideration . . ." [93]

I know of no principle of logic or practical or theoretical politics, still less any constitutional principle, which establishes all or any of these exclusions Certain it is that the Court's opinion does not establish them So far as the Court says anything at all on this score, it says only that "legislators represent people, not trees or acres," *ante*, p 27, that "citizens, not history or economic interests, cast votes," *ante*, p 45; that "people, not land or trees or pastures, vote," *ibid* [94] All this may be conceded But it is surely equally obvious, and, in the context of elections, more meaningful to note that people are not ciphers and that legislators can represent their electors only by speaking for their interests—economic, social, political—many of which do reflect the place where the electors live The Court does not establish, or indeed even attempt to make a case for the proposition that conflicting interests within a State can only be adjusted by disregarding them when voters are grouped for purposes of representation.

CONCLUSION.

With these cases the Court approaches the end of the third round set in motion by the complaint filed in *Baker* v. *Carr* What is done today deepens my conviction that judicial entry into this realm is profoundly ill-advised and constitutionally impermissible As I have said before, *Wesberry* v *Sanders*, *supra*, at 48, I believe that the vitality of our political system, on which in the last analysis all else depends, is weakened by reliance on the judiciary for political reform; in time a complacent body politic may result

These decisions also cut deeply into the fabric of our federalism What must follow from them may eventually appear to be the product of State Legislatures Nevertheless, no thinking person can fail to recognize that the aftermath of these cases, however desirable it may be thought in itself, will have been achieved at the cost of a radical

[87] *Ibid*
[88] *Ibid*
[89] *Ante*, pp 41–42
[90] *Davis* v *Mann*, *post*, p 12
[91] *Id*, at 13
[92] *Lucas* v *Forty-Fourth General Assembly*, *post*, p 22
[93] *Ante*, p 46
[94] The Court does note that, in view of modern developments in transportation and communication, it finds "unconvincing" arguments based on a desire to insure representation of sparsely settled areas or to avoid districts so large that voters' access to their representatives is impaired. *Ante*, p. 45.

alteration in the relationship between the States and the Federal Government, more particularly the Federal Judiciary Only one who has an overbearing impatience with the federal system and its political processes will believe that that cost was not too high or was inevitable

Finally, these decisions give support to a current mistaken view of the Constitution and the constitutional function of this Court This view, in a nutshell, is that every major social ill in this country can find its cure in some constitutional "principle," and that this Court should "take the lead" in promoting reform when other branches of government fail to act The Constitution is not a panacea for every blot upon the public welfare, nor should this Court, ordained as a judicial body, be thought of as a general haven for reform movements The Constitution is an instrument of government, fundamental to which is the premise that in a diffusion of governmental authority lies the greatest promise that this Nation will realize liberty for all its citizens This Court, limited in function in accordance with that premise, does not serve its high purpose when it exceeds its authority, even to satisfy justified impatience with the slow workings of the political process For when, in the name of constitutional interpretation, the Court *adds* something to the Constitution that was deliberately excluded from it, the Court in reality substitutes its view of what should be so for the amending process.

I dissent in each of these cases, believing that in none of them have the plaintiffs stated a cause of action To the extent that *Baker* v *Carr*, expressly or by implication, went beyond a discussion of jurisdictional doctrines independent of the substantive issues involved here, it should be limited to what it in fact was: an experiment in venturesome constitutionalism. I would reverse the judgments of the District Court in Nos 23, 27, and 41 (Alabama), No 69 (Virginia), and No 307 (Delaware), and remand with directions to dismiss the complaints I would affirm the judgments of the District Court in No 20 (New York), and No 508 (Colorado), and of the Court of Appeals of Maryland in No. 29.

APPENDIX A.

Statements made in the House of Representatives during the debate on the resolution proposing the Fourteenth Amendment *

> "As the nearest approach to justice which we are likely to be able to make, I approve of the second section that bases representation upon voters " 2463 (Mr Garfield).
>
> "Would it not be a most unprecedented thing that when this [former slave] population are not permitted where they reside to enter into the basis of representation in their own State, we should receive it as an element of representation here, that when they will not count them in apportioning their own legislative districts, we are to count them as five fifths (no longer as three fifths, for that is out of the question) as soon as you make a new apportionment?" 2464–2465 (Mr Thayer)

* All page references are to Cong Globe, 39th Cong, 1st Sess (1866)

"The second section of the amendment is ostensibly intended to remedy a supposed inequality in the basis of representation The real object is to reduce the number of southern representatives in Congress and in the Electoral College, and also to operate as a standing inducement to negro suffrage " 2467 (Mr. Boyer).

"Shall the pardoned rebels of the South include in the basis of representation four million people to whom they deny political rights, and to no one of whom is allowed a vote in the selection of a Representative?" 2468 (Mr Kelley)

"I shall, Mr Speaker, vote for this amendment; not because I approve it Could I have controlled the report of the committee of fifteen, it would have proposed to give the right of sufferage to every loyal man in the country " 2469 (Mr Kelley).

"But I will ask, why should not the representation of the States be limited as the States themselves limit suffrage? . . If the negroes of the South are not to be counted as a political element in the government of the South in the States, why should they be counted as a political element in the government of the country in the Union. 2498 (Mr. Broomall)

"It is now proposed to base representation upon suffrage, upon the number of voters, instead of upon the aggregate population in every State of the Union " 2502 (Mr. Raymond).

"We admit equality of representation based upon the exercise of the elective franchise by the people The proposition in the matter of suffrage falls short of what I desire, but so far as it goes it tends to the equalization of the inequality at present existing; and while I demand and shall continue to demand the franchise for all loyal male citizens of this country—and I cannot but admit the possibility that ultimately those eleven States may be restored to representative power without the right of franchise being conferred upon the colored people—I should feel myself doubly humiliated and disgraced, and criminal even, if I hesitated to do what I can for a proposition which equalizes representation " 2508 (Mr. Boutwell).

"Now, conceding to each State the right to regulate the right of suffrage, they ought not to have a representation for male citizens not less than twenty-one years of age, whether white or black, who are deprived of the exercise of suffrage This amendment will settle the complication in regard to suffrage and representation, leaving each State to regulate that for itself, so that it will be for it to decide whether or not it shall have a representation for all its male citizens not less than twenty-one years of age " 2510 (Mr. Miller).

"Manifestly no State should have its basis of national representation enlarged by reason of a portion of citizens within its borders to which the elective franchise is denied If political power shall be lost because of such denial, not imposed because of participation in rebellion or other crime, it is to be hoped that political interests

may work in the line of justice, and that the end will be the impartial enfranchisement of all citizens not disqualified by crime. Whether that end shall be attained or not, this will be secured that the measure of political power of any State shall be determined by that portion of its citizens which can speak and act at the polls, and shall not be enlarged because of the residence within the State of portions of its citizens denied the right of franchise So much for the second section of the amendment It is not all that I wish and would demand, but odious inequalities are removed by it and representation will be equalized, and the political rights of all citizens will under its operation be, as we believe, ultimately recognized and admitted " 2511 (Mr Eliot).

"I have no doubt that the Government of the United States has full power to extend the elective franchise to the colored population of the insurgent States I mean authority, I said power I have no doubt that the Government of the United States has authority to do this under the Constitution, but I do not think they have the power. The distinction I make between authority and power is this: we have, in the nature of our Government, the right to do it: but the public opinion of the country is such at this precise moment as to make it impossible we should do it It was therefore most wise on the part of the committee on reconstruction to waive this matter in deference to public opinion The situation of opinion in these States compels us to look to other means to protect the Government against the enemy " 2532 (Mr Banks)

"If you deny to any portion of the loyal citizens of your State the right to vote for Representatives you shall not assume to represent them, and, as you have done for so long a time, misrepresent and oppress them This is a step in the right direction, and although I should prefer to see incorporated into the Constitution a guarantee of universal suffrage, as we cannot get the required two thirds for that I cordially support this proposition as the next best " 2539–2540 (Mr Rogers).

APPENDIX B.

Statements made in the Senate during the debate on the resolution proposing the Fourteenth Amendment *

"The second section of the constitutional amendment proposed by the committee can be justified upon no other theory than that the negroes ought to vote; and negro suffrage must be vindicated before the people in sustaining that section, for it does not exclude the non-voting population of the North, because it is admitted that there is no wrong in excluding from suffrage aliens, females, and minors But we say, if the negro is excluded from suffrage he shall also be excluded from the basis of representation. Why this inequality? Why this injustice? For injustice it would be unless there be some good reason for this discrimination against the South in excluding her non-voting population from the basis of repre-

* All page references are to Cong Globe, 39th Cong, 1st Sess (1866)

sentation The only defense that we can make to this apparent injustice is that the South commits an outrage upon human rights when she denies the ballot to the blacks, and we will not allow her to take advantage of her own wrong, or profit by this outrage Does any one suppose it possible to avoid this plain issue before the people? For if they will sustain you in reducing the representation of the South because she does not allow the negro to vote, they will do so because they think it is wrong to disfranchise him." 2800 (Senator Stewart)

"It [the second section of the proposed amendment] relieves him [the negro] from misrepresentation in Congress by denying him any representation whatever " 2801 (Senator Stewart).

"But I will again venture the opinion that it [the second section] means as if it read thus: no State shall be allowed a representation on a colored population unless the right of voting is given to the negroes—presenting to the States the alternative of loss of representation or the enfranchisement of the negroes, and their political equality " 2939 (Senator Hendricks)

"I should be much better satisfied if the right of suffrage had been given at once to the more intelligent of them [the Negroes] and such as had served in our Army But it is believed by wiser ones than myself that this amendment will very soon produce some grant of suffrage to them, and that the craving for political power will ere long give them universal suffrage . . . Believing that this amendment probably goes as far in favor of suffrage to the negro as is practicable to accomplish now, and hoping it may in the end accomplish all I desire in this respect, I shall vote for its adoption, although I should be glad to go further." 2963–2964 (Senator Poland).

"What is to be the operation of this amendment? Just this: your whip is held over Pennsylvania, and you say to her that she must either allow her negroes to vote or have one member of Congress less " 2987 (Senator Cowan)

"Now, sir, in all the States—certainly in mine, and no doubt in all—there are local as contradistinguished from State elections There are city elections, county elections, and district or borough elections; and those city and county and district elections are held under some law of the State in which the city or county or district or borough may be, and in those elections, according to the laws of the States, certain qualifications are prescribed, residence within the limits of the locality and a property qualification in some Now, is it proposed to say that if every man in a State is not at liberty to vote at a city or a country or a borough election that is to affect the basis of representation?" 2991 (Senator Johnson)

"Again, Mr President, the measure upon the table, like the first proposition submitted to the Senate from the committee of fifteen, concedes to the States . . . not only the right, but the exclusive right, to regulate the franchise . . It says that each of the southern States, and, of course, each other State in the Union, has a

right to regulate for itself the franchise, and that consequently, as far as the Government of the United States is concerned, if the black man is not permitted the right to the franchise, it will be a wrong (if a wrong) which the Government of the United States will be impotent to redress " 3027 (Senator Johnson).

"The amendment fixes representation upon numbers, precisely as the Constitution now does, but when a State denies or abridges the elective franchise to any of its male inhabitants who are citizens of the United States and not less than twenty-one years of age, except for participation in rebellion or other crime, then such State will lose its representation in Congress in the proportion which the male citizen so excluded bears to the whole number of male citizens not less than twenty-one years of age in the State " 3033 (Senator Henderson)

PER CURIAM ORDER
December 3, 1964

Since the historic pronouncement by the Supreme Court of the United States in *Baker v Carr*, 369 U.S 186 (decided March 26, 1962), the federal courts of the United States have been literally flooded with suits by voters, alleging either "the debasement" of their vote by state legislative action, or by the failure or alleged inability of the state legislature to act pursuant to constitutional requirements, which in either event have resulted in "invidious discrimination" against the litigant, and others in his class, which amounts to or results in a violation of the equal protection clause of the Fourteenth Amendment to the United States Constitution This is one of those cases.

Plaintiff, Phill Silver, filed this class action on July 16, 1962, as a citizen of the United States and of California, and as an elector and registered voter of Los Angeles County, on his own behalf and on behalf of all other citizens, electors, and registered voters of the State of California, similarly situated The defendants are sued in their representative capacities as State officials, performing duties in respect to State elections.

The complaint alleged a deprivation of rights under the California Constitution and under the Equal Protection Clause of the Fourteenth Amendment It is asserted, and we hold, that this court has jurisdiction under the Civil Rights Act, 42 U S C §§ 1983, 1988, and 28 U.S C. § 1343(3). Relief is prayed for under 28 U S C §§ 2201-2202

Since relief was sought under the Federal Declaratory Judgment Act (28 U S.C. §§ 2201-2202), a three-judge District Court was convened The plaintiff prayed for injunctive relief to enjoin the 1962 General Election as it applied to the election of State Senators Plaintiff alleged that the present apportionment of the California State Senate, (Cal. Const, Art. IV, Sec 6, as amended in 1926), deprived him and all others similarly situated of due process of law and the equal protection of the law. Furthermore, he alleged that his right to equal suffrage in a free and equal election had been deprived in violation of both the California Constitution and the Fourteenth Amendment of the U S Constitution.

On August 30, 1962, this court handed down its opinion and order (Civil Action No 62-953 MC) holding that it had jurisdiction, *Baker v. Carr, supra* at 204-208, and that the subject matter of this suit was justiciable, not a non-justiciable political question regarding the relationship between the judiciary and its co-ordinate branches of the Federal Government. *Baker v. Carr, supra* at 208-236, especially at 217. All of defendants' motions to dismiss were denied However, this court, while retaining jurisdiction, denied any injunctive relief at that time, as there was then available to the plaintiff a State remedy, namely, the Initiative Measure on the 1962 General Election Ballot, Proposition 23, which, if passed, would have reapportioned the State Senate

II

The California Constitution of 1849 and the revised Constitution of 1879 provided for representation on the basis of population in both houses of the Legislature *(Cal. Const.* 1849, Art. IV, §§ 28-29; *Cal Const.* 1879, Art IV, §6) and vested the entire lawmaking power of the State in that body. *(Cal. Const.* 1849, Art IV, §29; *Cal. Const.* 1879, Art IV, § 6).

In response to Governor Hiram Johnson's call to allow the people the right to check any abuse of power by the Legislature, the Legislature in 1911 submitted to the voters of the state a constitutional amendment, which was passed by the electorate, reserving to them the right to initiate and enact laws, which is the initiative, and to prevent laws enacted from becoming effective, which is the referendum *(Cal. Const.* Art IV, §1; Hichborn, *Story of the California Legislature of 1911,* p 93).

After the 1920 decennial census, the 1921, 1923 and 1925 sessions of the State Legislature failed to enact any reapportionment scheme, as demanded by the U S Constitution, Art I, § 2 The people of the State responded to the inaction of the legislators and on the 1926 election ballot they qualified two proposals by initiative for the consideration of the electorate. Proposition 20 would have retained the apportionment of the two houses as they then existed, namely, on a population basis; whereas, Proposition 28 presented the so-called "Federal Plan" to the electorate, which would retain the Assembly's apportionment on a population basis, but the State Senate was to be apportioned largely on a geographic basis Proposition 28 was based on existing representation in the Congress of the United States Proposition 28 was adopted, and Proposition 20 was rejected Thus, since 1926, California has retained this "Federal Plan" in its apportionment of seats in the California Legislature. It is this amendment to Art IV, § 6 of the California Constitution, which the plaintiff challenges here Since the adoption of Proposition 28 in 1926, the State Legislature has never failed to comply with the Federal requirement of apportioning its seats every ten years in accordance with the Federal Census

Presently, the State of California is divided into forty senatorial districts. Furthermore, no county is to have more than one representative in the Senate, and no Senator is to represent more than three counties (*Cal Const* Art IV, § 6, *Cal Elections Code* § 30100). There is no controversy here over the constitutionality of the apportionment

of seats in the State Assembly, containing 80 members, since the apportionment in the lower house is based solely on population. (*Cal. Const.* Art IV, § 6; *Cal. Elections Code* § 30201).

Since the Amendment to Article IV, Section 6 was adopted in 1926, there have been four attempts by the initiative process to revert back to the pre-1926 apportionment. But the electorate in 1928, 1948, 1960 and most recently in 1962, has rejected these initiatives. Since 1951 there have been numerous bills introduced in the State Legislature for the apportionment of the State Senate on a population basis, but all of these attempts have been killed by the Senate or died without any action by both houses.

III

It is pertinent to note the various population disparities which exist in the present apportionment of seats in the California State Senate under Art. IV, § 6, as amended in 1926 For example, according to the last Federal Census (1960), the population of the 38th Senatorial District, comprising Los Angeles County, is 6,380,771. The population of the 28th Senatorial District, comprising Mono, Inyo, and Alpine Counties, is 14,294 This is a ratio of almost 450·1. Other great disparities exist with respect to other Senatorial Districts, i e, 40th Senatorial District, San Diego County, 100·1 as compared to District 28; 16th Senatorial District, Alameda County, 90.1 as compared to District 28, 14th Senatorial District, San Francisco County, 60.1 as compared with District 28; 35th Senatorial District, Orange County, 50.1 as compared to District 28, to name a few Thus about one-third of the total population of the State of California today controls more than two-thirds of the representation in the State Senate. (See U S. Census of Population, 1960, California, U. S. Department of Commerce, Bureau of the Census, p. 23).

IV

INTERVENTION OF THE STATE SENATE

The California State Senate's motion to intervene as a substantially interested party was granted because it would be directly affected by the decree of this court. Fed. R. Civ. P. 24(a)(2); *Calif. Const.* Art. IV, §§ 1, 4, 5 and 6; *People v. U S*, 180 F.2d 596 (9 Cir.); *Kozak v. Wells*, 278 F.2d 104; *Ex Parte D. O. McCarthy*, 29 Cal. 395.

V

LEGAL EFFECT UPON THIS SUIT OF THE VARIOUS LITIGATION INITIATED IN THE CALIFORNIA SUPREME COURT BY APPLICATIONS FOR WRITS OF MANDAMUS, WHICH WERE ALL DENIED

In *Yorty and Bonelli v. Anderson*, 60 C 2d 312, 33 Cal Rptr 97, 384 P 2d 417 (1963); *Yorty and Bonelli v Jordan*, Sac No. 7543 (appealed to the U. S. Supreme Court, October 1964 Term, Case No. 250, and dismissed for want of jurisdiction on October 12, 1964, ___ U.S. ___); and *Yorty* and *Bonelli v. Jordan*, Sac. No. 7582, the plaintiffs sought a writ of mandate from the Supreme Court of the State of

California to compel a reapportionment of the Senate of the Legislature of the State of California on a population basis

In denying a writ in the last named case, the Supreme Court of California said:

> "The petition to intervene and the petition for the writ of mandate are denied for the reason that any determination by this court on the question of legislative reapportionment would be premature until such time as the Legislature has had an opportunity to consider the matter and to take such action as it may deem to be required pursuant to the expression of the United States Supreme Court in *Reynolds v. Sims*, ___ U.S ___, and companion cases."

None of these cases have any effect on the present suit, for in *Yorty v. Anderson, supra,* the case was determined on a non-federal question, i e, the plaintiff had misjoined the wrong party as defendant. The proper party defendant should have been the Secretary of State, not the members of the Reapportionment Commission, which had no jurisdiction to reapportion the legislature, unless the Legislature failed to act, which it had not. The other two cases, resulting in denials of petitioners' request, were denied without any opinion It is apparent that none of these cases have directly reached the federal constitutional question of an alleged denial of petitioner's rights under the Equal Protection Clause of the Fourteenth Amendment, and, as such, they have no relation to our decision here

VI

DELAY

Although the plaintiff herein originally sought injunctive relief, which this court temporarily denied, his position subsequently changed Despite the fact no initiative petitions proposing reapportionment of the California Senate had been filed with the State by June 25th, 1964 (the last day for filing such initiative proceedings) and that none of the twelve proposed amendments to the California Constitution, appearing on the November 3rd, 1964 election ballot, related to reapportionment of the California Senate, it was stipulated (Supplementary Stipulation of Facts No. 3, ¶ XXI). "The plaintiff does not seek any injunctive or mandatory relief in connection with the November 3, 1964 general election."

This court deemed it proper, in view of the lack of demand for injunctive relief, to obtain the benefit of the argument of plaintiff, and original defendants, and more particularly that of the intervening Senate, as to the meaning and effect of the group of cases on this novel and revolutionary legal theory, decided by the Supreme Court of the United States on June 15, 1964. *Reynolds v Sims,* 377 U S 533, *WMCA, Inc v. Lomenzo,* 377 U S 633; *Maryland Committee v Tawes,* 377 U S 656; *Davis v Mann,* 377 U S 695; *Lucas v Colorado General Assembly,* 377 U S 713.

These cases dispose of each position taken by the intervening plaintiffs. They establish the existence of "malapportionment" in California Senate election districts, on the facts present before us But they did

not require immediate action by this court, for all reiterate the principle that in awarding relief for malapportionment of election districts, a District Court should consider many factors, including the proximity of the forthcoming election, the complexities of the election laws, etc, and above all should rely on general equitable principles.

VII

DIFFUSION OF POLITICAL POWER BETWEEN THINLY AND HEAVILY POPULATED COUNTIES IS NOT PERMISSIBLE

Defendants contend that population is not the only basis for an apportioning of seats in a bicameral legislature, as such. California's so-called "Federal Plan" is constitutionally valid (*Cal Const*, Art IV, § 6, as amended in 1926) The defendants contend that such was the rule as laid down in *Baker v Carr, supra Baker* held only that the petitioners had stated a cause of action, and thus the Supreme Court remanded the cause to the District Court in Tennessee for a hearing on the merits In *Grey v Sanders*, 372 U S. 368 (1963), the court held that the Georgia County Unit System was unconstitutional as it "watered-down" the weight of the votes of certain Georgia voters simply because of their residence Such discrimination cannot be justified, for the Equal Protection Clause as well as the Fifteenth and Nineteenth Amendments demand "One-Man, One-Vote." Thus it was apparent that the "handwriting was on the wall" with the *Grey* decision, and the pinnacle was reached in the landmark Reapportionment Cases of June 1964

In considering whether or not the State's legislative apportionment method amounts to an invidious discrimination violative of rights asserted under the Equal Protection Clause, the crucial point is that these rights purportedly violated are individual and personal in nature *Reynolds v Sims*, 377 U S 533, 561, affirming and remanding 208 F. Supp 431 (M D Ala, 1962) Even though the court's holding may result in a reapportionment of the California State Senate, this court must predominantly concern itself in ascertaining if the plaintiff and others similarly situated have been so invidiously discriminated against as to constitute a prohibited dilution of their constitutionally protected right to vote The court stated in *Reynolds v. Sims, supra:*

> "Legislators are elected by voters, not trees or acres Legislators are elected by voters, not farms or cities or economic interests As long as ours is a representative form of government and our legislators are those instruments of government elected directly by and directly representative of the people, the right to elect legislators in a free and unimpaired fashion is a bedrock of our political system "

377 U.S. at 562; *WMCA, Inc v Lomenzo*, 377 U S. 633, reversing and remanding 208 F Supp 368 (S D N Y 1962); *Maryland Committee v Tawes*, 377 U S 656 reversing and remanding 209 Md 406, 184 A.2d 715; *Davis v. Mann*, 377 U S. 678, affirming and remanding 213 F Supp 577 (E D Va 1962); *Roman v Sincock*, 377 U S 695, affirming and remanding 215 F Supp 169 (Del.

1963); *Lucas v Colorado General Assembly*, 377 U S. 713, reversing and remanding 219 F.Supp. 922 (Colo 1963).

In California the Twenty-Eighth Senatorial District, Inyo, Mono and Alpine Counties, had a population of 14,294 according to the 1960 Federal Census, contrasted with the 38th Senatorial District, Los Angeles County, with a population of 6,380,771 The disparity here in favor of the residents of the 28th District is almost 450 to 1 It is invidious discrimination against the residents of Los Angeles County and is debasement of their right to vote and deprives them of the Equal Protection of the Laws as guaranteed by the Fourteenth Amendment *Reynolds v. Sims, supra* The votes of the voters of Los Angeles County simply do not count as much as the votes of the voters of Alpine, Mono and Inyo Counties It takes 450 Los Angeles County voters to equal one vote cast by a voter in the 28th District In *Maryland Committee v. Tawes, supra*, the ratio was 32 to 1 in the State Senate in the variance of allocation of seats between the most populous and least populous counties, and 12 to 1 in the House In *Davis v Mann, supra*, the population variance in the State Senate was 2 65 to 1, and in the House, 4 36 to 1 In *Roman v Sincock, supra*, the population variance was 15 to 1 for the Senate, and in the House, 35 to 1 Lastly, in *Lucas v Colorado General Assembly, supra*, the population variance, after the enactment of the Constitutional referendum by the voters in 1962, adopting an apportionment which divided the seats on population and other factors in the State Senate and population in the House, in the Senate was 3 6 to 1 and in the House, 1 7 to 1 In all these cases the court held, in line with the *Reynolds* doctrine of apportionment on a "Substantially-Equal" Population Basis, that they all failed to meet the requisites of this rule and were, therefore, unconstitutional under the Equal Protection Clause of the Fourteenth Amendment

The court held in *Wesberry v Sanders*, 376 U S 1: "We do not believe that the framers of the Constitution intended to permit the same vote-diluting discrimination to be accomplished through the device of districts containing widely varied numbers of inhabitants To say that a vote is worth more in one district than in another would . run counter to our fundamental ideas of democratic government " 376 U S 1, at 8. Thus the court held in *Reynolds v Sims, supra*, that population is the central point for determination and the main basis for judgment in legislative apportionment controversies

> "A citizen, a qualified voter, is no more nor no less so because he lives in the city or on the farm This is the clear and strong command of our Constitution's Equal Protection Clause This is an essential part of the concept of a government of laws and not men This is at the heart of Lincoln's vision of 'government of the people, by the people, [and] for the people ' The Equal Protection Clause demands no less than substantially equal state legislative representation for all citizens, of all *places* as well as of all races " 377 U S. at 568 (Emphasis added).

Then Chief Justice Warren, writing for the majority, held:

> ". . . as a basic constitutional standard, the Equal Protection Clause requires that seats in a bicameral state legislature must be

apportioned on a population basis. Simply stated, an individual's right to vote for state legislators is unconstitutionally impaired where its weight is in a substantial fashion diluted when compared with votes of citizens living in other parts of the State." 377 U.S. at 568.

Defendants' contention that population is not the only basis for apportioning of seats in the State Senate and that a diffusion of political power between urban and rural areas is permissible cannot be sustained, as such a position is the antithesis of the doctrine which *Reynolds v Sims, supra,* and all its companion cases have established

The reliance on *MacDougall v Green,* 335 U.S. 281, by the defendants is futile in light of *Reynolds v. Sims, supra,* and its companion cases They have completely misinterpreted *Baker v. Carr, supra,* where the majority in citing *MacDougall* did not give their approval, but rather clearly disapproved it, for the court stated

> "In MacDougall v Green, 335 U.S. 281, the District Court dismissed for want of jurisdiction, which had been invoked under 28 U.S.C. § 1343(3), a suit to enjoin enforcement of the requirement that nominees for state-wide elections be supported by a petition signed by a minimum number of persons from at least 50 of the State's 102 counties *This Court's* disagreement with that action is clear since the Court affirmed the judgment after a review of the merits and concluded that the particular claim there was without merit " 369 U.S. at 203 (Emphasis added)

Clearly, by the Court's own language it has disapproved the earlier *MacDougall v Green, supra,* holding, for it held that "this Court" disagrees with the earlier holding. Therefore, although not expressly overruled, *MacDougall v Green. supra,* is now obsolete in light of *Baker v Carr, supra.* and *Reynolds v Sims, supra.*

California's Senatorial apportionment under Art IV, § 6, as amended in 1926, is invidiously discriminatory, being based on no constitutionally valid policy; therefore it is invalid under the Equal Protection Clause of the Fourteenth Amendment, since it substantially dilutes one's right to vote solely because of where one happens to reside. *Reynolds v. Sims, supra; Maryland Committee v. Tawes, supra; Davis v Mann, supra; Roman v Sincock, supra; WMCA v. Lomenzo, supra;* and *Lucas v Colorado General Assembly. supra; Paulson v Meier,* 232 F Supp 183 (No Dak, S W, July 1964); and *League of Nebraska Municipalities v. Marsh,* 232 F Supp 411 (Nebr, July 1964).

Any reliance by the defendants on *Scholle v. Hare,* 367 Mich. 176 (116 N W 2d 350), and its subsequent companion cases, under the 1963 Michigan Constitution, Art. IV, §§ 2–6, in 372 Mich 418 (126 N.W 2d 731), (see latter case's two supplemental opinions in 372 Mich 461 (126 N W 2d 731) and 128 N W 2d 350) is now futile This is necessarily so, for the Supreme Court in a per curiam decision, 32 U S L Week 3442; 82 S.Ct. 1912; based on *Reynolds v Sims,* 377 U.S 533, and *Lucas v. Colorado General Assembly.* 377 U S 713, reversed and remanded for further hearings consistent with the *Reynolds'* rule, *Marshall v Hare,* 227 F Supp 989 (E D Mich, 1964), the exact same case, which had been instituted in the District Court The discrepancy in representation in Michigan was about 4 to 1, like all the other reapportionment deci-

sions handed down last June, it, too, was invalid under the *Reynolds'* doctrine

VIII

AVAILABLE POLITICAL REMEDIES, AS THE INITIATIVE AND REFERENDUM, HAVE NO CONSTITUTIONAL SIGNIFICANCE

Any reliance on the political remedies of initiative and referendum (*Cal Const* Art IV, § 1) has no constitutional relevance Even though a majority of the electorate may have voted to retain the present apportionment scheme in California under Art IV, § 6, as amended in 1926, such a vote cannot be sustained, if it deprives others of the Equal Protection of the Laws under the Fourteenth Amendment *Reynolds v Sims, supra,* and *Lucas v Colorado General Assembly, supra* The Court in *Lucas v Colorado General Assembly, supra,* was explicit on this point·

> " . . While a court sitting as a court of equity might be justified in temporarily refraining from the issuance of injunctive relief in an apportionmen case in order to allow for resort to an available political remedy, such as initiative and referendum, individual constitutional rights cannot be deprived, or denied judicial effectuation, because of the existence of a nonjudicial remedy through which relief against the alleged malapportionment, which the individual voters seek, might be achieved An individual's constitutionally protected right to cast an equally weighted vote cannot be denied even by a vote of a majority of a State's electorate, if the apportionment scheme adopted by the voters fails to measure up to the requirements of the Equal Protection Clause Manifestly, the fact that an apportionment plan is adopted in a popular referendum is insufficient to sustain its constitutionality or to induce a court of equity to refuse to act . . A citizen's constitutional rights can hardly be infringed simply because a majority of the people choose to do so We hold that the fact that a challenged legislative apportionment plan was approved by the electorate is without federal constitutional significance, if the scheme adopted fails to satisfy the basic requirements of the Equal Protection Clause, as delineated in our opinion in *Reynolds v Sims* And we conclude that the fact that a practicably available political remedy, such as initiative and referendum exists under state law provides justification only for a court of equity to stay its hand temporarily while recourse to such a remedial device is attempted or while proposed initiated measures relating to legislative apportionments are pending and will be submitted to the State's voters at the next election." 377 U S at 736–737.

Therefore, it is clear that the mere fact that California voters have consistently rejected any reapportionment of the State Senate on a population basis by the initiative process in the elections of 1928, 1948, 1960 and 1962 is immaterial The rejection cannot be immune from constitutional attack on the ground that it violates the plaintiff's and all others similarly situated right to vote without having such right being substantially diluted by the mere fact of their residence, which

is in direct violation of the rights guaranteed under the Fourteenth Amendment. *Reynolds v Sims, supra*, and *Lucas v. Colorado General Assembly, supra.*

IX

CAN CALIFORNIA'S GREAT DIVERSITY OF PEOPLES RESOURCES, INTEREST AND ACTIVITIES OVERRIDE THE EQUAL PROTECTION PRINCIPLE?

It is the position of the defendants that California's apportionment of its State Senate (Art. IV, § 6, as amended in 1926) is constitutionally rational in light of the State's size, diversity, interests and activities This argument had it been made prior to *Baker v Carr, supra*, and its progeny, would have been highly persuasive But these other factors cannot be sustained where the deviation is so clerly invidious, as is the case here in California (almost 450 to 1 in two districts). *Reynolds v Sims, supra; Lucas v Colorado General Assembly, supra; Davis v Mann, supra; Roman v Sincock, supra; Maryland Committee v Tawes, supra;* and *WNCA v Lomenzo, supra* The rule laid down in *Reynolds* and its companion cases will allow for a slight deviation from the "Substantially Equal Population" Doctrine, where such is incident to the effectuation of a rational state policy The Court in *Reynolds v. Sims, supra,* held:

> ". . . neither history alone, nor economic or other sorts of group interests, are permissible factors in attempting to justify disparities from population-based representation Citizens, not history or economic interests, cast votes Considerations of area alone provide an insufficient justification for deviations from the equal-population principle Again, people, not land or trees or pastures, vote Modern developments and improvements in transportation and communications make rather hollow, in the mid-1960's, most claims that deviations from population-based representation can validly be based solely on geographical considerations Arguments for allowing such deviations in order to insure effective representation for sparsely settled areas and to prevent legislative districts from becoming so large that the availability of access of citizens to their representatives is impaired are today, for the most part, unconvincing." 377 U S. at 579–580.

Thus any reliance on California's large area, diverse interests, history, sectional differences, that districts would be too large in area, and the like, are immaterial, since California's State Senate is strictly apportioned on an area basis (Art IV, § 6, as amended in 1926) without any consideration to the substantially-equal population doctrine by *Reynolds v Sims, supra,* and its companion cases

X

FEDERAL SCHEME ANALOGY

Furthermore, defendants contend that the present apportionment of the California State Senate (Art IV, § 6, as amended 1926) can, nevertheless, be sustained because it is patterned after the Federal

Congress Factually, the similarity is clear, for in California the Assembly is apportioned strictly on a population basis (*Cal Const* Art. IV, § 6), analogous to the House of Representatives (U S C, *Const Art.* I, § 2, cl 3), whereas, the State Senate, being apportioned on an area basis with no more than one Senator for each county, is analogous to the United States Senate, where each State is entitled to two Senators regardless of population (Seventeenth Amendment of the U S Constitution). But, legally, this analogy is inapposite and irrelevant to State Legislative Districting schemes The Court in *Reynolds v Sims, supra,* adopted the opinion of the lower court on this matter, which had held that the Alabama counties were merely involuntary political units of the State created by statute to aid in the administration of the State Government *Sims v Reynolds,* 208 F Supp 431 (M D Ala 1961) The Court held that the federal analogy argument is generally the last hope when it is clear that a state's apportionment is, as is California's, individiously maladjusted The Supreme Court holds our Founding Fathers did not intend to establish any pattern for state legislative apportionment when the representation in the Federal Congress was adopted *Reynolds v Sims, supra; Maryland Committee v. Tawes, supra; Roman v Sincock, supra; Davis v Mann, supra;* and *Lucas v. Colorado General Assembly, supra* The Court in *Reynolds* proceeded:

> ". . . The fact that almost three-fourths of our present States were never in fact independently sovereign does not detract from our view that the so-called federal analogy is inapplicable as a sustaining precedent for state legislative apportionments The developing history and growth of our republic cannot cloud the fact that, at the time of the inception of the system of representation in the Federal Congress, a compromise between the larger and smaller states on this matter averted a deadlock in the Constitutional Convention which had threatened to abort the birth of our Nation. . . .
>
> Political subdivisions of States—Counties, cities, or whatever—never were and never have been considered as sovereign entities Rather, they have been traditionally regarded as subordinate governmental instrumentalities created by the State to assist in the carrying out of state governmental functions . . The relationship of the States to the Federal Government could hardly be less analogous " 377 U S at 574–575

Defendant makes further mention that the different basis of apportionment in the California Legislature is necessary to maintain the proper checks and balances between the two houses of the legislature, as is the case in the Federal Congress This again might be a forceful argument were this a case of first impression, but this argument is of no avail in light of the Court's holding that the Federal Analogy is inapposite and irrelevent to state legislative schemes This is seen from the Court's holding in *Reynolds:*

> "We do not believe that the concept of bicameralism is rendered anachronistic and meaningless when the predominant basis of representation in the two state legislative bodies is required to be

the same—population A prime reason for bicameralism, modernly considered, is to insure mature and deliberate consideration of, and to prevent precipitate action on, proposed legislative measures Simply because the controlling criterion for apportioning representation is required to be the same in both houses does not mean that there will be no differences in the composition and complexion of the two bodies Different constituencies can be represented in the two houses One body could be composed of single-member districts while the other could have at least some multimember districts. The length of terms of the legislators in the separate bodies could differ The numerical size of the two bodies could be made to differ, even significantly, and the geographical size of districts from which legislators are elected could also be made to differ And apportionment in one house could be arranged so as to balance off minor inequalities in the representation of certain areas in the other house In summary, these and other factors could be, and are presently in many States, utilized to engender differing complexions and collective attitudes in the two bodies of a state legislature, although both are apportioned substantially on a population basis " 377 U S. at 576–577

XI

CONCLUSION

The present plan of Senate apportionment by districts in California is unconstitutional, being an invidious discrimination of citizens' rights and violative of the Equal Protection Clause of the XIV Amendment to the United States Constitution, as interpreted and determined by the Supreme Court of the United States

XII

RELIEF

Equitable principles must guide this court in whatever relief it determines is just and appropriate under the circumstances of this case (*Baker* v *Carr, supra; Reynolds* v *Sims, supra*)

This court asserts and agrees that "legislative reapportionment is primarily a matter for legislative consideration and determination, and that judicial relief becomes appropriate only when a legislature fails to reapportion according to federal constitutional requisites in a timely fashion after having had an adequate opportunity to do so." *Reynolds* v *Sims, supra* at 586

At the same time, this court feels required to state (as a three-judge court in this circuit has heretofore said with respect to reapportionment of both houses of the State Legislature of the State of Washington) .

> "In the legal climate of today, no citizen may acquire a right to a legal status created by an unremitting legislative disregard of sacred constitutional rights " *Thigpen* v *Meyers,* 211 F Supp. 826 (1962).

If the California State Legislature once ordered fails to act, and to act with promptness, we, ever conscious of our oath to uphold the

Constitution of the United States, will unhesitatingly take appropriate action to correct the inequity

This court, having determined that the primary objective of any order or decree at this time should be to effectively induce the 1965 session of the California State Legislature *to properly reapportion itself as its first order of business,* makes no order at this time other than the following.

(1) It is the order of this court that the California State Legislature reapportion the California State Senate consistent with this opinion, and the several existing United States Supreme Court decisions on the subject, so that the *Reynolds'* doctrine of "districts of substantial equality in population" exists

(2) Should the California State Legislature fail to discharge its duty to fairly, adequately and validly redistrict State Senatorial Districts within the State of California, by not later than July 1, 1965, this court will, before or after that date, hold further hearings, or motions; devise redistricting plans, and make such further orders or take such further steps as may be necessary or appropriate (either upon its own motion, or on the motion of any party or intervenor), and to that end we retain full jurisdiction of this case for such purpose, and all others.

REAPPORTIONMENT—No. 6336

DEAR MR ALLEN:

At your request we have prepared and enclose an analysis of the recent decisions of the United States Supreme Court on the subject of legislative reapportionment Due to the extreme length of the decisions, our analysis is also quite long, and, to permit you to more readily ascertain what the court held in the cases, we will set forth here a brief summary of the conclusions reached by the court

The court held that the Equal Protection Clause of the Fourteenth Amendment of the United States Constitution requires that the seats in both houses of a bicameral state legislature must be apportioned on a population basis, and that an individual's right to vote for state legislators is unconstitutionally impaired when its weight is in a substantial fashion diluted when compared with votes of citizens living in other parts of the state (*Reynolds* v *Sims* (Ala), 32 Law Week 4535)

It held that the fact that a legislative apportionment plan is approved by the electorate of the state, or that the remedy of initiative and referendum is available to the people, is without federal constitutional significance, if the scheme adopted fails to satisfy the basic requirements of the Equal Protection Clause (*Lucas* v. *The Forty-Fourth General Assembly of the State of Colorado* (Colo), 32 Law Week 4557).

It held that the fact that a legislature has little discretion in forming legislative districts due to state constitutional restrictions (*WMCA, Inc.* v. *Lomenzo* (N.Y), 32 Law Week 4551), or that the legislature has consistently carried out its duty to reapportion every 10 years (*Davis* v. *Mann* (Va), 32 Law Week 4579), does not excuse the failure to comply with federal constitutional requirements.

The court recognized that mathematical exactness in the apportionment of districts is not a constitutional requisite, and that so long as the divergencies from a strict population standard are based on legitimate considerations incident to the effectuation of a rational state policy, some deviations from the equal-population principle are constitutionally permissible in either or both houses The overriding objective, however, must be substantial equality of population among the various districts, so that the vote of any citizen is approximately equal in weight to that of any other citizen of the state (*Reynolds* v. *Sims* (Ala), 32 Law Week 4735).

In the same connection, the court indicated that a state may legitimately take into consideration the lines of political subdivisions in forming legislative counties, some independent representation in at least one house of the legislature, as long as the basic standard of equality of population among districts is maintained The court pointed out, however, that consideration of area alone does not provide a sufficient justification for deviations from the equal-population principle, nor is history alone or economic or other group interests permissible factors in attempting to justify disparities from population-based representation A state, for example, may not give representation to each political subdivision, regardless of population, or in most instances justify population disparities on the ground that they were necessary to prevent the formation of a legislative district so large in area as to afford little access of its citizens to their representatives (*Reynolds* v *Sims* (Ala), 32 Law Week 4735)

Again speaking on the issue of population disparities, the court indicated that the problem does not lend itself to any uniform mathematical formula denoting the constitutionally permissible bounds of discretion in deviating from apportionment according to population The court stated that the proper judicial approach is to ascertain whether, under the particular circumstances existing in the individual state whose legislative apportionment is at issue, there has been a faithful adherence to a plan of population-based representation, with such minor deviations only as may occur in recognizing certain factors that are free from any taint of arbitrariness or discrimination. (*Roman* v. *Sincock* (Del), 32 Law Week 4583).

The court left it to the lower courts to decide whether to permit the use of existing reapportionment provisions for pending elections, but indicated that in no event should elections in future years be permitted to be held under provisions held to be invalid by the courts (e g *Maryland Committee for Fair Representation* v *Tawes* (Md), 32 Law Week 4573) * The court did speak with favor, however, with respect to giving a state legislature an opportunity to apportion districts to meet constitutional requirements, before an exercise of judicial action in this area.

It should also be noted that the court considered the fact that state constitutions often impose restrictions on the legislature that make it difficult to achieve equality of population The court's answer to this is that state requirements should be complied with if at all possible, but that where there is an unavoidable conflict between the federal and state constitutions, the latter must yield (*Reynolds* v *Sims* (Ala), 32 Law Week 4735)

Very truly yours,

A. C MORRISON
Legislative Counsel

BY EDWARD K PURCELL
Deputy Legislative Counsel

* In the Maryland case cited, the court stated that under no circumstances should the 1966 election of members of the Maryland Legislature be permitted to be conducted pursuant to the existing or any other unconstitutional plan of apportionment

STATE OF CALIFORNIA

OFFICE OF LEGISLATIVE COUNSEL

Sacramento, California
June 24, 1964

HON. DON A ALLEN, SR.
4222 Don Diablo Drive
Los Angeles 8, California

Dear Mr Allen·

ANALYSIS OF DECISIONS OF UNITED STATES SUPREME COURT ON LEGISLATIVE REAPPORTIONMENT—No. 6336

A. *Reynolds* v. *Sims* (32 Law Week 4535).

Facts

In August of 1961, certain voters of the *State of Alabama* brought an action in the federal district court challenging the apportionment of the Alabama Legislature on the grounds that it deprived them of their rights under the Alabama Constitution and the Equal Protection Clause of the Fourteenth Amendment of the Constitution of the United States They sought a declaration that the existing constitutional and statutory provisions, establishing the apportionment of seats in the Alabama Legislature, were unconstitutional, and an injunction against the holding of future elections for legislators until the Legislature reapportioned itself in accordance with the State Constitution.

The Alabama Constitution provides that the Legislature shall consist of not more than 35 Senators and not more than 105 members of the House of Representatives, but authorizes an additional representative for each new county created. It requires that the number of representatives be apportioned after each federal decennial census among the several counties of the state, according to the number of inhabitants in them, and that the state be divided after each federal decennial census into as many senatorial districts as there are senators, and that such districts be as nearly equal to each other in the number of inhabitants as may be It provides that in the formation of senatorial districts no county shall be divided between two districts, and no district shall be made up of two or more counties not contiguous to each other. It states that representation in the Legislature shall be based on population, and that such basis of representation shall not be changed by constitutional amendment

The Alabama Constitution, in 1901, established the boundaries of the original legislative districts, and these provisions were periodically enacted as statutes by the Alabama Legislature, modified only by the creation of an additional county in 1903 As a result, the districts,

in effect, were based on the 1900 federal decennial census, and variations between the population of districts ranged from a ratio of 41 to 1 for the Senate and 16 to 1 in the House.

The district court did not grant an injunction, and stated that it would take no action before the Alabama Legislature had a further reasonable but prompt opportunity to comply with its duty under the Alabama Constitution. The court, in April of 1962, reset the case for hearing in July of 1962, and stated that unless the Alabama Legislature took action to comply with constitutional requirements before that time, the court itself would take some action on the matter prior to the 1962 general election.

On July 12, 1962, the Alabama Legislature, in extraordinary session, adopted two reapportionment plans to take effect for the 1966 elections One was a proposed constitutional amendment, apportioning the House of Representatives by giving one seat to each of the 67 counties and distributing the remaining 39 according to population; and by fixing the number of Senators at 67, one from each county. The other reapportionment plan was a statutory measure, to take effect if the constitutional amendment was not adopted by the people or was declared invalid by the federal court It provided for a 35-member Senate, representing 35 senatorial districts established along county lines, and altering only a few of the former districts It also gave each county one seat in the House of Representatives and apportioned the remaining 39 seats on a population basis

On July 21, 1962, the district court held that the inequality of the existing representation in the Legislature violated the Equal Protection Clause of the Fourteenth Amendment Furthermore, it held that neither the constitutional amendment nor statutory plan proposed by the Legislature met the necessary constitutional requirements It pointed out that the proposed constitutional amendment would increase the population disparity between senatorial districts, so that members representing 19.4 percent of the people would control the Senate. The court noted, however, that the proposed apportionment of seats in the House of Representatives would probably be sufficient to meet constitutional standards, even though serious disparities still remained. The court found the statutory plan to be totally unacceptable, since it would give control of the House to members representing 37 percent of the state's population, and would not significantly reduce the population disparity between senatorial districts.

The district court, as a consequence of its findings, adopted a provisional and temporary reapportionment plan composed of elements of both the proposed constitutional amendment and the statutory proposal, and ordered that such plan be followed for the 1962 general election. It stressed that its plan was not acceptable as a piece of permanent legislation, but was merely designed to break the stranglehold by the smaller counties on the Alabama Legislature, and to enable the reapportioned Legislature to formulate an acceptable plan for reapportionment

After the district court's decision, new primary elections were held and the general election was conducted on the basis of the court's plan. However, the new Legislature did not enact legislation on re-

apportionment An appeal was filed in the Supreme Court from the district court's decision It was alleged, on appeal, that the district court erred in failing to compel reapportionment of the Alabama Senate on a population basis, and that the district court should have required and ordered into effect the apportionment of seats in both houses on a population basis.

Decision of the United States Supreme Court

The Supreme Court held that the district court was correct in holding that neither the existing apportionment of the Alabama Legislature nor the plans proposed by the Alabama Legislature meet constitutional requirements, and that since the district court has evinced its intention to take further action if the provisionally reapportioned Legislature fails to do so, the matter should be remanded to the court for further proceedings in accordance with the principles enunciated by the Supreme Court in its opinion

In the course of its opinion, the Supreme Court set forth the constitutional principles governing the apportionment of seats in a State Legislature It pointed out that the Equal Protection Clause of the Fourteenth Amendment guarantees the opportunity for equal participation by all voters in the election of state legislators, and that an individual's right to vote for state legislators is unconstitutionally impaired when its weight is in a substantial fashion diluted when compared with votes of citizens living in other parts of the state. It concluded that, as a basic constitutional standard, the Equal Protection Clause requires that the seats in both houses of a bicameral state legislature be apportioned on a population basis

The court rejected the application of the so-called federal analogy to state legislative apportionment arrangements, whereunder it is sought to justify basing one house on population and the other on geographical considerations. The court stated that political subdivisions of states—counties, cities, or whatever, never were and never have been considered as sovereign entities, but rather have been traditionally considered as subordinate governmental instrumentalities created by the state to assist in the carrying out of state governmental functions. Thus, it is improper to compare the right of such a political subdivision to representation in the State Senate to the right of a state to representation in the United States Senate.

The court, however, did indicate that a state may legitimately take into consideration the lines of political subdivisions in forming legislative districts, and afford political subdivisions some independent representation in at least one house of the state legislature, so long as the basic standard of equality of population among districts is maintained The court was careful to point out, however, that considerations of area alone do not provide a sufficient justification for deviations from the equal-population principle A state, for example, may not give each governmental unit or political subdivision representation, regardless of population, especially where the number of counties is large and many of them are sparsely populated.

The court recognized that mathematical exactness in the apportionment of districts is not a constitutional requisite. It stated that so long

as the divergencies from a strict population standard are based on legitimate considerations incident to the effectuation of a rational state policy, some deviations from the equal-population principle are constitutionally permissible with respect to the apportionment of seats in either or both houses of a bicameral state legislature The overriding objective, however, must be substantial equality of population among the various districts, so that the vote of any citizen is approximately equal in weight to that of any other citizen of the state

Along this same line, the court stated that neither history alone, nor economic or other group interests, are permissible factors in attempting to justify disparities from population-based representation It also rejected as a justification for population disparities the contention that in sparsely populated areas a population standard would result in legislative districts so large that citizens would have little access to their representatives The court indicated that modern developments and improvements in transportation and communications make this contention rather hollow.

The court sanctioned the use of decennial reapportionments, even though population shifts might cause inequities in the interim It stated that if reapportionment were accomplished with less frequency, it would be constitutionally suspect

The court then considered the fact that state constitutions often impose restrictions on the legislature that make it difficult to achieve equality of population The court's answer to this is that state requirements should be complied with, if at all possible, but that where there is an unavoidable conflict between the federal and state constitutions, the latter must yield.

The court declined to consider the question of the proper remedial devices which federal courts should utilize in state legislative apportionment cases It did state, however, that once a state's legislative apportionment scheme has been found to be unconstitutional, it would be the unusual case in which the court would be justified in not taking appropriate action to insure no further elections are conducted under the invalid plan. Despite this statement, the court went on to state that where an impending election is imminent and a state's election machinery is already in progress, a court would be justified in withholding the granting of immediate relief, even though the existing apportionment scheme was invalid.

In this same connection, the Supreme Court praised the district court for declining to stay the pending primary election in Alabama and for giving the Alabama Legislature the opportunity to remedy the admitted discrepancies in the state's legislative apportionment scheme, while initially stating some of its views to provide guidelines for legislative action. It also stated its agreement with the district court's conclusion that legislative reapportionment is primarily a matter for legislative consideration and determination, and that judicial relief becomes appropriate only when a legislature fails to reapportion in a timely fashion after having an adequate opportunity to do so Finally, the Supreme Court commended the district court for acting with proper judicial restraint, after the Alabama Legislature failed to act effec-

tively, in ordering its own temporary reapportionment plan into effect, at a time sufficiently early to permit the holding of elections pursuant to that plan without great difficulty, and in prescribing a plan admittedly provisional in purpose so as not to usurp the primary responsibility for reapportionment which rests with the Legislature.

B. *WMCA, Inc.* v. *Lomenzo* (32 Law Week 4551)

Facts

An action was brought in the federal district court by certain voters of the *State of New York* requesting a declaration that the provisions of the State Constitution and statutes respecting legislative reapportionment violate the Fourteenth Amendment of the Constitution, and requesting the court to enjoin the election officials from performing any acts or duties in compliance with the allegedly unconstitutional legislative apportionment provisions

The district court, upon remand of the case to it from the Supreme Court after it initially dismissed the case, again dismissed the case. The court held that the plaintiffs had not proved invidious discrimination, that the apportionment provisions were rational and not arbitrary, that they were of historical origin and contained no improper geographical discrimination, that they could be amended by an electoral majority of the citizens of New York, and that therefore the apportionment was not unconstitutional The decision of the court was appealed to the United States Supreme Court

Decision of the United States Supreme Court

The Supreme Court first outlined the formulas prescribed in the New York Constitution for the apportionment of seats in the New York Legislature The formulas in question are extremely complicated. In brief, they provide for allocation of seats to the counties on the basis of ratios, with a variation in the formulas which, in operation, served to give greater representation to the less populous counties According to the figures cited by the court, a citizen in a less populous county had, under the 1960 census, about 1 7 times the representation in the State Senate of a citizen in a populous county A similar situation prevailed in the State Assembly. The difference between the least populous and the most populous senatorial district would be about 2 6 to 1, and 12 7 to 1 in the Assembly, if reapportioned under existing constitutional formulas

The court reversed the decision of the district court, holding that neither house of the State Legislature was apportioned sufficiently on a population basis to be constitutionally sustainable

The court stated that however complicated or sophisticated an apportionment scheme might be, it cannot, consistent with the Equal Protection Clause, result in a significant undervaluation of the weight of the votes of certain of a state's citizens merely because of where they happen to reside

The court noted that since the rules prescribed in the New York Constitution for apportioning the Senate are so explicit and detailed, the New York Legislature has little discretion in decennially enacting

implementary statutory reapportionment provisions, and likewise has little discretion in reapportioning Assembly seats. This fact, however, does not operate to render its apportionment valid

The court left the matter of remedies up to the district court It stated that since all members of the Legislature will be elected in November of 1964, the district court, acting under equitable principles, must determine whether, because of the imminence of the election and in order to give the New York Legislature an opportunity to fashion a constitutionally valid apportionment plan, it would be desirable to permit the 1964 election of legislators to be conducted pursuant to the existing provisions, or whether, under the circumstances, the effectuation of the appellant's right to a properly weighted voice in the election of state legislators should not be delayed beyond the 1964 election.

C. *Lucas* v. *The Forty-fourth General Assembly of the State of Colorado* (32 Law Week 4557)

Facts

An action was brought in the federal district court by certain voters of the *State of Colorado* challenging the constitutionality of the apportionment of seats in both houses of the Colorado Legislature, and requesting declaratory and injunctive relief

The district court found that the existing apportionment did not meet constitutional requirements, but, due to the imminence of the primary and general elections, and the fact that two constitutional amendments on reapportionment were pending, continued the case until after the general election

The voters, at the 1962 general election, rejected a constitutional amendment that would have required that both houses of the Legislature be apportioned on a population basis, and adopted instead a constitutional amendment providing for the apportionment of the lower house on a population basis, but maintaining the existing apportionment in the Senate, which was based on a combination of population and various other factors The Colorado Legislature, at its 1963 session, reapportioned on the basis of the constitutional amendment adopted by the people

The district court concluded that the apportionment met the requirements of the Equal Protection Clause, and, in doing so, placed heavy stress on the fact that the electorate had approved the reapportionment plan and that the initiative was available to the people to change the plan when they see fit The decision of the district court was appealed to the United States Supreme Court

Decision of the United States Supreme Court

The Supreme Court first found that the population disparities between senatorial districts were too great to meet constitutional requirements. According to the figures cited by the court, the maximum population variance ratio was 3 6 to 1.

The court then proceeded to consider the fact that the apportionment plan was one adopted by the people, and that the initiative was available to the people to change that plan The court concluded that this was immaterial.

The court pointed out that while a court of equity might be justified in temporarily refraining from the issuance of injunctive relief in an apportionment case in order to allow for resort to an available political remedy, such as initiative and referendum, individual constitutional rights cannot be deprived or denied judicial effectuation because of the existence of a nonjudicial remedy through which relief against the alleged malapportionment might be achieved The court stated that an individual's constitutionally protected right to cast an equally weighted vote cannot be denied even by the vote of the majority of a state's electorate, if the apportionment scheme adopted by the voters fails to measure up to the requirements of the Equal Protection Clause.

The court reversed the decision of the district court, and left it to that court to determine whether the imminence of the 1964 primary and general elections requires the utilization of the existing apportionment plan or whether the circumstances in Colorado would permit the effectuation of the appellants' rights in 1964.

D. *The Maryland Committee for Fair Representation* v. *Tawes* (32 Law Week 4573)

Facts

An action was brought in the state court by certain voters of the *State of Maryland* challenging the apportionment of the Maryland Legislature. The plaintiffs requested a declaration of their rights and, if necessary, injunctive relief against further elections under the existing apportionment plan

The state court held that the apportionment of seats in the lower house of the Legislature did not meet constitutional requirements, but upheld the Senate reapportionment plan on the theory that one house can be constitutionally apportioned on a nonpopulation, geographical basis An appeal was taken to the United States Supreme Court from the lower court's decision on Senate apportionment.

Decision of the United States Supreme Court

Relying on its decision in *Reynolds* v *Sims*, discussed above, the court held that both houses of a state legislature must be apportioned substantially on a population basis. It concluded that neither house of the Maryland Legislature is apportioned sufficiently on a population basis to be constitutionally sustainable The population ratio variance for the Senate was 32 to 1 and for the lower house was 6 to 1.

The only new point made by the court was as to its right to consider the apportionment of Maryland's lower house, when the appeal was based on the alleged invalidity of the State Senate. The court concluded that it must of necessity consider the challenged scheme as a whole in determining whether the particular state's apportionment plan, in its entirety, meets federal constitutional requisites The court stated that it is simply impossible to decide upon the validity of the apportionment of one house of a bicameral legislature in the abstract, without also evaluating the actual scheme of representation employed with respect to the other house It further stated that the proper and indeed indispensable subject for judicial focus in a legislative apportionment controversy is the overall representation accorded to the state's voters in both houses of a bicameral state legislature.

With respect to remedies, the court noted that the next election for state legislators will not be conducted until 1966, and that the Legislature has sufficient time, without further judicial action, to enact an acceptable apportionment plan prior to the 1966 elections. The court cautioned that under no circumstances should the 1966 election be conducted pursuant to the existing or any other unconstitutional plan.

E. *Davis* v. *Mann* (32 Law Week 4579)

Facts

Certain voters of the *State of Virginia* brought an action in the federal district court challenging the apportionment of the Virginia Legislature The plaintiffs requested a declaration that the statutory scheme of legislative apportionment was unconstitutional, an injunction against further elections under existing apportionment statutes, and a mandatory injunction calling for the election of legislators on an at-large basis.

The district court held that the inequalities of population in the case of both senatorial and lower house districts violated the Equal Protection Clause of the Fourteenth Amendment. The decision was appealed to the United States Supreme Court

Decision of the United States Supreme Court

The Supreme Court noted that the Virginia Constitution did not impose any particular restrictions on the Legislature in forming legislative districts, and that the Legislature had reapportioned decennially, on a population basis The only issue, therefore, was whether the population disparities were too great to meet constitutional requirements. The court found that the disparities were too great; they being 2.65 to 1 in the Senate and 4 36 to 1 in the House.

The court pointed out that the fact that the Legislature consistently reapportioned every 10 years did not serve to validate the apportionment plan. It stated that state legislative malapportionment, whether resulting from prolonged legislative inaction or from failure to comply sufficiently with federal constitutional requisites, although reapportionment is accomplished periodically, falls equally within the proscription of the Equal Protection Clause

The court concluded that since the next election of Virginia legislators will not occur until 1965, the Legislature has ample time to enact a constitutionally valid reapportionment scheme Should it not do so, the district court would then be obligated to grant relief under equitable principles to insure that no further elections are held under an unconstitutional scheme.

F. *Roman* v. *Sincock* (32 Law Week 4583)

Facts

An action was brought in the federal district court by certain voters of the *State of Delaware* challenging the apportionment of the Delaware Legislature. The plaintiffs sought a declaration that the provisions of the Delaware Constitution establishing the apportionment of seats in the Legislature was unconstitutional, an injunction against holding further elections under the existing apportionment scheme, and an order by the district court either reapportioning the Legislature on a popula-

tion basis or requiring that the general election be conducted on an at-large basis.

Subsequently, a constitutional amendment was adopted by the Legislature changing the apportionment provisions of the Delaware Constitution

The district court found the legislative districts to be unconstitutional, both before and after the adoption of the constitutional amendment The decision of the court was appealed to the United States Supreme Court.

Decision of the United States Supreme Court

The Supreme Court affirmed the decision of the lower court, and held that the legislative districts did not meet constitutional requirements. The court pointed out that even under the revised apportionment plan, the population-variance ratio for the House was 12 to 1 and for the Senate 15 to 1.

The only new point made by the court was in reference to the attempt of the district court to set forth in mathematical language the constitutionally permissible bounds of discretion in deviating from apportionment according to population The Supreme Court stated that the problem does not lend itself to any such uniform formula, and it is neither practicable nor desirable to establish rigid mathematical standards for evaluating the constitutional validity of a state legislative apportionment scheme under the Equal Protection Clause The court further stated that the proper judicial approach is to ascertain whether, under the particular circumstances existing in the individual state whose legislative apportionment is at issue, there has been a faithful adherence to a plan of population-based representation, with such minor deviations only as may occur in recognizing certain factors that are free from any taint of arbitrariness or discrimination

The Supreme Court left to the district court the decision of whether to allow the 1964 election of Delaware legislators to be conducted pursuant to the provisions of the 1963 constitutional amendment, or whether the factors involved are insufficient to justify any further delay in the effectuation of appellants' constitutional rights

LETTERS OF TRANSMITTAL

April 26, 1965

Hon. Jesse M Unruh, *Speaker of the Assembly,*
and Members of the Assembly:

We transmit herewith a report on the subject of reapportionment prepared for the Assembly by Professors William P. Gerberding, Edward M Goldberg, Douglas S Hobbs, and Charles G. Bell, under contract with our committee. We invite each member of the Legislature to examine the contents of this report with the greatest care

The transmittal and publication of this report should not be construed to imply that either the committee or any of its members necessarily concurs in or endorses any of the conclusions contained therein Such construction is not the intention of either the committee or the authors.

The committee wishes to take this occasion of express its gratitude to Professor J A C. Grant of U C L A and Dean Edward L Barrett, Jr, of the Law School of the University of California at Davis, in addition to Gerberding, Goldberg, Hobbs, and Bell, for invaluable advice and counsel on this most difficult and complex legal, historical, and political issue. These men have rendered a distinct service to the people of California and merit the highest esteem of the Legislature, the public, and their colleagues in the academic community.

Respectfully submitted on behalf of the committee,

DON A. ALLEN, SR. *Chairman*

HON DON A ALLEN, SR, *Chairman*
Assembly Committee on Elections
and Reapportionment
State Capitol, Sacramento

Dear Mr. Chairman

Enclosed herewith is our "Consultants' Report to the Assembly" on the state of the law regarding legislative reapportionment and an analysis of the alternatives available to the California Legislature The contribution of Contributing Consultant Charles Bell Fullerton, appears as Appendix E.

TABLE OF CONTENTS

PART ONE

INTRODUCTION AND SUMMARY

The subject matter of this report is very complex. Anyone who wishes to understand the details and the subtleties of the current reapportionment problem confronting California would be well advised to read this entire report, especially Parts Two and Three. What follows in Part One is a summation, without much elaboration, of the major facts, conclusions, and judgments which are discussed at greater length in Parts Two and Three.

I.

The new (1964) "one man, one vote" requirement—which holds that both houses of state legislatures and congressional representation must be apportioned on the basis of districts of substantially equal population—is not likely to be changed The Supreme Court almost certainly will not reverse or modify its position, and the chances that the United States Constitution can be amended are very slim

II.

Therefore, California must adjust to this new requirement The State Senate is already under a federal court order to do so by July 1, 1965 Sooner or later, depending upon the vagaries of court action, the Assembly and congressional apportionments will very likely have to be adjusted as well

III.

If the Legislature fails to reapportion the State Senate by July 1, 1965, the federal court *might* extend its deadline beyond July 1, 1965 A much more likely development, however—unless the Legislature appears to be nearing action on the matter—is that the court will reapportion the Senate, either by itself or through a special master

IV.

Either as an aspect of the court proceedings regarding the State Senate or, more likely, as a consequence of other judicial action, the Assembly is likely to be ordered to reapportion It is impossible to predict with any confidence when this will occur This presents the Legislature (or the Assembly alone) with some difficult choices

A. The Legislature could simply wait until such an order to reapportion the Assembly is handed down and then respond to it. This response could take several forms

1 The Legislature could reapportion the Assembly If the reapportionment were adjudged valid by the ordering court that would presumably be the end of the matter (barring a successful challenge of the reapportionment in another court or by a referendum petition). If the reapportionment were adjudged invalid, then the ordering court would either permit another effort by the Legislature or reapportion the Assembly by itself.

2. The Legislature could ignore the court order or fail to act on it. The court would then reapportion the Assembly by itself. If, under these conditions, the Assembly had itself passed a valid reapportionment plan—which had failed to become law— the court might very well adopt this plan as its own and order the Assembly reapportioned accordingly

B. Alternatively, the Legislature (or the Assembly alone) could anticipate such an order and pass a law (or, in the case of the Assembly acting alone, a bill) reapportioning the Assembly. (The purpose of having the Assembly act alone, if necessary, would be the same as that described above · it would provide a court with a plan to adopt as its own. Whether this action should be taken before or after a court order, or at all, is, of course, a political question)

C Finally, the Legislature could enact a contingency reapportionment plan for the Assembly, to be implemented if and when the court orders Assembly reapportionment

V.

Regarding congressional reapportionment, essentially the same options are available to the Legislature (or the Assembly alone).

VI.

However and whenever the Legislature (or the Assembly alone) decides to act, it will be confronted with the knotty problem of determining which, if any, of the state constitutional provisions affecting state legislative apportionment are still binding No certain answers are possible. Our best judgment is as follows

A Regarding the Senate, the requirement of a 40-member Senate is still binding and the requirement of single-member districts is almost certainly still binding Those which require that no more than three counties be combined in any district, that multicounty districts be composed of whole contiguous counties, and that no county may have more than one senator are no longer binding

B Regarding the Assembly, the requirement of an 80-member Assembly is still binding and the requirement of single-member districts is almost certainly still binding The requirement that multicounty districts be composed of whole contiguous counties is no longer binding

C. Regarding congressional apportionment, there are fewer state constitutional restrictions than there are regarding the Assembly and the Senate A congressional district, unlike either Assembly or Senate districts, may cross a county line and include only part of one or more counties The only troublesome proviso is that when congressional districts are formed within counties having populations which merit more than one congressional district, Assembly districts may *not* be divided. This prohibition is bound to create congressional districts which are substantially unequal in population and is therefore no longer binding.

VII.

In the course of any reapportioning process in California, the following considerations should be borne in mind

A It is not yet known what the maximum permissable deviation from districts of exactly equal populations will be. The Supreme Court has been unwilling to adopt any rigid mathematical formula. Only a few guidelines have been offered

1. Regarding state legislative districts, acceptable justifications for deviation are limited to two considerations: (a) the use of political or natural or historical boundary lines so long as the resulting apportionment is based substantially on population; and (b) the balancing of a slight overrepresentation of a particular area in one house with a minor underrepresentation of that area in the other In addition, temporary reapportionment plans designed to elect a legislature which will effect a permanent reapportionment may permissibly contain deviations which would be unconstitutional in a permanent plan
2. Regarding congressional apportionment, the Supreme Court has indicated that less flexibility is probably permissible regarding congressional districts than regarding state legislative districts. In fact, it could be argued at this point in time that there are *no* allowable grounds for deviation regarding congressional districts. Recent events in Congress suggest that federal legislation may be passed providing for a maximum deviation among a state's congressional districts of 15 percent from the norm The Supreme Court would almost certainly accept any such congressional determination.

B In California, the State Constitution makes reliance on the 1960 census data mandatory in any reapportionment prior to 1971.

C. The constitutional status of gerrymandering is far from clear. The Supreme Court has referred to gerrymandering in passing but its comments have not been helpful The Supreme Court may very well avoid dealing with political gerrymandering altogether. What it will do regarding racial gerrymandering is entirely unclear at this time

D The Supreme Court has specifically authorized multimember districts, but will probably declare certain kinds—i.e, those that grossly and deliberately discriminate against racial or political minorities—unconstitutional.

E Weighted (or fractional) voting, although not necessarily unconstitutional in terms of the U S Constitution, is clearly contrary to the California constitution

F Floterial districts will be upheld as constitutional only under the unusual circumstances wherein the component single-member districts are substantially equal in population

PART TWO

THE CURRENT STATE OF THE LAW IN REGARD TO LEGISLATIVE APPORTIONMENT

I. INTRODUCTION

A very great jurist, from whose wisdom and insight we invariably profit, defined law in his relative youth as "The prophecies of what the courts will do . . ."* In stressing the necessity of prediction Holmes was perhaps exaggerating the law's uncertainty His exaggeration is, however, peculiarly relevant to this section of the report, which is at best prophecy, or, if we may be permitted an immodest paraphrase, an 'educated guess' as to what judges will or might do Such educated guesses are very often little better than uneducated guesses This seems particularly true of the law surrounding reapportionment To make the point more dramatically, the informed predictions of both lawyers and political scientists in the aftermath of *Baker* v *Carr* † almost universally failed to anticipate what, in retrospect, was obviously the court's intended course of action ‡

If the efforts below fail to convey certainty, it is not because the authors have attempted to lay off their bets It is rather a case of the law itself being uncertain to the point of being mysterious What we hope to achieve is not prophecy in its literal sense, but rather an intelligible recounting of what the courts, particularly the Supreme Court of the United States, have said about reapportionment and a systematic elaboration of what appear to be the unresolved constitutional issues Our purpose will be fulfilled if our readers are helped in making the difficult judgments ahead

II. DEFINITION OF "POPULATION"

The Supreme Court has left no doubt that its "one person, one vote" [1] caveat means legislative districts (for both houses of the state legislatures and for the House of Representatives) of "substantial equality of population" [1a] or "as nearly of equal population as is practicable" [2] It has, however, been singularly and unfortunately vague about how it is using the word "population" This is apparently the key word in light of the Supreme Court's dictum in *Reynolds* v *Sims* that "population is, of necessity, the starting point for consideration and the controlling criterion for judgment in legislative apportionment

* Holmes, "The Path of the Law," *Collected Paper* 9 (1920)
† 369 U S 186 (1962)
‡ For a list of the false or misguided prophets, see *Lucas* v *Forty Fourth General Assembly*, 377 U S, 748 n 9 (1964) (Stewart, J, dissenting)
[1] The phrase was coined by Douglas, J, writing for the Court in *Gray* v *Sanders*, 372 U S 368, 381 (1963) Stewart, J, concurring, preferred the "one voter, one vote" formulation *Id* at 382 This preference is most easily explained by Justice Stewart's belief that arithmetic equality applied only to votes cast within the same constituency It does not imply a belief that voters rather than persons were the appropriate basis of apportionment
[1a] *Reynolds* v *Sims*, 377 U S 533, 599 (1963)
[2] *Id* at 577

controversies"[3] The court uses the word in a variety of ways. In *Reynolds,* the governing case in the area of state legislative apportionment, the Chief Justice within the space of seven pages speaks of "numbers of people,"[4] "voters,"[5] "citizens,"[6] and "qualified voters"[7] as if each were a generally accepted synonym for "population." Some 10 pages later, on the other hand, he speaks within a single sentence of "residents, *or* citizens, *or* voters"[8] as if the terms were perhaps distinguishable.

One inference that could be drawn from the court's language is that for constitutional purposes the terms are in fact interchangeable, and that as far as the court is concerned the states are at liberty to select whichever measure, whether it be residents, citizens or voters, they think most appropriate. Such a conclusion, however, seems unjustifiable, or at least premature, in view of the logic the court employed in support of its "one person, one vote" criterion. The court's *logic* intimates that the way a state chooses to define "population" may well affect the constitutionality of its apportionment. It is our intent here to examine that possibility.

The court's rationale for districts of equal population is that any other arrangement results in an unconstitutional "dilution" or "debasement" of the value of the *vote* in the more populous districts For example, a *voter* in a district of 20,000 inhabitants is alleged to have one-half the vote of one voting in a district of 10,000 Or, to put it another way, the voter in the smaller district is said to have his vote "weighted" by a factor of two.[9] Leaving aside the question of whether talk of "dilution" or "weighting" is, as alleged by Justice Harlan,[10] circular or question begging, the court's reasoning is, at least in mathematical terms, beyond reproach if, *but only if,* the figures cited refer to populations composed *entirely of voters.* Under these circumstances the voter in the larger district clearly exercises a proportionately lower degree of influence on election day than his counterpart in the smaller district If, however, this condition does not prevail, the court's argument poses some serious questions for all of the standards for measuring population which are currently employed by one or more of the states.

The criteria currently in vogue are· (a) inhabitants (with or without exceptions for certain groups such as aliens, non-resident service personnel, etc);[11] (b) registered voters;[12] and (c) voters[13]

[3] *Id* at 567
[4] *Id* at 560
[5] *Id* at 561
[6] *Id* at 562
[7] *Id* at 565
[8] *Id* at 577 (Emphasis added)
[9] The Court alluded to "weighting" in both *Gray* v. *Sanders, supra* note 1, at 380, and *Wesberry* v *Sanders,* 376 U S 1, 8 (1964) The "weighting-dilution" argument is most fully elaborated in *Reynolds* v *Sims, supra* note 1a, at 561–568
[10] *Wesberry* v *Sanders, supra* note 9, at 25 (dissenting opinion), *Reynolds* v *Sims, supra* note 1a at 590 (dissenting opinion)
[11] On the eve of *Baker* v *Carr,* 369 U S 186 (1962), thirty-three states employed a standard of total inhabitants Alabama, Colorado, Connecticut, Florida, Iowa, Kansas, Kentucky, Louisiana, Missouri, N Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Dakota, Utah, Virginia and Wyoming apportioned *both houses* by this method, Arkansas, Georgia, Illinois, Maryland, Michigan, Montana, Nevada, New Hampshire, New Jersey, New Mexico, Rhode Island, S Carolina, Texas and West Virginia apportioned the *lower house* in this fashion, Vermont employed total population for the upper house Ten states employed a somewhat narrower base New York and Nebraska excluded aliens, California excludes persons ineligible to U S citizenship (see note 19 *infra*) Maine excluded aliens and untaxed Indians from the upper house apportionment and

(a) For those states such as California which utilize "inhabitants" or some modified version thereof in their apportionment formula the court's "dilution" logic presents a potantially serious problem What, for example, would be the court's view of an apportionment based on inhabitants which resulted in districts of equal population, but where, because of the concentration of significant numbers of persons ineligible to vote such as nonresident servicemen and their families, the ratio of voters between two given districts reaches, say, two to one? (Such a situation is conceivable in a state where there is a high proportion of ineligible voters who tend to concentrate in certam geographic areas) According to the logic of "dilution" such a situation would seem constitutionally impermissible [13a] Yet, on the other hand, the use of "inhabitants" has a certam historic legitimacy, regardless of the inequities it may foster; it has been the predominant practice in the states and appears to be sanctioned by the Federal Constitution which provides that "Representatives shall be apportioned . . according to . . . numbers, counting the whole number of persons excluding Indians not taxed." [14]

(b) For those states employing "registered voters" in the apportionment formula, an analogous question of constitutional import arises when there is a substantial divergence amongst the districts in the ratio of registered to actual voters Under such circumstances, would residents of districts where the ratio of voters to registered voters was habitually and substantially higher have an allowable constitutional claim? Again there are arguments on both sides From one standpoint it could be maintained that the voters in the districts where there existed a higher participation rate had their votes "diluted " From another, it could be argued that the "stay-at-home" was a "potential" voter who simply elected to remain "neutral" and whose right to an "undiluted" vote at some future election should be anticipated and protected

(c) For those states that base their apportionment on "actual voters," the controversial issue is which election should be chosen to serve as the apportionment base. What if it can be shown that in the election selected as the apportionment base, large numbers of eligible voters in certain areas were unable to vote not because of apathy but

aliens from the lower house formula North Carolina excluded both aliens and untaxed Indians Minnesota excluded untaxed Indians Washington, Wisconsin, and Alaska excluded military personnel And Indiana based its apportionment upon male inhabitants over 21 years of age Baker, *State Constitutions Reapportionment*, Appendix, at 63-70 (1960)

[13] Massachusetts and Tennessee used registered voters for both houses, Texas and Rhode Island for the upper house, and Hawaii for the lower house *Id*

[13a] Arizona based its apportionment of the lower house on the number of votes cast for governor in the most recent election

[13a] But cf *Ellis* v *the Mayor and City Council of Baltimore*, 234 F Supp 945 (1964) There a Federal District Court held unequivocally that *Reynolds* v *Sims*, "and particularly its analysis from *the* foundation of the 'one person, one vote' concept, makes clear /*sic*/ that the basic constitutional protection is one of equal representation by population, and not equal representation by registered voters" *Id* at 953

[14] Art I, Sec 2, para 3, as amended by Amendment XIV, Sec 2 The Virginia Supreme Court of Appeals has recently ruled that since Representatives are allocated to the states on the basis of population, congressional seats within the state must be apportioned on the same basis Virginia's employment of inhabitants (i e, residents) for congressional apportionment was thus held impermissible *Wilkins* v *Davis*, 33 LW 2364 (1965) Congress is currently considering legislation which *inter alia* would require states to apportion their congressional districts on the basis of "whole numbers of persons excluding Indians not taxed " See H R 5505 contained in Appendix E It should be noted that since the Supreme Court ruled that all Indians were "subject" to taxation, *Superintendent* v *Commissioner*, 295 U S 418 (1935), the Census Bureau has included all Indians in its apportionment computations

because of a natural disaster or epidemic which was confined largely to their locale? Or, what if the *type* of election—e g , "off year" or when no statewide offices were at stake—upon which apportionment was based was one in which certain districts traditionally achieved a higher percent of voter turnout than other districts? It would appear that the voters in the low turnout areas would in both cases have a case of substantial merit for claiming that their votes were being "diluted" as long as the apportionment derived from the base election remained in effect Whether the court would acknowledge the claim is of course another matter [14a]

There are at present no available answers to the questions raised when the court's dilution logic is applied to the several measures of population, each of which, as we have seen, possesses its own peculiar potential for "inequity" Each of the cases before the court involved a state employing the "inhabitant" criterion, and in each the population disparities among the districts were so great under any accepted standard of population that the inequities, if any, attributable to their definition of the term "*population*" was not even considered by the court

On the one occasion where the court might have provided some guidance in this area, it managed to avoid making a constitutional pronouncement In *Davis* v *Mann*,[15] the Virginia reapportionment case, in which the state attempted to justify population disparities on the grounds that the larger districts contained a high percentage of nonresident servicemen and their families, the court brushed aside the state's contention on several grounds, none of which met the constitutional question First, it stated broadly that "[d]iscrimination against a class of individuals [i e , servicemen] merely because of the nature of their employment, without more being shown, is constitutionally impermissible" Then, more specifically, it noted (a) that there was no

[14a] In the recent New York case, a federal district court was called upon to pass upon the use of actual voters as the basis for apportionment The court struck down the plan on the *grounds* that (a) *since the effect of the plan was to reduce the* representation accorded New York City, it failed to reflect the U S Supreme Court's concern with the existing "bias against voters, living in [New York] State's more populous counties", and (b) New York State had, since 1894, used *citizen population as the apportionment base* The district court, however, scrupulously avoided passing upon the constitutionality of using voters as a base under other circumstances, and, with consummate delicacy, did not mention the fact that the base election employed in the plan—the 1962 gubernatorial election—was to the marked advantage of one of the political parties *WMCA, Inc* v *Lomenzo*, Civil Docket 1559, S District of New York, filed 1 Feb 1965 (mimeo)

The district court's approval of the employment of citizen population (as opposed to total population) is of scant precedential value since the record clearly showed that aliens were equally distributed throughout the state and that their exclusion from the apportionment formula would thus not be to the advantage of any given area

[15] 377 U S 678 (1964)

showing that the Legislature did *in fact* take the presence of servicemen into account in its allocation of legislative seats, (2) that since state election laws appeared to encourage servicemen to vote, their exclusion from the apportionment formula was of questionable rationality; and (3) that, even if servicemen were taken into account, the disparity between districts could not be satisfactorily rationalized.[16] At most, this reasoning carries with it the implication that nonresident servicemen may be excluded if certain conditions are met Whether or not under certain circumstances exclusion is required is not clear [16a]

Despite the existing uncertainty as to the exact constitutional status of the various population standards, some generalizations can be made concerning possible court reaction in this area In the first place, there is no standard—inhabitants, registered voters, or voters—which is unconstitutional on *its face*. Barring a clear showing by the complainant that the prescribed norm in fact produces a "dilution" of anyone's vote, it would seem most unlikely that the court would assume jurisdiction over the complaint [17] If the mere possibility of discrimination were the basis for intervention, the court would not only be inviting litigation, but doing so without an appropriate remedy since any standard it chose to impose as a replacement would also be discriminatory, or potentially so To anticipate, then, that all standards will be accorded a presumption of constitutionality appears reasonable

Secondly, once the inequities due to the employment of a given population standard have been shown, the court has a crucial choice· Are all substantial and correctable inequities to be regarded as impermissible, or only those which can be shown to be the result of a deliberate state policy? Presumably the court would opt for the latter alternative To do otherwise would put it in the unenviable position of striking down an apportionment which, for lack of evidence to the contrary, would normally be assumed to be the result of " . an honest and good faith effort" [18] on the part of the apportionment agency Further, to refrain from intervention in the case of unanticipated or fortuitous inequities would probably not result in the perpetuation of any great inequities In an age of elaborate census data, voting statistics, and computers—to say nothing of politically sensitive legislators, alert journalists, and obliging political scientists—it would seem improbable that gross inequities could be convincingly or reasonably attributed to "inadvertance" or "lack of warning "

Thirdly, even if the court has been satisfied that the inequity was unintended, its task is by no means complete What if the Legislature consciously elected to use registered voters as the measure of population, well knowing that it would create certain inequities, but was prepared to justify its choice on the grounds that this particular variety of "dilution" or "weighting" was preferable to some other inequity that would result if another standard were adopted? As we have seen,

---

[16] *Id* at 691

[16a] One conceivable situation where the use of "residents" rather than "inhabitants" would be arguably required is when, because of large military installations, certain districts composed almost entirely of nonresident servicemen and their families assume the aspect of "pocket boroughs", i e, are controlled by a relative handful of actual residents

[17] In the Baltimore case, *supra* note 13a, there was evidence before the court to suggest that employment of registered voters in the apportionment formula did in fact discriminate against certain areas

[18] *Reynolds* v. *Sims*, *supra* note 1a, at 577.

each standard is capable of producing its own brand of numerical injustice As a result, the alternative before the apportionment agency may well be, indeed often will be, not between an inequitable and equitable standard, but between various inequitable standards The avoidance of one inequity may require the adoption of another. How the court will confront this and the other dilemmas involved in the utilization of a population measure is, in the last analysis, a matter of considerable conjecture at this point

This uncertain state of the law in regard to the definition of population suggests that all that can be done for the present is for each apportioning agency to make the required "honest and good faith effort," and then to hope that its effort is adjudged constitutional Until and unless the court clarifies the matter, selection of the population measure will remain within the discretion of the apportioning agency.

As far as California is concerned, the problems surrounding the definition of "population" are, for the present at least, academic Article IV, Section 6, of the California Constitution provides that "Each . . . reapportionment . . . shall be based upon the last preceding federal census." [19] Even if it could be shown that census figures are—either because of actual or projected population movement—less than an ideal basis for court ordered reapportionments in California between now and 1970, the unequivocal mandate of the existing State Constitution leaves no immediate alternative but the use of the census data of 1960. Further, the Supreme Court clearly stated in *Reynolds* that decennial reapportionment, "although undoubtedly . . . lead[ing] to some imbalance in the population of districts toward the end of the decennial period," clearly meets "the minimal requirements for maintaining a reasonably current scheme of legislative representation." [20] From this it may reasonably be inferred that any alleged inequities attributable to the employment of the most recent official (but nevertheless probably out-of-date) population data will not be the basis of a successful federal constitutional claim.

III. SUBSTANTIAL EQUALITY OF POPULATION

Assuming that an acceptable or workable definition of "population" can be generated, the next question is what constitutes "substantial" equality, or what does "as nearly [equal] as is practicable" mean. Since the court suggested in *Reynolds* that the requirements for apportioning state legislatures were distinguishable from those governing congressional apportionment,[1] we will here treat congressional and state legislative apportionment separately.

[19] Census data is based upon *total inhabitants* The stipulation in Article IV, to the effect that in reapportionment "no persons who are not eligible to become citizens of the United States under the naturalization laws shall be counted as forming the population of any district" is apparently obsolete by virtue of the fact that no such class of persons has existed since 1952 when congress provided that no person shall be denied the right to become a citizen of the United States because of race, sex, or marriage 8 U S C A 1422 The stipulation in the California Constitution was apparently incorporated with an eye to excluding those of Chinese ancestry from the apportionment count See *Debates of the California Constitutional Convention* 1257–1258

[20] *Supra* note 1a at 583–584

[1] 377 U S 533, 577 (1964).

A. *Congressional Apportionment*

In *Wesberry* v *Sanders*,[2] the only case involving congressional apportionment in which the Supreme Court considered the merits in opinion form, the Court went no further than to state that districts shall be "as nearly [equal] as is practicable."[3] Clearly the Georgia apportionment at issue, which contained a district "two to three times" as large as others,[4] did not meet this requirement As to what is meant by "practicable," however, the court went no further than to acknowledge that "it may not be possible to draw . . districts with mathematical precision . . "[5] As Justice Harlan noted in dissent, such a formulation swept "a host of questions under the rug "[6]

> How great a difference between the population of various districts within a state is tolerable? Is the standard an absolute or relative one, and if the latter to what is the difference in population to be related? Does the number of districts within the state have any relevance? . . . Is the relevant statistic the greatest disparity between any two districts or the average departure from the average population per district, or a little of both? May the state consider factors such as area or natural boundaries (rivers, mountain ranges) which are plainly relevant to the practicability of effective representation?

If these queries were left unanswered in *Wesberry,* the experience of the past two years has provided some partial answers In the first place, in *Reynolds* the court noted that "more flexibility may . . . be constitutionally permissible with respect to state legislative apportionment than in congressional districting "[7] This conclusion flowed from the following argument

> Since, almost invariably, there is a significantly larger number of seats in state legislative bodies to be distributed within a state than congressional seats, it may be feasible to use political subdivision lines to a greater extent in establishing state legislative districts than in congressional districting while still affording adequate representation to all parts of the state To do so would be constitutionally valid, so long as the resulting apportionment was one based substantially on population and the equal-protection principle was not diluted in any significant way.[8]

Since adherence to the boundaries of political subdivisions was virtually the only permissible justification for departing from the population principle afforded in the case of state legislatures which the court noted, it could be argued that in congressional districting there are *no* allowable grounds for deviation Justice Harlan's final query could be considered answered in the negative

Although the court elected to distinguish congressional and state legislative apportionment solely on the grounds of their differing relationships to political subdivisions, it appears likely that the court was

[2] 376 U S 1 (1964).
[3] *Id* at 7–8
[4] *Id* at 7
[5] *Id* at 18
[6] *Id* at 21 n 4
[7] 377 U S 533, 578 (1964).
[8] *Ibid*

not unmindful that deviations from the population standard among congressional districts—which are fewer in number and more populous than state legislative districts—were not only easier to detect, but also more susceptible to simple remedy than analogous disparities among state legislative districts Even minor disparities among congressional districts, which generally average around 410,000 inhabitants,[9] result in easily recognizable absolute deviations A 5 percent deviation, for example, represents 20,500 readily visible people, more than the average lower house district in some state legislatures

In terms of remedy, election-at-large for congressional seats usually presents manifestly fewer inconveniences and dangers than a similar election for a 200- or 300-member state legislature would [10] Similarly, even the reapportionment of congressional seats by a court itself is usually much less awesome when compared to a similar effort in regard to the state legislature

Probably the most useful clarifications in the area of congressional apportionment have been provided by the lower courts which have contributed at least some suggestive examples of what apportionments are *impermissible*.[10a] Table 1 is a summary of the cases decided through February 28, 1965, in which apportionments have been overturned With the exception of the Georgia case, which was finally decided by the Supreme Court itself, and the Virginia case, which was decided by the Virginia Supreme Court of Appeals, all the cases were handled by federal district courts.

TABLE 1

Congressional Apportionments Held Unconstitutional

State	Ratio of largest to Smallest district [a]	Citation
1. Alabama	2 8 to 1	*Moore* v *Moore*, 229 F. Supp 435 (1964).
2 Georgia	3 0 to 1	*Wesberry* v *Sanders*, 376 U S. 1 (1964).
3 Texas	4 4 to 1	*Bush* v *Martin*. 224 F Supp 499 (1964), affirmed *Martin* v *Bush*, 376 U S 222 (1964) (per curiam)
4. Maryland	2 9 to 1 [b]	*Maryland Citizens Committee for Fair Congressional Redistricting*, 228 F. Supp. 956 (1964).
5. Michigan	1 6 to 1	*Calkins* v *Hare*, 228 F. Supp. 824 (1964).
6 Kansas	1 5 to 1 [b]	*Meeks* v *Anderson*, 229 F. Supp 271 (1964).
7. Florida	2 8 to 1	*Gong v. Bryant*, 230 F. Supp 917 (1964).
8 Missouri	1 4 to 1	*Preisler* v *Hearnes* [c]
9. Virginia	1 7 to 1	*Wilkins* v *Davis*, 33 LW 2364 (1965)

[a] With the exception of the Michigan case, the courts, when they have used figures at all, have confined themselves to comparing the largest districts to the smallest in terms either of a ratio or raw population In Calkins v Hare the court spoke of the "Index of Representation," defined as the average district population divided by the population of a given district, as well as the disparity between largest and smallest districts 228 F Supp 824, 826 n 4 (1964)

[b] No figures cited in the opinion Data used in the table is based upon Congressional Quarterly Special Report: Congressional Districting (1962)

[c] Opinion is unreported to date For an account, see the Los Angeles Times, January 5, 1965, p 26

[9] *Congressional District Data Book*, Table A (Bureau of the Census, 1963)

[10] The "danger" of elections at-large is, of course, their winner-take-all aspects which is understandably frightening to either political party See, e g, *Colegrove* v *Green*, 328 U S 549, 553 (1946) The recent experience in Illinois suggests that this problem can be substantially obviated by interparty agreement to guarantee the losing party a certain minimum percentage of the seats

[10a] Since *Wesberry* only in one case, *Levitt* v *Maynard*, 202 A 2d 478 (1964), has a congressional apportionment withstood judicial scrutiny Unfortunately, however, the case is of scant precedential value In the first place, the New Hampshire apportionment involved was one of the nation's best, only two states (Maine and North Dakota) showing a smaller disparity between largest and smallest dis-

The most that would appear to be justifiably inferrable from these cases is (1) that the principal judicial preoccupation is with extreme deviations rather than the overall pattern of apportionment within a state, and (2) that any apportionment which involves a 1 4 to 1 or greater ratio between the largest and smallest districts is probably constitutionally suspect At exactly what point the courts will elect to fix the maximum permissible deviation in individual cases remains conjectural. What is apparent, however, is that however and wherever the line is drawn it will be done so arbitrarily.

As things stand now, these arbitrary determinations could be made in either of two ways They could be accomplished either on an *ad hoc*, case by case basis, which is the method suggested by the Supreme Court for the handling of state legislative apportionment controversies.[11] or in terms of some universally applicable norm(s) prescribing maximum permissible variations Either approach would have its own peculiar results, which we shall now explore.

If the case by case approach is adopted—and it has been so far—the following consequences may be anticipated·

(1) Specific findings in individual cases will not necessarily be binding in subsequent cases, but will create certain rebuttal presumptions For example, the holding in *Wilkins* v *Davis* [12] that a maximum deviation ratio of 1 4 to 1 is constitutionally impermissible would not necessarily mean that, say, the California apportionment [13] which contains a 2 to 1 ratio is analogously void on its face What it would mean, however, is that there would be a presumption against the California scheme In other words, the burden of proof would be shifted from the plaintiff, where it would normally be placed, to the state To meet this burden the state would have to be able to distinguish its situation from that in Virginia There are any number of ways in which this might be attempted One would be to demonstrate that extreme variations in California, which has 38 districts, do not have as bad an overall effect on an apportionment plan as such variations have in Virginia, which has 16 seats This might be accomplished by showing either that in California the average deviation per district was less or that a higher percentage of the total electorate was required to elect a majority of the representatives

(2) As implied above, there will be a great deal of uncertainty, at least temporarily, as to exactly what is permissible Thus uncertainty will remain until some court approves an apportionment whose validity is doubtful Until that time, all that can be assumed realistically is

tricts Thus, even if New Hampshire's 1 2 to 1 ratio between its most and least populous districts is considered constitutional, the apportionments of 37 of the remaining 39 states which district (i e, those states with more than one representative that do not conduct their elections at large) are still in doubt Secondly, the New Hampshire Court predicated its finding on a very questionable reading of *Wesberry* Not only did it rely upon Justice Harlan's *dissent*, but it appears to have misread the dissent, at that Justice Harlan had said that apportionments which contained population differentials between districts of more than 100 000 persons were "presumably" not as nearly equal "as is practicable" 376 U S 1, 21–22 (1964) The New Hampshire court then made the very questionable inference that Justice Harlan had read the *Wesberry* majority as approving any apportionment having less than a 100,000-person disparity between districts *Levitt*, *supra* at 480

[11] *Reynolds* v *Sims*, *supra* note 1, at 578
[12] 33 LW 2364 (1965).
[13] See Appendix A.

that any plan which provides for deviations no greater than those already disapproved by some court has a chance of being upheld.

(3) The point at which apportionment schemes are confronted with a presumption of unconstitutionality will be lowered over time. The first cases to be litigated are, in general, the more extreme ones in which the courts are not required to establish very restrictive holdings However, once the potential litigants in the more marginal situations become encouraged and take up the cause, the courts will be faced with suits involving apportionments where deviations, while noticeable and correctable, are hardly spectacular And, sooner or later, some court will strike down a marginal apportionment and thus further reduce the area of presumed constitutionality It is not by accident that the successive ratios contained in Table 1 display a general downward trend.

This process of the lowering of the permissible level of deviation is not likely to be halted by any of the appellate courts, including the Supreme Court A court which initially strikes down an apportionment is presumably prepared to say that a more equitable apportionment is "practicable" This type of judgement is difficult to reverse A reversal by an appellate court in such circumstances would be tantamount to a verdict of no confidence in the inferior court, a judgment courts are understandably and wisely reluctant to make

In summary, the overall result of *ad hoc* determinations will be uncertainty and flexibility which over time will give way to greater certainty, increasing rigidity, and more restrictive interpretations of permissible deviation

If a policy of imposing, across the board, absolute standards, is, on the other hand, found attractive by the courts, the following results may be anticipated:

(1) Certainty will be achieved once the standard(s) is (are) established

(2) The process of selecting the standards will be troublesome to say the least In the first place, there is the question of what standard to adopt Should deviations be limited to 15 percent, as suggested by the American Political Science Association in 1951? [14] Or, would a 10 percent norm be better? To answer this type of question, the Supreme Court, which would inevitably be the ultimate arbiter, would be confronted with precisely the task it has so assiduously avoided up to now, namely, how to set an absolute standard without appearing palpably arbitrary In the second place, since no single standard, unless extremely restrictive, provides enough safeguards to guarantee the meeting of constitutional requirements, the courts would be obliged to enunciate more than one standard which would necessarily compound its difficulties

(3) If the courts elect to impose one extremely restrictive standard, states with large congressional delegations may find apportionment extremely difficult While states with two or three districts can easily meet any requirement, a standard which requires, say, that no district deviate from the average by more than 5 percent (roughly 20,000 persons) would certainly cause a hardship for a state with 20- or 30-odd districts.

[14] "The Reapportionment of Congress," 45 *American Political Science Review* 154–155 (1951).

(4) If, on the other hand, the court opted for the adoption of more flexible, multiple standards, the more populous states would be relatively better off than their less populous sisters. Assume for example, that the courts employ conjointly the following standards: (a) no district may deviate from the norm by more than 15 percent and (b) no less than 45 percent of the population may be able to elect half of the delegation Under these rules, New Hampshire, which has two districts, could have no district deviating by more than 5 percent from the norm without violating condition (b). California with 38 districts, on the other hand, could have 24 districts deviating by 15 percent (12 by +15% and 12 by −15%) or all 38 districts deviating by 10 percent (19 by +10% and 19 by −10%), and still meet the second stipulation

The foregoing analysis is both speculative and contingent. It certainly has raised more problems than it has solved. And some of these problems may turn out not to be problems at all once the situation becomes clarified, as it inevitably must. However, this is the way it must be, for the area of congressional apportionment has been at most only faintly illuminated by the endeavors of the judiciary to date.

Recent events in Congress suggests that much of the present uncertainty may be removed by legislation.[15] Bills defining the maximum permissible deviation for congressional districts have been introduced in the House of Representatives. One bill provides for a 15 percent limit, another for a 12½ percent maximum disparity. The former proposal, reflecting the American Political Science Association's 1951 recommendation, appears to have considerable backing. Both bills appear eminently reasonable, and the passage of either should not create any serious difficulties for those states required to redistrict. Quite clearly any federal legislation in the area of congressional apportionment would be subject to judicial scrutiny on constitutional grounds Fortunately, it appears extremely unlikely that the courts would be so judicially immodest as to nullify a patently reasonable and helpful effort on the part of the political branches to implement *Wesberry* v. *Sanders*. Congress's authority over federal elections is indisputable and its endeavors are invariably accorded appropriate deference by the courts

If the federal courts prove to be reluctant to overturn requirements established by Congress, it does not necessarily follow, however, that any and every congressional apportionment which meets the plus or minus 15 *per centum* requirement would be immune from judicial oversight Take, for example, an extreme situation where half of a state's districts deviated by plus 15 percent and half by minus 15 percent, and assume further that all the former districts were urban and all the latter were rural Despite the fact that such an arrangement conforms to the letter of the law, it would appear that it would not be beyond constitutional challenge. Such a situation could be handled by the courts in at least two ways The courts could find that the apportionment, despite its conformance to statutory provisions, was so "invidiously discriminatory" that it violated the Equal Protection Clause. Or, they could construe the congressional statute as setting boundaries, the exceeding of which would be a *prima facie* case of unconstitutionality,

[15] See "Congressional Districts," 23 *Congressional Quarterly* 286 (1965) for a summary of current happenings in Congress.

but still requiring the apportionment agency to construct districts of as nearly equal populations "as is practicable." This particular construction would seem not unreasonable in light of the fact that HR 5505,[16] which was recently favorably reported by the House Judiciary Committee, provides simply that no district deviate from the average by more than 15 percent. It does not say that any deviation of less than 15 percent is constitutionally permissible. Thus, the way is open for the courts to strike down a given apportionment without voiding the governing congressional enactment.

B. *State Legislative Districts*

(1) THE BASIC NORM In *Reynolds* v *Sims* the court held that, "as a basic constitutional standard, the Equal Protection Clause requires that the seats in both houses of a bicameral legislature must be apportioned on a population basis."[1] The court refined this requirement with the following observations:

(a) ". . . the Equal Protection Clause requires that a state make an *honest and good faith effort* to construct districts . . . of . . . as *nearly of equal population as is practicable.*"[2]
(b) "Mathematical exactness or precision is hardly a workable constitutional requirement."[3]
(c) Both houses must be apportioned "*substantially* on a population basis"[4]
(d) Districts should be "*substantially equal* in population"[5]
(e) In evaluating a legislative apportionment the courts should "consider the challenged scheme as a whole" because "disparities from population-based representation, tough minor, may be cumulative instead of offsetting where the same areas are disadvantaged in both houses . . ."[6]

Although the court eschewed advancing any mathematical standards for implementing the constitutional norm on the grounds that such standards were "neither practicable nor desirable,"[7] it did elaborate "a few rather general considerations which appear . . . relevant."[8] These considerations consisted of a lengthy exegesis of considerations which would *not* justify departures from the population standard and a not so lengthly enumeration of factors which would justify some deviations. Justice Harlan enumerated those factors which may *not* be considered as a justification for deviations from the population standard as follows:[9]

[16] See Appendix D.
[1] 377 U S 533, 568 (1964).
[2] *Id* at 577 (Emphasis added)
[3] *Ibid.*
[4] *Lucas* v *Colorado General Assembly*, 377 U S 713, 734 (1964) (Emphasis added)
[5] *Id* at 735 n 27 (Emphasis added)
[6] *Ibid*
[7] *Roman* v *Sincock*, 377 U S 695, 710 (1964)
[8] *Reynolds* v *Sims*, *supra* note 1, at 578
[9] *Id* at 622–623 (Dissenting opinion) (Footnotes omitted) Justice Harlan cited the following sections of the court's opinions in support of his view that the various factors he listed had been precluded from consideration
(1)—(6)[N]either history alone, nor economic or other sorts of group interests, are permissible factors in attempting to justify disparities from population-based representation Citizens, not history or economic interests, cast votes Considerations of area alone provide an insufficient justification for deviations from the equal-population principle Again, people, not land or trees or pastures, vote Modern developments and improvements in transformation and communications make rather hollow, in the mid-1960's, most claims that deviations from popula-

(1) History;
(2) "Economic or other sorts of group interests;"
(3) Area;
(4) Geographical considerations;
(5) A desire "to insure effective representation for sparsely settled areas;"
(6) "The availability of access of citizens to their representatives;"
(7) Theories of bicameralism (except those approved by the court);
(8) Occupation;
(9) "An attempt to balance urban and rural power,"
(10) "The preference of a majority of the voters"

It should be acknowledged that Justice Harlan may have unduly exaggerated the court's holdings to the extent that he overlooked the fact that factors (1), (3), and (4) were qualified by the word "alone."[10] If one chooses to stress this qualification, it is possible to interpret the court's opinion as meaning that these factors were not excluded as justifications *per se* but were rather excluded as justifying departures in and of themselves Conceivably, what is meant by the court is that these factors, unpersuasive when standing alone, can under certain circumstances be combined to form an acceptable rationale for deviation A certain credence is lent to this view by the Chief Justice's somewhat ambiguous statement which immediately precedes his analysis of factors (1), (3), and (4).[11]

> So long as the divergences from a strict population standard are based on legitimate considerations incident to the effectuation of

---

tion-based representation can validly be based solely on geographical considerations Arguments for allowing such deviations in order to insure effective representation for sparsely settled areas to prevent legislative districts from becoming so large that the availability of access of citizens to their representatives is impaired are today, for the most part, unconvincing, (*Reynolds* v *Sims*, 377 U S 533, 579–80 [1964])

(7) [W]e necessarily hold that the Equal Protection Clause requires both houses of a state legislature to be apportioned on a population basis The right of a citizen to equal representation and to have his vote weighted equally with those of all other citizens in the election of members of one house of a bicameral state legislature would amount to little if States could effectively submerge the equal-population principle in the apportionment of seats in the other house We do not believe that the concept of bicameralism is rendered anachronistic and meaningless when the predominant basis of representation is required to be the same—population Simply because the controlling criterion for apportioning representation is required to be the same in both houses does not mean that there will be no differences in the composition and complexion of the two bodies Different constituencies can be represented in the two houses the length of terms of the legislators in the separate bodies could differ . [Etc] (*Id* at 576–577)

(8) We reject appellants' argument that the underrepresentation of [certain named areas] is constitutionally justifiable since it allegedly resulted in part from the fact that those areas contain large numbers of military and military-related personnel Discrimination against a class of individuals merely because of the nature of their employment without more being shown, is constitutionally impermissible (*Davis* v *Mann*, 377 U S 678, 691 [1964])

(9) We also reject appellants claim that the apportionment is sustainable as involving an attempt to balance urban and rural power in the legisature this explanation lack[s] legal merit (*Id* at 692)

(10) Except as an interim remedial procedure, justifying a court in staying its hand temporarily, we find no significance in the fact that a nonjudicial, political remedy may be available for the effectuation of asserted rights to equal representation in a state legislature We hold that the fact that a challenged legislative apportionment plan was approved by the electorate is without federal constitutional significance, if the scheme adopted fails to satisfy the basic requirement of the Equal Protection Clause (*Lucas* v *Forty-Fourth General Assembly*, 377 U S 713, 736 [1964])

[10] See note 9 *supra*

[11] *Reynolds* v *Sims*, supra note 1, at 579

> a rational state policy, some deviations from the equal-population principle are permissible . .

In the last analysis, however, the manner in which one chooses to interpret the Chief Justice in this regard is of no great consequence In practical terms, the acceptable justifications discussed below are adequate to justify just about any departure which history, area, or geographical considerations could rationalize if employed in combination. The critical point, to anticipate, is that deviations, however justified, must be insubstantial under any circumstances

The expressly acceptable justifications for advertent deviation are limited to·

(1) the employment of political or natural or historical boundary lines "so long as the resulting apportionment . . . [*is*] one based *substantially* on population ."[12] [This, however, "does not mean that each local governmental unit or political subdivision can be given separate representation, regardless of population "] [13]

(2) the balancing of "a *slight* overrepresentation of a particular area in one house with a *minor* underrepresentation of that area in the other "[14]

Adherence to political subdivisions is apparently "a legitimate consideration incident to the effectuation of a rational state policy" whenever (a) it deters "partisan gerrymandering;"[15] (b) [l]ocal governmental entities are charged with various responsibilities incident to the operation of state government;"[16] or (c) "much of the state legislature's activity involves the enactment of so-called local legislation "[17] The employment of natural and historical boundaries can justify deviations where such use hinders gerrymandering In light of the court's warning against "cumulative" inequities,[18] number (2) may perhaps best be considered directive rather than permissive.

About all that the court has made unmistakably clear is that for a deviation to be permissible, it must be "slight" or at least not "substantial " It has, of course, been unwilling to put forth any "rigid mathematical standards" which distinguish the permissible from the impermissible[19] However, its case-by-case handling of the apportionment problem has (1) suggested what type of measures of representativeness it will employ and (2) provided a basis for the drawing of certain inferences as to both what is permissible and what is impermissible.

(2) INDICES OF REPRESENTATIVENESS The Supreme Court has utilized three yardsticks of representativeness· (1) the Dauer-Kelsay Index, i e , minimum percentage of the population capable of electing a

[19] *Roman* v. *Sincock*, *supra*, note 7, at 710

simple majority of the legislative body; (2) the ratio of the largest to the smallest district, the so-called population-variance ratio, and (3) the relative value of the vote In general, the court has relied upon more than one measure, an especially prudent practice since each measure possesses its own peculiar disadvantages. Although statistically more sophisticated indices are available,[20] these three appear to be adequate for purposes of measuring electoral inequalities [21]

The Dauer-Kelsay Index is arrived at by arranging the districts in ascending order of population, counting down the list from the low population end until a majority of legislative seats has been accumulated, and then computing exactly what percentage of the electorate is represented by the seats so accumulated [22] The index provides the best overall view of the pattern of apportionment Its weaknesses are that it may, especially in the case of large legislatures, obscure some rather dramatic disparities between districts and that it offers no way of evaluating representation accorded various geographic areas or identifiable groups The scale can, for example, hide the facts that there are significant disparities amongst a few districts and that there is a resulting inequality between, say, rural and urban representation [23]

The population-variance ratio, computed by simply dividing the population of the largest district by the population of the smallest provides a clear picture of the worst of the inequities It is an appropriate supplement to the Dauer-Kelsay Index in that it focuses upon the dramatic deviations It indicates nothing, however, about the overall pattern of representation.[24]

Although the court has generally been content to rely upon the tandem use of the Dauer-Kelsay Index and the population-variance ratio, it entertained evidence adduced from the employment of the relative value of the vote The relative value of the vote is calculated by dividing the average district (the total population of the state divided by the number of districts) by the population of individual districts. Districts of less than average size will thus have an index of more than one, while districts of more than average size will have an index of less than one The advantage of this technique is that it allows the observer to group districts, in terms of their characteristics, e g , urban or rural upstate or downstate, and thus facilitates comparison [25]

(3) IMPERMISSIBLE DEVIATIONS Generally relying upon the above measures of inequality, apportionments in some sixteen states have been established as unconstitutional by the Supreme Court through January 15th, 1965 These apportionments are summarized in Table 2 Italicized figures are those actually considered by the court itself or the court below.

[a] **Reynolds v Sims, 377 U S 533 (1964)** The court invalidated the existing apportionment and two alternative plans, one embodied in an amendment and the other in a statute

[b] **WMCA, Inc v Lomenzo, 377 U S 633 (1964)** The court examined the existing apportionment statute in terms of both the 1950 and 1960 census and the state constitutional provisions regarding apportionment in terms of the 1960 figures and found on the merits that both statutory and constitutional provisions compelled an impermissible dilution of the vote

[c] **Maryland Committee for Fair Representation v Tawes, 377 U S 656 (1964)** The court invalidated both the state constitutional provisions pertaining to apportionment and a temporary enactment reapportioning the lower house

[d] **Davis v Mann, 377 U S 678 (1964)** The figures under the relative value of the vote column refer to Arlington County, the City of Norfolk, and Fairfax County respectively Id at 687–88

[e] **Roman v Sincock, 377 U S 695 (1964)** The court held that Delaware was not constitutionally apportioned "either before or after the 1963 constitutional amendment " Id at 708

[f] **Lucas v Forty-fourth General Assembly of Colorado, 377 U S 713 (1964)** The court affirmed a lower court finding that the existing apportionment was unconstitutional and further held that an apportionment amendment adopted by referendum did not meet constitutional requirements It is noteworthy that the referendum apportionment of the lower house was not declared unconstitutional on its face The court conceded that it was "arguably" constitutional (id at 730), but refused to let it stand because there was "no indication" that lower house apportionment was "severable" from the rest of the apportionment which was clearly unconstitutional (id at 735) This is the closest the Supreme Court has come to sustaining an apportionment

[g] **In Schoife v Hare, 367 Mich 176 (1962)**, the Michigan Supreme Court upset the upper house apportionment provisions of the state constitution The Supreme Court denied certiorari, **Beadle v Schoife, 377 U S 990 (1964)**, apparently on the grounds that the provisions at issue were no longer effective since a new constitution had been approved in 1963 The apportionment provisions of the 1963 Constitution were overthrown in **Marshall v. Hare, 378 U S 561 (1964)**, reversing 227 F. Supp 989 (1964)

The cases summarized above provide a fairly clear picture of what apportionments will *not* pass judicial muster The closest the Supreme Court came to approving an apportionment was in *Lucas* when it noted that the apportionment of Colorado's lower house was "*at least arguably* apportioned substantially on a population basis . . ."[26] Since this apportionment contained a maximum variation ratio of 1.7 to 1 and minimum percentage to elect a majority of 45 1,[27] it *may be* safe to infer that any arrangement which falls on the permissible side of these limits—i e, 1 7 or less and 45 1 percent or more—would have a good chance of being sustained, provided, of course, (1) that inequities did not prove to be cumulative when the other house was taken into consideration and (2) that the inequities could be justified in terms of adherence to the boundaries of political subdivisions Yet, even this estimate may be subject to some uncertainty in light of the court's emphatic reluctance to sustain an attempt by a federal district court to impose a maximum population variance ratio of 1 5 1[28] From the court's opinion it appears, however, that this disavowal was based upon an unwillingness to accept "rigid mathematical standards" rather than any belief that such a ratio was perhaps too permissive[29]

One point which does appear clear is that temporary or "stop-gap" apportionments designed to elect a legislature which will accomplish a permanent reapportionment may permissibly contain deviations which would be unconstitutional in a permanent plan In *Hill* v. *Davis* the Supreme Court affirmed a district court finding that both houses of the Iowa Legislature were unconstitutionally apportioned However, the court declined to pass on the "temporary plan" which the lower court approved for use in the 1964 elections[30] Since the plan had maximum population variance ratios of 2 23 to 1 and 3 20 to 1 and minimum percentages required to elect a majority of 48 3 and 38.9 in the House and Senate respectively, it appears that temporary apportionments will be accorded the benefit of the judicial doubt

IV. TYPES OF DISTRICTS

Another problem which has been left largely unanswered in the apportionment litigation is the type of districts which are permissible. In *Reynolds* v *Sims* the Supreme Court suggested that along with the normal single member districts states might permissibly choose to em-

[h] Meyers v Thigpen, 378 U S 554 (1964)

[28] *Roman* v *Sincock*, *supra* note 7, at 710
[29] *Ibid*
[30] 378 U S 565 (1964) It should be noted that the temporary plan was enacted *after* a federal district court had found the existing apportionment unconstitutional and had directed the legislature to adopt a temporary apportionment for use pending the approval of a constitutional amendment See *Davis* v *Synhorst*, 225 F Supp 689 (1964)

ploy either multimember or floterial districts.[1] Despite this apparent approval, post-*Reynolds* events have suggested that the choice of such districts may well have constitutional significance. The attempt by certain states to comply with the court's population requirement through the use of single member districts in conjunction with either weighted or fractional voting has suggested further questions. We will examine the possible constitutional questions presented by the utilization of each type of district.

A. Single Member Districts

Single member districts have been the general rule in America[2] and their legitimacy was taken for granted by the Supreme Court in the apportionment cases Nevertheless, under certain circumstances the employment of such districts can raise some potentially critical questions under the Equal Protection Clause For example, as Justice Stewart pointed out, even "with legislative districts of exactly equal voter population, 26 percent of the electorate, (a bare majority of the voters in a bare majority of districts) can, as a matter of a kind of theoretical mathematics embraced by the court, elect a majority of the legislature under our simple majority electoral system"[3] Or, at the other extreme, it could be noted that with the right population distribution a bare 51 percent of the electorate could elect the *entire* legislature. To the extent that either possibility is statistically unlikely, the court may not be required to confront these questions However, as we shall suggest below, if the court attempts to confront the problems raised by multimember districts or weighted or fractional voting by establishing permissible ratios between votes cast and representatives elected, single-member districts may ultimately not be immune to constitutional challenge At present, this would seem to be highly unlikely, but not inconceivable

B. Multimember Districts

Although multimember districts were approved in principle in *Reynolds*,[4] the effects of such districts have already proved troublesome for federal district courts In *Dorsey* v *Fortson* a district court, adopting a highly restrictive and literal interpretation of the Equal Protection Clause, struck down a provision in the Georgia apportionment statute for multimember districts on the grounds that. "The statute causes a clear difference in the treatment accorded voters in each of the two classes of senatorial districts It is the same law applied differently to different persons The voters select their own senator in one class of districts. In the other they do not They must join with others in selecting a group of senators and their own choice of a senator may be nullified by what voters in other districts of the group desire."[5] A district court similarly outlawed a similar provision in a recently adopted Pennsyl-

[1] 377 U S 533, 579 (1962). "Single member districts may be the rule in one state, while another state might desire to achieve some flexibility by creating multimember or floterial districts" (Footnotes omitted) *Cf id* at 577 "One body could be composed of single-member districts while the other could have *at least some* multimember districts (Emphasis added).

[4] See note 1 *supra*

[5] 228 F. Supp. 259, 263 (1964).

vania apportionment [6] Again the grounds were the possible submerging of a minority in multimember districts In both cases, the courts were concerned that the "winner take all" aspect of multimember elections could deprive a minority party or group of any representation at all, and presumably believed such privation would be at least less likely in smaller single-member districts.

The action in the Pennsylvania case was stayed pending the outcome of the 1964 elections, which were to be held under the previous statute [7] In the Georgia case, however, the Supreme Court, citing its *dictum* in *Reynolds* as to the allowability of multimember districts, over-ruled the lower court.[8] Justice Brennan, writing for an eight-man majority, based his opinion on the facts that there was "clearly no mathematical disparity," i e, all districts met the population standard, and that the claim of the nullification of minority voting strength was "highly hypothetical." [9] Further, "[i]f the weight of the vote of any voter in a Fulton County district, when he votes for seven senators to represent him in the Georgia Senate, is not the exact equivalent of that of a resident of a single member constituency, we cannot say that his vote is not 'approximately equal in weight to that of any other citizen of the State'." [10] He went on, however, to qualify the court's approval of the Georgia arrangement with the following

> It might well be that, designedly or otherwise, a multimember constituency apportionment scheme, under the circumstances of a particular case, would operate to minimize or cancel out the voting strength of racial or political elements of the voting population When this is demonstrated it will be time enough to consider whether the system still passes constitutional muster.[11]

Only Justice Douglas was of the opinion that multimember districts were impermissible *per se* [12] His position is surprising in the light of his apparently unreserved acquiescence in *Reynolds*.

The Supreme Court's recent decision in the Colorado case will have the effect of implementing multimember districting. At issue in that case was a provision of the Colorado Constitution providing that no county be divided into districts for the election of state legislators The Legislature had ignored this provision in reapportioning the state in compliance with a court order to apportion the Legislature on the basis of population A federal district court upheld for temporary use the apportionment which subdistricted the more populous counties entitled to more than one representative [13] But in a separate suit the State Supreme Court ruled in favor of a plaintiff who alleged that since subdistricting violated the State Constitution, and was not *necessary* for compliance with the Federal Constitution, an at-large election of representatives from multimember counties was required [14] On appeal the United States Supreme Court remanded to the district court for

reconsideration in light of the state court's interpretation of state law.[15] Since state courts are regarded as having the final word in interpreting state law, it appears certain that upon reconsideration the state court's view will prevail, i.e., multimembered districts will be required

The major test of multimember districts will not occur until a given arrangement is challenged on the ground that it in fact deprives an identifiable racial or political minority of the representation to which its numerical strength would appear to entitle it When this occasion arises the court, as always, will have a number of alternatives before it. However, these alternatives would appear to be sharply circumscribed by several factors. On the one hand, the court could not very well realistically adopt a position of "hands off." The adoption of such an attitude would be an open invitation to various groups now in power to submerge completely significant minorities by placing them in multimember districts where they would be victimized by the winner-take-all stipulation which almost invariably accompanies such districting.[16] It is not difficult to predict the result (if not the reasoning) of a case in which Negro plaintiffs in a southern county allege that despite the fact that they constitute 45 percent of the population they were precluded by multimember districting from capturing any of the county's 10 seats. On the other hand, the court cannot very well say that any and every nullification of a group's voting strength is unconstitutional *per se*. Such a ruling would for all intents and purposes render its previous approval (indeed encouragement) of multimember districts virtually meaningless since, as a matter of fact, multimember districts customarily involve winner-take-all elections whose effect is invariably at least *some* submerging of minority representation.[16a] To effectively preclude the employment of multimember districts at this date would seem to place the court in the rather awkward position of at least implicitly conceding that its earlier *dicta* were misleading and/or thoughtlessly devised.

If, as we have suggested, the Supreme Court is in a position neither to approve nor reject minority-submerging multimember district out of hand, neither can it, without opening a veritable Pandora's Box, contrive on an *ad hoc* basis a set of constitutionally allowable relationships between a group's electoral strength and its legislative representation. Once such relationships were accorded constitutional status it would appear that the court would be logically compelled to espouse some form of proportional representation as a constitutional principle; that is, the court would have to say in essence that an identifiable group with "X" votes has a constitutional right to "Y" representatives Although "one person, one vote" may be, as Justice Stewart argues,

[15] *Forty-fourth General Assembly* v *Lucas*, 85 S Ct 715 (1965) (Per curiam)
[16] Baker, *State Constitutions Reapportionment* 2 (1960) According to Baker, only Illinois, with a system of cumulative voting which allows the voter to distribute his votes—he has as many as there are seats—in any manner he pleases, giving them all to one candidate if he wishes, has adequately provided for minority representation In all other states the winner-take-all principle applies, i e, the major party or group, assuming that its members act in a concerted manner, will take all the seats With cumulative voting a minority may concentrate all of its votes on one seat and thus generally secure itself some representation See also Silva, "Seats Apportioned to a Legislative District," XVII *The Western Political Quarterly* 742 (1964), for a good overview of the various ways in which multimember districts may be constructed.
[16a] Silva, *op cit supra* note 16, at 744

the logical progenitor of "X" votes, "Y" representatives,[17] the two propositions are surely distinguishable in practice The former is at least arguably an aspiration of American democracy The latter, however, has never been an acceptable principle in American thought or practice[18] It seems highly unlikely that the court would embrace it and all of its manifold ramifications, the most significant one of which is that it would encourage a proliferation of political parties[19]

If we are correct in ruling out the more or less simplistic alternatives discussed above, what remains for the court is to approach the constitutional questions raised by multimember districts as though they were questions of gerrymandering This would involve the making of a series of individual determinations taking into consideration a variety of factors If this approach is adopted, the burden of proof would be placed upon the plaintiffs who would be required to show *inter alia* that (a) their underrepresentation was the result of a conscious state policy and (b) that such underrepresentation was in fact curable by subdistricting In other words, the plaintiffs would be required not only to show that the underrepresentation was intentional and not just the luck of the draw, but that with nongerrymandered subdistricting—i e subdistricting which involved districts constructed either in a compact and contiguous fashion or in conformance with the boundaries of political subdivisions—the particular group would actually receive better representation Since these requirements of proof would be generally difficult to meet except in the case of marked inequity, the court would not be compelled to intervene except in the more extreme cases[20]

In handling alleged inequities in a case-by-case fashion the court, of course, would not be precluded from developing at some point a set of general principles applicable to districting problems It might for instance conclude by judicial fiat that there is some arbitrary maximum number of seats which can be encompassed in one district The imposition of such a maximum, while it would not preclude the submerging of minorities, would certainly statistically reduce the possibilities of manifest inequities An electoral system comprised of a number of relatively small multimember districts quite obviously has a better likelihood of reflecting minority opinion than one consisting of a huge multimember district

To the obvious objection that treating the problems of multimember districts as gerrymandering questions would open the way for judicial discretion and involve the court in the making of palpably political judgments, there is apparently only one answer This is, quite simply, that the court itself elected after dutiful deliberation to enter the fabled "political thicket" The only meaningful question remaining is whether it prefers to perform its political role with flexibility or with a dogmatic and perhaps inopportune decisiveness

C. *Weighted and Fractional Voting*

Weighted voting involves the weighting of a representative's vote in the Legislature in relation to the population of his district. The vote of the representative in the smallest district is given a value of one, and other values are computed on the basis of population. Thus, if the smallest district should contain 1,000 inhabitants, a district with 6,000 inhabitants would have a representative who would cast six votes at every rollcall. Fractional voting is similar, except that the largest district is represented by one vote, while the smaller districts have votes of fractional value relative to their population Thus, if the largest district contained 6,000 inhabitants, it would have one vote and a district of 1,000, one-sixth of a vote. Unless one has a decided preference for either multiplication or division, or feels more secure with whole numbers than with fractions, the systems for practical purposes are identical. They shall be treated here as indistinguishable and covered under the general rubric of "weighted voting."

The alleged advantages of weighted voting are three

(1) It permits reapportionment without redistricting or altering the size of the Legislature (and thereby not depriving any sitting legislator of his seat), since population growth or shifts may be taken account of by simply recomputing the value of the votes in the Legislature
(2) The number of representatives may be kept small without depriving the less populous areas of accessible representation.
(3) It does not result in any "dilution of the vote," at least in the sense that that notion has been applied to date.

Clearly weighted voting may diminish minority electoral effectiveness within a district In this regard, we may expect that its constitutional fate will be analogous to multimember districting However, it also possesses its own peculiar and allegedly objectional features, which are perhaps of constitutional import.

In the first place, the system accords the citizens in the more populous districts less access to their representatives in the sense that individually they have a relatively smaller claim on their representatives' time. In the second place, the system raises a series of dilemmas as far as legislative organization is concerned Are votes to be weighted in committee and party caucus? If they are, it could be argued that party organization would be determined by a handful of "heavies" and that committees would be dominated by one or two members who could constantly override their more numerous but light-voting colleagues If, on the other hand, weighted voting were to apply only on the floor, it could be argued that the more populous areas were being disadvantaged in a crucial and integral part of the legislative process.

Further, weighted voting creates problems in the making of committee assignments Does a five-vote representative receive five times as many assignments as a one-vote representative? If he does, he might be overworked and perhaps ineffective If he doesn't, it will be argued that his constituents have received less than their mathematical share of committee representation. Finally, weighted voting raises problems in terms of the representatives of the smaller con-

stituencies. Their actual influence may be less when confronting one man with five votes than when facing five men, each possessing a single vote

It was on the basis of the above problems that the federal district court struck down fractional [weighted] voting in *WMCA* v. *Lomenzo*,[21] after it had acknowledged that such a system, at least as implemented in New York's apportionment, "would probably not offend 'the basic standard of equality' among the districts"[22] The core of the New York decision is contained in the following three sentences:

> . . . legislators have numerous important functions that have nothing directly to do with voting: participation in the work of legislative committee and party caucuses, debating on the floor of the Legislature, discussing measures with other legislators and executive agencies, and the like The Assemblyman who represents only one-sixth of a district can *theoretically* give each constituent six times as much representation in these respects as the Assemblyman who represents a full district This disparity of representation persists even if the state is right in arguing that the Assemblyman with one-sixth of a vote will carry only one-sixth as much political weight when he engages in these activities.[23]

If the New York case is appealed, we can only guess at the Supreme Court's ultimate response However, it should be pointed out that the objections we outlined above, and apparently accepted by the District Court,[24] may well be countered. Some of the questions raised by these objections are subject to reasonable answer; and other objections appear rebuttable on the grounds that the alleged abuses are not easily distinguishable from existing practices which have never been constitutionally questioned

The objection concerning access could possibly be removed simply by according the representatives from the larger districts additional staff to assist in the handling of constituent requests and needs[25] Further, it might be pointed out that the Supreme Court was not particularly impressed with the access argument when it was presented by the denizens of sparsely settled and overrepresented areas as a rationalization for a deviation from the population standard[26] A court that apparently rejects the view that a rural citizen who has to travel 300 miles to a county seat to see his representative on a weekend is the victim of some discrimination may well be unimpressed by the fact that an urbanite, because of the greater demands on his repre-

[21] Civil Docket 1559, S District of New York, filed February 1, 1965 (Mimeo)
[22] *Id* at 19
[23] *Ibid* [The connection between the second and third sentences is obscure Sentence (2) is a "theoretical" statement, while (3) evidently contains some factual premise The joining of them would appear to result either, at best, in question-begging or, at worst, in a *non sequitor*]
[24] We say "apparently" because the district court, after mentioning these objections, proceeded to accept their validity with a summary *ipse dixit* to the effect that a representative with 1/x vote can "theoretically" give his constituents X times the representation that a representative with a full vote can See quotation cited *supra* note 22
[25] Additional staff certainly would also aid these representatives in their dealings with both fellow legislators (and their staffs) and executive officials
[26] *Reynolds* v. *Sims*, 377 U S 533, 580 (1964).

sentative's time, has to stand in line for several hours to see his representative

As far as voting in committee and caucus is concerned, it would appear that the obvious answer would be to dispense with weighted voting on the grounds that, so long as committee and caucus decisions were subject to reversal on the floor where all votes are weighted, no constituency would be deprived of political influence proportionate to its numerical strength Furthermore, it is highly questionable whether majority rule in any meaningful sense ever prevails in either committee or caucus It is probably fair to say that the only place the numerical majority ordinarily rules is on the floor Domination of caucus and committee by party leaders and powerful committee chairmen is a recognized and not necessarily unfortunate aspect of American political life

In regard to committee assignments, a review of the practices in the national Congress and the various state legislatures should dispel any notion that committees are, or ever were, expected to represent the electorate *in camera* On the basis of experience, it would be difficult to argue that there was any constitutional requirement for committee assignments to be reflective of district population or, for that matter, anything except that which the legislature itself considers relevant

In answer to the objection that representatives from the smaller districts will exercise little influence in legislative councils, there are two answers The first is simply that that is precisely the purpose of the one person, one vote norm The less populous areas, by definition, are expected to exercise less influence than the more populous The alternative answer is that legislative influence, depending as it does on a variety of factors ranging from seniority to personality, is really incalculable and as such is susceptible to neither measurement nor effective control To make equality of legislative influence an operable constitutional norm would raise difficult if not insurmountable problems of implementation The only way such a requirement could even be approximated would be to organize the Legislature by drawing lots

In the final analysis, it would seem, first, that on its face weighting voting is probably no more repugnant to the "one man, one vote" criterion than multimember districting; second, that in our present state of knowledge, it is extremely difficult to anticipate whether or not weighted voting will produce actual consequences which are constitutionally offensive To be sure, it may, but constitutional rulings, as distinguished from judgments about convenience, are generally and wisely based on determined fact, not hypothetical horribles

A very great danger in precipitous judicial action against weighted voting is that it could commit the courts to broadening its analysis of apportionment beyond the simple and apparently manageable numerical relationship between population and votes cast in the Legislature If this could occur, the courts would be making judgments in areas where knowledge is both incomplete and the subject of controversy (The irony of weighted voting is that it has already forced the courts to reconsider those very "qualitative" aspects of representation which the Supreme Court worked so laboriously to dismiss when it enunciated its "quantitative" norm in *Wesberry* and *Reynolds*) For the courts to begin to employ majoritarian assumptions beyond the electoral process

would be to open up a whole panoply of issues involving such manifestly political problems of legislative organization as committee assignments, the selection of committee chairmen, the proper roles of the various committees, the rules of debate, staffing, the seniority system, etc

If *WMCA, Inc* v. *Lomenzo* is at present uncertain precedent, the other decisions involving weighted voting are clearly of questionable import In two cases, *Maryland Committee for Fair Representation* v *Tawes* [27] and *Thigpen* v *Meyers*,[28] lower courts have endorsed weighted voting as a temporary expedient, pending the adoption of a permanent apportionment plan In neither case, however, was the plan implemented, and in the latter case the court accepted a stipulation by the parties to the effect that weighted voting was not required At most, these cases may be considered precedent for the temporary employment of weighted voting after an existing apportionment has been voided

With the exception of *Lomenzo* the cases in which weighted voting has been struck down are all inapposite to the resolution of the federal constitutional question In each case the decision was based either on state law [29] or state constitutional provisions [30] The unelaborated *dicta* in the New Jersey case to the effect that certain members of the court considered weighted voting to run afoul of federal constitutional standards may by virtue of its off-hand presentation be taken with the proverbial grain of salt [31]

When all is said and done, and whatever may be the fate of weighted voting in terms of federal requirements, the immediate problem before the California Legislature is whether or not weighted voting is permissible, even as a temporary expedient, under the California Constitution This query, unlike most of those asked in this section of the report, is not easier to posit than answer Pretty clearly, weighted voting is contrary to the California Constitution if that document is construed literally. Section IV, Art 15, provides, in refreshingly clear terms, that "no bill shall become law without the concurrence of a *majority of the members* elected to each house" [Emphasis added] [32] If this clause is binding, and there appear to be no reasons why it should not be, weighted voting, even as a temporary expedient, is impermissible without a constitutional amendment

D. Floterial Districts

A floterial district is a "legislative district which includes within its boundaries several separate districts which independently would not be entitled to additional representation but whose conglomerate population entitles the entire area to another seat in the particular

[27] 180 A 2d 656 (1962) (Maryland)
[28] 231 F Supp 938 (1964) (Washington)
[29] *Jackman* v *Rodine*, 205 A 2d 735 (New Jersey) The court suggested *obiter* that "some members of the court wish to state now that both constitutions bar weighted voting A majority of the court feel the question need not be decided now" *Id* at 736
[30] *Brown* v *State Election Board*, 369 P 2d 140 (Oklahoma 1962), *Forther* v *Barnett*, No 59, 965, Ch, Hinds County Mississippi (1962), *Cargo* v *Campbell*, No 33, 273, Dist Court, Santa Fe, New Mexico (1964)
[31] *See In 29 supra*
[32] The phrase "members voting" or its equivalent is used consistently throughout the Constitution See *e g*, Art IV, secs 16 (overriding a veto), 17 (impeachment), 229 (state retirement system), 25½ (removal of commissioners), 34a (appropriations), Art XI, sec 7½ (ratification of charter)

legislative body being apportioned." [33] Such a district is essentially an at-large district superimposed over several single-member districts. For example, assume that on the average each county is entitled under the population norm to one representative for every 20,000 inhabitants and that two adjacent counties, A and B, have populations of 26,000 and 34,000 respectively By employing a floterial scheme, each county could be allocated one representative and the two counties could then be combined into a floterial district for the election of an additional representative The result would be three seats for 60,000 persons, an average of one seat per 20,000 persons The advantage of such an arrangement is that it allows county boundaries to be observed while at the same time providing for mathematical equality of representation *for an area as a whole.*

The problem inherent in the employment of floterial districts is that these districts, unlike either multimember districts or weighted voting, do not necessarily produce equality of the vote In fact, it cannot produce such equality unless each of the districts which constitute the floterial district are of roughly the same population Take the example above and assume, for simplicity's sake, that the average district population is 20 and that districts A and B have populations of 26 and 34, respectively:

1 If districts A and B were combined into one district with three representatives elected at-large, each voter would have a vote worth 1/60th of 3, or 05
2. Similarly, if A and B were combined into a single member district having one representative whose vote in the Legislature was weighted by three, then each voter would have a share of a vote in the Legislature worth 1/60th of 3, or 05
3 However, if the district A and B each were allotted one representative, and combined to elect a third representative in a floterial district, then the voters in districts A and B would have the following shares of a vote · a voter in district A would have *1/26th* of 1 (or 035) share in the single-member district plus 1/60th of 1 (or 017) share in the floterial district for a total value of *052:* the voter in district B, on the other hand, would have shares of 1/34th of 1 (.029) and 1/60th of 1 (017) for a total of *046.* But, .052 > .046.

Quite clearly, then, floterial districts do not provide for mathematical equality All floterial districts really do is. (1) provide areas, but *not* individual districts, or individual voters within those districts with the representation to which they are entitled (e g , in the situation above it permitted counties A and B to receive the representation to which they were collectively entitled, but it did not provide B or the voters within it with the representation to which it and they individually were entitled), and (2) it *slightly* reduces the existing inequities between districts within the floterial district (e g., the ratio of disparity between .046 and 052 is somewhat less than that between 029 and 035)

The thrust of the above argument, quite simply, is that floterial districts, while acceptable, as the Supreme Court indicated in *Reynolds,* are not a means of miraculously transforming unequals into equals In

[33] *Davis* v. *Mann,* 377 U.S. 678, 686–87 n. 2 (1964).

other words, if the component single member districts are not substantially equal in population, the utilization of a floterial district to take account of their excess (over the norm) populations can neither make the component districts equal nor provide equal weight to each of their members The only condition under which a floterial district will survive judicial scrutiny is when the component districts are of substantially equal population The controlling question, as in *Reynolds*, must remain one of whether or not the individual districts comply with the population criterion.

The further observations are worth making First, if a floterial district combines districts in a manner that requires more than one additional seat, it will present the problems inherent in any multimember district, and presumably the courts would treat them as such. Second, if noncontiguous counties are combined, a whole series of problems may be created Not only are noncontiguous districts generally associated with gerrymandering, but a floterial district encompassing counties at opposite ends of the state might be considered by the courts so irrational and unnecessary as to constitute a *prima facie* case of "*invidious discrimination*" How the courts would actually respond to a case in which a floterial district incorporated widely separated districts can not, of course, be predicted with any certainty Nevertheless, prudence would seem to dictate that floterial districts be composed of contiguous counties, at least whenever it is practicable, and that the number of additional seats be kept at a minimum

V. GERRYMANDERING

Gerrymandering, in the very narrowest sense, is the drawing of legislative districts in such a way that a certain group is able to maximize its electoral strength, i e , to capture as many legislative seats as possible.[1] It is a matter of drawing districts, not of apportionment. An example of a "perfect" gerrymander would be where a party with 50 percent plus one of the electorate is able, because of the distribution of voters and the artful construction of districts, to elect all of the Legislature Ordinarily, the purposes of a gerrymander are far more modest, involving such practicable aims as protecting seats for incumbents, giving representation to special minority groups, and, of course, providing majority parties with the best arrangement for the maintenance of their legislative dominance At exactly what point "districting" becomes "gerrymandering" is invariably a matter of opinion. The general rule appears to be that a given scheme is "gerrymandering" when your opposition supports it and "districting" when your side supports it.

The law regarding the constitutional status of gerrymandering is far from clear. The Supreme Court has dealt with the problem in two recent cases, neither of which provided very many answers. In *Gomillion* v *Lightfoot* the court unanimously struck down a blatant gerry-

[1] There are two methods of "gerrymandering"·
(1) spreading the opposition party's vote among the various districts so that the opposition can carry few, if any, districts,
(2) concentrating the opposition party's vote in a few districts so that the opposition's popular support will be dissipated in the form of large electoral margins in these few districts
Silva, "Legislative Representation," 27 *Law and Contemporary Problems* 409, 420 (1962) The classic study on gerrymandering is still Griffith, *The Rise and Development of the Gerrymander* (1907).

mander attempt by the Alabama Legislature.[2] The Legislature had remapped the boundaries of the city of Tuskegee so that all but a handful of the 400 qualified Negro voters were "districted out" of the municipality. No white voter was so affected.[3] Petitioners—Negro voters who had been deprived of their votes in the municipal elections—argued *inter alia* that the redistricting represented a violation of the Fifteenth Amendment's prohibition against a state depriving any citizen of the vote "on account of race, color or previous condition of servitude." Respondents did not deny a discriminatory purpose, but rather relied upon a demonstrably erroneous theory that a state has *unrestricted* power over districting. The Supreme Court, noting that the redistricting altered the boundaries "from a square to an uncouth 28-sided figure,"[4] had little difficulty in inferring an unconstitutional purpose. Speaking through Mr. Justice Frankfurter, it threw out the Alabama statute with the cryptic comment that "The [Fifteenth] Amendment nullifies sophisticated as well as simple-minded modes of discrimination."[5] Since the discrimination involved was both manifest and grotesque, the decision provides a precedent of singularly narrow applicability.

In *Wright* v *Rockefeller*[6] the Supreme Court faced a more difficult and subtle situation. In performing its decennial reapportionment of New York's congressional districts, the state legislature redrew the boundaries of New York's (Manhattan's) four districts.[7] Plaintiffs argued that the Legislature had established "irrational, discriminatory, and unequal congressional districts . . [which] segregate eligible voters by race and place of origin," in short, the Legislature had "ghettoized" the Island of Manhattan.[8] The evidence adduced by plaintiffs contained a recounting of the percentage of nonwhites in each of the four districts and showing that the changes in the boundary of the famed "Silk Stocking District" (the 17th) resulted in adding predominantly white areas and dropping areas which contained a high percentage of Negroes and Puerto Ricans. These nonwhite areas were added on to Adam Clayton Powell's equally famed 18th District. The resulting boundary between the 17th and 18th was "an 11-sided, step-shaped" one.[9] From these facts the plaintiffs inferred that the boundaries "were drawn with regard to race" and argued that such a consideration was impermissible in light of the Equal Protection Clause.

Justice Black, speaking for a seven-man majority, accepted the lower court's finding of fact that the plaintiffs had failed to prove that the Legislature had been motivated by considerations of race or national origins, or had in fact drawn districts on racial lines.[10] Justice Douglas and Goldberg wrote separate dissents with each subscribing to the other's. Both thought that the trial court's finding of fact was clearly erroneous. As far as they were concerned the plaintiffs had established a *prima facie* case for racial motivation.[11] Since the state presented

[2] 364 U S 339 (1960)

[4] *Id* at 340.
[5] *Id* at 342, citing *Lane* v *Wilson*, 307 U S 268, 275 (1939)
[6] 376 U S 52 (1963). For a good critical analysis of *Wright*, see Note, *Wright* v *Rockefeller and Legislative Gerrymanders*, 72 *Yale Law Journal* 1041 (1962)
[7] *Id* at 53.
[8] *Id* at 53
[9] *Id* at 60 (Dissenting opinion)
[10] *Id* at 56
[11] *Id* at 60–61 and 71–73.

no evidence in rebuttal, the plaintiff's evidence should have been controlling[12] Justice Douglas' dissent stressed the position that race is never a permissible legislative classification Even if considerations were designed to benefit racial minorities, they were still impermissible[13] Justice Goldberg articulated the view that once a *prima facie* case for racial motivation had been established, the burden of proof should be switched from plaintiff to respondent (i e, the state) who should then be required to prove that race *was not* in fact the legislative motivation[14]

The court's opinion is not very helpful To begin with, as the dissenters compellingly demonstrated, the court's reliance on the district court's determination was highly questionable in light of the fact that it was by no means clear exactly what, aside from the fact that plaintiff's claim was without merit, the district court had actually decided Two of the lower court judges appeared to have been of the persuasion that plaintiffs could meet the burden of proof through circumstantial evidence[15] However, they disagreed on whether the plaintiffs had in fact met his burden The third judge, while of the belief that plaintiffs had not met the burden of proof, implied that this burden included actual evidence of hostile intent on the part of the legislature, not simply evidence of racial motivation[16] What we have, as a result, is an ambiguous district court decision the two judges who agree upon the evidentiary requirements differ on whether they have been met, while the two judges who agree on whether the burden of proof has been met, employ different requirements

As a result of this ambiguity in the trial court's opinion, the Supreme Court's opinion leaves unresolved the crucial constitutional questions involved in racial gerrymandering Is the consideration of racial factors in districting impermissible, and, if so, under what circumstance? Clearly, it is impermissible when, as in *Gomillion*, its purpose is to disadvantage a given group But what if its purpose is to guarantee a minority group at least some representation? For Justice Douglas, racial considerations, beneficent or not, are always impermissible[17] But the majority was silent on this issue If the propriety of racial motivation depends upon circumstances, as might be inferred from the court's opinion, is such a motivation improper only when it is the only criterion, when it is the dominant criterion, or simply one of many criteria? Again the majority is silent

Further, what standards of evidence are to be employed? This is perhaps the most critical question of all If the burden of proof is assigned to the plaintiffs, the result in the instant case suggests that obligation would seldom ever be met Direct evidence is always difficult to produce in this area, and it is difficult to conceive of more persuasive circumstantial evidence than that provided in *Wright* Justice Goldberg's frustrated query of "what more need appellants have proved?"[18] suggests a very real question On the other hand, if Justice Goldberg's recommendation that the burden of proof be placed under the state once

plaintiffs have established a *prima facie* case is adopted, the state will be confronted with equally difficult problems of proof Justice Douglas, despite his categorical disapproval of using race as a criterion for drawing legislative districts, would apparently allow the state to offer its desire to preserve "neighborhoods" in rebuttal to a gerrymander charge.[19] However, he doesn't define "neighborhood" One wonders how he would have greeted a claim by the state that Harlem is a "neighborhood."

Since *Wright* the Supreme Court has made only passing reference to gerrymandering In both cases the reference was to Partisan gerrymandering. In *Reynolds* the Chief Justice noted that "Indiscriminate districting, without any regard for political subdivision or natural or historical boundary lines may be little more than an open invitation to partisan gerrymandering"[20] and that "a state may legitimately desire to construct districts along political subdivision lines to deter the possibilities of gerrymandering"[21]

While these *dicta* suggest that the court is aware of gerrymandering, they fall far short of a guarantee that the court will actually assume jurisdiction over cases where partisan (as opposed to racial) gerrymandering is alleged The court may well recognize the fact that questions of partisan gerrymandering are generally solvable only in the subjective terms of "whose ox is gored," and consciously avoid dealing with such gerrymanders Such an approach would have much to recommend it since each of the available "objective" standards designed to thwart gerrymandering possesses troublesome aspects The employment of a permissible ratio between votes cast and seats won in an effort to guarantee equity in districting, for example, has several serious shortcomings In the first place population patterns are often such that a satisfactory ratio between votes and seats cannot be practically achieved. In the second place, such a standard involves an implicit acceptance of the questionable theory of proportional representation and tends to obscure the fact that electoral systems are generally expected to produce working majorities, as well as to provide for adequate representation. Finally, if it were constitutionally incumbent upon the apportioning agency to provide for "competitive" districts (i e , districts where party strength was reasonably well distributed), a state might end up with serpentine districts running the length of the state

Another allegedly "objective" standard, the requirement that districts be "compact and contiguous,"[22] possesses its own drawback Since "neighborhoods" are often not compact and contiguous, this requirement might preclude rather than encourage rational districting[23] The employment of a criterion requiring adhrence to natural and political subdivision boundaries possesses a similar disadvantage.

[19] *Id* at 59
[20] 377 U S 533, 578–579 (1964).
[21] *Id* at 581
[22] Several of the bills currently before congress relating to congressional districting contain provisions requiring districts of compact and contiguous territory See "Congressional Districts," 22 *Congressional Quarterly* 286 (1965) Such a provision was in the Apportionment Acts of 1901 and 1911, but was omitted from subsequent acts Celler, "Congressional Apportionment—Past, Present, and Future," 17 *Law and Contemporary Problems* 268, 272 (1952)
[23] There is, of course, a further difficulty compactness is a matter of degree, and, as a result, the employment of such a criterion, whether at the behest of Legislature or judiciary, may prove troublesome See Hacker, Congressional Districting 66–69 (1963) See also, Reock, "Measuring Compactness as a Requirement of Legislative Apportionment," 5 *Midwest Journal of Political Science* 71 (1961)

Any discussion of gerrymandering must end with the paradoxical warning that standards designed to limit gerrymandering may, when actually imposed by either judicial decree or legislative fiat, actually force the result they were designed to thwart. In the last analysis all that can be said about any of these standards is that they make successful gerrymandering more difficult by cutting down discretion. Whether reducing the probabilities of grotesque gerrymanders is worth the price of perhaps requiring and excusing less spectacular but nevertheless undesirable inequities is a question for which we have not devised any general answers. Reasonable men may perhaps agree on whether given districts are of substantially equal populations, but, if our experience suggests anything, it is that the same is generally not the case when the question becomes whether or not districts are gerrymandered.

VI. THE PROBLEM OF REMEDY

In *Reynolds* the Supreme Court eschewed consideration of "the difficult question of the proper remedial devices." Nevertheless, certain general principles concerning remedy can be culled from *Reynolds* and the companion cases, and further propositions can be inferred from the decisions and practices of the inferior courts. The principles governing remedy which have been suggested by the post *Baker* experience are summarized and commented upon below.

(a) ". . . *[I]t would be the unusual case in which a court would be justified in not taking appropriate action to insure that no further elections are conducted under the invalid plan.*"[1] Courts may take into account such factors as the imminency of elections and the mechanics and complexities of the electoral system in determining whether or not a given case is "unusual."[2] To date, the inferior courts, both state and federal, have been generally reluctant to demand immediate reapportionment once the election machinery has started to grind.[3]

(b) "*[L]egislative reapportionment is primarily a matter for legislative consideration and determination, and . . . judicial relief becomes appropriate only when a Legislature fails to reapportion according to federal constitutional requisites in a timely fashion after having an adequate opportunity to do so*"[4]

(c) *When state "constitutional provisions relating to legislative apportionment . . . [are] held unconstitutional, the . . . [l]egislature presumably has the inherent power to enact at least temporary reapportionment legislation pending adoption of state constitutional provisions relating to legislative apportionment which comport with federal constitutional requirements*"[5]

(d) "*Clearly, courts should attempt to accommodate the relief ordered to the apportionment provisions of state constitutions insofar as is possible.* [i.e., insofar as these provisions are not in conflict with the federal constitution]"[6]

[1] *Reynolds* v *Sims*, 377 U.S. 533, 585 (1964) (Emphasis added.)
[2] *Ibid.*
[3] See, e.g., *Toombs* v *Fortson*, 205 F. Supp. 248 (1962), *League of Nebraska Municipalities* v *Marsh*, 232 F. Supp. 411 (1964).
[4] *Reynolds* v. *Sims*, *supra* note 1, at 586. (Emphasis added.)
[5] *Maryland Committee for Fair Representation* v *Tawes*, 377 U.S. 656, 675–676 (1964). (Emphasis added.)
[6] *Reynolds* v. *Sims*, *supra note* 1, at 584. (Emphasis added.)

(e) *Although state courts are the final interpreters of state constitutional provisions,*[7] *when "* *a federal court's jurisdiction is properly invoked, and the relevant state constitutional and statutory provisions are plain and unambiguous, there is no necessity for the federal court to abstain pending determination of the state law questions in a state court"* [8]

(f) *Upon determining that a given apportionment is unconstitutional, inferior courts can and will at their discretion establish a reasonable time table for legislative elections,*[9] *regardless of state constitutional provisions relating to election dates, and tenure of office* [10] Whether or not a court may prohibit a Legislature from conducting other business until the reapportionment is accomplished is at present unclear [11]

(g) *Upon the failure of a state legislature to accomplish a reapportionment within the time specified by a court order, the court in question has available various courses of action* Experience to date suggests that the following alternatives are available to a court

(1) To stay the execution of its order in order to give the legislature additional time to comply [12]

(2) To accept and implement as its own a plan or combination of plans drawn up by friends of the court [13]

(3) To order elections at-large [14]

(4) To reapportion the legislature itself [15]

(5) To appoint a special master to reapportion [16]

---

[7] This proposition is supported by a long line of decisions, going back well beyond *Murdock* v *Memphis* 20 Wall. 590 (1875) For more recent restatements see, e.g., *Wolff Packing Co* v *Court of Industrial Relations* 267 U S 552 (1924), *Berea College* v *Kentucky* 211 U S 45 (1908) See also, *California Adjustment Co* v *Atchison T & S F R R*, 179 Cal 140 (1918)

[8] *Davis* v *Mann*, 377 U S 678, 690 (1964) (Emphasis added)

[9] See, *e g*, *Hughes* v *WMCA*, 85 S Ct 713 (1965) (Per curiam), *Davis* v *Mann*, 85 S Ct 718 (1965) (Per curiam), *Parsons* v *Buckley*, 85 S Ct 503 (1965) (Per curiam)

[10] See, *e g*, cases cited note 9 *supra*

[11] Federal district courts have issued orders limiting legislative business until reapportionment has been accomplished in both Georgia and Vermont However, in both instances the courts modified the orders upon stipulation by the parties *See, Parsons* v *Buckley, supra*, note 9, *Fortson* v *Toombs*, 85 S Ct 593 (1965) (per curiam)

[12] See, *e g* *Butterworth* v *Dempsey* 227 F Supp 302 (1964) (per curiam) The district court modified its timetable because, despite "commendable efforts," the legislature was unable to act Account was also taken of the impending national election and the then current congressional debates concerning the role of the courts in reapportionment *Id* at 307

[13] See, *e g*, *Reynolds* v *Sims* 377 U S 533 (1964) The Supreme Court approved of a federal district court's implementation of a temporary plan combining sections of two plans

[14] No court ordered elections at-large have taken place as a result of the apportionment cases However, both federal and state courts have provided for election of congressmen at-large in the event that the legislature fails to redistrict *See, e g*, *Wilkins* v *Davis*, 33 LW 2364 (1965) (state court), *Bush* v *Martin* 224 F Supp 499 (1964) Since elections at-large for state legislatures are impermissible under most state constitutions, including California's, it seems questionable whether federal courts would or should compel elections at-large for state legislatures For federal courts to order such elections would be to invite conflict between the federal judiciary and the state courts Such conflict would augur ill for the federal courts since the state courts are the recognized guardians of the state law

[15] See, *e g*, *Moss* v *Burkhart* 238 F Supp 323 (1964), *State ex rel Reynolds* v *Zimmerman*, 125 N W 2d 16 (1964) Justice Harlan has questioned the propriety of federal courts entering the districting business itself *Parsons* v *Buckley*, 85 S Ct 503, 506 (1965) (concurring opinion)

[16] See, *e g*, *Butterworth* v *Dempsey supra* note 12 The federal district court provided for a master who would draw up a temporary plan in the event the legislature failed to act within the prescribed time limit The court subsequently named the Director of the Yale University Computer Center as Special Master Since the legislature ultimately met its deadline the Master's services were not required To date, no master has actually reapportioned a legislature

The principle which appears to have caused the most confusion to date is (d) The question involved is one of exactly what state constitutional provisions relating to apportionment are struck down when a given apportionment is voided The general rule of statutory or constitutional construction is that those provisions which are *severable* are to remain in effect Whether or not given provisions are severable is largely a matter of legislative intent, which involves the court in asking two questions (1) What was the purpose behind the enactment of the plan? (2) Would certain provisions if allowed to remain in effect contribute to the realization of that purpose?[16a] In *Duffy* v *Sincock*, a federal district court summarized this procedure as follows

> In accordance with the rules governing the invalidity of portions of a statute, it has been held that where part of an amendment to a state constitution is invalid because it violates the Fourteenth Amendment to the Federal Constitution, if the several parts of the amendment are separable, the valid portions *may* be saved, unless it is *obvious* that the intent of the adopters of the amendment was to accept one general scheme in an entirety, in which event, if part of the amendment falls, the whole must fall with it[17]

Unfortunately, this formulation does not provide very much guidance for a state confronted with the aftermath of a case such as *Silver* v *Jordan*,[17a] which declared the apportionment of the California Senate violative of the Federal Constitution The provisions involving the apportionment of the Senate are all contained in Article IV, Sec 6,[18] of the California Constitution and may be summarized as follows

(1) There shall be 40 senatorial districts,
(2) Each district shall elect one Senator,
(3) No more than three counties may be combined in any district,
(4) Multicounty districts shall be composed of whole contiguous counties, and
(5) No county may have more than one Senator

What are the valid or severable provisions? What provisions must the reapportionment agency, whether federal court or state legislature, anticipate that the state court will consider binding? On the face of it, it looks as though the agency would be compelled to guess In California, however, a rather firm answer is apparently available It appears clear that the provision requiring a 40-member Senate is still binding and that the provision for single-member districts is most likely binding[18a] This reasoning is based on several considerations Both provisions not only antedate[19] the adoption in 1926 of the "Little Federal Plan" in Article IV, Section 6, and thus presumably fulfill some purpose independent of the Federal Plan, but both are also contained in Article IV,

---

[16a] See, *e g*, *Carter* v *Carter Coal Co*, 298 U S 238 (1935)
[17] 215 F Supp 169, 188–89 n 19 (1963), quoting 11 *American Jurisprudence* Sec 52 (1937)
[17a] No 62–453 MC, U S Federal Court S D Calif (3 Dec 1964)
[18] Calif Const, Article 27, Sec 6 These provisions have remained unchanged since adoption in 1926
[18a] The "most likely" qualification is explained in fn 20 *infra*
[19] The single member district provision has been part of the Constitution since statehood and the 40 member provision has been included since 1879

Section 5 (which was approved as recently as 1942) [20] as well as in Section 6, and thus presumably reflect the polity's most up-to-date thinking, insofar as that elusive element can be determined. They are the only two provisions of which this may be said

Moreover, the argument that any other combination of compatible provisions contained in Section 6—say, for example, numbers (2) and (3)—has equal claim to being severable, simply by virtue of being compatible, is unpersuasive Clearly all five of the provisions cannot be adhered to simultaneously, if the "one person, one vote" criterion is to be observed, i e, at least one must be disregarded and treated as unconstitutional. This being the case, a strong argument can be made to the effect that because at least one provision is treated as unconstitutional, the entire section must be so treated The Attorney General of California, for example, has argued that the rule that "constitutional portions of a statute may be separable from unconstitutional portions" does not apply to constitutional amendments

> This rule reflects the courts' traditional hesitancy to upset statutes for unconstitutionality The day-to-day relationship of court and Legislature is not at stake in constitutional amendment cases At stake instead are the constitutional requirement that amendments be voted on separately (Const Art XVIII, Section 1) and the principle that the voters have a clear and simple basis upon which to vote . The Constitution itself opposes separability by requiring proposed amendments to be presented so that they can be "voted on separately" (Const Art XVIII, Section 1) Moreover, to even qualify as a single "amendment," the proposed changes must be "germane to the general subject of the amendment, or so connected with or dependent upon the general subject that it might not be desirable that one be adopted, and not the other When the Legislature proposes a number of changes with one proposition it presumptively presents them as an integrated package which stands or falls as a unit This single package rule provides a much more accurate reflection of the voters will than does an approach calling for a refined analysis of each provision [21]

[20] The Article reads

> The Senate shall consist of 40 members, and the Assembly of 80 members, to be elected by districts, numbered as hereinafter provided One half of the Senators shall be elected every two years, those from the odd-numbered districts being elected when the number of the year is divisible by four
>
> [Textually, it is not beyond argument whether "districts" means "single member districts" However, it appears, in light of California practice, that the adopters intended this construction]

[21] Opinion No 59-242, 27 *Attorney General's Opinions* 52, 57–58 (1961)

> Several comments concerning the Attorney General's Opinion are perhaps in order First, the opinion is *authority* but not, of course, *precedent* Second, although the opinion can be easily read as involving an unqualified rejection of the *separability principle* as far as State Constitutional *Amendments* are concerned, it is, on the other hand, possible to distinguish the fact situation giving rise to the opinion from the one currently relevant to apportionment The Attorney General was concerned with a situation where two amendments which were noted in the voter's pamphlet to be mutually exclusive were both approved by the electorate The question at issue was whether or not the nonconflicting sections of the amendment receiving the lesser number of votes were separable and were to stand along with the amendment receiving the higher number of votes It was not, in other words, a question of what sections of a single amendment remained in effect when the amendment was in part found to be in conflict with some federal standard
>
> Whether or not the opinion should be accepted at face value or more narrowly construed is a matter of disagreement among the consultants Fortunately, this disagreement is academic to the extent that it does not affect the basic conclusion arrived at *concerning* the *binding provisions* relevant to the apportionment of the California Senate

If the Attorney General's view prevails in the state courts, clearly only the provisions of Section 5 would need to be adhered to in the coming apportionment, in other words, a combination of provisions (2) and (3), or any other combination contained in Section 6 [except, of course, (1) and (2)] would be void

If this argument is correct, then the apportionment agency would enjoy maximum discretion Even if the state courts fail to adopt the Attorney General's line of reasoning, it would appear that any apportionment of the Senate which contained a 40-member house (provision 1) elected from single-member districts (provision 2) and adhered to county boundaries (provision 4) *insofar as it was practicable* within the confines of the "one person, one vote" requirement would pass state constitutional muster For, as a matter of fact, it would be easily shown that such a scheme incorporated the maximum number of compatible provisions and included the two (provisions 1 and 2) which have a special status because of their inclusion in Section 5

PART THREE

AN ANALYSIS OF ALTERNATIVES

Five suits affecting state senate, assembly, and congressional districts in California provide the present legal framework for apportionment in the State of California In the first, *Silver* v *Jordan,* Civil Action No 62-953MC (S D Calif 1964), a three-man federal district court, in a 2-1 decision, declared that the existing apportionment of the State Senate is unconstitutional The court withheld relief in order that the 1965 California Legislature might "*properly reapportion itself as its first order of business,* " (*Silver* v *Jordan,* p 21, *italics* in the original) The court retained jurisdiction to act in the event that the Legislature failed to "fairly, adequately and validly redistrict state senatorial districts by no later than July 1, 1965 " (*Silver* v *Jordan,* p 21) If the Legislature fails to act, or if the Legislature reapportions the senate on other than a straight population basis, there is little doubt that the federal district court will provide by court order for the reapportionment of the senate

The second suit, *Silver* v *Brown,* Civil Action No 851488, Superior Court of Los Angeles County (Calif 1965), challenging the state's congressional districts, is currently pending While no decision has yet been made in this case there is a real possibility, in view of the population disparities among several of the state's 38 congressional districts and the United States Supreme Court's decision in *Wesberry* v *Sanders,* 376 U S 1 (1964), that the courts will—either in this or a subsequent case—declare the current California congressional districts to be unconstitutional

The third suit, *Silver* v *Jordan,* Civil Action No 65-1 MC (S D Calif 1965), challenged the state's assembly districts It was dismissed on March 2, 1965, on the ground that Silver lacked standing In essence, the court declared that Silver lived in an Assembly District (the 42nd) which was overrepresented and hence there was no dilution of Silver's vote

The fourth and fifth suits, *Ruth* v *Brown,* Civil Action No _____, Superior Court of San Diego County (Calif 1965) and *Johns* v *Unruh,* Civil Action No 552017, Superior Court of San Francisco County (Calif 1965), also challenge the state assembly districts, and action is pending

Whatever the disposition of these last two cases, it is generally assumed that, within the foreseeable future, the courts will be confronted with a case wherein the plaintiff can establish standing and which must, therefore, be decided on its merits While the 1961 reapportionment of California's assembly districts was performed essentially on the basis of population, there is a real possibility, in view of the population disparities that do exist among a number of the state's 80 assembly districts, and the United States Supreme Court's decision in *Reynolds* v *Sims,* 377 U S 533 (1964), that the courts will declare the current California assembly districts to be unconstitutional

The following is a discussion of the alternatives available to the State of California if its congressional and assembly apportionments, as well as its state senate apportionment, should be declared unconstitutional

I. AVOIDANCE OF REAPPORTIONMENT?

Can the Supreme Court rulings be avoided in California? Basically, there are four ways that a Supreme Court decision can be altered First, it may be ignored and or unenforced Second, the Court may overrule or substantially modify its own decision Third, Congress may, in certain kinds of cases, modify or reverse the court's decision Fourth, the United States Constitution may be amended

The first alternative is not really plausible in the case of reapportionment Inferior courts, both state and federal, have demonstrated a willingness—in some cases, an eagerness—to implement and enforce the Supreme Court's ruling If the California Legislature elects to ignore such court decisions, there is no doubt that the inferior courts will act In *Silver* v *Jordan, supra*, for example, the court declared that "should the California State Legislature fail to discharge its duty to fairly, adequately and validly redistrict state senatorial districts by not later than July 1, 1965, this court will, before or after that date, hold further hearings, or motions, devise redistricting plans, and make such further orders to take such further steps as may be necessary or appropriate " (p 21)

As the Supreme Court has stressed reapportionment is basically a legislative task, and it is presumably better that the people's elected representatives perform the duty in accordance with the constitutional law of the nation and state, rather than have these responsibilities devolve upon the judiciary [1]

The second alternative, that the Supreme Court will substantially modify or overrule itself, is not likely to occur in apportionment cases Eight of the nine justices supported the *Reynolds* holding and six supported the *Wesberry* holding A careful reading of all the opinions shows that six of the nine believe that the proper standard for each type of apportionment is "one person, one vote " Two others believe this is too rigid a standard but nonetheless agree with the six that the court has properly entered this "political thicket" in defense of constitutional rights Only one justice (Harlan) holds the older view that apportionment should never be a judicial concern Subsequent cases, including *Fortson* v *Dorsey,* 85 S Ct 498 (1965) indicate that the Supreme Court of the United States will not overrule itself nor permit any substantial deviation from the "one person, one vote" criterion for legislative apportionment [2]

The third alternative, congressional action to reverse or modify the Supreme Court's reapportionment decisions, could be accomplished in one of two ways (a) Congress could pass a law removing the juris-

[1] In *Reynolds,* for example, the court observed that "legislative reapportionment is primarily a matter for legislative consideration and determination, and judicial relief becomes appropriate only when a legislature fails to reapportion according to federal constitutional requisites in a timely fashion after having had an adequate opportunity to do so" 377 U S. 533, 586 (1964)

[2] In *Fortson* v *Dorsey,* 85 S Ct 498 (1965), which dealt in an introductory fashion with the knotty problem of multimember districts and which is discussed in Part Two of this report, the Supreme Court cited with emphasis key passages from the *Reynolds* opinion, thereby reasserting the essentials of that decision

diction of the federal courts over apportionment[3] Such a bill was passed by the House of Representatives on August 19, 1964, by a vote of 218–175 However, one month later, at the end of a long struggle over this and related measures, the United States Senate defeated the bill, 56–21. In view of the composition of the newly elected 89th Congress, it is not likely that such a bill could be passed this year or next Even if such a bill were to be passed, we do not know whether or not the President would sign it into law If he vetoed it, the 1964 votes suggest that there would not be a two-thirds majority in either house to override his veto And even if Congress passed such a law and the President signed it, there is always the possibility that the Supreme Court would declare it to be unconstitutional. A very grave constitutional crisis would probably then ensue with unpredictable consequences.[4] It would appear that a law removing the jurisdiction of the federal courts over reapportionment cases is only a remote possibility.

(b) The other thing that Congress could do would be to declare a moratorium on federal court action over reapportionment for a stated period of time—say two years However, while such a bill might have more support than an act removing the judiciary from apportionment controversies completely, it is not likely that it would pass the 89th Congress Perhaps the most important reason for this is the demonstrated willingness of Senators favorable to the *Reynolds* decision to filibuster any such proposal to death[5] But even if Congress were to pass such a law, there would remain the question of presidential approval and the possibility of the Supreme Court declaring it

[3] Article III, Section 2, of the U S Constitution defines "the judicial power" of the United States and in paragraph (2) provides that "In all the other cases before mentioned [excepting those 'affecting ambassadors, other public ministers and consuls, and those in which a state shall be party'] the Supreme Court shall have appellate jurisdiction, both as to law and fact, with such exceptions, and under such regulations as the Congress shall make" (See also note 4 below)

[4] In 1868, Congress passed an act, pursuant to Article III, Section 2 of the Constitution, altering the Supreme Court's appellate jurisdiction by denying to the high court the power to review judgments of the circuit court in certain classes of habeas corpus cases Later that year, the Supreme Court acknowledged the restriction on its appellate jurisdiction by dismissing a habeas corpus appeal in *Ex parte McCardle*, 7 Wall 506 (1868) This has been interpreted as indicative of the power of Congress to limit the jurisdiction of the federal judiciary (with the exception of the Supreme Court's original jurisdiction prescribed in Article III, Section 2 of the Constitution) as it sees fit However, the Supreme Court, while accepting this limitation on its appellate jurisdiction took pains to point out that this was only one limitation on habeas corpus appeals and that the rest of its appellate power in habeas corpus cases was unaffected by the statute It also asserted that its general appellate power was prescribed by the Constitution, and did not pass on whether or not the act would have been valid had it eliminated all of the court's jurisdiction in habeas corpus cases Thus, while the Supreme Court will normally accept Congress' determination of what the jurisdiction of the federal courts shall be, the court might well decide that a statute completely eliminating the jurisdiction of all federal courts in one class of cases, such as legislative apportionment, was unconstitutional

[5] On September 19, 1964, a motion to end a filibuster against the so-called "Dirksen-Mansfield" proposal was defeated, 63–30 The proposal was a mild one It would have stayed reapportionment orders, "in the absence of highly unusual circumstances," until January 1, 1966, or until a legislature had "reasonable opportunity in regular session" for reapportionment action It also would have explicitly authorized the courts, in the absence of legislative reapportionment within these time limits, to promulgate reapportionment plans so that apportionment would be "consistent with the requirements of the Constitution of the United States" This latter provision implied approval of the basic Supreme Court decision in *Reynolds* and, along with the other provisions, clearly showed how far the opponents of the decision were willing to compromise in order to gain even a slight delay In sum, the whole episode showed that unless sentiment changes rapidly in the U.S Senate, even mildly worded delaying action is unlikely to be accepted.

unconstitutional. It would appear that such a law is only a remote possibility.

The fourth alternative, amendment to the United States Constitution overruling or modifying the court's reapportionment decision, could be accomplished in one of two ways. First, Congress could propose such an amendment to be ratified by either state legislatures or state conventions in three-fourths (38) of the states. Second, Congress could be compelled, on application of two-thirds (34) of the states to call a national convention for the purpose of proposing such an amendment for ratification by the state legislatures or state conventions Both methods would be time-consuming, and certainly neither one could be accomplished before the July 1, 1965, deadline set by the federal district court for the reapportionment of the California State Senate In fact, it is unlikely that either method could be successfully employed to adopt such an amendment at any time during this year, or in the foreseeable future.

First, Congress can only propose a constitutional amendment by a two-thirds vote of both houses. The votes in the 88th Congress last fall, and the composition of the 89th Congress, suggest that a two-thirds majority for such a measure could not be secured in either house of Congress this year or next. Even if such a majority could be obtained, however, it is doubtful that such a proposal would be ratified in the required 38 states. There are two reasons for this doubt. One is that state legislatures have been and are being reapportioned rapidly since *Baker* v. *Carr,* 369 U.S. 186 (1962), and *Reynolds* v. *Sims,* and the resulting legislative bodies are not nearly as responsive to such a proposal as their predecessors may have been. The other reason is the result of the 1964 election. This landslide election, affecting both reapportioned and nonreapportioned legislatures, resulted in such an enormous increase in "liberal" state legislators that even if no state legislatures had been reapportioned lately, the prospects for the passage of such an amendment would have been seriously diminished.

The second method of amending the Constitution has never been used in American history. According to Article V of the U S Constitution, "The Congress, . . . on the application of the legislatures of two-thirds of the several states, shall call a convention for proposing amendments. . . ." As of early March 1965, 21 states had made application to Congress since 1962 for a constitutional convention for some kind of amendment regarding apportionment of state legislatures. Nevertheless, it would seem that securing the approval of 34 state legislatures for applications for a constitutional convention is nearly as unlikely as securing the approval of 38 state legislatures for any ensuing amendment In summary, constitutional amendment to overrule or substantially modify the Supreme Court's apportionment decision does not appear likely.

II. APPROACHES TO REAPPORTIONMENT

In the light of the foregoing analysis, it seems inescapable that the California Senate will be reapportioned prior to next year's elections, either by the Legislature or by the federal court. In this connection, it should be pointed out that the court may consider the apportion-

ment of the Assembly as well as the Senate in determining the validity of any Senate reapportionment In *Maryland Committee for Fair Representation* v *Tawes*, 377 U S 633 (1964), the Supreme Court declared that "in reviewing a state legislative reapportionment case this court must of necessity consider the challenged scheme as a whole in determining whether the particular state's apportionment plan, in its entirety, meets federal constitutional requisites It is simply impossible to decide upon the validity of the apportionment of one house of a bicameral Legislature in the abstract, without also evaluating the scheme of representation employed with respect to the other house Rather, the proper, and indeed indispensable, subject for judicial focus in a legislative apportionment controversy is the overall representation accorded to the state's voters, in both houses of a bicameral state Legislature "[6]

This ruling seems to suggest that federal courts are *required* to rule on the constitutionality of *both* houses when hearing cases involving only one As a matter of fact, however, no federal court has followed this course of action In adjudging the California Senate to be unconstitutionally apportioned, for example, the federal court made no judgment about the constitutionality of the Assembly's apportionment It did note that there was "no controversy here" regarding the Assembly "since the apportionment in the lower house is based solely on population " But in support of this statement it merely cited the relevant sections of the California Constitution and the California Elections Code, it did not inquire into whether the Assembly was *in fact* so apportioned[6a] It may have been that the court regarded the California Senate as so patently in violation of the "one man, one vote" principle that its reapportionment was clearly required regardless of the validity or compensatory characteristics of Assembly apportionment

Whatever its reasons for not adhering literally to the *apparent* command of the *Tawes* decision, the quotation cited above raises a number of possibilities in the present California context If the Legislature *does not* reapportion the Senate validly this year, then the federal court presumably will do so[6b] As it proceeds to do this—either by itself or through a special master—it may or it may not consider the apportionment of the Assembly If it chooses to do so, then a number of outcomes

[6] 377 U S 633, 673 (1964)

[6a] *Silver* v *Jordan*, No 62–953 MC, U S Federal Court, S D Calif (3 Dec 1964), p 4

[6b] Speculation to the effect that either the federal court or the Governor or Lieutenant Governor could convene the California Reapportionment Commission is probably misguided

The California Constitution, Article IV, Section 6, provides that 'should the Legislature at the first regular session following the adoption of this section or at the first regular session following any decennial federal census fail to reapportion the assembly and senatorial districts, a Reapportionment Commission, which is hereby created, consisting of the Lieutenant Governor, who shall be chairman, and the Attorney General, State Controller, Secretary of State and State Superintendent of Public Instruction, shall forthwith apportion such districts in accordance with the provisions of this section and such apportionment of said districts shall be immediately effective the same as if the act of said Reapportionment Commission were an act of the Legislature, subject, however, to the same provisions of referendum as apply to the acts of the Legislature "

A strict construction of this provision would hold that since it refers only to the regular decennial reapportionment, it has nothing to do with other reapportionments There is, by this reasoning, no role for the Reapportionment Commission at any time other than the regular decennial reapportionment

But a state or federal court *might* construe this language more loosely, arguing that since the framers of Article IV, Section 6, presumably gave no thought to the possibility of an irregular, court-ordered reapportionment, it was necessary to construe the 'intent" of the framers regarding these unanticipated

are conceivable It would presumably hold hearings on the matter and then render a judgment If it then found the Assembly to be constitutionally apportioned it could then proceed to reapportion—or have a master reapportion—the Senate Or, it might find the Assembly apportionment only temporarily permissible (i e , until after the 1970 census). Finally, it might find the Assembly apportionment unconstitutional and requiring prompt remedial action. Presumably, it would then order the Legislature to reapportion the Assembly well in advance of next year's primary elections

On the other hand, the court might prefer to proceed with its reapportionment of the Senate without considering the apportionment of the Assembly It could do so simply out of a sense of judicial restraint, *Tawes* notwithstanding, by concluding that the Assembly was at least arguably constitutional and that since the matter was not technically before the court, it would not deal with it (We regard this latter development as by far the more likely)

The same kinds of choices are open to the federal court if the Legislature *does* reapportion the Senate this year (It should be noted in this connection that the Supreme Court has warned against apportionment plans for entire state legislatures wherein minor disparities in the two chambers become cumulative instead of offsetting each other. " [W]here the same areas are disadvantaged in both houses of a state legislature, [such disparities] may . render the apportionment scheme at least constitutionally suspect " *Lucas* v *Forty-fourth General Assembly of the State of Colorado,* 84 S Ct 1472 (1964).)

---

conditions If a court did so, it *might* conclude that it was permissible to convene the Reapportionment Commission following a legislative failure to reapportion in accordance with a court order We regard this as unlikely, but possible

The California Supreme Court has dealt obliquely but not definitively with this subject In 1963, Los Angeles Mayor Samuel W Yorty and others attempted to compel the Reapportionment Commission to convene and, in the light of the then recent *Baker* v *Carr* doctrine, reapportion the State Senate The California Supreme Court refused to do so The core of its reasoning was as follows (in *Yorty* v *Anderson* 384 P 2d 417, 419–420)

Under Section 6 of article IV the power of the commission to act is expressly conditioned upon the failure of the Legislature to reapportion the assembly and senatorial districts at the first regular session following each decennial federal census The reapportionment of the senatorial districts made by the Legislature in 1961 occurred at the first regular session after the 1960 federal census (Stats 1961, Chs 21, 1235 pp 879–880, 2983) If, on the one hand, this reapportionment is valid, the commission of course has no present power to act with respect to senatorial districts On the other hand, if we assume, as petitioners assert and as indeed they must establish in order to prevail in this proceeding, that the portion of Section 6 complained of here is both invalid and severable from the provision relating to the commission, the Legislature nevertheless has acted to reapportion the senatorial districts and the requisite condition to exercise of the commission's power has thus not been satisfied

Section 6 without doubt vests in the Legislature, not the commission, the primary duty and power to reapportion, and the obvious purpose of the provision establishing the commission is to provide an alternative method of reapportionment to be used only in the event of legislative inaction Here the Legislature did not fail to act, to the contrary, it enacted a complete reapportionment plan, and, in the event that this plan is held invalid by judicial decision, the Legislature, under a reasonable construction of Section 6, is entitled to an opportunity to adopt a plan that will meet the requirements of the Federal Constitution

"Our conclusion that the commission has no present power to act is in accord with an opinion of the Legislative Counsel relating to the analogous situation which would arise if a reapportionment by the Legislature of assembly districts were nullified on referendum (Legislative Counsel's Opinion No 5463, Dec 12, 1960, as reported in Assembly Interim Comm Rep 1959–1961, vol 7, No 6, pp 100–101) In concluding that a new reapportionment by the Legislature would be proper under Section 6, the Legislative Counsel stated with respect to the power of the commission 'The apparent purpose of the provision [relating to the duties of the commission] is to prevent the Legislature from failing to act to redistrict the state as soon as possible after each federal census It is clear that if the Legislature had failed to enact a statute establishing new assembly districts at this session, the Reapportionment Commission would be required to act The Legislature having acted, however, it is our opinion that the Reapportionment Commission is neither required nor authorized to take any action

The Legislature may, of course, decide to reapportion the assembly (and congressional) districts in anticipation of the courts ordering it to do so This could be accomplished together with Senate reapportionment or in separate measures [7] Another possibility would be for the Assembly (or the Legislature) to adopt a "contingency plan" reapportionment for the Assembly just in case the federal court—either in the course of its handling of the Senate case or as an independent decision growing out of some additional court action—or a state court decided to order Assembly reapportionment. This "contingency plan" would go into effect only upon a court order to reapportion the Assembly.

There is, finally, another possibility, namely, the passage by the Assembly alone of a reapportionment plan for the Senate only, for the Assembly only, or for both houses. The propriety of any such action is a matter quite obviously beyond the scope of this report. However, it is appropirate to note this possibility and to make a few comments upon it. An apportionment scheme embodied in such an Assembly action might be regarded favorably by the federal court which presumably is not anxious to reapportion the Senate (or the Assembly) by itself. An Assembly scheme, if it met constitutional standards, would have a certain legitimacy about it, since the Assembly is already apportioned largely on the basis of population. The court might, in other words, accept all or most of any such proposal.

III. THE PROBLEM OF VALIDITY

However the Legislature (or the Assembly alone) decides to proceed, one of the pressing questions is what portions of the California Constitution are still valid and therefore binding

This matter was partially discussed in an earlier section of the report (Part Two, VI). Therein, it was shown that there are five state constitutional provisions affecting Senate reapportionment:

(1) There shall be 40 senatorial districts
(2) Each district shall elect one Senator
(3) No more than three counties may be combined in any district
(4) Multicounty districts shall be composed of *whole* contiguous counties
(5) No county may have more than one Senator

With the possible exception of number (5), no single provision is invalid on its face; and it appears that no more than two of the existing provisions may be adhered to simultaneously. The question now arises as to what the Legislature can validly do by statute and what will require a constitutional amendment Before dealing with this question,

[7] Such an act might be challenged in the courts on the grounds that the California Constitution calls for reapportionment every 10 years only As a matter of fact, the California courts have held that the legislative power to form legislative districts can be exercised but once during the period between one federal census and the succeeding one (*Wheeler* v *Herbert*, 152 Cal 244, *Dowell* v *McLees*, 199 Cal 144) The disposition of the case would then depend upon whether the 1961 apportionment was adjudged to be constitutional or not If not, then another apportionment would clearly be both permissible and mandatory

It should perhaps be noted that in such proceedings the Assembly would be put in the awkard position of arguing that it was not presently constitutionally constituted

the state constitutional provisions affecting Assembly apportionment will be set forth.[8]

(1) There shall be 80 Assembly districts
(2) Each district shall elect one member of the Assembly
(3) Multicounty districts shall be composed of *whole* contiguous counties
(4) Assembly districts shall be as nearly equal in population as may be.

Again, no single provision is invalid on its face and number (4) clearly supports the philosophy of *Reynolds*. But the combination of (1) and (3) may often force apportionments which deviate impermissibly from the "one man, one vote" standard Therefore, as a practical matter, one or the other of them would quite probably have to be ignored in any temporary reapportionment and some constitutional change would seem to be indicated.

In advance of state constitutional change, and in the absence of any advisory opinions from the state courts, the Legislature must initially make judgments about which provisions are still valid and binding, and which are not.

One possibility is that the state courts may ultimately decide that the existing provisions are inseparable—part of a "package"—and that therefore none of them are binding any longer. The Legislature *could* anticipate this ruling and reapportion one or both houses without regard to *any* existing state constitutional provisions. Whether the state courts will in fact regard none of the provisions as binding is simply unknowable at this time. It can be pointed out, however, that a legislative reapportionment which ignores *all* existing provisions is *more likely* to be found in violation of the State Constitution than one which adheres to it as closely as possible In other words, for the Legislature to anticipate a court ruling declaring no provisions still valid would be the most risky procedure. But, of course, it might be upheld, risky or not.

Regarding the Senate, the alternative, as suggested in the earlier section (Part Two, VI), is to regard *two* of the *five* provisions affecting Senate apportionment as still binding. If this is to be the course of action, the question becomes· Which two? As argued in the earlier section (Part Two, VI), provisions (1) [40 Senators] and (2) [one Senator per district] would seem to have the best claim to being still valid. They are *clearly* compatible and, unlike the other provisions, enjoy special constitutional status

The only other clearly compatible pair is (2) and (3) As argued in the earlier section (Part Two, VI), however, the use of these two provisions—or any other two except (1) and (2)—is of doubtful validity.

Adherence to provisions (1) and (2) is clearly less risky than ignoring all existing provisions It is difficult to see how the state courts could invalidate a reapportionment which respected as much of the current state constitution as is it possible to do On the other hand, it should be

[8] The preceding and following lists of relevant state constitutional provisions are not given in the language of the California Constitution itself That language is very difficult to understand, especially on first reading The lists, then, are comprised of our own formulations of the state constitutional requirements For those wishing to read the constitutional language, see Appendix B

repeated that the first alternative—ignoring *all* existing state constitutional requirements for the Senate—*might* be upheld by the state courts

In the case of the Assembly, rather different questions arise It would seem even more unlikely than in the case of the Senate that the state courts would find *all* of the existing provisions (listed as 1 through 4 above) invalid The Assembly apportionment is already based largely on population, and, as noted above, it is only the combination of provisions (1) [80 Assembly districts] and (3) [multicounty districts shall be composed of *whole* contiguous counties] which raises the possibility that impermissible deviations will be unavoidable if these provisions are respected Whether such deviations would in fact be unavoidable is an open question, the answer to which would vary over time To repeat, therefore, it is impossible to predict with any confidence whether the courts will treat all of these provisions as binding or whether, on the other hand, they will regard some or all of them as invalid

The preceding paragraphs have been designed to suggest alternative courses of action available to the Legislature Which course of action the Legislature *should* adopt is, of course, a political, not a technical, question

Congressional Apportionment

It remains to touch on the issue of congressional apportionment There are fewer state constitutional restrictions regarding the drawing of congressional district lines than there are regarding Assembly or Senate districts (See Article IV, Section 27, Appendix B) A congressional district, unlike either assembly or senate districts, may cross a county line and include only part of one or more counties

There are basically three ways to form a congressional district. A whole county may become a congressional district (In this instance, the congressional district will necessarily be composed of whole assembly districts, because assembly districts may not cross county lines, except to include whole counties) Secondly, multiple whole counties may become a congressional district (In this instance, assembly districts may be divided) Thirdly, congressional districts may be formed within counties having populations which merit more than one congressional district and any residue consisting of a whole assembly district may be attached to contiguous whole assembly districts in another county (In this instance, assembly districts may *not* be divided)

This third circumstance is almost bound to create congressional districts which are substantially unequal in population There are two reasons for this First, assembly districts will probably vary in population and *may* compound the inequalities when combined to form congressional districts Second, and far more importantly, this third circumstance applies "only" in the large-population counties, but this is enough to insure that *most* congressional districts in the state will have to be based on whole assembly districts The problem arises from the fact that the number of assembly districts is not—and probably never will be—exactly divisible by the number of congressional districts This makes it inevitable that either (a) some congressional districts (within large counties) will contain more assembly districts than

others, or (b) some congressional districts (outside the large counties, and even though not bound by assembly district lines) will have disproportionately large (or, after California's congressional delegation goes beyond 40, disproportionately small) populations

If the state constitutional provision requiring, in effect, that most congressional districts be based on assembly districts is respected in any future reapportionment—*even if assembly districts are identical in population*—it is quite unlikely that the apportionment would meet the "one man, one vote" standard Therefore, it is probably fair to say that any future reapportionment, even if temporary, would have to treat that state constitutional requirement as no longer valid

Finally, it should be noted that, as argued earlier (in Part Two, III, A), the standards applied to congressional districts will probably be even more strict than those applied to state legislative districts.[9]

The only other restriction in the State Constitution which has any bearing on this issue provided that when a congressional district consists of two or more counties it shall not be separated by any county in another congressional district

IV. BASIC OPTIONS FOR THE FUTURE

Regardless of what temporary steps are taken by the courts and/or the Legislature to satisfy the *Reynolds* ruling, sooner or later the California Constitution is going to have to be amended What follows is an analysis of some of the basic questions and possibilities which are likely to arise in any such process

A. *A Unicameral Legislature*

One possibility is the adoption of a unicameral legislature While such a step—especially under present circumstances—would have many political ramifications which go beyond the purview of this report, there are certain traditional arguments for and against unicameralism which can properly be set forth herein

Perhaps the most common argument in behalf of a unicameral Legislature since the *Reynolds* decision is that if the apportionment in both houses is based on population, then a second chamber is superfluous, or redundant It is also contended that a unicameral Legislature would be more efficient and less costly Moreover, a unicameral Legislature would simplify the task of the voters, thereby increasing the possibility that they would cast informed ballots In addition, it would fix responsibility more clearly

Another argument which has traditionally been made on behalf of unicameral legislatures is that they reduce the possibility of legislative stalemate and inaction This argument is not entirely consistent with the newer contention that a second chamber also based on population is superfluous.

The opponents of unicameralism regard all or most of these arguments as either false or unproven or misleading As against the conten-

[9] The Judiciary Committee of the U S House of Representatives recently reported out a bill (H R 5505) which would require that all congressional districts be "composed of contiguous territory, in as compact form as practicable" and that no district shall have a population more than 15 percent greater or smaller than the average obtained by dividing the total population of the state by the number of congressional districts in the state [After this report was completed, the House of Representatives passed this bill See Appendix D]

tion that a second house based on population is superfluous, it is argued that two chambers inevitably develop different traditions, styles, and personalities In more concrete terms, they are likely to represent voters and interests differently regardless of the fact that they are both based on population.[10]

This would probably be true even if both houses of the Legislature were identical in size and districting—an unlikely circumstance—simply because different legislators behave differently. And each variation in their comparative electoral process will engender still more differences The chambers will probably be different in size and therefore in districts represented One house may have exclusively single-member districts while the other may have at least some multimember districts And the length of terms of office may differ

Since the houses will in fact be different, then it also follows that the traditional argument about "checks and balances" continues to apply Stalemate will perhaps be less likely than when one chamber was apportioned on a basis other than population, but there will inevitably be contention, rivalry, and differing perspectives as between the two chambers, and this—it is contended—is a good thing.

As for the contention that a unicameral Legislature will be less costly, that depends on a number of other considerations, especially size and staffing allowances. Moreover, if cost were the primary consideration, it would be possible to have a small and poorly staffed bicameral Legislature. "Efficiency" is a vague term. If it means that bills would be acted upon more expeditiously, this might be true, but needs to be weighed against the virtues of deliberation and the emergence of conflicting views and interests which are more likely to occur in a bicameral Legislature The greater and more diversified the points of access, the more likely that all legitimate factors will be considered. And having a "second look" is sometimes a prudent practice in legislative bodies The same sorts of things can be said about the merits of simplifying the voters' task. Simplicity should be weighed against the merits of diversity of representation.

This, in brief outline, is the nature of the claims and counterclaims regarding unicameralism and bicameralism. It should be stressed that even if it were possible to assess them without reference to immediate political considerations there would be no "objective" or "unbiased" or "scientific" way of resolving the debate. Nebraska seems satisfied with its unicameral Legislature, but its example has not spread This may be the result of a general institutional conservatism or the protective instinct of officeholders, or both, and it may be wise or unwise. Such judgments are beyond the scope of this report, and are, in any event, usually more expertly made by legislators than by outsiders.[11]

If a unicameral Legislature were to be adopted in California, it would have to be apportioned on the basis of population alone.[12]

[10] In 1963, there were nine states (Indiana, Massachusetts, Minnesota, Oregon, South Dakota Tennessee, Washington, West Virginia, and Wisconsin) which were required by their constitutions to apportion both houses of their legislatures on the basis of population There was only one unicameral legislature (Nebraska)

[11] For further discussion of unicameralism and bicameralism, see Hurst, *The Growth of American Law*, 43–45, 53–56 (1950), and Hogan, "The Bicameral Principle in State Legislatures," *Journal of Public Law* 310 (1962)

[12] The nation's only unicameral legislature (Nebraska) is under a federal court order to reapportion itself on the basis of equal population *League of Nebraska Municipalities* v *Marsh*, 232 F Supp 411 (1964)

The basic decision regarding a unicameral Legislature would therefore not be its basis of apportionment but its size The creation of a very large body would have certain obvious advantages from the standpoint of state Senators whose seats are currently endangered by the reapportionment order of the court There are, of course, many other political implications regarding the size of any such body, but these matters are not the concern of this report. As for the comparative "objective" merits of a small or medium or large-sized unicameral Legislature, they are generally well-known. A small one would *probably* be more "efficient" and less costly, while a larger one would probably better represent the diversity of interests in California as well as providing political opportunities for larger numbers of citizens. It is impossible to forecast whether a unicameral Legislature of, say, 60 districts, would be more "liberal" or more "conservative" than one of, say, 180 seats Much would depend, as usual, on who was responsible for districting and how the lines were drawn

A related question is whether the size of the unicameral Legislature should be fixed or should vary in relation to some standard, such as, for example, the number of congressmen or absolute population figures. In a state which is growing as rapidly as California, the arguments in favor of a larger body also point towards a flexible number of districts and, conversely, those in favor of a smaller body point toward a fixed number Whether there is a point at which legislative bodies become so large as to become unwieldly is a controversial question and one which clearly has political implications The United States House of Representatives has 435 members and it is probably fair to say that most observers do *not* regard it as too large and yet are not anxious to see it become any larger But clearly there is nothing magic about the figure 435 and, of equal saliency, any such comparisons are of limited utility In sum, there simply is no way of knowing what an optimum figure for a Legislature is, be it unicameral or bicameral This, again, is a matter for prudential judgment

B. Types of Bicameralism

1 THE CANADIAN PLAN. If bicameralism is to be retained in California the question arises as to the form that this bicameralism is to take. It has been suggested that the Legislature be modeled after the Canadian Federal Parliament Under this arrangement, the Assembly would continue to be elected on the basis of population while the Senate would be elected—rather than appointed for life, as is the case in Canada's upper house—on the basis of geographic areas as at present However, the Senate would act in an advisory or quasi-legislative capacity, rather than as a full partner with the Assembly Bills passed by the Assembly would be sent to the Senate If the Senate refused to pass the bill, or if the Assembly refused to concur in the Senate's amendments, the will would not then become law However, if the Assembly passed the bill again after a year (30 days for money items), then the bill would be sent to the governor without being resubmitted to the Senate In effect, the Senate would have only a suspensive veto The rural areas would be heard, but the population-based lower house would be able finally to assert its will

Would this intriguing arrangement be upheld as constitutional? The Supreme Court has made it clear that both houses of a bicameral state legislature must be based on population But is this arrangement a "bicameral legislature"? Does a merely suspensive veto constitute enough legislative power to require that its holders be elected from districts apportioned on the basis of population? This arrangement would raise new questions, ones which the Supreme Court has not been called upon to face It is not possible at present confidently to predict what the court's holding would be, but it would quite likely be negative

This "Canadian" arrangement also raises, of course, many questions which are not constitutional in character Would such an arrangement be an appropriate compromise between the existing system and a bicameral legislature with both houses based on population? Would it be preferable to either a unicameral or a fully bicameral Legislature? Might it be a plan which would appeal to the present Senate as a way out of its current problems regarding reapportionment?

2 TWO COEQUAL CHAMBERS The other basic alternative, of course, is to continue to have a bicameral Legislature in California with essentially the existing characteristics, i e , two legislative chambers coequal in power and responsibility As with a unicameral legislature, a basic question is what size the Legislature should be Again, it should be stressed that decisions in such a matter have political implications which are beyond the scope of this report, and that, from an "objective" standpoint, there are cogent arguments for and against large (or small) bicameral Legislatures In fact, the arguments about size are essentially the same ones noted above regarding unicameral Legislatures

In addition, there is the complex issue of what the relative sizes of the two chambers should be It is widely believed that having chambers of differing size is desirable There is also a considerable body of opinion which holds that the two chambers should be based, at least in part, on differing electoral systems Again, it should be stressed that there can be no "objective" opinions about such matters and that such judgments are distinctly political in character

C. *Electoral Systems*

1 SINGLE MEMBER AND "WINNER-TAKE-ALL" [13] MULTIMEMBER DISTRICTS There are several types of electoral systems which could conceivably be incorporated into a new state constitutional plan The two most prominent possibilities, however, are "single member districts" and "multimember districts" (with a "winner-take-all" provision), and either separately or in combination they would appear to be the most likely type of electoral systems to be adopted in any new state constitutional plan

Multimember districts in state Legislatures are by no means rare California is one of only nine states in which all of the legislators, both

[13] As used herein, 'winner-take-all' is intended to suggest that the electoral system is not designed to guarantee a minority party or group some representation as, for example, a "proportional representation" system tends to do The phrase does *not* imply that one party, for example, will necessarily win all the seats If the seats are listed separately on the ballot, rather than by slate, it is possible that the candidates of more than one party will win seats at any given election

upper and lower house, are elected from single member districts [14] While most state legislators do represent single-member districts, 39 percent, or nearly 2 out of every 5, are elected in multimember districts Three thousand seven hundred and four of the 5,883 members of lower houses of state Legislatures—46 percent—represent multimember districts, while 305 of 1,903 state senators—16 percent—also are elected from multimember districts [15] Many states use a combination of single and multimember districts in composing their legislative chambers

The issue of whether to create single or multimember districts for the election of legislators has long been the subject of considerable controversy, speculation, and debate both among politicians and among scholars. Unfortunately, there is almost no empirical evidence to sustain the arguments for or against single or multimember districts Except for a few fairly self-evident observations, we do not know what are the practical effects of utilizing single-member, rather than multimember districts, or vice versa

It is commonly assumed and argued that single-member districts strengthen the two-party system by polarizing the choice in a plurality election, i e, the candidate with the largest number of votes wins, even if he does not have a majority of the votes cast because he had two or more opponents According to the accepted theory, competing interests moderate their differences, compromise, and work together to achieve victory at the polls Hence, the two major parties are strengthened, while minor parties are destroyed because they lack the ability to win and receive little support except from single special interests However, there is no evidence that multimember districts result in encouraging third parties or in weakening the two-party system The 41 states with multimember districts do not have multiparty systems Indeed, New York, one of the nine states using single-member districts exclusively has long had a strong third—and often fourth—party on its ballot

It has also been argued that single-member districts strengthen democratic government by resulting in a more direct, more intimate, and hence, more responsible relationship between the legislator and his constituents than is possible when the citizen has more than one representative Again, however, there is really no evidence that legislators elected from multimember districts are less responsive to their constituents than are their colleagues who are elected from single-member districts Indeed, it can be argued that when the citizen has two or three or more representatives, he has greater access to the Legislature than when he has only one But, as with the converse proposition, there is no evidence that this is true either Inasmuch as almost all politicians wish to be reelected, or elected to another office, it is doubtful that they will ignore any citizen, regardless of the type of district from which they are elected There is no empirical data with which to prove that

[14] The others are Delaware, Kansas, Kentucky, Missouri, Nebraska, New York, Rhode Island, and Wisconsin Maurice Klain "A New Look at the Constituencies The Need for a Recount and a Reappraisal" 49 *American Political Science Review*, 1105 1106–1107 (1955)

[15] Paul T David and Ralph Eisenberg, "State Legislative Redistricting Some Practical Issues in the Wake of Judicial Decision," paper read before the meeting of the American Political Science Association, Washington D C, September 5, 1962, p 22

either single-member or multimember districts strengthen democratic government

The most common attack upon the single-member district is that it is most susceptible to the partisan gerrymander. At first blush, this would appear to be obviously true But in its own way, a multimember district can also result in a partisan gerrymander When a district elects several representatives, it is quite possible for a party with a majority of the votes in the district to take all of the seats, leaving the second party, which might have a large percentage of the registered voters with none. Indeed, while holding that multimember districts were constitutional, the Supreme Court of the United States recently acknowledged that· "It might be well that, designedly or otherwise, a multimember apportionment scheme, under the circumstances or a particular case, would operate to minimize or cancel out the voting strength of racial or political elements of the voting population, "*Fortson* v. *Dorsey, supra,* p 6.

It is quite possible that multimember districts can work to destroy a community of economic and social interest which single member constituencies could serve well. Large multimember districts could be used to reduce the political effectiveness of minorities—whether racial, ethnic, economic, or political—by subsuming them in a district with larger numbers of people who are not a part of the minority community.

Advocates of the multimember district argue that members elected from such districts are less susceptible to pressures from "special interest groups" than are legislators from single-member districts. Being one of several legislators from the same district, they argue, gives the representative some immunity from the types of pressures which can be placed on a man who is a representative from a single-member district The latter, it is contended, becomes an easy target for pressure. The former, because he represents a larger, more diverse district, is harder to isolate. In addition, it is contended that the representative from the smaller, single-member district tends to develop a narrow outlook, to be concerned essentially with local, rather than statewide, issues, and to develop a passion for logrolling and porkbarrelling. Hence, it is asserted that the larger, multimember districts attract more independent, stronger, and abler men to run for public office.

Supporters of the single-member district, on the other hand, assert that because it is easier for the voter to control one representative than several, the legislator who has the support of his constituency has greater immunity from special interest pressures than does his colleague from a multimember district They argue that rather than being lost in the crowd as one of several, the single-member district focuses attention on the individual legislator and hence a concern for the man rather than the party This, they insist, results in more independent, stronger, and abler candidates in single-member districts than in multimember constituencies.

Again, there is no empirical evidence to support the contentions of either the advocates of single-member or multimember districts. They are arguments to support a point of view, but they have not been proved. Indeed, there has been no attempt to prove them

Inasmuch as it has not been proved that the practical effects of single-member districts are "better" than those resulting from multimember districts, or vice versa, and inasmuch as both types of districts are constitutional, the proposed constitutional amendment could be worded to permit the creation of either or both kinds of districts at the discretion of the reapportioning agency. However, in order to avoid the problems of the long ballot in multimember districts, it might be prudent for the proposed amendment to provide for a maximum number, such as three, to be elected from any one multimember district.

2 AT-LARGE DISTRICTS. A special kind of multimember district is one which covers a very large population, such as an entire large state or half of one. It has been suggested, for example, that the California Assembly continue to be elected from single-member districts, but that state senators be elected at-large from the entire state or that the state be divided into two equal population districts, each district to elect half the state senators Proponents of this apparently believe that, somehow, an at-large election would work to the advantage of the less densely populated areas of the state. It is alleged that an at-large election is not as susceptible to the gerrymander

An at-large election, however, has a number of practical disadvantages. It is possible for numerically smaller interests, whether political, economic, racial, ethnic, or social, to be completely submerged in an at-large election by the more heavily populated areas of the state or district Rather than insure rural representation, an at-large election could work to *eliminate* such representation altogether.

Moreover, a ballot with large numbers of senators, in addition to all the other offices being voted upon in the same election, makes a rational choice difficult, if not impossible This is especially true in primary elections where the number of candidates normally will be far larger than the number of persons to be nominated Voter control over the nomination and election of legislators is greatly weakened when the ballot is lengthy and cumbersome. Such a ballot puts a premium on ballot position, name familiarity, party label, or newspaper or other interest group endorsement. A voter entitled to ballot for a large number of names could help defeat his favorite candidate if he used all his available votes, especially since some factions will cast "bullet votes" for one group of candidates only. No voter—not even the most informed person—could vote such a ballot with any degree of discrimination in the general election, let alone a party primary.

At-large elections provide incentives for informal arrangements between the two major political parties to insure that one of them is not completely denied representation. In the Illinois at-large election for the state House of Representatives last year, for example, the leaders of the two major parties agreed to run only two-thirds as many candidates as there were seats (177 seats). One interesting twist developed in that election when a "blue ribbon" slate of candidates, attached to neither party and competing for every seat, offered themselves as an alternative. With its usual display of loyalty to the party system and an earthy disdain for the "anti-politics" pretentions of the blue ribbon slate, the voters overwhelmingly repudiated this insurgent group. But not before some anxious moments had been recorded in party circles.

There are various other schemes designed to insure minority representation They require multimember districts and specially designed electoral systems These will be discussed briefly below [16]

3 LIMITED VOTING Under this electoral system, a voter in a multimember district has fewer votes than there are representatives to be elected If, for example, there are three representatives to be elected from the district and each voter has only two votes, this is a "limited voting" system The obvious purpose of this system is to facilitate minority party representation Whether it does in fact do so depends upon how large the minority party is, how disciplined it and the majority are, and how many candidates each party offers for the three seats

Suppose, for example, that a "limited voting" district with three representatives was made up of 45,000 Republicans and 36,000 Democrats If the Republicans put up three candidates, received 100 percent support from their followers, and voted for their candidates in equal proportions, each candidate would receive 30,000 votes If the Democrats put up only two candidates and received 100 percent support from their followers, their two candidates would each receive 36,000 votes The Democrats would win two seats, the majority Republicans only one In the next election, the Republicans would almost certainly run only two candidates and both would probably win But the Democrats would still have one seat and this pattern would probably prevail indefinitely, thereby providing minority representation In a straight, at-large, "winner-take-all" election, by contrast, the majority Republicans would presumably win all three.

No state has ever adopted the "limited voting" system for the election of state legislators.

4 CUMULATIVE VOTING Under this electoral system, a voter in a multimember district has as many votes as there are representatives to be elected and he may distribute his votes in any way he chooses If, for example, there are three representatives to be elected from the district, he can cast all three of his ballots for one candidate, or two for one candidate and one for another, or 1½ for each of two, or one for each of three Once again, the obvious purpose of this system is to facilitate minority party representation.

Suppose, for example, that a "cumulative voting" district with three representatives was made up of 75,000 Democrats and 30,000 Republicans If the Democrats put up three candidates for the three seats —and if party lines held—each of the Democrats would receive about 75,000 votes If the Republicans put up only one candidate—and if party lines held—he would receive about 90,000 votes The Republicans would thereby win one of three seats despite the fact that they constituted less than 30 percent of the electorate

Illinois has had a "cumulative voting" system for its state House of Representatives since 1872 It has in fact worked to ensure minority party representation and very few districts have ever been swept by one party Perhaps the most criticized feature of the system is that it

[16] The following summaries are based in part on Ruth C Silva, "Relation of Representation and the Party System to the Number of Seats Apportioned to a Legislative District," *The Western Political Quarterly*, Vol XVII, No 4 (December 1964), pp 742–769 This article contains excellent discussions and extensive bibliographies on each of the plans discussed herein

tends to reduce competition in the general elections Party leaders can calculate with considerable accuracy their electoral strength and they ordinarily put forward only two candidates if they are in a majority and only one if they are the minority. The voter is left with little choice

Cumulative voting tends to produce narrow legislative margins This is a factor of some consequence when considered in terms of the two-thirds majorities required for the passage of certain key measures in the California Legislature.

5 PROPORTIONAL REPRESENTATION Under this electoral system—commonly called "PR"—a party wins a proportion of representation roughly equivalent to its proportion of the vote If, for example, there were ten representatives to be elected in a given district and the Republicans received 60 percent of the vote and Democrats 40 percent, they would win six and four seats, respectively

There are basically two types of PR The least complicated is the "list system" Parties offer a "list" of candidates and voters cast their ballots for a party. A party is awarded representation roughly equivalent to its percentage of the vote In one version, its winning candidates are taken from the top of the list (which was originally drawn up by party officials) In another version, the identity of its winning candidates is determined on the basis of preferences declared by the voters who, while voting for the party, also rank their candidates The list system has never been employed in the United States but has been widely used in Europe

The other and more complicated basic type of PR is the "Hare system" There are various ways in which this system can be employed, the following is an outline of one typical method First, an "electoral quota" is established This refers to the minimum number of votes needed to elect a candidate The electoral quota is determined by dividing the total number of votes cast by the number of representatives to be elected plus one, and then adding one. If, for example, three representatives are to be elected and 80,000 people cast ballots, the electoral quota would be determined as follows:

Number of Representatives, plus one = 4
80,000 divided by 4 = 20,000
20,000 + 1 = 20,001, the electoral quota

The voters vote for as many candidates as they wish but they must rank them 1, 2, 3, etc After the polls close, the ballots are separated according to the first choice on each ballot and a count is made Those candidates, if any, which have 20,001 or more votes are declared elected Their "excess" ballots are then distributed—by any one of a variety of methods—according to their second choice; and so forth

If, however, as is more likely, no candidate is elected on the first count, then the candidate with the least number of votes is eliminated and his ballots are then distributed according to their second choices This procedure, in combination with the re-distribution of "excess" ballots from winning candidates, is then repeated until the appropriate number of candidates is elected

The Hare system of PR has been used in more than 20 American cities at one time or another, but it has never really caught on at any level of government in this country. No form of PR has ever been used for the election of state legislators The arguments for and against it have usually been based more on abstract theory than on hard evidence And what evidence exists is, for the most, conflicting. A few generalizations, however, would appear to be indisputably valid: minority party representation is facilitated and, more than any other electoral system, PR does foster third or "splinter" parties For both reasons, legislative majorities are reduced

6 WEIGHTED VOTING Another possible variation in districting is to continue to elect respresentatives from existing or other nonpopulation-based districts and then to assign differential weight to their votes depending upon the size of the population represented It has been suggested, for example, that Assemblymen continue to be elected from single-member districts of equal population, but that the Senate be reapportioned to utilize a weighted vote system In this situation, senators would be elected from single-member districts of unequal population representing geographic areas Within the Senate, however, the members would be assigned a number of votes, say one to five, based on the size of their constituencies In this manner the less densely populated areas of the state would be represented by more senators than their numbers warranted, but the senators representing the more heavily populated areas of the state would have more votes than their rural colleagues A variation of this system would be the fractional vote in which senators would receive from one-fifth to one whole vote based on the size of their constituencies

The arguments for and against this system of representation have been adequately treated above in the section dealing with its constitutionality. (See Part Two, IV, C.)

7 FLOTERIAL DISTRICTS Except under unusual circumstances, floterial districts do not meet the constitutional standard of "one person, one vote." See the discussion in Part Two, IV, D

There are some rather exotic representation systems and variations on the ones discussed above which have not been treated in this report. For an exhaustive listing of and bibliography on such schemes, see Ruth C Silva, "Relation of Representation and the Party System to the Number of Seats Apportioned to a Legislative District," *The Western Political Quarterly*, Vol. XVII, No. 4 (December, 1964), pp 742–769

8 CONGRESSIONAL APPORTIONMENT It has already been suggested in an earlier section (see Part Three, III) that the state constitutional requirement that certain—and, in practice, most—congressional districts be composed of whole assembly districts should be removed If it is believed that counties or other political subdivisions should be preserved intact insofar as possible, then an amendment could be drafted to provide that political subdivisions may not be subdivided *except* to achieve equality of population among districts And it would probably be prudent—in the light of *Wesberry* and/or possible congressional action in this field—if the amendment also contained a

provision restricting the population deviations to a plus and minus maximum of 10 to 15 percent of the norm for all districts

The current provisions for contiguous districts could be retained without difficulty and legislative apportionment would presumably still be required after each federal census.

In any amending effort, it would seem to be advisable to rewrite entirely Article IV, Section 27, which is, to put it mildly, difficult to understand and laden with ambiguity

APPENDIX A

THE CURRENT APPORTIONMENT SITUATION IN CALIFORNIA

The current districting of California's congressional seats was made in 1961 on the basis of the population figures revealed by the 1960 federal census Although an attempt was made to create districts essentially on the basis of equal population, some deviations from the norm of 413,610 were unavoidable due to a complicated set of provisions in the state constitution which, with minor exceptions, require that congressional districts be composed of whole and contiguous assembly districts (For a discussion of these provisions, see Part Three)

Adherence to these provisions, plus the fact that the number of assembly districts was not exactly divisible by the number of congressional districts, made deviations from the norm for congressional districts inevitable [1]

The size of California's congressional districts ranges from 591,882 (28th C D) to 301,172 (5th C D), a ratio of 1 96 to 1 between the largest and smallest district The largest congressional district exceeds the state norm by 178,212 (43 1 percent) and the smallest is 112,438 (27 2 percent) under the norm for all congressional districts All together, 9 of the 38 congressional districts deviate from the norm by more than 15 percent, while five additional district deviate from the norm between 10 and 15 percent (see Table 1)

The current apportionment of California's assembly districts also was made in 1961 on the basis of population figures revealed by the 1960 federal census As noted above, it was impossible to create assembly districts of substantially equal population because of the State Constitution which provides that the boundaries of assembly districts may not cross county lines except in the formation of districts consisting of two or more *whole* counties (Art IV, Sec 6: see Appendix B). The norm was 196,465 (see Table 2)

The size of California's assembly districts ranges from 306,191 (74th A D) to 72,105 (75th A D), a ratio of 4 2 to 1 between the largest and smallest district The largest assembly district exceeds the state norm by 109,726 (55 9 percent) and the smallest is 124,360 (66 3 percent) under the norm for all assembly districts All together, 24 of the 80 assembly districts deviate from the norm by more than 15 percent, while seven additional districts deviate from the norm between 10 and 15 percent

The current apportionment of California's senatorial districts was adopted by the Legislature in 1930 to implement the constitutional amendment adopted in 1926 (Art IV, Sec 6) Under this apportionment, the size of California's senatorial districts ranges from 6,038,771 (38th S D) to 14,294) (28th S D), a ratio of 422.5 to 1 between the

[1] For the relevant provisions of the California Constitution (Article IV, Sections 6 and 27), see Appendix B

37	4th	Colusa, Glenn, Lake, Solano, Sutter, Yolo, Yuba Counties	310,561	-24 9
38	5th	Part of San Francisco County	301,172	-27 2

SOURCE California Assembly Committee on Elections and Reapportionment

largest and smallest district (see Table 3) The largest senatorial district exceeds the state norm by 5,645,841 (1,436 9 percent) and the smallest is 378,636 (—96 4 percent) under the norm for all senatorial districts All together, 37 of the 40 senatorial districts deviate from the norm by more than 15 percent, while one additional district deviates from the norm between 10 and 15 percent

Population inequalities among state legislative districts are not peculiar to California Indeed, the pattern of legislative apportionment in the 50 states reveals widespread population inequalities in almost every state in the union Table 4 reveals the ratio of the largest to the smallest district in each of the 99 state legislative chambers as of January 1, 1965 As can be seen, the California Senate's ratio of 422 5 to 1 is the highest of all the 50 senates The lowest ratio, 1 2 to 1, belongs to Kansas Senate The highest ratio among all 49 lower houses is Vermont's 1,480 4 to 1 The lowest ratio is Colorado's 1 2 to 1

While the ratio of largest to smallest district population reveals a widespread pattern of population inequalities among the several districts in most state legislative chambers, it does not reveal the entire

pattern It emphasizes the extreme situation, and does not indicate the overall effect of the pattern of apportionment in the legislative body. The Dauer-Kelsay Index of Representatives helps to complete the picture.

The Dauer-Kelsay Index of Representatives shows the theoretical minimum percentage of a state's population that can elect a majority of a legislative body [2] It indicates the general pattern of apportionment in a state and not simply extreme deviations (The ratio between the largest and smallest constituencies is, of course, entirely based on the extreme deviation) Table 5 reveals the Index of Representativeness for each state legislative chamber in the United States as a whole, as of January 1, 1965

According to the Dauer-Kelsay Index of Representativeness, the California Senate ranks 49th among the 50 state senates in representativeness Only the Nevada senate's index of 8 0 is lower than California's 10 7 The Assembly's index of 44 7, on the other hand, ranked 16th among the 49 lower houses of state Legislatures

[2] The calculation process is simple The several legislative districts of the chamber being analyzed are arranged in rank order from smallest population per member to largest The count then proceeds from the smallest district up the scale until the cumulative number of seats equals a majority of the chamber The percent that the population of the several districts able to elect a majority is of the total population of the state is the "Index of Representativeness" of that chamber For example, 21 members constitute a majority of California's 40-member Senate The population of the 21 smallest districts which together can elect a majority of the California Senate, is 1,678,630 This represented 10 7% of the state's total population of 15,717 204, and this percentage is the Dauer-Kelsay Index for the California State Senate See Manning J Dauer and Robert G. Kelsay "Unrepresentative States," 44 *National Municipal Review* 571 (1955). Figures corrected in 45 *National Municipal Review* 198 (1956).

APPENDIX B

RELEVANT PROVISIONS OF THE CONSTITUTION OF CALIFORNIA, ARTICLE IV

Election and Terms of Members of Assembly

SEC 3 Members of the Assembly shall be elected biennially, and their term of office shall be two years Each election shall be on the first Tuesday after the first Monday in November, unless otherwise ordered by the Legislature

(Amendment adopted November 8, 1960)

Election and Terms of Senators—Qualifications of Members of Legislature

SEC 4 Senators shall be chosen for the term of four years, at the same time and places as Members of the Assembly, and no person shall be a Member of the Senate or Assembly who has not been a citizen and inhabitant of the state three years, and of the district for which he shall be chosen one year, next before his election

(Constitution of 1849, Art IV, Secs 4, 5, revised 1879)

Number of Senators and Assemblymen—Election by Districts

SEC 5 The Senate shall consist of 40 members, and the Assembly of 80 members, to be elected by districts, numbered as hereinafter provided One-half of the Senators shall be elected every two years, those from the odd-numbered districts being elected when the number of the year is divisible by four

(Amendment adopted November 8, 1960)

Senatorial and Assembly Districts

SEC 6 For the purpose of choosing Members of the Legislature, the State shall be divided into 40 senatorial and 80 assembly districts to be called senatorial and assembly districts Such districts shall be composed of contiguous territory, and assembly districts shall be as nearly equal in population as may be Each senatorial district shall choose one senator and each assembly district shall choose one Member of Assembly The senatorial districts shall be numbered from 1 to 40, inclusive, in numerical order, and the assembly districts shall be numbered from 1 to 80 in the same order, commencing at the northern boundary of the State and ending at the southern boundary thereof In the formation of assembly districts no county, or city and county, shall be divided, unless it contains sufficient population within itself to form two or more districts, and in the formation of senatorial districts no county, or city and county, shall be divided, nor shall a part of any county, or of any city and county, be united with any other county, or city and county, in forming any assembly or senatorial district The census taken under the direction of the Congress of the United States in the year 1920, and every 10 years thereafter, shall be the basis of fixing and adjusting the legislative districts; and the

Legislature shall, at its first regular session following the adoption of this section and thereafter at the first regular session following each decennial federal census, adjust such districts, and reapportion the representation so as to preserve the assembly districts as nearly equal in population as may be; but in the formation of senatorial districts no county or city and county shall contain more than one senatorial district, and the counties of small population shall be grouped in districts of not to exceed three counties in any one senatorial district, provided, however, that should the Legislature at the first regular session following the adoption of this section or at the first regular session following any decennial federal census fail to reapportion the assembly and senatorial districts, a Reapportionment Commission, which is hereby created, consisting of the Lieutenant Governor, who shall be chairman, and the Attorney General, State Controller, Secretary of State and State Superindent of Public Instruction, shall forthwith apportion such districts in accordance with the provisions of this section and such apportionment of said districts shall be immediately effective the same as if the act of said Reapportionment Commission were an act of the Legislature, subject, however, to the same provisions of referendum as apply to the acts of the Legislature

Population

Each subsequent reapportionment shall carry out these provisions and shall be based upon the last preceeding federal census But in making such adjustments no persons who are not eligible to become citizens of the United States, under the naturalization laws, shall be counted as forming a part of the population of any district. Until such districting as herein provided for shall be made, Senators and Assemblymen shall be elected by the districts according to the apportionment now provided for by law

(Amendment adopted November 3, 1942)

Readings and Passage of Bills

SEC 15 No law shall be passed except by bill Nor shall any bill be put upon its final passage until the same, with the amendments thereto, shall have been printed for the use of the members, nor shall any bill become a law unless the same be read on three several days in each house, unless, in case of urgency, two-thirds of the house where such bill may be pending shall, by a vote of yeas and nays, dispense with this provision Any bill may originate in either house, but may be amended or rejected by the other; and on the final passage of all bills they shall be read at length, and the vote shall be by yeas and nays upon each bill separately, and shall be entered on the Journal; and no bill shall become a law without the concurrence of a majority of the members elected to each house

(Constitution of 1849, Art. IV, Sec 16, revised 1879)

Bills to Be Presented to Governor—Veto—Procedure

SEC 16 Every bill which may have passed the Legislature shall, before it becomes a law, be presented to the Governor. If he approve it, he shall sign it, but if not, he shall return it, with his objections, to the house in which it originated, which shall enter such objections

upon the Journal and proceed to reconsider it If after such reconsideration, it again pass both houses, by yeas and nays, two-thirds of the members elected to each house voting therefor, it shall become a law, notwithstanding the Governor's objections If any bill shall not be returned within 10 days after it shall have been presented to him (Sundays excepted), the same shall become a law in like manner as if he had signed it, unless the Legislature, by adjournment, prevents such return, in which case it shall not become a law, unless the Governor, within 30 days after such adjournment (Sundays excepted), shall sign and deposit the same in the office of the Secretary of State, in which case it shall become a law in like manner as if it had been signed by him before adjournment. If any bill presented to the Governor contains several items of appropriation of money, he may object to one or more items, while approving other portions of the bill * In such case he shall append to the bill at the time of signing it, a statement of the items to which he objects, and the reasons therefor, and the appropriation so objected to shall not take effect unless passed over the Governor's veto, as hereinbefore provided If the Legislature be in session, the Governor shall transmit to the house in which the bill originated a copy of such statement, and the items so objected to shall be separately reconsidered in the same manner as bills which have been disapproved by the Governor

(Amendment adopted November 3, 1908)

Formation of Congressional Districts

SEC 27. When a congressional district shall be composed of two or more counties, it shall not be separated by any county belonging to another district No county, or city and county, shall be divided in forming a congressional district so as to attach one portion of a county, or city and county, to another county, or city and county, except in cases where one county, or city and county, has more population than the ratio required for one or more congressmen, but the Legislature may divide any county, or city and county, into as many congressional districts as it may be entitled to by law Any county, or city and county, containing a population greater than the number required for one congressional district shall be formed into one or more congressional districts, according to the population thereof, and any residue, after forming such district or districts, shall be attached by compact adjoining assembly districts, to a contiguous county or counties, and form a congressional district In dividing a county, or city and county, into congressional districts no assembly district shall be divided so as to form a part of more than one congressional district, and every such congressional district shall be composed of compact contiguous assembly districts

(Constitution of 1849, Art IV, Sec 30, revised 1879.)

APPENDIX C

THE CONSTITUTIONAL DOCTRINE OF STATE LEGISLATIVE APPORTIONMENT FROM *COLEGROVE* v. *GREEN* TO *REYNOLDS* v. *SIMS*

Modern constitutional doctrine in the area of legislative apportionment begins with the decision of the Supreme Court of the United States in a congressional districting case, *Colegrove* v *Green*, 328 U S 549 (1946) The judgment of the court was announced in a decision by Mr Justice Felix Frankfurter which held, in essence, that plaintiffs had no standing to sue, and that courts had no jurisdiction in such cases because the issue presented a nonjusticiable political question As Justice Frankfurter put it "Courts ought not to enter this political thicket The remedy for unfairness in districting is to secure State Legislatures that will apportion properly, or to invoke the ample powers of Congress" *Colegrove* v *Green*, *supra*, at 556

Although Frankfurter's reasoning was acceptable to only three of the four members of the majority (only seven members of the court participated in the four to three decision), his *Colegrove* doctrine of nonjusticiability based on the political nature of the issue came to prevail in federal and state courts over the next 14 years During that period, 13 cases affecting apportionment or districting reached the Supreme Court of the United States Most of them were disposed of in *per curiam* (unsigned) decisions without opinion, or by refusal of the High Court to review the case Only twice did the court give reasons for its actions

In *MacDougall* v *Green*, 335 U S 281 (1948), a majority of five justices sustained an Illinois statute requiring a new political party to secure signatures in at least 50 of the state's 102 counties on the ground that the due process and equal protection clauses of the Fourteenth Amendment did not "deny a state the power to assure a proper diffusion of political initiative as between its thinly populated counties and those having concentrated masses" *MacDougall* v *Green*, *supra*, at 283-284 Similarly, in *South* v *Peters*, 339 U S 276 (1950), a challenge to the Georgia County unit system of elections, the court stated. "Federal courts consistently refuse to exercise their equity powers in cases posing political issues arising from a state's geographical distribution of electoral strength among its political subdivisions" *South* v *Peters*, *supra*, at 277

In 1960, the Supreme Court of the United States declared an Alabama statute redrawing the boundary lines of the City of Tuskegee to be unconstitutional because it was a "racial gerrymander" *Gomillion* v. *Lightfoot*, 364 U S 339 (1960) The act, which had the effect of removing all but four or five Negro voters from the municipality while keeping all white voters within the city limits, was held to violate the Fifteenth Amendment's prohibition against denying or abridging the right to vote because of race While the court in this manner distin-

guished the case from apportionment issues which involve the equal protection clause of the Fourteenth Amendment, the *Gomillion* case opened the door to a reconsideration of the *Colegrove* doctrine One week after Gomillion was decided, the Supreme Court decided to review *Baker* v *Carr*, 364 U S 898 (1960)

The *Tennessee Reapportionment Case*, *Baker* v *Carr*, 369 U S 186 (1962) was the vehicle which announced a new trend in Supreme Court decisions in apportionment cases. Breaking with *Colegrove* v *Green*, *supra*, the high court held 1) federal courts do have jurisdiction over apportionment disputes because the "cause of action is one which 'arises under' the Federal Constitution" and is neither "unsubstantial" nor "frivolous," *Baker* v *Carr*, *supra*, at 199, 2) individual voters have standing to sue because "appellants seek relief in order to protect or vindicate an interest of their own, and of others similarly situated," *Baker* v *Carr*, *supra*, at 207, and 3) the issue is justiciable and does not present a political question with which courts cannot deal, *Baker* v *Carr*, *supra*, at 209

Thus, the Supreme Court opened the courthouse door—shut by *Colegrove* in 1946—to apportionment conflicts But in so doing, the Supreme Court did not fully establish the new rules of the game The court did not indicate what standards were to be applied in examining a challenged apportionment nor what forms of relief could be granted should an inferior court find an existing apportionment to be unconstitutional With regard to standards, Mr Justice Brennan, for the court, said only "Judicial standards under the Equal Protection Clause are well developed and familiar, and it has been open to courts since the enactment of the Fourteenth Amendment to determine, if on the particular facts they must, that a discrimination reflects no policy, but simply arbitrary and capricious action " *Baker* v *Carr*, *supra*, at 226 Similarly, Justice William O Douglas, in a concurring opinion, pointed out that the "traditional test under the Equal Protection Clause had been whether a state has made 'an invidious discrimination' . . ." *Baker* v. *Carr*, *supra*, at 244 And in his concurring opinion, Justice Tom C Clark indicated that the test to be applied was whether the apportionment represents "a rational state policy" or reflects "no policy whatsoever" resulting in "a crazy-quilt without rational basis," was not "reasonable" and, hence, violated the equal protection clause. *Baker* v *Carr*, *supra*, at 252–254 But the specifics were left for future development, for while none of the justices endorsed the view that exact mathematical equality is required by the equal protection clause, neither did they indicate how much weighting of nonpopulation factors would be permissible in an apportionment scheme

The first key step in providing the basic ground rules implementing *Baker* v *Carr* was the decision in the *Georgia County Unit System* Case, *Gray* v *Sanders*, 372 U S 368 (1963) Rejecting an analogy to the federal electoral college, the Supreme Court declared· "Once the geographical unit for which a representative is to be chosen is designated, all who participate in the election are to have an equal vote—whatever their race, whatever their sex, whatever their occupation, whatever their income, and wherever their home may be in that geographical unit This is required by the Equal Protection Clause

of the Fourteenth Amendment The concept of 'we the people' under the Constitution visualizes no preferred class of voters but equality among those who meet the basic qualifications" *Gray* v *Sanders, supra,* at 379–380. In summary, Mr Justice Douglas, writing for the court, stated: "The concept of political equality from the Declaration of Independence, to Lincoln's Gettysburg Address, to the Fifteenth, Seventeenth, and Nineteenth Amendments can mean only one thing —*one person, one vote*" *Gray* v *Sanders, supra,* at 381 (italics added).

The second post-*Baker* decision affecting legislative apportionment was a congressional districting case, *Wesberry* v *Sanders,* 376 U S 1 (1964). Although the Wesberry decision was not based on the equal protection clause, equality of population was evolving as the basic constitutional standard for apportionment and districting cases. Justice Hugo L. Black, writing for the court, stated that "The command of Article I, Section 2, that representatives be chosen 'by the people of the several states' means that as nearly as is practicable one man's vote in a congressional election is to be worth as much as another's." *Wesberry* v *Sanders, supra,* at 7–8 Since it was "our Constitution's plain objective of making equal representation for equal members of people the fundamental goal for the House of Representatives," the concept of "by the people" means "*one person, one vote.*" *Wesberry* v. *Sanders, supra,* at 18 (italics added)

"We hold that, as a basic constitutional standard, the Equal Protection Clause requires that the seats in both houses of a bicameral state Legislature must be apportional on a population basis" *Reynolds* v. *Sims,* 377 U S 533, 568 (1964) With these words, Chief Justice Earl Warren, writing for six members of the Supreme Court, faced "the problem of determining the basic standards and stating the applicable guidelines for implementing our decision in *Baker* v. *Carr.*" *Reynolds* v. *Sims, supra,* at 568. Asserting that "Legislators represent people, not trees or acres Legislators are elected by voters, not farms or cities or economic interests," *Reynolds* v. *Sims, supra,* at 562, and that "citizens, not history or economic interests cast votes . . people, not land or trees or pastures, vote," *Reynolds* v. *Sims, supra,* at 580, the court held that "an individual's right to vote for state legislators is unconstitutionally impaired when its weight is in a substantial fashion diluted when compared with votes of citizens living in other parts of the State" *Reynolds* v *Sims, supra,* at 568

But in establishing "one person, one vote" as the basic constitutional standard for state legislative elections, the court did recognize that "mathematical nicety is not a constitutional requisite." *Reynolds* v. *Sims, supra,* at 569. Hence, the Chief Justice wrote: "By holding that as a federal constitutional requisite both houses of a state Legislature must be apportioned on a population basis, we mean that the Equal Protection Clause requires that a state make an honest and good faith effort to construct districts, in both houses of its Legislature, *as nearly of equal population as practicable* We realize that it is a practical impossibility to arrange legislative districts so that each one has an identical number of residents, citizens, or voters Mathematical exactness or precision is hardly a workable constitutional requirement." *Reynolds* v. *Sims, supra,* at 577 (italics added). Therefore, each state

was to be permitted some degree of flexibility in determining its apportionment scheme "*so long as the resultant apportionment was one based substantially on population and the equal population principle was not diluted in any significant way*" *Reynolds* v. *Sims, supra,* at 578 (italics added)

While the Supreme Court declined to spell out any precise constitutional tests, preferring to permit the development of a body of detailed doctrine to be evolved on a case-by-case basis, *Reynolds* v. *Sims, supra,* at 578, the court made it clear that the basic constitutional standard for the apportionment of both houses of the state legislature was "one person, one vote"

APPENDIX D: H.R. 5505

[The following is the bill passed by the House of Representatives on March 16, 1965.]

89th Congress
1st Session

H.R. 5505

IN THE SENATE OF THE UNITED STATES, March 18, 1965
Read twice and referred to the Committee on the Judiciary

AN ACT

To require the establishment, on the basis of the eighteenth and subsequent decennial censuses, of congressional districts composed of contiguous and compact territory for the election of Representatives, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 22 of the Act of June 18, 1929, entitled "An Act to provide for the fifteenth and subsequent decennial censuses and to provide for apportionment of Representatives" (46 Stat 26), as amended, is amended as follows

(1) Subsection (c) is amended by striking out all of the language in that subsection and inserting in place thereof the following:

II

"(c) In each State entitled in the Ninetieth Congress or in any subsequent Congress to more than one Representative under an apportionment made pursuant to the provisions of subsection (a) of this section, there shall be established by law a number of districts equal to the number of Representatives to which such State is so entitled; and Representatives shall be elected only from districts so established, no district to elect more than one Representative Each such district so established shall at all times be composed of contiguous territory, in as compact form as practicable, and under apportionments made upon the basis of the eighteenth and subsequent decennial censuses, no district established in any State for the Ninetieth or any subsequent Congress shall contain a number of persons excluding Indians not taxed, more than 15 per centum greater or less than the average obtained by dividing the whole number of persons in such State, excluding Indians not taxed, as determined under the then most recent decennial census, by the number of Representatives to which such State is entitled under the apportionment made upon

the basis of such census Where a State has redistricted since the last decennial census, the most recent Federal special census conducted pursuant to the provisions of the Act of August 26, 1954, as amended (71 Stat 481, 13 U S C 8), may be used in determining whether any district within the State, invalid under the latest decennial census, meets the 15 per centum criterion There shall be not more than one redistricting during any decennial census ''

Passed the House of Representatives March 16, 1965
Attest RALPH R ROBERTS,
Clerk

APPENDIX E

MEASUREMENT OF POPULATION EQUALITY

by

CHARLES G. BELL

Assistant Professor of Political Science, California State College at Fullerton

I. INTRODUCTION

While the S C has established the rule of "one man, one vote"[1] it has not provided any definition of either the "man" or the "vote". So far the courts have not indicated, even in dictum, what specific standards are to be used in determining the validity of an apportionment[2] And although gross inequalities of population per election district may lead to an obvious conclusion of unequal representation and, according to the courts, invidious discrimination, the legislative body faced with reapportionment must decide for itself what is "equal" and what does not constitute invidious discrimination

However, the courts have referred to what is frequently called "practical equality" and under that rubric have allowed for deviation from a mathematically exact equality of population per legislative district. Thus "one man, one vote" has lost, if it ever had, a mathematical exactitude and can be practically considered as an approximate equality, to be aimed for while recognizing the impossibility of attainment[3] In light of recent congressional action, a 15 percent deviation from perfect equality would appear to be probably acceptable (barring an obvious pattern of discrimination within these limits)

Since *Baker* v. *Carr* and, more particularly, the Reynolds case, many lower courts have been faced with the concrete problem of determining what is equal and what is not The consultant suggests that final determination of "equality" is a policy issue which is beyond his purview. Moreover, a broad survey of research literature on the subject of reapportionment illustrates that political scientists and other concerned professionals have made little contribution to the fundamental techniques of measuring gerrymandering While there has been a copious outpouring of articles and books on the general subject of malapportionment, these have been largely normative in character and when attempting to prove, by the use of statistics, the existence of malapportionment or gerrymandering, have relied upon rather gross data

[1] *Reynolds* v *Sims*, 377 U S 533 (1964)

[2] The case of *Baker* v. *Carr* provides an excellent example of the problem of coming to grips with the technical nature of apportionment One finds in the majority opinion written by Mr Justice Clark and in the dissenting opinion of Mr Justice Harlan disagreements not only about the law and public policy of judicial intervention but disagreement as to the "facts" in the case One state court, however, did describe in detail the apportionment it would implement if the Legislature did not reapportion see *Fortner* v *Barnett*, Chancery Court, 1st Judicial Dist., Hinds County, Mississippi, circa 1961

[3] See *Baker* v *Carr*, 186, (1962) 260 (concurring opinion)

which in many cases illustrated wide variances of population between districts but did little to come to grips with the problem of how to measure objectively the *degree of malapportionment* (See Bibliography) The question of criteria of population is, therefore, the basic question considered herein

In trying to determine the proper criteria for apportionment by population both legislative bodies and the courts have, almost without exception, relied upon the most recent comprehensive federal decenial census data[4] A large majority of the states use census data as the source of population data for drawing legislative district lines for those legislative chambers apportioned by population (see Table B). In less than 10 percent of the cases is population defined by some other method

The courts, in examining criteria for legislative apportionment, have considered, in addition to total number of residents or citizens: the number of registered voters,[5] "history,"[6] geography,[7] "mass media,"[8] votes cast for Congress,[9] and direct taxes paid[10] Other factors considered have included male inhabitants, the exclusion or inclusion of servicemen, Indians,[11] and aliens Again, the use of census data has received preferred treatment In addition to various definitions of population the courts have considered several factors which would justify deviations from mathematical exactitude These include, for example, the "history," geography and "mass media" criteria cited above[12]

II. POPULATION

In the first place, the consultant assumed that any measure of malapportionment would be a measure of deviation from an ideal of equal representation based upon some definition of population The problem here, of course, is definition of "population" California has, in the past, used total population excluding aliens not eligible for naturalization There are, however, other criteria which might be used. These could be, aside from the most commonly used Census Bureau data (either total population or population 21 and over), the number of registered voters, total votes cast in the last general election, or votes cast in the last statewide election (whether Gubernatorial or Presidential)

However, it is suggested that use of either registration or votes cast be rejected. This recommendation follows analysis of the ratios: (1) between total registered voters per total population (1950 and 1960) for each county; and (2) between total votes cast, 1958, 1960 and 1962 and population (1960) for each county Both registration and vote

[4] To provide a valid base for reapportionment census data must be statewide While of more recent origin, legal special censuses are not comparable to the 1960 census data within the rest of a state and can therefore, not be used

[8] *Moss* v *Burkhart*
[9] *Caesar* v *Williams*
[10] See the New Hampshire Supreme Court's decision in *Levitt* v *Maynard* (July 16, 1962) upholding that state's constitutional establishment of direct taxes paid as the basis for apportioning the State Senate (Part II, Articles 25 and 26) This was before *Reynolds* v *Simms*
[11] *Baker* v *Carr*, op cit, pp 146–147
[12] See 17 *Law and Contemporary Problems*, pp 253–469 (1952), 43 *Michigan Law Review*, pp 1091–1112, and the *Book of States*, 1960–61, pp 21, 54–58

showed wide fluctuation as indicators of population (see Table A) In addition, any measure used must be statewide in nature, therefore, special censuses of various cities or areas within the state should not be used in conjunction with census data of other dates and places.

A second problem in measurement occurs due to the nature of boundary lines of legislative districts In many instances lines do not follow census tracts and for that reason either enumeration district data or approximations must be made

Availability of population data: The State of California is a highly urbanized area There are, or there were, as of the 1960 census, 10 standard metropolitan statistical areas which included 18 counties In 1960 these 10 SMSA's made up 86 4 percent of the total population of the state Since these 10 SMSA's are tracted, tract data is available for 86 4 percent of the state's population The remaining 13 6 percent of the population resides in the other 40 counties of the state However, because the Bureau of the Census reports the population of places of 1,000–2,500 population, the committee staff will be able to analyze the population distribution of another 1 5 percent of California's population As a result only 12 1 percent of California's 1960 population was not reported in either census tract areas or in places which were clearly defined with small population units facilitating accurate assignment to appropriate electoral districts [13]

Forty-eight states use some definition of population to some extent in apportioning at least one house of their Legislature, and of these, 30 use some definition of population to some extent in apportioning both houses As a result, there are 78 legislative chambers in the United States in which population has played some role in determining the apportionment of seats However, while the definitions of population vary, the overwhelming majority (72%) use total population figures

Listing	*Criteria*	*Number of chambers*

COMMITTEE LETTER OF TRANSMITTAL

ASSEMBLY CHAMBER, STATE CAPITOL
Sacramento, California, January 4, 1965

HON JESSE M UNRUH
Speaker of the Assembly

MEMBERS OF THE ASSEMBLY
Assembly Chamber
Sacramento, California

Gentlemen:

Pursuant to House Resolution No. 500.10, 1963 Session of the California Legislature, your Assembly Interim Committee on Governmental Efficiency and Economy herewith submits its final report covering its studies during the 1963–65 interim

We here summarize the committee's findings and recommendations. Suggested bills are included when specific legislation is recommended. Exhibits, statements, and research material will be found included in the complete transcripts of each hearing. In the interest of readability and economy this report has been kept as concise as possible

The report of the Subcommittee on Subdivision Mapping, chairmaned by Assemblyman Greene, is being printed as a separate section as its probable circulation would be among a special group.

Respectfully submitted,

LESTER A. MCMILLAN
Chairman

MEMBERS OF COMMITTEE

Alfred H Song, Vice-Chairman
Lou Cusanovich
George E Danielson
George Deukmejian

BUILDING DESIGNERS AND THE LAW GOVERNING THE PRACTICE OF ARCHITECTURE

House Resolution No 70 (McMillan—1964 Regular Budget Session) was heard by the Assembly Interim Committee on Governmental Efficiency and Economy in Los Angeles on September 25, 1964. This measure requested a study of the recently revised law governing the practice of architecture, which included in the revision the regulation of the practice of building design through the registration of building designers Representatives of professional and trade associations, as well as individuals, testified as to the impact brought on by the changes made to the Architectural Practice Act during the 1963 regular session of the Legislature At the hearing a number of persons testified as to the equity in the administration of the revised act, and the effect that it had upon the practitioners of the building design profession.

FINDINGS

1. It was not the intent of the Legislature when the Architectural Practice Act was revised by Assembly Bill 2239 in the 1963 session of the Legislature, to work a hardship on anyone Reports coming back to members of the committee had indicated a disturbance on the part of some persons claiming that they were being denied their rights to practice in the field of building design and thereby were deprived of earning their livelihood as a result of the interpretations and administration of the measure.

2. It was conceded that some of the complaints over the administration of the statute could be corrected administratively

3. In the event that the administration of the statute is arbitrary and discriminatory and is not remedied administratively, amendments should be proposed at the 1965 session of the Legislature to correct any of these inequities

4. Serious objection was raised over the fact that the period for applying for registration as a building designer was concluded on March 18, 1964, and that there were a minimum of at least 180 applications or requests for applications received following the deadline. The Attorney General's office informed the Designers Qualifications Advisory Committee that they could not consider these late applications or the requests for the applications according to the wording of the present statute. Most of those persons testifying agreed that it might be advisable to amend the statute to allow an additional period for making application for registration

5. Considerable testimony was presented opposing the interpretation which has been placed upon the qualifying experience for registration as building designers While there were sharp dif-

ferences expressed as to the interpretation of the statute, opinion was expressed that the interpretation should be rather liberal, and if there was a question of a doubt the applicant should be registered as a building designer The basis for this expressed opinion was that ultimately building designers as a classification would eventually be phased out

6 Concern was expressed by members of the committee that experience acquired while in the employment of someone else was not counted in the qualification for registration as a building designer, as it is entirely possible that in any profession an employee may in the terms of ability and capacity exceed that of his employer Therefore, many competent people may be excluded from registration

7 The need was expressed to clarify in the statute the terms "associate with" and "the degree of responsibility."

8 A suggestion was presented calling for radical changes in the statute regulating the practice of architecture and the registration of building designers The committee felt that recommendations calling for wholesale changes in the act regulating the practice of architecture and the registration of building designers was both unrealistic and impractical

RECOMMENDATIONS

1 There should be a change in the statute that would permit the re-opening for a reasonable length of time the period in which applications for registration as building designer may be submitted.

2 In the event there was a continuation of the problems of interpretation of the statute with regard to the registration of building designers, changes in the statute should be introduced giving a little more discretion to the Designers Qualifications Advisory Committee in the matter of applicants lacking time and experience requirements and of interpreting qualifying experience to include persons in key or responsible positions while in the employment of others.

3. Include a definition section for the purpose of interpreting the terms "associate with, responsibility, and supervision"

CITY AND REGIONAL PLANNERS

House Resolution No 338 by Assemblyman Clair Burgener (1963 Regular Session), relating to a study of the advisability of licensing city and regional planners, was heard by the committee in San Diego, Tuesday afternoon, January 21, 1964.

FINDINGS

1. City and regional planning is a relatively new activity, only about 40 years old Today planners are employed by cities and counties and the state, all agencies of government, as well as by large private developments Two-year Master's degrees in City and Regional Planning are now available from many universities However, there are no established qualifications for persons in the profession in California, no minimum standards of education and experience by which competency can be judged

2 The California Chapter, American Institute of Planners, has been seeking a method to establish such standards for the profession They have had a committee working on legislation and circulating it within their own group and among interested persons and organizations in related fields Although there is a problem of definition and overlap with other professions, and it is unlikely that a field such as planning can be neatly contained and packaged, they feel it is probable that a minimal core of professional competence can be defined Their representatives would like to license, or register, the title of planning on the state level, rather than the practice, leaving the practice of planning still open to any person, and other professional groups would not be excluded from the practice Some of the other states do have such registration at present.

3 Opponents to the proposals, representing the League of California Cities, the Building Engineers Association of California, Society of Professional Engineers, etc stated that merely registering persons does not in itself insure competency, and that a "proliferation of additional boards for registration is not in the public interest." They stated that the "area of planning is very broad and complex, and is an 'art' rather than a science. Public safety aspects are in the field of civil engineering and are already safeguarded " It was also suggested that if some form of registration is found necessary, it be put under the umbrella of the present board of registration for civil and professional engineers. They protested the need for such registration or licensing, as public bodies already select their planners by open competitive examinations The representative of the County Supervisors Association while taking no stand, suggested that any legislation or definition include the words "County Planner" as county government is very active in this field.

4 The State Planning office has already established its own standards The Planning Advisory Committee, under the Urban Planning Assistance Grant Program, has a statement of minimum qualifications for urban planners and approves consultants suggested by cities The statement provides that.

The minimum experience and education required of the individual shall be as follows.

1 Experience—Six (6) years of professional planning work involving the preparation of comprehensive plans for cities, counties or urban area

2 Education—One only of the following educational degrees may be substituted for a portion of the required experience on the following basis

a Ph D in planning or a MCP—3 years,

a Ph D or MA in a related field, or an AB in planning—2 years;

an AB in related field—1 year

3 The term "related field" as used in paragraph (2) above, is intended to mean architecture, civil engineering, economics, geography, landscape architecture, public administration, and traffic engineering.

or

The contractor shall present evidence of demonstrable experience in the accomplishment of similar studies of relative complexity as those proposed as a part of the urban planning assistance program

5 The problem before the committee of the advisability of licensing these planners boiled down to three basic questions·

Is there a public need?

Will registration of the title of planner protect public agencies?

Under what professional group should they be?

RECOMMENDATIONS

1 Licensing legislation is not recommended at this time, but further investigation of the matter should be made.

COSMETOLOGY

Two hearings were held by the Committee on the subject of Schools of Cosmetology and related problems (House Resolution No 616—Kennick and Assembly Bill No 3087—Meyers), one in Los Angeles on November 7, 1963, and one in San Francisco on August 6, 1964

FINDINGS

1 It was alleged that competition for patronage between schools and licensed shops has resulted in problems detrimental to the public and to the industry Mrs Naomi Lovett, representing the the California State Association of Journeyman Barbers, Hairdressers, Cosmetologists, Masseurs and Proprietors, stated

"It must be quite evident to everyone concerned that something must be done to stop the practice of the schools from openly and legally competing with shops for the patronage of the public, without considering those students in the schools of cosmetology as employees Either the workers must be considered as employees and be compensated as such under the laws of the state as set forth in the Labor Code, or they should be prevented from working on the public for pay by patrons, in the same manner as licensed operators work on the public in shops The incentive to operate a school under such a system far overweighs the incentive to operate a shop and abide by the laws governing workers The minimum wage and the maximum hour law for women and minors should be respected and observed in every field of endeavor where the law is applicable This law applied to beauty shops This was the reason for A B 3087 It should be re-introduced and passed by the Legislature so it will become law. The failure to pass A B 3087 prompted the introduction of H R. 616 A thorough study by this committee perhaps will lead you to conclude, as we have, that such a law should be enacted by the Legislature

Then, too, we submit that a junior operator, one who learns this vocation in a shop, is covered by the minimum wage and maximum hour law of California This is pure and unadulterated discrimination A beauty shop must pay the minimum wage to the learner, but the so-called school does not

We are of the opinion that the Legislature should give serious consideration to providing for a full-time board of three or five members so as to specifically place responsibility for the administration of the act upon individuals who are practitioners, and provide for these individuals conducting the examination, conducting the hearings, and establishing policy California had 73,966 licensed cosmetologists in 1962 with 13,792 shops, and this large number certainly justifies a full-time board

Then too, we suggest that serious consideration be given to enacting legislation which will provide for a ratio of population for each cosmetology school such as was provided for in A B 1599 of the 1963 session Such a law is existant in this state governing barber colleges, and many states are giving, or have given, serious consideration to similar legislation A B 1599 passed the Assembly but was referred for interim study in the Senate

In cosmetology, a person can graduate from trade school after 1600 hours of training and instruction, apply for, and take, the examination to become a full-fledged licensed operator If the candidate is successful in passing the examination, he can immediately become a shop owner and operate independently We are convinced that this is not in the best interest of the student, the vocation, or the public The Legislature may well consider a law which will provide for a period of apprenticeship or internship for a period of one or two years 1600 hours is a very short time in which to prepare a person to become an entrepreneur or a manager of a business as complex as cosmetology "

Mr William G Sinn, however, representing the California Association of Schools of Cosmetology, denied that such competition exists to any significant degree He submitted figures to the committee to show that there were as of June 30, 1964, 201 schools of cosmetology in California and 17,436 beauty salons; that school clinic sales in California are only 1½ to 2% of the total spent for beauty services in California; that the people who patronize school clinics are principally drawn from the lower income groups who would not regularly patronize beauty salons, and that if effective competition existed, beauty salons could not have expanded as they have—an increase in beauty salons of 100% during the last 12 years compared to a population increase of only 50%

2 It was established that schools have a cost advantage on supplies purchased at special discounts

3 Complaints were made that there are too many schools and that there is not enough room in the profession to take care of the trainees Representatives of the schools claimed that competition among the schools is taking care of this problem automatically.

4 No criticism was offered of public schools teaching cosmetology

5 Examples were submitted of misleading and illegal advertising

(a) By schools, in which cosmetological services were offered at cut prices, but the fact they were schools rather than licensed shops was concealed.

(b) By pseudo barber shops operating in the Los Angeles area, who advertised themselves as barber shops but which were really beauty shops licensed under the Cosmetology Board. These shops had been illegally competing with legitimate barber shops This situation had been reported to the Board

months prior to the November, 1963 hearing At the succeeding hearing on August 6, 1964, it was found such shops were still operating in the San Fernando Valley despite the new rule adopted and placed into full force and effect by the Cosmetology Board The Chairman suggested the Cosmetology Board must be derelect in its duty or extremely understaffed not to have revoked the license of such shops, or that legislation should be introduced clearly defining the difference between barber and beauty shops

6 The representatives of the school groups admitted there are apparently some unethical and unlawful practices followed by some individual schools of cosmetology, but did not agree that legislation is necessary to correct them They contended that the Board of Cosmetology and the Department of Investigation and Inspection already have the power to eliminate such practices, or that the other problems can be solved by changes in the Cosmetology Board Regulation As a voluntary step, the California Association of Schools of Cosmetology has embarked upon an Accreditation Program of private schools of cosmetology in California to elevate the standards and practices of the schools above the legal requirements The criteria would require that all advertising state that work is performed by students, that applicants be screened, that the school represent correctly the probable earnings of the student in the industry, charge tuition at least sufficient to pay the salary of teachers, and in cases of dismissal, that the student shall receive a pro-rata refund It was the contention of this group this program would shortly correct the abuses attributable to the minority of school establishments.

RECOMMENDATIONS

1. The Board of Cosmetology should be a policy making body, meeting once a month to lay down the policy Regular notices should be sent out announcing such meetings. There should be a strong executive officer to carry out such policy, and the staff and budget of the Board should be augmented to enable them to enforce their regulations The Board should submit to the Legislature at the next session a clear cut definite program, with a request for legislation for any additional authority or finances needed

2. Problems in the industry should be settled as far as possible by regulatory measures decided upon by the Board and enforced by them rather than by putting details into the law

3 The Board should be more aggressive in enforcing their regulations on false advertising in cases such as school ads and pseudo barber shops If necessary, legislation should be introduced to define clearly the functions of a beauty shop as distinguished from a barber shop.

4. It is recommended that Board membership should be balanced among salon owners and operators and school owners and teachers.

5. The Board should be given the power to raise the standards of the schools, the requirements for opening schools, the student training programs, and to insure that they operate as schools rather than in competition with licensed shops The latter could be accomplished in one of the following ways
   (a) Students to receive a minimum wage for services performed on the public
   (b) Schools to provide cosmetological services to the public for not more than the cost of materials, with the schools deriving their income from paid tuitions
   (c) Board to supervise schools more closely to eliminate abuses
6. There should be some limitation on the number of schools or cosmetological students in proportion to the need Three methods to accomplish this were suggested by committee members
   (a) Direct legislation as in the case of barber schools
   (b) Legislation giving the Cosmetology Board the power to issue or withhold a license, based upon the finding of public convenience and necessity
   (c) A moratorium be established on the issuance of school licenses until an economic study of the problem has been completed

DRY CLEANERS

House Resolution 547 and Assembly Bill No 2890 (Cusanovich—1963) relating to the Dry Cleaning Industry were heard by the committee Thursday morning, November 7, 1963, in Los Angeles

FINDINGS AND RECOMMENDATIONS

1 The Dry Cleaner's Law which has not been changed since 1945 does need revision due to the changes in the industry and the development of the self-service dry cleaning business New types of equipment and new processes, such as the coin-ops, present new problems.

2 New categories such as the clean only and clean and spot categories have been handled administratively A redefinition of educational and experience requirements should be established by the Board of Dry Cleaners but legislation is necessary to give a legislative base to the rulings of the Board A difference of opinion exists in the industry as to the number of hours of training that should be required before an appleant is eligible to take the examination.

3 At present, public protection is afforded solely through the screening of applications as to moral character and testing ability through examination Protection to the public in other areas would require additional legislation.

4 Problems of law enforcement exist which would require some legislative action.

5 Some of the new synthetic materials are not renovatable by the usual cleaning methods It was suggested that legislation might be introduced to require that in garments sold in California, manufacturers use materials that can be renovated, and attach labels on garments recommending the proper cleaning method

6. Two schools have already been started in California in Los Angeles and San Francisco to train persons in the Drycleaning business, financed by Federal Funds under the Manpower Development Training Act.

7 All groups expressed their willingness to work with the Board in formulating legislation satisfactory to all It was recommended that a study group be established for this purpose comprised of representatives of the Legislature, the State Board of Dry Cleaners, the Department of Professional and Vocational Standards, the public, various segments of the industry, and labor The Board agreed to take the initiative in setting up and arranging the meetings A series of hearings were thereafter conducted by the Department of Professional and Vocational Standards with representation from all segments The report presented by this group is as follows·

BOARD OF DRY CLEANERS

INTRODUCTION

Pursuant to recommendations made by the Assembly Governmental Efficiency and Economy Committee and the Senate Business and Professions Committee, Director Harold J Powers of the Department of Professional and Vocational Standards, in January 1964, appointed a Committee to resolve problems in the dry cleaning industry

Representation on the Committee was had by various segments of organized labor concerned with all phases of the dry cleaning industry, representatives of Coin-Operated dry cleaning equipment manufacturers and Coin-Operated dry cleaning establishments, conventional dry cleaning plant owners and operators, representatives of the California Dry Cleaning Association, the State Board of Dry Cleaners and public members Well attended meetings were held throughout the State and testimony was taken and considered by the Committee from all those attending

Meetings were held each month commencing in January 1964 and ending in June 1964 A summary of the problems encountered and the Committee's proposed solutions are as follows.

1. Classification of Coin-Operated Establishments

Coin-Operated dry cleaning establishments are of such recent origin that the dry cleaner's law up to the 1963 session of the Legislature, could not and had not considered the problems of such enterprises An Attorney General's opinion decided that Coin-Operated dry cleaning establishment was a dry cleaning plant as defined in the dry cleaner's law The result of the opinion made it incumbent upon Coin-Operated establishments to have a fully qualified and properly licensed plant operator on the premises at all times the establishment was open and operating This posed a burden, both financially and in man power for the owners of these businesses, due to the scarcity of qualified operators and the cost of using them

The present law also provides, that as a pre-qualification for the examination for licensure as a plant operator, the applicant must possess either one years experience in the industry or the completion of 360 hours of approved instruction in a dry cleaning school. The examination consists of a written test and a manual spotting and pressing practical examinations

The owners of many of the Coin-Operated establishments had no previous experience or training, and, therefore, could not qualify to take the examination to operate their own establishment Many therefore, were required to hire a qualified operator. Others, are owned by one or more persons who merely invested their capital in these establishments and who were led to believe that being Coin-Operated the general public could operate it and no attendant was required.

The Dry Cleaners law does not permit the Board to adopt rules and regulations which would alleviate some of these problems and legislation is required

Additionally, the public safety is greatly involved as the machines use solvents which are highly toxic and can do great bodily injury if not properly handled and controlled

It is now universally agreed and accepted that an attendant is required at all times that an establishment is in operation for the protection of the public and the owner It is also agreed that knowledge of equipment, types of fabrics, dry cleaning solvents, their use and dangers, are knowledges an attendant should possess.

RECOMMENDATIONS

After careful consideration, the Committee proposes that the Dry Cleaner's law establish three categories of plant operator. They are:

a Clean only.
b Clean and spot.
c Clean, spot and press

The clean only category would be available to those Coin-Operated establishments where only cleaning will be done by use of Coin-Operated equipment, operated either by the public or an operator with a clean only certificate To obtain a license as a clean only operator, the applicant need pass only a short written examination and need either four months of experience or possess 120 hours of approved schooling

The clean and spot license would permit the operator to spot clothing in addition to cleaning as mentioned and the test would additionally include a practical examination for spotting ability. Spotting would involve an additional four months experience or 120 additional hours of training in an approved school for spotting

The clean, spot and press category would be similar to the present plant operator certificate and embrace cleaning, spotting and pressing with these same requirements as at present (See proposed new Section 9550 5 attached.)

2. Sales of Equipment to New Installations and Sale of Existing Establishments

Some salemen sold expensive Coin-Operated dry cleaning equipment without informing the purchaser that there was a dry cleaner's law and that a license would probably have to be obtained or that a qualified operator would have to be on the premises, etc Another problem often encountered, was that of an establishment which had been sold to a new owner without the previous owner advising the purchaser that a license was required and that to obtain such license an examination, or the hiring of a licensed operator, was involved

The problem of closing these establishments to protect the public works a great financial hardship upon these purchasers To permit them to operate until they could either secure a qualified operator or pass the required examination is both a moral and legal problem These problems were greatly accentuated with the advent of Coin-Operated machines

Needing solution, is how to protect the public and at the same time acquaint the purchasers of either equipment or establishments, with the requirements of the California Dry Cleaner's law

RECOMMENDATION

It was unanimously agreed to insert a provision in the Dry Cleaner's law to require sellers of equipment and businesses, to notify prospective purchasers that a license or licenses may be required and to provide penalties for failure to do so (See proposed new Section 9538)

MINORITY RECOMMENDATION (Assemblyman Leroy Greene)

If proposed Section 9538 becomes law, how does the seller know he has this new obligation? The proposed section even implies that the agreement is null and void if the seller neglects to inform a properly licensed buyer that a license may be required

This proposal could establish a precedent that would eventually require a seller of an automobile to inform the purchaser that he must obtain a driver's license

3. Dry Cleaning Agencies—Rural Areas

There are in the rural areas of the State many businesses, such as barber shops, grocery stores, and the like, who, as an accommodation to their customers, serve as a "dry cleaning drop" The license fee for a dry cleaning establishment is often more than the profit obtained from serving as a drop The problem is, therefore, how to provide a service and protection to the public at a reasonable cost

RECOMMENDATION

It was agreed that after properly qualifying for an agency license and paying the required fees, that those agencies who thereafter can show to the satisfaction of the Board that their gross business for the preceding year was $150 00, or less, then the renewal fee for such agency should be $2 00 per year, for each year in which such gross business shall remain at $150 00 or less (See proposed new Section 9582e)

MINORITY RECOMMENDATION (Danielson and Greene)

No fee should be charged in such an instance A dry cleaning agency is merely a place to leave and pick up dry cleaning that is done elsewhere The dry cleaning establishment is licensed to perform the work The dry cleaning agency furnishes a pickup and delivery type of service exercising no skill or judgment beyond transmitting clothes and information supplied by the customer The service rendered by a dry cleaning agency is not of such character as to require a license from the state

4. Bonding Requirements

Although the present Dry Cleaner's law, section 9547, provides for a bonding requirement a technical deficiency makes it inoperative for all practical purposes The committee felt that public protection required an effective bonding provision, but also felt that discretion on the part of the Board was advisable to prevent an undue financial burden on those operators of establishments who are able to demonstrate to the Board's satisfaction financial stability It was also felt that a levy on the bond be made only upon a court order directing a payment in settlement of a claim

Another aspect of the problem was to prevent the Board from either adjudicating claims or acting as a collection agency for claimants.

RECOMMENDATION

The Committee proposes that Section 9547 be amended to give the Board authority to levy bonds whenever in its judgment the financial abilities of the licensee may be of doubtful mature It is understood by the Committee that rules would have to be adopted by the Board to detail the manner in which the bonding principle would be carried out

5. Composition of the Board

Both organized labor and the Coin-Operated segments of the industry expressed strong feelings about their lack of representation on the Board. The Coin-Operated industry had proposed a revision to the present composition of the Board to attain representation After considerable discussion it was agreed by the Committee to recommend that a representative of the Coin-Operated industry and a member of organized labor appropriately associated with the dry cleaning industry be added to the present Board The Committee felt this compromise solution was the best that could be arrived at

PROPOSED LEGISLATION AMENDING THE DRY CLEANER'S LAW CHAPTER 18, DIVISION 3, BUSINESS AND PROFESSIONS CODE

Add a New Section 9550.5 to Read:

9550 5 The board shall issue certificates of registration in the following categories

(a) Clean Only, to a person who has qualified to act as the registered operator in charge of a clothes cleaning establishment or a cleaning and dyeing establishment which performs a dry cleaning service but not a spotting or pressing service

(b) Clean and Spot, to a person who has qualified to act as the registered operator in charge of a clothes cleaning establishment or a cleaning and dyeing establishment which performs a dry cleaning and spotting service but not a pressing service

(c) Clean, Spot, and Press, to a person who has qualified to act as the registered operator in charge of a clothes cleaning establishment or a cleaning and dyeing establishment which performs a dry cleaning, spotting and pressing service

Amend Section 9551 5 to Read·

9551 5 An applicant for a certificate of registration shall:

(a) Be of good moral character Lack of good moral character may be established by showing that any of the grounds specified in Section 9540 3 of this code are applicable to the applicant

(b) Demonstrate by examination that he possesses the knowledge and skills necessary to qualify him to act as a registered operator in the particular category for which the certificate is sought

Add a New Section 9551.6 to Read:

9551.6 Except as otherwise provided by Section 9551 7, an applicant for a certificate of registration shall at the time he files his application have had the following active experience in the dry cleaning industry, in this or another state or, in lieu thereof, the following training in a school approved by the Board

(a) For a certificate in the Clean Only category, four months of experience or 120 hours of training

(b) For a certificate in the Clean and Spot category, eight months of experience or 240 hours of training

(c) For a certificate in the Clean, Spot and Press category twelve months of experience or 360 hours of training.

Add a New Section 9551.7 to Read:

9551 7 The board may by regulation reduce the amount of experience or the number of hours of training required by Section 9551 6 for the certificates described therein and may by regulation provide for the issuance of certificates of registration in other categories and prescribe the amount of experience or number of hours of training required to qualify for such certificates, except that in no event shall the board require more than twelve months of experience or 360 hours of training as a condition of qualifying in any category

Amend Section 9582 (b) to Read:

(b) Except as otherwise provided in subdivision (e) of this section, the renewal fee is thirty dollars ($30)

Add a New Section 9582 (e) to Read·

(e) The renewal fee for an agency license is two dollars ($2) if at the time he applies for renewal of this license the licensee establishes by proof satisfactory to the board that the gross receipt from his agency business during the preceding twelve-month period did not exceed one hundred fifty dollars ($150)

Add a New Section 9538 to Read.

9538. Prior to entering into an agreement to sell to a person in this State who is not licensed under this chapter any article of equipment which the seller knows or in the exercise of reasonable care should know is intended to be used by the purchaser in the performance of a dry cleaning service for which a license is required by this chapter, the seller shall notify the purchaser in writing that a license is required under this chapter for such intended use Failure to give such notice shall render the agreement null and void

Proposed Draft for Amendment of Section 9547

9547. The Board shall require that all licensees conducting, maintaining, or operating establishments as licensed by the Board, shall file with the Board a surety bond in the sum of $1,000 for the protection of the customers in the public interest The bond shall be executed by a surety company authorized to do business in this State and shall

be in such form and on such conditions as the Board may, in the public interest, by regulation, require for the protection of persons with whom the licensee may deal as a licensee, provided that where the Board has determined, upon application and required proof, that the financial responsibility of the licensee is unquestioned, the Board may waive the filing of the surety bond in accordance with such conditions as may be laid down by the rules and regulations of the Board

Payments to be made from the bond shall be for settling claims only after a court decision has been made in favor of such claim

Proposed New Section 9538 to Read:

9538 Prior to entering into an agreement to sell to any person in this State who is not licensed under this chapter any business for which a license is required under this chapter or any article of equipment which the seller knows or in the exercise of reasonable care should know *may be* intended to be used by the purchaser in the performance of a dry cleaning service for which a license is required by this chapter, the seller shall notify the purchaser in writing that a license *may be* required under this chapter for such business or such use of equipment, as the case may be Failure to give such notice shall render the agreement null and void

PROPOSED CHANGES IN COMPOSITION OF THE STATE BOARD OF DRY CLEANERS

(1) Amend Business and Professions Code Section 9530 to increase the membership of the board from seven to nine, one of the new members to be the owner of a coin-operated dry cleaning plant and one a representative from organized labor in the dry cleaning industry Keep in mind that because coin-operated plants are relatively new it might be necessary to exempt the coin-op member first appointed from the requirement that each member of the board "shall have been actively engaged in his respective branch of the cleaning industry for a period of at least five years prior to his appointment"

Minority opinion of Mr. Greene. "If the purpose of adding one of these new members on the Board is to insure the presence of a non-owner on the Board, the section should so state rather than requiring " . . a representative from organized labor " I am uncertain as to the situation when an owner-member of the Board is also a member of organized labor I also question whether this law should differentiate between 'labor' and 'Organized labor' "

(2) Amend Business and Professions Code Section 9531 to describe expiration dates for the terms of the first appointees in the two new categories, keeping in mind the constitutional prohibition against terms in excess of four years and the practical desirability of staggering expiration dates in such manner that a proper balance of representation is maintained on the board

GAMBLING AND GAMES OF CHANCE

A subcommittee of the full committee, to be known is the Subcommittee on Gambling and Games of Chance, was authorized by the Speaker of the Assembly on July 15, 1964, to investigate the facts surrounding the recent rapid growth of gambling activities throughout California particularly relating to the playing of the card game pangumgue A hearing on the matter was held in the City of Santa Monica on Friday, August 21, 1964.

FINDINGS

1 During the first nine months of 1964, a substantial number of establishments devoted to the playing of the card game pangumgue and involving gambling among the patrons commenced or sought to commence operations in California with most such activities concentrated in the Los Angeles Metropolitan area

2 The legal theory of preemption of the field of gambling regulation by the state was relied upon to legalize these activities and to prevent local law enforcement officials from interfering on the basis of local ordinances designed to prohibit or regulate such activities.

3 Applying the preemption theory as it has been developed by a series of California Supreme Court decisions (exemplified by the Carol Lane case which involved a Los Angeles resorting ordinance) local law enforcement agencies were in fact enjoined by the courts from enforcing local ordinances and gambling operations were conducted despite the existence of local regulations which otherwise could have been used to prevent them

4 Local officials were unanimous at the subcommittee's hearing in petitioning the Legislature for relief from this situation in the form of a specific amendment to Section 330 of the Penal Code to state that the Legislature did not intend to preempt the field of gambling regulation by the prohibitions contained in that section Some support was expressed for either a general nonpreemption statute to afford relief in all areas where preemption has been asserted by court decisions or alternatively for a constitutional amendment to cover either the general situation or specifically the gambling situation

5 Subsequently, on November 30, 1964, the California Supreme Court ruled in the case of Prival vs Mooney (a Long Beach case) that the Legislature did not intend to preempt the whole field of gambling by its enactment of the Penal Code statutes and that therefore local regulatory ordinances were valid As a result, the situation of local law enforcement agencies has reverted to its former status in regard to gambling activities and the operation of pangumgue gambling has ceased where it is opposed by local officials under local ordinances

6 The problem still remains concerning preemption by the state in other areas of law inforcement.

RECOMMENDATIONS

1 Legislation is recommended to specifically state the legislative intention not to preempt the field of gambling regulation in California in order to reinforce and stabilize the decision of the Supreme Court in Prival vs Mooney

2 Consideration should be given to the entire problem of preemption in all fields of law enforcement activity

o

INCOME TAX RETURN PREPARERS

House Resolution 228 (Quimby—1963 Regular Session) called for an interim committee study of regulation of persons purporting to be experts in the field of preparing income tax returns and offering their services in this capacity for a fee In some cases members of the public have been victimized by such persons who have been unqualified and who were no longer available to their clients when the returns were questioned A hearing was held on this subject by the committee in San Diego on Tuesday, January 21, 1964

FINDINGS

1 For many years the Internal Revenue Service has sought some effective and practical means of controlling persons who prepare income tax returns for others To date, no satisfactory solution has been found The traditional stand of the Federal Government is not to interfere with the right of the taxpayer to engage anyone he wishes to assist him in the preparation of tax returns.

2 There is no law or regulation or requirement for persons engaging in this activity at present, other than laws regulating Public Accountants, which many have felt have been ineffective. A problem does exist due to some "fly-by-night" operators.

3 At present there is no effective regulation of a person who prepares a fraudulent or inaccurate return who doesn't sign it as a preparer.

4. Although there is a Federal Statute making it a Federal crime dishonestly to prepare a Federal income tax return, there is an amorphous area in the State definitions of persons engaged in "preparation" of income tax forms and "routine and clerical activities" such as filling out short forms

5. Competent income tax preparers and advisors are very much needed in the field in California, with the increase in population, particularly of those over 65

6 Fear was expressed that licensing or registration might give the group the aura of state approval as if they had passed a competency examination, or had the professional standing of tax attorneys, certified public accountants, or public accountants

7 There is a problem of the cost of enforcement of any regulatory statute It was suggested it could be brought under the existing State Board of Accountancy for enforcement.

RECOMMENDATIONS

1 The most important factor in any proposed legislation is to require those who hold themselves out as being experts to be account-

able to the taxpayer and easily accessible following tax return time.

2 A survey should be taken by the Franchise Tax Board to obtain a breakdown of the people who prepare income tax returns for profit and to ascertain the extent of the problem. A questionnaire could be sent at the time the taxpayer's tax informational forms are sent by the Board The questionnaire should apprise the taxpayer that if he retains a party to prepare his return for compensation said preparer should complete the questionnaire and return it to the Board upon filing the tax return The questionnaire should solicit, among other things

(a) Name

(b) Business Address

(c) How long have you conducted business from this address?

(d) Are you a C P A _____ ___, Attorney _____, Public Accountant _____, Tax Consultant _____, Other _____?

(e) Do you also prepare Federal income tax returns for compensation?

3. A simple penalty statute might be introduced requiring preparers for compensation to sign returns and maintain a current correct mailing address with the Franchise Tax Board (perhaps to within three months of any change), or have a permanent place of business There would be a misdemeanor penalty for violation This would provide year-round service and availability

4. All preparers for compensation might be required to maintain current registration with a State agency for a period of perhaps two years following the filing of returns Such registration seems to be working well with the new law controlling TV and Radio Repair Dealers

5 There should be stricter enforcement of existing laws prohibiting misleading advertising The Franchise Tax Board might be given jurisdiction over the form and content of advertising by tax preparers

6 A strong public information program should be developed aiming at informing the taxpayer how to choose a tax advisor

7 Legislation might be introduced to require that any person holding himself out to the public as capable of preparing tax returns for the public be bonded, unless he is a licensed attorney, C P A or P A, or he is licensed to practice before the Internal Revenue Service Preparation of tax returns by unlicensed persons who are not bonded would be a misdemeanor.

JANITORIAL MAINTENANCE CONTRACTORS

House Resolution 390 by Assemblyman Charles Meyers (1964), directing the committee to study the subject of janitorial maintenance contractors including the need for state licensing and regulation of this occupation, was considered by the committee in San Francisco on Tuesday, December 15, 1964

FINDINGS

1 A proposed bill to create a State Board of Janitorial Maintenance Contractors in the Department of Professional and Vocational Standards to license and regulate persons in the business was submitted for the consideration of the committee by Assemblyman Meyers and officers of the Institute of Janitorial Maintenance Companies, representing various building maintenance companies The bill included a provision that licensees shall at all times meet the statutory requirements regarding Workmen's Compensation Insurance, and in addition shall maintain bodily injury and property damage liability insurance, for the protection of the public and the customer, and a third party blanket indemnity bond covering all employees It would not apply to paid employees who work directly for establishments operated by owners or governmental entities

2 Witnesses testified that legislation to make maintenance contractors responsible to the public is desperately needed in California due to multiple hazards inherent in the business—fire and safety risks, danger of theft and property damage, and injury to the public Potentially harmful chemicals are used and accidents sometimes caused by careless personnel Cases of theft were reported where the public had no recourse on a Janitorial Maintenance Contractor because he was not covered by bond and insurance liability, and the liability became that of the property owner It was asserted that constant danger of liability faces the property owner when he contracts with or hires a Janitorial Contractor who does not have the proper coverage or does not have the financial responsibility for his company operations

3 The volume of business was estimated at $200,000 000 to $300,000,000 a year Over 1200 contractors are in the business employing around 50,000 persons and the total is increasing each year The proponents of the legislation stated the public must be protected by requiring persons in the business to be properly trained and by having minimum requirements for insurance and bonding and financial responsibility and evidence of a knowledge of the business They felt the proposed legislation would accomplish this purpose

4 Opponents claimed the sponsors of the bill did not represent the whole industry, that licensing and regulation are not necessary

and would not solve any of the real problems in the industry, and objected to the establishment of another board and the cost of administration

RECOMMENDATIONS

1 The committee would recommend legislation requiring some financial responsibility in the form of insurance and bonding for janitorial contractors but further licensing and regulation of the occupation is not feasible at this time

LOCAL BUILDING AND ZONING LAWS

Assembly Bill No 2617 (Allen—1963) which redefined the term "local agency" so that cities and counties would no longer be exempted from being subject to the other's local law, was heard in San Diego on January 22, 1964

FINDINGS

1. Under present law, as interpreted by the court in the Hall vs Taft case in 1957, when one governmental agency builds in the jurisdiction of another, it is not subject to any enforceable control Counties can build in cities or cities in counties without having to comply with any law whatsoever It is the only situation where there is no law binding either the construction or land use (zoning)

2 The problem presently is confined to Los Angeles but the bill would have statewide effect AB 2617 was sponsored by the City of Los Angeles but was opposed by the County The County of Los Angeles feels the legislation would be a burden primarily to the county, particularly as to zoning Counties have to provide certain countywide services without being subject to the restrictions of cities.

RECOMMENDATIONS

1 The problem might be solved through voluntary cooperation between the city and county as in San Diego, rather than through a mandatory law.

2 There should be master planning laws city and countywide and joint uniform building codes, without exceptions

3 Governmental agencies should be required to conform to the same building restrictions as private enterprise for the same reasons and because many governmental buildings eventually house private enterprise projects.

4. Where there is no authority over construction a jurisdiction might request the State to step in and inspect to assure compliance with the code. Where there is no authority in zoning cases the local agency should have the right of appeal to the courts.

LOCKSMITHS

The subject matter of legislation to regulate and license locksmiths and key duplication machines and to create a State Advisory Board of Locksmiths in the Department of Professional and Vocational Standards was considered by the committee in San Francisco, Wednesday morning, December 16, 1964.

The original bill, AB 2106, was introduced at the 1963 Regular Session by Assemblyman Moreno, and was sponsored by the California Locksmiths Association, Inc. Assemblyman Donovan plans to introduce similar legislation at the next session and presented the topic to the committee.

FINDINGS

1. At present any person may call himself a locksmith after obtaining a business license and a retail tax permit. No bond is required, and no police permit is required except in a few communities. Proponents claimed that the public is endangered by the lack of regulation. Incompetent or dishonest persons may leave locks easily opened, in a condition so that they may jam, or may make duplicate keys for illegal purposes. Locksmiths may obtain lock picks by mail, car opening tools, code books, and safe opening information. No official records are kept of keys made, and no identifying number is required on keys, to help in crime detection. Proponents of the legislation believe an individual desiring to enter the locksmith industry should be thoroughly screened as to his character.

2. The bill was opposed by representatives of retail stores, especially those in the hardware business, and other small business establishments. Many such stores have key duplicating machines as an incidental accommodation to their customers. They objected to the additional "bureaucracy", red tape, bookkeeping, and extra expense that would be passed on to the public, and charged that the legislation would be difficult to enforce. They claimed that it would be a harassment to the legitimate persons in business and would not protect the public against the dishonest.

RECOMMENDATION

1. The committee feels that such legislation is unlikely to be successful at this time unless it is modified to apply only to professional locksmiths, eliminating key duplicating that is done incidental to other businesses.

MOTOR VEHICLE REPAIR AND SMOG CONTROL DEVICES

The committee heard testimony on Assembly Bill 2348 by Assemblyman Kennick (1963 Session) and Assembly Bill 2638 by Assemblyman Meyers (1963 Session) in San Francisco on Friday, August 7, 1964. The two bills provide for the registration and regulation of persons in the business of motor vehicle repair. A follow-up hearing on AB 2638 was held in San Francisco on Wednesday afternoon, December 16, 1964.

Public attention had been called to this problem in recent months due to new legislation providing for the installation of smog control devices on automobiles. Many complaints had been received by the committee chairman and the authors of the bills that the devices had been improperly installed, charges were excessive, and motor damage had resulted.

Assembly Bill 2638 creates within the Department of Professional and Vocational Standards the California State Board of Vehicle Repair composed of nine members appointed by the Governor. It vests in the board the duty to register persons engaged in the business of auto repairing and to issue certificates to journeyman auto mechanics, and prohibits a person from engaging in that business or from acting as a journeyman auto mechanic without being registered or certified. It was introduced at the request of the California Labor Federation and the California Conference of Machinists.

Mr. Meyers had introduced similar legislation at the General Sessions in 1959 and 1961 and the subject matter was referred for interim study to the Governmental Efficiency and Economy Committee during the 1959–61 interim and to the Committee on Transportation and Commerce during the 1961–63 interim.

Assembly Bill 2348 by Assemblyman Kennick creates within the Department of Motor Vehicles a Bureau of Automotive Repair. Dealer Registration under the supervision and control of the Director of Motor Vehicles. The Director is vested with the duty of enforcing this law, assisted by an advisory board composed of five members appointed by the Governor and confirmed by the Senate, with terms of four years. It provides for the registration of service dealers, defined as persons who, for compensation, engage in the business of repairing motor vehicles. The bill has no application to an employee of a service dealer if the employee repairs motor vehicles only as such an employee or to any person, who, for compensation, engages in the business of repairing the motor vehicles of a single commercial, industrial, or governmental establishment. It provides a procedure for handling of complaints made to the Director by the public against a service dealer.

AB 2348 was sponsored by the Office of the Consumer Counsel. Based on an estimate of 28,000 licensees who would be covered, a proposed budget totaling $531,116 a year was submitted to the committee as the cost of administering AB 2348. To provide the revenue a sliding fee

scale of not less that $20 nor more than $50 for each place of business in the state would be required

Since the problems due specifically to the installation of smog control devices go beyond the aspects of the proposed bills on motor vehicle repair, the findings and recommendations of the committee are listed under separate headings

MOTOR VEHICLE REPAIR

FINDINGS

1. All witnesses agreed a serious problem exists in California and some remedial legislation is needed The motoring public needs to be protected from unsafe mechanical work on cars and exhorbitant costs Mr Don Vial, representing the California Labor Federation, stated

"It is our conviction that the necessity of action stems both from the sheer volume of consumer expenditures for automotive repairs, and the important role which the automobile plays in our society as a primary mode of transportation . . . Today's automobile is an intricate piece of machinery, and most consumers of automotive repair services are incompetent to judge the quality of those services, and under these circumstances the automobile owner is unable to attest to the safety of his vehicle beyond the confidence he has in the services rendered on it "

Mr George Brunn, representing the Association of California Consumers told the committee·

"That rackets and incompetence exist in more than isolated cases in the auto repair field is hardly news. . . . The legislature last year brought TV repair under effective regulation by enacting the Electronic Repair Dealer Registration Law. The need is even more urgent with respect to auto repair, for cars have become a necessity of every day life, the money spent on auto repair is far greater than on TV repair and auto repair is of obvious importance for the safety of the driver, passengers, and other drivers on the road."

2 The major differences between the two bills considered by the committee were the different departments under which they would be set up, the certification of mechanics called for in the Meyers bill, and the registration approach in the Kennick bill The Meyers bills have been consistently opposed by owner groups on the ground that compulsory unionization should not be incorporated in the legislation Labor representatives expressed themselves as willing to make concessions, but recommended that provision be made for establishing the competency of mechanics, and that a final bill include the voluntary certification of mechanics All elements in the industry were willing to go along with the approach of open registration rather than licensing.

3. Some opposition was based on the possibility licensing or registration would increase costs to the public and would deter smaller communities and more remote areas from furnishing repair services.

4. Exemption for service station operations and dealers was requested by their representatives

5 The Department of Motor Vehicles objected to the Kennick bill as presently drawn, on the ground the establishment of a "bu-

reau" would be violative of the present organization of the department The department would recommend that the duties proposed for the bureau be (a) assigned to the existing Division of Registration; or (b) assigned to a new Division of Regulation, which would include present investigative activity.

RECOMMENDATION

1. Sponsors of the legislation should get together on one compromise bill to include the essential concepts and desirable aspects of each, to be introduced at the 1965 session.

SMOG CONTROL DEVICES

FINDINGS

1 Devices installed upon used cars are causing problems which have not developed in new cars which were engineered and designed for the use of a particular device

2 It was asserted that smog control devices required on old used cars is the first such retroactive or "aftermarket" program and leads to forced obsolescence of cars Additional motor tune-ups, new engines, etc , sometimes necessitated are an unfair and undue expense for the public The complaints, according to the Smog Control Board, are usually due to the incorrect installation of the device All agreed that crankcase devices on new and old cars have increased mechanical problems and the need for additional upkeep and expense

3 Charges were made that the devices even on new cars cause the consumption of more oil and gasoline which eventually can cause an increase in atmospheric pollution

RECOMMENDATIONS

1 Present law concerning inspections should be reconsidered

2 There should be a publicity program to inform the public of the necessity for servicing devices on cars

3 A modification of the present law is recommended in cases where installation would be detrimental to the vehicle or the installation charge out of proportion to the value of the car, or the law should be changed to require only new cars to have such devices.

OPTICIANS AND OPTOMETRISTS OPERATING IN DISCOUNT STORES

Assembly Bill 290 (Bane—1963 Regular Session) was heard by the committee in Los Angeles on Thursday, September 24, 1964 The bill provides that any dispensing optician or optometrist who maintains an office in any retail store which lays claim to a policy or a continuing practice of generally underselling competitors shall be deemed as offering to render his services under the representation that the fee for such service is at a discount or less than the average fee charged under like conditions by other persons so licensed

Under Section 651 of the Business and Professions Code, enacted in 1955, it is unlawful for any person licensed under this division to offer for sale or to sell any commodity or to offer to render or to render any service under the representation that the price or fee which is to be, or is charged for such commodity or service, or both, is at a discount . .

This legislation, therefore, would have the effect of making illegal the practice of optometry or dispensing opticians in such retail stores It would affect about 100 such practitioners, out of a total of about 2800 licensed in California

The bill had received a thorough hearing in committee in 1963 but was referred to interim study Similar legislation was introduced in 1961 (S B 1062—McCarthy) and was referred for interim study by the Senate Fact Finding Committee of Public Health and Safety This committee held two interim hearings on the subject matter, and its recommendation was against the bill, although they urged the passage of legislation to provide minimum standards for optometric services and sanitary and health standards for offices of optometrists in discount store locations and/or elsewhere * The latter legislation was subsequently passed at the following session

Testimony proffered at the hearing of the Assembly Committee on Governmental Efficiency and Economy by both the proponents and opponents was almost identical to that submitted at the prior hearings

Speaking in favor of the bill were Dr Bernard R Garrett, Chairman of the Legislative Committee of the California Optometric Association, Anthony Kennedy, Jr, California Association of Dispending Opticians, and a letter was submitted from Benjamin J Kingwell, President of the California Pharmaceutical Association, requesting that the bill be amended to include pharmacists The opponents were represented by J Howard Sturman, General Counsel for the California Association of Optometrists in Mercantile Establishments, Dr Philip S Young and Dr. Arnold Opengart, Optometrists, and a letter was submitted opposing the bill from Vincent D Kennedy, Managing Director of the California Retailers Association

* See Report of Senate Fact Finding Committee on Public Health and Safety, January 1963, pp. 56–61.

Proponents claimed that optometrists working in discount houses and retail stores tended to downgrade the profession and that the volume of business resulted in incomplete examinations

Opponents denied that the public received inferior care in these retail establishments or that discounts were offered in violation of the law All optometrists and dispensing opticians are licensed by the state, subject to sanctions for improper practices, and have had their practices periodically checked by the State Optometry Board investigator If their practice procedures or quality standards are found to be unlawful or dangerously inferior, they are already subject to suspension or revocation of their licenses.

FINDINGS

1. No evidence was offered conclusively indicating that the public is receiving inferior care in these establishments. Existing law appears to be sufficient for the protection of the public
2. A profession is not necessarily downgraded by location of offices where they may be available to the most people.
3. The problem as such is now dissolving as the discount houses themselves are undergoing a change in advertising policies.
4. It is lawful at present for any person, licensed or not, to sell eyeglasses containing refractions as merchandise, so long as he does not hold himself out as competent to "examine, test, or prescribe for the human eye." Thus dime stores and drug stores and their clerks can presently sell such glasses It was the consensus of the committee that this practice is harmful to the patients' eyes and endangers the public.

RECOMMENDATIONS

1 Legislation should be introduced to prohibit retail sales of eyeglasses containing refractive values except by or under the supervision of a duly registered optometrist or duly licensed physician or surgeon.

2 Legislation might be introduced prohibiting percentage lease arrangements when it could lead to a mass kind of practice adverse to the public welfare

PAWNBROKERS

Assembly Bill 2416 by Assemblyman John Quimby providing for the state licensing of pawnbrokers was heard by the committee Friday morning, September 25, in Los Angeles The bill would require all pawnbrokers to have a license issued by the Commissioner of Corporations, with an investigation fee of $100 and an annual license fee of $200. A bond in the amount of $1000 would also be required, with the commissioner given authority to require additional bonds if the original bond is depleted or impaired.

FINDINGS

1. There are at present about 220 pawnbrokers in the State of California They are supervised by local police departments but not by any state agency, although the Corporation Commissioner has authority over small secured loan operators, and the state law governs the interest charged and minimum rates and the laws of usury

2 Proponents claimed that the local ordinances concerning pawnbrokers are inconsistent and enforcement varies with the locale, and that a state agency should have supervision of the operation, without pre-emption of the field.

3. No serious complaints of injury to the public were reported. Complaints that have been brought to the attention of the authorities have dealt primarily with misleading advertising

4. Opponents of the bill declared that in the larger communities there is adequate protection to the public at present, and that in smaller areas the fees and requirements would be prohibitive The necessary permits now cost each pawnbroker about $350 a year, plus the license. In the small town the pawnbroking part of the usual business is subordinate, and the majority of the activity is in retail sales. If the proposed legislation were to pass, such operators would go out of the pawnbroking business and buy and sell instead, decreasing their services to the community.

5. Representatives of the Los Angeles Police Department testified that the proposed bill would deprive citizens of local remedies of action by a local agency and result in the loss of local police supervision and control. They doubted that a state agency could or would provide for the close supervision considered desirable for this type of business, and feared a state law might be interpreted as state pre-emption of the field.

RECOMMENDATIONS

1. Present state and local laws seem to be adequate for the protection of the public. The proposed bill would be a duplication of authority and regulation.

2. If any legislation is introduced it should include a paragraph to the effect that it is not the intent of the legislature to pre-empt the field and to replace local ordinances, rules, and regulations.

COMMUNITY PLANNING—PROPRIETARY HOSPITALS

Numerous complaints having been received by the Chairman of the Committee of restrictions on the development of proprietary hospitals, a subcommittee was set up for the purpose of investigating the complaints. The subcommittee, consisting of Chairman McMillan and Assemblymen Ferrell, Greene, Kennick and Whetmore, held a meeting in Sacramento, November 21, 1963

REPORT OF HEARING

Letters were presented to the committee from Dr Erle M Blunden, Director of the American River Hospital in the Carmichael area, and Fred Sullivan, Executive Director of the Davi-Cruz Investment Company which was constructing the Clark Binning General Hospital between Davis and Woodland They stated that in spite of the need for hospital facilities their expansion was being opposed and state and federal funds were being allocated to support hospitals in competition with the proprietary hospital built with private funds

John R Derry, Chief of the Bureau of Hospitals, Department of Public Health, explained the administration of the hospital licensing program, under the Hospital Advisory Board and the Council, and the allocation of Hill Burton Funds

Dr. Glenn Pope, President of the Sacramento County Medical Society, testified concerning the opposition of the society to the proprietary hospital which provides minimal services, but stated they had no objection to the expansion program of the American River Hospital He said his organization concurred in the stand of the Hamilton Report recommending that no hospital construction be condoned or supported that doesn't start with a minimum of 150 beds

John V. Lemmon, President of the Sacramento Regional Hospital Planning Council for the Sacramento Region, explained the background and activities of the Council, and stated the Hamilton Plan for hospital development disapproved the development of a proprietary hospital in the north area and supported the expansion of the Mercy-San Juan non-profit hospital there instead.

Dan Kelly, Administrator, Woodland Memorial Hospital, presented the point of view of that hospital group and the need for funds to rehabilitate the Woodland Hospital

James E. Ludlam, attorney for the California Hospital Association representing all types of hospitals, testified in favor of the planned approach to hospital building.

Dr Erle Blunden. President of the Board of Directors of the American River Hospital, reviewed the history of the development of that hospital He stated that they had been having difficulty getting zon-

ing and use permits to build and expand, due to concerted opposition, and had not received recognition of their request for representation on the Regional Planning Council *

Fred Sullivan, Executive Director and Coordinator of the Davi-Cruz Corporation which is building the Clark Binning General Hospital on Road 99 between Davis and Woodland, explained the background of their project. He stated a need for a hospital in that area had been demonstrated but they had been assured there was no possibility for many years of an allocation of Hill-Burton funds for such construction A group was therefore orgainzed to build the hospital with private funds After construction was started, Hill-Burton funds were allocated to the Woodland Memorial Hospital in the same area to modernize and enlarge.

Dr James Kennedy, Chief of Staff of the Clark Binning General Hospital, urged that the allocation of the Hill-Burton funds be more consistent.

Jerry B. Whitney, Attorney for the Clark Binning Hospital and the American River Hospital, charged that public funds under the Hill-Burton Act were being used to stifle the proprietary hospitals in their establishment and/or expansion.

Sherwin Memel, representing the Proprietary Hospitals Association of California, stated his group felt they had not had adequate representation in the hospital field.

John McMurdy, Councilman in the City of Davis, stated that the community of Davis did not wish to jeopardize the efforts of the community of Woodland to improve and rehabilitate their existing hospital, and that they would also be happy to see the Clark Binning Hospital go ahead. He did not feel they were incompatible.

Erwin W Meier, County of Yolo Manager-Executive stated that a chronic shortage of hospital beds existed in the county and that they were faced with an exploding population in the near future They expect such an increase in the need for indigent beds that unless a substantial amount of beds are provided by some other source, it will be necessary for the county to put up an additional wing for private patients, which it does not wish to do His opinion was that both the Woodland and Clark Binning Hospital facilities would be needed in the area

FINDINGS

1. The California Hospital Survey and Construction Program was established by the State Legislature in 1947. The legislation defined the purpose as follows:

   "The purpose of this act is to provide for the better protection of the public health, which is hereby declared to be a matter of statewide interest and concern, by cooperation with the United States Government in developing and carrying into effect a program for the construction of such hospitals as will, in conjunction with existing facilities, afford the necessary physical facilities for furnishing adequate hospital, clinic, and similar

* Subsequent to the hearing, American River Hospital was granted its permit by the County Planning Commission

services for all of the people of the State, and to that end to comply with and implement the Federal Hospital Survey and Construction Act; and by supplementing the federal assistance provided pursuant to said federal act by providing state financial assistance for the construction of such hospital and other facilities to those agencies empowered to construct and operate hospitals and similar facilities to which the State Constitution permits assistance to be made available."

2 The Bureau of Hospitals in the State Department of Public Health administers the Hospital Licensing Act of 1945 and the Hospital and Construction Act of 1947 with the assistance, advice, and guidance of a citizen group appointed by the Governor for each of these programs. The Advisory Board advises the Department on the standards for licensed facilities The Hospital Advisory Council advises regarding hospital planning and construction and on the allocation of state and federal funds. It is responsible for the Hill-Burton program, and the policy through which federal and state funds are allocated annually The Department has always followed the recommendation of the Council The last fiscal year, under the Hill-Burton Act, federal funds available to California were approximately $11,000,000, matched by state funds of $11,000,000, totaling a little over $22,000,000 allocated to approved projects. Proprietary hospitals are not eligible for such aid

3 Many hospitals that are today classified as non-profit started as proprietary hospitals

4 There is a trend in California toward the development of the large institutional type hospital with total health services administratively operated

5 There apparently is no significant difference between the cost of hospitalization to the patient whether it is in a non-profit or a proprietary hospital, although the non-profit hospital may have Hill-Burton aid in construction, may have the benefit of funds raised by public subscription, and pays no taxes.

RECOMMENDATIONS

1 The Hill-Burton program having been established to fill the need where funds and facilities are deficient, these public funds should not be allocated where private capital can furnish adequate services

2 Legislative authority might be given to the principle that regional hospital planning councils are necessary and helpful, but should not be recognized unless the proprietary hospitals in the area are also represented on their boards

3. Further study of the allocation of State and Federal Aid for hospital construction in California is recommended.

COMMITTEE LETTER OF TRANSMITTAL

ASSEMBLY CHAMBER, STATE CAPITOL
Sacramento, January 4, 1965

HON JESSE M UNRUH
Speaker of the Assembly
Members of the Assembly
Assembly Chamber
Sacramento, California

Gentlemen:

Pursuant to House Resolution No 500.10, 1963 session of the California Legislature, your Subcommittee on Mapping Laws Revision of the Assembly Interim Committee on Governmental Efficiency and Economy herewith submits its report covering the studies of the committees during the 1963–65 interim.

This report is being submitted as a separate section from the main body of the report of the Assembly Interim Committee on Governmental Efficiency and Economy since it was determined its probable circulation would be among a special group

Respectfully submitted,

LEROY F GREENE
Chairman
Subcommittee on
Mapping Laws Revision

LESTER A. MCMILLAN
Chairman
Assembly Interim Committee
on Governmental Efficiency
and Economy

MEMBERS OF SUBCOMMITTEE:
Lester A. McMillan
John T. Knox

2—L-1413

SUBDIVISION MAPPING

Assembly Bill No 700 (Knox—1963) dealt with the subject of subdivision maps. The Assembly Interim Committee on Governmental Efficiency and Economy heard testimony on this subject at a Los Angeles meeting November 8 and 9, 1963

Chairman Lester A McMillan suggested to the witnesses at that meeting that they form an advisory committee of persons interested in legislation in the field of subdivision mapping He asked Assemblyman John T. Knox to act in a liaison capacity between the interim committee and its Citizens' Advisory Committee

The Citizens' Advisory Committee met twice in Los Angeles and once in Sacramento. Assemblyman Alfred H Song presided at the first two meetings when heavy legislative activity prevented Mr Knox from attending. At these meetings the advisory committee worked in two groups: Subordinate Committee No. 1 was chaired by Charles R Martin, Monterey Park City Attorney; Subordinate Committee No 2 was chaired by Walter J. Hanna, Jr, a Gilroy engineer

March 20, 1964, Chairman McMillan of the Assembly Interim Committee on Governmental Efficiency and Economy, with the consent of Speaker of the Assembly Jesse M. Unruh, established the Subcommittee on Mapping Laws Revision Assemblyman Leroy F. Greene was appointed chairman of the subcommittee. Members appointed to the subcommittee were John T Knox, Lester A McMillan and Alfred H Song.

Written reports dated March 16, 1964, and May 29, 1964, were received from the Citizens' Advisory Committee These were discussed at a hearing of the subcommittee in Los Angeles June 12, 1964 Some 30 persons participated in the work of the advisory committee There were representatives of governmental agencies including city engineers, city planning commissioners, city attorneys, county engineers and surveyors, county planning commissions, county recorders Also participating were representatives of title insurance companies and finance houses, also persons from American Institute of Planners, Building Contractors Association, California Council of Civil Engineers and Land Surveyors, California Legislative Council of Professional Engineers, California Real Estate Commissioner, County Engineers Association of California, Home Builders Association and State Board of Landscape Architects Groups which did not participate in the work of the advisory committee but did testify at the June 12, 1964, hearing were· City of Fresno, International Conference of Building Officials and League of California Cities. Subsequent to the hearing the committee received communications from the State Building Standards Commission and the California Council, The American Institute of Architects.

FINDINGS AND RECOMMENDATIONS

1. Legislation should be enacted embodying the advisory committee's proposal for a new type of map, the "parcel map," defined in proposed new Sections 11503.1 and 11570 through 11575 of the Business and Professions Code, shown following this discussion. This proposal would authorize local agencies to provide in their ordinances for a "parcel map" to be used by planning bodies in processing land divisions that fall outside the definition of a "subdivision" It thus provides a vehicle for the administration of so-called lot-split ordinances.

Proposed new Section 11503.1, Business and Professions Code

11503.1. "Parcel map" refers to a map showing the division of land as described in subsections 11535(b) and (c)

Proposed new Sections 11570 through 11575, Business and Professions Code:

Article 6. Parcel Maps

11570. A parcel map under the provisions of this chapter shall comply with all the provisions of the chapter and, if there is a local ordinance, with all its provisions.

11571 (a) The parcel map shall be prepared by a registered civil engineer or licensed land surveyor It shall show ties to the centerline of streets or property lines bounding the property for the purpose of showing street widening, comformity with proposed building setback lines, and other information required by the governing body for the orderly administration of their zoning and building regulations.

Minority Recommendation—Assemblyman Lester A. McMillan:

11571 (a) The parcel map ~~shall be prepared by a registered civil engineer or licensed land surveyor. It~~ shall show ties to the centerline of streets or property lines bounding the property for the purpose of showing street widening, comformity with proposed building setback lines, and other information required by the governing body for the orderly administration of their zoning and building regulations. *The governing body may require that a parcel map be prepared by a registered civil engineer or licensed land surveyor.*

(b) In any case where the division of land creates four or less parcels, the parcel map may be compiled from record data available when sufficient survey information exists on filed maps and when the location of any boundary of the parcel map, either by monuments or possessory lines, is certain.

(c) In any case where the division of the land creates five or more parcels, as authorized in Section 11535, subsections (c) (1), (c) (2), or (c) (3), the parcel map shall be based upon a field survey of the land made in conformance with the Land Surveyors Act. In any case the parcel map may be based upon a field survey made in conformance with the Land Surveyors Act Where the

parcel map is based on a field survey, it shall be submitted to the county surveyor or city engineer for his examination prior to filing

(d) Within 20 days after receiving the parcel map, or within such addtitional time as may be reasonably necessary, the county surveyor or city engineer shall examine it for the survey information shown thereon, and if he is satisfied that it is technically correct, he shall place the following certification on the map:

COUNTY SURVEYOR'S CERTIFICATE
(OR CITY ENGINEER'S CERTIFICATE)

This map has been examined this ___ day of _____, 19___, for conformance with the requirements of Section 11571 of the Subdivision Map Act.

Signed_____
County Surveyor/City Engineer

(e) Where the field survey discloses conditions existing as described in subsections 8762(a), (b), (c) or (d) of the Land Surveyors Act, a record of survey map shall be filed as required by the Land Surveyors Act. The parcel map may then be based upon this survey.

11572. The parcel map shall conform to all of the following provisions

(a) It shall be a map legibly drawn, printed, or reproduced by a process guaranteeing a permanent record in black on tracing cloth or polyester base film, including certificates, except that such certificates may be legibly stamped or printed upon the map with opaque ink when recommended by the county recorder and authorized by the local governing body by ordinance If ink is used on polyester base film, the ink surface shall be coated with a suitable substance to assure permanent legibility

(b) The size of each sheet shall be 18 x 26 inches. A marginal line shall be drawn completely around each sheet, leaving an entirely blank margin of one inch The scale of the map shall be large enough to show all details clearly and enough sheets shall be used to accomplish this end The particular number of the sheet and the total number of sheets comprising the map shall be stated on each of the sheets, and its relation to each adjoining sheet shall be clearly shown

(c) Each parcel shall be numbered or otherwise designated.

(d) The exterior boundary of the land included within the parcel map shall be indicated by colored border The map shall show the definite location of the original parcel or parcels, and particularly its relation to surrounding surveys.

11573. If the parcel map satisfies the condition of this article and those applicable provisions of Section 11535 of this code, no final map need be filed.

11574. Certificates shall appear on a parcel map as follows.

SURVEYOR'S CERTIFICATE

This map was prepared by me or under my direction (and was compiled from record data) (and is based upon a field survey) in conformance with the requirements of the Subdivision Map Act at the request of (Name of person authorizing map) on ___ ____, 19___ I hereby certify that it conforms to the approved tentative map and the conditions of approval thereof; that all provisions of applicable state law and local ordinances have been complied with

(Signed and sealed) _____
L S *(or R C E) No* _____

RECORDER'S CERTIFICATE

Filed for record this ___ day of _____, 19___, at ___m in Book ___ of _____ at Page ___ at the request of _____
_____

(Signed) _____
County Recorder

11575 After affixing his certificate as required in subsection 11571(d) the county surveyor shall present the map to the county recorder for filing In cases where the county surveyor's or city engineer's certificate is not required then the surveyor, after affixing his certificate as required in Section 11574, shall present the map to the county recorder for filing

When any parcel map is presented to the county recorder and is accepted by him he shall so certify on the face thereof and shall fasten the same securely in a book of parcel maps which he shall keep in his office The recorder may not have more than 10 days to examine the parcel map before accepting or refusing it for filing The charge for filing and for indexing by the recorder shall be the same as provided for subdivided and under Section 27372 of the Government Code Upon acceptance by the recorder, the parcel map shall be a public record

2 The terminology of existing law carries the implication that an "advisory agency" is authorized to investigate the report on only "subdivisions " Legislation should be enacted broadening the authority of local planning bodies to consider land divisions other than "subdivisions "

Accordingly it is proposed to amend Section 11509 of the Business and Professions Code to read

11509 "Advisory agency" refers to an official or an official body designated by a local ordinance and charged thereby with the duty of making investigation and reports on the design and improvement of proposed subdivisions *of land.*

3 The language of Section 11525 of the Business and Professions Code, should be made more concise and meaningful The suggested new language follows

11525 *(a)* Control of the design and improvement of subdivisions is vested in the governing bodies of cities and of counties. ~~but, in all matters concerning such design and improvement, any decision by a governing body is subject to review as to its reasonableness by the superior court in and for the county in which the land is situated.~~ Every county and city shall adopt an ordinance regulating and controlling the design and improvement of subdivisions

(b) Any subdivider or person claiming to be aggrieved by the decision of a governing body *concerning a subdivision shall* ~~may~~ within 90 days after the rendering of the decision bring a special proceeding in the superior court *for the county in which the land is located* to determine the reasonableness *or validity* of the decision. The proceeding shall take precedence over all matters upon the calendar of the court, criminal, probate, eminent domain and forcible entry and unlawful detainer proceedings excepted

4 There is a question as to whether local agencies may assess fees to pay for the work of examining tentative maps for compliance with the law and regulations Section 11529 of the Business and Professions Code authorizes ordinances to provide a fee to be collected from the subdivider for examination of a final map The County of San Diego proposed legislation in 1963, Assembly Bill No 1045 (Barnes, Ashcraft, Burgener, Donovan, and Mills) was intended as a way to finance the agency's cost of examining maps other than final subdivision maps The bill was dropped because the Committee on Governmental Efficiency and Economy was expected to study the subject in depth

Legislation should be enacted to authorize local agencies to assess fees for examining tentative maps The following amendments to Sections 11526 and 11529, Business and Professions Code, are proposed to accomplish that purpose.

11526 The design, improvement and survey data of subdivisions and the form and content of tentative and final maps thereof, and the procedure to be followed in securing official approval are governed by the provisions of this chapter and by the additional provisions of local ordinances dealing with subdivisions, the enactment of which is required by this chapter

Local ordinances may provide a proper and reasonable fee to be collected from the subdivider for the examination of tentative and final maps.

11529 The county surveyor or city engineer shall make such detailed examination of *tentative and* final maps and such field check, if any, as may be necesaary to enable him to *ascertain compliance with this chapter and to* make *on final maps* the certificate required by Section 11593 ~~Local ordinances may provide a proper and reasonable fee to be collected from the subdivider for such examination.~~

5. Legislation should be enacted to prevent circumvention of the Subdivision Map Act by dividing property and placing liens on the parcels, then foreclosure or default results in the conveyancing of the parcels. The advisory committee called this process "subdivision by hypothecation." The Real Estate Commission and the League of California Cities prefer to call it "subdivision by financing" We will accept the latter recommendation pending consideration of the question by the Legislative Counsel Bureau

Under the Real Estate Act, subdivisions consisting of parcels less than 160 acres in size and divided for the purpose of sale, lease, or financing require an apllication to, and subdivision report issued by, the Real Estate Commissioner. Therefore any subdivision which has parcels 20 acres or 40 acres in size must have a subdivision report before it can be marketed. The Subdivision Map Act regulates the processing through local planning bodies of land subdivisions and does not affect the reporting requirement imposed by the Real Estate Act There should be limits set in the Subdivision Map Act to the end that the word "subdivision" as contemplated by that act does not include farms and other properties when transferred in 40-acre parcels, and does not include mountain and other properties in parcels of between 20 acres and 40 acres when there is access to the parcels that is approved by the governing body

Legislation should be enacted which would provide for the use of the "parcel map" in lieu of the record-of-survey map as the authorized alternative to "Subdivision" maps. The record-of-survey map was created by the Land Surveyors Act as the instrument to be filed by the surveyor to show the results of a field survey Present law requires that the record-of-survey map be used as an altenative to the final subdivision map in certain circumstances The Citizens' Advisory Committee came to the conclusion that the record-of-survey map cannot adequately serve this dual purpose and therefore recommended that a "parcel map" be created and authorized for use in controlling land divisions.

All of these proposals are contained in the following recommended draft of an amended Section 11535, Business and Professions Code

> 11535 (a) "Subdivision" refers to any real property, improved or unimproved, or portion thereof, shown on the latest adopted county tax roll as a unit or as contiguous units, which is divided for the purpose of sale, ~~or~~ lease, *or financing,* whether immediate or future, by any subdivider into five or more parcels; provided, that this chapter shall not apply to the leasing of apartments, offices, stores, or similar space within an apartment building, industrial building, commercial building, or trailer park, nor shall this chapter apply to mineral, oil or gas leases
>
> ~~(b) "Subdivision" does not include either of the following:~~
>
> ~~(1) Any parcel or parcels of land in which all of the following conditions are present: (i) the whole parcel before division contains less than five acres; (ii) each parcel created by the division abuts upon a public street or highway; (iii) no street opening or~~

~~widening, drainage facilities, or other improvements have been required by official action of the governing body, and (iv) the lot design meets the approval of the governing body.~~

~~(2) Any parcel or parcels divided into lots or parcels, each of a net area of 20 acres or more, to be sold or leased for commercial agricultural purposes each of which abuts upon an improved public street or highway and the lot design meets the approval of the governing body.~~

~~(3) Any parcel or parcels of land abutting on a public street or highway which comprises part of a tract of land zoned for industrial development, a tentative map of which has been submitted to and approved by the governing body as to street alignments and widths, sewage and drainage provisions.~~

~~(c) In either case provided in subsection (b) of this section, a tentative map shall be submitted to the governing body in the same manner as is provided in this chapter for subdivisions and approved by the governing body as to all requirements of this section and thereafter a record of survey map in accordance with the approved tentative map shall be filed pursuant to the provisions of Chapter 15 (commencing with Section 8700, Division 3 of this code), and thereupon conveyances may be made of lots or parcels shown on such map by lot or block number, initial or such other designation as may be shown on such map.~~

(b) Subdivision does not include any parcel or parcels of land which is divided into four or less parcels.

(c) Subdivision does not include the division of any real property improved or unimproved or a portion thereof shown on the latest adopted county tax roll as a unit or as contiguous units, which is divided for the purpose of sale, lease, or financing, whether immediate or future, if any of the following conditions prevail:

(1) The whole parcel before division contains less than five acres, each parcel created by the division abuts upon a public street or highway and no dedications or improvements are required by the governing body

(2) Any parcel or parcels divided into lots or parcels, each of a gross area of 20 acres or more, and each of which has an approved access to a maintained public street or highway

(3) Any parcel or parcels of land having approved access to a public street or highway which comprises part of a tract of land zoned for industrial development, and which has the approval of the governing body as to street alignments and widths.

(4) Any parcel or parcels of land divided into lots or parcels, each of a gross area of forty (40) acres or more

(d) In any case provided in subsections (c)(1), (c)(2), and (c)(3), and in the case of subsection (b) where a local ordinance regulates the division, a tentative map shall be submitted to the governing body or advisory agency (in the same manner as provided in this chapter for subdivisions) for approval as to area and lot design and as to all requirements of this section. Within

one year after approval of the tentative map, a parcel map showing each new parcel or parcels may be filed with the recorder of the county concerned. This map shall be filed prior to sale or lease of the parcels shown, and conveyances may be made of parcels shown on such map by number or other such designation Upon application an extension of the approval of the tentative map, not to exceed one year, may be granted by the governing body or advisory agency.

The governing body may require dedications or an offer of dedication by separate instrument for street opening or widening or easements If dedications or offers of dedications are required, such dedications shall be completed prior to filing of the parcel map An offer of dedication shall be in such terms as to be binding on the owner, his heirs, assigns or successors in interest, and shall continue until the governing body accepts or rejects such offer.

In the case of subsections (b) and (c)(3), and when local ordinance provides, the governing body may require the improvement of public or private streets, highways, ways, or easements as may be necessary for local traffic, drainage and sanitary needs

(d e) Nothing contained in this chapter shall apply to land dedicated for cemetery purposes under the Health and Safety Code of the State of California.

(e f) Nothing contained in this section shall in any way modify of affect any of the provisions of Section 11000 of this code

Changed Recommendations for No 5

5 The Citizens' Advisory Committee in its proposal for Section 11535 used the term "hypothecation" The Real Estate Commission and the League of California Cities prefer to use the word "financing" The word "financing" was used in this transmittal In 11535 (d) the Citizens' Advisory Committee allowed the subdivider 18 months to complete work after filing a tentative map In this transmittal the 18 months has been reduced to one year in accordance with the present law

---

6 The Subdivision Map Act defines the area within which local agencies may regulate subdivisions. With the expanded authority proposed now for local agencies to regulate divisions of land other than subdivisions a statement defining their scope of regulation in the new fields is needed It is proposed that Section 11540 1 of the Business and Professions Code be amended to accomplish this

11540.1. Nothing in this chapter prevents the governing body of any municipality or county from regulating the division of land which is not a subdivision, ~~but the~~ *provided that such regulations are not more restrictive than the requirements of this chapter* The validity of any conveyance, as defined in Section 1215 of the Civil Code, made contrary to the provisions of any ordinance prescribing the area or dimensions of lots or parcels, or prohibiting the reduction in area or the separation in ownership of land, or requiring the filing of a map of any land to be divided, shall not be affected, except that any such ordinance may provide that any

deed of conveyance, sale or contract to sell made contrary to the provisions of such ordinance is voidable to the extent and in the same manner provided in Section 11540.

7. The Citizens' Advisory Committee recommended amending Section 11550, Business and Professions Code, to require the signature on tentative maps of a civil engineer or a land surveyor whenever his services are required by law in the preparation of the map This proposal has been opposed by the City of Fresno, California Council, the American Institute of Architects and California Council of Landscape Architects The advisory committee contends that the proposal is intended as a reaffirmation of existing opinion law. Since there does not appear to be a clear need for this particular amendment the proposal is rejected

Changed Recommendation for No. 7

7 Recommendation No 7 concerns the proposal of the Citizens' Advisory Committee to require the signature of a civil engineer or land surveyor on tentative maps. This was opposed by some groups and is therefore rejected in this transmittal Note however that the transmittal includes such a requirement for final maps in its recommendation No 15. This proposal was contained in all of the submittals of the Citizens' Advisory Committee It is supported strongly by the County Engineers Association and has not been opposed by anyone

---

8. Legislation should be enacted to require public agencies to furnish a subdivider with a written statement about his subdivision map before taking final action on the map It is the opinion of the advisory committee that this procedure would make the hearings on map approvals more productive in that it would enable the subdivider to prepare for the hearing There was opposition voiced on this subject at the June 12 hearing. The opposition was directed primarily to the delays which this procedure would cause. The Citizens' Advisory Committee revised the proposed amendment in light of the opposing arguments and submitted a new proposal for amending Section 11552 of the Business and Professions Code which is here recommended

11552 *(a)* If there is no advisory agency, the clerk of the governing body shall submit the tentative map to the governing body at its next regular meeting, which shall act thereon within 40 days thereafter.

If there is an advisory agency, it shall report, *in writing*, on the map or maps of any subdivision submitted to it within 40 days after the tentative map has been filed and the report shall approve, conditionally approve or disapprove the map or maps of the subdivision

The governing body may authorize the advisory agency to report its action direct to the subdivider If the governing body does not so authorize the advisory agency, the advisory agency shall make its report to the governing body, which body shall act

upon the report within 10 days or at its next succeeding regular meeting after receipt of the report.

Any reports or recommendations on the map or maps of any subdivision submitted to the advisory agency or governing body shall be submitted in writing to the subdivider prior to final action on the map or maps by the advisory agency or governing body.

(b) If the subdivider is dissatisfied with any action of the advisory agency with respect to the tentative map, or the kinds, nature and extent of the improvements recommended by the advisory agency to be required, he may, within 15 days after such action, appeal to the governing body, unless an appeal board has been designated in which event such appeal must be to the appeal board, for a public hearing thereon. The governing body or appeal board as the case may be shall hear the appeal, upon notice to the subdivider and the advisory agency, unless the subdivider consents to a continuance, within 15 days or at its next succeeding regular meeting At the time fixed for the hearing the governing body or appeal board shall proceed to hear the testimony of the subdivider or any witnesses in his behalf and the testimony of the representatives of the advisory agency or any witnesses in its behalf It may also hear the testimony of other competent persons respecting the character of the neighborhood in which the subdivision is to be located, the kinds, nature and extent of improvements, the quality or kinds of development to which the area is best adapted and any other phase of the matter with respect to which it may desire to inquire into.

Upon conclusion of the hearing the governing body or appeal board shall within seven days declare its findings based upon the testimony and documents produced before it It may sustain, modify, reject or overrule any recommendations or rulings of the advisory agency and may make such findings as are not inconsistent with the provisions of this chapter or local ordinance adopted pursuant to this chapter.

If the subdivider or advisory agency is dissatisfied with any action of the appeal board with respect to the tentative map, or the kinds, nature and extent of the improvements required by the appeal board, either may, within 15 days after such action, appeal to the governing body. The governing body shall hear the appeal within 15 days or at its next succeeding regular meeting, unless the subdivider consents to a continuance, and shall give notice of such hearing to the subdivider, the appeal board and the advisory agency The governing body shall hear the argument of the subdivider, the appeal board and the advisory agency or of their representatives based upon the testimony and the documents before the appeal board, and may receive documents from or hear the testimony of any competent person respecting the character of the neighborhood in which the subdivision is to be located, the kinds, nature and extent of improvements, the quality of kinds of development to which the area is best adapted and any other phase of the matter with respect to which it may desire

to inquire into. Upon conclusion of the hearing the governing body shall, within seven days, declare its findings based upon the testimony and documents produced before it or before the appeal board. It may sustain, modify, reject or overrule any recommendations or rulings of the appeal board and may make such findings as are not inconsistent with the provisions of this chapter or local ordinance adopted pursuant to this chapter

9 Sections 11594, 11618 and 11629, Business and Professions Code, are repetitious. They deal with the filing of maps to correct errors in previously filed maps. Section 11594, Business and Professions Code, and Section 11618, Business and Professions Code, should be repealed. Section 11629, Business and Professions Code, should be amended as follows:

11629. Any map of a subdivision that has been filed for record may be amended to correct an error in any course or distance shown thereon or to show any course or distance that was omitted therefrom by the filing for record of an ~~amended~~ *amending* map of said subdivision *The amending map shall conform to the requirements of Section 11567* The county ~~engineer~~ *surveyor* shall examine such ~~amended~~ *amending* map and if such examination discloses that the only changes on the amended map are changes above provided for, he shall certify this to be a fact over his signature on the ~~amended~~ *amending* map. Thereafter the ~~amended~~ *amending* map shall be entitled to be ~~recorded~~ *filed* in the office of the recorder in which the original subdivision map was ~~recorded~~ *filed* *Upon such filing, the recorder shall note upon the map thereby superseded, the book and page reference to the amending map.*

10. With regard to condominium developments there is a need for more uniformity of terminology so that the developer and his surveyor, the title insurer, the finance house, the governing body and the recorder will have the same understanding as to the intent of the law The following set of proposals appear to have the support of all groups affected:

Amend Section 11535.1, Business and Professions Code, to read:

11535.1. For purposes of Section 11535, "subdivision" includes a condominium project, as defined in Civil Code Section 1350, containing five or more condominiums, *as defined in Civil Code Section 783,* ~~and~~ *or* a community apartment project, as defined in Business and Professions Code Section 11004, containing five or more parcels; but maps of such projects need not show the buildings or the manner in which the buildings or the airspace above the property shown on the map are to be divided, nor shall the governing body have the right to refuse approval of a tentative or final map of such a project on account of design or location of buildings on the property shown on the map not violative of local ordinances or on account of the manner in which airspace is to be divided in conveying the condominium Fees and

lot design requirements shall be computed and imposed with respect to such maps on the basis of parcels or lots of the surface of the land shown thereon as included in the project Nothing herein shall be deemed to limit the power of the governing body to regulate the design or location of buildings in such a project by or pursuant to local ordinances

Amend Section 783, Civil Code, to read

783 ~~A condominium is an estate in real property consisting of an undivided interest in common in a portion of a parcel of real property together with a separate interest in space in an residential, industrial or commercial building on such real property, such as an apartment, office or store. A condominium may include in addition a separate interest in other portions of such real property.~~

A condominium is an estate in real property, which real property includes a residential, industrial or commercial building or buildings or other improvements incidental thereto located on such real property, which estate consists of (a) an undivided interest in common in a portion or portions of such real property; and (b) a separate interest or interests in other portions of such real property, which separate interest or interests may be an interest in space or any other interest in such real property; provided, however, that there has been compliance with the provisions of Sections 1351 and 1355 of this code

Such estate may, with respect to the duration of its enjoyment, be either (1) an estate of inheritance or perpetual estate, (2) an estate for life, or (3) an estate for years

Amend Section 1351, Civil Code, to read

1351. The provisions of this chapter shall apply to property divided or to be divided into condominiums only if there shall be ~~recorded~~ *filed with the county recorder* in the county in which such property lies a plan consisting of (i) a description or survey ~~map~~ *plat* of the surface of the land included within the project, (ii) diagrammatic floor plans of the building or buildings built or to be built thereon in sufficient detail to identify each unit, its ~~relative~~ location and ~~approximate~~ dimensions, and (iii) a certificate consenting to the ~~recordation~~ *filing* of such plan pursuant to this chapter signed and acknowledged by the record owner of such property and all record holders of security interests therein. *The survey plat, diagrammatic floor plans, and certificate that are filed shall be in compliance with the provisions of Section 11567(c) and Section 11573(a) and (b) of the Business and Professions Code.* Such plan may be amended or revoked by a subsequently acknowledged recorded instrument executed by the record owner of such property and by all record holders of security interests therein *If the diagrammatic floor plan is part of a final subdivision map, then it may be amended by making changes on an exact copy of the original which is then filed If such amendment is for the purpose of correcting a variance between the diagramma-*

the floor plan and the completed units, then no governmental approval is necessary. Until recordation of a revocation, the provisions of this chapter shall continue to apply to such property. The term "record owner" as used in this section includes all of the record owners of such property at the time of recordation, but does not include holders of security interests, mineral interests, easements or right of way *Evidence of such ownership shall be presented at the time of filing with the county recorder*

11 The present law provides no time limit within which action may be commenced in court by a person claiming to be aggrieved by a zoning determination. Legislation should be enacted to make the procedure in zoning matters correspond to the procedure in subdivision matters in this regard.

Amend Section 65850 of the Government Code to read:

65850. The legislative body of a city or a county may, by ordinance, create either a board of zoning adjustment or the office of zoning administrator.

If so designated, and when so operating, acts and determinations of such board of zoning adjustment or such zoning administrator shall be directly reviewable by the legislative body, which may affirm, reverse or modify any such act or determination as it deems just and equitable The procedure for such review shall be as provided by ordinance of the legislative body After the act or determination has been so reviewed, ~~it may be reviewed by competent courts~~ *any person claiming to be aggrieved thereby, shall within 90 days bring a special proceeding in the superior court to review such act or determination*

12 Section 11626 of the Business and Professions Code contains a provision that the county recorder may not accept a final subdivision map until there has been compliance with all provisions of the Subdivision Map Act. This conflicts with other provisions which assign to the county surveyor or the city engineer the responsibility of determining the map's compliance with the law The provision in Section 11626 should therefore be removed

Another provision in Section 11626 allows the recorder 10 days to accept or refuse a final subdivision map This provision should be preserved Accordingly it is proposed that this provision be added in Section 11628 and the entire Section 11626 be repealed

Amend Section 11628 of the Business and Professions Code to read

11628 When any final map is presented to the county recorder and is accepted by him, he shall so certify on the face thereof and shall fasten the same securely in a book of maps of subdivisions or of cities and towns which he shall keep in his office *The recorder may have not more than 10 days to examine the final map before accepting or refusing it for filing* Upon acceptance by the recorder, the final map shall be a public record

13 Subdividers have complained that the subdivision map does not allow enough time after approval of a tentative map before a final map must be submitted. Subdividers now have one year and may be granted

an additional year. Failure to submit a final map within the time allotted terminates all proceedings. It appears to be true that both inclement weather and the large number of approvals required can sometimes cause unavoidable delays beyond the statutory time limit It also happens, sometimes, that the subdivider is required to meet changed requirements before a new tentative map for the same project will be approved, and the new requirements may completely destroy the plan.

On the other hand, the argument is advanced by some public officials that the approval of a tentative map freezes that piece of land to the particular development proposed on the map. Many such development projects are never consummated Coordinated planning of an area is not possible when parts of the area are not developed at the time and in the manner contemplated. Therefore, in a rapidly developing area, some public officials believe unwise to extend the statutory time for submitting final maps.

Legislation should be enacted which would authorize the governing body to establish by ordinance an initial time for submittal of the final map of not less than one year and not more than two years. This may be done by amending Sections 11554 and 11555 of the Business and Professions Code to read.

> 11554. Within ~~one year~~ *a period of one to two years, as prescribed by ordinance*, after approval or conditional approval of the tentative map or maps, the subdivider may cause the subdivision, or any part thereof, to be surveyed and a final map to be prepared in accordance with the tentative map as approved Upon application of the subdivider an extension of not exceeding one year may be granted by the governing body or by an advisory agency that is authorized to report its action directly to the subdivider. In the event the advisory agency denies a subdivider's application for extension, the subdivider may appeal to the governing body.
>
> 11555. Any failure to record a final map within ~~one year~~ the period *prescribed by ordinance* from the approval or conditional approval of the tentative map or any extension thereof granted by the governing body, shall terminate all proceedings Before a final map may thereafter be recorded, a new tentative map shall be submitted.

Changed Recommendation for No. 13

13. The Citizens' Advisory Committee recommended an 18-month period after filing a tentative map before the final map must be submitted There is still considerable opposition to this although the subdividers feel very strongly that 18 months is not long enough Accordingly, it is proposed in this transmittal that the matter be made a subject of local regulation so that the local governing body will be required to establish the period and it must be between one and two years

14 There appears to be some misunderstanding of Section 11611 of the Business and Professions Code regarding the acceptance of improvements in connection with the approval of a final subdivision

map In order to clarify the language of the section the Citizens' Advisory Committee proposed the following amendment:

11611. The governing body shall at its next meeting or within a period of not more than 10 days after the filing approve the map if it conforms to all the requirements of this chapter and of any local ordinance applicable at the time of approval of the tentative map, or any rulings made thereunder

The time limit for the approval of such map may be extended by mutual consent of the subdivider and the governing body. If no action is taken within such time limit or within the time to which it has been extended by such mutual consent, the map, if it conforms to all the requirements above set forth, shall be deemed to be approved, and it shall be the duty of the clerk of the governing body thereupon to certify the approval

The governing body shall at that time also accept, *accept subject to improvement,* or reject any of all offers of dedication and, *unless the streets and easements have been improved and accepted,* shall, as a condition precedent to the acceptance of any streets or easements, provide for the improvement of such streets or easements in accordance with standards established by such governing body by local ordinance applicable at the time of approval of the tentative map by requiring the subdivider (a) ~~to improve said streets and easements, at the subdivider's expense, prior to acceptance thereof~~ ~~(b)~~ to enter into an agreement with the city or county upon mutually agreeable terms to thereafter improve said streets and easements at the subdivider's expense, or (*e b*) to enter into a contract with the city or county upon mutually agreeable terms to thereafter initiate and consummate proceedings under an appropriate special assessment act for the financing and ~~improvement of said streets and easements~~ *installation of all the improvements required by local ordinance*

The standards may be adopted by reference, without posting or publishing them, if they have been printed in book or pamphlet form and three copies thereof have been filed for use and examination by the public in the office of the clerk of the local agency prior to the adoption.

Changed Recommendation for No. 14

14. Only a small change was made to the Citizens' Advisory Committee recommendation on 14. That committee provided Section 11611 that "The governing body shall at that time also accept, *subject to improvement,* or reject." This appears to have been an oversight on the part of the committee in not providing for the outright acceptance of offers of dedication, so the transmittal provides "The governing body shall at that time also accept, *accept subject to improvement,* or reject" offers of dedication.

15 The city engineer or county surveyor who must approve the engineering plans for development of a subdivision needs a provision in law to bar the submittal of incompetent plans and to require that the responsible engineer be named on the plans. Legislation should

therefore be enacted to provide for the engineer's certificate on engineering improvement plans. A new Section 11595 of the Business and Professions Code is proposed to do this

> 11595. Plans or designs, which are civil engineering as defined in the Civil and Professional Engineers Act, for improvements required by the governing body and local ordinance shall be prepared by, or under the direction of, and shall be signed by a registered civil engineer.

Changed Recommendation for No. 15

The wording in the submittal of this proposal by the Citizens' Advisory Committee was somewhat garbled and the provision was questioned by the subcommittee at the hearing June 12 In this transmittal the new section would provide that only final plans which are civil engineering must be prepared and signed by registered civil engineers

16 There were other aspects of the subdivision mapping laws with which the Assembly Interim Committee on Governmental Efficiency and Economy and its Citizens' Advisory Committee have been concerned These include handling of offsite and oversize improvements and the coordination of zoning laws with planning regulations. Further study is being given to these subjects by the Citizens' Advisory Committee since agreement has not yet been reached on corrective legislation in the areas.

ASSEMBLY INTERIM COMMITTEE ON PUBLIC HEALTH
CALIFORNIA LEGISLATURE

Sacramento, January 11, 1965

To the Speaker and Members of the Assembly:

Your Interim Committee on Public Health in accordance with your instructions, herewith respectfully submits a report on the subject matter assigned during the 1963–64 interim session

Respectfully submitted,

W. BYRON RUMFORD, *Chairman*

Members

E. RICHARD BARNES
CLAYTON DILLS
F. DOUGLAS FERRELL

INTRODUCTION

The Assembly Interim Committee on Public Health, authorized by House Resolution 500, was organized into the subcommittees listed below:

	Dates of hearings	*Location*
Institutions and Public Health Services	November 18, 1963 January 14, 1964 January 24, 1964	San Francisco Santa Barbara Los Angeles
Burt M. Henson, *Chairman* Milton Marks W. Byron Rumford Philip L. Soto Howard Thelin		
Professions and Occupations	December 6, 1963 September 11, 1964	San Francisco Los Angeles
Philip L. Soto, *Chairman* E. Richard Barnes Clayton A. Dills F. Douglas Ferrell Don Mulford George A. Willson		
Drugs and Hazardous Substances	November 12, 1963	Los Angeles
F. Douglas Ferrell, *Chairman* Milton Marks Don Mulford Leo J. Ryan George A. Willson		
Environmental Pollutants	December 2, 1963	Los Angeles
Leo J. Ryan, *Chairman* E. Richard Barnes Clayton A. Dills Burt M. Henson Howard Thelin W. Byron Rumford		

It should be noted that the following subcommittee reports can only contain a small, albeit very significant portion of the testimony contained in the hundreds of pages of hearings accumulated by the subcommittees during the past interim session. In the realization of this obvious limitation upon space, the transcripts of the hearings to which reference has been made in the reports have been deposited in the State Library in Sacramento, as well as with the Legislative Reference Service of the Assembly, and over 20 other libraries throughout California.

REPORT OF THE SUBCOMMITTEE ON INSTITUTIONS AND PUBLIC HEALTH SERVICES

Subcommittee on Institutions and Public Health Services

AB 2031: Hospital Staffing

Recommendations

1. That the Assembly Committee on Public Health strongly endorses the principle of fair hearing procedures for doctors in hospitals in California, and urges that doctors exercise their legitimate rights under these procedures
2. That legislation dealing with hospital hearings not be forthcoming at the present time pending a review of the adoption and operations of the recent hearing procedure amendment by the California Medical Association and the California Hospital Association to the Guiding Principles
3. That the Legislature continue to exercise surveillance and study this sensitive and important area dealing with medical care in California

Findings

1. That there have been cases in California of doctors dismissed from hospital staffs or denied membership without being given hearings.
2. That the Guiding Principles for Physician-Hospital Relationships have recently been amended to include the requirement that a hearing be given to a doctor who requests it. The provision reads

   "APPEALS

   "Medical staff bylaws should provide for an appeal and hearing when such is requested by a staff member or applicant who considers that his appointment was terminated or denied, his privileges curtailed or advancement denied, without sufficient cause, in an arbitrary, discriminatory, capricious or unreasonable manner"
3. That doctors have not for the most part fully exercised their rights when hearing procedures have been available
4. That close and continuing legislative scrutiny is necessary in this complex and sensitive area if Californians are to receive the best possible patient care.

Hermes asked Zeus how he should impart justice and reverence among men: Should he distribute them as the arts are distributed; that is to say, to a favoured few only, one skilled individual having enough of medicine or any other art for many unskilled ones? "Shall this be the manner in which I am to distribute justice and reverence among men, or shall I give them to all?" "To all," said Zeus, "I should like them all to have a share; for cities cannot exist if only a few voters share in the virtues, as in the arts"

Protagorus, 322

At the present time the hospital industry is facing three major unresolved problems—medical care for the aged, hospital planning, and

medical staff privileges The first two are being widely discussed and debated, but the seriousness of the third is just being realized. . . . there are serious indications that unless considerably more statesmanship is used in medical and hospital circles and control of medical staff appointments in the voluntary hospital system will be a governmental rather than a governing board function

JAMES LUDLAM,
"Medical Staff Privileges—A Legal Can of Worms,"
mimeographed address

Analysis

The enactment of hospital staffing privileges acts in New York [1] in 1963, Louisiana [2] in 1964, the similar legislation in Montana,[3] together with the trend of court decisions on public hospitals and at least in New Jersey for nonprofit hospitals, added to the existence of numerous suits in California courts,[4] indicate that the serious nature of the problem of hospital staffing and membership is beginning to be realized with a rush.

Three types of source material are utilized in the following report:

1 The case studies from the individual doctors testifying before the committees, or other particular cases which have come to the attention of the committee.

2. The survey which the Interim Committee on Public Health has made of the hospitals in California in which over 500 questionnaires were sent out and nearly 300 returned. (See the section entitled, "Questionnaire Results," pp. 22-40)

3. That which might be termed the evidence of learned commentary The doctor-hospital relationship is a vitally important aspect of one of the most important occupations in society and there is a body of literature which has accumulated on this specific subject as well as the subject matter to which it is only one part, i.e, professionalism, bureaucracy, organizational theory, and eventually the private government-public government relationship.

The Centrality of the Hospital

The problems of the hospital are not those of a declining institution, but are those of one of the key institutions of modern life. The President's Commission on the Health Needs of the Nation stated in 1952

> Hospitals are at the heart of our modern medical system . . . More and more (it) is becoming responsible for a continuing flow of health services to the community, supplying preventative services in health centers at one end of the line and rehabilitative and home care at the other end (39, p. 22)

The hospital has become such a significant institution that one of the recurring themes has been the degree to which it is a public utility (16), or is affected with the public interest (33, 36). The public-private

[3] Mont Rev Code 69-2917
[4] Letter from counsel of the California Hospital Association to committee consultant lists 10 cases in various stages at the beginning of 1965

differentiation is becoming increasingly blurred. Whereas the question of the degree of "publicness" of the voluntary nonprofit hospitals has been analyzed in different ways by the courts and by the commentators, the Legislature is not in a similar position to the courts in having the necessity of finding that the hospital is in effect a public utility before it finds that the presence of hearing procedures and standards are a valuable addition to public policy As the Legislature of New York stated in passing legislation in 1963:

> The legislature hereby finds and declares that discrimination in hospital staff appointments and in the granting of hospital professional privileges because of a physician's participation in any medical group practice or authorized nonprofit health insurance plan has created an emergency condition which is a menace to the health and safety of citizens of this state who require hospitalization and medical treatment. Therefore, in order to protect and promote the health and safety of the citizens of this state, the provisions hereinafter prescribed are enacted and both their necessity in the public interest and their urgency with respect to matters of public concern are hereby declared as a matter of legislative determination.

The central emphasis of this study is the relationship between hospitals and doctors, and further the proper role of state government. The courts have commented on the meaning of the hospital to the physician in his work

> It is common knowledge that a physician or surgeon who is not permitted to practice his profession in a hospital is as a practical matter denied the right to fully practice his profession.[5]

Medical Standards

One of the most meaningful aspects of the hospital-physician relationship is the control of medical standards. The role of the hospital in medical standards and the meaning of the State Medical Licensing Act are intimately related. The limitations of the present State Medical Practice Act have been studied by the Senate Committee on Public Health and Safety (11) and recommendations for improvement, concurred with by the medical and hospital groups, have been presented. Any changes in this act cannot help but affect the role of hospitals, but there is little doubt but that the hospital will continue to be the first line of review[6] At the present time, there is an element of fact in the assertion that "hospitals have a responsibility for the quality of care not merely in the hospital but generally in the state, in order to make up for the deficiencies in the state medical care act." (20, p 21)

This governmental vacuum has also been filled, in the sense of the awarding of certification, by the specialty boards and in the surveillance of actual day-to-day work by the hospital A recent chairman's

[5] *Wyatt* v *Tahoe Forest Hospital District*, 174 C A , 2nd 714

[6] It might be noted that the Governor's Committee on Medical Aid and Health recommended the establishment of regional medical disciplining committees and their "review of denial or revocation of membership on hospital medical staffs, and medical service agencies to confirm or deny the action." (8, p 70)

address before the Section on Internal Medicine of the American Medical Association summarizes the negative aspects and positive qualities of the board system:

> On the minus side is a too common belief that the boards are self-appointed licensing agencies with power to say who can and who cannot practice his specialty. This attitude is reflected in requirements set up by various governmental agencies and by some private ones which reward diplomates in a way wholly frowned upon by the boards themselves The result is unwarranted recognition for those who pass and undeserved heartache for many who fail. The boards themselves have repeatedly condemned this practice of granting increased rank and income to its diplomates. . .
>
> The merits of the system, however, are obvious in terms of the protection which certified consultants give to the public No one, of course, knows what would happen if the boards were to dissolve tomorrow, but it is hard to imagine what other stimulus would support this vast program—unless the graduate schools take over. (17, p. 927) See also 9, pp 19–23.

The centrality of the hospital in standards is in great part due to what the American Medical Association terms "a highly structured situation," (2, p. 44) or as the representative of the California Hospital Association stated at the November 18, 1963, committee hearing:

> Now unfortunately in the practice of medicine there is only one place that a man cannot commit mayhem and get away with it, and that is in the hospital. If he chooses in his office, the only thing that stops him is the threat of a suit of malpractice and intent, there is nothing else. In a hospital it is the threat of malpractice and the threat of losing his privileges, so therefore he must practice well (8, p 106)

The doctor is incomplete without the comprehensive facilities of a hospital.

> In this day of advanced medical knowledge and advanced diagnostic techniques much of what a physician or surgeon must do can only be performed in a hospital. In many instances only a hospital has the facilities necessary for proper diagnosis or treatment.[7]

The Present Legal Situation

The latest review article in American Law Reports on hospitals and physicians (24 ALR, 2nd 850) now over 14 years old notes that.

> In the slightly more than two decades which have elapsed since the publication of the earlier annotation, there have been more reported cases dealing with the question stated in the title than in the entire period prior thereto, due no doubt to the marked increase in recent years in the use of hospitals, which has given rise to new problems in connection with their management generally, and particularly as to the constitution, organization, and functioning of their medical staffs While a few general rules as to the

[7] *Wyatt, op cit*, p 714

> relative rights of hospitals and practitioners in the present connection have been evolved by the decisions, there is also a difference of judicial opinion in regard to some matters, and the conclusions reached have in some instances been influenced by particular factors, as hereinafter noted

There have been several recent reviews of the current status of legal opinion (20, 21, 22) and it is not necessary here to analyze in any great depth the rapidly evolving court decisions in this area Generalizations could be drawn but the conclusions of the study for the American Hospital Association are very relevant

> . . . generalizations are, however, illusory as assurances against legal attack on the actions of hospital authorities, both private and public, in restricting admissions to hospital practice A mounting tide of litigation challenges the action of hospital boards on a variety of grounds, both constitutional and statutory. It has been urged in behalf of boards so challenged that the defense of such actions may constitute a serious drain upon hospital finances and personal resources (20, p. 1)

The law book at this time is not an infallible guide to what *ought* to be done. As the legal counsel for the California Medical Association has stated:

> Now, actually, I know of no rule of law that guarantees right of counsel at an administrative matter such as a preliminary hearing by a section or a board committee I do think that one has to be practical and play it by ear and make one's decision on the basis of the particular case and the particular circumstances, because usually you are dealing with a question again basically of a person's livelihood. The area is sensitive and you frequently have problems that *are not answerable simply by looking at a law book and saying that this is what the rule is in the book.* (emphasis added) (37, p. 32)

Fair Practices: Hearings and Standards

There is a meaningful difference between what the courts have indicated is necessary and what informed opinion feels should be rendered. The opinion voiced by the representative of the medical association who testified before the committee was that hearings should be held (8, p 52) The representative of the California Hospital Association, Fred W. Moore, stated in reference to the earlier testimony by those who had not received hearings

> Now the only requirement that I have heard here today was that doctors be afforded a hearing I agree; they should have a hearing. I have a hearing tomorrow morning at 8 o'clock about a man on our staff He has the right to appear before the board of trustees, if he so chooses, at our hospital I think all hospitals should have this (8, p 106, 107)

The recommendations of the study undertaken at the request of the American Hospital Association also called for a hearing in almost all cases (20, pp 24–25)

The point must be made, however, that the consensus of opinion among those in leadership positions in hospitals has apparently existed for several years, while almost every one of the cases brought before the Assembly Public Health Committee has occurred in recent years Thus at the California Hospital Association Legal-Medical Institute held in the fall of 1960, Mr Samuel J. Tibbitts, Administrator of California Hospital, stated in answer to a question on the desirability of a hearing or hearings and characteristics

> I feel in all fairness that there should be a hearing. The hearing committee should consist of representatives from that section in which the doctor has his membership, or department, whether it be surgery or medicine And with general practitioners, it is generally wise to have at least one general practitioner on the hearing committee particularly when the subject of surgery might be involved.
>
> This hearing, and the results of the hearing, should be recorded, and the results and recommendations of the hearing committee should be forwarded on to the executive committee for their action, and the results, of course, of the actions of the executive committee have to go to the governing board
>
> If there is still a question regarding it, it is probably better that the staff and hospital handle it through their joint conference committee (37, p 32)

The Positive Contributions of Adequate Hearing Procedures and Standards

As a prologue to the analysis which follows, it should be made clear that one of the main perspectives in the discussion of hospital staffing membership and privileges is that sound adequate procedures and standards can aid immeasurably in maintaining quality in the hospital This is true for several reasons As the legal counsel for the California Hospital Association has written

> Having been through a great many of these situations, I have found that if the doctor is not given a hearing that no matter how bad he may be that he can rally substantial, if not overwhelming, support from other members of the staff as well as the public over the issue of the "un-American denial of a hearing " The merits of the case are soon lost when this issue raises its ugly head (28, p 7)

The hearing procedure can both prevent situations which would otherwise erupt and its very presence can lead to positive results in the hospital setting:

> Of critical importance is the fact that experience has proven that in by far the greatest number of cases the use of the hearing technique resolves the matter entirely This may result for two basic reasons· In the first place the very preparation for the hearing may develop the fact that the problem is not as serious as it first appeared; and in the second place, it is surprising how often a doctor who is required to explain a series of charts or other conduct suddenly comes to the first realization of the error of his ways.

> An important byproduct of a hearing of this character is often the generally tightening up of medical practice throughout the hospital The word soon gets out and everyone is just a little bit more careful. If properly handled, it also boosts the morale and esprit de corps of the entire medical staff. They are proud to be a part of an organization that is in a fair and effective way acting for the best interest of the patient. (28, p. 8)

There is, however, a further rationale for the existence of fair standards and procedures As the situation now stands and will probably continue to develop if there is not the adoption of fair standards and procedures, there is a rather massive degree of courage involved as a prerequisite to causing removal or termination action which might lead to the initiator and the hospital being the object of large suit and the expenditure of a huge amount of time and energy. At the Third Medical-Legal Symposium held in Los Angeles in 1964, a number of case studies in the removal of doctors from staffs were discussed, with at least part of the emphasis on lessons to be drawn on personal sacrifice that those "blowing the whistle" had to bear In another staffing case the parallel was drawn between the doctor initiating charges and the individual, in the absence of any police officers, who would go to the aid of an individual who was being attacked by a hoodlum This is not to say that individual courage is not needed in society It is to say that if particular environment for handling incompetency within the hospital requires an extraordinary degree of courage, time, and energy on the part of one or more doctors, then the chances of good patient care are much lower than they should be Regardless of the merits of the case, the Marin Hospital District's inability to produce doctors who would testify in the recent and apparently continuing action at that hospital indicates that there is a particular "cost" beyond which it is unrealistic to expect an individual to expose himself. The functional contribution of known procedures and standards is that while at the same time that arbitrariness is diminished, the hospital becomes better equipped to cope with variations from desirable behavior.[8]

Case Studies in the Lack of Procedure

At the San Francisco hearing the committee received testimony on the lack of procedures encountered by two doctors Dr Stanford Asch-

[8] Among contemporary novelists, C P Snow has most thoroughly caught the issues, if not perhaps the passions, involved in the attempts to judge scientific competence in an atmosphere permeated with personality His novel, *The Affair* (New York, 1960) reads in parts as if taken verbatim from a composite of the hospital staffing cases The final paragraphs of the book are an attack on the theory that 'forms of procedure" play a relatively unimportant role in arriving at fair decisions

> Crawford was saying at large
> "Well, I'm glad this business is settled without breaking too many bones" He called to me as though he had never had a doubt in his life "I think I remember saying to you in this room last week, Elliot, perhaps we worry too much about forms of procedure I think I remember saying that in my experience sensible men usually reach sensible conclusions."
> He said it with invincible content, with the reverence of one producing a new truth

It might also be noted that the caustic comment immediately following Crawford's naive statement, is made by a lawyer

erman who had testified at the committee hearings on AB 2031 during the legislative session in Sacramento stated

What I want to demonstrate here this afternoon is that none of the hospitals have any provisions in their bylaws nor is it their practice to provide for any type of proceeding by which a doctor may receive fair and objective consideration It is the uniform practice of some of these hospitals to exercise their powers arbitrarily, and if someone wants to get rid of a doctor they simply wait until the end of the year and they just do not put him on the reappointed list. There is no explanation given in any committee meetings, and much of the information which I have to give to you this afternoon has been obtained as a result of the litigation and the depositions of some of the defendants. I would like to tell you that I have never been notified of any of the reasons for my dismissals from the hospitals and it is very peculiar that most of the dismissals occurred within a very short time of each other, probably within a period of two to three months, many of them within a period of days or weeks

After receiving the dismissals from the hospitals, that is the nonreappointment, I made inquiry as to whether or not I was entitled to receive a hearing, and I wish to read to this committee some of the responses from the administrators, the chief executive officers, and the president of the lay board of directors of these various hospitals. I read first from a letter from Franklin Hospital:

"Dear Dr. Ascherman:

"In reply to your question, I regret to inform you that the rules or bylaws of the hospital do not contain any provision which would entitle you to a hearing before the credentials committee"

From Hahnemann Hospital, and the administrator of that hospital was sitting in the room here this morning and perhaps if he is sitting here this afternoon you may want to ask him some questions, but I would like to read you his reply to a similar inquiry, and this again is a matter of only a few months apart:

"Dear Dr. Ascherman·

"In accordance with the direction of the executive committee, please be advised that it is the position of the executive committee that no purpose would be served in continuing the investigation for holding any hearings concerning your reappointment to the medical staff of this hospital"

. . . Here is another letter from Hahnemann in response to further inquiry:

"Dear Dr Ascherman:

"Reference is made to the inquiry as to whether or not you are entitled to a hearing before the credentials committee in accordance with medical staff bylaws provisions. The

medical staff bylaws rules and regulations of Hahnemann Hospital, a copy of which is provided, does not provide for a hearing of applicants before the credentials committee on matters concerning appointment or reappointment."

At French Hospital where I had obtained temporary privileges, and again most of this information is from subpoenaed records, there is no mention made in their minutes of any executive staff meeting or credentials committee meeting It is simply a list of those that are appointed, and those that are not reappointed. There is no discussion. The applications of such and such doctors, and Dr. Ascherman were not approved receiving insufficient votes to be elected to the courtesy staff. (8, pp. 69–70)

The Santa Barbara case [9] study illustrates that the simple existence of a hearing procedure is not a panacea The question of standards to be utilized and by whom the judgment is to be made cannot help but play an important role

There is a substantial agreement on the facts that there were hearings available in the Santa Barbara hospitals although there was some lack of clarity on their characteristics, with the details not always known with great accuracy.

The following exchange is with the chairman of the medical staff at St Francis Hospital in Santa Barbara·

Assemblyman Marks: Doctor, I wonder if you could tell me whether or not your hospital has any provisions in its rules and regulations granting a physician who is either denied admittance to your staff or was turned down or required to leave the staff, the right to a hearing?

Dr. Sherman: Yes, it is specifically stated in the bylaws

Assemblyman Marks: Is it a public hearing, or what kind of a hearing?

Dr. Sherman: The only thing that I can find right now would apply to any member of the staff whose qualifications make him eligible for membership in any special division of the hospital and who is refused membership in this division He shall have the right of appeal, first to the executive board and finally to the board of directors whose decision shall be final.

Assemblyman Marks: Suppose a doctor is on the staff and then action is taken to remove him from the staff? What right to a hearing does he have?

[9] The Santa Barbara case (9, 35) is also a study in general practitioner-specialist relations within the context of hospital planning and medical economics The main concern of the committee in this case is with staffing procedures and standards The survey questionnaire did contain an item aimed at determining discriminations against the physician solely on the basis of his lack of board certification (Section II, questions 5–7) The response indicated that almost all hospitals are following the recommendation of the medical and hospital societies that the individual be judged on the basis of individual competence rather than the single criteria of board certification Should there be a deviation from this policy, it would, of course, be a test of the ability of voluntary standards to function as effectively as governmental rules and regulations

For a discussion of the early conflicts in England in the 19th century among general practitioners, specialists, and hospitals see "Hospitals and General Practitioners," Chapter 7 in Brian Abel-Smith's, *The Hospitals 1800–1948* (Cambridge, Mass., 1964), pp 101–118 Other perspectives applicable to the GP-specialist dilemma (18, 36, 42) indicate that the issues involved are both deep and enduring

Dr. Sherman: The reason I am quoting from our bylaws, this specifically has to do with written censure I would presume that the same thing applies to removal from the staff In any case in which a specialty division contemplates written censure of the quality of an individual's work, that individual shall have the opportunity to defend his record at a meeting of the division before the written censure is voted upon.

Assemblyman Marks: Do you feel that the provisions for a hearing are sufficient, or would you be in favor of granting additional rights to members of your staff?

Dr. Sherman: I believe that in several places in our bylaws provisions are made for appeal from various decisions. Specifically, the one that I read stated that an appeal can be made directly to their division, to the executive staff or to the administrator. (9, p 36–37)

And with regard to appeals:

Assemblyman Thelin: Mr Iverson, in the discussion we have just had relative to what you might call procedural due process, in hearings that are called for in the hospital bylaws, it has been testified that this procedure is fair The doctor who faces removal or suspension of his privileges is faced by his accusers, you might say, and given a statement as to what is alleged to be wrong, and I suppose if he is removed or suspended, told why I get the impression that this procedure is followed, but it is not spelled out in any bylaws or regulations that the hospital may have Do you know if that is so or not?

Mr. Iverson: (Counsel for the Santa Barbara County Medical Society) I think the procedures for appeal are not very well spelled out in the existing bylaws Maybe this is an area where the——

Assemblyman Thelin: Well, as a lawyer, would you be inclined to believe that it would perhaps be advisable to be a little more specific in spelling out a kind of a procedural due process?

Mr. Iverson: Not being counsel for either of the hospitals, I don't know, but I think probably you are right 'I think it might be well to spell them out more carefully But there is no evidence that that has been a problem in the last several years because there have been no appeals (9, pp 71–72)

From the results of the questionnaire showing that only a small percentage of doctors asked for hearings after being refused their requests, the following attitude would appear to be prevalent

Assemblyman Marks: Doctor, I believe you said that you were denied certain privileges at Cottage Hospital, am I correct?

Dr. Ashton: True

Assemblyman Marks: Now, did you have or seek a hearing on denial of these privileges?

Dr. Ashton: I requested these privileges every year for 10 years.

Assemblyman Marks: In what way did you have a hearing?

Dr. Ashton: Every year there is another form that comes out in which each man on the staff has to again request his staff privileges.

Assemblyman Marks: But what I mean is, did you ask for a hearing?

Dr. Ashton: I didn't ask for any hearing This is useless. You don't ask the poundmaster to let the dog go away It was impractical to do such a thing You make out your form and ask for full surgical privileges, but you know you are not going to get them, so what is the use of going any further with it? (9, p 104)

The Legislative Role

The issues involved in fair hospital staffing legislation touch not only the whole subject of patient care, but go deeply into the meaning of professionalism and the occupational environment. The issue is not the responsibility of government to contribute to the best patient care for Californians. This is an acknowledged responsibility. The central issue here is not whether there should be fair hospital standards and procedures. There has been no testimony that arbitrariness should be the rule. The issue is rather whether or not fair hospital staffing legislation is a necessary contribution of government towards ensuring that the massive public investment in hospitals is properly utilized Since 1947 over $181,000,000 has been granted by the federal government and the State of California to aid in the building of 308 community health facilities.

The principal evidence involved, as it is so often in governmental-professional relations, is the adequacy of private government to accomplish voluntarily what legislation can do both universally and immediately. There is every inclination on the part of the committee to prefer that hospitals meet the standards of fair practices without the passage of legislation involving a commitment of governmental resources to regulate and enforce this area in detail At the present time, the committee survey (see pages 22–40) indicates that there is substantial availability of a hearing procedure The test, however, of voluntary compliance is that it can be as effective in both width and depth as is governmental action.

The Council of the California Medical Association in August, 1964 adopted the following amendment to the Guiding Principles for Physician-Hospital Relationships:

> Medical staff bylaws should provide for an appeal and hearing when such is requested by a staff member or applicant who considers that his appointment was terminated or denied, his privileges curtailed or advancement denied, without sufficient cause, in an arbitrary, discriminatory, capricious or unreasonable manner

This is an important recognition of the problem of medical staffing and can serve as a measurement device for those hospitals which at the time of the committee survey were deficient with regard to offering hearings The failure to have a hearing procedure is thus not simply a lack of possessing adequate procedures but also of not being in conformity with the rules of the voluntary governmental organization.

Beyond the availability of the hearing itself are the particular characteristics of the procedure The committee survey showed a wide variation here (see Table 3) At this time the California Hospital Association is working on a set of suggested characteristics The appearance or absence of some of the basic attributes of the hearing process can, of course, determine whether or not the hearing procedure is meaningful.

In conclusion, it is abundantly clear that hospital staffing and privileges constitute one of the most important facets of modern medical care It is also clear that this is a complex and sensitive area which should continue to be the subject of close and continuing legislative scrutiny to ensure that Californians are receiving the best possible patient care.

QUESTIONNAIRE RESULTS

To gain a broader view of the hospital staffing situation, the committee initiated an inquiry into the nature of hearing procedures within general hospitals in the state. A questionnaire was constructed by the committee staff. There were three main sections to the questionnaire: (1) hospital characteristics; (2) medical staff characteristics, and (3) medical staffing administrative procedures In the first part, background information on the hospital was requested—whether it was large or small, what its occupancy was in 1962–63, the number of hospital employees, and whether the hospital was approved for training of residents and/or interns. The second portion asked for information on the number of physicians on the staff, the organization of the medical staff and whether doctors have to be board-certified to have certain privileges in the hospital The final section of the questionnaire dealt with the main focus of the bill under consideration—AB 2031 The hospital was asked to detail whether it granted hearings for doctors, what body within the hospital handled the hearing procedures, the actual numbers of doctors who had been involved in the three-year period 1961–63, the reasons for the actions taken and the characteristics of the hearing procedure that the hospital had adopted (if the hospital had adopted one).

Moreover, it was recognized that there were several distinct areas in which control could be exercised by the hospital over the actions of doctors. Not only could doctors be dropped from the staff, but they could be (1) denied admission to the staff, (2) denied additional privileges, (3) have their staff privileges reduced, (4) suspended for failure to comply with certain hospital policies—the main one being, failure to complete medical records, (5) not have their membership renewed at the end of the year (as distinct from being dropped in the middle of the year). The questionnaire was drawn up so as not to confuse these widely differing reasons for action on the part of the hospital.

The questionnaire was sent to all general hospitals in the State of California (excluded were specialty hospitals such as TB or mental hospitals, nursing homes and state and federal hospitals) Returns were received from nearly 60 percent of the hospitals in California It was decided, however, to eliminate from the tabulations the county hospitals. Thus, the total number on which this report is based is 227,

slightly more than 50 percent of the noncounty general hospitals in the state. The following shows the rate of response among the three types of hospitals of major concern in this report—district hospitals, nonprofit hospitals and proprietary hospitals

Table No. 1

QUESTIONNAIRE RESPONSE

Total	District	Small nonprofit	Medium nonprofit	Large nonprofit	Small proprietary	Medium-large proprietary
227	33	20	37	61	41	35
Small (under 50 beds) Medium (50–149) Large (150 plus)						

The report is divided into two parts The first deals with whether hearings are granted (upon request of the doctor involved) and with the characteristics of the hearing procedure The second section deals with the actual cases on which the hospital took action in the years 1961–1963.

I. HEARINGS AND PROCEDURES

Hearings are not offered to doctors by from between 10 to 18 percent of the hospitals (depending upon the matter under consideration). Similarly about 25 percent of the hospitals offer hearings, upon request, at all three levels—medical staff, governing board and joint committee Approximately 20 percent offer hearings at only the medical staff committee level and another 15 to 20 percent at both the medical staff and governing board levels About 20 percent have provisions for hearings at other points in the administrative hierarchy (e g only at the governing board level)

From Table 2 it may be noted that hearings are most often not held for those who failed to complete medical records and were thus

Table No. 2

HEARINGS REQUESTED BY DOCTORS FOR VARIOUS ACTIONS: HOSPITAL'S PROVISIONS

	Original applications (percent)	Appointment not renewed (percent)	Failure to complete medical records (percent)	Termination from staff (percent)	Privileges reduced (percent)	Additional privileges denied (percent)
No hearing granted to doctor	11	10	18	13	13	16
Hearing granted by this hospital unit						
(a) Medical staff committee	19	16	23	18	23	24
(b) Medical staff and governing board	23	21	15	19	17	18
(c) Medical staff, governing board and joint committee	26	30	24	30	25	24
(d) Other	19	22	18	19	22	18
(e) No answer	1	1	1	1	1	1

suspended (18 percent) and for those doctors who were denied additional staff privileges (16 percent). Hearings were, as might be expected, held at all three levels of the hospital's administrative hierarchy for the more serious offenses—when appointments were not renewed or when physicians were terminated from the staff (both in 30 percent of the hospitals).

Types of Hospitals

Several interesting variations appear among the types of hospitals, with respect to the hearing procedure First, it must be remarked that in the following tabulations, the hospitals have been divided into seven categories:

1. District hospital
2. Small (under 50 beds) nonprofit hospital
3. Medium (50–149 beds) nonprofit hospital
4. Large (150 beds and over) religious group-run nonprofit hospital
5. Large (150 beds and over) other nonprofit hospital
6. Small (under 50 beds) proprietary hospital
7. Medium and large (50 beds and over) proprietary hospital

The other large nonprofit hospitals are more likely than any other category not to grant a hearing for two types of physicians with grievances—those who were denied initial admission to the hospital staff and those who were suspended for failure to complete medical records. The religious group hospitals were more likely to have provisions for hearings at only the medical staff committee level than any other type of hospital in four of the six cases (for doctors whose appointments were not renewed, doctors terminated from the staff, doctors whose staff privileges had been reduced and doctors who were denied additional privileges). Medium-sized nonprofit hospitals were most likely to hold hearings at all three in hospitals—in how large a number it is impossible to determine exactly—are largely informal. The term conference might better describe the meetings which staff committees have with individual doctors than would the more formalistic term, hearing

In Table 3, the characteristics of the hearing are shown for each of the seven types of hospitals It is important to note one factor in the construction of this table: The base (N) on which each percentage was calculated was the *number of hospitals that mentioned, in the previous question, that they granted a hearing at that level.*

The first general observation to be made is that in almost all cases the characteristics which the largest percentage of the hospitals claim to have are the following· minutes kept, presentation of evidence by the defendant and opportunity to file written answer to charges In most of the columns of the table (3) these three characteristics are bunched within 10 percentage points of each other. In fourth place, is the initial characteristic on the list—written notice of charges. The fifth characteristic mentioned, though by a considerably smaller percentage of the hospitals than the other four was, the cross examination

M* Medical Staff
G* Governing board
J* Joint committee

of witnesses. The other three procedures—referee used, parties represented by attorneys, and transcript made—were rarely cited by more than one-fourth of the hospitals.

This rank order of characteristics held true for hospitals at all three levels of hearings—medical staff, governing board and joint committee.

Among the types of hospitals, there are four patterns that of the district hospitals, that of the nonprofit hospitals with the exception of the large nonprofit hospitals; the other large nonprofit hospitals and the proprietaries. Among the district hospitals few of the 26 which mention holding hearings at the medical staff level have procedures However, at the governing board committee level, between 40 and 50 percent of the hospitals mention all the procedures as characteristic of their hearings. This is quite different from the other three types of hospitals, which have nowhere near the same percentage answering affirmatively to the least popular three characteristics. Among the other large nonprofit hospitals, there is considerably greater strength for the most popular three characteristics, however.

The nonprofit hospitals comprising the second group (small, medium and religious group nonprofit hospitals) have at all three levels—medical staff committee, governing board and joint conference committee—the same rank order of characteristics as mentioned previously. There is one interesting anomaly, however The religious group hospitals have the smallest percentage of any hospital category giving written notice of charges at *both* the medical staff and the governing board levels Indeed, in the formalization of procedure as represented in this tabulation, these hospitals are much closer to the smaller nonprofits rather than the other large nonprofit category

The other nonprofit hospitals have, by and large, the highest percentage of hospitals for each one of the five leading characteristics. Between two-thirds and three-fourths of these hospitals mention the last three of them—minutes kept, presentation of evidence and opportunity to file answers to charges Slightly more than 50 percent mention giving written notice of charges; this, interestingly is about the same as in the proprietary hospital category. Also, it might be pointed out that nearly 60 percent of the hospitals having procedures at the joint committee level allow cross-examination of witnesses

The proprietary hospitals stand intermediate between the other, large nonprofit hospitals and the small, medium and religious group nonprofit hospitals There is somewhat of a tendency within the proprietary category for the larger hospitals to have a greater percentage mentioning the various procedures However, this is only true at the medical staff and the joint committee level; at the governing board committee level, the percentages are almost identical

II. ACTIONS 1961–1963

In this section, an examination will be made of the actions taken by hospitals against doctors, whether hearings were asked for or received and the reasons given by the hospital for its action. Here, as before, there are considerable differences, not only in the severity of the sanctions involved, but also in the ways in which hospitals treat doctors who, for example are applying for additional privileges or are being terminated from the staff. Thus, the types of action will be kept separate. First, suspensions for failure to complete medical records will be discussed.

(1) Suspension

Only 40 percent of the hospitals in the survey mentioned that they had suspended a doctor in the past three years for failure to complete medical records. The percentage was highest in the large nonprofit hospitals (other than those controlled by religious groups) and in the medium and large proprietary hospitals Of the religious nonprofit hospitals, slightly less than 40 percent suspend staff members for medical records; they are again closer to the medium sized nonprofit, and, indeed nearer to the small proprietary hospitals than to the other large nonprofit institutions.

Table No. 4

SUSPENSION FOR FAILURE TO COMPLETE MEDICAL RECORDS BY VARIOUS TYPES OF HOSPITALS

	Total (percent)	District (percent)	Small nonprofit (percent)	Medium nonprofit (percent)	Large nonprofit religious (percent)	Large nonprofit other (percent)	Small proprietary (percent)	Medium-large proprietary (percent)
Yes	40	27	15	38	39	65	27	68
No	52	64	85	51	49	28	63	26
No answer	8	9	--	11	12	7	10	6
Total number	(227)	(33)	(20)	(37)	(33)	(29)	(41)	(35)

(2) Original Application

The next type of action concerns original applications for staff membership, and whether refusal of a doctor's application led to a hearing. Initially it must be remarked that there were two slightly different answers coded in response to this question Some hospitals responded with the number of applications for active staff membership, while other, usually larger, hospitals reported the number of courtesy staff applicants for active staff membership Though the latter refers to doctors who have been on the staff for a year, and have undergone an informal screening, and the former reply concerns new applicants—and thus the two figures have somewhat different referents—it was decided to tabulate all the responses rather than to leave a substantial proportion uncoded.

Several interesting results can be seen from this tally (Table 5) Six percent of the hospitals in the survey actually gave hearings to doctors whose staff membership was rejected Nearly half of the total number of hospitals reported that no original application was rejected, while 30 percent, while not granting hearings, added that no hearing had been requested.

Table No. 5

DISPOSITION OF ORIGINAL APPLICATIONS FOR STAFF MEMBERSHIP

	Total (percent)	District (percent)	Small nonprofit (percent)	Medium nonprofit (percent)	Large nonprofit religious (percent)	Large nonprofit other (percent)	Small proprietary (percent)	Medium-large proprietary (percent)
None rejected	49	91	80	38	18	28	61	40
Hospital did not grant hearings (none requested)	30	3	10	40	61	50	12	34
All hearings granted	6	0	5	11	6	8	2	11
No answer	14	6	5	11	15	14	24	20
Total number	(227)	(33)	(20)	(37)	(33)	(28)	(41)	(35)

Among the types of hospitals, it should be noted that the large nonprofit hospitals had far less than 50 percent reporting that no applications were rejected The greatest percentage in this regard was

among the district hospitals and the small nonprofit hospitals, in which 91 and 80 percent, respectively, said that they had not rejected any applications for staff membership in the past three years.

The total number of cases involved was 746. Of these doctors rejected for staff membership, only 23 (somewhat over 3 percent of the total) requested hearings Twenty-eight hearings were held—23 that were requested and 5 that were not requested by the doctors involved. The three reasons most commonly given by hospitals for rejecting applicants for staff membership were (1) professional competence, (2) that the doctor was out of the area which the hospital served, and, (3) that the credentials presented by the physician could not be verified Three hospitals rejected a total of seven doctors for participation in group medical practice. Ten hospitals which advance courtesy staff members to active status mentioned that they rejected applicants because of interpersonal reasons—the doctor could not get along with other doctors or hospital personnel

Table No. 6

HEARINGS FOR ORIGINAL APPLICANTS—TYPES OF HOSPITALS

	Total	District	Small nonprofit	Medium nonprofit	Large nonprofit religious	Large nonprofit other	Small proprietary	Medium-large proprietary
Number of cases	746	2	10	114	430	73	17	100
Number asked for hearings	23	0	1	10	4	2	0	6
Percent asked for hearings	3	0	10	9	1	3	0	6
Received hearings	28	0	1	10	4	2	1	10
Number of hospitals	82	1	3	19	22	16	6	16

(3) Additional Staff Privileges

Turning to requests for additional staff privileges, it may be noted that while 60 percent of the hospitals in the state said that they had rejected no such applications, the percentage varied widely among the types of hospitals. While 80 percent of the district and small nonprofit hospitals did not reject applications, this was only true for 40 to 45 percent of the large nonprofit hospitals. Another interesting fact shown

Table No. 7

REQUESTS FOR ADDITIONAL PRIVILEGES—TYPES OF HOSPITALS

	Total (percent)	District (percent)	Small nonprofit (percent)	Medium nonprofit (percent)	Large nonprofit religious (percent)	Large nonprofit other (percent)	Small proprietary (percent)	Medium-large proprietary (percent)
None rejected	61	79	80	68	46	39	68	49
Hospitals not granting hearings (none requested)	15	6	5	11	39	25	0	17
All hearings granted	12	3	10	10	6	25	8	22
No answer	13	12	5	11	9	11	24	11
Total number	(227)	(33)	(20)	(37)	(33)	(28)	(41)	(35)

in Table 7 is that one-fourth of the other nonprofit hospitals granted hearings for staff members seeking additional privileges; this was double the average for all hospitals, and, surprisingly, more than four times the proportion of religious group-run hospitals.

The total number of cases involved was 154. Of these 27 percent asked for and received a hearing In the nonprofit hospitals run by religious groups, the smallest proportion (16 percent) of doctors asked for a hearing By far the largest proportion asking for hearings were in the proprietary hospitals. It is true that these hospitals had far fewer cases of physicians being rejected for additional privileges. However, of the physicians who *were* rejected, 100 and 56 percent respectively in the small- and medium-sized proprietary hospitals asked for and received a hearing. The only reason given (by more than a few hospitals) for the rejection of doctor's applications for additional privileges was that of professional competence.

Table No. 8

HEARINGS FOR ADDITIONAL PRIVILEGES—TYPES OF HOSPITALS

	Total	District	Small nonprofit	Medium nonprofit	Large nonprofit religious	Large nonprofit other	Small proprietary	Medium-large proprietary
Number of cases	154	3	4	20	61	43	4	20
Number asked for hearings	42	0	1	6	10	10	4	10
Percent asked for hearings	27	0	25	30	16	24	100	50
Received hearings	44	1	2	6	8	10	4	12
Number of hospitals	58	3	3	8	15	14	3	12

(4) Reduction of Privileges

Nearly 60 percent of the hospitals answered that they had reduced no physician's staff privileges in the past three years. Again, there was a wide variation among the types of hospitals Large nonprofit hospitals not under religious group auspices were far more likely to have reduced doctors' privileges than any other type of hospital. Also, among this group of hospitals was the greatest percentage granting

Table No. 9

PRIVILEGES REDUCED—TYPES OF HOSPITALS

	Total (percent)	District (percent)	Small nonprofit (percent)	Medium nonprofit (percent)	Large nonprofit religious (percent)	Large nonprofit other (percent)	Small proprietary (percent)	Medium-large proprietary (percent)
None reduced	59	73	15	59	49	25	82	46

Total number	(227)	(33)	(20)	(37)	(33)	(28)	(41)	(35)

hearings to all physicians who requested them Small hospitals, both nonprofit and proprietary were more likely than the other types not to have reduced privileges of doctors on their staffs.

Of the 334 doctors whose privileges were reduced, 22 percent asked for and received hearings. In addition to these 73 doctors, 15 others received hearings, making a total percentage of 26 which had hearings The other nonprofit (large) and medium nonprofit hospitals granted hearings to a larger proportion of doctors than did any of the other types of hospitals which had over 10 doctors reduced (religious group, small and medium proprietary) Again heading the list of reasons for reduction of privileges was professional competence The other reasons, which almost exhausted the total number given, had to do with noncompliance with hospital policies, specifically with failure to attend staff meetings, lack of use of the hospital's facilities and nonpayment of dues.

Table No. 10

HEARINGS FOR PRIVILEGES REDUCED—TYPES OF HOSPITALS

	Total	District	Small nonprofit	Medium nonprofit	Large nonprofit religious	Large nonprofit other	Small proprietary	Medium-large proprietary

Received hearings	88	5	6	25	13	26	3	10
Total hospitals	82	7	5	13	16	18	6	17

(5) Appointments Not Renewed

Of the hospitals in California, slightly over 60 percent reported that they had not dropped any staff member at year's end (other than for reasons such as moving away, death or retirement). The large nonprofit category, both those under religious auspices and the others, had a far greater percentage of hospitals in which doctors had not been renewed (only about 40 percent in each of these categories as well

Table No. 11

APPOINTMENTS NOT RENEWED—TYPES OF HOSPITALS

	Total (percent)	District (percent)	Small nonprofit (percent)	Medium nonprofit percent)	Large nonprofit religious (percent)	Large nonprofit other (percent)	Small proprietary (percent)	Medium-large proprietary (percent)
None not renewed	63	85	85	65	36	43	93	43
Hospitals not granting hearings (none requested)	24	9	5	24	42	39	5	40

Total number	(227)	(33)	(20)	(37)	(33)	(28)	(41)	(35)

as only 40 percent in the medium-sized proprietary hospitals, said that they reappointed all physicians seeking reappointment to their staffs) In addition, hearings were granted to all requesting them in both types of large nonprofit hospitals in a greater proportion of the cases than was true in the other types of hospitals

Of the 1,422 doctors who did not have their appointments renewed, about 3 percent asked for hearings The main reasons given for non-reappointment were failure to attend staff meetings, lack of use of hospital facilities and nonpayment of dues, medical records and professional competence The lack of use of hospital facilities was, by far the reason for the largest number of appointments not renewed.

Table No. 12

HEARINGS FOR APPOINTMENTS NOT RENEWED—TYPES OF HOSPITALS

	Total	District	Small nonprofit	Medium nonprofit	Large nonprofit religious	Large nonprofit other	Small proprietary	Medium-large proprietary
Number of cases	1,422	7	22	267	401	420	89	216

Received hearings	50	0	2	19	13	9	0	6
Total hospitals	72	3	2	12	19	16	2	18

(6) Terminated From Staff

A larger proportion of the hospitals did not terminate any physicians' appointment than was true of any other type of action Whereas 68 percent of the hospitals did not dismiss any doctor from the staff in the past three years, 63 percent had not dropped anyone from the staff at year's end, 59 percent had reduced no doctor's privileges, 61 percent had rejected no applications for additional privileges, 49 percent had rejected no original applications for staff membership and 52 percent had not suspended any physicians for failure to complete medical records The other nonprofit category had the greatest proportion of hospitals which did terminate a doctor or doctors in the period

Table No. 13

TERMINATED FROM STAFF—TYPES OF HOSPITALS

	Total (percent)	District (percent)	Small nonprofit (percent)	Medium nonprofit (percent)	Large nonprofit religious (percent)	Large nonprofit other (percent)	Small proprietary (percent)	Medium-large proprietary (percent)
None terminated	68	82	80	68	73	43	78	51
Hospital does not grant hearing (none requested)	15	9	5	16	15	21	8	28
All hearings granted	13	6	10	11	9	32	13	11
No answer	4	3	5	5	3	4	2	8
Total number	(227)	(35)	(20)	(37)	(33)	(28)	(41)	(35)

under consideration. Fifty-three percent of the hospitals included in this category mentioned that they had dropped at least one physician from the staff. Again, there is a marked difference between the large nonprofit hospitals under religious auspices and the other nonprofit hospitals The proportion in the latter category of hospitals which had terminated a staff member was only 24 This was comparable to the proportion in the small, medium nonprofit hospitals and also that in the small proprietary hospitals It must be noted, also from Table 13, that the other large nonprofit hospitals had a much higher percentage of hearings granted to all staff members requesting them than did any other medium or large hospital.

Of the 204 doctors terminated from hospital staffs, 12 percent asked for hearings, in addition, another 12 doctors were reported by the hospitals to have been given hearings though they did not request them This raised the percent of doctors given hearings to 18. There was a considerable discrepancy among the types of hospitals with respect to doctors' asking for hearings In the other large nonprofit category, 37 percent of the doctors who had been dropped from the staff asked for and received hearings In the small nonprofit hospitals, the religious group nonprofit hospitals and the small proprietaries 20 to 29 percent asked for hearings. The other types of hospitals were under 10 percent Reasons given for termination varied Professional competence, lack of use of hospital facilities and nonpayment of dues were the main ones given Failure to complete medical records was given by slightly less than half as many hospitals as the above reasons for terminating a physician Alcoholism, failure to attend staff meetings and interpersonal relations were given in the cases of from 5 to 10 physicians as the motivation behind the hospitals dropping from the staff.

AB 2130: Epilepsy Program

Recommendation

The committee supports legislation and an appropriation to provide for a program of services for children with epilepsy.

Findings

1. The pilot programs for epilepsy conducted under Chapter 2033, Statutes of 1959, have been successful
2. The early diagnosis and treatment of this condition can prevent the loss of ability to work and can contribute to the individual leading a normal life

Analysis

The Subcommittee on Institutions and Public Health Services recommended to the 1964 session of the Legislature that epilepsy be included in the Crippled Children Services program. An item was included in the budget but was deleted during final legislative consideration of the budget.

Epilepsy is another of the negative conditions of human beings in which rapid strides have been made in treatment (27, 29) The issue before the committee is an evaluation of the pilot program done at the Legislature's request (12). An evaluation of the policy of state government towards this condition is also involved.

The Legislature authorized a study of children with epilepsy in California by the passage of SB 739 during the 1959 session. The legislation directed the study to cover.

> . the asssembling of information relating to the number of epileptic children in California not receiving adequate treatment, the cost of diagnosing the disease and providing initial treatment to establish control of it, and the problem of educating children with controlled and uncontrolled epileptic seizures The study may also cover problems associated with the education of parents of epileptic children, methods of bringing services to such children in rural areas, and the need for assistance to teachers in handling classes that include children with epilepsy (12, p. 6)

From the results of the study, the Department of Public Health recommended:

1 That epilepsy be included in the Crippled Children Services program as an eligible handicapping condition

It is estimated that the costs of providing the same services statewide as provided in the project counties during the first year of a state program will be $118,400. (This is based upon an estimated $350,000 for 2,800 diagnostic examinations at an average cost of $125 per child, and $102,600 for the treatment of 1,900 children (average cost $56 per child per year) Of the treatment costs $68,400 will be state funds and $34,200 county funds)

2. That CCS programs include social work staff, to provide social diagnostic services to children with suspected or known epilepsy. A priority should be placed on family centered social assessment in the diagnostic procedures, collaboration in the development of treatment recommendations, interpretations of findings, and coordination of planning.

3. That social casework and psychiatric services be available to

children with epilepsy and their families. The Child Welfare Services of the welfare departments and the Short-Doyle Community Health Services programs seem to be the available and appropriate community resources to support this recommendation.

4 That vocational planning, counseling and training services be made available to the child with epilepsy at the earliest possible age while he is still attending school.

The pilot program has met the requirements which were set in the authorizing legislation, and its recommendations are, in effect, to bring California within the large number of states which now accept children with epilepsy for service. At the present time 33 states include epilepsy in their children services program (27, p 7). In evaluating the operation of the Maryland epilepsy program, a recent article concluded that :

> It has been responsible not only for improvement of medical care for all epileptic children in the state, but also for a better understanding of epilepsy by the public, thereby helping to eliminate some of the many unwarranted stigmas associated with epilepsy (27, p. 11).

No witnesses appeared against this legislation at the hearing of the Subcommittee on Institutions and Public Health Services in Los Angeles (7). A large number of dedicated and informed witnesses stressed the value of the passage of legislation such as AB 2130 The committee has encountered no arguments against the inclusion of epilepsy within the state's Crippled Children Services program

In connection with the cost/benefit factor necessarily involved in any decision to spend state funds on a new service, there are significant returns in terms of individuals improved and potential contribution to society. The report on the findings of the project in the official journal of the California Medical Association, noted that:

> Most of the children with epilepsy were having uncontrolled seizures at the time of referral, one in five having one or more seizures daily. Three out of five children became free of seizures within the limited observation periods Another one-fifth has a reduction of 50 percent or more in the number of their seizures, while the remainder either could not be improved or required further study and treatment to improve their status
>
> Two-thirds of the families had moderate or severe problems of family functioning One in five of the families studies were in need of casework or psychiatric services to assist them to cope with problems which disturbed their social functioning Unless these families receive such services, these children will very likely not be able to benefit from medical treatment provided.
>
> The major service provided by the project was to organize a multidiscipline team which could complete an evaluation of the child and his family, and bring together those persons interested in the child to plan and coordinate his care. In so doing the project was able to determine gaps in community services as well as point out those services needed for the successful treatment of the children.

The project was able to facilitate the care of the child because it had the funds necessary to pay for the complete evaluation of the child and his family, and to pay for the attendance and participation of the child's physician at the case conference. The case conference was one of the most important and essential features of the diagnostic services, and the interpretative conference with the parents and the child was equally valuable (23)

As to the particular administrative provisions of AB 2130 it should be noted that previously children suffering from phenylketonuria and cystic fibrosis have been added to the program simply by the addition of those terms to Section 250 of the Health and Safety Code. As worded, AB 2130 states that·

SEC 2 Section 252 6 is added to said code, to read·

252 6 The Department of Public Health shall establish throughout the state a program of services of children suffering from epilepsy, which program shall have the following essential features

(a) Social staff work involving diagnostic examinations for children with suspected or known epilepsy, with emphasis and priority placed upon family centered social assessment in the diagnostic procedures

(b) Collaboration and cooperation with public and private persons and agencies in the treatment of children, the development of treatment recommendations, the interpretation and coordination of accumulated data and information which will serve to aid the children and their families in overcoming the burdens arising from the disease, and the development of coordinated plans.

(c) Providing vocational planning, counseling and training services to the child at the earliest possible age and while the child is still attending school

(d) Social casework and psychiatric services to be made available to children and their families

SEC. 3 Section 252 7 is added to said code, to read:

252 7 In conducting the program of services for children suffering from epilepsy, the State Department of Public Health shall utilize to the extent possible the services of county agencies providing child welfare services, and it shall be the duty of such agencies to cooperate with the department in the administration of the program Social casework and psychiatric services for children and their families shall be provided under direction of the department through the community mental health services established pursuant to Chapter 1 (commencing with Section 9000) of Division 8 of the Welfare and Institutions Code

The Department of Public Health has informed the committee that it suggests that these additional provisions of AB 2130 are "cumbersome and would be difficult to administer" [1]

If the other conditions which are included in the Crippled Children Services program are being effectively conducted there would seem to

[1] Letter to committee dated January 7, 1965.

be little need for the particular language in AB 2130 which would in effect give a somewhat different status to epilepsy than to the other conditions. The necessity of the additional language should be examined by the Legislature in the 1965 session.

In conclusion, the Assembly Committee on Public Health strongly supports legislation and an appropriation to provide for a program of services for children with epilepsy

HR 173: Barriers to Tuberculosis Care

Recommendation

For the general good as well as the good of the patient, the committee supports the goal of eradicating tuberculosis in California, and the elimination of any practices at the state or county level which hamper the treatment of tuberculosis patients by contributing to the interruption of their care.

Findings

1. The State of California contributes assistance for counties for inpatient tuberculosis care but not for outpatient care. The state forbids liens on homes for inpatient care but not for outpatient care.

2. The location of treatment of tuberculosis has shifted markedly from hospital inpatient care to outpatient care

3. The new tuberculosis case rate in California, for the first time in over a decade, has failed to be reduced during the past three years.

4. While there are many indications that the past few years have seen a removing of barriers to TB treatment, the evidence presented to the subcommittee indicates that areas in need of improvement in the tuberculosis treatment program still exist.

Analysis

This is another area in which the characteristics of drug technology have created a situation in which there is a need to reexamine basic state policy This is true because of the advances which have been made up to the present time, but also due to the pattern of drug-resistant cases which have become more prevalent.

Tuberculosis Treatment in California

The history of tuberculosis treatment has been chronicled elsewhere (14, 25). The pattern has been a state subsidy in support of county tuberculosis institutions rather than "the almost universal pattern followed by other states which built and maintained state institutions." (14)

The recent report by the California Interagency Council on Tuberculosis and the California Department of Public Health describes the impact of the antituberculosis drugs and the shift in the location of therapy in the following manner

> The advent of the antituberculosis drugs about 1950 revolutionized disease treatment. Prior to this, resources for treatment of

the disease were concentrated in sanatoria, where therapy consisted mainly of months or years of bed rest Private physicians and some health departments offered services where patients could receive pneumothorax or other lung-collapse therapy Public health nurses provided service to patients on bed rest at home. Case-finding then was chiefly through mass chest x-ray surveys Diagnostic facilities for persons with suspicious chest films or those whose symptoms made them seek medical care were available but rarely adequate

Today, most of the tuberculosis patient's treatment is received outside of the hospital[2] Although a period of hospitalization is still recommended for almost all patients, the average necessary length of stay in a hospital has been greatly shortened; chemotherapy ordinarily brings about quite prompt improvement and shortens the period of communicability At any given time, fewer than half of the known active cases under treatment are in the hospital, and probably many who are hospitalized could be at home if their communities had facilities to continue proper care outside the hospital Outpatient care should be continued for years after the patient leaves the hospital However, families of patients no longer require repeated home visits over long periods of time, as had been customary What they do need is examination and prophylactic treatment, both of which they can receive efficiently from an outpatient clinic or a private physician especially skilled in tuberculosis care

The reduction in the amount of active disease in the general population, and the increased knowledge that helps both to identify those persons at risk and to provide means for reducing that risk, have vastly altered the direction of community tuberculosis control Generally speaking, identification and repeated examinations of persons at special risk should replace mass screening techniques that are no longer highly productive These changed needs place an extra load on communities (14, p. 6)

Tuberculosis Case and Death Rates

The prevailing trend in tuberculosis case occurrence and death rates has been until recently a downward pattern From 1940 to 1950 the rate of cases in California fell from 112 2 to 84 8 per 100,000. The death rate fell from 56 3 to 21 7 per 100,000 From 1951 to 1960 the case rate fell from 75 1 to 32 6 and the death rate from 19 4 to 5 1 per 100,000 However, the rates have remained very much the same for 1961, 1962, and 1963

Three points can be made with regard to the current case and death rate First, there has been a disturbing degree of resistance to the anit-tuberculosis drugs in reactivation cases

Because of infrequent contact with clinic or public health nursing staff, patients lose motivation to continue taking drugs reg-

[2] Dr Bertram H Eckmann of Riverside County, at the Los Angeles hearing of the subcommittee noted that

In 1958, our health department possibly had 20 patients under outpatient chemotherapy In 1964 we have between three and four hundred It it far cheaper to keep a patient well outside of the hospital than to have to pay $20 a day in hospital cost if he relapses and becomes sick.

ularly This leads frequently to relapse or reactivation and to the development of drug-resistant strains of tubercle bacilli. Reactivations in 1963 constituted about 20 percent of all active tuberculosis cases reported to the State Department of Public Health Laboratory data indicate that 63 percent of a group of cases previously treated show resistance to one or more of the three primary antituberculosis drugs (14, p 13)

Secondly, there is a large proportion of cases (about 75 percent) which are discovered in a moderate or advanced state while approximately 8 percent are first discovered at the death of the individual (14. p. 14)

Finally, the conclusion to be drawn from the marginal return characteristics of drug technology as the case and death figures remain about the same is that the antituberculosis drugs have gone about as far as they can go given the deficiencies of the current programs in tuberculosis control

> Present deficiencies in local tuberculosis control programs are mostly due to lack of sufficient staff and funds, and the changing treatment and distribution of the disease Some deficiencies, however, are due to program administration The inadequacies found in various local health department tuberculosis record systems make it apparent that good administrative control cannot now be exerted over program activities
>
> Tuberculosis record systems should provide information for (1) the continuous supervision of cases and he followup of contacts and suspects until satisfactory disposition is made; (2) definition of the disease problem in the community through statistical analysis; (3) evaluation of program effectiveness in serving the community needs, and (4) program redirection, where necessary.
>
> A recent survey of six California local health department tuberculosis control programs indicate that record systems are infrequently used for actual case supervision The records are being used too often as information repositories rather than indicators of needed action Contact and suspect records are seldom maintained to indicate final disposition
>
> In most California local health departments, tuberculosis data are not analyzed to define the nature and extent of the disease in the community. Even simple indices to determine the effectiveness of casefinding and followup activities are not compiled. Records are often incomplete or out of date, and therefore are unusable for quantitative or qualitative evaluation of program performance Most local health departments have failed to adapt their records to produce the performance indices recommended by the Public Health Service.
>
> Program evaluation is not being considered fundamental to the full operation of a tuberculosis control program, so programs are not often redirected to make optimum use of available staff and facilities or to meet changing needs of patients and communities. (14, p 16)

Barriers to Tuberculosis Care in California

From the above discussion it can be seen that the lien laws are one part of an overall picture Subsequent to the introduction of HR 173, the lien laws with regard to inpatient care were changed AB 175 of the 1963 session contained the provision that.

> No lien shall be taken pursuant to Section 2601 against the home of a person for care provided him in a county hospital if he was confined to the county hospital as the result of a diagnosis of tuberculosis [3]

At the two hearings at which the Subcommittee on Institutions and Public Health Services[5] heard HR 173, evidence was gathered from many witnesses on the barriers to tuberculosis care One recurring theme was that even where an enlightened procedure was followed, the individual patient still perceived negative factors, especially monetary debt, associated with treatment Thus Dr Bertram Eckmann, Tuberculosis Control Officer for the Department of Health of Riverside County, testified that.

> No patient is ever refused hospital care who needs it under any circumstances All communicable or clinically active tuberculosis is accepted for immediate hospital treatment Financial eligibility is determined for each patient as to whether he can or cannot contribute to the cost of his medical care with appropriate arrangements All patients, upon discharge, receive a statement of the cost of their medical care and a disposition as to payment plan or deferment thereof This is periodically reviewed but hardship is never inflicted However, despite these arrangements, apprehension on the part of patients and their families concerning the cost of medical care and resultant indebtedness still remains a deterrent in convincing some individuals to enter the hospital and will continue to do so as long as such care is charged for

He offered two case studies on the meaning of county residency

> Mrs B moved to Riverside County with her husband who had heart disease, and purchased a home here to be near her daughter About six months after arriving tuberculosis was discovered and Mrs B was hospitalized She was subsequently transferred to the county hospital of her county of legal residence, 400 miles away, separated from her daughter and husband for approximately six months Her family was able to visit her only occasionally. After discharge from the hospital she returned to Riverside County Her husband died shortly thereafter She was not denied treatment and had a successful result, but at great emotional hardship
>
> Case I—V.C , 70-year-old white male, with far advanced pulmonary tuberculosis, heart disease, and other disabilities, was successfully treated and discharged from the county hospital No longer able to live by himself, he moved in with a niece in an adjacent county. Until legal residence was established in this county, a year subsequent to his hospital discharge, he was not accepted for followup care or chemotherapy for tuberculosis A lapse

[3] Welfare and Institutions Code, Section 2601 5.

in his treatment occurred while this matter was settled and we resumed his followup care Fortunately no adverse effects resulted However, the situation of the patient living in one county and outside of the health district of another county from which he receives treatment is anomalous and not in the best interest of providing coordinated care

As part of its study of HR 173, the Public Health Committee enlisted the aid of the Tuberculosis and Health Associations of California to survey the county regulations on inpatient care and outpatient care The data from the counties indicate a large degree of variability from county to county On the point of lien laws, the survey showed that of the counties responding for outpatient care, 4 counties took liens on homes for outpatient care while 39 did not The lien law per se then would not appear to be a major barrier to patient care [4]

With regard to financial reimbursement for outpatient care, there appears to be a wide variation from county to county In some counties there appears to be no charge for outpatient care In others, charges are based on an ability to pay.

The survey did indicate that any residency requirement for county care was modified in practice Thus for outpatient care while many counties had a residency requirement, 41 reported that a person with no legal residence was treated while 2 reported they did not There would, however, appear to be some difficulty to patients who were legal residents of one county but had moved to another county Thus the following comments were received in the questionnaire on the impact of lack of residency·

"Women had to wait a year after moving to fulfill residency requirement before beginning treatment "

"In the past, residency requirements caused problem with hospitalization of patient "

"Women who had lived in two counties transferred back and forth between them until finally hospitalized."

"One reactivated case was known to have delayed seeking treatment because of fact he didn't think he was eligible "

Only nine of the counties surveyed indicated that reciprocal reimbursement agreements are in existence with other counties. As Dr. Eckmann stated in his testimony before the committee:

Because of the highly mobile population of California, referrals for outpatient chemotherapy necessary to prevent relapse and recurrence of tuberculosis are frequently made Because of the wide variation of practices throughout county health jurisdictions and clinics we are never certain as to whether chemotherapy is actually continued in many cases, to the disadvantage of the patient and the public.

[4] In evaluating what is a barrier, one of the difficulties is that while objectively there may be no lien law it is difficult without some form of patient-interview survey to really be sure that the patient perceives the financial aspect of county care as not eventually involving his house or possessions The difficulties of obtaining data on the effects of liens and also other barriers to care are formidable One attempt to survey those who had liens put on their property for county hospital care found that in the sample of 26 families interviewed, 18 "expressed varying degrees of resentment and bitterness toward the liens" (13)

The results of this survey do not project an image of easily accessible care for all TB patients throughout California

Conclusion

The report of the California Interagency Council on Tuberculosis and the State Department of Public Health (14) calls for a new and expanded program to eradicate tuberculosis in California The annual cost of an augmented program for the first year is estimated at $2,767,-315 The meaning of the study on HR 173 is that there are barriers which should be eliminated as a necessary component of any expanded program

REPORT OF THE SUBCOMMITTEE ON PROFESSIONS AND OCCUPATIONS

Subcommittee on Professions and Occupations

PHILLIP SOTO, *Chairman*

In the area of proposals for establishing or modifying professional or occupational licensing requirements, the burden of proof is on those seeking legislative change. The evidence must be both quantitative and qualitative, and must be evaluated in terms of the protection of the public health As the 1957 report of the Senate Interim Committee on Licensing Business and Professions stated

> . unless there is a marked and evidenced requirement to protect the public health, safety, welfare or morals, it is not the function of the state to license and thus to regulate and control

The same factors are involved in proposed changes to licensing statutes An increase in the requirements for prequalification, introduction of new bases for revocation of suspension of licenses, or expansion of the scope of practice are proposals which must always be examined in relationship to the objective to be reached as it pertains to the public interest

AB 1713: Corrective Shoes

Recommendation

Due to the lack of sufficient documentation of abuses under the present statutes dealing with corrective shoes or appliances, the committee recommends that the proposed statute change not be enacted at this time

Analysis

As introduced, AB 1713 would have altered the present exception to Section 2141 of the Business and Professions Code which is present in Section 2148 Section 2141 of the Business and Professions Code reads

> Any person, who practices or attempts to practice, or who advertises or holds himself out as practicing, any system or mode of treating the sick or afflicted in this state, or who diagnoses, treats, operates for, or prescribes for any ailment, blemish, deformity, disease, disfigurement, disorder, injury, or other mental or physical condition of any person, without having at the time of so doing a valid, unrevoked certificate as provided in this chapter, is guilty of a misdemeanor

Section 2148 reads

> Corrective Shoes and Foot Appliances Nothing in this chapter prohibits the manufacture, the recommendation or the sale of either corrective shoes or appliances for the human feet

The issue involved here is the amount of evidence accumulated to prove that as it now exists Section 2148 has contributed to occurrences which adversely affect the public health. The section as it now reads has been in existence since 1937

The committee heard extensive testimony at its December 6, 1963, meeting in San Francisco The representative for the California Podiatry Association informed the committee that they felt that Section 2149 of the bill should be deleted and that the word "shoes" should be removed wherever it appeared in the bill. (1, pp 2, 3)

The role of the committee as it is in each proposal which affects the licensing structure is to evaluate the negative effects to the public health that the present wording of the codes is producing Dr Robert Shor, a practicing podiatrist and chairman of the Legislative Committee of the California Podiatry Association, presented the case for the bill (1, pp 5–77)

> Even though diagnosis of the human foot is restricted to licensed practitioners by Sections 2139 and 2141 of the Business and Professions Code, the unlicensed person is permitted by Section 2148 to manufacture, recommend and sell foot appliances. The code sections are consistent if one naively accepts the quoted play on words As a practical everyday matter, however, the sections have proved to be greatly inconsistent How can a salesman recommend a foot appliance without there having been a diagnosis of the physical condition being treated by mechanical means? (1, pp 6, 7)

The main contention was that "a potentially dangerous problem" could be aggravated by an individual utilizing the services of somebody other than a licensee in the healing arts

> The problem revolves around the rash of foot analysts "which have flooded the large cities of California" and are extending to other small cities This raises a very serious problem involving the public at large, the people who take their sick feet to shoe stores These individuals are not licensed to practice medicine, podiatry or the other healing arts, but manage to dispense a bootful of physiological advice anyway Now we are not referring here to the ordinary shoe salesman, but to the so-called "foot analyst" Now this "foot analyst" is the man in the white coat with this medical aura about him who infers that he is some sort of foot specialist The layman who presently becomes involved is totally unaware of the misleading implications A potentially dangerous problem may already exist when the analyst prescribes the fit of an appliance or inlay, but the problem is magnified by inadequate or dangerous treatment As more of these particular ill-fitting supports are fabricated, the total hazard will increase and the number of deleterious results will rise. The individuals concerned are those who suffer from diabetes meletus, the whole ramification of the arthritics, those with peripheral vascular disease as well as those patients who have certain neurological disturbances which interfere with the normal perception of pain, heat and cold Now when these individuals enter a commercial establishment to purchase shoes the so-called "foot analyst" proceeds to prescribe supports for their foot condition Untrained and unsupervised individuals are unable to recognize the symptoms and effects of the vascular disease since they are ignorant of their very existence They are unfortunately unaware of the

constant danger in which these individuals find themselves They are unaware of the precautions necessary to avoid injury They are further in no position to prevent complications and after-effects. The number of cases of gangrene and amputation produced in such cases has not been computed The number will increase in proportion to the number of supports and inlays made without control (1, pp 5, 6)

One of the central questions raised by one proponent of the bill was the extent to which individuals with a foot condition which should be treated by a licensee in the healing arts did not do so because of the existence of Section 2148 The following exchange illustrates the lack of specific information available on this point

Assemblyman Barnes: Podiatry is a very important profession and, in my opinion, a person who has a real problem will get to a podiatrist I am not convinced by the testimony which you have just given that these people need a podiatrist, but I am not convinced that they would not have gotten to you anyway

Dr. Nelson: Well, they probably would, but I am thinking in terms of the time of arrival which eliminates the great possibility of future, more intensely deliberating

Assemblyman Barnes: Does your profession have any record of the number or the percentage of tragic cases that are no longer treatable that would have been treatable if they had gotten to you instead of to this man in the white coat?

Dr. Shor: I do not think we have computed this, but just to answer your question a little further Assemblyman Barnes . .

Assemblyman Barnes: If I ever got one of these foot problems and I tried one of these devices and I still had a real painful foot, I would go to my doctor and he would direct me to a podiatrist

Dr. Shor: The problem is this The individual walks into the shoe store that is inferring that this type of appliance or inlay is going to help a particular condition Now the person who buys this device, seeing the individual in the white coat and by inference feeling that he is a foot specialist, goes back to the shoe store if he has a problem because that is where he bought the appliance The saleman, in turn, adjusts the device What we are trying to bring out here is that in certain conditions this constant delay, this masking over a condition can hinder these people By the time they get to us or to a physician a great deal of harm has been done (1 pp 14-15)

An analysis of the cases which the proponents presented to the committee reveals no case in which an individual was injured due to the

existence of the present statute in California [1] If there has been a widespread problem in this area it would be logical to assume that suits have been filed against the businesses operating under Section 2148 At this time no evidence on this point has yet come before the committee

Chairman Soto: In the situation where a person who has some affliction goes to one of these white coat persons in a store and this white coat person misrepresents and suggests a particular type of device or appliance that is supposed to take care of the difficulty that this person has, and if this person discovers, through examination that there is a more serious problem, are there not grounds for suit here?

Mr. Finell: There might be, sir.

Chairman Soto: There might be?

Mr. Finell: There might be, sir

Chairman Soto: With the number of problems that we have had in this area, I would assume that there must be record of some person taking one of these white coat persons to court for suit

Mr. Finell: I believe that Dr Shor, in connection with his work at the county hospital, pointed out to me why in many instances nothing is done He might be able to answer your question

Dr. Shor: Well, Mr Soto, there may be a great many that have had suits against them, I don't know, I have not looked at any court records I know of cases that were brought against a few of the commercial establishments in which the peripheral vascular became involved and legs were amputated Now, if necessary, we can go ahead and get the court cases and document them for you

Chairman Soto: Would you make those available for us?

Dr. Shor: I will do my best to get it and send it to the committee (1 p 40-41)

At this time there has been neither the type nor depth of evidence presented to the committee which would justify the enactment of legislation such as that presented in AB 1713 The situation is summarized by Assemblyman Mulford's statement at the committee hearing.

Assemblyman Mulford: It seems to me that one of the biggest points that you people have scored to day, and I commend you for it, is to bring in that there is misrepresentation in other segments of the industry You seek to control this and it would seem to me that the representatives of the industry who are here should be placed on notice as a result of this hearing that any sense of at-

[1] See the cases given to the committee (1, pp 8–11, 13)

Case 1 "A patient was brought in with a typical symptom on pain in the arch which *would ordinarily* have been treated with the type of arch support that you have heard discussed previously"

Case 2 "*If she would have accepted* treatment of an appliance and arch support it would have probably lead to disastrous results"

Case 3 and 4 Both cases where arch supports were used, found unsatisfactory and the individuals *then went* to a podiatrist and the condition corrected

Case 5 " the typical arch pain for which an appliance *would* be dispensed"

Case 6 A woman living in Rome who bought an appliance "in the United States" (not apparently in California) which apparently prevented early diagnosis

tempt to misrepresent or attempt to stand in the shoes of a professional podiatrist or a doctor could lead to very serious legislative consequences I do not agree that you have proved your case entirely, insofar as this bill is concerned But I do think you have served a very useful purpose and perhaps there are areas of the language that we can proceed on when we again convene. But the representatives of the industry here, if the testimony which we received is factual and we, of course, assume that it is, should be warned that any attempt to misrepresent certainly would not be tolerated and is not in the public interest I am sure this would be reviewed in the industry. I think the podiatrists have scored some points that, to a degree, can be interpreted as an indictment It would seem to me that cleaning your own house and starting now to attack this problem would make a big step forward toward resolving it without having to come to the legislature for a solution (1, p. 44)

AB 2658: Out-of-State Laboratories

Recommendation

The committee urges the professional and occupational societies concerned with the operation of clinical laboratories to accomplish the goals of AB 2658 through an intensive educational campaign

Findings

1. There is a consensus that every assurance must be given the people of California that the clinical laboratories which are utilized by the California medical profession are of the highest caliber
2. There is disagreement within the profession and occupational groups involved that the proposal contained in AB 2658 is the best answer to the problem present in the area of clinical laboratories

Analysis

Since the introduction of this bill a degree of disagreement has developed on the best manner of coping with the problem at which the bill was aimed. In a recent letter to the Committee on Public Health, the Chief of the Laboratory Field Services, Dr Max Chapman stated.

> The California Medical Association, I believe, will conduct an intensive educational program among all physicians within the next two years If this method can be successful, it would be a more desirable means of correcting some of the evils in this field than would be accomplished through legislation. However, if this effort fails to accomplish the desired purpose, then I believe the leaders of the profession will favor introducing legislation.[2]

The subcommittee during its September 6 hearing in Los Angeles did not receive any documentary evidence that the people of California were receiving substandard clinical laboratory work under the current

[2] Letter to committee dated November 27, 1964.

statutes (2 pp 91-170) Given this situation, the committee urges the professional and occupational societies concerned with the operation of clinical laboratories to accomplish the goals of AB 2658 through an intensive educational program

AB 2856: Prohibition of Pharmacies in Grocery Stores

Recommendation

There has been no evidence presented to indicate that the administrative rules and regulations of the California Board of Pharmacy regarding the physical location of pharmacies are inadequate to protect the public health and welfare

Analysis

At the Subcommittee on Professions and Occupations hearing on December 6, 1963, no testimony was offered in support of this legislation. The representative of the California Pharmaceutical Association states

> We cannot in our conscience see how the location of a pharmacy, whether it be in a grocery store or not can have any effect upon the public health. (1, p 93)

At the present time, the administrative rules of the Board of Pharmacy contain 16 separate provisions dealing with sanitary conditions for licensed establishments [3] There has been no indication given to the committee that these regulations are inadequate to achieve the protection of the public health in the physical location of pharmacies

AB 3127: Dental Hygienists

Recommendation

It is recommended that the proposed statute lessening the educational requirements for dental hygienists in the public schools not be enacted

Findings

1. The bill would nullify the effect of the Fisher Bill, (five years of education) before teaching in the public schools as it now pertains to dental hygienists
2. There are fewer than 35 dental hygienists positions in California.
3. There was a lack of evidence presented to the committee indicating that the requirement of fewer years of education would·
   (1) Increase the usage of dental hygienists in California school districts, and,
   (2) Increase the supply of these teachers.

[3] California Administrative Code, Title 16, Section 1713

Analysis

This proposed change in the Education Code would eliminate the present requirement that dental hygienists teaching in the public schools comply with the requirements of the Fisher Bill. At the subcommittee hearing on this measure, Carl A Larson, Chief of the Bureau of Teacher Education and Certification in the Department of Education, presented the department's opposition·

> We oppose this legislation on the basis of the licensing of certificated personnel law of 1961 As amended in 1963, this was the Fisher Bill and had as its major objective increasing the academic atmosphere of the school system, and increasing the stature of teachers, supervisors, and all the employees in the school in terms of academic competence Therefore, this law did establish five years of preparation for entry into professional positions in public schools, a minimum of five years for all people . .
>
> The thesis here was that there should be no one employed in a professional position in the public schools who would not increase the academic competence of the staff of schools Therefore the studying of five years as a minimum for teachers and all other employees was established I think that it would be safe to say that there are probably less than 30 dental hygienists employed in the public schools in the entire state The State Board of Education has established and implemented the Fisher Law, and last May adopted new regulations A great deal of consideration was given by the State Board of Education in adopting these new regulations. The specific requirements for dental hygienists is a license to practice dental hygiene This is the only specific requirement that the state board has established, but the law itself, in establishing the level of entry to the public schools established that at five years So this is five years total (1, pp 109–110)

Dr Gordon Watson, a member of the Southern California State Dental Association, testified in support of a change in the present law to four years' preparation rather than the two years set in AB 3127 or the five years currenly required (1, pp 98–108)

The committee recognizes the importance of health instruction in the schools From the evidence presented at the hearing there is some difficulty in determining what the impact of the reduction to four years would have on the supply of dental hygienists in the public schools.

At this time, there is consensus on the position that the dental hygienist should share the professional status of her teaching peers. With the absence of evidence to indicate that the legislation requiring this status has produced a significant lessening of dental hygienists, the committee recommends that the proposal contained in AB 3127 not be enacted.

HR 576: Hypnosis

Recommendation

The committee finds that in view of the provisions of Section 2141 of the Business and Professions Code that there are

adequate protections against the improper use of hypnosis by those who are not licentiates in the healing arts, and therefore legislation is not necessary in this area

Analysis

There is almost as much disagreement on the actual danger to the subject of the use of hypnosis as there is in the lack of documentary cases which can contribute to evaluating whether the use of hypnosis should be restricted by legislation to use by specific occupational groups The goal of the following report is to review the current legal situation concerning hypnotism and its use by those not licensed in the healing arts; to explore the data available on sequelae to hypnotic induction; to note the factors involved in licensing "lay hypnotics", and to offer some conclusions as to current policy-future conditions.

The Present Legal Situation

The central case in the area of the medical use of hypnosis by those not licensed to practice in the healing arts is *People* v. *Cantor* In this case appellant was convicted for violating Section 2141 of the Business and Professions Code The court's summary of the facts is as follows·

> In telephone conversations between appellant and one female prosecution witness who told appellant she was overweight, appellant said he could help her and would send her his brochure, that he guaranteed results and that he would hypnotize her; in his office, appellant repeated to her that he could help her, that he had no failures, he had cured bed wetting by a child, he could and did relieve cancer pain; for an eye pain of this witness, appellant attempted to hypnotize her, then he prescribed self-hypnosis and gave her a type paper to teach her to relax and hypnotize herself, on her second visit he told her he could make her lose 20 to 30 pounds, from 10 to 15 in one week; he asked her if she had any bad habits or serious illnesses; the witness paid for seven visits; he told her he was not a doctor, he put his hands on her for relaxation; while she was supposed to be under hypnosis, he touched the back of her head and rubbed around there and then over her eyes and forehead, he gave her no medicine but did give her a doughnut; and told her that she would be more sociable, more outward by his hypnosis, that to repeat that she would not overeat, with which she complied; the other prosecution witness over the phone told him she was terribly nervous, had a great pain in the back of her head and in answer to her question if he could cure her, he said he could overcome the condition, then said she had a tension headache, he told her he would cure her, at his office the witness complained of the head pain, to which appellant said "This is a migraine headache this time"; that he could make her well, he put his hand on the back of her head and asked her if she could feel the pain go away, to which she replied "yes", he said he would make her well, he would help her, he put her in a chair and told her to relax and gave her a typed paper of instructions for self-hypnosis (People's Ex 3), he had

her repeat the phrases there, and at a certain count by him she would awake "refreshed, relaxed, confident, and the pain in your head will be gone", later he stated he would go to another room and give her a hypnotic or telepathic suggestion, and that she would go into a deep trance, from which she would awaken feeling "refreshed, relaxed" and all the things she referred to before, she paid appellant for this visit (People's Ex. 4)

From all the evidence, it is apparent that appellant "advertised," held himself out as practicing and practiced and attempted to practice a system or mode of treating the sick or afflicted, that he diagnosed, treated "an ailment, disease or disorder or other mental or physical condition" within the purview of the statute

The meaning of the case for the present review is that to quote the language of the case, "The practice of hypnosis as a curative measure or mode of procedure in helping patients to lose weight, relax tension, and improve nerves and bad habits by one not licensed to practice medicine amounts to the unlawful practice of medicine"[4]

Hypnosis and Legislative Regulation

There has been a considerable amount of literature published on the nature of hypnosis and its medical uses (7, 8) The subject of this report, however, is the meaning of hypnosis with relationship to governmental control and licensure The central question relating to the gathering of relevant evidence is the harm to the public health of individuals from the use of hypnotism At this point there is simply a paucity of information which can contribute to a scientific evaluation of the need for state regulation At the hearing of the Subcommittee on Professions and Occupations held in Los Angeles, September 11, 1964, the emphasis was placed on gathering documentary evidence The following exchange took place between the subcommittee chairman, Phillip Soto, and Dr Stuart Knox, representing the California Medical Association.

Chairman Soto: I am wondering if the California Medical Association has a record of specific cases where there have been side effects, adverse effects where there has been some neuro or psychiatric effect that has been recorded

Dr. Knox: We have had several cases reported

Chairman Soto: Do you have documentation?

Dr. Knox: Yes, we do

Chairman Soto: How many cases have you had in the last four or five years in which you could say that—in which you could say that these cases were created as a result of the misuse of hypnosis?

Dr. Knox: I think that we document five or six (2, p 8)

Dr Bernauer Newton, the representative of the California Psychological Association testified with regard to the cases on record that "There is more evidence than was testified to this morning," and that there were "10 to 15" cases (2 p 69) Neither the 5 cases nor the 10 to 15 have been submitted to the committee

[4] 198 C A, 2nd Supp 844

Dr Newton emphasized the difficulty in gathering evidence with regard to the effects of hypnosis

> Let me also say, at this point, one of the most difficult things is to document and validate this kind of evidence because we know, whether we are talking about hypnosis or whether we are talking about any other kind of human function, there is no one-to-one relationship between what happens, or what is done to an individual, and his immediate response to it This is why it is so difficult For example, we know that there are many traumas that we all have experienced at one time or another, especially in our childhood, in which the evidence for or the symptom resulting from this particular trauma, or this particular emotional conflict, does not manifest itself for a number of weeks, months, or even years. So it is very difficult to tie down and say that this was caused by this In those few cases where the stimulating situation, such as the hypnotic induction, is so quickly followed by a radical change in that individual's behavior, we can with more certainty say this caused this But I believe that our knowledge of psychodynamics suggests that many of the other things which occur much later in time we cannot tie in in terms of verifiable statistics, but I think the bulk of scientific opinion is in this direction (2 p 69)

A recent article summarizing a considerable amount of research in the field of hypnotism concurred in the difficulty of reaching a meaningful quantitative analysis:

> Appropriate statistics are difficult to locate. Extreme cases come to attention and are reported, but there is no way of knowing how representative they are A handful of such cases can be quite impressive; even one case is enough to warn that care must be exercised in psychotherapy, hypnotic or otherwise. (4, p 462)

This survey concluded that:

> The literature on the aftereffects of hypnosis is lacking in statistical studies that relate unexpected or unintended consequences to the total population from which the cases are drawn Fifteen cases from the literature of the last few years show that symptoms may develop after hypnotic symptom removal which are more severe than the original symptoms, a number being of psychotic intensity. They appear, however, chiefly in patients with a long history of illness, and perhaps showing psychotic trends prior to the therapy; there is no way of knowing the total sample from which they are drawn, or to what extent the consequences are determined by ill-advised techniques of psychotherapy rather than with hypnosis as such. Symptom removal by techniques other than hypnosis occasionally has similar consequences (4, p 476)

The Licensure of "Lay Hypnotists"

While the evidence gathered and reviewed by the committee indicated that Section 2141 of the Business and Professions Code as interpreted in *People* vs *Cantor* was sufficient to prevent the use of hypnosis for medical purposes, there was a paucity of evidence to support any form of licensure or statutory acknowledgment of a particular group of

individuals not licensed in the healing arts who would be granted in effect an exemption from Section 2141

Again any such request for the granting of a license must be seen in the perspective of the total state licensing program, the characteristics of the group seeking recognition, and the criteria of necessity involved State licensing can be viewed as an attempt to bring rationality and order to an occupational segment which in its nonlicensed state is or would detract from the public health and safety Licensing can be an attempt to create or recognize an occupational group and by setting standards for admission and/or practice remove a negative impingement on the public health or safety. Licensing should not be an award of prestige It is a perfectly valid and very necessary utilization of governmental authority in important or vital spheres of society

In the *People* vs *Cantor* the court stated that "While it may be that one day the use of hypnotism may be recognized sufficiently to warrant the Legislature to license that practice, to date it has not done so" From the evidence presented at the committee hearing and gathered from other sources, it would appear that those who practice hypnotism in a manner which does not impinge on the practice of medicine are in a category which at this time does not have the characteristics to warrant legislative recognition either in the sense of virtually prohibiting their existence or creating a licensing program

Conclusion

The findings of this review should not be seen as constituting a position that the situation as it now exists in hypnosis might not be altered in the future It is an area of interest which seems peculiarly susceptible to creating great interest and then subsiding into quiescence As the Council on Mental Health wrote in the introduction to its report on "Medical Use of Hypnosis"

> The history of hypnosis since the time of Mesmer has been characterized by a series of curious cycles alternating between great interest and almost complete rejection This phenomenon in itself is an indication of the somewhat mystical aura that has surrounded the subject through the years Recently, owing to concatenation of circumstances, there has been a reawakened interest in hypnosis (7, p 186)

There are thus at least three conditions that would prompt a reevaluation of the committee's position

1 Evidence to indicate that despite the presence of Section 2141 of the Business and Professions Code there have been a number of cases in which individuals without licenses in the healing arts were infringing into the area of medical use of hypnosis

2 That hypnotism was removed from where it now resides as a subject of interest, i e , with a segment of the medical profession and a small number of "lay practitioners" and became something of a mass phenomena in turn causing an impact on the public health and safety

3. That the use of hypnosis in nonmedical instances, whether for memory training or the like, had created a problem for individuals to the extent that a restriction of the process itself, not simply its medical usage, would contribute to the public health and safety.

Subcommittee on Environmental Pollutants

LEO J. RYAN, *Chairman*

AB 2467: Radioactive material waste disposal sites

Recommendation

The committee proposes that legislation be enacted which before a radioactive material waste disposal site in California be established that such a site be, (1) economically beneficial to atomic energy development in California, and, (2) meet requirements of public health and safety. That the Coordinator of Atomic Energy Development and Radiation Protection be responsible for the determination as to economic benefit; and that the coordinator solicit the advice of the Atomic Energy Development Council.

Findings

1 With the expiration of ACR 87 in September of 1965 the California Department of Public Health will have no authority to deny licenses for the establishment of several disposal sites in California

2. There is considerable doubt if there is sufficient radioactive waste in California to support even one California site.

Recommended Legislation

SECTION 1 Section 25812 is added to the Health and Safety Code, to read:

25812 The department shall not grant any license to establish and operate a radioactive waste disposal site unless all of the following requirements are satisfied

(a) The land on which the radioactive wastes are to be buried is owned by the federal or state government

(b) The department determines that the site is consistent with the public health and safety

(c) The department receives a finding from the Coordinator of Atomic Energy Development and Radiation Protection that the establishment and operation of the site will be of economic benefit to atomic energy development in this state The coordinator, in arriving at such a finding, shall consult with the Advisory Council on Atomic Energy Development and Radiation Protection.

Analysis

The need for the above legislation derives from the lack of authority on the part of the State of California to limit the number of radioactive waste disposal sites in the state.[1]

[1] "The regulations of the Department of Public Health set standards for the disposal of radioactive waste If these standards can be met by more than one company, there is no apparent reason why more than one company would not be entitled to a license to bury radioactive wastes" Letter from Attorney General Stanley Mosk to Mr Alexander Grendon, Coordinator, Atomic Energy Development and Radiation Protection February 1, 1963 See also California Administrative Code, Title 17, Section 30194, "General Requirements for the Issuance of Specific Licenses"

During the 1963 session, two relevant measures were introduced AB 2467 would have made the finding that the public health and safety and also the needs of atomic energy development required that there be a limitation on the number of sites The bill also set up a "public interest" test for the conduct of any operations ACR 87 requested the State Department of Public Health to "restrict the issuance of permits which authorize the burial of radioactive waste to the permits which the department determines are absolutely essential to meet the needs of industry " The time period covered by ACR 87 expires on the 91st day after the final adjournment of the 1965 Regular Session of the Legislature Thus some form of legislation must be passed during the 1965 session to prevent the department from having to issue several licenses

The main consideration is simply that the state must have an ongoing interest in these sites If any were to be abandoned by a private company, the interest of the state would not cease The state thus has a legitmate interest in protecting itself from a needless proliferation of these sites At the December 2, 1963, hearing of the Subcommittee on Environmental Pollutants, Dr John Heslep, Chief of the Bureau of Radiological Health, testified on this point:

> We feel that this existing situation does put us in an indefensible position because as Mr. Blanc has pointed out, we feel very strongly that the number of sites should be limited because the state must maintain surveillance over these sites in perpetuity. Some of it lasts thousands of years, and if the site were abandoned by a private company the state would have to continue to maintain surveillance for health and safety, so we feel very strongly that we need some legislative relief from the existing situation [2]

At the subcommittee hearing there was considerable testimony on the financial aspects of site management and the need for competition. From the evidence that has been presented to the committee there is some doubt that there is sufficient radioactive waste to support even one site in California The conclusion of the Atomic Energy Coordinator's survey and the California Manufacturers' Association Committee on Atomic Energy and Radiation Protection both reflect the lack of a necessity for multiplicity of sites and the ambiguity in the meaning of competition in this area

> All of those interviewed (the largest producers of radioactive waste in California) stated that some competition would be beneficial to the industry, economically and technically At the same time it was felt that should there not be enough business to support two sites (Nevada and other), the present situation was acceptable and although, while not too desirable, it still did not hinder industry in its use of radioactive materials The consensus seemed to favor a second site but not necessarily one in California. Operation of the site in Washington by California Nuclear at costs

[2] *Environmental Pollutants*, Hearing of the Subcommittee on Environmental Pollutants of the Assembly Interim Committee on Public Health, December 2, 1963, p 70 For similar testimony see the testimony of the Atomic Energy Coordinator, pp 27–34, and also California Coordinator of Atomic Energy Development and Radiation Protection, *Fifth Annual Report*, (January 14, 1965), pp 6 and 7

to California industry competitive with Nuclear Engineering's satisfied most of those contacted At the present time it also appears that two operating organizations with two separate burial sites are adequate to handle the California radioactive waste demand for the next 5 to 10 years This is not intended to preclude other firms from entering into this business but rather to suggest an adequate minimum level of service [3]

This rather cursory study would indicate that California only needs one low level solid waste burial ground It would also indicate that the number of firms hauling only waste would not be too large in that an average truck can take 1,000 to 1,500 cu ft /load (Less than 50 trips per year to the burial ground from the collection points) *This true technical need for a burial site, which is actually satisfied by the Beatty, Nevada, site,* must be balanced against the benefits of competition, benefits to the state and its industry due to ease of burial from more than one site, the fact that waste disposal is a sideline activity to most of the companies involved, etc.[4]

The legislative role here, however, is to establish a procedure and a criteria whereby an evaluation can be made on an application for any radioactive waste disposal site in California To this end, the proposed legislation establishes three criteria·

(a) The land on which the radioactive wastes are to be buried is owned by the federal or state government

(b) The department determines that the site is consistent with the public health and safety.

(c) That the establishment and operation of the site will be of economic benefit to atomic energy development in California.

The procedure for decision making utilizes the appropriate expert bodies The Department of Public Health will have the responsibility for consistency of the site with public health and safety The department must also receive a finding from the individual responsible within California government, for atomic energy development that the establishment and operation of the site will be of economic benefit to atomic energy in the state In the process of making his finding and recommendation, the legislation provides for his consulting with the Advisory Council on Atomic Energy Development and Radiation Protection

The main goal involved in this area is that California government must be in a position to continue the policy declared in the Atomic Energy Development and Radiation Protection Law of 1959.

> To encourage the constructive development of industries producing or utilizing atomic energy and radiation and to eliminate unnecessary exposure of the public to ionizing radiation [5]

To accomplish this end the structure of state government must remain flexible in order to cope with a constantly shifting technology. The alternatives to the recommended legislation are to either issue licenses

[3] California Coordinator of Atomic Energy Development and Radiation Protection "Radioactive Waste Disposal Enterprises in California," (typed manuscript, p 8)
[4] *Ibid*, p 7
[5] Health and Safety Code, 25710

en blanc, or to have a situation where licenses are issued without effective criteria, or to tie the hands of the state in such a manner as to make it impossible to grant any license except by special legislation

AB 2512: Labeling of detergents and soaps supplied to restaurants

Recommendation

It is recommended that the proposed statute requiring specific labeling of restaurant detergents not be enacted at this time

Findings

1. There is not sufficient evidence at this time to indicate a necessity for specific labeling legislation of this type.
2. The California Restaurant Act's requirements for restaurant sanitation seem to adequately cover the intent of the proposed legislation.

Analysis

At the December 2 hearing of the subcommittee, no witnesses appeared to testify in favor of this legislation The original stimulus for its introduction was that it was possible for inferior soap products to be sold to restaurants for cleaning and dishwashing purposes Opposition to the legislation was presented by the Soap and Detergent Association [6]

A recommendation for passage of AB 2512 would involve a finding that the California Restaurant Act of 1961 has not been operating effectively in this area There are extensive requirements in this act [7] dealing with the cleaning of dishes There is the requirement that dishes shall be washed "with an effective detergent," and there is a penalty for the violation of the requirements of the act [8] At this time the evidence necessary to support the enactment of this measure has not been accumulated, and it would appear that the existing law adequately covers the purpose of the bill

AB 2379: Sewerage treatment facilities

Recommendation

Sufficient evidence has not been presented to justify enactment of legislation as proposed in AB 2379

Analysis

No representatives appeared to testify either for or against this legislation at the subcommittee hearing

[6] *Environmental Pollutants,* pp 1–26

REPORT OF THE SUBCOMMITTEE ON DRUGS AND HAZARDOUS SUBSTANCES

Subcommittee on Drugs and Hazardous Substances

F. DOUGLAS FERRELL, *Chairman*

AB 2033: Investigational Drugs

Recommendation

It is recommended that the proposed statute dealing with changes in the procedures in the use of investigational drugs not be adopted

Findings

1 The federal law on the use of investigational drugs was thoroughly revised by the 1962 Kefauver-Harris Act

2 That the enactment of AB 2033 would remove California from conformity with the federal law

3. The effects on medical research in California of the procedures put forth in AB 2033 are difficult to assess but would probably be deleterious

Analysis

As now in force, the Food and Drug Administration regulations dealing with patient notification and consent in clinical pharmacology and clinical investigations state that

> The investigator certifies that he will inform any subjects, including subjects used as controls, or their representatives, that drugs are being used for investigational purposes, and will obtain the consent of the subjects, or their representatives, except where this is not feasible or, in the investigator's professional judgment, is contrary to the best interests of the subjects

The regulations on this point are the result of an amendment to the Kefauver-Harris Drug Law of 1962 by Representative Friedel of Maryland [1] The amendment was strongly supported by the National Health Federation which described the events in the following manner

> An attempt was made when the bill went to conference to destroy the Friedel consent amendment, but we were able with the support of these representatives to keep the amendment, but were not able to prevent the opposition from tacking on a phrase that may be used as a loophole However, the fact that the bill as finally passed carries the Friedel amendment requiring consent before use as an experimental guinea pig has established the principle in federal law If we find that the escape clause is abused, we can amend it off in a future Congress [2]

The meaning of "abused" has at least two connotations· (1) that doctors have utilized the exemptions too liberally, (2) and/or that patients have been subjected to harm because of this invoking of the ex-

[1] For one view of the factors involved in the patient consent amendment, see Richard Harris, *The Real Voice*, (1964) New York Macmillan and Company

[2] *Bulletin*, National Health Federation, Vol VIII, No 11, Nov 1962, p 22

ceptions. At the hearing of the Subcommittee on Drugs and Hazardous Substances in Los Angeles on November 11, 1963, representatives of the National Health Federation testified but did not touch on these points

There are apparently two distinctly separate aspects to a mandatory informing, i e , without any discretion on the part of the doctor The first of these is that by being informed the patient will protect himself from harm through declining to participate in the use of the drug. The second contention is quite different and is essentially that there is an absolute right to know which ought not to be abridged

AB 2033 as amended states that its provisions shall not apply to the use of an investigational drug in the course of a scientific study conducted by a university nor within a facility under the direct control of the university [3] The rationale of AB 2033 is thus closely linked with the patient serving as a barrier to the possibly negative consequences of the testing of investigational drugs by individual doctors not associated with an institutional environment such as a university. There is some indication that the qualifications of those involved in investigating drugs are less than would be desirable [4]

The central issue, however, would appear to be whether the mandatory notification provisions of AB 2033 offer the most suitable manner of ensuring patient safety to the greatest degree possible There has been little evidence to indicate that the *modus operandi* of such a provision would provide a comprehensive, measurable, and adequate contribution to the problems involved in the testing of investigational drugs If the procedures that the Food and Drug Administration requires are inadequate, mandatory patient consent offers little hope of making a substantial contribution to the prevention of negative consequences If the Food and Drug Administration regulations are performing the task which they were designed for, then the mandatory patient consent procedure in California as a contribution to the prevention of negative consequences appears to be unnecessary

The context of such an evaluation includes the fact that the Kefauver-Harris amendments are relatively new and should be given an op-

[3] "The federation is not opposed to the use of human beings for drug experimentation provided (1) such experimental studies be made by qualified scientists, (2) that such experiments be made by recognized universities in medical faculties owned or controlled by said universities, (3) the only deviation from this rule would be in dire emergencies such as where a physician had tried all known remedies and in an endeavor to save a life would use an experimental drug, (4) wherever possible and practical all of the foregoing should be done only with the full knowledge and consent of the patient, his parent, or responsible guardian and (5) experimentation by individual doctors should under no condition, except that of a dire emergency be carried on without the full knowledge and consent of the patient, his parent, or responsible guardian

'Please understand the federation is not opposed to human experimentation, but is unalterably opposed to experimentation by individual doctors as stated in item (5) We believe that individual doctors in the course of their practice are not qualified to set up proper experimental conditions, keep proper records, have proper control of the patients, with the necessary continuous and careful observation neither do they have the time to properly manage such vital experiments It is thus individual doctor type of experimentation that the federation is opposed to and we believe your bill, properly amended, to confine experimentation to universities as suggested in points (1) and (2) would be a *great boon to humanity and remedy a very potent evil* '

Letter from Fred J Hart, President, National Health Federation, in support of AB 2033, dated May 16, 1963 In committee files

[4] "On occasion the drugs of rather diverse nature are being investigated by individuals whose training, facilities and attitudes appear to be inadequate for the magnitude of the task which they have undertaken" Dr Francis Kelsey, as quoted in a letter from McKay McKinnon, Jr., Director, San Francisco District, Food and Drug Administration, to the Assembly Public Health Committee, dated December 11, 1964

portunity to be evaluated before the enactment of a state law modifying one aspect. There is thus a federal-state issue involved here In itself, the argument that the state should not deviate from federal standards is not a sufficient argument against the adoption of AB 2033, but in association with the recent and comprehensive nature of the federal law together with the lack of information indicated that the bill would accomplish its goal, the federal regulations serve as a deterrent to a recommendation for the enactment of the bill At the committee hearing there was also testimony on the negative effects of AB 2033 on drug research in California. (1, p. 68)

There was, however, by those testifying against the bill, a lack of information put forth on the actual utilization of the exceptions to patient consent provisions provided by the FDA regulations. It would appear that consideration should be given to the question of whether or not the investigator who invokes these exemptions should be required to note this in his reporting to both the FDA and the contractor for whom he is doing the investigation

AB 2538: Chloromycetin

Recommendation

That the committee concur with the 1962 Senate interim study of the Department of Public Health that a special legislative category not be enacted for this drug.

Findings

1 There have been extensive governmental reviews of the use and characteristics of chloromycetin
2 Each of these has concluded that there is no need to enact legislation such as AB 2538 placing chloramphenicol in a special legislative drug category.
3 There is the need for an on-going analysis of the usage of this drug This need is being met in a joint study by the California Department of Public Health, the California Medical Association, and the California Pharmaceutical Association.

Analysis

The drug chloramphenicol is intimately connected with two of the most prevalent themes in the concern with the meaning of modern drug technology. The first of these centers around the ability of the doctor to absorb the breadth and depth of knowledge necessary to ensure as safe a usage as is possible of these products The second theme, which must include a value judgement on the first point, is the attempt to calculate to some degree of validity a risk/benefit formula to evaluate whether a specific drug should be allowed to become or remain accessible to the medical profession. The centrality of chloramphenicol in the discussion of these two factors is clearly illustrated by the following exchange between the subcommittee chairman and the U S. Commissioner of the Food and Drug Administration during a recent, extensive congressional review of drug safety

Mr Fountain. May I interrupt you, Mr Larrick, to say that I suspect a problem arising for the doctors is in finding time to read and study this material before they make the decision.

Mr. Larrick Very true, Mr Chairman

Mr Fountain And it is extremely important that they be familiar with it.

Mr. Larrick It is extremely important, particularly when you realize a very large percentage of the drugs the doctor uses today were not available when more than two-thirds of the doctors graduated from medical school, because they have been developed so recently.

Mr Fountain Thank you

Mr Larrick It is good medical practice to administer penicillin to a patient with no previous history of penicillin sensitivity who is suffering from a raging infection caused by microorganisms susceptible to this antibiotic But occasionally, within minutes after a doctor administers an injection of penicillin, the patient gasps for breath—shows signs of distress and dies almost immediately from a reaction known as anaphylactic shock

We would not be justified in taking penicillin off the market because of these infrequent reactions The reason is that many more lives are saved each year because of the good penicillin does than are lost because of the anaphylactic reactions.

If I had typhoid fever or a member of my family had typhoid fever, I would want the attending physician to prescribe chloramphenicol This is the only drug available today that offers outstanding promise of cure of this disease Without it 1 victim out of 10 will die With it, only one or two per hundred will die There are also certain other conditions in which this antibiotic is the drug of choice. Every year some people who have received chloramphenicol appear to recover and then in the next few weeks become listless, tired, generally worn out, and later die because the chloramphenicol has destroyed their blood-forming mechanism. They suffer from a condition known as aplastic anemia They do not manufacture enough blood cells to maintain life.

We have reviewed the facts on chloramphenicol repeatedly and extensively We have consulted outstanding physicians skilled in the use of antibiotics On two occasions we have consulted panels of medical experts convened at our request by the National Research Council The decision every time has been and still is that the lives saved by chloramphenicol, properly used, far exceed the lives that are lost because of the drug We would not be justified in removing chloramphenicol from the market; we do require very extensive warnings in the labeling of the drug to remind physicians of the hazard (5, p 148)

The governmental decisions involved here are of a different type than those facing the individual physician. As the Commissioner of the U S Food and Drug Administration has testified

> The decision to approve a drug for marketing, or to withdraw an earlier approval requires a weighing of the benefit to be expected from use of the product against the risk inherent in its

use While this is the same type of decision a physician makes each time he prescribes a drug for a patient, the government must consider a number of factors not pertinent to the individual physician's decision The government must consider.

Not just a patient with a disease process,

Not just the skills of a physician, including his ability to arrive at a correct diagnosis, his awareness of recent scientific discoveries relating to the drug, and his willingness to read the labeling of the new drug, to perform the tests prerequisite to its safe use, and to take the time to make other observations required for proper use of the medication

The government must make a judgment as to the hazards likely to be encountered when the drug is employed by physicians of varying skills and abilities, in patients with a multitude of disease processes, many occurring concurrently, and in patients incorrectly diagnosed or inadequately tested with accepted laboratory procedures (5, p 153)

Government and Chloramphenicol

The federal government's concern with the drug's characteristics goes back to 1952 The FDA has summarized its activities in the following manner

CHLORAMPHENICOL (Chloromycetin)

This antibiotic was first certified in 1949

Beginning in 1950 reports appeared that aplastic anemia had been observed following its use

In 1951, New and Non-official Remedies, a publication of the American Medical Association, reported blood changes caused by the use of the drug

On June 28, 1952, an editorial in the Journal of the American Medical Association referred to additional reports of the effect of the drug on blood and bone marrow The Food and Drug Administration discontinued the certification of chloramphenicol and referred the question to the National Research Council for a recommendation as to the future of the drug

In August 1952, the ad hoc committee made its recommendations, and they were immediately made effective by the Food and Drug Administration The label was required to bear a statement. "Warning Blood dyscrasias may be associated with intermittent or prolonged use It is essential that adequate blood studies be made"

The official brochure was required to bear a warning at the top of the circular as follows "Certain blood dyscrasias (aplastic anemia, thrombocytopenia purpura, granulocytopenia, and pancytopenia) have been associated with the administration of chloramphenicol It is essential that adequate blood studies be made when prolonged or intermittent administration of this drug is required Chloramphenicol should not be used indiscriminately or for minor infections"

The use of the drug dropped sharply after this warning, but by the middle of 1960, its use had greatly increased The Journal of the American Medical Association again issued a warning against indiscriminate use

On November 28, 1960, the Food and Drug Administration again requested the National Research Council to review the status of chloramphenicol and to make recommendations both on proposals for improving the labeling and on the question whether the use of chloramphenicol should be discontinued entirely or restricted to hospitalized patients only

On January 11, 1961, the ad hoc committee made its recommendations The hospital restriction was not approved, but the modifications of the labeling were The committee's report was accepted and announced in a press release on January 22, 1961, and the regulations providing for the relabeling of this drug were issued on February 3, 1961

Under these revised regulations, the label on the bottle and on its package is required to bear the statement, "Warning. Blood dyscrasias may be associated with the use of chloramphenicol. It is essential that adequate blood studies be made (see enclosed warnings and precautions)."

Packages were required to bear an insert, and to begin with the following statements which were to be underscored or italicized.

(a) "Warning—Serious and even fatal blood dyscrasias (aplastic anemia, hypoplastic anemia, thrombocytopenia, granulocytopenia) are known to occur after the administration of chloramphenicol Blood dyscrasias have occurred after both short-term and prolonged therapy with this drug Bearing in mind the possibility that such reactions may occur, chloramphenicol should be used only for serious infections caused by organisms that are susceptible to its antibacterial effects Chloramphenicol should not be used when other less potentially dangerous agents will be effective, or in the treatment of trivial infections such as colds, influenza, or viral infections of the throat, or as a prophylactic agent"

(b) "Precautions—It is essential that adequate blood studies be made during treatment with the drug While blood studies may detect early peripheral blood changes, such as leukopenia or granulocytopenia, before they become irreversible, such studies cannot be relied upon to detect bone marrow depression prior to development of aplastic anemia"

This order was made effective on the date of its publication in the Federal Register, February 10, 1961, but it stated

"However, to facilitate the orderly transition from the labeling heretofore used to the new labeling the Commissioner will, for a period of 30 days, certify chloramphenicol preparations bearing the packaging labels adopted on the basis of the recommendations of the NRC in 1952, upon a showing that the firm requesting certification has disseminated to all practitioners licensed by law to administer the drugs, a brochure containing the new warnings"

The mailing of the complete new warnings to physicians was made promptly Everything certified since March 10, 1961, has had the insert and the new label warning

The concern with this drug in California was traced up to January, 1963 by the Report of the Senate Factfinding Committee on Public Health and Safety (2), and the study of the California Department of Public Health (3) The Senate study concluded that the bill under study comparable to AB 2538 (SB 35) "is not believed feasible in original or amended form at this time" (2, p 77). The Department of Public Health report concluded that "At this time there is no sound basis for legislative action to restrict or control the use of the drug chloramphenicol by practicing physicians," but added that "Should aplastic anemia continue to occur in association with chloramphenicol used for viral or trivial infections, it will be necessary to reevaluate the situation in respect to the need for legislative control" (3)

During the 1963 session, two Senate Resolutions, SR 150 and 151, were adopted which serve as the basis for an extensive study now being conducted by the State Department of Public Health, the California Medical Association, and California Pharmaceutical Association (4). The first three objectives of this study are of particular relevance to legislative decision making

1 To determine, as feasible, by a detailed study of fatal cases of aplastic anemia in California, those cases due to or associated with chloramphenicol

2 To identify avoidable factors related to deaths of aplastic anemia associated with the exhibition of chloramphenicol Examples of preventable features in such cases might be

- a Administration of chloramphenicol for conditions too minor to justify this antibiotic
- b. Exhibition of chloramphenicol for conditions for which another form of therapy or a different antimicrobial agent would have been preferable, and could have been anticipated
- c Inadequate supervision of the patient during and following the period of administration, by observing less than the minimum acceptable precautions, such as clinical reviews, periodic blood studies, thorough check of past history of drug administration and reactions, if any

3 To use the information acquired, and that from other expert sources, to develop recommendations directed to an attempt to prevent similar deaths

This last objective is vitally important but also extremely difficult in that the translation of a given set of facts on a condition into the formulation of a procedure to prevent this condition is seldom easily accomplished But it would appear that there is a proper role for state effort These themes of medical competency, risk/benefit calculation, and state responsibility are involved in an exchange between the chairman of a congressional subcommittee and the U S Commissioner of Food and Drugs

Mr Fountain In your statement you said there is no such thing as absolute safety in a drug You pointed out that each time a physician writes a prescription, he must weigh the advantages of a drug against its possible dangers

However, chloramphenicol, one of the examples you cite of a dangerous drug the advantages of which outweigh its dangers, is Known to have been frequently misused, it is not, by physicians who have prescribed it when a less powerful drug, with less toxic potential, would have been sufficient? If so, does this not raise a question concerning the extent to which FDA can rely on the discretion of individual medical practitioners, in balancing the advantages and hazards of a drug?

Mr. Larrick Mr Chairman, basically I think your question goes to the heart of the matter of states rights My conception of our responsibilities in this respect is that in large part the Food and Drug Administration should not attempt to determine the requirements for and the individual proficiencies of physicians who properly, in my judgment, are licensed and regulated by the states

For the most part—and with some exceptions—I think our job is to see to it that the drug as it is placed before persons who are licensed by the states to practice medicine and to administer drugs, is accompanied by information that is sufficiently comprehensive so that if those precautions are followed, there will be a reasonable assurance of safe use of the drug

Now, I don't think that is absolute I think if we do conclude that the misuse of the drug is quite general, our duty would not be to try to regulate the practice of medicine, nor to try to step into a field that is not our business but simply to say this drug is in fact *doing more harm than good* so we will take it off the market

Mr Fountain You make an important observation, of which I think we all are aware One of the reasons for asking the question was to emphasize the tremendous responsibilities that are placed upon members of the medical profession I think we are sometimes inclined to believe that all they have to do is dish out a drug on the basis of some advertisement they have seen that it is good for a certain purpose

But they do have a very important responsibility in making the decision to which you refer, before they prescribe a drug (5, p 180)

There is thus a role for the state in attempting to find procedures to compensate for possible deficiencies in the utilization of drugs whose characteristics put them near the margin of the risk/benefit calculation With reference to the procedure put forth in AB 2538,[5] there is a pau-

[5] The following exchange indicates to some extent both the working of the barrier to misuse i e, the patient after seeing the label becoming a check on the doctor, and the possible impediments to the patient providing this check

ASSEMBLYMAN MARKS As I understand it, Mr Elfstrom, this drug cannot be obtained except by prescription, am I correct?

So in order to get the drug, it follows that you have to go to a doctor or a physician to get a prescription for the drug If there are some physicians who are improperly prescribing this, actually this bill would not prevent them from improperly prescribing it, would it?

MR ELFSTROM No, it wouldn't

ASSEMBLYMAN MARKS So if a person went to a physician and got a prescription and this bill were passed, this person would still have received a prescription after having gone to the doctor

MR. ELFSTROM Let me ask you in turn If this bill were passed and you developed a cold or sore throat and went to a physician and he prescribed chloromycetin for you, and it was on the label that it should be used very carefully and that it was potentially dangerous, what is your reaction?

ASSEMBLYMAN MARKS I am not arguing against this bill, Mr Elfstrom But if a person were going to a doctor who was improperly using this drug and he

city of evidence to indicate that it would be an efficacious method of accomplishing what is widely acknowledged to be a necessary goal. There is large amount of evidence to indicate that reliance on a label as a prime contributor to rationality on the part of the home consumer of dangerous substances has definite limitations.[6]

In conclusion, the consensus in the scientific community is that chloramphenicol is associated with aplastic anemia (6, 7) and that the drug should be used

1. Only for certain conditions, e.g., "serious infections caused by organisms that are susceptible to its anti-bacterial effects"
2. It should be used only *with* certain procedures, e.g., blood studies.

It is the task of the joint study conducted by the State Department of Public Health, the California Medical Association, and the California Pharmaceutical Association to determine what it is actually being used for and with what procedures. It is the further task of this joint study to translate these facts, if necessary, into recommendations for action to rectify the improper utilization of chloramphenicol. It is the role of the Legislature to determine if there is a necessity to translate by legislation any proposals into procedures which are then mandatory in the handling of this drug. At this time the committee concurs with the 1962 Senate interim study and the ongoing study of the Department of Public Health that a special legislative category not be enacted for this drug.

HR 387: Model Rocketry

Recommendation

No legislative changes are necessary in the statutes relating to amateur or model rockets.

Findings

The statutes which pertain to novice rocket activities are adequate to protect the general health and safety while providing a framework of safety for the users of these rockets.

---

still had confidence in him, even if this bill were passed, he still would presumably have the same confidence in the doctor. The patient would assume that the doctor would have told him that while the drug is dangerous, in this particular instance, it was the proper thing to be used.

Mr. Elkington: You could be sure in that case that your condition would be explained to you thoroughly by your doctor and that if he felt it was necessary to prescribe a drug as potent as this one that you would feel that it was a very serious condition. I have had various newspapermen who have become familiar with this problem who have told me they have gone to a physician and had the drug prescribed for a sore throat, and when they questioned the physician on it, he said, "Well, if you don't want to take it, I will give you something else." For instance, the secretary of the Senate Factfinding Committee on Public Health and Safety—his wife just before the hearings went to a Palo Alto physician with a sore throat, and he prescribed chloromycetin, and when she questioned him about it, he changed it immediately. (1, pp. 11–13)

[6] One study of household insecticides label reading found that "only slightly more than 40 percent of those questioned reported they read all the instructions and knew at least one precaution. Only 8 to 15 percent knew important precautions required for years on all aerosol and liquid sprays." Paper presented during 44th Annual Midyear Meeting, Chemical Specialties Manufacturing Association, May 1958, reprinted in *Interagency Coordination in Environmental Hazards* (Pesticides), Part 4, hearing of the Subcommittee on Reorganization and International Organizations of the Senate Committee on Governmental Operations, August 20, 1963, pp. 839–845.

Analysis

Under section 12503 of the Health and Safety Code "skyrockets, rockets, including all similar devices employing any combustible or explosive material and which rise in the air during discharge," are included in the meaning of "dangerous fireworks" Under section 12555 of the Health and Safety Code the State Fire Marshal with the advice of the Fire Advisory Board, may "adopt reasonable regulations providing for "

> (a) the granting of licenses and permits for amateur research or experiments with experimental or model rockets or missiles, or for the production, transportation, or firing of experimental or model rockets or missiles

The State Fire Marshal has recently proposed regulations to govern the utilization of model rockets[7] in California The key issues in this area are the degree of hazard and the need for adult supervision From the evidence presented to the subcommittee (1, pp 126–159) it would appear that there is inevitably a potentially hazardous situation when these articles are utilized There is, however, also the element of education involved here, in that there is a scientific learning experience associated with the proper utilization of these devices It would appear that some form of adult relationship to the utilization of these devices would be desirable

The context of any decisions regarding the regulations concerning "model rocketry" is one of tentativeness and a need for flexibility to adapt the regulations in this area to the experience gained For this reason the present statute provisions with the delegation of rule making to the State Fire Marshal offer the greatest degree of flexbility The alternative would be to write detailed statutes which could not provide the flexibility necessary in what is likely to be a rapidly changing area of youth activity What is to be sought in this area is a structure which is adequate to protect the general health and safety while at the same time providing a framework for those using model rockets The present statutes would appear to offer these conditions

[7] To be used or classified as a "model rocket" as distinguished from an "amateur rocket' the Fire Marshal has included the following characteristics (a) the rocket engine shall be commercially manufactured, (b) the propellant charge shall not exceed four (4) ounces .. (c) the rocket shall be constructed of paper, plastic, rubber, or wood and without any metal parts, (d) the rocket shall include within its construction an effective means for returning the rocket safely to ground without causing injury to persons or property, (e) the entire weight of the finished rocket with any payload shall not exceed 1b ounces
