COMMITTEE LETTER OF TRANSMITTAL

Sacramento, California, January 4, 1965
STATE CAPITOL BUILDING

HON JESSE M. UNRUH
Speaker of the Assembly
HON GLENN M. ANDERSON
President of the Senate

Gentleman:

We are submitting herewith to you and to the Honorable Members of the California Legislature the first report of the Joint Legislative Retirement Committee.

This committee was established as a permanent committee of the Legislature by Assembly Bill No 1672, passed in the Regular Session of 1963. The committee is an outgrowth of the Joint Interim Committee on the Investment of Public Retirement and Pension Funds. The committee was established as a permanent committee of the Legislature to study all bill and proposals dealing with the various retirement systems of and in the State of California over which the Legislature has authority.

The members of the committee are Assemblyman Don A Allen, Sr., Chairman; Senator Alan Short, Vice Chairman; Senator Randolph Collier; Senator Alvin C Weingand, all veterans of the prior committee; and Assemblyman E. Richard Barnes and Assemblyman Harvey Johnson, appointed after the creation of this permanent committee.

Since the end of the 1963 General Session, this committee has held nine public hearings, for a total of twelve (12) days, on eleven (11) Assembly Bills and three (3) House Resolutions referred from the 1963 General Session and the 1964 Budget Session of the California Legislature.

The findings and recommendations contained in this report are the result of these public hearings conducted by the committee and considerable research by individual committee members and the committee secretary.

It was the unanimous recommendation of the committee that there be no committee legislation. The members felt that unfortunately in the past some committees had, after hearing, drafted their own bills and thus usurped legislation of other members. We recommend that, based on our findings, the original authors of these bills reintroduce similar legislation if they so desire

DON A ALLEN, SR, *Chairman*
ALAN SHORT, *Vice Chairman*

STATE EMPLOYEES' RETIREMENT

NONINDUSTRIAL DISABILITY BENEFIT

Assembly Bill No 208 (Meyers, Belotti, Foran, Gaffney, and Marks—1964 First Extraordinary Session) was heard in San Francisco on September 21, 1964 The bill relates to the State Employees' Retirement System and will do the following:

1. It proposes to increase the nonindustrial disability retirement allowance minimum from one-fourth to a one-third of final compensation basis as to state members or local members whose employing agencies have so contracted.
2. It includes those employees already retired
3. It requires an additional state contribution to the Retirement Fund of one-tenth of 1 percent of the salaries of warden members and one-hundredth of 1 percent of the salaries of state miscellaneous members.

FINDINGS

1. The present nonindustrial disability allowance formula provides for one and one-half (1½) percent of the member's final compensation for each year of service. Therefore, if the member had 10 years of service his allowance under this formula would be 15 percent of his final salary.
2. The present nonindustrial disability retirement allowance provision includes a special formula to be used if the usual formula does not provide an allowance equal to one-fourth of final compensation for a member who has 10 or more years of service The maximum allowance that can be paid under the special formula is one-fourth of final compensation.
3. The nonindustrial disability benefit is the only disability benefit the great bulk of state employees have under the retirement system.
4. Under the present formula an employee would have to have 20 years of service to gain a 35 percent of his final salary allowance. Therefore this bill would affect the disability retirement income for all employees having between 10 and 19 years of service.
5. The annual cost to the State of California to finance the change in the special formula is estimated by the Legislative Analyst at $60,000, in his report to the committee dated September 11, 1964.
6. If this change in the special formula is adopted it will materially aid in retiring people who should be retired because of physical impairment. At the present time there is a tendency for disabled employees to try and hang on to their jobs because of the simple fact that they cannot exist on 25 percent of their final salary. Conversely, supervisors hesitate to force an old-time employee to retire for the same reason.

7. Physically impaired employees in some categories not only cannot perform their duties adequately, they place an undue burden on their fellow employees.
8. The physically impaired employee also exposes himself to undue risk of industrial injury which, if it occurs, materially adds to the cost of the state through compensation payments or industrial disability retirement.

RECOMMENDATION

The committee unanimously recommends that this legislation be adopted at the 1965 Regular (General) Session of the California Legislature.

Legislative Analyst
September 11, 1964

ANALYSIS OF ASSEMBLY BILL NO. 208 (Meyers)

1964 First Extraordinary Session

Cost:
$60,000 annually

Analysis:

Assembly Bill No 208 would increase the minimum guarantee for the allowance on retirement for nonindustrial disability from one-fourth of final compensation to one-third of final compensation for those members retiring from the State Employees' Retirement System

The disability retirement allowance provision includes a special formula to be applied if the usual formula does not provide an allowance equal to one-fourth of final compensation for a member who has 10 or more years of service, and imposes a maximum of one-fourth on the allowance that may be paid under the special formula. This bill would change the one-fourth to one-third in both instances The bill would also extend the benefit of its provisions to persons already retired for disability.

The bill further provides an additional state contribution to the Retirement Fund of one-tenth of 1 percent of the salaries of warden members and one one-hundredth of 1 percent of the salaries of state miscellaneous members

The State Employees' Retirement System estimates the annual cost of Assembly Bill No. 208 to be $60,000.

PENSION FORMULA OF STATE EMPLOYEES' RETIREMENT SYSTEM

Assembly Bill No 868 (Monagan—1963 Regular (General) Session) was heard in San Francisco on July 27, 1964. The bill would amend and add various sections to the Government Code as it relates to the State Employees' Retirement System and would do the following:

1 It proposes to change the formula for current service pensions from $\frac{1}{60}$ (as at present) to $\frac{1}{50}$ of final compensation on retirement at age 60 for each year of service subsequent to June 30, 1964 for state miscellaneous members.
2. It would also apply to certain school members and local members whose agencies contract to be subject to this change in formula.
3. It provides for an increase in both the member's and the state's rate of contribution.

4. It would change the miximum allowance formula for nonindustrial disability from the basis of 90 percent of $\frac{1}{60}$ to 90 percent of $\frac{1}{60}$ for service subsequent to June 30, 1964.
5 It would change the minimum nonindustrial disability retirement allowance from $\frac{1}{4}$ to $\frac{1}{3}$ of final compensation (Similar to AB 208 —Meyers et al., previously reported favorably by this committee).
6. It would increase the basic retirement allowance formula for state miscellaneous members and most school members by 20 percent for service subsequent to June 30, 1964. For those members currently also covered by Federal Social Security, the change would be limited to final compensation in excess of the compensation covered by social security.

FINDINGS

1 The changes in the basic retirement formula for state miscellaneous workers and others subject to these provisions would not materially enhance the retirement income of those members retiring in the near future The reason is that the provisions would be applicable only to service rendered after July 1, 1964
2 This bill would make far-reaching changes in the basic structure of the retirement system.
3 The Legislative Analyst's estimate of costs is in excess of $7,000,000 annually based on an actuarial evaluation.
4 It was pointed out that this would be the first major change in the basic formula since 1947 when the Legislature established the current "$\frac{1}{60}$ at age 60" formula.
5 This legislation is sponsored by the California State Employees' Association.

RECOMMENDATION

The committee unanimously recommends that this bill be held in committee for further study for the following reasons:

1. Before a change of this magnitude is made in any retirement system, the committee would like the opportunity of studying and analyzing its effect on all of our retirement systems.
2. The change in formula will not materially affect the retirement income of those retiring in the near future. This allows time to thoroughly study the proposal.
3 The California State Employees' Association has requested a delay in this matter to allow them time to revise their proposal

Legislative Analyst

ANALYSIS OF ASSEMBLY BILL NO. 868 (Monagan)

1963 General Session

Cost: $4,570,400 General funds
2,529,200 Special funds
$7,099,600 Total Cost

Analysis:

AB 868 would amend and add various sections to the Government Code relating to the State Employees' Retirement System.

The bill changes the formula for current service pensions from $\frac{1}{60}$ to $\frac{1}{50}$ of final compensation on retirement at age 60 for each year of service subsequent to June 30, 1964 and provides for member contributions on the basis of accruing one-half of such allowance, the rate change to be effective July 1, 1964 and for an increase in the state's rate of contribution.

It changes the maximum allowance formula for nonservice connected disability from the basis of 90 percent of $\frac{1}{60}$ to 90 percent of $\frac{1}{50}$ with respect to the same service and the "minimum" provision for such allowance from $\frac{1}{4}$ to $\frac{1}{3}$ of final compensation

The bill applies to state miscellaneous members and those warden and forestry and other state members subject to provisions applicable to state miscellaneous members It applies to school members and to contracting agencies only if the agency so elects

The bill would increase the basic retirement allowance formula for state miscellaneous members and most school members by 20 percent for service on or after July 1, 1964, and increase member rates commensurately for such service For those members covered under social security the change is limited to final compensation in excess of the social security covered wages.

The total annual state cost established by actuarial valuation is $7,099,600 of which $4,570,400 is the cost to the General Fund

RETIREMENT FROM STATE EMPLOYEES' RETIREMENT SYSTEM

Assembly Bill No 1391 (Meyers—1963 Regular (General) Session) was heard in San Francisco on July 27, 1964. The bill would amend one section and add a new section to the Government Code as it relates to the State Employees' Retirement System and would do the following:

1. It proposes to permit a state miscellaneous member of the system to retire after thirty (30) years of service regardless of age.
2. It would permit such a member with thirty (30) years' service to elect to receive fifty (50) percent of his final compensation as a combined current and prior service pension.

FINDINGS

1. This proposal would drastically revise the present formula used by the State Employees' Retirement System The present formula provides that a member may retire at age 60 with 30 years of service at 50 percent of his final compensation. The member may retire at age 55 but at a reduced rate of compensation due to the fact that life expectancy is longer.
2. This proposal was suggested by a chapter of the California State Employees' Association. However, it does not have the backing of the association itself.
3. The committee is aware that from time to time improvements must be made in our various retirement programs in order to stay competitive with other governmental agencies and private industry.
4. The author of the bill requested and was granted permission to furnish further supporting statements to the committee.
5. It was brought out in testimony that the basic idea for this retirement formula came from the policies followed by the military services.

RECOMMENDATION

The committee unanimously recommends that AB 1391 be held over for further study for the following reasons.

1. The provisions of the bill would drastically change the existing retirement formula.
2. There is no estimate of the costs involved to the state if such a proposal were adopted.
3. The committee believes that if such an improved formula is considered for "state miscellaneous employees" that all other retirement programs should be studied to determine the total effect of such a formula.
4. In any event, an actuarial study of the possible costs involved to the state should be made before any basic change is made in the system.

Legislative Analyst

ANALYSIS OF ASSEMBLY BILL NO. 1391 (Meyers)

1963 General Session

Cost: Unknown, but would be in excess of several millions of dollars

Analysis:

AB No 1391 would amend the Government Code relating to the State Employees' Retirement System The amendment would permit a state miscellaneous member to retire after 30 years of service, regardless of age. Proposed Section 21252 7 of the Government Code would permit a member with 30 years of service who retires at any age to elect to receive 50 percent of his final compensation as a combined current and prior service pension.

In order to determine the cost of AB No 1391 an actuarial evaluation would have to be made of the State Employees' Retirement System taking into consideration the assumptions proposed in the bill. The system states it is unable to do this, however, it has stated that the cost of the bill would no doubt be in the millions of dollars since not only would many employees be able to retire that are not presently able to, but employees with 30 years of service who are between 55 and 60 years of age would be able to retire at 50 percent of salary, instead of at a reduced amount as they do now.

LOCAL SERVICE CREDIT

Assembly Bill No. 1582 (Meyers, Kennick, Z'berg, Belotti and coauthored by Senator Geddes—1963 Regular (General) Session) was heard in San Francisco on July 27, 1964. The bill would amend the Government Code as it relates to the State Employees' Retirement System

The bill would allow state employees to elect prior to October 1, 1964, to make contributions to the state retirement system and thereby receive retirement credit for service rendered in local government prior to October 1, 1954.

FINDINGS

1. "Local service credit" has been granted by the Legislature on two different occasions in the past:
   (a) It was originally granted in 1951 provided existing state employees applied for such credit within a specified period of time or, in the case of new employees, within one year after attaining membership in the State Employees' Retirement System. In 1953, the Legislature set a termination date of October 1, 1954
   (b) In 1957, the Legislature again granted the right to "local service credit" until October 1, 1958. However, such "local service" had to have been rendered prior to October 1, 1954.
2. State employees who availed themselves of the opportunities outlined above were required to contribute regular employee contributions for the period to be credited plus the contributions which the state would have made had the person been in state employment. The basis of these contributions was the state rate of contribution to the retirement system and the salary at the time the person became a member. The remainder of the cost of a retirement allowance based on such service is paid by the state.
3. It is estimated by the Legislative Analyst that the cost to the state of "local service" already credited is between five million and seven and one-half million dollars.
4. The Legislative Analyst also estimates that if "local service credit" is extended to members employed by the state since October 1958 the additional cost to the state could be between two and one-half and five million dollars.
5. Under the "local service" provision, credit for service to any city, county, district or other local authority or public body, may be obtained if such service is not credited under another retirement system.
6. It was also pointed out in testimony that the previous granting of such credit has proved to be extremely costly to the state because the amount of such credit allowed far exceeded that which was anticipated.

RECOMMENDATION

The committee unanimously recommends that this legislation be denied for the following reasons.

1. It was brought out in testimony that the state has been working with local subdivisions to obtain reciprocal arrangements regarding local employees within the state. This, in the committee's opinion, is the best method to follow.
2. "Local service credit" has been offered twice by the state. The Legislative Analyst testified that the cost to the state proved to be very costly because the amount of local service for which election was made greatly exceeded that which was anticipated. It was also pointed out that some of the employees now seeking this credit had refused to take advantage of this opportunity on previous occasions for one reason or another.

3. The State Employees' Retirement System is basically a sound system and this committee hesitates to look favorably upon any request of this sort without an actuarial study of the problem to determine the possible total cost to the state.
4. The Legislative Analyst is unable to give a report on the cost to the state because there is no such study. However, the Legislative Analyst reports that the State Employees' Retirement System has estimated the cost could be between two and one-half million and five million dollars.
5. The committee further recommends that, if the Legislature desires to grant such "local credit" once again, no action be taken until an actuarial study of the costs involved to the state has been made.

Legislative Analyst

ANALYSIS OF ASSEMBLY BILL NO. 1582 (Meyers)
1963 General Session

Cost: Indeterminate, however the State Employees' Retirement System has estimated the cost could be between $2.5 and $5 million.

Analysis:

Assembly Bill No. 1582 would amend Section 20931 of the Government Code relating to the State Employees' Retirement System.

This bill would grant the right to receive service credit under the "local service" provisions of the Retirement Law for service rendered to public agencies in the state prior to October 1, 1954. This right was first granted in 1951 to be exercised within a specified time following enactment of the law or, for new employees, within one year after entering membership. In 1953 a termination date of October 1, 1954 was provided. In 1957, the right was reopened until October 1, 1958, but was not extended to service after October 1, 1954.

Under the "local service" provision, credit for service to any city, county, district or other local authority or public body, may be obtained if it is not credited under another retirement system. The member electing the credit must contribute regular employee contributions for the period and also the contributions which the state would have made had he been in state employment using the state rate of contribution to the system and the salary at the time the person became a member. The remainder of the cost of a retirement allowance based on such service is paid by the state.

A cost to the state of between five million dollars and seven and one-half million dollars has been placed on the "local service" already credited. The cost of reopening the choice and extending it to members employed since October, 1958 will increase this cost materially, perhaps to 10 million dollars or more.

The "local service" provisions of the Retirement Law proved to be very costly, the amount of such service for which elections were made far exceeding that which was anticipated. The right was terminated and later reopened for a period of a year. This bill would have reopened it a second time and have the effect of giving persons who previously could have obtained the credit another opportunity. For some this would have constituted a third opportunity. It also would have given the right to persons who have become members since the October 1, 1958 termination date.

STATE POLICE RETIREMENT BENEFITS

Assembly Bill No. 1807 (Chapel—1963 Regular (General) Session) was heard in Los Angeles on August 19, 1964. The bill would amend various sections and add new sections to the Government Code as it relates to state police retirement benefits and would do the following:

1. It would apply only to those state police members who are designated by the Director of Finance as having peace officer powers and whose principal duties are law enforcement.
2. It provides that those state police members (defined in No. 1 above) will participate in the retirement system on substantially the same basis as patrol members in regard to benefits, members contributions and compulsory retirement age.

FINDINGS

1. It was clearly established to the satisfaction of the members of the committee that these state police members are in fact peace officers
2. It was also clearly established that contrary to what some people may think these state police officers are constantly exposed to the hazards and risks encountered by all other law enforcement officers.
3. The state police members of the retirement system are currently classified as "state miscellaneous members."
4. The job specifications for state police officers as set by the State Personnel Board are quite similar and for the most part identical to the job specifications for highway patrol officer.
5. This bill would place state police officers under the same retirement benefits now available to highway patrol officers

RECOMMENDATION

The committee unanimously recommends that this legislation be adopted by the Califorina Legislature during the 1965 Regular (General) Session It is the Committee's contention that all law enforcement officers should be treated equally regarding retirement benefits.

Legislative Analyst

ANALYSIS OF ASSEMBLY BILL NO. 1807 (Chapel)

As Amended in Assembly April 17, 1963

1963 General Session

Cost: There would be an increase to state cost, however an actuarial valuation would have to be conducted to determine the cost and the State Employees' Retirement System has not conducted such valuation study.

Analysis:

Assembly Bill No. 1807 as amended in Assembly April 17, 1963, would have added and amended various sections of the Government Code relating to the State Employees' Retirement System.

The bill would have created a new class of member, "state police member" and extend to members in this class the benefit and other provisions now applicable to patrol members, with a provision for offset against both contributions and benefits, contributions to and benefits received under Old-Age, Survivors and Disability Insurance.

Members of the state police employed under Section 13000, Government Code, designated by the Director of Finance as having power of peace officers and whose duties consist of active law enforcement, would have been classified as "state police members" These persons are now miscellaneous members The changes in benefits and obligations accomplished for persons in this group would be as follows:

1. From the 1/60 (one-half final compensation on retirement at age 60 with 30 years of service) formula for service retirement to one-half of final compensation at age 55 with 20 years of service, or upon later completion of 20 years of service. (Secs. 11, 12, 4, 5)

2 Minimum retirement age from 55 to 50 with a reduced allowance. (Secs. 8 and 13)

3 Addition of an allowance in an amount equal to one-half the member's allowance upon death after retirement, to his surviving spouse, children, or dependent parents Includes persons already retired (Sec 14)

4 Mandatory retirement age reduced from 70 to 65 (Sec 9)

5 Addition of industrial disability and death benefits consisting of an allowance equal to one-half of final compensation to the disabled member or his eligible survivors respectively, consisting of wife and children. (Sec. 10, 18)

6 Members to contribute on the basis of providing an annuity in the amount of one-half the allowance The effect will be generally by way of increase. Changes will be effective on and after October 1, 1963 For members under OASDI, the contributions will be reduced by the contribution to Old-Age, Survivors and Disability Insurance (Sec 2, 3, 4, 5)

Service retirement allowances, disability retirement allowances, the industrial benefits, and the allowance for survivors upon death after retirement will be reduced by the amounts which the person is entitled to receive from OASDI, This reduction applies only when entitlement begins, so that the allowance of a person retiring at age 55 would be unaffected until age 62 The amount offset in the case of retirement appears to be only the primary insurance amount, which does not include a wife's and children's benefit

There would be an increase in state cost No actuarial valuation has been made, thus the cost is not known.

SABBATICAL LEAVE CREDIT

Assembly Bill No 2394 (Meyers, Z'berg, Kennick and Belotti—1963 Regular (General) Session) was heard in San Francisco on July 27, 1964.

The bill would amend the Government Code as it relates to state employees' retirement to provide the following:

1. A member on sabbatical leave shall receive full credit towards retirement for that period provided the member contributes to the Retirement Fund a sum equivalent to what he would have contributed if he had not been absent or working only part time.
2. It would also apply to approved leaves for state employees when the member is on leave working for the federal government, foreign countries or any other type of loan to other political agencies.

FINDINGS

1. The University of California system presently has a provision whereby the person on sabbatical leave can receive credit for the full year by paying both his own contribution and the employer's contribution.
2. The bill contains no time limit on how long a member can be gone from the job.
3. The bill does not contain any safeguards for the state to guarantee that the employee will return to his job and not leave soon after finishing his sabbatical.

RECOMMENDATION

The committee unanimously recommends that this legislation be denied for the following reasons:

1. The lack of any safeguards or controls as the bill is now written.

2. The difference in ultimate retirement income is infinitesimal compared to the benefits which would normally accrue to the employee due to future salary increases or promotions due to study and advanced degrees obtained through sabbaticals.
3. By the committee's own knowledge, there have been numerous abuses of the original intent and purpose of sabbatical leaves.
4. The committee believes that before any such legislation is considered by the Legislature, adequate safeguards and controls should be devised to guarantee to the state that abuse of this privilege be minimized.

Legislative Analyst

ANALYSIS OF ASSEMBLY BILL NO. 2394 (Meyers)

1963 General Session

Cost: Indeterminate

Analysis:

AB 2394 would amend Section 20860 5 of the Government Code relating to the State Employees' Retirement System.

The bill provides for full-time retirement credit for periods of time on sabbatical leave granted a member, if he so elects and contributes amounts necessary to bring his accumulated contributions to a full contribution basis for the period of absence.

Under existing provisions, only part-time service credit is given in the proportion that compensation paid bears to full compensation earnable if the member were not absent, but retirement benefits are computed on *full-time compensation*, that is, the credit for time of service is reduced and the retirement benefits are based on full-time compensation for the reduced period of time

Presumably the intent is to provide a retirement allowance for such absence equal to that which would be received had the member not gone on leave.

The bill would increase benefit costs for the state and other employers under the system The State Employees' Retirement System has no information of record as to the amount of service involved and can prepare no estimate of the cost.

NARCOTIC ENFORCEMENT MEMBERS RETIREMENT

Assembly Bill No. 2484 (Meyers, Z'berg, Ryan, Knox, Belotti, Britschgi, Burton, Crown, Foran, Gaffney, Kennick, Marks, Petris, Thomas and Waldie—1963 Regular (General) Session) was heard in San Francisco on July 28, 1964.

The bill would amend and add various sections to the Government Code as it relates to narcotic enforcement members' retirement and would do the following.

1. It provides that narcotic enforcement members will participate in the retirement system on substantially the same basis as patrol members in regard to benefits, members' contributions and compulsory retirement age
2. It permits those who are members prior to the effective date of the act to elect to remain subject to the present provisions rather than the amended provisions which would be enacted by this measure
3. It sets the age limits for examination for the position of narcotic agent as 21 to 40.

FINDINGS

1. Narcotic enforcement members now have the same retirement benefits as state miscellaneous members. These benefits now cover

all state employees except members of the highway patrol, warden and forestry members

2. This bill would provide narcotic enforcement members the same benefits now applicable to Highway Patrol members by adding the following benefits
   (a) The "one-half pay at age 65" retirement allowance formula
   (b) Allow for retirement at ages 50 through 55 with a reduced allowance
   (c) The continuance of one-half the retired members' pension to his surviving spouse, children or dependent parents, upon death after retirement.
3. Provision is made for coordination with Old Age Security and Disability Insurance There would be an offset of the amount of the entitlement, under Old Age Security and Disability Insurance, of the member or his beneficiary against the amount otherwise payable by the retirement system.
4. The bill is specifically written to cover only narcotics agents, it would not cover those employees whose duties are clerical or outside the scope of active law enforcement
5. The 1963 Legislature adopted legislation to grant the employees of the Bureau of Criminal Identification and Investigation similar benefits
6. It was brought out in testimony that narcotics agents are exposed to the same risks and hazards as other law enforcement officers
7. It was also pointed out in testimony presented on behalf of the Chief of the Bureau of Narcotic Enforcement that this type of work demands young men because of the active nature of the work
8. It was further brought out in testimony that the bureau has a recruiting problem due mainly to the fact that qualified officers on metropolitan police forces now receive much better retirement benefits than state narcotics agents Therefore, the trained, qualified individual will not transfer for lesser retirement benefits.

RECOMMENDATION

The committee unanimously recommends that this legislation be adopted by the California Legislature during the 1965 Regular (General) Session for the following reasons:

1. There is no doubt that active narcotics agents should be classified as law enforcement officers for retirement purposes on the same basis as other law enforcement officers employed by the state The dangers involved in this work were clearly demonstrated to the satisfaction of the committee
2. There is a need for young men in this field because the nature of the work demands great physical activity on the part of the agent By allowing agents to retire at age 55 at one-half their final compensation after 30 years of service, the state will be able to replace

these dedicated public servants with younger, more active men. Because of the undercover nature of their work, it is imperative that the bureau have qualified young men in its ranks as well as seasoned active veterans

3 Although there is no cost estimate attached to this bill, the committee feels that there are overriding factors in this proposal as follows:

(a) The legislation will affect the future retirement program of only 89 agents at the present time

(b) All law enforcement officers employed by the state are and should be entitled to the same retirement benefits

(c) The bill specifically provides for coordination with Old Age Security and Disability Insurance benefits, thus offsetting partially the cost to be borne by the state.

(d) It will aid the Bureau in attracting qualified personnel.

Legislative Analyst

ANALYSIS OF ASSEMBLY BILL NO. 2484 (Meyers)

1963 General Session

Cost: The cost would be substantial, however, no actuarial evaluation has been conducted thus no precise estimate can be made.

Analysis:

AB 2484 adds and amends various sections of the Government Code relating to narcotic enforcement members of the State Employees' Retirement System (SERS)

The bill would provide for narcotic enforcement members all of the benefits now applicable to Highway Patrol members Present members of the system would be given an option whether to become subject to the proposed provisions of the bill

The following benefits for narcotic enforcement members would be added:

1. "One-half pay at age 55" retirement allowance formula.
2. Retirement at ages 50-55 with reduced allowance
3. Continuance of one-half the retired member's allowance to his surviving spouse, children or dependent parents, upon death after retirement

Narcotic enforcement members now have the same benefits as "state miscellaneous members" (all state employees except members of the highway patrol, warden and forestry members) and in addition the special death benefit for death resulting from employment and the industrial disability allowance of one-half of final compensation if disabled in the course of employment The bill provides for coordination with OASDI There would be an offset of the amount of the entitlement of the member or his beneficiary under OASDI against the amount otherwise payable by the retirement system

There is no way of accurately determining the cost of this bill until such time as an actuarial evaluation is made by the retirement system No such evaluation has been made. The system has stated that "a very substantial increase would be required."

MEMORIAL RESEARCH SECRETARIAT

Assembly Bill No 3119 (Meyers—1963 Regular (General) Session) was heard in San Francisco on July 27, 1964

The bill would amend the Government Code as it relates to the State Employees' Retirement System It would do the following:

1. Create the position, within the system, of Research Secretary to be known as the Edwin J. Callan Memorial Research Secretariat.

2. The position would be filled by appointment by the Governor of a person who actively participated in the founding of the State Employees' Retirement System
3. The person so designated would serve at the pleasure of the Board of Administration of the Retirement System and the salary would be fixed by the board.

FINDINGS

1 Mr. Edwin J Callan was one of the state employees who played a principal part in the founding of both the state retirement system and the California State Employees' Association

2 The committee believes that a history of the founding of state retirement system would be invaluable from a historical point of view.

RECOMMENDATION

The committee unanimously recommends that this specific legislation be denied.

1. The reason for this recommendation is that the California State Employees' Association is currently working on a similar project and it would serve no useful purpose for the state retirement system to duplicate this work.
2. The Legislative Analyst estimated the annual cost for the establishment of this position at $15,000 This cost would have come out of the State Employees' Retirement Fund. Inasmuch as the state employees are now paying for such a report, the committee sees no reason to create this additional position at the expense of the employees

Legislative Analyst

ANALYSIS OF ASSEMBLY BILL NO. 3119 (Meyers)

As Amended in Assembly June 4, 1963
1963 General Session

Cost: Approximately $15,000 from the State Employees' Retirement Fund.

Analysis:

Assembly Bill No 3119, as amended in Assembly June 4, 1963, would have added Section 20108 to the Government Code relating to the State Employees' Retirement System

The bill would have provided for the establishment of a position in the State Employees' Retirement System that would be known as the Edwin J Callan Memorial Research Secretariat The position would have been filled by a person who actively participated in the founding of the State Employees' Retirement System and who would be appointed by the Governor.

The bill stated that the duties of the position would include research, study and compilation of the historical aspects of the State Employees' Retirement System

The estimated annual cost for the establishment of this position is $15,000 which would have come out of the employees' retirement fund.

STATEWIDE HEALTH CARE AND RETIREMENT PROGRAM

House Resolution No 618 (Zenovich—1963 Regular (General) Session) requested an interim study relative to extending statewide health care and retirement programs, to all state employees. HR 618 was referred to this committee by the Assembly Rules Committee Specifically, HR 618 requests a study of the advisability of extending coverage under the State Employees' Retirement Act and the Meyers-Geddes Medical and Hospital Care Act to all state employees. The resolution has particular reference to University of California employees.

FINDINGS

1. The State Employees' Retirement Act was amended and the Meyers-Geddes Act was adopted in the 1961 session of the Legislature to provide medical and hospital care coverage for all state employees.
2. The University of California has operated its own retirement system for academic personnel independent of the State Employees' Retirement System, for over 50 years
3. Until 1961, all nonacademic employees of the University were covered under the State Employees' Retirement Act In 1961, the Board of Regents of the University adopted regulations that made it mandatory that all future employees would be covered under the University retirement system Those employed prior to the adoption of that regulation were given the option of staying with the State Employees' Retirement System or transferring to the University system.
4. About 20,000 of the now academic employees of the University chose to remain in the state system Presently the University system has approximately 21,000 members This constitutes the largest group of state personnel outside of the state system.
5. Subsequent to the passage of the Meyers-Geddes Act, the Board of Regents established their own group life and health insurance programs (they now have five programs) and refused to come under the Meyers-Geddes Act

RECOMMENDATION

The committee unanimously recommends that legislation to return the University of California to the state retirement system and the state medical and hospital care program for the following reasons:

1. The committee believes that independently administered retirement systems should be held to an absolute minimum
2. At the present time, the State Employees' Retirement System administers the retirement programs for not only state miscellaneous employees but also many cities and counties, the highway patrol, forestry and warden members, the Legislature, and the judges. In our opinion, this system is more than qualified and capable of handling the University of California as well
3. The committee believes that when the Legislature passed the Meyers-Geddes Act in 1961, the intent was to have all state employees covered under that act. We do not believe it was the intent of the Legislature to merely pass enabling legislation so that various agen-

cies could go off on tangents and create their own medical and hospital care programs.

4. Under the Meyers-Geddes Act the state participates in the cost of the program on the basis of $6 per employee per year.
5. Although the University of California has established its own program, their budget, which requires the approval of the Legislature, contains an appropriation of $6 per employee (both academic and nonacademic) for their health care program
6. The Legislative Analyst's report states that bringing University employees under the Meyers-Geddes Act would not entail any increased cost to the state, but would result in slight administrative savings to the state The committee feels that any savings, no matter how slight, should be taken advantage of in these days of continually increasing budgets
7. The committee recommends that if the University continues on its own independent program then the General Fund appropriation should be reduced by an amount equal to $6 per employee.
8. The committee is well aware that many problems will be confronted in merging the University retirement system with the state system For one thing, the University now has the right and does invest in common stock, which this committee has consistently advocated for all retirement funds We are also aware that the University system antedates the state system However, we do recommend that serious studies be initiated to determine how the two systems can be merged.

ANALYSIS OF HOUSE RESOLUTION NO. 618 (Zenovich)

1963 General Session

COST: No increased state cost.

Analysis:

House Resolution No. 618 directed the Assembly Committee on Rules to assign to the appropriate committee for interim study the subject of extending coverage under the State Employees' Retirement System and the Meyers-Geddes Medical and Hospital Care Act to all state employees and to direct such committee to report to the Assembly no later than the fifth legislative day of the 1965 Regular Session of the Legislature.

The resolution whereas clauses point out that the University of California did not elect to participate in the Meyers-Geddes Hospital and Medical Care Act and established a health insurance program of its own It is pointed out that the employees of the University are the only large group of state employees not covered by the Meyers-Geddes Act

The University currently contributes six dollars a month toward the premium of an approved health insurance policy for those University employees who wish to have such coverage. The employee also contributes an amount toward the premium amount depending upon the number of dependents the employee may have

The six dollars per month contribution is the same amount that is contributed by the state through the Meyers-Geddes program

Should the University employees be included under the Meyers-Geddes Program, there might be some slight administrative savings to the University However, since the University has only five approved plans available to employees, the administrative staff is small and is currently handled within the personnel office There would be no increased cost or any savings in the state's contribution toward the premium payment with the transfer of the program under the Meyers-Geddes program.

OUT OF STATE TEACHING SERVICE CREDIT

Assembly Bill No. 1050 (Bee, Hinckley, Rumford, Garrigus, Belotti, Casey and Ryan—1963 Regular (General) Session) was heard at the following places:

February 20, 1964	Sacramento
March 4, 1964	Sacramento
March 10, 1964	Sacramento
July 27, 1964	San Francisco
August 18, 1964	Los Angeles
October 22, 1964	San Diego
November 16, 1964	Sacramento

The bill would amend various sections and add new sections to the Education Code as it relates to state teachers' retirement by adding credit for retirement purposes for out-of-state teaching experience.

Subsequent to the initial hearing on February 20, 1964, Mr. Bee, at the request of ARCOSS the sponsor of the bill, suggested certain modifications to AB 1050 as referred After due deliberation the committee unanimously accepted the modifications for purpose of study. Therefore, rather than studying a specific bill, we studied the entire question of the granting of out-of-state service credit and its effect on the California public school system.

The modifications to AB 1050 adopted by this committee are as follows:

1 An out-of-state teacher must teach in California for a minimum of five years before being allowed to qualify any out-of-state service.

2. After teaching in California for five years a teacher may, at his option, qualify five years of out-of-state experience.

3. Out-of-state experience may be qualified thereafter on a matching year-for-year basis. In other words, a teacher teaching in California for six years may qualify six years out-of-state credit and a teacher teaching seven years in California may qualify seven years out-of-state experience.

4 In all cases, the buy-in is to be at the option of the individual teacher. However, the teacher must notify the state during a period not longer than six (6) months after the first five (5) years of California service of his intention to exercise this option The teacher must be notified by the State Teachers' Retirement System during the fifth year of California service that he can qualify his out-of-state service for retirement credit.

5 BUY-IN:

(a) For those teachers entering teaching in California beginning September 1, 1944 through June 30, 1951, the buy-in shall be based on the age and sex of the teacher at the time of entering California service and the first full year's salary, plus the rate in effect for that age and sex during the year 1951-52.

(b) For teachers entering the California service during or after the 1951-52 year, a teacher qualifying out-of-state experience for retirement purposes would pay into the California Retirement System a sum of money determined by the teacher's age and sex and actual salary at the time of entering California service.

6. Payment to the Retirement System for out-of-state credit may be made in one of three ways at the option of the teacher, all carrying 5 percent interest from the date the option is exercised to the date payment in full is made to the Retirement System for the years being qualified for out-of-state service:
   (a) Lump sum cash payment.
   (b) Increasing existing payment into the retirement system and spread over the remaining years of active service.
   (c) For already retired teachers or for those too close to retirement to make (a) or (b) feasible:
   Have a certain sum deducted from their monthly retirement check until the payment is made in full, whereupon they receive full retirement payment. (Not to exceed three years for payment.)

BACKGROUND

1. AB 1050 was referred with the recommendation that if a new actuarial study of the costs involved in granting out-of-state service credit the costs of such study should be borne by the state
   The reason for this recommendation was that testimony given before the Assembly Ways and Means Committee on April 25, 1963, pointed out that ARCOSS members had paid in excess of $40,000 for a survey of costs in 1960, but this survey contained grievous errors and was therefore, worthless The old survey was conducted by contract with the State Teachers' Retirement System and an actuarial firm and the state charges in excess of $25,000 for its portion of the survey.
2. The committee determined that a new survey of costs was needed and to this end appointed an advisory committee to work out the details of the questionnaire and the scope of the survey The members of the advisory committee, working with the chairman of the full committee were:
   Mr. Leo Reynolds, Executive Director, State Teachers' Retirement System
   Mr Lloyd C. Graybill, State Employees' Retirement System, representing Executive Director William E. Payne
   Mr. Thomas J. Dooley, representing Mr. A. Alan Post, Legislative Analyst
   Mr. William E Barton, California Teachers Association
   Mr. Shirl Olympius, Public Relations Counsel, representing ARCOSS, INC.
3. The details of the survey were worked out and adopted by the committee on March 10, 1964 At the suggestion of Senator Collier, the committee also decided that in order to get the complete picture of the state's total obligation an actuarial study of the system itself should be made. The committee therefore, determined that two surveys be made and the date of each survey should be as of June 30, 1964.
4. The committee requested and the Legislature approved the necessary funds for these studies. The committee engaged the services of an actuarial firm and a data processing firm to make the study

of the costs of granting out-of-state service The State Teachers' Retirement System is conducting its own survey of the total obligation of the state to the teachers as of June 30, 1964 Questionnaires concerning out-of-state service were distributed through channels to all teachers in May 1964

5. Based on the modifications to AB 1050 outlined above, the committee ordered the actuarial study to reflect the costs involved if the state were to grant 5, 10, 15, or unlimited years credit for out-of-state teaching experience.
6. The completed actuarial report on the out-of-state service proposal was submitted to the committee on October 5, 1964 This report was accepted by the full committee at our San Diego hearing October 22, 1964.
7. The second phase of our overall study is still underway and will be reported by this committee as soon as we have received the results

FINDINGS

1. The committee held seven (7) public hearings on this subject in various sections of the state in order to get as broad a perspective of this subject as possible
2. Testimony and the actuarial report pointed out that this legislation would affect approximately 56,000 active public school teachers as of June 30, 1964.
3. Legislation adopted in 1944, blanketed in over 21,000 teachers with out-of-state service who were teaching in California as of June 30, 1944
4. It was pointed out that 27 other states have some provision in their retirement laws to allow out-of-state service credit and that 22 of these states allow 10 years or more credit
5. Studies made by the State Department of Education were submitted which show that it will be impossible to graduate sufficient California teachers for our needs until 1972 At least until that time we will be forced to recruit out-of-state teachers
6. Testimony was offered by several superintendents from various sections of the state regarding the difficulty in recruiting sufficient trained, experienced teachers to adequately staff our classrooms
7. It is estimated by the State Department of Education that at the current time the various school districts throughout the state are spending over $3 million per year to recruit out-of-state teachers It was also pointed out that it is becoming practically impossible to recruit teachers with experience and more and more, they have to accept recent college graduates with no teaching experience merely to staff our classrooms.
8. Further testimony by the Superintendent of the Fullerton Junior College and High School District showed the dire need for experienced teachers at the high school and junior college levels He testified that in an attempt to get experienced teachers his district was currently offering a salary incentive of two steps above what

would normally be paid and they intend to go even higher in the future He pointed out that, despite our somewhat better salaries, experienced teachers were extremely reluctant to give up retirement credits earned in other states merely to move to California and start all over.

9. The committee notes that despite legislative efforts to improve the educational system through the adoption of the Fisher Act (Credentialling), the Unruh Act (Consolidation), the Casey Act (Foreign Language), the McAteer Act (culturally handicapped children) and various other measures the State Board of Education actually found it necessary in 1964 to allow various school districts to hire uncredentialled teachers in order to provide sufficient teachers. Thus, instead of improving, we have added approximately 1,000 new uncredentialled teachers This was necessary because it was proven beyond a reasonable doubt that trained teachers were not available.
10. The actuarial report contained the following basic information.
    (a) Of the 56,000 active teachers with out-of-state service their average age is 43 3 years
    (b) The average years of out-of–state service is 5.48 years.
    (c) There were approximately 1,700 already retired teachers who would be affected by this legislation for a total of 57,484 active and already retired teachers

RECOMMENDATION

The committee unanimously recommends that the 1965 California Legislature adopt legislation to allow out-of-state teaching service credit for retirement purposes on the following basis:

1 That the bill reflects the modifications adopted by this committee and reflected in the actuarial report; and
2. That the maximum allowance of such credit be limited to ten (10) years provided the recipient has rendered ten years of full-time service in the California Educational System
3 That a satisfactory formula be worked out to prevent an individual from receiving a retirement allowance for identical service from any other state or public agency.

The committee makes this recommendation for the following reasons·

1. The adoption of this legislation will materially aid the recruitment of trained, qualified teachers, we vitally need to assure the parents and children in California of a continued excellent educational system
2 This legislation will assure our dedicated career public school teachers of an adequate retirement income after devoting their lives to the education of the youth of the United States
3 The committee is cognizant of the fact that according to the 1960 census report over 60 percent of our California citizens were born in other states. Thus it is logical to assume that our need for out-of-state teachers is directly attributable to the migration of others to this state.

4. If legislation is adopted as outlined above the maximum possible costs to the state will be $1,022,000 for the first year and an estimated average cost over the next 10 years of $6,793,700. These costs are maximum and are predicated upon all teachers availing themselves of this opportunity. From information we have received there will be many teachers who will not do so for one reason or another. This will materially reduce the cost to the state.
5. In order to obtain this maximum benefit, the teachers will be required to contribute a net of $100,904,000 into the State Teachers' Retirement System.
6. The committee has received testimony from various superintendents throughout the state, that the adoption of this legislation will result in a savings in recruitment costs to the various districts. We feel that this plus enabling the districts to hire within the normal salary ranges will do much to offset the costs to the state involved in granting out-of-state service credit. Although this affects different budgets, the committee points out that we are talking about the same taxpayers throughout the state

SUGGESTED MODIFICATIONS TO AB 1050

1. An out-of-state teacher must teach in California for a minimum of five years before being allowed to qualify any out-of-state service
2. After teaching in California for five years a teacher may, at his option, qualify five years of out-of-state experience.
3. Out-of-state experience may be qualified for a maximum of 10 years on a year-for-year basis In other words, a teacher teaching in California for six years may qualify six years out-of-state credit and a teacher teaching seven years in California may qualify seven years out-of-state experience, up to a maximum of 10 years.
4. In all cases, the buy-in is to be at the option of the individual teacher. However, the teacher must notify the state during a period not longer than six (6) months after the first five (5) years of California service of his intention to exercise this option. The teacher must be notified by the State Teachers' Retirement System during the fifth year of California service that he can qualify his out-of-state service for retirement credit
5. BUY-IN·
   (a) For those teachers entering teaching in California beginning September 1, 1944 through June 30, 1951, the buy-in shall be based on the age and sex of the teacher at the time of entering California service, plus the rate in effect for that age and sex during the year 1951–52 This will be based on the actual beginning salary earned by the teacher in California

   In other words, if a female teacher, age 30, started teaching in California in the 1945–46 school year at a salary of $2,800, then her contribution for out-of-state credit would be 6 75 percent (the rate in effect for a female, age 30, in the year 1951–52) × $2,800

   Another example . . a male teacher, age 35, started teaching in California in 1947–48 at a salary of $3,100 To qualify for out-of-state credit this teacher would pay into the Retirement System 6 26 percent (which was the rate in effect for a 35-year-old male in the year 1951–52) × $3,100.

   In other words, in all cases where the teacher entered the California service prior to 1951–52 we would use the actual salary first earned by the teacher, the teacher's actual age and sex at the time of entering California service, but the percentage would be that percentage paid by a person of that age and that sex in the year 1951–52

   (b) For teachers entering the California service during or after the 1951–52 year, a teacher qualifying out-of-state experience for retirement purposes would pay into the California Retirement System a sum of money determined by the teacher's age and sex and actual salary at the time of entering California service.

In other words, if a male teacher first taught in California in 1955 he could qualify his out-of-state teaching experience by paying into the Retirement System a sum of money based on his actual age and sex and actual salary earned during his first year of California teaching for all qualifying years of out-of-state service up to the 10-year maximum

6 Payment to the Retirement System for out-of-state credit may be made in one of three ways at the option of the teacher, all carrying 5 percent interest from the date the option is exercised to the date payment in full is made to the Retirement System for the years being qualified for out-of-state service:

(a) Lump sum cash payment

(b) Increasing existing payment into the retirement system and spread over the remaining years of active service.

(c) For already retired teachers or for those too close to retirement to make (a) or (b) feasible.

Have a certain sum deducted from their monthly retirement check until the payment is made in full, whereupon they receive full retirement payment (Not to exceed three years for payment)

7. In all cases the years to be qualified must run in reverse order from the date the teacher started teaching in California

For example, if a teacher first started teaching in California in 1956 and had taught in another state from 1936 to 1955 then the years credited for out-of-state service would be 1955, 1954, 1953, 1952, 1951, 1950, 1949, 1948, 1947 and 1946.

Five percent interest does not begin until the teacher has exercised his option.

8. Study the costs involved to the state if they granted 5 years, 10 years, 15 years, or unlimited credit. This information can be gathered at the time the new actuarial survey is made.

STATE TEACHERS' RETIREMENT

STATE TEACHERS' RETIREMENT SYSTEM

Assembly Bill No 2692 (Meyers—1963 Regular (General) Session) was heard in San Francisco July 28, 1964.

The bill would amend the Education Code as it relates to the State Teachers' Retirement System, and would authorize school district governing boards to pay the members' (teachers') Permanent Fund Contributions.

FINDINGS

1. It was brought out in the testimony of the proponents that this permissive legislation, if adopted, would have the effect of raising teachers' salaries in those districts where the school board decided to pay the entire Permanent Fund contribution of the member.
2. The districts are now required by law to contribute $6 per year per teacher plus 3 percent of their total gross payroll for teacher retirement. This amounted to $39,000,000 in the past year and is used annually to pay for teacher retirement

RECOMMENDATION

The committee unanimously recommends that this legislation be denied for the following reasons.

1 Because it would be merely permissive legislation, it would be extremely difficult to administer the funds accumulated by the State Teachers' Retirement System
2. The committee believes that if individual school districts desire to raise teacher salaries, they already have the authority to do so without resorting to paying all or part of a teacher's contribution to the Permanent Fund.

Legislative Analyst

ANALYSIS OF ASSEMBLY BILL NO. 2692 (Meyers)
1963 General Session

Cost: Potential total cost of approximately $12,000,000 to local school districts

Analysis:

Assembly Bill No 2692 (Meyers), 1963 General Session, would have amended Section 14201 of the Education Code relating to the State Teachers' Retirement System

The bill would have authorized all local school district governing boards to pay the members' contributions to the Permanent Fund of the State Teachers' Retirement System

Section 14101 of the Education Code provides that each member of the system shall deposit $60 annually into the Permanent Fund Should all districts decide to pay the employees' share of the retirement contribution, the total cost would be approximately $12,000,000.

STATE TEACHERS' RETIREMENT SYSTEM

House Resolution No. 195 (Veysey and Casey—1963 Regular (General) Session) was heard in Los Angeles on August 18, 1964. The resolution cited several problems that have occurred and are occurring in the administration of the State Teachers' Retirement System and requested an interim committee study to determine whether or not a full-scale management survey of the system was needed.

FINDINGS

1. The Auditor General submitted two reports on the financial statements of the State Teachers' Retirement System The first report dealt with an examination of these records for the year ended June 30, 1958 The second report dealt with the year ended June 30, 1962 The Auditor General states, "On each occasion we were unable to complete our examination because the accounting records were not up to date"
2. The Auditor General also reported the following
   (a) At June 30, 1956, the active membership was 173,000 As of June 30, 1964, the active membership was 295,000—an increase of 122,000 in the past eight (8) years.
   (b) During this same period, the number of retired teachers has increased from 17,000 to 27,700 or 10,700 additional already retired members
   (c) In this same period, annual benefits paid by the system have increased from $41 million to almost $90 million, thus more than doubling the amount of benefits paid out each year.
   (d) The annual reports required by the system can and should be simplified
   (e) An extensive study should be made into the method used in computing service credit
   (f) It is fundamental to improve administration of the system; that improvement be made in the timeliness of the annual reports Testimony brought out the fact that no work is done on updating the records of the system until the annual reports from all counties are in the hands of the system.
   (g) The incidence of error of calculations in the retirement roll is unacceptably high and that these errors are concentrated in retirement allowances calculated during the period 1955 through 1959.
   (h) A number of instances were discovered whereby the allowances paid are different than those which would be paid if the benefits were to be recalculated under current policy.
   (i) It was recommended that the Teachers' Retirement Board review the policy decisions and determine the need for recalculation of benefits and also that a complete review be made of all such calculations during the 1955–1959 period when the workload was extremely heavy due to the extensive revisions to the benefit structure that became effective in 1956.

(j) There is a drastic need for better management controls in the system. One example placed before the committee is that there is no semblance of order in the manner that pertinent documents and information is placed in a member's individual file folder. In many cases the Auditor General was unable to find pertinent documents This results in a considerable expenditure of time when a member retires because at that time all of the information has to be collected and verified

(k) The system makes no effort to record and report their outstanding liabilities Therefore, it is impossible to determine the outstanding liability of the state except when an actuarial study of the system is made every six (6) years

(*l*) Because the books of the system are not closed on a timely basis and because the accounting records of the system are not maintained on a current basis the accounts of the State Controller and the system do not balance.

(m) It was pointed out that there is a "very critical shortage of supervisory personnel"

(n) The present organizational plan as well as the operation of the system should be subjected to a comprehensive survey. This should be a management survey and systems analysis which currently does not come under the responsibilities of the Auditor General.

3 In the words of the Auditor General, "An organization of this size requires an active, informed stewardship"

4. The Legislative Analyst recommends that the 1965 General Session of the Legislature enact legislation to change the method of financing the administration of the system At the present time 100 percent of these costs come from the General Fund The recommendation was that part of these costs should be borne by the teachers and the employing school districts This would place the administration of the teachers' system on much the same basis as the state employees' system, where the administrative costs are paid out of interest income.

5. The Legislative Analyst recommended that the share that the teachers and school districts would pay be taken out of interest earned on the funded portion of the Retirement Fund However, from a cursory analysis of state budgets for the past 10 years it appears that the districts' funds (3 percent of the payroll plus $12 per teacher) are expended yearly. Therefore, the only funds invested would be the teacher contributions It was pointed out that if some method of sharing costs is devised it could produce a savings of up to $400,000 annually to the General Fund.

6. There is some problem created by local retirement plans. These members are also by law members of the state teachers' system Testimony was offered that 90 percent of these teachers, upon retirement, will withdraw from the local system, pay their money into the state and retire on state benefits which are somewhat higher than local

benefits What the actual cost would be to the state was not stated. However, the 1964–65 State Budget carried an appropriation of $2,-055,660 labeled Subventions to Local Systems.

7. Many instances were cited to committee members by fellow legislators and others, of cases in which members were unable to obtain information regarding their status in any reasonable length of time. There are also instances where members had to engage the services of an attorney to determine their status. Numerous cases have been reported to the committee of overpayments and underpayments both into the system and also to retired members.
8. This committee and other members of the Legislature have reported at various times that it was rather difficult to obtain information and answers to questions from the administrative staff of the system.

RECOMMENDATION

The committee unanimously recommends that the 1965 General Session of the Legislature authorize a complete management survey of the State Teachers' Retirement System as requested by HR 195. We further recommend that said survey be made under the supervision and control of this committee and that the committee be authorized to contract with a private organization to make said survey. We make these recommendations for the following reasons:

1. The Auditor General's report pointed up the great need for better financial controls, better and more efficient reporting, and a comprehensive study of the organizational structure of the system.
2. The committee is well aware that three pieces of legislation authored by Mr. Veysey were adopted by the 1963 Legislature. This legislation was aimed at increasing the efficiency of the system by authorizing advance payment of retirement allowances for new retirees based on preliminary information, by creating a new Teachers' Retirement Board and by requiring counties to report not later than Decembr 31st, following the close of the school year.
3. However, the committee believes that, based on testimony heard during 1964, a management survey is needed of the entire system to assess the success of the 1963 legislation in eliminating some problems and to attempt to eliminate other problems mentioned in the findings.
4. The committee believes an outside organization should make this survey because to our knowledge no state agency has the time and personnel to conduct a survey of this magnitude without disrupting the services our state agencies rendered to the entire structure of state government.
5. It was brought out in testimony that the State Employees' System has much better controls, more efficient reporting, makes up-to-date information available to its members, gets retirement payments to new retirees within one month after they retire. The committee is at a loss to understand many of the administrative deficiences in the Teachers' Retirement System.

6 The system has now moved into new, larger quarters and this committee believes it is time that the Legislature took a long, hard, cold look at the administrative operation of the State Teachers' Retirement System

Legislative Analyst
August 18, 1964

Mr. Chairman, and members of the committee

We have been asked by the chairman of your committee and by the author of House Resolution 195, the Honorable Victor Veysey, to appear before you today and comment upon the resolution

HR 195 was introduced by Mr Veysey on April 3, 1963 On that same date and also on April 5 and April 11, 1963, Mr Veysey introduced three bills that pertained directly to much of the subject matter of HR 195 All three bills were subsequently enacted by the legislature and signed into law We shall comment on the legislation as we discuss each "Whereas" clause of the resolution

In addition to legislation enacted during the 1963 General Session, the legislature in 1964 increased the budget of the State Teachers' Retirement System by 28 4 percent This was the largest percentage increase of any of the larger agencies in state government Much of the increase was proposed to correct the deficiencies outlined in House Resolution 195 The final amount appropriated from the General Fund for support of the system for the 1964–65 fiscal year was $784,502.

House Resolution 195

The first "Whereas" clause of HR 195 indicates the magnitude in the number of accounts of both active and retired members of the State Teachers' Retirement System. Currently the active membership of the system is approximately 265,000 and the retired membership is approximately 30,000

The second "Whereas" clause, which states "The system has three different funds to keep track of" is still true and as far as we know is not a controversial matter The three funds are the Teachers' Permanent Fund, the Retirement Annuity Fund, and the Annuity Deposit Fund The last of the three funds, the Annuity Deposit Fund, consists of solely member contributions from July 1, 1935 to July 1, 1944 and the interest thereon The first two funds consist of member, school district and state contributions

The third "Whereas" clause states, "The system is over two years behind in posting to members' accounts, and audits indicate a high percentage of errors in computing benefits."

A large percentage of the errors resulted from a legislative change in 1956 in the method of computation of a retired member's benefit allowance A thorough review of the records have uncovered the errors and corrections have been made. The two-year delay in posting to members' accounts was due primarily to the delay of the counties in forwarding the appropriate information to the state Chapter 1981, Statutes of 1963 (AB 2360, Veysey), now provides that the annual reports of county superintendents are due on July 31st following the close of a school year, and shall be delinquent if not filed on or before the following December 31st In the event that a report is delinquent, the State Controller, upon order of the board, shall withhold subsequent allocations to the County School Service Fund. We believe that if the system can stay on top of the problem, there is now adequate statutory support to force the counties to submit their reports on time It is our hope that the system will continually pressure the counties to submit their reports on time.

"Whereas" clause number four states, "Retiring teachers have been required to wait as long as six months after applying for retirement to commence receiving benefits."

Chapter 2134, Statutes of 1963 (AB 2241, Veysey), provided that the system could make advance payments to persons who have filed applications for retirement, but who have not made their final elections with respect to options Two positions were added to the system's 1964–65 budget to implement that provision. Retiring teachers should now receive their first benefit check between 30–45 days after retiring The advance payments may differ by a few dollars from the final allowance, however such overpayment or underpayment is quickly adjusted.

"Whereas" clause number five states, "The Teachers' Retirement Board is composed of the members of the State Board of Education and the appointive members of the Retirement Investment Board, and the members of the Retirement Investment Board and the members of the State Board of Education lack sufficient time to devote to the retirement system."

Chapter 2135, Statutes of 1963, (AB 2286, Veysey), reconstituted the board. The reconstituted board is composed of three members of the system, a member of a local board of education, an official of a bank, and an official of an insurance company. The Director of the Department of Finance and the Superintendent of Public Instruction are also ex-officio members.

Clause number six states, "Counties are slow in reporting to the system the required information on members and the accounts of the State Controller do not balance with the accounts of the State Teachers' Retirement System."

As stated above concerning clause number three, Chapter 1981 was enacted to remedy that particular situation. A representative of the Auditor General's office may wish to comment on this particular problem.

The final clause states the following: "The system's problems are complicated by the fact that it is not a funded system, and by the fact that different provisions applying to members who are also members of a local teachers' retirement system make computation of benefits and administration of the state system more complicated."

It is not essential that the system be funded and there is a very practical problem in attempting to fund close to two billion dollars over the next 25 to 30 years as has been recommended by others.

We have one major recommendation we would like to make at this time for consideration by the 1965 General Session of the Legislature:

We recommend that legislation be enacted at the 1965 General Session of the Legislature that would change the financing of the administration of the State Teachers' Retirement System from 100 percent support by the state to some form of sharing of costs by the state, the teachers and the employing school districts.

Currently Section 13907 of the Education Code, enacted in 1944, provides the following:

> "The cost of the administration of the Retirement System (State Teachers' Retirement System), including the employment of necessary expert and clerical assistance, the purchase of necessary supplies and equipment, and any other expenses necessary in the administration, shall be paid by the state, but the total of the costs of administration during any fiscal period shall not exceed the amount made available by law for such costs during the fiscal period."

The Legislature in 1959 also adopted a policy statement that is included in Section 14215 which states that "The costs of administration of the Retirement System shall be met from contributions by the state."

Our recommendation would basically follow the pattern of financing the administration of the State Employees' Retirement System. In 1959 the Legislature added Chapter 2066 to the Government Code wherein "Costs of administration of the system shall be paid from interest income from the Retirement Fund beginning with the fiscal year 1959–60; provided that the amount of income so applied in any fiscal year may not exceed ten hundreds (0.10) of 1 percent of the investments of the Retirement Fund at book value as of the close of the preceding fiscal year."

There is a very basic difference between the State Employees' Retirement System (SERS) and the State Teachers' Retirement System (STRS). The employees' system is a full reserve system, or funded system, where the state contributions and the employee contributions are both set upon an actuarial basis, thus assessing the cost of the retirement program, and paying for it at the time that the employees' service is rendered. Thus, since the obligation is created pursuant to expenditures authorized by the Legislature and under a retirement law controllable by the Legislature, the Legislature sees that revenues are sufficient in that same year to support the obligations created.

The teachers' system cannot be said to be on a full reserve basis, as the state's contributions to the system are made as liability matures and not as it accrues. The sum requested from the General Fund to meet the state's liability for the 1964–65 fiscal year amounts to $52,500,000. Since 1944 the member contributions

have been on a full reserve basis. In addition to the state and member contributions, the employing school districts contribute three percent of the certificated payroll to the fund plus $12 per year for each employed teacher.

We are recommending that the state, the teachers, and the employing school district all share in the cost of the administration of the teachers' system. We recommend that the share that the teachers and school district would pay would come from interest income from the Teachers' Retirement Fund, which would be comparable in principle to the State Employees' Retirement System. Since the state's share of the benefit cost is paid as the liability matures and not as it accrues, the state money that is transferred into the Teachers' Retirement Fund is encumbered and not available for investment. It would be necessary to appropriate the state's share of administering the teachers' system directly from the General Fund. Depending upon the type of sharing program adopted, the adoption of our recommendation could produce savings to the General Fund in the order of $400,000 annually.

INVESTMENT OF PUBLIC AGENCY RETIREMENT FUNDS

This committee has held numerous public hearings on two measures relating to the investment of public agency retirement funds These measures are as follows:

1. Assembly Bill No 1203 (Allen, Lanterman and Casey—1963 Regular (General) Session) This bill would add and amend various sections of the Government Code relating to the County Retirement Law of 1937 It was introduced as a vehicle to implement Proposition 7 on the 1964 ballot It would have allowed counties to create a fund to invest a portion of their retirement funds in common stock and it further provided that each member of the retirement system could elect to have one-half or all of his contributions placed in such a fund
2 House Resolution No 489 (Williamson and Casey—1963 Regular (General) Session) This resolution requested an interim committee study on the subject of investing in common stocks by public agency retirement funds It further stipulated that the interim committee report sugggested legislation to the 1965 session of the Legislature

Public hearings were held by this committee on AB 1203 and HR 489 on the following dates:

July 28, 1964 ..... San Francisco
August 19, 1964 ..... Los Angeles
September 21, 1964 ..... San Francisco
October 20, 1964 ..... Los Angeles
October 21, 1964 ..... San Diego

FINDINGS

1. The intent of both of these measures was to provide the 1965 session of the Legislature with proposed legislation to implement Proposition 7, provided it passed in the 1964 General Election.
2 Proposition 7 was the outgrowth of ACA 13 (Allen) passed at the 1963 session of the Legislature
3 Proposition 7 was an enabling act which would have amended the constitution to allow the state and its political subdivisions to invest public retirement funds in common stocks under rules and regulations adopted by the Legislature
4 The prohibition against investing in common stocks was written into the State Constitution in 1879 prior to the time that any controls had been established by government regulating the stock market
5 This matter has been subjected to extensive research and public hearings in 1961 and 1962 by the Joint Interim Committee on the Investment of Public Retirement and Pension Funds the fore-

runner to the present permanent Joint Legislative Retirement Committee. The previous committee has filed two reports with the Legislature.

6 Proposition 7 failed to gain voter approval in the 1964 general election Therefore, the constitutional prohibition still stands

RECOMMENDATION

The committee unanimously recommends that the subject matter be kept alive and further studies be authorized on this subject for the following reasons.

1. Many California chartered cities and independent retirement systems are now investing retirement funds in common stocks They can do so because they have been held to be exempt from the constitutional prohibition Their experience has been good and their earnings are considerably higher than those retirement funds which by necessity invest only in bonds
2. The committee feels that Proposition 7 failed to gain approval because of the lack of an organized voter education campaign in 1964
3 A new opinion on the investment of the employee portions of retirement funds is being requested from the Legislative Counsel
4 There is a possible test suit developing to test the validity of the prohibition
5. The main argument used by newspaper editors in opposing Proposition 7 was the lack of a specific proposal for implementing this enabling act

Therefore, the committee believes that we should continue our study of this matter Although no legislation can be adopted at this time, we believe that specific legislation should be worked out so that we will have the guidelines drafted in the event the voters authorize such investment policy in the future

ANALYSIS OF ASSEMBLY BILL NO. 1203 (Allen)

As Amended in Assembly April 18, 1963
1963 General Session

Cost: No state cost. Administrative cost to counties unknown

Analysis:

Assembly Bill No 1203 would have added and amended various sections of the Government Code relating to the County Retirement Law of 1937

The bill would have provided that all counties that have retirement systems under the provisions of the Retirement Law of 1937 would be allowed to establish a division in the retirement fund of the county system for the investment in common stocks

The bill would allow the member within the retirement system to elect to have one-half or all of his contributions placed in such division

The bill would have taken effect upon the effective date of a constitutional amendment permitting the Legislature to authorize investment of funds of a retirement system in such stock

There would be no state cost with the passage of AB 1203, however there would be an administrative cost to many of the counties that is not known

TABLE OF CONTENTS

LETTER OF TRANSMITTAL

Assembly Chamber, State Capitol
Sacramento, January 4, 1965

HON JESSE M UNRUH, *Speaker of the Assembly*
and Members of the Assembly
Assembly Chamber, Sacramento

Dear Mr Speaker and Members

Your Interim Committee on Industrial Relations, created by House Resolution No 500(k), 1963 Regular Session, herewith respectfully submits the final report of its activities

The report contains the committee's findings and recommendations on the subjects referred to it for interim study by the Assembly Rules Committee

Respectfully submitted,

EDWARD E ELLIOTT, *Chairman*
MERVYN M DYMALLY, *Vice Chairman*

ROBERT E BADHAM
CLAIR W BURGENER
LOU CUSANOVICH
JOHN FRANCIS FORAN
EDWARD M GAFFNEY
WALTER W POWERS
ALFRED H SONG
VICTOR V. VEYSEY

AREAS OF INVESTIGATION AND SUBJECTS REFERRED TO COMMITTEE

The general scope of the areas of investigation authorized by H R 500(k) was as follows. "The Labor Code, uncodified laws relating to labor and industrial relations, and other matters relating to industrial relations."

The following subjects were referred to the committee by the Assembly Rules Committee of the 1963 Regular Session: H R 160 (Foran) strengthening apprenticeship programs, A B 604 (Dymally) regulation of apprenticeships with contractors, A B 1202 (Lanterman) regulation of heaters in school facilities and classrooms; A B 2783 (Gaffney) standards of safety for employees working near high voltage wires; H R 525 (Gaffney) standards of safety for employees working near high voltage wires, A B 2896 (Foran) safety regulations for operation of boilers: A B 2364 (Alquist) safety regulations for operation of boilers, and A B 1710 (Burton) extension of Fair Employment Practices Act to include discrimination in employment because of age

In November of 1964 a Special Subcommittee on Economic Opportunity was appointed with the consent of the Assembly Rules Committee to examine the provisions of H R 197 (Dymally), 1964 First Extraordinary Session Assemblyman Mervyn M Dymally was appointed chairman of the subcommittee Others appointed to the subcommittee were Assemblymen Clair W Burgener, John Francis Foran, Walter W. Powers, and Alfred H Song The subcommittee held five hearings in November and December of 1964 It will file a supplemental report

The Subcommittee on Apprenticeship Training will also file a supplemental report

The committee very much appreciates the excellent assistance and cooperation received from the chairmen of the subcommittees, Assemblymen Mervyn M Dymally, John Francis Foran, Edward M Gaffney, and Alfred H Song Their administrative assistants were also most helpful, namely Gonzalo Molina, assistant to Assemblyman Edward E Elliott, chairman of the Committee on Industrial Relations, Louise Ridgle, assistant to Assemblyman Dymally, Gary Analla, and Phil Ryan, assistants to Assemblyman Foran, James L O'Dea, assistant to Assemblyman Gaffney; and Robert Daugherty, assistant to Assemblyman Song They all assisted in the preparation and conduct of the hearings and in the interim work in general Harry Compton, assistant to Assemblyman Burgener, gave very substantial help in preparing the committee's hearing in San Diego on January 17, 1964

The committee also wishes to thank the staff of the Assembly Legislative Reference Service, who were most generous in their assistance.

CHAPTER 1

A.B. 1710; AGE FACTORS IN THE EMPLOYMENT OF OLDER PERSONS; ADMINISTRATION OF THE LAW RELATIVE TO DISCRIMINATION BECAUSE OF AGE

Section 1

Assembly Bill 1710 by Assemblyman Phillip Burton was referred to the committee for interim study by the Assembly Rules Committee of the 1963 Regular Session Briefly, this bill proposed to extend the provisions of the California Fair Employment Practices Act to include discrimination in employment on account of age

In its study of this bill, the committee extended its inquiry to include the general subjects of age factors in the employment of older persons; the administration of the law relative to discrimination in employment because of age (Chapter 9 5, Sections 2070–2078, Unemployment Insurance Code), vocational training and youth employment opportunities.

Hearings on these subjects were held in Los Angeles on September 19 and 20, 1963; in San Francisco on October 24, 1963; in Sacramento on December 2, 1963, and in San Diego on January 17, 1964

In connection with the employment problems of older persons and discrimination because of age, some background to the present inquiry may be helpful in evaluating the testimony of witnesses who testified on this subject.

During the interim of 1959–1960, the Committee on Industrial Relations conducted hearings on this subject, and as a result of its findings, and of the findings of a special committee appointed by the Governor in 1959, it was recommended that legislation in this area be enacted.

A bill to this effect (A B 1976) was introduced by the now Speaker of the Assembly, the Honorable Jesse M. Unruh, and was passed at the 1961 Regular Session This bill amended the Unemployment Insurance Code by adding Chapter 9 5, Sections 2070 through 2078, to read in part as follows

> "It is the public policy of the State of California that manpower should be used to its fullest extent This statement of policy compels the further conclusion that human beings seeking employment, or retention thereof, should be judged fairly and without resort to rigid and unsound rules that operate to disqualify significant portions of the population from gainful and useful employment. Accordingly, use by employers, employment agencies, and labor organizations of arbitrary and unreasonable rules which bar or terminate employment on the ground of age offend the public policy of this State."

This act, however, contains no provision specifically imposing a liability or creating rights, either criminal or civil, upon the occurrence of the specified acts, although Section 2112 of the Unemployment Insurance Code does make a violation of the chapter a misdemeanor, thereby providing a basis upon which the injured individual may bring a civil action to redress that injury

This, then, is the background of the present inquiry, which was aimed in part at determining to what degree this legislation has been effective in alleviating the employment problems of older persons

FINDINGS

Although it is now generally recognized that discrimination in employment because of age exists, and is even increasing with the steady introduction of new industrial techniques, statistical information on its incidence is difficult to come by and difficult to compile

Sixteen states, including California, have recognized the existence of the problem to the extent of enacting antidiscriminatory laws ranging from general statements of policy to detailed acts prescribing specific penalties for noncompliance and enforcement procedures by agencies similar to California's Fair Employment Practice Commission

Even in these latter states, complaints filed under the age category have been relatively few as compared to those having to do with discrimination because of race, color, religion or national origin, and the penalty section seldom comes into action One of the reasons, perhaps, is that discrimination because of age is less easy to identify than in the other categories.

In many instances it is relatively easy to mask a reluctance to hire older workers or continue them in employment behind the allegation of a decline in the capacity to perform, and in many instances, of course, such a claim may have a perfectly sound basis in fact The difficulty lies in the means of distinguishing between the two

Another difficulty occasionally encountered is that of clearly defining what is meant by "age" For example, the New York law specifies coverage as applying to ages between 40 and 65, but the State Commission Against Discrimination has ruled that discrimination is not limited to the ages specified, but "shall mean discrimination based on *overage*" Thus an employer may not discriminate against a person solely because that person is over the age the employer desires to employ, and it would be unlawful for an employer to specify that he wanted a bookkeeper under the age of 35

Group insurance rates and the cost of private pension programs are also frequently adduced as a reason for the reluctance to hire older persons, although this is coming to be less of a barrier than it was formerly thought to be

Where older workers appear to run into the greatest difficulty is in finding reemployment after layoffs owing to plant conversion, the elimination of certain skills by automation, and other related factors.

Under California's present law the Older Worker Program in the State Department of Employment reports encouraging progress in finding employment for workers in this category through its special placement service and educational techniques directed at breaking down prejudice against the hiring of these persons.

This also appears to be the limit of the effectiveness of our present law, there being no evidence of its being brought into action beyond this point.

Many private organizations such as the Fraternal Order of Eagles, Forty-Plus in Los Angeles, and Careers Unlimited for Women in San Francisco are doing energetic and effective work in special areas of this general field, as are labor unions through retraining programs and employer contract agreements.

It is expected that much of the information not now available on this subject will be forthcoming in the final report on the joint study by the Department of Employment and the Citizens' Advisory Committee on Aging, which was initiated in accordance with HR 77, introduced in the 1963 session by Assemblymen Joseph M. Kennick and Frank P. Belotti.

RECOMMENDATIONS

(1) That any enforcement or penalty procedures related to the hiring of older workers, which may be considered by the Legislature, be kept separate from the Older Worker Program in the Department of Employment and delegated to the Department of Industrial Relations.

(2) That the Legislature give serious consideration to the possibilities of constructive legislation that may be suggested by the joint report on employment of older workers to be submitted to the 1965 session by the Department of Employment and the Citizens' Advisory Committee on Aging in accordance with HR 77, 1963 Regular Session.

The following are pertinent excerpts from testimony given on this subject:

HONORABLE PHILLIP BURTON, *Member of Congress and Former Member of the Assembly:*

One of the great disadvantages of the current law as it affects older workers is this: That it forces the older person to, in effect, file a criminal complaint against the employer. This does little or nothing in the way of improving that employer's attitude toward this problem and it does nothing at all in terms of the employer community generally, except generate a great deal of hostility toward this idea. Now I've always felt the conservatives had missed the boat when it came to the manner of enforcing a stated civil right by not preferring commission enforcement. Commission enforcement permits informal discussions with the employer. If the history of this state and all the rest of the states that have FEP is any yardstick, the bulk of all complaints are resolved at the informal level, one way or another. In the event this informal discussion is unsuccessful, there is another step taken where there is an investigation made by the staff of the commission, and there is another opportunity for the employer to ascertain, in collaboration with his associates as well as his counsel, whether or not he has violated

the law. All of this discussion and negotiation takes place privately. There is a law prohibiting any public disclosure as to the complaint and the overwhelming majority of any would-be employees' complaints are resolved amicably and without publicity In the process, the employers are given an opportunity to state the problems as they view them, affecting the hiring of older workers, and may have many of their misgivings dispelled in these conferences, which really serve a very great educational purpose. I think that the method by which we now deal with the problem of discrimination against older workers is the least desirable. We bring into a criminal action context and conflict, the grievances the older worker has against the employer, and I submit that is the worst of all ways to remedy this problem.

So I think it is important that we adopt the commission enforcement concept because it is much fairer to the employer than the present law It guarantees him a chance to view afresh his practices before he runs the risk of public opprobrium because a criminal action has been brought against him, and I think it would be a much more salutary way to deal with this very serious problem So in sum, I believe this legislation is needed. I think it is a more equitable way for both the employee and the employer. It is a more equitable form, a more reasonable form to resolve these differences and I would hope that this committee will recommend the adoption of this legislation at the 1965 session.

WILLIAM BECHILL, *Executive Secretary, Citizens' Advisory Committee on Aging of the State of California:*

Although the members of the Citizens' Advisory Committee on Aging have not taken an official position regarding A B 1710, the committee is on record in support of enforcement procedures being a definite part of any legislation which prohibits age discrimination in employment We believe that the individual should have recourse through an administrative agency which has clear authority to act in his behalf.

Under the present provisions of Chapter 9 5, Section 2070 of the Unemployment Insurance Code, enacted in 1961, no enforcement procedures are included The only recourse now provided to the individual is to refer his complaint to local law enforcement agencies, although the department makes it a practice to directly contact the employer, employment agency, or labor union, in an effort to interpret the provisions and the policies of the law

We, of course, support this emphasis on education and interpretation These are primary tools by which better understanding of the abilities of older workers and removal of current obstacles to their employment can be achieved in many instances on a voluntary basis. Yet, when such efforts fail, the lack of effective enforcement procedures, in my opinion, weakens and is a serious gap in an otherwise constructive program and law

The question of what administrative agency should be given the responsibility of enforcement has, admittedly, been a perplexing one. It has been the subject of previous study by the Legislature, as mentioned, and others Personally, I would favor the designation of this responsibility to the Fair Employment Practice Commission as pro-

vided for in A B 1710. We feel that their experience and present organizational structure lend themselves far more to the assumption of this responsibility than the Department of Employment, whose primary statutory mission in this field should be, as it is now, focused upon a program of information, education, research and community organization designed to promote better community understanding of the problems of older workers by those most directly concerned.

We anticipate that this endorsement of A B. 1710 may raise some questions as to the possible duplication which might occur if the Fair Employment Practice Commission were to have this responsibility. Personally, I do not feel that this would happen and conceive of the entrance of the commission into this role in ways that would augment and supplement the present work of the Department of Employment which would continue to have the primary responsibility and skill involved in the placement, training, and development of job opportunities. The aspects which FEPC would be concerned with would be those more related to bonafide instances of discrimination, where the need for conciliation service and enforcement is essential.

The importance of equal opportunities for older people as a public policy of the State of California has been established previously. Any major restrictions on the securement or retention of employment by older people in this period of rapid technological change is not to the best interests of the economic and social climate of California Moreover, we cannot accept the view which has been expressed in some quarters that California, or this nation, does not have a sufficient level of employment, does not have the type of economy rather, which can provide a sufficient level of employment for all people in our population, regardless of age, who want to, and in many instances, need to work In our response to current pressures, I hope that neither business, government, or labor does not respond to the suggestion that a general reduction of the age of retirement is the answer. This would be a very expedient and costly solution, both in the short and the long run, and be a setback to some of the current efforts of industry, labor, and government, to adopt flexible retirement practices which recognize the abilities of individual persons, and also to develop sound benefits to assure adequate retirement income.

I would like to conclude with four recommendations of possible subjects that I hope the committee will concern itself with during the course of the interim.

One. We would like to recommend the strengthening of the present program of the Department of Employment in carrying out the provisions of Section 9 5 of the Unemployment Insurance Code. The department has made great progress in increasing its placement and counseling services to older workers during the last four years Nevertheless, it could do an even more effective job if it had the staff to carry out the continuing program of education, information, study, and community organization authorized when A B 1976 was enacted two years ago. I would remind the members of the committee that no additional funds were appropriated to the department when that bill was enacted. Community organization, public education, and research are tasks which

require both thoughtful planning and time, and I would urge your serious consideration of this recommendation

Two We hope that you would be concerned with any efforts that could be made to increase the educational and retraining opportunities that are now available to older people in California There is already some progress being made here as a result of recent federal legislation and state legislation

Nevertheless, I hope that this committee will concern itself with what can be done to insure that there is adequate attention given to the retraining and education of older workers as a major part of the manpower program This is a very complicated problem as you know, and right now there is a tendency to concentrate present retraining and educational efforts on displaced younger workers, or young people just entering the labor market I firmly believe that more balanced emphasis is needed, and that the needs of the displaced older worker deserve greater attention.

Three We believe that there should be greater attention given to the development of employment opportunities particularly for those persons 65 and over who need and are interested in employment This is an area we hope to give special attention to during the study which we will conduct under House Resolution 77 I would also like to call to your attention that there is federal legislation pending before the congress at the present time that would provide federal grants to public and nonprofit organizations for the stimulation of employment for older people Our committee is on record and supports this legislation, feeling that these grants could be an important resource in promoting new avenues of employment for both middle-aged and aged people

Four We would encourage any efforts to focus greater attention by both public and private employers and labor on the importance of adequate retirement planning and the further development of flexible retirement policies

There has been increased interest in retirement preparation in recent years Such interest will inevitably concern itself with retirement policies and the extent to which they affect the employment of older people. The Citizens' Advisory Committee on Aging believes it has a real responsibility in this area, and we are currently considering a number of recommendations which we hope to present to the Governor at an early date

JOHN ANSON FORD, *Past Chairman, California Fair Employment Practice Commission:*

One reason that the Fair Employment Practice Commission did not take a position, as I have indicated, is that we do not think it would be proper and it would be up to other agencies to select the most appropriate vehicle if the Legislature decides to put on the statute books a restriction with respect to age of employees We have plenty to do as a commission as we are now, I should say frankly It would, of course, involve an additional appropriation before we could hope to effectively serve in this area

And then there is this consideration also, and that would be perhaps the only additional point I have to mention The administration of a law with respect to age is in a somewhat different area or social cate-

gory from the one in which we have been operating for the last four years Ours has been primarily an area of racial differences and racial discrimination This age discrimination brings in a somewhat different category That is not to say that we can't function in this area also, but it would be, you might say, a departure from the traditional area in which this nondiscriminatory legislation was first initiated

MISS ELEANOR FAIT, *State Supervisor of the Older Worker Program, California State Employment Service:*

One-half of the population of California over 25 years of age is over 45 years of age. This older work force constitutes almost 40 percent of the total work force The age group 18 to 25 today constitutes *9 percent* of our population The population over 60 years of age constitutes *12 percent* of our population The median age of all male craftsmen in California was 42 years of age in 1960

California has changed into a manufacturing economy in less than 10 years and has caught up the older work force in these changes, making their role as workers difficult and, oftentimes, precarious The services of the California State Employment Service are devoted increasingly, to the able, active man caught in the dislocation of plant mergers and relocations as well as in automation and technological change This worker finds the greatest barriers to employment at an age when he has the greatest need for employment in order to house, support and educate his children and to accumulate assets for his retirement years A prolonged period of unemployment at this stage of his working life can mean reduced social security pension benefits upon retirement, thus creating additional future problems, not only for the worker himself but for the economy of society in general

The barriers to employment for older workers are formidable even during high employment periods—based on stereotypes and prejudices concerning older worker performance on the job; and sometimes, on the fears of greater costs of hiring older workers among those employers with inadequately structured insurance plans But without full utilization of the older worker segment of the labor force, California's economic growth cannot proceed at a satisfactory rate The meshing of a large number of mature, experienced workers into the new industrial machine emerging in our state poses a serious problem at the present time, the dimensions of which are just now beginning to become apparent to us

The California Legislature passed a law outlawing age discrimination in employment which became effective on September 15, 1961. The administration of this law was assigned to the Department of Employment There were no provisions for enforcement of this law contained in the legislation Since ours is not an enforcement agency the task of enforcement was assigned to the duly constituted local law enforcement agencies—the police and sheriff's departments Employers with less than six employees are not subject to the law, workers under 40 and 65 years of age and over are not included, apprentice programs are exempt from the provisions of the law as are employers who have established recruiting programs with high schools, colleges, universities and trade schools.

The California State Employment Service offers special services to older workers in all of our more than 100 local offices. These services include job counseling, testing, job development and placement. The California law on age discrimination has provided us with the moral foundation for a strong policy For example, our order taking procedures apply to *all* employers and to *all* upper age limits except for the exceptions mentioned in our report

If the employer accepts our policy of referring solely on the basis of qualifications for the job, we refer applicants qualified to meet the performance standards of the order, disregarding age. If an employer does not accept our policy of referral, and does not come within the exceptions in the law, his order is canceled on the grounds of age discrimination.

Furthermore, a direct personal contact is made by the manager of the local office, the older worker specialist or a member of the area staff with this employer to discuss the details of his order in relations to the law and department policy We feel we have had marked success in this conference method in clarifying misunderstandings and making certain that the employer understands his obligation This procedure is in effect throughout the state at the present time and has been for a year and a half.

Statistics are not available on the number of misdemeanor charges filed under the law This is not to say that none have been filed, but records on misdemeanors in law enforcement agencies are seldom handled so that they are available for statistical purposes later.

In the four years from 1959 through 1962, placements of older workers in business and industry in California increased by 90 percent. For calendar 1962, the placements of workers 45 years of age and over increased 38 5 percent over 1961 These figures reflect the population increases, of course, but they also reflect the impact of the age discrimination law and the intensive efforts of the Employment Service to place these workers.

Although considerable progress has been made in reducing the age barriers to employment, the problem is still substantial. Much more must be done before age discrimination is eliminated from hiring practices, and it will require continuing and increasing effective efforts on the part of the Employment Service, employers and the community to achieve this objective.

I would call to your attention an omission in the present law on age discrimination; namely, enforcement machinery When an individual comes to us and says he wishes to file a complaint on age discrimination, the only action we can take is to refer him to the police or sheriff We feel that if there are to be sanctions, the Fair Employment Practice Commission is better equipped by training and experience and is properly qualified to follow through with enforcement action, if this is necessary. However, we pointed out in our 1962 report that the experience of other states with a conciliation service indicates that a discussion disposes of most complaints without a public hearing. The whole emphasis is remedial, not punitive I want to repeat—the Department of Employment is not interested in handling such a conciliation service ourselves.

With the very complex problem which age discrimination represents, it is logical and practical that more than one state agency, each with a different function, handle different aspects of the same problem, and thereby be more effective in the long run. The placement of enforcement authority with the Fair Employment Practice Commission will not change the present direction of our program or activities but will relieve us of a responsibility we are inadequately prepared to carry out.

A law on age discrimination in employment which provides for enforcement of the law creates no special privilege, but it does establish a legal bulwark now lacking, for the rights of California workers to obtain employment based on their ability without regard to the factor of age

DON VIAL, *Director of Research and Education, California Labor Federation, AFL-CIO:*

In 1959 the federation submitted a statement to this committee that we favor the addition of age discrimination to the FEP law. I don't think it is necessary to go into that statement because I think it is valid today. Perhaps the figures need updating. The legislation that was enacted in 1961 is consistent with the recommendations of the Governor's commission, and so is the legislation that is now being proposed, because I think that the legislation that was enacted in 1961 goes to the necessary positive program that must be a part of any effort to alleviate the problem of the aging, and the two must be complementary This, of course, is the major burden of the sections of the report of the Governor's commission That is, the enforcement cannot work without the positive program.

I have reviewed in some detail the report of the Department of Employment that was submitted to the Governor and the Legislature on the activities since the enactment of 1961 law and it is quite clear that the enforcement aspect is a matter of immediate action

ERNEST B. WEBB, *Director, State Department of Industrial Relations:* (Statement presented to committee by Everett Corten, counsel for the Department of Industrial Relations)

I received the letter from the chairman of the committee, dated October 4, 1963, inviting me to appear today to express my views on the subject matter of A B 1710, which is before your committee for study. I am pleased to appear and to assist the committee in any way that I can in its deliberations on the subject matter of that bill, namely, discrimination in employment on account of age.

As a result of the duties imposed upon our department by the various laws dealing with the relationship between employee and employer, we are aware of the problems not only of the young worker and the middle-aged worker, but of the growing plight of the older workers in California

As long ago as 1930, the Department of Industrial Relations made an extensive study of the middle-aged and the older workers in California This study was embodied in Special Bulletin No. 1, entitled "Middle Aged and Older Workers," dated January 1930, and Special Bulletin No 2, entitled "Middle Aged and Older Workers in California," dated

August 1930. Bulletin No 1 was general in character. Bulletin No 2 was based upon confidential reports from 2,808 California employers regarding age limitation policies While many reports and studies have been made since that time, by interested private individuals and groups and governmental agencies, those bulletins at a very early date clearly and graphically pointed out the gravity and magnitude of the problem in California and outlined its salient problems and causes.

Those reports showed that prior to 1920 there was practically no problem with respect to discrimination against older workers Until 1920 the employment of older workers kept pace with the expansion of industry Since 1920, the reports point out, the machine process has expanded at an unprecedented rate As the machines and technological processes expanded the rate of production, the number of unemployed persons began to increase And, as the number of unemployed persons increased it became evident that older workers constituted a larger and larger portion of the unemployed group

In 1961, the Legislature, specifically recognizing the problem of discrimination in employment because of age, adopted A B 1976 adding Chapter 9 5 entitled "Employment for Older Workers" (Section 2070, and following) to the Unemployment Insurance Code The Legislature, in adopting A B 1976 in 1961, had before it the problem of determining whether to place the administration of the specific legislation against discrimination in employment on account of age in the Department of Employment or elsewhere The Legislature chose the Department of Employment

In 1963, A B 1710 (Burton) was introduced. This bill, by adding the word "age" to appropriate sections of the Labor Code, would have made the Fair Employment Practice Act (which is administered by the Division of Fair Employment Practices and the Fair Employment Practice Commission in the Department of Industrial Relations) applicable to discrimination on account of age A B 1710 is one of the subjects being studied by this committee

This brings us directly to the problem posed by your letter. In your letter, you state that at your Los Angeles hearing a discussion developed as to alternative means of enforcing the proposed measures (A B 1710) and of the present law (Ch 9 5, Section 2070, Unemployment Insurance Code) You then mention several alternatives within the Department of Industrial Relations as having been discussed at such hearing

I shall address myself first to the possible alternatives within the Department of Industrial Relations You have indicated that you have given some consideration to delegation of enforcement powers and conciliation services to these alternatives within our department (1) to an existing agency; (2) to a new agency, (3) to the Fair Employment Practice Commission

Since receipt of your letter, I have given consideration to the possible alternatives within the Department of Industrial Relations If the Legislature in its wisdom sees fit to place the administration of a law such as A B 1710 in the Department of Industrial Relations, it is my view that it should be placed under the Division of Fair

Employment Practices and the Fair Employment Practice Commission I do not believe the creation of a new agency is warranted I also believe that no other existing agency is as close to the picture of discrimination in employment as the Fair Employment Practice Commission

If such a law as A B 1710 were given to our department to administer, procedures generally similar to those used in carrying out the Fair Employment Practice Act could be adopted and used to implement and carry out such a new law relating to discrimination because of age It is our policy under present laws and procedures to stress conference, conciliation, education and persuasion and it is only after these steps fail that hearings and court enforcement are resorted to

A B 1710 also poses further questions as to whether the entire subject of discrimination in employment on account of age should be placed in one department or the other Thus, if more conciliation and enforcement services and duties than exist today under Chapter 9 5 of the Unemployment Insurance Code are contemplated, should the Unemployment Insurance Code be amended so as to give the Department of Employment additional authority and power in these areas or should the entire subject matter be given to the Department of Industrial Relations?

We see no major inconsistencies between the functions and activities of the Department of Employment in attempting to eliminate discrimination on account of age while servicing employers' orders for employees and those of the Department of Industrial Relations if such a law as A B 1710 were assigned to us for administration

At the First Extraordinary Session of the Legislature in 1963, the Assembly adopted House Resolution No 77 requesting the Department of Employment and the Citizens' Advisory Committee on Aging to undertake jointly a study of how and where employment opportunities for older persons may be improved and expanded throughout the state I am informed that this study is under way at the present time and I am looking forward to seeing the results of such a study Without seeing the results of such a study, however, it seems to me that it would be somewhat premature to attempt to make a final determination of all phases of this problem or to make a final assignment of the duties and responsibilities for the entire program

It was not until 1961 that the Legislature passed A B 1976, giving to the Department of Employment administration over discrimination in employment on account of age The span of time from 1961 is, of course, a rather short time in which to amass a body of facts relating to the administration of such a law

Also, while I have indicated that the Fair Employment Practice Commission and Division would be my choice of agencies in our department to administer this problem if the Legislature chose our department as the vehicle for administration, I have done so with some

reservations The Fair Employment Practice Commission and Division have been in existence only since 1959 and have barely gotten through their shakedown cruise in the administration of the Fair Employment Practice Act.

Furthermore, the administration of a new function of such large proportions as the one contemplated under A B 1710 necessarily involves budgetary considerations In this connection, it would be an unfortunate thing if a new function were imposed upon the Fair Employment Practice Commission without adequate staffing and financing An omission in this regard would not only be unfair to the new program but could seriously impair the efficiency of existing programs which the commission has the responsibility for administering

Thus, and I say this with all due respect and certainly with no intent to delay any plans of this committee, it seems to me that both departments will have more accurate and up to date facts and more experience in this field if final policy determinations on the problem are not made until after the report requested by House Resolution No. 77 is made.

GERALD PARRISH, *Regional Director, U S Employment Service of the United States Department of Labor:*

We are in agreement with what Miss Fait gave to you in terms of the description of the problem and most specifically the recommendations that the Department of Employment has made about A B 1710 We would endorse their position There may be some other suggestions regarding legislation on discrimination because of age which you may wish to consider One is the matter of applying it specifically to certain ages I believe the proposal is to refer specifically to age discrimination in the age range between 40 and 64 years

I wonder whether you might want to consider eliminating that kind of an age range and have it directed to discrimination at any age level, because there are occasions when discrimination in employment based on age may occur at an earlier level There are, of course, many people over 65 who are fully qualified to work, who are capable of working productively and who need to work to support their families, and there should be some legislation for them as well Secondly, your law at the present does exempt employers who have less than six employees This may be a practical administrative measure but you may wish to consider whether it should apply to all employment regardless of the size of the establishment. Also, we notice that your law does not refer to newspaper advertising Classified advertising which includes upper age restrictions is not considered a violation of the law We do know that a number of the states have anti-age-discrimination statutes and prohibit the age discrimination limitation in classified advertising for employment. These are matters which you may wish to consider I am not making an official U S Department of Labor recommendation on these matters but merely bringing them up as a point of information

I would also like to express agreement with the suggestion by the Department of Employment that the enforcement and conciliation

machinery for this should be vested in some agency other than the State Department of Employment The State Employment Service is not an enforcement agency It is a service agency, as you know, affiliated with the United States Employment Service, and it does not have the machinery for this type of enforcement and conciliation service Its administrative funds come entirely from federal grants for employment security administration There is some question whether they can appropriately engage in an enforcement activity in any situation of this kind I would certainly endorse the position given you by the Department of Employment delegating this conciliation and enforcement to some other agency in the state government

WILLIAM SMITH, *California Conference of Employer Associations:*

No statewide body of the public was set up under A B 1976 but these functions are being met by two other organizations One is a statewide interdepartmental committee on problems of the aging and by local advisory committees The latter are doing a tremendous job. They are composed of representatives of organizations and individuals interested in helping to meet these problems The former is composed of representatives of ten state agencies directly involved in the problems of the aging and a good description of the activities of this committee is contained in its Annual Report to the Governor for 1962. Chairman of the committee is Mr. Stanley Sworder, Chief of the Bureau of Adult Education.

Now A B 1976 provides also for "such local advisory agencies as in its judgment," that is, the judgment of the Department of Employment, "will aid in effectuating the purposes of this section," and may empower them to study the problems of discrimination on account of age and all problems relating to employment programs for older workers, and to foster through community effort cooperation among the various groups and elements of the population of the state, and to make recommendation to the department for the development of policies and procedures to carry out the procedures of this section

Under the leadership of older worker specialists in the Department of Employment many of these local bodies have been organized to work with other local groups interested in this problem

Perhaps the most interesting new development in the Older Worker Program is the group session approach According to a report by Eleanor Fait, state supervisor of the Older Worker Program, this is proving to be a psychologically sound method of helping the older worker to help himself and others Throughout the state local CSES offices are experimenting with group sessions and finding them effective for counseling and placement Here is one example The downtown Los Angeles Job Clinic was planned by the area coordinator and staff of the Department of Employment, was cosponsored by the California Federation of Business and Professional Women, the mid-city YWCA, and the adult division of the Los Angeles City Schools This was not a one-shot affair This was six sessions, with leaders of industry, busi-

ness and education telling older women who needed jobs how to get them and at the same time it was telling these leaders of industry, business and education that this is the kind of person who is available for the kind of jobs that they have This communication worked both ways These group sessions are called by various names in the different communities They may be job clinic, job preparation clinic, new employment horizons, how to get and hold a job after 40, etc. There are many different names but they have this fine function Altogether such group sessions sponsored by the local Department of Employment offices have now involved over 2,500 older workers in sessions leading to training, counseling and jobs Best of all, many of these community bodies are becoming permanent local organizations working on the problem of getting jobs for older persons The older worker specialist of the Department of Employment works closely with these and other such groups in the community That is part of the job of education that is so important and must be carried on.

The Legislature, in passing A B 1976, did so without adopting a method of enforcement and upon advice from the Attorney General, the task of legal enforcement was assigned to local law enforcement agencies

Apparently the Legislature was persuaded that the essential task was one of improving the acceptance of the older person in the job market This was done by fixing a sound policy and then organizing public support behind that policy. It is done also by a realistic recognition that the older person is competing in the job market with younger workers, which we have been reminded of at least four times today, and that the older worker has a better chance, just as does the younger worker, if he improves his ability, appearance and job performance. After all, there is no absolute assurance that anyone is going to get a job He is going to get it only in competition with his fellow job applicants

Apparently also the Legislature believed that the key to specific instances of age discrimination is conciliation and persuasion that comes with counseling both the applicant and the employer or the union or the employment agency In this connection I strongly recommend that the Department of Employment be given funds to be used in developing more adequate counseling staff and that this staff be charged specifically with the function of investigating and conciliating any instances of apparent age discrimination. As Miss Eleanor Fait told this committee in its Los Angeles hearing, the problems are different from FEPC problems and competent counselors do require special knowledge and qualifications

The department's staff is already doing the job of conciliation through its counseling of employers and applicants. As Miss Fait stated also, the Department of Employment is 99 percent successful in talking to employers and convincing them that age should not be the sole factor for employment I am sure that this comment related

to specific instances which came to the department's attention There appears to be some reluctance by the department to expanding the duties of its counselors to include more consultation and more counseling with persons who may be engaging in employment discrimination because of age.

YOUTH EMPLOYMENT OPPORTUNITIES

FINDINGS

It appears that a constructive and forward-looking approach to the problem of increased youth employment opportunities is being developed in recent federal legislation and complementary actions on the part of the State of California These include S 2642, 88th Congress, Second Session, the Economic Act of 1964, commonly known as the Antipoverty Bill; the Manpower Development and Training Act, HR 8720, Public Law No. 88-214, passed December 19, 1963; and the Federal Vocational Education Act of 1963, Public Law No. 88-210, passed December 18, 1963 The coordination of these programs plus the cooperation of state agencies will aid in the development of these programs

Excerpts From Testimony Given on Subject of Vocational Training and Youth Employment Opportunities

LORENZO TRAYLOR, *Assistant Program Development Director, Youth Opportunities Board of Greater Los Angeles:*

The planning money that we have for this 18 months planning period comes from the President's Committee on Juvenile Delinquency and Youth Crime Now meanwhile, we have received a grant for a Youth Training and Employability Project for the East Side This is separate and apart from the planning fund and it represents an action program This program is going to include eight areas that we have identified as being critical to youth needs

First, a training and job development program for school dropouts, potential dropouts, and terminal high school youth And this program will be designed to get at these young people who have already dropped out of school and who are not going back to school; who are not college material and have a need for training, remedial education and some form of employment We recognize that, in addition to providing the training and the education, we must also provide some jobs We have the job development phase in this program too

The second phase is more a compensatory type program and is similar to the approach of the McAteer Act at the state level The cultural enrichment type program to help young people stay in school, to reach a higher potential and perhaps not come into the job market at such an early age This is designed for youngsters who are potential dropouts, who are not motivated and who may be predelinquents In addition to that, we recognize that a part of the problem is that many of these

kids have a tremendous amount of leisure time and that there is a need, especially in the deprived areas, to do something about helping them to learn how to be creative in their leisure time; to be able to do more than stand around on the corner or to participate in delinquent activity So we have some supported recreation and culture enrichment leisure time programs.

A fourth area is what we're calling a supportive health and mental health services program, and the demonstration area in which we are going to be working is out in South Los Angeles with young people who have problems, emotional problems, and are unable to get any kind of help In many cases, they wait for several months or even a year and a half to get the help they need at the moment, and so we would want to build as a part of our program some mental health services and health services that could help as the crisis develops and at the same time help the agencies and organizations dealing with these young people, help them by providing consultation services Another part of the program will be family centered welfare services designed to provide protective services for children, and parent education These programs are designed primarily to decrease dependency and delinquency The area in which we will be working is high in welfare families, ANC families. We believe that many of these people can be rehabilitated, that they can be trained and that these mothers can be retrained and eventually can go into jobs There is no need for a continuing lifetime of dependency if at this state in their lives they are given some help, training and perhaps remedial education to get them through this particular period

We are also concerned with aspects of law enforcement, probation, court, and correction services designed to improve law enforcement and community relations We have a tremendous problem here in Los Angeles in the relations between the community and law enforcement And there is also a need for our services to help the youthful offender who comes back into the community Many times he comes back into the same environment which he left and has little possibility for being rehabilitated after having spent some time in an institution

Of course, basic to all of this is what we're calling a community improvement program designed to upgrade the environment that these people live in, to involve citizens in participating in activities in which they help themselves to improve the community, cleaning up deliquency breeding spots, making better use of the services they have, becoming involved in activities that would be of assistance to their particular community. And, of course, the eighth program goes through all of this and ties right in with the personnel who are working with these young people We want to be sure that they are given the training and in-service training to be able to understand how to work with the deprived communities and the disadvantaged youngster.

Now in the interest of saving time, I just want briefly to say something about the job training and job development program. This program includes an intensive vocational guidance and job placement service as I said before We know that these young people have a need for psychological services and remedial education before they can even

get ready to go into a training class Once you get them to this point then some special classes will have to be developed, so this will be included Then these classes will have to be flexible enough to meet the needs of the youngster who can't write as well as other youngsters who will have a language difficulty, the youngster who maybe has come from a southern background where he is handicapped because of education The training program must be flexible enough so that it meets the need of that particular youngster, so that he will know how to look for a job, know how to be interviewed for a job, to fill out an application and this kind of thing We also want to provide an information center for occupational training, and materials these kids can have, and youth opportunity centers throughout the area We are going to develop an intensive job development program with people out in the community beating the bushes to get the local business people who work in the community but live elsewhere to become concerned and see if we can develop jobs by this means Tied into all of this is the need for a communitywide advisory committee This way, we will involve the total community in this thrust

DR EDWARD GOLDMAN, *Assistant Superintendent of Adult Education, San Francisco Unified School District:*

I'm very pleased to be here and to be able to tell you a little bit about what is being done in at least one school system as far as problems of the older worker, youth opportunities and vocational training are concerned

We have several items that I've selected that will illustrate these. One, we have a Day Vocational High School and Technical Institute Two, we have an Evening Vocational and Technical Institute Three, we have day and evening adult schools Four, we have the City College of San Francisco, our junior college Five, we have the Manpower Development and Training Act program in San Francisco And, six, we have a recently established Youth Opportunity Center Taking those somewhat in order, first, the Day Vocational High School and Technical Institute is really for those who wish to obtain a high school diploma and at the same time establish a preapprentice craft In other words, if they wish to go into the crafts and they are going to take a lot of work which requires three hours of manipulative and related training in the craft that they have selected And the other three hours of their school day will be in the academic work which is required by the State of California and the local school district to get a high school diploma These take in what we call preapprentice programs and usually they are in such areas as auto mechanics, mill and cabinet machine shops, sheet metal and so forth The other phase of the program is for preemployment Remember now, this is during the day Preemployment is usually classes for adults and they're classes in such areas as shoe repair, watch repair, radio and TV repair, television station maintenance, cooking and baking and so on These are six hour programs and they lead directly to employment. These usually do not have an age limitation The program that I mentioned first usually is for the adult, for the high school student and for the adult who wants to go back and get a high school diploma.

The evening program, the Vocational Technical Institute, encompasses those programs that involve the apprentice training program, the journeyman training program and occupational preparation These are important to the committee I think because the indentured apprentice program is the program which works in cooperation with labor management, Division of Apprenticeship Standards, in which we have indentured apprentices working on the job for 40 hours a week, going to school four hours a week, usually 144 hours a year, and the number of years would depend on the kind of craft that it is and what the contract calls for. We in San Francisco work with approximately 40 to 60 of the crafts, giving the indentured apprentice related training work The age limitation, as you know, for indentured apprentices may range between about 16 and 25 Usually there is a bottom limitation, most of them are high school graduates, not all of them, and in most cases, the contract calls for an age limitation which usually doesn't exceed 24 or 25.

The day evening adult schools are primarily for, really, four purposes, but I am going to try to pick out the part that would be important to us here I would say in passing that we have a great many of our adults coming back for elementary education, high school education and English for the foreign born, what we call Americanization The other important part of our program is occupational preparation We don't call these vocational classes because the terminology that we get from the United States Congress through the old Smith Hughes Act says that a vocational program is one that's reimbursed We know that there are other programs that aren't reimbursed, but they're vocational I'm talking now particularly about the programs in business education — typing, shorthand, bookkeeping, office machines, filing clerks and so on These are a great part of the occupational preparation programs In these we have adults coming back to school ranging in the ages between 18 and 60 I really shouldn't use the word "sixty," I guess, because we don't have any limitation, but we found those that come back usually are between the ages of 18 and 60

In this program we have some very special kinds of occupational assistance Working with the Department of Employment, working with the local newspapers two or three years ago, we were wondering how we could do some additional training for the older person. We came up with the first class in training retired men who wished to do some work in gardening As a result these men became home gardeners and I think there are several other programs that have started, with the result that we offer the program now periodically about two or three times a year All of these retired men went to work as independent contractors in home gardening.

We had a program last year, and we're repeating it this year, working with the Department of Employment and the department stores so that women could come back into the labor force and be trained as gift wrappers This is usually during the holiday season; and we specified in this case that we wanted this available to the older woman so that she would be able to get some employment The school department did a short intensive training program and the department stores hired these people to go to work

In addition to that one, we work with the Department of Employment and the local Department of Public Welfare in trying to do something for the women who are on aid to needy children In this case we said, how can we train these women so that they can become citizens who earn their own way instead of getting money from the taxpayers through ANC? We opened such short unit programs as hospital and hotel maid training; housekeeper training and we found that we were able to train these people for a period of from six to eight weeks and in each instance they were able to obtain employment. At least 90 percent of them were employed from each of these classes. These are special programs that can be done and have been done in a school department

I should also tell the committee that in a city such as San Francisco we are doing classroom training for the Manpower Development and Training Act of 1962. This, as you recall, is primarily a retraining of the worker who is out of work because of automation and mechanization. The training period is limited to one year. If it is an adult who has been in the labor field for at least three years and is head of the household, he may, through the Department of Employment and the Department of Labor and Congress, receive a training subsistence of approximately $41 to $43 a week. If he's between the ages of 19 and 21, he may get $20 a week. If he's between 16 and 19 years of age he gets no subsistence at all. But the important part of this is that the Department of Employment determines the training needs, the areas in which there is a shortage of trained personnel. They work with these people to find out if they're eligible for the program, if they can do the program Then they come to the school department or a private agency in some cases and say, would you do the training? And we have been very happy to work with them. This program is 100 percent reimbursed, as far as the direct cost of teaching is concerned. There are other costs to the school district that we absorb. But to show you what can be and has been done, we have offered such courses for periods of 30 to 40 hours a week for anywhere from 12 weeks up to a full year in such courses as mail order training, clerk-typist, nurses aid, camera salesman, and stenographers. At the present time we're doing clerk-typists, stenos, office machine repair, and other skills We found that the insurance people need girls who know more about the insurance field and know more about the terminologies, trained insurance girls. Courses are projected and tentatively approved by the Department of Employment for training or clerk-typist for the high school dropout Here again, down to the younger person who is a high school dropout, by providing some training in the clerk-typist field and also giving them some academic work, we hope to be able to get them their high school diploma. The drycleaning self-service division now needs some trainees so these people may operate the drycleaning self-service stores The vending machine repairman will be starting The housekeeping program will be starting A program for interior painters who are journeymen but who have to learn some phases of the work that they didn't learn when they first became journeymen, and also a vocational nursing program, will be started. We think MDTA is doing an excellent job. It's a limited job and there may be more questions about it later.

Now the last one I would talk about here is the Youth Opportunity Center, because it's quite unique. This is a combination of many agencies in San Francisco, working together to try to do something for a culturally deprived area specifically in San Francisco, the Bay View-Hunters Point district. In this district we have thousands of young people between the ages of 16 and 22 that we know are not working. Many of them have dropped out of school and the question is, can we do something for them? Working with the mayor's committee originally trying to find out what we could do, the Ford Foundation came into the program. They are giving approximately $650,000 over a three-year period to help in this program. The Department of Health, Education and Welfare is coming in with some research money and the Manpower Development and Training Act group is saying to us, you do what you can. We will see if we can give you money for some of these programs The local divisions are working, such as the department of public welfare, police department, the boys' clubs, the citizens' committee, United Community Fund, Hunters Point-Bay View Center and, of course, the schools.

Now, what are we trying to do in this Youth Opportunity Center? We're trying first to find employment for the youth between the ages of 16 and 21 Secondly, if they can't find employment, we're trying to encourage the younger ones to go back to school. Third, we're saying to the youths, who will not go back to school, you may need some education. We'll set up some special adult vocational classes for you so you can get the basic education in order to get to be trained to go to an occupation. Henceforth, we're going to do some direct occupational training. We're going to do that on our own. We're going to do it with the Manpower Development and Training Act program They have already worked on it. There are six projects, I think it's six, that are now being contemplated. We're sure we'll start with them in the next couple of months. We'll be trying to train in that area general clerks, clerk-typists, office boys, stenos, insurance rate clerks, gardeners, and telephone operators for the PBX part of it Now those are all specific things that will be done for this special Youth Opportunity Center program

GERALD PARRISH, *Regional Director, U.S. Employment Service, United States Department of Labor:*

I'd like to discuss, with your permission, the serious problems of youth employment opportunities which we are very much concerned with. We know, for example, and I am sure these figures have been given to you, that the unemployment rates for people under 25 are about double the unemployment rates for the labor force as a whole. We know, further, that this heavy burden of unemployment falls with ever greater severity on many of the youth of minority races in the major metropolitan areas of this state. In such areas as east Los Angeles and south central Los Angeles, and Hunters Point, Fillmore Districts here in San Francisco, Richmond, and other sections of Alameda County, where there is a sizable residence of Negro and Mexican Americans, the unemployment rate among their youth now is running 50 to 70 percent.

There are, we believe, several major causes of unemployment among the youth and certain actions must be taken to alleviate this One of the major causes, of course, is our overall unemployment problem, the fact that our economy is not growing at the rate sufficient to provide employment opportunities to all additions to the labor force You are well aware of the postwar baby boom, and just by counting the years, you know that many of these youngsters are now becoming of working age.

Another problem, however, in regard to the youths, is that many of our unemployed youths do not possess the education and training to enable them to qualify for the jobs that are available now

A third significant problem of unemployment among youth here is that many are handicapped by racial discrimination As I mentioned here earlier, the unemployment rates among the minority youth are drastically higher than for white youth, while, in turn, the unemployment rate for all youth is higher than the labor force as a whole So we have a problem here where discrimination is contributing drastically to the unemployment problems of youth

This, of course, brings me to the matter of the vocational education programs in the State of California I think that in some respects, the State of California can well be proud of its vocational education programs In some respects, we do lead the nation California vocational education cannot be criticized to the same degree as these general accusations are made nationally about vocational education being concerned only with agriculture and home economics, because in California considerably more has been done in the areas of trade and industrial education, in distributive education and in technical training Furthermore, in California, there has been a development, I think, that really places California in a leading role in the nation with respect to post-high-school education We have many more youth proportionately engaged in post-high-school and adult education vocational training than the rest of the nation But still, having said all that, we have to face up to the fact that of all of the youth of high school age in California, only about 8 percent of them are enrolled in some form of vocational training in these categories that are supported by the federal government, distributive education, trade and industrial education, technical training, home economics, and agricultural education Many more have the opportunity for training in office occupations which is an area of vocational training that does not receive federal government support But when we look at the fact that 8 out of 10 of our youth in school today are not completing college, that 80 percent of them are in some form of occupational training or preparation other than professional or college level training, we have to recognize that vocational education in this state must be expanded and strengthened and made available to more young people of the state.

DR. WESLEY P SMITH, *Director of Vocational Education, State Department of Education:*

Mr. Elliott, and members of the committee, one of the developments that has taken place since last I had the opportunity to talk with this

committee on vocational education two years ago, has been the almost explosive increase of interest in vocational education

Regardless of all other recent accomplishments in the area of vocational education, this awakening of interest and this widespread public anxiety must be cited as the most notable achievement It is this attitude of concern that is the stimulant for development of vocational education that will serve the need of California in the difficult years ahead

During the last year we have recorded the largest enrollments in our history In every aspect of vocational preparation—in the business occupations, in the agricultural occupations, in the industrial occupations, and in the universal occupation of homemaking—the high school and junior college enrollments of full-time students are at an all-time high

Without question, one of the easiest measurable accomplishments in the total program of vocational education, and some think the most significant, must be credited to that part of the program that is designed to help adults adjust to the ever changing requirements of their existing jobs or to retrain themselves for new jobs. And it is here in California where these achievements are the envy of the nation

The combination of the widespread system of tuition-free public educational facilities—adult, junior college, and otherwise—the existence of essential vocational education physical facilities throughout the state, the enlightened attitude of organized labor, the progressive attitude of employers, and the existence of a large reservoir of talented teachers of adults, has made possible the attainments unmatched anywhere at any time

In recent months, this ongoing program of part-time occupational preparation, which enrolls at least 250,000 right at this moment, has been further augmented by specialized programs of retraining sponsored by the federal government, and the most prominent of these, of course, is the Manpower Training and Development Act Of all the states and territories involved in this program over the nation, California ranks first. Some 267 different training projects have been approved, involving more than 9,000 trainees Of those who have already completed training, over 75 percent have secured gainful employment. These were unemployable people before This high rate of employment for persons previously unemployed is a credit to the Department of Employment personnel who selected them for training and to the public and private schools that offered the training

I want to now very quickly move to some of the promises for the immediate future As is the case with so many of our societal needs, we will be very hard pressed to provide occupational preparation programs, either preemployment or retraining, that will be sufficiently extensive, sufficiently available, or sufficiently effective to meet all the job training requirements in California in the days ahead The upward spiral of requirements for all occupations, coupled with the flood of population converging upon our state, poses a problem impossible of immediate or complete solution

Now, finally, a few comments regarding the long-term needs and some personal reflections that we have in the area of vocational education. We should all recognize that California's program of vocational educational education has always been influenced significantly by the economic and social environment in which it functions There is no reason to expect any change in this situation because, as we peer again into the long-term future, it seems a certainty that some of the following influences will guide the stream of change in vocational education, and it must be a stream of change, and these are the influences as we see them

First, the postwar baby boom is producing a wave of youth that will create unprecedented problems of absorption into the labor force and long after 1963 Just one measurement of this avalanche is possible even now, because we know that of the age group 14 to 17, there are now 1,000,000 young people in California at this moment. Ten years ago, there were only 500,000 These are rough figures In other words, there are twice as many 14- to 17-year-old people in California today as there were 10 years ago This is one measurement of this avalanche

Second, more than two million women are now in California's labor force. This number will increase to three million by 1970 Not only are there more and more women in the labor force, but there is a trend for women workers to become involved more and more in occupations previously assigned almost exclusively to men.

Third, more than 4,000,000 persons now 25 years of age and older in California have not achieved high school graduation This number is almost 30 percent more than the non high school graduates in 1950. Even more significant is the fact that of persons 25 years or older in California, 1,300,000 lack even an eighth-grade educational achievement, and this is an increase of 16 percent in the last 10 years Nowhere has automated technology advanced faster than in California, and nowhere will its effects be more in evidence. This modern manifestation of the centuries-old shift from men to machines is producing dislocations that reverberate through society and it has its implications for all workers—present and future.

Regardless of the virtues of vocational education programs of the past or present, and in spite of the attainments made to date, the sober fact remains that there is more yet to be done than has been accomplished. A few of the needs are easily discernible. Among these are as follows, and they are not too many:

1. Vocational education needs to be strengthened at the high school level. The comprehensive high school has given disproportionate attention to the college-bound student The equally important needs of employment-bound youth have been too long overlooked or slighted. The existence of thousands of unemployable youths—out of school and out of work—attests to the need to bring more balance to the high school curriculums.

2. Large numbers of youth with special needs are not now being well served by existing vocational education programs. Such youth have academic, socioeconomic, or other handicaps that prevent them from profiting from the more traditional pattern of vocational education.

3 Greater use must be made of community resources in the preparation of youth for work Every community abounds in unused resources —and the extent to which these resources go unused is the extent to which vocational preparation needs of many youths go unfilled

There is a need for more and more attention upon cooperative effort in occupational preparation. The spiraling complexities of job competencies, the increasing number of job classifications, the enormous number of persons in California's work force, together comprise almost a mandate that all agencies and all organizations involved in occupational preparation must work together efficiently and harmoniously. There is a real need to develop lines of communication and cooperative procedures that will insure maximum efficiency in sharing the total work load involved

LEONARD HARDIE, *Field Director, Office of Manpower Development and Training, U.S. Department of Labor:*

I have been asked to say a few words about the Manpower Development and Training Act and how it has been applied in the State of California. I will try to make some reference by way of comparison to the national scene and see just about how we have been doing here in California.

Reference was made this morning to the statement in yesterday's newspaper that in the State of California good jobs are going begging This is one of the paradoxes which has faced us from the beginning and, of course, is one of the reasons why we're in business But we note here in this article of yesterday's date that there are still at this day 336,000 persons unemployed in the State of California. I remind you that MDTA was intended at its best to train somewhere in the neighborhood of 440,000 persons, which you see is just a little bit higher nationwide than the total number of unemployed in the State of California at the present time. Under MDTA there are three phases to the training program per se. The first phase, or the one most commonly alluded to in press and elsewhere is the institutional training which by virtue of its name takes place in institutions already extant. So in the several states we go in and we use the existing facilities which may be vocational education programs in high schools, which may be vocational education programs in junior colleges, or which may in fact be vocational education programs for your colleges. Wherever they may be, we ought to use them. And secondly, if there are no appropriate public facilities available and private facilities are available, then we can move over into the private sector and provide training there Put all of these together and we then refer to "institutional training" They take place in existing institutions and under existing supervision.

Next we have the phase 2 of our training program known as "on-the-job training." The extent of on-the-job training was to provide for either fresh training or retraining to people already employed and we would again use existing facilities. In this case we would use the plant facilities of employers or unions, or both, or whatever, but neither the federal government nor the local school district nor otherwise,

would be required to set up new facilities With certain restrictions this was intended to provide a pretty fair sector of training and retraining for the public.

And lastly, where neither on-the-job training nor institutional training can be effective, for better or for worse, then some other method might be found whereby these people could be drawn into the fold and given what some people have termed "one last chance" This might be literacy training; this might be preentry training Whatever it is it comes under the heading, under the MDTA program of experimental or demonstration, the idea here being that you take the people who are otherwise passed over from all the standard, conventional opportunities and you single them out for a specific pilot program, a specific demonstration program. or a specific experimental program, not knowing what your result will be but hoping that whatever the result is it will afford you the guidelines for spending your money in the future in as wise a way as possible in order to get the greatest amount of coverage

Now, let's take a look at what has happened in each of these three phases of the program in the State of California from the time the program got off to a running start in late August of last year In institutional training programs, by the end of June 1963, which is the end of the first fiscal year of this three-year act, California had placed 112 institutional programs into effect California had placed five on-the-job programs into effect, and California had placed three experimental and demonstration projects into effect In the institutional phase we had a total of 1,505 persons committed for institutional training, we had on-the-job training for 117 persons, and we had experimental and demonstration projects going for 21 persons with a total of 1,643 by the end of June

Now, from 1963 to date, which is November 14th, so far as my figures are concerned, we've converted the institutional training from a total of 112 to a total of 177. Now these are separate and distinct projects and separate and distinct schools or institutions, but many of them repeated in some places a second time around On-the-job training, we now have a total of 16 projects for a total of 311 trainees. In any event, California is taking a very prominent place, as Mr. Smith testified this morning, in the total program However, most of the strength of the program in terms of numbers of projects, in terms of numbers of trainees, is carried in the institutional phase of the program, and while this is very pleasing to my national headquarters, we would still like to see even more institutional programs developed during this year and certainly we'd like to see more on-the-job training programs And lastly, we would like to see more experimental and demonstration programs because we feel that we have the evidence that there is need for getting at some of the hardcore people who are not being reached, shall we say, by any, by either of the other two types, the institutional or on-the-job training.

ROBERT HILL, *Supervisor of Youth Employment, State Department of Employment:*

I would like to talk just a little bit about the programs that the Department of Employment has now in effect to help young people find employment and find their way to permanent full-time jobs The California State Employment Service, in providing employment services in its youth population, has for the last 12 years given special program emphasis to youth employment services These employment services are provided in an environment of community action and cooperation coupled with government action and cooperation

First, we have what is referred to as the terminal student program. This is a program not indicating that the young person is through studying by any means, but it does mean that at the high school level, where we first come in contact with him, he is planning on entering the full-time labor market Basically, this statement means that we take the Department of Employment and its services through special youth employment counselors directly to the high school and work with school people in the high school and their school counselors and with these young people who plan to leave school and enter the labor market We help them do vocational planning, we help them find permanent, full-time jobs in line with this planning

The other phase of the department's overall youth employment program we refer to as our preemployment youth program The preemployment youth program is designed to help the teenagers still in school find part-time jobs after school, on weekends and during vacation periods This phase of our total youth employment program helps the young person meet his financial obligations and assists him in the transition between school and the time when he will compete in the open labor market as an adult worker

And another area that the Department of Employment has been working very hard in is in the area of what we call youth opportunities boards There is one in Los Angeles County There's also one now being formed in Alameda County The real purpose of the youth opportunities boards, now being financed in some measure by foundation grants is to provide a board of people who are in top-level citizen and executive and government positions to give real close attention to across-the-board problems of youths and youth employment Currently we have full-time coordinators assigned to these projects, one in Los Angeles and one in Alameda County, and the board is now working on arrangements to provide employment counseling and job placement to all graduates and school dropouts who are entering the labor market and interested in full-time career employment

LEE RALSTON, *Director, Division of Practical Arts, Office of the Los Angeles County Superintendent of Schools:*

Interest in vocational education is increasing at the local level, and this interest has been stimulated by recent legislation at our national Congress This legislation is officially known as the Vocational Education Act of 1963 It is also referred to as the Morse-Perkins Bill The basis for this legislation was a report made by a panel of consultants

appointed by the late President Kennedy The report came out under the title of "Education for the Changing World of Work" The report contained the conditions as they had existed since the original Smith-Hughes Act was passed in 1917 and the conditions as they exist at present, along with specific recommendations for the future

The new legislation made minor changes in the Smith-Hughes and George-Barden Acts These have been the main sources of federal vocational education funds for the last several years In total they amount to about $57 million to all states for all fields of vocational education

This new legislation has as its purpose to maintain, extend and improve existing programs of vocational education, and to develop new programs as they are needed

The new act provides only for authorization for appropriations on a continuing basis Of course, this means that until Congress makes appropriations, no money will be distributed to the several states

The authorization has the following amounts for the fiscal years ending

June 30, 1964, $60 million, June 30, 1965, $118 million; June 30, 1966, $117 million, June 30, 1967, $225 million, and for each fiscal year thereafter

The allotment to the states is on another basis, and it will be 90 percent of the above funds on the basis of a formula that has two basic factors the population of the age groups 15 to 19 inclusive, 20 to 24 inclusive; and 25 to 65 inclusive, also, the per capita income for each state

The other 10 percent of the funds are reserved by the U S Commissioner of Education for experimental and research programs to meet the vocational education needs of youth with special handicaps

Although it is difficult to predict with any degree of precision, California will be eligible for slightly less than 7 percent of the appropriated funds in 1964 During this fiscal year the funds will not require matching money However, after this year each federal dollar will have to be matched by state and local dollars

MISS ALTHEA T L SIMMONS, *Field Secretary, West Coast Region N.A.A.C.P.:*

In California, which has experienced a tremendous population explosion, with the influx of in-migrants, both white and Negro, during the past two decades, the Negro population of the state increased sevenfold between 1940 and 1960, from 124,306 to 883,861 A recent publication by the Department of Industrial Relations, "Negro Californians," noted that white males, 14 years and over, represented 5.5 percent of the unemployed civilian labor force Youngsters 14 through 17 years of age, nonwhites represented 22 0 percent, nonwhite females 18 9 percent Of the youngsters 18 through 19 years of age, nonwhite males represented 22 3 percent and nonwhite females 19 7 percent

Reports from both private and governmental agencies point to the fact that one-fifth of all nonwhite youth in the national labor force were unemployed, and that this was three-fourths higher than the rate which was obtained for white youth.

At the next age group, 18- and 19-year-olds, where about two-thirds of the nonwhite youth have left school, the situation was even more serious These are general averages for the nation as a whole, but the situation is even more critical in some communities and cities On a statewide basis, Negroes make up some 6 percent of the California population In Los Angeles, for example, Negroes comprise 14 percent of the population, Pasadena, 12 percent, San Diego, 6 percent, and San Bernardino, 9 percent Thousands of Negro youth under the age of 21 are included in these figures and thousands of Negro youth in our fair state are ill prepared to earn a livelihood.

The problem, we feel, of job opportunities for youth is one requiring the cooperation of school, state and local government and private industry.

School boards should set up crash programs to bring inadequately trained out-of-school youngsters up to minimum standards of employability Distributive education and other work experience courses should be made available on a broader basis as a means of holding the interest of youth who are potential dropouts

We feel that there is a need for more vocational education centers Existing programs should be reevaluated to ascertain whether or not they are adequately meeting the needs of young people who plan to leave school and go to work without benefit of a college education

Employers should reexamine their hiring, training and promotion policies to better accommodate youth into industry. This would require setting up more on-the-job training programs, the reduction of education and skill requirements where possible for beginning level jobs

Unions and management should revise such rules, contract provisions and practices which restrict, in the main, the entry of youth into beginning jobs The minimization of Negro participation in apprenticeship programs, traditionally and currently, results in both the misdirection and malpreparation of Negroes for skilled craft occupations Negroes, as a rule, must seek skilled training opportunities outside of formal apprenticeship programs These, in turn, do not usually provide the recipients with the qualitative preparation requisites for truly skilled standing in today's economy.

DR REX GORTON, *President, San Diego City College:*

Since 1937, the vocational training program at San Diego City College has supplied trained and highly skilled employees to the business and industrial community of San Diego For example, at the time of the second World War, 250,000 persons were trained and placed in defense industries

In addition to the vocational function, the transfer program at the college has been operating since 1914, and provides highly diversified and effective curriculums leading to preparation for further training in four-year institutions

Currently there are 5,000 day students and 6,500 evening students Half of the day students and two-thirds of the evening students are enrolled in vocational education courses. Some are preparing for initial entry into the labor market, others are retraining in particular programs, and some are retraining for a second career.

The training programs are initated and kept up to date by the use and advice of some 75 advisory committees made up of both management and labor in the respective fields of training

Continuing evaluation of the quality of education by the community and students receiving vocational training testify to its high quality. For example, as a result of a recently completed survey of 370 graduates of the class of 1962, results showed that of the 140 graduates who transferred to colleges, 96 percent of them indicated that their preparation for further college education was good All of the 230 vocational terminal graduates who replied indicated that the college did an adequate job of preparing them for immediate entrance into business and industry, and three-fourths of them were actually working in the specific fields for which they had received their training

Because of the pressure of financing the regular programs of compulsory elementary and secondary education, it is increasingly difficult to obtain local tax funds required to maintain or expand vocational education This is especially true because of the expensive facilities and equipment required for effective vocational education. A regular school classroom serving 30 to 35 pupils requires a thousand or less square feet and a few hundred dollars in equipment A vocational shop serving 20 to 25 pupils will require from 2,000 to 5,000 square feet, and from $10,000 to $100,000 in equipment. San Diego has invested within the past eight years about $10,000,000 of local funds in junior college facilities, including the second complete junior college plant which will open next month.

The total annual budget for junior college operations in San Diego amounts to about $3,000,000. The cost of the vocational courses amounts to more than $1,500,000 The federal vocational funds received this year will total about $110,000, or about 7 percent of the actual cost

The recent federal legislation, HR 4955, for the improvement of vocational education, authorized (but as was mentioned this morning, no funds have been appropriated yet) a quadrupling of the federal aid for vocational education. But this aid will be granted only if the state and local expenditures are maintained and in some cases increased.

It is therefore essential that the level of state support for junior colleges, and in particular for vocational classes and courses in the junior colleges be drastically increased.

WILLIAM STEINBERG, *Specialist in Practical Arts and Vocational Education, San Diego City Schools:*

In the San Diego city schools, we have found that about 55 to 60 percent of our graduating high school seniors go on to some type of post-high-school education Most of these students attend our junior colleges that you have heard about, our liberal arts colleges and universities This means that from 40 to 45 percent of our graduates are not college bound Some of the noncollege group will go into the armed forces, and some of the girls will become housewives The remaining group will seek some kind of employment. It is our hope that we will be able to provide them with a salable skill

Our goal is to provide skills and knowledges needed to enable students to obtain initial employment in a broad range of entry jobs We hope that every student, not continuing his education, will be enrolled before he leaves high school in our vocational curriculum This curriculum includes general education courses such as English, social studies, physical education, mathematics and science In addition, it will include specific preparation for one of the many occupations available in the community.

At the present time selected students desiring to prepare for skilled technical trades travel to our junior college shops for part of the school day. Dr. Gorton mentioned the junior college has a good technical program The remaining part of the day they attend the high school in their neighborhood where they take their regular academic subjects In this way, these youths do not have to sever their high school loyalties and may continue to participate in school activities that are important to all teenagers The shop program in the junior college has status and prestige The shop facilities are outstanding High school youth attending the shop classes at the junior college must be fully qualified and are not accepted for disciplinary reasons Parents do not seem too reluctant to permit their children to enroll in trade classes under these circumstances The junior college also uses the shops for high school graduates and selected adults who are preparing for employment in the skilled trades This joint use assures maximum utilization of expensive shops and equipment

At the present time, we have an outstanding work experience program that allows students to attend school four hours per day and work in business and industry for four hours a day This program is closely supervised by work counselors and is an excellent opportunity for students to obtain practical experience On-the-job training is one of the finest educational programs and when jobs are available, and this is the hard part, when jobs are available every effort is made to encourage students to participate in this program

The school cannot assume the total responsibility for preparation for work. Every community resource, including business and industry, is needed to provide occupational information, vocational guidance, and job opportunities By all of us working together, we should be able to avoid the human tragedy of unskilled and unemployed youth.

Section 2

Ventilation of Heaters—A.B. 1202 (Lanterman)

A B 1202 was heard by the 1963 Assembly Standing Committee on Education and put over for interim study at the request of its author, Assemblyman Frank Lanterman It was subsequently assigned to the Interim Committee on Industrial Relations Prior to its introduction, the Monrovia Unified School District had initiated a rather extensive conversion from unvented to vented type heating units in its school facilities and classrooms, and there was some thought that specific

legislation might be desirable to clarify the authority of governing boards of local school districts in this area

A hearing on this bill was held in Los Angeles on September 20, 1963.

FINDINGS

The committee is not aware of any restrictions on the authority of governing boards of local school districts to convert from unvented combusted fuel heaters to vented heaters in the school facilities within their jurisdiction

Such unvented heaters as presently exist appear to be in use only in older school construction, and even here the trend is to convert to vented heating systems as rapidly as local school financing permits

In Los Angeles city schools, no unvented heaters have been installed since 1951, and an informal survey of 16 northern counties where many of the rural school facilities have been in long use revealed no problem with converted heaters Six counties—El Dorado, Glenn, Lassen, Plumas, Shasta and Sierra—reported that there were no facilities using unvented combusted fuel heaters in any of their schools

RECOMMENDATIONS

(1) That Title 19, Health and Safety Regulations of the California Administrative Code, be revised to include class "C" occupancies in the building occupancies covered by present venting regulations, with provisions permitting local school districts to program the replacement of their existing heaters

(2) That legislation be considered amending the Health and Safety Code to prohibit all use of unvented combusted fuel heaters in school facilities after July 1, 1969

The following are pertinent excerpts from testimony given at this hearing:

WILLIAM TORRES, *Assistant Business Manager, Monrovia Unified School District:*

I am here to represent Dr Harold A Beall, superintendent of the Monrovia Unified School District I think historically Monrovia is the second oldest incorporated city in Los Angeles County, so it follows that the school district is quite old too As a result, the buildings were constructed some time ago, so that we have these types of heating facilities in many of our school plants and scattered throughout many of our classrooms

We have found nothing in the Education Code that prevents the district, on its own initiative, from correcting these types of heating units We have found only this, that we have been limited in the extent to which we may make value judgments, what we are going to do in these kinds of buildings and what steps, by priority, we can take first

Well, this past year we established a priority and attempted to work up a three- to five-year schedule in replacing the types of unvented, unhealthful gas heaters We have replaced approximately 125 units this immediate past year, we have on order another 80 units, and possibly we will go into some more We are financially limited in making the complete transition in one fiscal period

Something else I think Dr Beall wanted me to present to the committee was that we are a bit reserved about the mandatory type of legislation and the wording "shall" As I indicated, we found nothing that prevented the districts, on their own initiative, from doing this I think possibly it might be the intent of the committee to encourage, rather than make mandatory

By way of recapping, I think I pointed out that we ascertained in our research that we were in violation of no statutes in regard to health, safety and welfare We also went further in our study and ascertained by professional report that none of the installations, even taking into account their age, which is 20 years or more, were unsafe And let me repeat—they were not unsafe However, we didn't need outside consultants to tell us that they were unhealthful and that they produced an unsatisfactory educational environment, and it is for these two reasons that the Monrovia Unified School District is moving ahead on its own to make these replacements This is what we are doing even though this past year the State Legislature gave somewhat limited funds to school districts for these kinds of things So whatever the committee might do, we are moving ahead I would like to mention also that in San Diego County I worked with some architects who are pretty well known and I know personally of no new construction that is going on now in schoolhouse building that provides for these types of heating units

There may be one other area that the committee might want to consider and that is the tax override section that was provided in the school financing picture here I believe it was about two years ago It dealt primarily with fire hazard I am not sure of the section, but it provides for an override to take care of receiving funds to correct things Maybe this would not come under the problem that you are reviewing here, because primarily you are talking about safety and health and welfare, rather than fire hazard.

FRANK MCCARTHY, *Senior Deputy, Office of the State Fire Marshal, Los Angeles District:*

At the present time, and until such time as this bill was introduced, we were unaware of any problems existing with unvented heaters in school classrooms If there have been any problems that were brought to the attention of the local authorities, they were not forwarded to our office Under the Health and Safety Code the State Fire Marshal is authorized and required to adopt regulations in relation to the assemblage, instructional and educational occupancies We have established under the educational occupancies that we would provide heating devices in schools in conformance with the nationally recognized standards At the present time these standards would be the American Gas

Association of the National Board of Fire Underwriters Their requirements are that in places where people sleep—hotels, residences and hospital occupancies—the heaters should be vented This is not required in classrooms.

We feel that if there is a problem existing with venting heaters in classrooms, we can take care of it in the California Administrative Code, which now requires approval of all school plans and all school construction from the health and safety standpoint If it is felt desirable that such legislation should be proposed, we will be very happy to write it into our regulations and make this requirement. If it goes into Title 19, it could be made retroactive so that each school district would be allowed to program the replacement of their existing heaters

We would propose a change in the proposed legislation We would suggest that A B 1202 be amended, if necessary, to include the following: (1) all heating equipment be installed and vented in accordance with the regulations of the State Fire Marshal; and (2) this section be made to apply to all school buildings, not just classrooms We feel that if there is a hazard, it exists in the assembly areas as much as in the classrooms

CLAIR L EATOUGH, *Senior Architect, Bureau of School Planning, State Department of Education:*

The Bureau of School Planning has little evidence that the use of unvented combusted fuel heaters is common We have submitted a form questionnaire to the county superintendents of schools in 16 northern counties because of an assumption that if there were such heaters in use, they would most likely occur in remote rural areas From the replies we have received to date, the evidence suggests that this is not a common problem It is possible that the Monrovia School District and the Los Angeles City School System, during a period of extreme economy, unwisely invested in heaters of this type Most school planners have long recognized that an unvented combused fuel heater could present safety problems Also, as a means of heating a classroom, such heaters are insufficient. Without a blower, the air distribution in a space the size of a classroom is short-circuited Usually the area around the heater is too warm, while other areas of the classroom remain cold. I don't believe that even Los Angeles has installed such units in the past 10 years.

The new Title 19, Health and Safety Regulations, which is now in current use, has excellent restrictions on the use of unvented combusted heaters However, class "C" occupancies (schools) are made an exception to these regulations I believe that this should be corrected If Title 19 were revised to the extent that class "C" occupancies were included in the building occupancies which are covered by present venting regulations, there may not be need for further legislation

The Department of Education was requested to make a recommendation on this bill, and we have no recommendation to make as to whether more stringent laws are needed or not We would suggest, however, that it *not* be placed in the Education Code, for the reason that the Education Code does not have the wide jurisdiction that Title 19 would have,

nor would there be any way to enforce or administer such a law Also because the great duplication that you would suddenly get into if you decided to put various safety laws in the Education Code would make it even more clumsy than it is at present

RICHARD LAWRENCE, *Legislative Representative, Los Angeles City Board of Education:*

When Assemblyman Lanterman offered this bill in the 1963 session, we immediately contacted him because of our concern in this area We wanted him to know that in Los Angeles our main concern was not with the problem itself, because we had been working on it, but that we *were* concerned with the mandatory provisions of the bill, because of the financial impact this would have on the district This was known to us because of a very complete survey that the district conducted in 1957 in the area of unvented heaters At that time, to replace and vent these heaters would have cost $3 9 million in the Los Angeles city schools So the Board of Education decided that, because of the extreme cost involved, they would have to do this on a gradual basis as we had demolition or complete rehabilitation of buildings, and that along with other buildings and construction projects they would also take care of the unvented heater problem in those individual construction areas

Since then we have proceeded with that type of planning and with considerable results Anyhow, our concern was how to cope with this problem and still not take away funds that should go into the educational program or that are already earmarked for the relieving of half-day sessions, et cetera So we do have a recommendation In view of this thinking by our district, and our knowledge of what the need is in Los Angeles schools, we would recommend, if the committee considers there is a need for this provision in the Education Code, or another code, that a district be given time to accomplish this, at least a three-year period—possibly a measure similar to the one covering fire safety facilities, a measure that was passed in 1961, I believe

I also have a letter from the California School Administrators Association, which supported this previous bill in 1961 and could support a bill relating to unvented heaters that would allow for a period of time They also recommend, as an association recommendation, that there be provisions possibly for an override tax which that measure covered, and I believe in a period of time the problem would be resolved and the provision would no longer be necessary

JOHN W. SCHAEFFER, *Maintenance and Operation Manager, Los Angeles City Schools:*

We have installed no unvented heaters since 1951 The ones that have been installed were prior to that time and many of those are in transportable buildings Our feeling is that none of our classrooms or offices are unsafe. If there is proper maintenance and inspection—and we do require that a detailed instruction card be attached and posted in every classroom in the district — with the combination of proper maintenance and proper inspection and supervision of these instruc-

tions, we feel that along with the procedures we are following in replacements we are insuring the health and safety of our pupils and our staff.

I would like to start by telling you what we had in 1957 and then tell you what we have done about it We really are working very seriously to eliminate these We made a report to the Board of Education in August of 1957 in which we indicated that there was a total of 11,787 unvented gas heaters in classrooms, in bungalows, in permanent building classrooms, in offices, workrooms, cafeterias, assembly rooms, faculty rooms, and child care center rooms Now since that time we have eliminated, through various means, some demolition of old buildings, some complete rehabilitation, we have eliminated over 1,000 of these heaters As to the number of classrooms, I have no accurate figure, but it would be considerably less than the total of 4,300 shown here Most of the heaters removed have been from classrooms

I would like to tell you that we have updated our figures on the cost of replacing these heaters It would be $4,900,000 If we were given three years in which to do this, it would then, of course, increase slightly more, because as you know, wages never stay put very long They keep moving up, so that by the end of the three-year period we would be over the $5 million mark It would cost us more in the long run because we would run into higher wage levels in the latter years

CHAPTER 2

BOILER SAFETY

A.B. 2896 and A.B. 2364

A B 2896 was introduced in the 1963 Regular Session by Assemblyman John Foran subsequent to a boiler explosion in the basement of a downtown department store in the City of San Jose on March 22, 1963, in which a number of people were seriously injured The object of the bill was to bring a greater degree of control over certain types of boilers not presently under State control or regulation Upon the recommendation of the Assembly Standing Committee on Industrial Relations, the bill was referred to the Interim Committee for further study

A second bill on the same subject, A B 2364, was also introduced in the 1963 Regular Session by Assemblyman Alfred E Alquist This bill was heard by the Assembly Standing Committee on Governmental Efficiency and Economy during the session and was put over for interim study by the same committee Subsequently, it was re-referred to the Industrial Relations Committee in August of 1964, for which reason an interim hearing could not be scheduled until late in the present interim period.

Two hearings were held on the subject matter of A B 2896, one in San Francisco on October 25, 1963, and one in Los Angeles on August 13, 1964 One hearing on AB 2364 was held in Sacramento on October 19, 1964.

FINDINGS

Catastrophic boiler explosions, such as the one in San Jose on March 22, 1963, which resulted in 7 deaths, 60 injuries, and considerable destruction, and the New York Telephone Company disaster of October 3, 1962, causing the death of 21 persons, have fortunately not been frequent, but the terrible toll of life, limb, and property they have taken make it imperative that all precautions need to be taken to insure that boilers are properly constructed, safely installed, provided with adequate safety devices, regularly inspected by certified experts, and maintained and attended by conscientious and competent hands

Upon the subject matter of Assembly Bill 2896 (1963 Regular Session) the committee makes the following findings

The provisions of Section 7621 of the Labor Code relating to "boilers" are not sufficiently comprehensive

It appears that some boiler manufacturing plants have developed types of boilers that greatly minimize the danger of steam explosion, particularly the coil type of boiler which contains pipes within the pressure vessels which conduct the stream Consideration should be given to requiring school districts and other public agencies to install

these safer types of boilers as boiler replacements become necessary. Information in respect to this matter needs to be provided by the Division of Industrial Safety of the State Department of Industrial Relations

A representative of the Los Angeles City School Districts gave the committee useful information on its method of insuring boiler safety The committee believes that this organization has displayed diligence, efficiency and competence, although the situation is probably not quite as roseate as depicted This representative based his opposition to A B 2896 on the concern that an extension of the penalty provisions of Section 7770 of the Labor Code would create a personnel and cost problem, and thereby inflict an unnecessary burden on the department No other school districts expressed such concern to the committee The committee finds these fears to be unfounded and that these arguments are of dubious validity

Upon the subject matter of Assembly Bill 2364 (1963 Regular Session) the committee makes the following findings

1 The bill contains many defects and shortcomings The sponsors of the legislation have been quick to recognize this themselves and have proposed remedies Most of these, however, have been couched in general terms, and in drafting a bill precise language must be devised

2 The definitions contained in Sections 9902 and 9903 regarding "a stationary powerplant" and "major mechanical and electrical equipment" are much too comprehensive In any serious consideration of legislation of this nature, there should be more exact definitions of a "stationary powerplant" and "major mechanical and electrical equipment" and its relationship to a stationary powerplant which would narrow the scope of the coverage of the act to that which needs to be covered in the interest of greater public safety

3 Public safety must be given paramount consideration in the study of such a legislative proposal At the same time care needs to be taken that those areas are covered that genuinely need to be covered in the interest of public safety Business, industry, the homeowner, and public agencies should not be saddled with additional regulations and restrictions unless there has been a reasonable demonstration of a need

4 Some of the concerns of business, industry, and public agencies in respect to the establishment of a uniform system of state licensing of "stationary steam engineers" and "boiler operators" adduces two reactions on the part of the committee: (a) that there would be genuine concern and strong opposition to A B 2364 in the form in which the subject matter of it was referred for study can be readily understood and met with sympathetic understanding; (b) that there would also be concern over the basic idea of the establishment of a uniform state system of licensing of "stationary steam engineers" and "boiler operators" for those operations involving public safety, is not reacted to by the committee in the same manner, particularly in view of the experience of the City of Los Angeles, which presently has a limited system of licensing

5 The committee finds some merit to the general principle of a uniform system of state licensing for the operation of boilers where the

public safety is involved Study needs to be made of the feasibility of establishing a state agency or state system to qualify and license types of "stationary steam engineers" and "boiler operators" in order that there will be a method of qualifying and certifying such individuals but without compulsory or penal provisions in regard to their use If this were done, there is a possibility that this service would be welcomed by business, industry, and public agencies and at the same time their voluntary use would make unnecessary a stricter licensing system

6 In any system of licensing it might be desirable to clarify in certain types of licenses that the licensee be permitted to integrate his responsibility as a licensee with other on-the-job employment duties and responsibilities

7 A system of licensing needs to give careful consideration and make clear delineations of the duties and responsibilities of the Department of Professional and Vocational Standards and the Division of Industrial Safety of the Department of Industrial Relations

8 A B 2364 was not referred to the Assembly Interim Committee on Industrial Relations until August of 1964 Therefore, the committee was unable to make as thorough a study of this subject matter as it would have liked

RECOMMENDATIONS

Upon the subject of boiler safety, the committee makes the following recommendations

The committee recommends that the subject matter of Assembly Bill 2364 (1963 Regular Session) be referred for further study during the 1965–66 interim period

The committee recommends the enactment of legislation embracing the provisions of Assembly Bill 2896 (1963 Regular Session) with revisions as follows

(Deletions of wording of present law in strikeout type, additions to present law in italicized type)

An act to amend Sections 7621, 7625, 7770, 7771, and the heading of Chapter 6 (commencing with Section 7770) of Part 6 of Division 5 of the Labor Code, relating to tanks and boilers

SECTION 1 Section 7621 of the Labor Code is amended to read·

7621 "Boiler" as used in this part means ~~any fired or unfired pressure vessel used to generate steam pressure by the application of heat subject to this part~~

(a) Any fired or unfired pressure vessel used to generate steam pressure by the application of heat (~~power~~ steam boiler)

(b) Any fired or unfired pressure vessel used to heat water at pressures exceeding 160 psi and/or temperatures exceeding 350 degrees Fahrenheit (high-temperature water boilers)

(c) Any fired or unfired pressure vessel ~~operating at steam pressure or steam safety valve setting of 15 psi or less, or at~~

~~250 degrees Fahrenheit or less, or at water pressure less than 160 psi (low pressure boilers).~~ *used to heat water under pressure, for use external to the vessel, at pressures less than 160 psi and/or at temperatures less than 250 degrees Fahrenheit (low-pressure water boilers)*

This subdivision is not intended to include domestic-type water heaters of 120 gallons capacity or less used exclusively to heat potable water

SEC 2 Section 7625 of said code is amended to read

7625 The following steam boilers are not subject to this part

(a) Boilers under the jurisdiction or inspection of the United States government, and all other boilers operated by employers not subject to Division 4 of this code

~~(b) Boilers on which the pressure does not exceed 15 pounds per square inch~~

~~(c)~~ (b) Automobile boilers and boilers on road motor vehicles

SEC 3 The heading of Chapter 6 (commencing with Section 7770) of Part 6 of Division 5 of said code is amended to read

CHAPTER 6 ~~MISMANAGEMENT~~ *MANAGEMENT* OF ~~STEAM~~ BOILERS

SEC 4 Section 7770 of said code is amended to read.

7770 Every engineer or other person having charge of any ~~steam~~ boiler, steam engine, or other apparatus for generating or employing steam, used in any ~~manufactory,~~ *school buildings or buildings of public assembly or in any manufactory*, railway, or other mechanical works, who willfully, or from ignorance or from gross neglect, creates, or allows to be created, such an undue ~~quantity of steam~~ *internal pressure* as to burst or break the boiler, engine or apparatus, or to cause any other accident whereby human life is endangered, is guilty of a felony.

SEC. 5 Section 7771 of said code is amended to read

7771 Every person having charge of any ~~steam~~ boiler, steam engine, or ~~other~~ apparatus for generating or employing steam, used in any *school buildings or buildings of public assembly or in any* manufactory, railroad, vessel, or other mechanical works, who willfully, or from ignorance or *gross* neglect, creates, or allows to be created, such an undue ~~quantity of steam~~ *internal pressure* as to burst or break the boiler, engine, or apparatus, or to cause any other accident whereby the death of a human being is caused, is punishable by imprisonment in the state prison for not less than 1 nor more than 10 years

In connection with the San Jose boiler explosion of March 22, 1963, the committee requested information from J C. Penney's department

store of San Jose regarding what steps had been taken to avoid such explosions in the future. The following is the reply written by Mr Austen D Warburton, counsel for the concern, prepared in the concern's behalf:

CAMPBELL, CUSTER, WARBURTON & BRITTON
ATTORNEYS AT LAW
San Jose, November 19, 1964

HON. EDW. E. ELLIOTT, *Chairman*
Industrial Relations Committee
California State Assembly
3404½ Whittier Boulevard, Rm. 4,
Los Angeles, California

Dear Mr Elliott:

We acknowledge your recent telephonic inquiry regarding what has been done with the boilers and the heating situation at our downtown J C Penney Co store in San Jose We appreciate the courtesy of your inquiry for as you know, our client, J C Penney Co, is and always has been very interested in the safety and well-being of its customers

The unfortunate explosion of March 22, 1963, resulted in a number of injuries and deaths, which are regretted by all It should be kept in mind, however, that the store building and the boilers and heating equipment involved were not owned by the J C Penney Co The J C. Penney Co at all times was a tenant, renting the premises from MacDonald Products Co, a copartnership This copartnership constructed the building in the late 1940's and installed the heating system, including the boilers in question The heating system was inspected by the Hartford Steam Boiler Inspection and Insurance Co, a competent inspecting service Inspections were made not once but many times by that organization The contract for such inspection was between the MacDonalds (the lessors) and Hartford Steam Boiler Inspection and Insurance Co Any problems noted in the course of such inspections were reported to the lessors, who undertook promptly to have the same rectified

There was apparently a relief valve situation which was inadequate. The inadequacy, however, did not come to light until the explosion The system, however, had been approved not only by the Hartford Steam Boiler people in their inspections, and by the lessors who were competent property managers, but also by all governmental inspections which had been performed from time to time through the years I am sure that you would agree that the J C. Penney Co should have been entitled to rely upon these experts in their fields in the performance of such inspections

The lessors had engaged the Vann Engineering Co to perform further work upon the boilers shortly prior to the explosion One of the boilers in fact was in the course of repairs under this contract between Vann Engineering Co and lessors when the other boiler exploded

Following the explosion, the older boilers were replaced with new, efficient Bryan boilers with Worthington units installed by the lessors These contain modern safety features which are even better than those

that had been recommended by experts These, of course, were installed by the J C. Penney Co. lessors and my clients are pleased with this improvement In addition, J C Penney Co has itself engaged the services of the Vann Engineering Co. for relatively frequent and periodic inspections of the equipment in order to insure itself that this equipment is continuing to function properly as designed The modernization of this equipment and the ongoing inspection service of the Vann Engineering Co , coupled with the lessors' own inspection and diligent attention to the matter, should prove effective to prevent any reoccurrence of the unfortunate incident of March 22, 1963

For your further information, you should be aware of the fact that the boilers, both prior to March 22, 1963 and now, service not only the J C Penney Co store but also the 'next door' store of the Thrifty Drug Co The Thrifty Drug Co leases those premises under separate lease directly from MacDonald Products Co

If there is any further information which you or your Committee might desire from us, please let me know Again may I express to you my appreciation for the opportunity to outline these facts to you through this letter.

Very truly yours,

AUSTEN D WARBURTON

The following are pertinent excerpts from testimony given at the two hearings on AB 2896:

DANIEL MOLLES, *International Representative, International Union of Operating Engineers:*

The California State Conference of Operating Engineers, already in the process of obtaining complete statistical and factual information relative to the installation, attendance, maintenance and inspection of boilers in the State of California, were moved by the explosion at Penney's in San Jose, killing or injuring 69 persons on March 22, 1963, to shortly thereafter, form an emergency statewide committee to accelerate the fact gathering process

Catastrophic boiler explosions, like San Jose, and like the New York Telephone Company disaster on October 3, 1962, killing 21 persons cannot be avoided unless boilers are properly constructed, installed, provided with adequate safety devices, attended by competent humans and regularly inspected by certified experts

A B 2896 provides that certain boilers now exempt from safety regulations be covered by such regulations Many of these exempt boilers contain far more potential destructive power than some of the boilers that are covered by the present safety codes

For instance, present California codes did not require the San Jose boiler and an unknown number of similar boilers to be inspected or to have permits to operate

The gathering of factual material, reflecting the number of such boilers and the degree of surveillance needed over boilers in California, to stop avoidable accidents, is difficult because of the wide gaps in responsibility, created by piecemeal application of present safety laws, codes, and ordinances For instance, the Division of Industrial Safety,

because of industrial expansion in the last few years, does not even know *how many* boilers there are in the State of California—guessing at about 600,000—which they indicate may be 100 percent in error Even the record of deaths and injuries from boiler explosions, available from the state and other sources, is incomplete and limited in value Up until 1954, certain boiler accidents were not considered boiler accidents for the purposes of record keeping

I want to say here, gentlemen, that so far as is within their power, through the preparation of this data and a study of the problems involved, we have had excellent cooperation from the Division of Industrial Safety. The reference to their not knowing how many boilers there are in California shouldn't reflect on their attentiveness or their abilities; it is simply built into the codes that we think need to be amended

During the past 10 years there have been 238 reported accidents with 253 injuries or deaths In all the years prior to that (to the best of our knowledge the recordkeeping goes back to about 1918) there were 134 accidents with 150 casualties The casualty process, of course, is accelerating because of the number of boilers that are being added to the state

Of the 238 recent boiler accidents in California, all were *preventable:* all resulted from one or more of the essentials above being absent That is, proper construction, proper installation, proper surveillance and inspection Some of these demonstrate graphically and shockingly how destructive to human life and property boiler accidents are, and how close to real catastrophe some of them have come, with the only variable factor a few minutes in time The California school explosion, to which Assemblyman Foran referred, one of four in two years, in which the state official reporting on the explosion said (it was a man from Industrial Safety) "A school's heating system had been shut down for the Easter vacation About 9 o'clock, the morning after the vacation, the custodian lighted the boiler so that the system would be ready to supply heat if the temperature dropped, as it was threatening rain About 10 30 a m the boiler exploded Fortunately, there were no injuries other than slight cuts from flying glass and plaster *However*, if the accident had occurred while the children were out in the schoolyard for recess, it would probably have been a catastrophe The boiler room walls and parts of the boiler were strewn over a large portion of the schoolyard "

The same shocking pattern was apparent in San Jose at the J C Penney store on March 22, 1963, at 4 41 p m , when the area disintegrated just a few short minutes before the normal evening influx of customers were due to arrive Again, only a few minutes in time made the difference

This seems to be the pattern in all of the statistics that we can gather throughout the country Where there are only a few deaths and major property damage, it is usually because the explosion happened at an opportune time, that is, when there were fewer than normal people in the area of the explosion

Assembly Bill 2896 also provides for necessary amendments to Chapter 6 in order that presently exempted boilers be subject to provision

of this chapter It is interesting to note that the type of boiler involved in the San Jose explosion is not covered by the present Chapter 6 And the type of boiler involved in the specific explosion in the school is of the so-called low-pressure type that is exempt, in most instances, from inspection under the present codes

ROBERT H FOX, *Assistant Business Manager, International Union of Operating Engineers, Local 501, Los Angeles:*

Presently, in Section 7621 of the Labor Code, a boiler is defined as used in this part as meaning "any fired or unfired pressure vessel used to generate steam pressure by the application of heat" subject to this part Now, this includes, then, steam boilers only There are many, many boilers which are hot water boilers, hot water heating boilers that are exempted from this code by reason of the fact that they do not generate steam With recent technological developments, we now have boilers which are extremely large boilers with high degree of heat and static pressure which do not have any steam space They are known as high-temperature hot water boilers These boilers are completely exempted from the present code regardless of size

In the division's orders, boiler and fired pressure vessel safety orders, certain boilers are exempted from the code They are low-pressure boilers, and I am now referring to Article 5, Section 7771, low-pressure boilers, miniature boilers, and boilers including force circulation Without going into detail, it would list a number of boilers which are exempted by size Under ASME standards, a high-pressure boiler is a boiler which is in excess of 15 pounds of pressure As an example, the San Jose boiler did not exceed 15 pounds in pressure, and it was a hot water circulating type boiler, therefore, it was exempt under the present code

The bill itself is designed to change the description of what a boiler is, the definition of a boiler So that we do have listed in the bill, A B 2896, "any fired or unfired pressure vessel used to generate steam pressure by the application of heat" Now, there has been some discussion and there may be some possible better language in this area, but generally that would refer specifically to the high-pressure boiler which was a steam boiler and exceeded 15 pounds of pressure And in subsection (b) it would bring under inspection, boilers which are in excess of 160 psi or temperatures exceeding 250 degrees Fahrenheit Now these are the large boilers I was referring to, the hot water boilers in which, although there is no steam space, some of them in temperature, approach 700 degrees and a static pump pressure approaches 700 pounds And the potential hazard in a boiler such as this is almost beyond belief We have water under pressure and under temperature held in a contained vessel, any failure of which would cause a rupture, the tremendous expansion of the water as it suddenly went from water into steam I believe the factors are in the neighborhood of 1,500 times Of course, this is what creates the tremendous power It is a little hard to visualize, but you can see in the pictures and many, many other pictures like them that are available that it is worse than a bomb

The third subsection (c) would bring under inspection the steam and water boilers, both, which were under 15 pounds pressure and under the 250 degrees Fahrenheit and under the 160 psi. That, in effect, is what the bill would try to do. Presently, as Mr. Molles stated, there are literally hundreds of thousands of boilers that are exempt from the code and we believe that it is necessary to do something about inspection How, is another problem

Under Chapter 6, Section 7770, we would suggest an additional change This section was designed to pinpoint the responsibility and make it a criminal act to willfully or from neglect or from ignorance allow an undue quantity of steam to be created. Under today's situation, a boiler could explode disastrously with an undue internal pressure of water without any steam and, therefore, these boilers that we are talking about, literally hundreds of thousands of them, are presently exempt from this chapter Section 7770, of course, makes it a felony where life is endangered, and Section 7771 has to do with loss of life

The amendment would delete the words "engine, or other" inasmuch as we felt that "engine" is quite broad We all have gasoline engines and diesel engines and the word "engine" is entirely too broad, so we suggested it be changed to "steam engine" in the amended bill

There was the amendment at the hearings in Sacramento to cover specifically school buildings or buildings of public assembly. You will note that "quantity of steam" was deleted and in its place substituted "internal pressure " It may be that "engine" on line 15 should be deleted also and substituted in its place "steam engine."

Section 7771, in effect, is a duplication of 7770, however, it refers, as I said, to a situation where life is taken. The original bill deleted the word "steam" in front of "boiler" and it deleted "steam" in front of "engine," which apparently is in error. "Steam engine" should probably remain. We would suggest that on line 20 following the words "steam, used" that 7771 be amended as 7770 was with the addition of "school buildings or buildings of public assembly," that was left out of 7771 It was added to 7770 and we suggest that it also be added to 7771 On line 10 in 7770, the amended bill reads, "school buildings or buildings of public assembly " And we would suggest that it be inserted on line 20 right after the word "used " We are also concerned about the use of the words "or apparatus for generating or employing steam" and we would suggest that during the course of your consideration, some language should be added to cover the situation where there is strictly a water situation, where a high temperature is in question, where there is an absence of steam space and to bring all of these potential bombs under the same code, so that if someone did willfully do anything or from neglect create a damage they would come under the same law

I think at this time it might be good to briefly comment on how boilers are inspected in California That is, the Division of Industrial Safety is responsible for the inspection of the boilers and the issuance of the permits to operate. The division employs inspectors to perform this while the insurance companies who insure these boilers also employ certified boiler inspectors who can certify to the state that they have

made the inspection They make their reports and submit them to the state This is common throughout the United States and my understanding is there is no state that attempts to inspect all of its boilers

As an organization, we have the feeling that this practice occasionally has its faults We see no way around it because having the state inspect all of the boilers would be prohibitive It is my understanding that the ratio of state inspectors, and Mr Snyder certainly has the figures, is about five or six to one That is about five or six insurance company inspectors to one state inspector

There are areas in the state where there is inspection of low-pressure boilers The City of Los Angeles and, if there is a hearing held in Los Angeles, the Los Angeles city inspectors can certainly give you the details Briefly, it is this, the City of Los Angeles requires inspection of low-pressure boilers The inspection may be done by an insurance company and certified back to the City of Los Angeles and they have a number of inspectors on their payroll to perform this operation In the city school system in Los Angeles, the city schools are not inspected by the City of Los Angeles, Department of Industrial Safety boiler inspectors There is a fee charged in the City of Los Angeles for inspecting boilers annually, and the board of education doesn't care to pay the fee, so they inspect their boilers with their own insurance company boiler inspectors They have had some problems down there which will probably be taken up at the time of the Los Angeles hearing I don't want to comment on that inspection without them being present

The high-pressure boilers, which are those steam boilers over 15 pounds pressure, are inspected; they are required to have permits to operate. They must be constructed according to code and they do require the permits to operate, which involves an inspection before they can be started and an annual inspection The permit to operate is reissued for each succeeding year Now, this does not cover the low-pressure boilers below 15 pounds. It does not cover the hot water boilers, it does not cover the high-temperature, high-pressure hot water boilers

In that regard, I would like to say that presently, in the State of California, we are quite concerned about other pressure vessels We have unfired pressure vessels safety orders for air tanks, and low-pressure gas tanks, such as butane, do require permits to operate, do require that they be constructed according to code, and there is a periodic inspection required by the laws of the State of California I don't want to indicate that air pressure tanks are not dangerous They certainly are and an explosion could be disastrous with low-pressure gas These things should be inspected and required to be I believe that the potential hazard of boilers which are not now required to be inspected is as great or certainly greater in many cases than an air tank or low-pressure air

JOHN EDSON, *Boiler Inspector, City and County of San Francisco:*

We are proud of our code here; however, the inspection of all boilers can be improved, which we are doing from time to time We issue permits that they have to have; all contractors that install boilers have to

have permits to install, so we make sure that these boilers in our code are installed according to state and local building codes

We report all high-pressure systems to them and we require all insurance companies on low-pressure boilers to report to us This is on the annual inspection I understand that Los Angeles inspects every year. San Francisco inspects every other year.

We have two boiler inspectors We have approximately 1,900 low-pressure boilers which we inspect every two years High-pressure boilers, we have approximately 700 Part of those are reported to the state, and air tanks which we inspect, we have approximately 1,500 We inspect them and we have the insurance companies There are some other boilers that are inspected and they report to us We never see them except on the installation to make sure they are installed according to code

ROBERT J. OWENS, *Safety Engineer, Pacific Gas & Electric Company:*

As to the background, it is our opinion an adequate framework for the control of hazards from any fired or unfired pressure vessel used to generate steam pressure by the application of heat (power boiler) already exists and is adequately covered by state orders promulgated by the State of California, Department of Industrial Relations, Division of Industrial Safety, pertaining to this subject This is as it should be, as such orders are flexible and can be revised from time to time to fit changing conditions and applications as technicial developments may require.

From our observations, there have been very few serious accidents which have occurred that were directly attributable to violations of these orders, particularly so, when we consider the large number of boilers in operation every day throughout the years in California And it is our feeling, very definitely, that the Division of Industrial Safety, Boiler Inspection Department, has done a very, very splendid job in surveying, advising and carrying out their responsibilities in this regard.

Now, it is our opinion that these matters should not be regulated by statutory enactment, but rather, that they be handled in the manner which presently prevails Handling of such matters by statute is most cumbersome as compared with the procedure followed by the Division of Industrial Safety I am sure that all of you gentlemen are in accord with our thinking and basic principle, which is, that we should not legislate in this regard just to legislate We believe that the aims intended by the authors of AB 2896 can best be accomplished under the existing framework and authority vested in the Division of Industrial Safety without further legislation in this regard.

ARTHUR I SNYDER, *Supervising Engineer, Pressure Vessels, Division of Industrial Safety, Department of Industrial Relations:*

I think there is no question but what this statute on boilers and pressure vessels needs a critical review at this time and I think it is very well that your committee is taking the time to do this This law was first enacted back in 1916 or '17 when boilers were not constructed

to any known standard and they set up standards that were suitable for that time which I think were very adequate However, in the ensuing 45 years or so, we have had some very rapid changes and drastic changes in technology that involved entirely new uses of this equipment, and new materials are being used to take care of the situation It is certainly possible that the standards that we have in our law are not adequate for today's technology and I believe it certainly does need a critical review at this time

If the boiler is fitted, even high-pressure boilers, if they are fitted with certain controls, we recognize that the boiler can be left for short periods of time and the operator could have other duties With low-pressure boilers, we do not have this degree of attendance spelled out that closely, so that I don't know that I could answer the question I do know that in some of these installations, particularly low-pressure boilers, the operator has other duties that take up probably more time than the boilers.

That is why, in our recommended minimum controls we developed in 1954 and 1955 for low-pressure boilers, one of the key controls that we required for these operations of low-pressure boilers was a high limit control that would operate if the operating control failed and would require manual resetting This would shut the boiler down and it would stay shut down until the operator came back and then he would know that something was malfunctioning Prior to that time, this high limit control did not require the manual resetting and we found evidence of cases where the operating control had started to malfunction and the boiler was actually operating on the high limit control but the operator was unaware of it Then this recommended minimum control which we hope to get into our safety orders and we hope to incorporate this feature into our regulations

I would agree that no boiler should be left completely unattended I feel very strongly about this and I think everyone would agree that all boilers are potentially hazardous pieces of equipment and potentially lethal weapons and they should not be shoved off into a corner and forgotten about Someone at the place of employment should be, it seems to me, delegated the duty and responsibility of seeing that the boiler is properly taken care of I would also believe they would have to agree that the degree of attendance is somewhat dependent upon the installation, but I agree 100 percent that you must have a maintenance program to maintain controls if you aren't going to have constant human attendance, if you are going to have a safe installation

The training of properly qualified inspectors is certainly a practical problem that we cannot ignore We have found it increasingly difficult to employ competent people in this field As a matter of information to you, we presently have eight vacancies for this position We find it difficult to get qualified people One solution is that which Mr Fox mentioned of possibly setting up an apprenticeship program to train these people, but this takes time also

Assuming the same ratio of low-pressure boilers to high-pressure boilers are insured, we would probably, I would say, require somewhere

in the nature of 15 or 20 additional field personnel to handle this workload And this I would want to make very clear is all a guesstimate because we very honestly do not know how *many* low-pressure boilers there are in the state They are not required to be recorded, they are not required to be inspected, and we do not know We do know very precisely how many high-pressure boilers there are, but the low-pressure boilers we do not

We try to delegate all of this to local people that they will take For example, we do not inspect in the City of Los Angeles at all if the city makes the inspections We do not inspect boilers that are inspected by certified inspectors employed by insurance companies The law, as originally written in 1916, permits the division to delegate this work, and we believe it was a wise move We would like to, let us say, delegate all of it if we could, because we think this is the most economical both from the standpoint of the state and it is also the standpoint of the owners of boilers and pressure vessels, because there is certainly no need for them to open a boiler for two different people to inspect

At the present time there is somewhere in the nature of about 280 certified inspectors in the state to 37 state inspectors As you can see, the major portion of the work is delegated to other agencies

At the present for low-pressure boilers, we require, in our administrative regulations, that they be constructed according to the nationally recognized standards We also require certain controls to be on the boiler to permit them to operate reasonably safe We also require that they be attended by a competent attendant

JOSEPH MCBRIDE, *Supervisor, Heating and Ventilation, Board of Education of San Francisco:*

I believe someone brought up the question as to who maintains and operates the boilers in the schools In all the high schools, we have operating engineers maintaining the boilers and in the junior high schools In all the elementary schools, they have janitors and custodians there full time It is up to us to instruct them in their duties in such as that but with 135 schools, counting the high schools, that is a physical impossibility, counting the paperwork, maintenance work, etc , although it is a requirement of civil service and the Board of Education In all the boilerrooms throughout the school department, we have instructions for them.

Some of our elementary schools are so small, it is not feasible to have an operating engineer They have a small cast iron boilers in most cases, although we have a lot of steam boilers in these schools We have schools where they have both steam and hot water, in the same boilerroom Rather than make it a standard design there for easier operations for the man, where you may have an addition, they put in hot water although there was an original steam boiler

One thing I would like in this law for my own personal protection would be yearly inspection, internal as well as external, of valve safeties and the boilers, particularly on these water controlled Just because they are inspected, that is no sign they are going to be working three months, or six months from now But if you are only required to open

them up every two years, that is a long time to wait, because sometimes the condition of the water is such that you get quite a bit of sediment in it which affects the full control in these water operated types I would like to see them opened up every year, but of course, that involves more money, too, which we are always up against.

JOHN GERHARD, *Chief, Fire Prevention Bureau, City of San Jose:*

Unfortunately, the City of San Jose does not have a drive to inspect these low-pressure boilers as do other cities and it is also unfortunate that Penney's had this happen in our city But one thing the city would like, and I don't know where the money is going to come from in this state to carry this out, but we would like the state to adopt rules for these low-pressure boilers and also to supervise the inspection I know that is a knotty problem but that is our position If for some reason the state did not provide the manpower to inspect the boilers, I presume the city would have to because another explosion like Penney's would leave a blight on the entire state But it is the position of the city administration that they would like the state to adopt the rule and also enforce it, if possible

One of our problems is that we actually have nobody who is competent to go there and inspect the boilers I know I have nobody in my office and I don't know of anybody in the actual city employed for that purpose But we have—let me read you one little thing that we have in our law at the present time, and this was there before the Penney's explosion "No person shall use any boiler or steam generating apparatus of over 10 pounds pressure per square inch who has not at the time of such use a certificate showing that said boiler or apparatus is in good and safe condition " There is much more to this, but, in essence what it amounts to is that we have a board of steam engineers or board of engineering examiners who are appointed by the city managers and serve at his pleasure, and they give examinations But these people are private citizens and work without pay And this only covers boilers that have 10 pounds pressure per square inch or over This particular boiler we are talking about in the explosion, that was inspected by an insurance company representative, if I remember right, about 17 months before and presumably had been inspected every two years, and was coming up at the end of another two-year period

ORMOND B STULL, *Associate Fire Prevention, Explosives, State Fire Marshal:*

I have worked in the office of the Fire Marshal for 8½ years and during this period, considerable time has been spent in the field of inspection We check the schools and we do check boilerrooms and we try to pick up the obvious hazards Some of these we know have been pinpointed and we check to see if there is an inspection being made by the insurance company or the Division of Industrial Safety and this follows through on the other facilities that we deal with also But then, as with all of our facilities, responsibility is delegated to the local fire authorities and here we have in many cases, the volunteer fire departments We have some 1,000 departments in the state and perhaps 400

of these are volunteers, so you know the inspection work in some of these facilities isn't being done We also have a small staff and we do assist them if they request our assistance So there is a very definite need for, we feel, a routine inspection, particularly on the boilers, and how to pay for this is the problem

ARTHUR G CLARK, *Chief of the Mechanical Bureau, City of Los Angeles:*

Our primary purpose is to assist the committee in any way we can, as far as the city requirements are concerned, and secondly, we would like to raise two questions here The first question pertains to Section 7621, subsection "e"; it is on line 11 We feel that the wording in this particular line is rather vague, and we are not sure exactly what the intent of this was The way it reads, it appears as though an open pressure vessel—or an open vessel, not neeessarily under pressure—would be subject to the definition of a boiler If I may read that part—it states, "or water pressure less than 160 psi"; so this would mean any pressure less than that apparently would be included in the definition of the boiler

I believe the wording is a little confusing there, if I may say so, and I believe it should be clarified Because as I read that, it doesn't make any difference whether it is the boiler or not, if any fired or unfired pressure vessel with the water pressure less than 160 psi, now if you mean more than 160 psi, that's different.

We also made that objection before, but if it isn't within the scope of a water heater of 120 gallons, if it is an open vessel, which it might be and not be a water heater, it looks like it would still be included I just raised the question before the committee, because I think that this subsection "e" needs some revision as to wording

Our second question pertains to Section 7770, line 11 again, and here again we raised the question as to what is meant by buildings of public assembly We have been unable to find any definition in the Labor Code, or elsewhere, as to what the meaning of buildings of public assembly is

We do inspect all pressure vessels in the City of Los Angeles on an annual basis We do inspect some of these hot water boilers, as they are called, by our plumbing division, and they are not subject to annual reinspection Now this generally is in the range of 120 gallons or below and it is covered by the ASME Code This is a first time inspection only—just like in any other plumbing or a domestic hot water heater

The hot water boilers above that—that are slightly above the 120 gallons—our boiler and pressure vessel inspectors inspect them also, but again only on a first time inspection This briefly is what we do It is a permit system We are a building department, and we have two sections that operate under state regulations On steam boilers, we have an annual inspection On any steam pressure at all, low pressure or above, we have one, what we call principal chief inspector, three seniors and nine field inspectors—field engineers And in addition, of course, a supporting staff,

HENRY B ELY, *Legislative Counsel, Construction Industry:*

I would like to point out how many agencies are concerned with boilers, at least a few of them, and then I ask why is this in the Labor Code The Legislature, very wisely, tried to make uniform laws governing the construction and maintenance of buildings, and we have the Uniform Building Standards Commission, which has been established by the Legislature Then, at a recent session of the Legislature, the Uniform Housing Act was passed The Uniform Housing Act applies to apartments, hotels and dwellings, and under the recent Title 24 of the Uniform Housing Rules and Regulations, there are rules and regulations governing hot water heaters, and there will be further rules and regulations Then, of course, as indicated, under Title 8, the Department of Industrial Relations, Division of Industrial Safety, regulates boilers in various manners, and they have completely revised recently, as indicated, their rules and regulations on fire boilers, which are covered here

Then there are the regulations of the department enacted in 1955, which it was indicated may be changed as to fire boilers Then, in addition, we have the Uniform Plumbing Code, which is about to be adopted and has been adopted in Los Angeles as to gas-fired water heaters and water boilers Now, when you were talking about construction and maintenance, we are talking about putting more costs on the public by having too many rules and regulations I submit to the committee that they should consider the place of this boiler installation license, as well as annual inspection for boilers and the whole picture of the building code, because I hate to see, after the Assembly worked for five years or seven years, getting the Uniform Building Standards Commission and uniform consideration for various state agencies, that then it should start enacting additional laws involving buildings and construction

The need for legislation is always based on the problem at hand. We have had a serious accident in San Jose, one was mentioned in Atascadero and one in Los Angeles We don't want to belittle the seriousness of those accidents, but if we are going to regulate and have inspectors inspecting every type of boiler and hot water heater, except as specifically exempt, we are undertaking a great deal of regulation and cost

We feel that the abuses haven't been shown, the dangers haven't been shown to be sufficient to have hordes and hordes of inspectors Now, as I say, as to subsections "a" and "b," we have no objection Those are dangerous, and we think that they should have inspection, but we might make a suggestion to the committee that if there is some specific problem within subsection "c" that a meeting be held of the interested parties to see if a proper definition can be worked out.

BURTON A CURRIE, *Assistant Engineer in Charge of Operations, Department of Water and Power, City of Los Angeles:*

As Mr Clark and others have pointed out, this subsection "c" is so all-inclusive, I think that some further study should be given to it And the second comment I would have is that with reference to

domestic-type water heaters of 120-gallon capacity, or less, this was included as an amendment, and as far as the Department of Water and Power is concerned, and its operations of electric water heaters in residences, we feel this exemption is a fine amendment and should not be changed

I checked this morning with our electrical servicemen who maintain these water heaters throughout the City of Los Angeles, and they tell me that they have never had an accident through the years, that they know of. Occasionally, as with any other mechanical device the thermostat might stick or an element might be grounded causing the heat to continue and water to boil, but this backs up into the supply lines and does not create excessive pressure And this is something that we feel should be maintained, and otherwise, the intent of the changes, the better definitions, we are in favor of it. We feel that anything that can make the operation of these devices safer is in the public interest and is good.

J. W. SCHAEFER, *Building and Grounds Services Administrator, Los Angeles City School Districts:*

Let me state unequivocally that the Los Angeles city school districts are sincerely interested in the safety of the students and the employees This is shown by the fact that every year thousands of dollars are spent in improving conditions and teaching safe practices We have recently completed a retraining program for 1,300 custodians who are, or may be operating low pressure heating plants Examinations were held and certificates of completion issued to the successful custodians

There is no record of there ever being a boiler explosion in the Los Angeles city schools in all of our years of operation We have had a few minor firebox explosions in our districts

If enacted into law, the effects of A B 2896 on the Los Angeles school districts is considerable The amendment eliminates the exemption of low-pressure boilers as shown in Section 7625, subsection "b" of the Labor Code It then has the effect of classifying low-pressure heating plants with high-pressure boilers, and makes the operators subject to Chapter 6, Mismanagement of Steam Boilers, Sections 4 and 5, which has penalty clauses, definitely affecting the operator. If this happens to become law, it will be necessary to assign a custodian full time—to the full-time operation of a heating plant

The above action would require the addition of operators in over 400 schools at an added cost to the districts and taxpayers of between $1,500,000 and $2,000,000 annually.

Because of the above facts, I want to go on record as a representative of the Los Angeles City school districts in opposing AB 2896 You know what the school districts are doing in the way of safety, what we are teaching our custodians, how we are teaching them, what we are requiring of them We have instructions posted in the boiler room for operating and servicing oil-fired, low-pressure steam and hot water heating systems When we have combined systems, we post both of these. We also have this record posted in the boiler room, which must

be kept daily as to the day of the month, the startup time, the temperature at the startup time, shutdown, all the way through, so we have an accurate record of what has happened during the day on each and every boiler in the district

We have very well-trained, very acceptable operators who did the training in this field Our area operations supervisors in all cases have come from the custodial field with a tremendous background in years of experience in operating equipment. They have done the instructing

The question also was raised about the city inspecting. Now, prior to 1960, the city and the state both, along with the insurance carrier, did some inspection of boilers in the Los Angeles city school districts At that time, I believe they were doing it on a no-fee basis, and we ran into difficulties in getting the work done, the inspections made—primarily because of a shortage of funds, I am sure.

We did then go to our carrier—insurance carrier, and the insurance carrier now makes annual inspections of every boiler, high and low pressure, in the districts Granted, you can't inspect the inside of a cast-iron low-pressure boiler, but you do and can inspect the controls, the low-water cutoff, the safety release valve, and so forth Beside that, these items, these safety controls are checked daily by the custodian in charge of the boiler. The way he shuts down a low-pressure boiler is to run the water down and kill the cutoff The lower water level cutoff shuts the boiler down. This indicates at that moment the safety cutoff is working

The installation is inspected by our heating inspector, who is a qualified heating inspector, licensed and who is accepted by the insurance company and they, therefore, will grant the insurance based on his acceptance.

Now, I think it should be remembered that there is one reason that the city could not do all of this boiler inspection if it wanted to The school district is almost twice the size of the city. We have many incorporated cities besides Los Angeles within the school district; therefore, we would get into working with every incorporated city, plus the county, and the problem would be just tremendous It would be almost impossible to work out, so we feel we are far better off with the insurance company's qualified inspectors

To bring this point to your attention, we have 453 locations where we have boilers — low pressure and high pressure There are only nine locations with high-pressure systems Now there are also some sites in which we have 14 low-pressure boilers on that one site, and if we should ever get to the point where we have to treat them the same way we treat the high pressure, which means the operator cannot leave the boilerroom for more that 10 minutes at one time, it would be impossible for him to get from one boilerroom to the other and over all of these within that 10-minute period It just can't be done

The following are pertinent excerpts from testimony on AB 2364 given at the hearing in Sacramento, October 19, 1964:

DANIEL MOLLES, *International Representative, International Union of Operating Engineers:*

If we can accept the concept that a steam boiler is a potentially hazardous instrument or machine, and if we can accept the concept that setting the machine in the hands of a totally incompetent person increases the possibility of accidents, we must also accept the concept that something can and should be done to control, to evaluate the knowledge and capacity to function properly of an individual assigned the responsibility of operating boilers It is our belief that the most commonly used method, that is, licensing after examination of such individuals, is the answer for the State of California If there are better ways to control competency, or rather to avoid the assignment of such a machine to the hands of an incompetent, we, as advocates of this particular piece of legislation, are willing to accept that Every individual who has anything to do with a steam boiler in the State of California—that is, design, erection, construction, and inspection—must meet rigid standards as to their competency, their training, and their experience Yet after all of these precautions are taken, the same boiler under present law may be placed in the hands of a person who is totally incompetent The State Labor Code requires, on certain types of so-called high-pressure boilers, the attendance of a human being, a competent human being, and yet no method is provided for determining his competency. In other states, in cities within our own state, the method of determining such competency has been the examining and issuing of a certificate of competency for a license to control this factor. I represent a labor organization that numbers among its members men who are boiler operators, and yet I wish to make clear that we do not consider this bill, AB 2364, to be a craft licensing bill, for the simple reason that the operation of a steam boiler represents only a small part of a stationary engineer's work functions In the State of California, a modern industrial state by and large, an individual who can only operate a boiler is almost unemployable The operation of a steam boiler, as hazardous as it is and as important as its control is, is a tool of the trade There are many hundreds of workmen in the State of California who operate boilers of all sizes and shapes, who are members of a wide variety of labor organizations, industrial unions, such as the rubber workers, the automobile workers, chemical workers, craft unions, electricians, boiler makers, teamsters, and so on There are hundreds of individuals employed in the State of California as boiler operators, who do not belong to any labor organization

MERLE MILLER, *Association of California Manufacturers of Coil Type Forced Circulation Boilers:*

The California manufacturers of coil-type forced-circulation boilers are vitally concerned about the safety of the operator and those persons within the near vicinity of the boiler We would not want to recommend any legislation that would endanger the lives of any persons On the

other hand, we certainly do not feel that you would want to pass any law that would only add economic burden to hundreds of California business concerns where such costs are entirely unnecessary If a miniature boiler is exempt from these requirements, then we feel that any other design of boiler that is proven to be less hazardous, should also be exempt

We believe that every boiler should be properly installed and correctly maintained by competent personnel That we definitely feel should be done However this does not require constant attendance of a boiler operator or a stationary engineer for equipment which is inherently safe against any possible hazard from a steam explosion It is our contention that safety regulations should be based on the potential hazard which might result from a steam explosion rather than on a general basis, which would include all types of boilers regardless of their inherent safety Mr Walter Parker, chief engineer for the Hartford Steam Boiler Inspection and Insurance Company, in a recent article in the *National Board Bulletin*, stated that "if a failure should occur in a coil-type water tube boiler, the release of energy is relatively small " It's the sudden rupture and release of all the water flashing into steam that causes a boiler to release such destructive energy This condition cannot occur in a coil-type boiler where the water is released in a small quantity, should a rupture occur

Since we are primarily concerned with safety, may we request that the coil-type, forced-circulation boiler be judged strictly on safety and classified on an equal basis according to the potential hazard to operating personnel If a miniature boiler is considered to be safe from the hazard of a steam explosion, then other types of boilers having less water content should likewise fall within the same class, in the writing of these regulations.

ROBERT HANLEY, *Legislative Representative, California Farm Bureau Federation:*

The California Farm Bureau Federation, which is composed of 53 county farm bureaus in 54 counties, having an aggregate membership of approximately 60,000 farm families in California, has been at somewhat of a loss to determine the impact of Assembly Bill 2364 on agricultural operations and the extent to which such operations would be affected by the bill in its presently amended form

Under the broad definitions of major mechanical equipment contained in the bill, and without limitation as to size, horsepower, etc, of such equipment, just about every piece of stationary power plant equipment used by farmers would be covered With over 200 commodities being produced commercially by California agriculture, each of which undoubtedly employs some or several pieces of stationary power plant equipment, it would be a major undertaking to make a field survey of such equipment We did, however, attempt to obtain as much information as possible by mail, and here again, because of the lack of explicit definitions, it was difficult to document information as to what would come under the meaning of this equipment and what would not

I do not wish to take the time of the committee to quote from all of the letters we have received from various commodities producers in groups, including livestock and dairy, hops processing, hog feeders, fresh and frozen vegetables, citrus, poultry and eggs, hatcheries, irrigated crops, bulb growers, and even mushroom growers I believe there are a number of growers present who could speak for some of these commodities, if you care to call upon them The important flower-growing industry is definitely affected.

We believe that insofar as agriculture is concerned, the bill is impractical in its application to on-the-farm operations and would result in many complications and unworkable situations As you are doubtless aware, all mechanical, electrical, and similar operations in agriculture are subject to safety orders of the Division of Industrial Safety It is our belief that procedure through present laws and regulations of the division is the most desirable approach in the interest of safe operation of equipment as covered under the bill. We would urge the committee to seriously consider following this latter course of action, rather than report favorably on AB 2364 as it is presently, without a great deal of further study

WILLIAM ENOMOTO, *California State Florists Association:*

In California we estimate there are slightly more than 1,000 flower growers and of these possibly 400 are greenhouse flower growers In describing the flower growing industry I can safely say that our magnitude is about equal to say the cling peach industry in agriculture, and also the lettuce industry, such as the one in Salinas and Imperial Valley, so we are not just a small section or small corner in the total agriculture picture in California, but these thousand or so growers have made an industry in California to make California the flower basket of the United States

The boiler plays a big, important part in the greenhouse—it is really the heart of our industry—in bringing off-season flowers and in bringing them in the quality that will be acceptable in the United States market However, many of our operations are seasonal, in that several months of heating may be required for some crops, and other crops, such as roses, require year-round heating.

This bill, if enacted as it is, could conceivably drive most of us so-called medium-sized operations out of business. They are all owner operated, and because they are owner operated, the attendants on our boilers are very thoroughly trained by the owners, and the owner, recognizing that it is the heart of his business, makes sure that the maintenance and equipment are in proper order I think we can be very proud that our workmen's compensation insurance is among the bottom of the list in all industrial activities That is because it is owner operated and it just makes good sense to see that his business is operated efficiently and in a safe manner I cannot recall any boiler explosion in the flower industry. There may have been, but I do not know of any myself in say the last 25 years that I have been in business

Now in our industry we do not deal with the public and no one lives in the structure where the boiler is (usually it's quite isolated) and

therefore I would like to suggest that if boilers are used in the agriculture operation, if they are housed in a separate structure where no one is living or where the public is not admitted, that the boiler in that structure be excluded from the requirement for the licensed engineers.

CHARLES KERSHAW, *Imperial County Farm Bureau Association:*

I am part owner of a family business engaged in cattle feeding and farming in Imperial Valley since 1929, and in the commercial cattle feeding business for 15 years.

For several years now we have been rolling grain for cattle feed, an operation which as you know requires steam. Modern boilers, such as ours, are equipped with numerous safety devices which automatically prevent them from operating in the event of any mechanical malfunction. In order to have adequate insurance coverage it is necessary to comply with present state requirements concerning boiler operation and maintenance. Boilers are periodically cleaned and thoroughly inspected by state-approved inspectors, and state operating permits are issued only if prescribed operating and safety standards are complied with. I agree that safety precautions regarding boiler operation should be strictly adhered to; these precautions are explicitly and, I think, adequately defined under present California state law Passage of Assembly Bill 2364 requiring a licensed operator to attend certain boilers would not, in my opinion, necessarily provide greater safety in boiler operation. In view of the fact that efficient and reliable safety devices now in use already assure safety in boiler operation, safety would not necessarily be improved by having a licensed operator in attendance, this opinion is shared by all other cattle feeders I have contacted.

RICHARD MCDOUGAL, *California Cattle Feeders Association:*

The California Cattle Feeders Association, a nonprofit, nonmarketing organization, was organized in June 1953. It is composed of cattle feeders and feedlot operators throughout the State of California. At the present time in California there are approximately 600 feedlots, 400 of which are active. Within the organization we have 250 feedlots, which generate $500 million in sales every year On these feedlots we have approximately, and this is in estimation, approximately 200 boilers.

Perhaps I could explain to you why we use boilers It's in the barley rolling that we use the steam. It enters into a chamber where the barley gradually flows through this steam and it softens it so it can be rolled out flat without having a great amount of dust in it Members of the association are very safety conscious. They employ every safety measure and device possible to insure the safety of their employees, in an effort to reduce hazards and to improve the efficiency of their methods of operation Accidents of any kind are expensive and wasteful Feed processing facilities for cattle feedlots, those using the kind of stationary boilers referred to in AB 2364, are not assembling places for groups of people, and as a rule they are not close enough to residential

areas to be a hazard from the standpoint of a boiler explosion We feel that the provisions of Assembly Bill 2364 would place an additional and unnecessary expense on the cattle feeding industry. We firmly believe that the requirements are not needed in this industry, and hope you will amend the bill to permit us this

IVAN GENNIS, *California Society of Professional Engineers:*

The California Society of Professional Engineers is a society concerned with the professional aspects of engineering, the public interest and the relationship of the engineer to the public interest. We have no quarrel with licensing of operators of the steam plants if this is deemed to be in the public interest We feel that certain aspects of the proposed bill are not in the public interest One of those is the use of the term operating engineer or stationary engineer Professional engineers have been registered in California since 1929 and we feel that the confusion between a registered professional engineer and a licensed engineer or whatever term is used to describe a boiler operator would not be in the public interest because we have enough confusion in this area already.

The other aspect is that there should be no question of the right of a professional engineer to supervise the operation of these installations These are designed initially by professional engineers and the installations themselves are getting highly complex. We're getting into nuclear structures and things of this nature. If a bill of this nature is passed, it should spell out the right of a professional engineer to supervise the operation of these more complex locations.

RICHARD GERHES, *Gerhes and Todd, Consulting Engineers:*

My interest is that of the registered professional engineers I have one point only, and that would be with respect to the degree of experience that the examiner must have who is going to state whether or not a man is qualified to operate a boiler I think it has been stated here this morning by others that the American Society of Mechanical Engineers is basically the controlling code for the construction of boilers Here in the State of California we have the title "mechanical engineer." Prior to the use of that title, one must qualify himself by state examination as a professional engineer I think we all recognize, and I'm sure I do, that there's absolutely no substitute for experience This is essential in determining whether or not a man is going to be qualified to operate a boiler, but in order to establish some standard of formal education of this examiner, I think we can at this point rely on the professional engineer

H J STONE, *California Employers' Safety Committee:*

It appears to us that the proposed bill, A B 2364, is so inclusive that it would require licensed employees in attendance at hundreds of thousands of units which, because of mechanical safety guards, should need no such constant supervision. It is the feeling of the safety engineers who make up the membership of the California Employers' Safety Committee that enactment of legislation of this type is the wrong ap-

proach to the accomplishment of safety It appears to us that it will tie the hands of the California Division of Industrial Safety, will make safety controls inflexible and is likely to increase the incidents or accidents from human neglect and would be difficult—if not impossible —to administer

It is our opinion, based on long experience, that adequate control of safety should remain the responsibility of the Division of Industrial Safety of the State of California, so that any changes or additions that may be deemed necessary may be included in the safety orders which are more flexible to administer and can be amended with the minimum of delay as conditions warrant Enactment of unnecessary statutory controls tends to limit prompt action in the correction of a real safety hazard

Realizing that the safe operation of boilers depends upon the construction and control systems, we now have fail-safe devices on all our pressure vessel systems so that regardless of the cause of mechanical or electrical failure, the boiler automatically shuts down in a safe manner.

It is our position that the work and recommendations of the Division of Industrial Safety will result in the greatest possible safety for all Californians We therefore urge that this committee's report recommend that the Division of Industrial Safety investigate the need for new or amended safety orders so as to provide proper controls of low pressure as well as high pressure vessels

AVY LEWIS MILLER, *President, Laars Engineers, Inc :*

I am a professional mechanical engineer, registered in the State of California, and Laars Engineers, Inc , the company of which I am founder and president has, for the past 11 years, been exclusively engaged in California in the manufacture of boilers During this period more than 50 000 boilers of our manufacture have been installed and are in operation in the State of California This is recited by way of pointing out that we have some competence and considerable experience in the boiler field.

The manufacture of boilers is one of the most stringently regulated and supervised of all industries By state, county and municipal code most boilers installed in California must be approved by the American Society of Mechanical Engineers (ASME) and/or the American Gas Association (AGA).

The effect of this excellent and smooth-working combination of industry self-regulation and government regulation has been that boilers have established for themselves a remarkably good safety record In our own experience we know of only three Laars boilers which have caused injury or property damage, and I am sure that our friendly competitors in this field have an equally good safety record

I think it proper to point out that to add the cost of attendance to the cost of operating a boiler would, in most instances, force the user to some other form of heating, and I respectfully suggest that it is very possible that the alternate methods of heating may be inherently more hazardous than a modern automatic unattended boiler

J W SCHAEFER, *Administrator, Buildings and Grounds Services, Los Angeles City School Districts:*

From the wording of Assembly Bill No 2364, it appears that the intent is to require licensed operators on all boilers, including the low pressure type. Exceptions are stated in Section 9951 (1 and 2)

May I enumerate the items that are worrying those of us in the Los Angeles School District responsible for the maintenance and operations of the school plants.

The initial fee and the renewal fee would be paid by the employee who is near the bottom of our salary schedule, ranging from $355 to $440 a month. They can little afford this expense and since it is not legal for the district to pay these fees, the burden would fall directly on the employee

To hire new employees with the necessary two years' experience, we would undoubtedly be forced into hiring engineers at a salary rate of $516 to $641 per month This poses another problem, will we be able to convince an engineer that he must sweep, dust and do other custodial chores for six out of his eight-hour assignment? I doubt it

If A B. 2364 becomes law and we are forced into hiring engineers to watch automatic controls work, the cost to the Los Angeles City School District and the taxpayers will be between 1½ and 2 million dollars annually.

This definitely affects the ratio of instruction costs to all other costs, the 55-60 percent law

Because of the above facts and the belief that the money for this could be better spent on educating the children, I want to go on record, as the representative of the Los Angeles city school districts, as opposing A B 2364

KARL SCHULZE, *Fire and Safety Committee, Western Oil and Gas Association:*

We are opposed to this bill We assume that the sponsors of the bill wish to improve safety and we approve of and agree with this objective However, we do not feel this bill will accomplish an improvement in safety

We feel the way to improve safety is to study the accident history and take steps to correct the conditions which lead to these accidents, as shown by the history

There is no history to show that there is any need for licensing or that it will improve safety In fact, one of California's most recent serious cases took place in a town which I understand requires licensing, and the licensing had no effect whatever on the prevention of this occurrence

Further, the state has an adequate method of control by the use of its safety orders If additional safety is needed, the way to attempt to obtain it is through revision of these safety orders

Our association stands ready at all times to cooperate with the Division of Industrial Safety in revising any of its orders We have done so in the past, and we'll continue to do so in the future We feel this is the way it should be done.

CHAPTER 3

KAISER STEEL CORPORATION LONG-RANGE SHARING PLAN EXECUTIVE HEARING, KAISER STEEL PLANT, FONTANA, CALIFORNIA, SEPTEMBER 2, 1964

On September 2, an executive hearing and tour of the Kaiser Steel Plant at Fontana, California, was held by the full Industrial Relations Committee The purpose of the meeting and tour was to gather information on the long-range sharing plan of the Kaiser Steel Corporation and its effectiveness in dealing with technological change and employment dislocations resulting from it This sharing plan resulted from the collective bargaining agreement entered into between the Kaiser Steel Corporation and the United States Steel Workers of America on October 26, 1959, which established a long-range sharing committee consisting of executives of the corporation and officers of the union It represents an historic development in dealing with the impact of technological change and automation in particular The long-range sharing plan is a significant step in meeting one of the fundamental concerns of our time—that is the concern that there is an orderly adjustment to current technological change which enables industries affected to soften the impact on the economy, provide for employment relocation of the displaced, and permit both industry and employees to derive benefits.

The committee wishes to express its thanks to Mr Joe Ternes, director of state relations, Kaiser Industries Corporation, and Mr Ralph L. Vaughn, assistant to the executive vice president, Kaiser Steel Corporation, for the courtesies and kindnesses extended to the committee in connection with its hearing and tour of the Kaiser Steel Corporation plant

FINDINGS

1 The Kaiser Steel Corporation and the United Steel Workers of America are to be commended for their intelligence, initiative, and foresight in working out the long-range sharing plan

2 The plan commands the study of its feasibility for other industrial concerns

3 This type of plan does help in the overall problem of employment dislocation and scarcity brought about by automation or technological change in general in that it avoids a further compounding of the problem by providing for a given industry to control its own internal problems

4 This plan does not deal with and is not intended to deal with the fundamental problem of the need to expand existing industries, create new industry, or regulate employment in order to deal with technological employment displacement, employment opportunities for the

constant influx of new entrants into the employment market, and the dependency of our prosperity on the maintaining of a high public buying power potential

Kaiser Steel Corporation Long-range Sharing Plan

Statements were presented to the committee by:

RALPH L VAUGHN, *Assistant to the Executive Vice President, Kaiser Steel Corporation*

GEORGE SIROLLI, *Staff Representative, United Steelworkers of America*

KEITH GEIBERT, *Staff Representative, United Steelworkers of America*

The following are salient parts of the statement of Mr Vaughn

"I would like to briefly set the stage, if I could, with a little history. As the chairman pointed out, this really started in October of 1959 This was after 104 days of strike that brought heavy financial losses to all parties. Kaiser Steel as well as the employees represented by the United Steelworkers of America The employees returned to work under terms of a contract that was really a new idea in management-labor relations For the first time, I think, the public was invited to become an active third party with management and union in forming a long-range committee to develop ways of eliminating incessant rounds of drawn-out negotiations and the threat of strike deadlines over matters of wages and benefits that have plagued industry in the past This language in the contract in part was as follows 'The parties shall establish a joint committee consisting of Dr George Taylor, chairman, David L Cole and Dr John Dunlop, and three representatives designated by each party to recommend for the consideration of the parties the establishment of a long-range plan for the equitable sharing among the stockholders, the employees, and the public of the fruits of the company's program The formula shall give appropriate consideration to safeguarding the employees against increases in cost of living, promoting stability of employment, to reasonable sharing of increased productivity, labor cost savings, to providing for necessary expansion and for assuring the company's and the employee's program '

"As a result of this committee being established, they started to function almost immediately It was not, however, until approximately three years later that all of the subcommittees which had been appointed started to bear some fruit It was in December of 1962 that all of the subcommittees brought some concrete recommendations to the long-range committee for their consideration which they subsequently approved and the employees had the opportunity to vote on what we now know as the long-range sharing plan Incidentally, the employee vote was overwhelming in favor of the plan to the extent of about three to one This vote was taken at the end of the year 1962 It was not until March of 1963 that the plan was actually put into effect

"I think there is one important point I should make here Before the employees voted, the union representatives held numerous sessions for the employees to attend so that they could clearly understand the details

of the plan, how it would affect them, what it would do to them, and what they might expect after the plan was installed I think this was one of the basic reasons that the vote was so overwhelming in favor of the plan itself As you know, the plan was installed in March of 1963 and we have been working under it since that time

"I think, for this committee, inasmuch as I am sure you are interested in a little more depth than just the details of the plan, if we could. I would like to briefly go through the underlying facts and assumptions which is on page two This really had to be worked out and agreed to as sort of guidelines for us to develop the plan Item No 1—progress—is achieved by an industrial corporation and its employees as a result of many factors including, but not limited to capital investments, advances in technology, public investment in community services and facilities, a skilled, intelligent, and alert work force, competent and skilled management, mature labor relations, and free collective bargaining"

Summary of Key Factors

Plan Coverage

It is a single, plantwide plan, covering all United Steelworkers of America employees (production-maintenance and clerical-technical) at KSC, Fontana.

Employment Security

Protection is provided against loss of employment and of income because of technological changes (automation) or new or improved work methods.

Standards

Standards include labor performance, material and supply usage, yield movements, and utilization of technological improvements Standards are developed for various products to permit adequate reflection of changes in product mix, as well as changes in operating levels.

Establishment of Standards

Standards are based on the actual experience for the year 1961, adjusted for wages and benefits put into effect through January 1963

Calculated and Paid

The plan will be calculated and paid monthly Payments of sharing plan gains will be made on the last Thursday of the following month

Protection Against Inflation

Standards are adjusted monthly by appropriate BLS indices to reflect industry and national economic movements The wholesale price index is applied to material and supply standards, and the consumer price index is applied to labor standards

Technological Investment

Net gains from technological improvements made to reduce product costs are shared

Sharing Ratio

The employees' share of the total net dollar gains generated under this plan is 32 5 percent.

Wage-benefit Reserve

A portion of the employees' share may be allocated for the improvement of an existing or for a new benefit, as the parties may decide.

Distribution of Employees' Share

The employees' share is distributed to employees not now on individual incentives on the basis of historical and equitable earnings relationships. Each occupation is assigned to one of five groups, with the maximum range of earnings relationships being 4:1

Existing Incentives

Employees on individual incentive plans may, at any time, withdraw from coverage of such plan in favor of full participation under this plan. In addition, such employees have the option, when offered by the company, of accepting a lump sum payment to eliminate their individual plan and thereby participating in the long-range sharing plan; or of continuing on their individual incentive plan.

Minimum Guarantee

Provision is made to ensure that the sharing ratio of standard labor cost to total standard cost experienced in the past is maintained. Also, unless changed or modified by this plan, all existing agreements between the company and the union remain in full force and effect under their terms.

Other Agreements

Grievances concerning application of or compliance with plan provisions will be handled under existing contract procedures.

Review and Duration

The plan is subject to review annually, is not applicable during periods of no finished steel production, and may be terminated by either party on the fourth anniversary date, and each fourth year thereafter.

THE LONG-RANGE SHARING PLAN

Introduction

The October 26, 1959, agreement between Kaiser Steel Corporation and United Steelworkers of America included an agreement of the parties to establish a joint tripartite committee The committee was charged with the responsibility of formulating, for the consideration of the parties, a long-range plan for equitable sharing of the company's progress The plan was to contain appropriate safeguards to deal with increases in cost of living, and was to promote stability of employment, reasonable sharing of increased productivity and labor cost savings and to provide for necessary expansion, all aimed at assuring progress for the company, the employees, and the public interest

The plan developed by the long-range committee has been conceived in the light of (1) the objectives of the parties; (2) the type of industry of which the company is a part; (3) the nature of the collective bargaining relationships involved; (4) the methods of wage payment and their relationship to production which have evolved in the basic steel industry; (5) the desirability of establishing a means by which all the parties at interest can achieve their objectives without impairing the vital function of free collective bargaining; and (6) giving due consideration to the public interest.

Underlying Facts and Assumptions

1. Progress is achieved by an industrial corporation and its employees as the result of many factors including, but not limited to, capital investment, advances in technology, public investment in community services and facilities, a skilled, intelligent and alert work force, competent and skilled management, mature labor relations, and free collective bargaining.

2 In order to attain and maintain mature labor relations, constructive attitudes must be engendered. constructive employee attitudes toward their jobs, toward the importance of the success of the business enterprise, and toward management, reflected individually and collectively through their union An integral requirement for achieving such attitudes on the part of employees and of the union, is the development on the part of management of appropriate attitudes concerning all of the human factors involved Not the least of these human factors is the need for security, recognition, equitable treatment, and appropriate sharing of progress.

3 An industrial enterprise is properly concerned with maximizing the return to its shareholders and maintaining and improving its competitive position. Unit costs are certainly a factor, although not the only factor, in its ability to accomplish these objectives. To the extent that rising dollar costs, whether they reflect rising hourly labor costs or rising material costs or other business costs, are absorbed by increased productivity through decreased labor, material or other requirements per unit of production, they present no problem to cost stability. It is possible, of course, to attain even a falling unit cost under conditions of rising total costs, depending upon unit requirements for labor, materials and the like.

4. Employees, and the union representing them, are properly concerned with the employees' job and income security, a rising standard of living, equitable wages, hours and working conditions, and a fair share of progress achieved.

5 The public is properly concerned not only with the avoidance of economic conflict between the industrial enterprise and its employees, but also with the achievement of stability of employment, increased productivity, improved quality and service, and increased economic returns to the community.

6 Some of the measures necessary to achieve the company's objectives are outside of the sphere of collective bargaining. With respect to such matters as sales policies, purchasing policies, research projects, management compensation, expansion of capacity and other similar areas, no measure of control is exercised by the employees or their collective bargaining representative.

The cost implications of management decisions in such areas are almost, if not completely, unaffected by the employees. However, in the case of labor performance, material and supply usage, yield improvement and utilization of technological improvements, product costs are directly affected by the cooperation and performance of the employees, as well as by management. There is a clear-cut opportunity for improvement in these areas. The gains achieved are, furthermore, measurable.

These factors, therefore, should be used as the basic determinants of a formula for the sharing of the progress which results from the mutual efforts of the company and the employees

7 Such improvements are reflected in the production value of a company Production value is the cost (not price) of the product sold It is a plant's internal productive effort in converting purchased raw materials into its finished product It excludes, for example, selling, administrative and general expenses, depreciation and depletion, lose or profit on sale of property, plant or equipment, interest, taxes, and profits The production value at Kaiser Steel is made up of approximately two-thirds material and supply costs and about one-third employment costs The ratio of employment costs to production value (about 1 to 3) has remained quite consistent over a period of years. This, of course, reflects a variety of factors including the results of collective bargaining Sharing in this ratio through future periods would mean a sharing of gains in the proportions achieved in the past, without setting maximum limits to the potential which exists

8 Formulation of a sharing ratio will not, of itself, generate gains to be shared A vital key to such progress is the relationship between labor and management at all levels, and especially at the plant level Work practices exist in every industrial establishment In fact, specific practices which take on the character of rules governing or guiding conduct exist everywhere Practices are neither "good" nor "bad" in themselves Moreover, they cannot be evaluated outside of the context in which they arose and in which they exist Only those who know intimately the meaning which particular ways of doing things have for the people involved, can hope to be constructive in this area, thus making it possible to bring about the improvements which may be necessary to achieve a proper balance between the goal of the lowest possible product cost and the human factors involved And even where objective solution can be clearly seen, habits, customs, ways of doing things change but slowly even in the best circumstances

A sharing plan can contribute greatly to the elimination of the obstacles to progress in this area Under a sharing plan, there are mutual advantages in putting into practice the best methods available. The economic progress to be shared is based on the ability to achieve, through cooperative effort, an improving productivity while maintaining a consistently high-quality product A sharing plan which also alleviates well-founded fears of job insecurity, when combined with education, understanding and cooperative discussion, will provide an environment in which the agreement of those directly involved can best be achieved.

9. Progress toward providing employment security and, in its absence, progress toward income security of employees has been made by the company and the union principally through supplementary unemployment benefits, seniority provisions, pensions, severance allowance, and a certain amount of in-plant training Accelerated progress toward additional productivity will be encouraged by providing additional employment and income security to the employees The interests

of all concerned will also be furthered by a thorough study of the types of training and retraining programs which may be required and the means through which such programs can be instituted

10 The company's records of employee turnover—retirements, deaths, quits—reveal an attrition rate which has consistently exceeded the long-term rate of employee displacement due to technological change and other causes related to improved productivity To the extent that this remains true, workers hired by the company need not suffer technological unemployment Given an attrition rate which exceeds the rate of increase in output per man-hour, steelworkers suffer periods of unemployment because of cyclical downturns, or because of. (a) temporary lags of the attrition rate behind the rising productivity rate in a given period of time, (b) fragmented seniority units which result in displacement of senior employees from one unit while hiring of new employees is taking place in another seniority unit, and (c) inability, at a particular time, of individual workers to perform the work required by vacant jobs Important strides will be made toward continuity of employment and income security by providing· (1) that increases in productivity will not result in loss of employment or income for the employees; (2) greater integration of seniority units; (3) training and retraining programs for employees in relation to the skills required for prospective job vacancies, and (4) conditions which will lead to improved product quality and customer service in order to earn and keep customers Of course, any growth in the demand for steel will be of great, additional aid in accomplishing this aim

11 While it is practicable to move toward continuity of employment and income of present and future steelworkers, it is important to note that the larger problem of creating additional, new jobs is affected by considerations which lie, at least in part, outside of collective bargaining The steps which can be taken to resolve this problem within the sphere of collective bargaining include such measures for minimizing layoffs and income losses as noted above, actions designed to stabilize or reduce units costs as a step toward gaining a greater product market, and development of progress on an equitably shared basis to enhance purchasing power through increased compensation It is apparent though, that the many additional measures required to achieve greater employment opportunities are largely outside the area of collective bargaining

12 Wage incentives have been an integral part of the method of compensation in the basic steel industry for many decades. In the early days of Kaiser Steel Corporation's operations, shortly after World War II, the company and the union negotiated a wage rate structure. When standard hourly wage rates were negotiated in the basic steel industry, these were adopted at Kaiser and supplemented by additional compensation Such additional compensation was applied only to certain production units and was designed to yield compensation in relation to levels which prevailed for such production units at the largest steel companies' plants. Subsequently, this method of payment was changed at Kaiser Steel by agreement to install individual unit incentive plans where economically feasible. At the present time, approxi-

mately 40 percent of the company's employees are covered by incentive plans of various types; 60 percent receive no incentive earnings Furthermore, within the 40 percent covered, there is a relatively wide variation in earnings levels under these separate plans. As might be expected, this situation creates numerous problems of equity among the employees. What is needed, and is desired, is an integrated equitable system of compensation In order to achieve this through a long-range sharing plan, there are certain basic requirements The plan should be designed to operate in conjunction with existing incentives. It should provide a potential for immediate gains for all employees, incentive and nonincentive. It should provide a means through which, over a period of time, employees covered by existing incentives can achieve higher compensation without such incentives than through their continuance. And it should be designed to produce earnings relationships of a more equitable nature among all the employees.

13. The plan has been designed to meet these requirements and to provide for automatic sharing of all the economic gains arising from manufacturing cost improvements as they are realized. In so doing, the plan will serve to minimize the area of potential conflict by eliminating contract termination deadlines centered on wages and other economic benefits.

14. The company and the union, in establishing this joint committee, called for the creation of a long-range plan. The nature of this plan may require an extended period for the development of its full potential. Therefore, it would be advantageous to institute the plan for an extended period, subject to periodic review by the parties for evaluation of their experiences and of results in relation to their joint aims

Scope of Plan

The plan shall cover all employees of Kaiser Steel Corporation at Fontana, California, who are represented by the United Steelworkers of America. The plan shall become effective March 1, 1963.

The following are some salient portions of the statements of Mr. George Sirolli: "Very briefly, from what Ralph has covered from the beginning, I would like to say and I think we should emphasize very strongly, that this was perhaps the first time that both the United Steelworkers of America, and a major steel corporation, decided that it would be to the best interest of all parties, including the public, that they would have members that would in general represent the public and also, from time to time, inject their thinking in the management-labor relationship that might exist or problems that might arise. This is revolutionary, because, to the extent that in the past before they brought mediators or arbitrators, it is something after there has been a deadlock. And then there's some difficulty of choosing them, and also there might possibly be a strike going on, and this is a tremendous loss to everyone The Steelworkers Union and the Kaiser Steel Corporation realize this and we have provided, in case of a situation arising to where it requires the public members, so to speak, to inject their thinking in what they believe the thinking of the public would be in a particular item, that they are there, present, and it's agreed upon.

"Also to align briefly what has already been covered by Ralph, this is also revolutionary for a steel corporation to realize that the employees have a very major stake in the progress of the company, and also they realize that this is a continuous situation that requires keeping the people themselves briefed on the intended expansion of the company, and also the company recognizes that in the area of the technological change, that the employees are very uneasy, they are concerned about their jobs, especially as they get older and the company recognizes this and they agree with the United Steelworkers of America to provide for this I think it is a major step forward and I think we're going to build upon it, and I think that the fact that we have provided for security for our people in the area of technological changes that this will open an avenue to where the employees themselves will greater accept these technological changes because they feel they have a protection. They don't fear technological changes when they know they are not going to lose a job by doing it; they're going to be protected. Thank you."

CHAPTER 4

SUBCOMMITTEE ON INDUSTRIAL SAFETY

The Chairman of the Subcommittee on Industrial Safety was Assemblyman Edward M Gaffney Members of the subcommittee were Assemblymen Lou Cusanovich, John Francis Foran, Clair Burgener and Walter Powers

The Assembly Interim Committee on Industrial Safety has been functioning under the chairmanship of Assemblyman Gaffney since 1947 with the exception of the year 1952 The Industrial Relations Committee wishes to reaffirm the confidence expressed in the work of this committee in the 1963 Report of the Assembly Interim Committee on Industrial Relations, which stated

> "There is a continuing need for this type of committee In addition to its function of proposing legislation or administrative regulations to protect working people against injury or accident, it performs a service as a sort of watchdog agency "

We believe that the work of this committee over the years has helped to keep California in the forefront in the field of accident prevention and industrial safety

The subcommittee held hearings at the following times and places

September 30 and October 1, 1963, in Salinas, on the subject of safety in railway crossings

September 14, 1964, in Los Angeles, on the subject of the operation of high lifts and elevators on construction job sites, and matters related to employees' safety in work near high voltage wires (A B 2783, 1964 Regular Session)

September 21, 1964, in San Francisco, on the same subjects

September 28, 1964, in Eureka, on the subject of safety in lumbering and related industries

Safety in Railroad Crossings—Chualar Bus Collision

FINDINGS

1 The committee found no evidence that the railroad personnel was in any way at fault in this tragedy

2 The committee was unable to discover any violations or neglect in regard to the legal responsibility of the railroad company involved

3 No evidence was adduced that the bus did not meet the standards prescribed by law

4 It appears to the committee that human fallibility, particularly in reference to the bus operator, was the principal factor in this disaster

5 The committee finds that the State Department of Motor Vehicles may have been less diligent than desirable in its attention to the written examination in English required in the licensing of the bus operator

6 That the occurrence of tragedies involving the death and injury of farm workers in railway accidents while being transported by buses makes it incumbent upon the Legislature to give constant scrutiny to safety procedures in this field.

7 The committee finds that there are measures that can be taken to lessen the possibility of such accidents

RECOMMENDATIONS

1 The committee recommends that legislation be enacted requiring farm labor buses to contain a window providing a view of the driver's cab and a warning system from the rear to the cab

2 That windows be required along the sides of the bus permitting the passengers to see outside

3 That legislation be considered requiring a "lookout" to ride in the cab in farm labor buses where dangerous crossings such as railway rights-of-way are involved in the transportation of workers

4 That the Department of Motor Vehicles, Drivers' License Division, be required to include, in its examination for drivers of vehicles which transport passengers, eyesight tests for "tunnel" vision in addition to the tests already given

5 That railroad companies be encouraged to install gates where private roads and easements cross railroad tracks in places where it does not appear feasible to install a conventional type of signal or traffic control device

Hearing in Salinas, September 30 and October 1, 1963

On September 17, 1963, at 4 20 in the afternoon, a farm labor bus carrying workers from a celery field at the end of the workday, was driven directly in front of a northbound diesel driven freight train of the Southern Pacific Railroad at a private crossing on the Demeo Farms near Chualar in Monterey County Twenty-two of the bus occupants were instantly killed, and 10 more died subsequently of injuries All but four of them were Mexican "braceros" working in California under Public Law 78

The driver of the bus, Francisco Gonzales Espinosa, was not a "bracero" but an employee of the Demeo Farms Corporation residing and working in the area under a "green card" permit issued by the U S Department of Immigration Riding in the cab beside the driver was the crew foreman, also an employee of Demeo Farms Both escaped serious injury, since the bus was struck at a point approximately two-thirds of the way toward the rear

At the time of the hearing, the driver was being detained under charges of felony manslaughter, and was not permitted to testify, and the California Highway Patrol was under instructions from the Attorney General and the Monterey County District Attorney not to divulge any statements made in the course of the investigation as a privileged communication The charges against Mr Espinosa were subsequently dropped

Both the driver and the vehicle were validly licensed under the Motor Vehicle Code, and the bus was carrying less than the maximum permissible load

Under the direction of Captain Francis Simmons, the California Highway Patrol carried out a very thorough investigation of the circumstances of the accident, including several reenactments of the episode using a similar vehicle and under similar conditions

Captain Simmons described the bus as follows:

"The original unit was a 1950 Ford, actually a two-axle cab-over-engine truck Through the years it had been completely rebuilt and modified, including stripping of the cab, the motor on it, and somewhere in time gone by a 302-cubic-inch General Motors engine was installed in this unit So it was a V-8 The persons responsible for installing it we do not know because the information would not be released to us by the company which had done the work

"On the truck chassis the custom-made body—the package unit which is fabricated here in Salinas by a local manufacturer for the purpose of transporting farm workers—was then mounted as a separate component."

As to the permissible capacity of the bus, Captain Simmons testified

"The rated capacity on a labor bus is predicated upon actual linear measurement of the interior That is, the number of inches per individual seating is 18 inches per human being of seating space and a minimum of 24 inches of aisle space where two of the benches of seats face each other. In this particular bus, on the basis of the measurements of the seating capacity, computed on this linear-inch basis, the capacity in the back of the bus was 69 persons."

In other testimony it was established that the windows of the bus were set high up in the body, so that the passengers were unable to see outside The crew foreman riding in the cab with the driver, was checking his timecards at the time of the impact and did not observe the approaching train

The accident occurred on a private road within the boundaries of the Demco Farms, at a point near the juncture where this road enters U.S Highway 101 at a right angle to the highway The Southern Pacific right-of-way crosses the farm in a direction parallel with Highway 101.

On the matter of the crossing, Captain Simmons testified as follows:

"I think it probably should be clarified that the particular roadway in question is a privately owned, privately maintained ranch road. The crossing, the Southern Pacific right-of-way, naturally is the property of the Southern Pacific, and insofar as any warning signs or official traffic control signals are concerned, the only thing that is there is the sign that it is a railroad right-of-way There was not, in the parlance, a sawbuck, which is a crossarm for railroad; there were no advisory or warning signs that this was either a private road or that there was a railroad crossing or track there "

The authority of the California Public Utilities Commission in the regulation of railroad crossings was summarized by James K. Gibson, and further clarified in answer to questions from the subcommittee Mr. Gibson testified, in part, as follows

"The California Public Utilities Commission is given authority by the Public Utilities Code, Sections 1202 and 1201 and some of the others, to authorize the opening of any public or publicly used crossings, and that has been in effect for some 50 years So whenever a grade crossing is opened in this state, the party wishing to open it, be it the railroad, the county, the city, or the State Department of Public Works, they must seek our authority to open that crossing, and the commission, by a hearing or otherwise, prescribes the protection to be put on those crossings, on that particular new crossing

"The code also gives authority over all existing public or publicly used crossing and to prescribe the terms of protection, use and operation of those crossings That, in general, is our authority on those crossings"

Question "Could I ask when this particular crossing was opened and was it under your jurisdiction when it was opened?"

Mr. Gibson. "This particular one at Chualar?

Question "Yes"

Mr Gibson: "No, sir. We do not have it listed as a public crossing, and my investigation indicates that it is a private crossing and is covered by a deed"

Question. "Then it was never under the jurisdiction of the PUC?"

Mr Gibson. "Well, they never came to us for authority to open it. I understand it was opened in the seventies some time, and that was long before our commission was in existence"

Question· "Has there ever been any other problem on this particular crossing?"

Mr. Gibson: "We have never had any other accidents We have never had any complaints about it"

On the matter of state regulations on buses stopping at railroad crossings, Captain Simmons testified as follows

"The Vehicle Code is only specific insofar as public streets and railroads are concerned, and the Vehicle Code laws are not in effect on private property or private roads, unless there is an enactment of legislation by local authorities So actually, technically and legally, the Vehicle Code was not in effect at this particular place because it was a private roadway"

Federal requirements relative to the transportation of "braceros" were read into the record by Randolph Kerr, General Attorney for the Southern Pacific Company, as follows:

"Pursuant to Public Law 78, there has been issued by the Government Joint Operating Instruction No 4, which I recite

"A The Migrant Labor Agreement of 1951, as amended, imposes upon the employer of Mexican nationals the responsibility of the safe transportation of the workers during the period of their employment whenever he provides or is responsible for providing transportation.

This responsibility remains even though the employer provides transportation through independent contractors

"Section J of this Joint Operating Instruction No 4 provides every motor vehicle transporting Mexican workers shall upon approaching any railroad grade crossing make a full stop not more than 50 feet and not less than 15 feet from the nearest rail of such railroad crossing, and shall not proceed until it has been ascertained that the course is clear.

"Section E, Subsection 6, provides that no employer shall operate or require or permit any person to operate a motor vehicle if there is any person or object in or on the vehicle which obstructs the operator's view or interferes with his freedom of movement to operate the vehicle

"No employer shall operate, or require or permit any person to operate a motor vehicle unless, when driving six or more workers, the operator is at least 18 years of age and possesses a valid appropriate chauffeur's license under the law of the state in which the vehicle is being operated"

Mr Karr's full statement is as follows

"Robert E Cripe was the locomotive engineer and J W Cady was the locomotive fireman on locomotive No 5857, which was the leading unit of a freight train consisting of four diesel locomotive units and 70 freight cars which collided with a labor truck owned by Demeo Farms, Salinas, California, and operated by Francisco Gonzales Espinosa on September 17, 1963, at a private road one and one-half miles south of Chualar railroad station, Monterey County, California, at about 3 23 p m, Pacific standard time, which is 4 23 daylight saving time.

"The freight train originated at San Luis Obispo on the morning of September 17, 1963, and was enroute to Chualar and Watsonville Junction at the time of the accident

"The leading diesel unit was equipped with an air horn, two oscillating headlights, two fixed-beam headlights, and a bell of approximately 60 pounds weight All of these devices were tested in San Luis Obispo prior to the departure of the train and were in proper working order

"Standing brake tests and running brake tests were conducted in San Luis Obispo prior to the departure of the train, and the brakes were in proper working order The train was stopped from time to time between San Luis Obispo and the scene of the accident, and the brakes at all times responded properly The whistle, bell and headlights were at all times in good working order

"The engineer, Mr Cripe, occupied the right side of the engine cab in the direction of the movement, and the fireman, Mr Cady, occupied the left side As the train approached the crossing at which the accident occurred the engineer, one-quarter of a mile south of the crossing, sounded the crossing whistle of two longs, a short, and a long, and when it became apparent to him that an accident was imminent, he changed his last long whistle to a series of short, abrupt blasts which continued until the leading locomotive passed over the crossing

"As the locomotive proceeded in a northerly direction approaching the crossing, the fireman, Mr Cady, observed the labor truck proceeding at a slow rate of speed in an easterly direction on the farm road toward the railroad track Mr Cady observed that the engineer commenced blowing the whistle when the train was one-quarter of a mile south of the crossing When the engineer commenced blowing the whistle, Mr Cady put the bell into automatic operation, which continued across the crossing

"The labor truck stopped, as observed by both Mr Cripe and Mr Cady, when the truck was 10 to 15 feet from the track, and then slowly started forward When the railroad train was approximately 10 to 15 car lengths—and you compute that at 50 feet per car—from the crossing, both Mr Cripe and Mr Cady observed that the labor truck slowly started up from its stopped position and proceeded forward toward the tracks

"When this was observed, Mr Cripe immediately applied the brakes in full emergency In this particular case, he was going to stop at Chualar and had already put a slight amount of air on so that his brake shoes were up against the wheel, so that there was no lapsed time It was one of those times where the brakes—as soon as you threw the air over—were in full emergency

"Just before the impact, Mr Cripe and Mr. Cady threw themselves to the floor of the cabin in an effort to avoid injury Mr Cripe continued to blow the whistle from his position on the floor of the cab The emergency brakes took hold immediately after the application and the train came to a complete stop with the engine approximately 3,440 feet north of the crossing, and he will tell you they took a lot of metal off the front of the cab at that point At the time the brakes were applied in emergency, the train was moving at approximately 60 miles per hour The stopping distance was good The applicable company speed limit for this train was 65 miles per hour "

An eyewitness account of the accident was given by Robert Cripe, the locomotive engineer, as follows

"Approaching the quarter-of-a-mile whistling post, I sounded the regular regulation crossing whistle Just prior to sounding that whistle at a quarter of a mile I had to head into Chualar, so I had made a slight automatic reduction of my brakes to set the brake shoes up against the wheels of our train That is always customary That was about, just a little bit longer than 1¼ miles, and at the quarter-mile whistling post from the crossing I started my regular crossing whistle

"Just before I stopped blowing the whistle—I guess maybe a few seconds before—I observed this farm truck coming toward the railroad crossing Just before I ended the crossing whistle that truck came to a complete stop momentarily He stopped momentarily Then he just started to move again, very, very slow It is hard to imagine anybody at a railroad crossing trying to go across slow like that, and I immediately started to give short sharp blasts of that whistle, and I immediately put the train into emergency application at the same time I told the fireman, I said, "We're going to hit him," and he hit the floor, got his back up against the cabinet I ducked down behind my automatic brake belt for protection and kept the whistle going continually until after the crash."

On the question of the employment of the bus driver, Mr. Jack Bias testified as follows.

"Under the regulations of the Department of Labor, a bracero is not permitted to drive a bus or any mechanical equipment. So the individual growers employ their own drivers. They are employees of the grower and they are required to have a chauffeur's license Our office has six fieldmen checking to see whether the drivers are qualified In addition to that, the Department of Labor in the Salinas office has four compliance people checking not only on the drivers of the buses, but on the camps and the regulations of the department In addition to that we are insured by the State Workmen's Compensation Fund

"The function of the growers association—when we are using braceros—is to bring in the braceros. The grower first must go to the Department of Employment and place an order with the department for domestic workers, and he must show his acreage, the type of acreage he has, the type of employment that is going to be needed, and not until the Department of Employment determines there are not sufficient domestic workers to do that type of work will they certify for braceros.

"When they do certify for braceros, the grower then notifies the association, and we get a 3401 order from the Department of Employment and then proceed to contract for braceros at the center. The braceros are brought in for and on behalf of the individual grower who has received his certification They are delivered to his camp or to our office, where he will pick them up in his buses. It is our function to see that the grower knows all of the regulations that are required by the Department of Labor and to see that he complies with these regulations."

The responsibility of the State Labor Commissioner was defined by Mr. Walter F Swope as follows

"The State Labor Commissioner's office is charged with the responsibility of licensing farm labor contractors and, in addition thereto, enforcing workmen's compensation acts Of course, if there is a labor contract involved then we are concerned with liability insurance on the equipment or the vehicle involved So we have three primary functions, and I immediately checked with the employer following the notification of this accident, and we determined that there was not a farm labor contract involved; that the driver of the truck was an employee of the Demco Corporation—that is, David E. Meyer's Company—and that the greater portion of the passengers were Mexican braceros here under Public Law 78

"So the Labor Commissioner's office then had a very small part to play in this Our greatest concern is that there should be workmen's compensation insurance, and I examined the compensation policies and found that the employer was properly insured through the State Compensation Insurance Fund and that it provides full coverage In addition thereto, the employer, Demco Corporation, did show me that they carried a liability insurance with, I should say, excessive limits."

Mr. Arden P. Jacobsen, supervising driver improvement analyst, Division of Drivers' Licenses, Department of Motor Vehicles, testified

as to the department's licensing procedures covering the situation under inquiry The department's records showed that Mr Espinosa first applied for an operator's license in 1956, and that on August 16 of that year he failed a written test in the Spanish language on his first attempt.

On August 27, 1956, he repeated the test, again in Spanish, and this time received a passing mark On August 17, 1959, he applied for a chauffeur's license and passed all the written tests, this time in English, since these latter tests were not given in Spanish On both occasions he also passed the visual test and signed the required oath as to his physical condition

Questions by the subcommittee brought out some significant details as to the physical and visual examination required by present law

Question "Was any physical examination given?"

Mr Jacobsen "None other than the visual one and the statements on the reverse side as to physical disability"

Question "Would you kindly tell the committee how extensive the test on vision is?"

Mr Jacobsen "Primarily the only testing is for visual acuity"

Question "Could you briefly describe in laymen's terms what is required for a chauffeur's license in the way of vision? Not this particular man, but generally"

Mr Jacobsen "Well, the screening standard is 20/40 in his best eye, and not over 20 points difference between it and the poorest eye In other words, if one eye was 20/40 and the other 20/60, that would be passing the screening standard But if they go beyond that, then they are required to go to an eye specialist, or eye doctor, and get an examination indicating whether glasses are needed and whether they are being obtained Then when the applicant returns with the necessary correction, he is tested with the correction"

Question "Is there any test on angular degree from the point of direct vision as to encompassing the vision on the right or left side of the person?"

Mr Jacobsen "No, sir There are tests such as that available, but the department does not give that type of test"

Question "Do you know that there are persons who cannot see more than 15 or 20 degrees of the semicircle on the right or left, and it is called tunnel vision?"

Mr Jacobsen "That is correct, and there should be more adequate testing"

It has been noted above that the subcommittee had no opportunity to interview the bus driver, Mr Espinosa, since he was then being detained under felony charges, and his statements to enforcement officials were held to be privileged communications The subcommittee was informed, however, that his interviews with the officials concerned had to be conducted through a Spanish-English interpreter, although the records of the Department of Motor Vehicles showed that he had passed the written test for his chauffeur's license in the English language

Employees' Safety in Work Near High Voltage Wires—A.B. 2783

FINDINGS

1 The committee finds that the resistance to this type of legislation by the management of both privately owned and publicly owned utilities was not tempered by constructive counter recommendations.

2 The committee believes that legislation assuring greater protection to those working near high-voltage wires is needed, but that more information and study are required in order to work out the precise language of legislation which would afford this greater protection without unduly hampering or burdening those involved

RECOMMENDATIONS

1. The committee recommends that legislation be enacted to bring Section 385 of the Penal Code into conformity with the more precise language of the safety orders of the Division of Industrial Safety with respect to the placing of cranes near high-voltage wires.

The following are pertinent excerpts from testimony given at these hearings:

FLOYD A. GOSS, *Electrical Engineer in Charge of Operations, Los Angeles Department of Water and Power:*

We have as great an interest as you have in this question of the safety of people who work in the vicinity of high-voltage lines I am a member, and have been for a number of years, of the Industry Advisory Committee to the Division of Industrial Safety I think my comment, generally, is that it seems to me that this question of working safely in the vicinity of high-voltage lines is well covered in the safety orders of the Division of Industrial Safety In my opinion, it is covered better there than it is in this bill It goes into more detail As you know, this matter is also covered in the Penal Code, Section 385, which gives the division, in my opinion, sufficient powers of enforcement.

So, in my opinion, the bill is not necessary to accomplish this thing we're all interested in, and that is the safety of people working in the vicinity of high-voltage lines I have some specific reasons for feeling that subject matters such as these are best covered by the administrative orders. And one of them is, it's been my experience that as we go along through life, we do things better as new methods, improved methods of performing work become available to us, and this requires changes in the orders to reflect that And it's much easier to change them than it is to change provisions of the code itself.

As far as the specific bill is concerned, I think there is apt to be confusion and there's a chance of confusion arising out of three sets of orders covering the same thing. One, of course, in the Labor Code, the second the orders of the Division of Industrial Safety, and the third the Penal Code For example, in this proposed order, high-voltage is defined as in excess of 600 volts under the present amendment; whereas, in the electrical safety orders it's 750 volts, as it is in the Penal Code.

Furthermore, I would refer to the provision that's been added in the amended bill beginning on line 6 of page 2 I'll read it "The provisions of this section shall not be applicable to tools, machinery or equipment personally used or operated by qualified electrical workers engaged in

construction, reconstruction, etc." This would mean that only a qualified electrical worker could operate such things as are normally operated by licensed equipment operators in the state and the general practice for the use of cranes and lifts by the utilities building, operating and maintaining these lines is to use equipment operators rather than electrical workers

Now, my only other comment is related to the amended bill, beginning on line 39, page 2, in which a qualified electrical worker is defined In almost every bill that comes up before the Legislature that has anything to do with industrial relations, this question of the definition of a qualified electrical worker is raised It's my position that I don't think it's within the prerogative of the Legislature to qualify people for electrical work; I think that's the responsibility of the people who use them, it's the responsibility of the unions, and I think working together we can best qualify our workmen For example, under this it would require a man having a minimum of four years' training experience under the instruction and direction of a qualified electrical worker who's familiar with the hazards involved Well, this four years is a rather arbitrary thing It may not at one time be necessary to have four years, it may require more than four years or three years

EDWARD V MULLER, *District Engineer in the Construction Section, Division of Industrial Safety:*

There are two provisions in the bill that I would say I think will do some good, although I'll frankly admit there isn't universal agreement on it One of these is the insulated cage-type guard around the boom and the other is the insulated hook I have personally investigated a number of accidents where, if these things had been provided and maintained in good condition, they would have saved lives The fear has always been that if this were made a provision, it would tend to make the operators careless, because they would feel it was safe to operate the equipment near a line and this is one of the things that many people have been opposing But I am sure that there would have been a number of cases where it would have saved lives if these things had been provided.

There is another point under items 1, 2 and 3 on page 2, which has caused a little concern on the part of the division, because it appeared to be putting the cart before the horse There are 11 field engineers in the electrical section to cover the entire state and they can't possibly keep up with these things Another thing that they have been faced with is the attitude in the courts I have taken a number of these cases into court In one case the judge said, "Well, I'm not going to find you guilty, it won't bring the dead man back" This is where a man was killed In another case a man was killed and the judge said, "Which would you rather have, a small fine or ninety day probation?" No sentence, just ninety days probation Report to the court every 30 days In other cases we've had fines of $25 I understand if you catch 11 fish and the limit's 10, they're liable to fine you $50 This is the thing that we're up against in trying to enforce these kinds of provisions and save lives It hasn't been any laxity on the part of the division; it's been partly the lack of personnel and partly the attitude of the

courts, which have never been cognizant of what's involved in these industrial accidents.

M A WALTERS, *Assistant Business Manager, Local 1245, International Brotherhood of Electrical Workers:*

With respect to A B 2783, we feel it addresses itself to a problem of the building and construction industry which has become increasingly evident in recent years With more and more high-rise buildings under construction, the use of high lifts and elevators on construction probably has grown with the result of construction workers being subjected to increased exposure to overhead high-voltage lines Not being in this industry myself, I don't have any statistics as to the results of such exposure, but being in a related industry, the utility industry, I have from my own knowledge evidence of electrical contact in this kind of situation While there are existing statutes directed to the foregoing problem, such statutes only provide coverage for a portion of the problem We feel that A B 2783 goes more fully to the heart of the problem and places the corrective legislation and preventive measures in the Labor Code where they properly belong This because employers and employees alike are more likely to go to the Labor Code than to any other orders for matters relating to employment practices and policies

We also recognize the hazard involved in working on energized high-voltage lines and equipment, and believe that in providing any exemptions, the Legislature should take the necessary steps to provide reasonable assurance that workmen are qualified by training and experience to protect themselves before they are exposed to the hazards involved Thus our support for the second amendment which defines a qualified electrical worker In our opinion, anything less than this definition would be inadequate

I have heard the statement made that the existing provisions of the electrical safety orders cover this subject adequately and that nothing further is needed. I would point out that there are provisions in the bill which are not covered in the electrical safety orders, and these are covered in Sections 7852, 7853 and 7854, which I think are very important In addition, there is a provision in the safety orders as they now exist which grants an exemption from the provisions of the safety orders which the bill would not grant The exception that the safety orders provide exempts the employees of the utilities from the provisions that are comparable in the orders However, the provisions of the electrical safety orders go one step further They also exempt the employees of employers who are performing work for the utility companies and this, I think, is a very important factor because the utility companies hire contractors to do various functions for them which require their employees to get within six feet of high-voltage lines.

For example, the utility companies, some of them, will hire painters to paint their towers carrying voltages anywhere from 60,000 on up to 200,000 With the advent of new techniques these are going on up to 500,000 and 750,000 on extra-high-voltage circuits There have been instances in the past where these painters have gone up to these towers, not familiar with the hazards and not being able to see which of the lines were energized, or on which side of the tower the lines were

energized and on which side they were not energized, and have gotten too close to the high voltage circuits and there have been accidents as a result

But of even more concern to me is the practice of the utility companies of letting out line clearance contracts That is, they let work out to tree-trimming contractors to provide tree clearance from their overhead lines In the tree trimming industry they take employees who have had absolutely no experience and put them into trimming trees around high-voltage lines—maybe a month or two, and they get them closer than six feet to these high-voltage lines Now the existing safety orders permit this to be done The bill, as it is before us, would preclude this from being done

ALBERT G BOARDMAN, *California State Conference of Operating Engineers:*

We have in excess of 20,000 members working in the State of California Our people operate the heavy-duty cranes and the hoisting equipment used on construction projects Our people are the ones usually involved in accidents where people on construction jobs are killed due to cranes contacting high powerlines and also due to equipment failure by these cranes Our people are subject to charges of a felony whenever such an accident happens Our people are not usually the ones killed in these accidents, it is usually the laborers, the people working on the ground around the cranes They are electrocuted, and this is of deep concern to my organization Our operators are usually pretty well grounded where they sit and are not killed But we are concerned with the poor man who gets caught on the ground and has no ground—nothing to take care of him

Under A B 2783 there would be insulation on the top part of the boom and this insulation probably would save the lives of many people for the very simple reason that when these accidents happen it is not one person who is killed but several We know that the state has a law that requires that the operator of a crane must not get within 6 feet of a powerline, but we are very much aware of the fact that, whether it is 6 or 12 feet, when a man is operating a crane and is occupied in placing materials, concrete, forms, there is always the possibility of a slip There is also a possibility that our people sometimes can be careless and careless people are usually killed

We are also under a tremendous pressure of speed—the requirement to rush a job The contractor makes his money by getting the job done as rapidly as possible This puts the pressure on the man who handles the big equipment because he is the producer, and when the pressure is put on him, sometimes unconsciously or sometimes under order, he moves in close to these big powerlines—and all you have to do is let your foot slip and you're into them Now any kind of insulation, any insulator that would save the life of the man on the ground, we are in favor of We feel, though, that this might just remotely give our people a false sense of security when they're working around these cranes But I believe that that possibility and that gamble is worth taking if we can save the life of just one man

NORMAN E WOODBURY, *California Municipal Utilities Association:*

Our association is composed of, I think, all the cities in the state which have their own utility system and also a number of the public utility districts, municipal utility districts, and special districts which have both water and power in their systems Our primary point to make today is that many of our members have been on the committee, which is appointed by the DIVISION of Industrial Safety, which tends to review and to recommend changes in the industrial safety orders I have talked to many of these men who tell me that the place for safety is in the safety orders rather than the general statutes, such as the Labor Code There are several reasons for this One is that this committee can be called at any time during the year to review those types of orders which have been found to be wanting, and make immediate changes, recommend those changes for immediate adoption This is keeping current the thing that should be kept current, which is the safety of the workers It should not be left up to the general course of change which we find in our legislative system When you are dealing with safety and with men's lives, these are matters which should be changed immediately, if necessary

Now, my people at least have found extreme satisfaction with the general safety orders from the standpoint of being called in for consultation on these matters, and these are top electrical engineers, top construction people in the municipal field And they tell me that such things as these safety booms have been discussed and rediscussed for years And they still feel that the reliance upon a crane with certain insulation—and it is my information that this insulation has a certain maximum capacity and does not compare in any sense with the type of insulation necessary when you're coming in contact with certain high voltage wires—permits the lessening of the human responsibility for the operation of these cranes

There are certain tiedowns and certain safety restraints on the degree in which this crane can move, and that is the real safety factor which should be considered It is in effect This has resulted in very little loss of life where these have been followed It is my information that there has been no loss of life attributable to the use of a crane in contact with a high-voltage wire where these tiebacks, tiedowns have been in operation

I think our main presentation to the committee is that those of my association who have been in this field of high voltage power lines feel that these things can best be handled through safety orders

JACK VALOV, *Supervisor for the Construction Section, Division of Industrial Safety:*

The Legislature can pass, say, a minimum or a maximum law, as you might look at it, in this case the 6-foot law If the problem becomes severe, then through administrative practices and approaches we may ask for, say 12 feet But the aggravating situation we have today is perhaps more clearly pointed out in the safety committees' actions in Fresno and other places We have had a statutory law which has required a sign in cranes to the effect that it is "unlawful to operate this equipment within six feet of high-voltage lines " This is in the Penal

Code But the safety committees were so aggravated by this obvious misinterpretation, or we'll say misdirection of the crane operator himself, that they are asking that all cranes or pieces of equipment have a second sign which states "All equipment shall be so positioned, equipped, or protected, that no part shall be capable of coming within six feet of high voltage lines" The first sign says unlawful to operate The intent is that you do not position yourself—that you at no time can allow the violation of this six-foot rule So now we have the strange situation where one sign must read "Unlawful to operate within six feet of high-voltage lines" because the Penal Code requires this sign Then we put another sign in there which will state "Unlawful to position, equip, and so forth" We would like to have the Penal Code changed to more clearly indicate what we mean Not just to operate, but even to position the crane

JOE ROBERTS, *Labor Liaison Representative, Division of Industrial Safety:*

The DIVISION of Industrial Safety electrical section has a safety order, 2363 I believe, which was promulgated and adopted years ago at the insistence of labor because of so many men being killed by electrocution That order spells out that not only must the crane be kept six feet away; it goes further than that and says, even loads or any part of that crane shall not be able to come within six feet of a high-tension line It's spelled out so that, for example, if a boom would fall, it would fall clear If a cable would break, it would break clear of the six-foot line If a load was attached, if the load swung around, the load couldn't touch the six-foot line Now that's the safety order we have on the books

However, since that time the Legislature added a section to the Penal Code—it is now Section 385 of the Penal Code—which requires the posting in plain view of the crane operator, of a durable sign legible at 12 feet reading "Unlawful to operate this equipment within six feet of high-voltage lines" That's the matter that was brought out here, that you have a sign saying that it is illegal to operate a crane within six feet, and actually it doesn't do the job Actually, the safety order in itself, if it were in the Penal Code, would say that no part of this load should be able to come within six feet of a high-tension line Then we would have it covered

E E CARLTON, *Supervisor of the Electrical Section, Division of Industrial Safety:*

I would agree with the other speakers that the insulation provided in the form of an insulating device between the hook and the line and also a cage around the boom would probably save some lives, but this would only be in the case where the insulation were maintained. And this is pretty difficult to do Many of these booms on these mobile cranes are as long as 125 feet Most of your overhead lines range in the vicinity of from 28 feet to about 35 feet clearance above the ground This is an economic problem Most of the lines that you operate around in construction fields will be in that neighborhood, which means that if you have a boom 125 feet long, probably the outer 100 feet of this would have to be covered with this cage, and since the boom has to be guyed

back to the body of the crane, this becomes a cumbersome, bulky affair Add to that, many times during the day this insulating link would probably be just above the hook, because they need the weight there to get the hook back down as the load is released to pick up a fresh load. This would mean, in many cases, that the boom and the hook and the link would lie on the ground And you're familiar with a construction job Most of them are pretty muddy and dirty, and so maintaining that high degree of cleanliness on that insulated link to make sure it is fully insulated at all times, it would be a practical problem that would be pretty difficult to maintain

The same would be true with the framework or cage that you would build over the boom, because at lunchtime, or coffee break, or end of day, normally they lay those booms down on the ground, which would mean they're in the mud, and these insulators are of the nature that if you're going to try to put them up there structually, they can't be too long, and the result is they would not be insulated for some of the voltages that you might come in contact with We now have voltages as high as 110,000 volts running into the customers' plants

From a practical standpoint, keeping six feet away from a high voltage line is providing reasonable safety As long as a man can keep that equipment away from it, the people on the ground are reasonably safe. So the cage and the link are good factors, but we don't think this is a substitute for keeping away from the line We don't think this should be accepted as a substitute It might be a supplement to these but it is no substitute for staying away from that overhead line

Operation of High Lifts and Elevators on Construction Jobsites

FINDINGS

1. The committee finds that attention to safety needs in construction elevators was most timely. The Division of Industrial Safety of the Department of Industrial Relations is in the process of revising, improving and modernizing its safety orders in this field The committee believes it has been of assistance to the division in this endeavor

2 The committee finds that most of the safety problems in regard to elevators and high lifts can be met by safety orders of the division, but it does appear to be desirable to provide for some amendments to the State Labor Code in order to facilitate the activity of the division

RECOMMENDATIONS

1 That the inspection of construction elevators and the administration of safety provisions related to them be made the responsibility of the Elevator Section of the Division of Industrial Safety

2 That there be a clearer distinction made in the Labor Code between construction elevators, high lifts and hoisting devices by amending the language of Section 7200 of the State Labor Code in order to provide for such clarification.

The following are pertinent excerpts from testimony given at these hearings:

JOHN E DOWD, *Business Manager, Local 18, Elevator Constructors Union:*

The committee I represent has put in about 2½ to 3 years work on this particular item of construction of personnel elevators I would like to bring this up to date and advise you exactly of the action that has taken place recently This, of course, is our position, and the people that I have contacted and talked to throughout the State of California—and I might add, other states around the country—are interested in pushing for the construction of personnel elevators for the protection of the men who up until now have been made second class citizens We furnish safe elevator transportation for office employees, janitors or anybody else, but if you have to be working on a construction job, they give you some broken-down material hoist or something else that is far from the California Code of Safety in respect to elevator equipment It is our concern that we could do something for the construction personnel who are working in the State of California

An analysis prepared by the Legislative Counsel of present law and safety orders in this field reveals that we are very lax as far as construction personnel elevators are concerned This is the reason for the activity on my committee's part to place these construction elevators under the jurisdiction of the Division of Industrial Safety, not just to erect them and put in a signal system and turn them loose We want the safety devices adequate and operative and this is the reason for this particular proposal to add, commencing with Section 7210 of the State Labor Code, the following amendments relating to construction personnel elevators:

An act to add Article 4 (commencing with Section 7210) to Chapter 1 of Part 3 of Division 5 of the Labor Code, relating to Construction Personnel Elevators

The people of the State of California do enact as follows:

SECTION 1 Article 4 (commencing with Section 7210) is added to Chapter 1 of Part 3 of Division 5 of the Labor Code, to read:

Article 4 Construction Personnel Elevators

7210 As used in this article

(a) "Construction personnel elevator" means any elevator used to hoist persons on a building under construction

(b) "Building" means structures of all kinds during the course of construction regardless of the purpose for which they are maintained and whether or not such construction is above or below the level of the ground

7211 A construction personnel elevator shall be furnished to transport employees on all buildings when the construction has progressed beyond the fifth floor level, and no employer shall permit employees not directly connected with the installation of floors or elevators to work above the fifth floor level until temporary elevator equipment has been installed and is operating on the sixth floor level, and, except as provided in Section 7213, on all levels thereafter

7212 Construction personnel elevators furnished as required by this article shall comply with the standards for passenger elevators adopted by the division pursuant to Chapter 2 (commencing with Section 7300) of this part

7213 Where a temporary installation of elevator equipment is installed to provide a construction personnel elevator to comply with this article at other than the permanent location of elevator equipment in the building, the elevator service need not be extended beyond the fifth floor to newly added floors until at least three additional floors have been added to the building

7214 Construction personnel elevators shall be used only to transport persons and their personal hand tools

JAMES E BUSHER, *District Engineer, Elevator Section, Division of Industrial Safety:*

Normally, we inspect, if an issue permits, for all elevators in the state, and I have charge of the elevators in the southern part of the state. We do not, at the present time, cover construction elevators. They come under the construction code and not under the elevator clause. We act as consultants for the construction section, and our men who are trained in elevator construction work go out with the construction engineers and actually run safety tests and inspect the construction elevators We are limited because we have to work in this case under the construction orders and it is my opinion, in conferring with Mr. Dowd, that these orders are not sufficient. They don't supply the man working on the construction job with the same safety that he would have if he came into this building and rode the elevator here I think in the past it has been looked on as a temporary hoist, and for this reason there was a certain laxity in safety devices as covered by the California Elevator Safety Code I believe that a separate code for construction elevators or elevators used in construction. temporary elevators, should be written and incorporated in the California safety orders under the Labor Code, because as they are written now, there may be cases where they are not practical.

The normal trend now is to have a separate elevator tower that is put up on the outside of the building to be used for construction There are cases in which a permanent elevator is temporarily installed in the permanent elevator shaft if it is going to be a large building and they are going to have several elevators, and this is used for construction However, it is usually quite late before this elevator can be put into use. There is a long period where there is no elevator

These construction elevators will have to have a competent person to operate them and also competent people to maintain them. This is a big feature of these elevators and they need numerous inspections Normally, the elevators like the ones in this building are inspected by law once a year On a construction job, in my opinion, they should be inspected every three months and a permit issued each time Every time they are moved, they should be inspected and safety tested again

INMAN S. REID, *District Engineer, Construction Section, Division of Industrial Safety, Department of Industrial Relations:*

There is no conflict between the Construction Section and the Elevator Section within the Division of Industrial Safety Now a comment was made on high-rise buildings, and I might further clarify that to this extent: that the removal of the height limit on buildings in Los Angeles has highlighted this problem of construction elevators or elevators for construction personnel It was not half as much of a problem with men climbing 10 to 12 stories as it is climbing up to 30 stories, so the Construction Section of the division has been well aware of the need for personnel elevators on high-rise buildings, and also a need of close supervision over these so-called construction personnel elevators We heartily agree that there should be some regulation requiring elevators for construction personnel starting at some figure, whether it is four stories or six stories, but for a regulatory body to decide.

One means of hoisting construction personnel allowed at the present time are the so-called man lifts, which are endless belts with platforms on the belts Personally I don't approve of those and I think that is something that needs to be considered along with the whole problem of construction personnel elevators There have been at least two bad accidents this year in southern California involving the use of these man lifts.

JOHN WITTE, *Chairman, Safety Committee, Associated General Contractors:*

We have worked for the last five years and more accurately the last three years, in two groups One is the Governor's Safety Group, which meets in this very room occasionally during the year Then we have a committee for the Revision of Safety Orders, and we have been meeting for the last three years, I would say on the average of twice a month, with the idea of drawing up new revised safety orders We have had meetings in southern California in Los Angeles, and in the north in San Francisco, we have had two sessions in Fresno I might add that the committees are made up of representatives of labor and management and representatives from the Department of Industrial Relations. Now between those meetings and those people we have come up with what we feel are adequate safety orders pertaining to any phase of construction We have been working on these from five to seven years and it has been accelerated the last three years, particularly this year when it was all brought to a head We now have safety orders that are ready to go to public hearing in San Francisco and in Los Angeles the first of next month Now at the public hearing there undoubtedly is going to be an extensive discussion, but essentially, I believe, we will have the orders as they stand with proposed revisions

C. V HOLDER, *Building and Contractors Association:*

The thing that I would like to see clearly brought out here is that, as far as personnel elevators are concerned, the contractors are not in any way in conflict with the unions, in regard to the rigid inspection of elevators that are used for personnel It seems to me that what has been said here is that there is going to be a personnel elevator on every job Now my thinking on this would be that if you had a personnel elevator for buildings that go beyond five floors, what is being said here is that this elevator will be used to transport a man from the fifth to the sixth floor and from the sixth to the seventh I just wanted this clearly brought out, for certainly, in the rigid inspection of a personnel elevator, there would be no objection to this at all by the contracting units in any elevator that was used for the transport of men We do not think that an elevator should be restricted only to the use of men and toolboxes We think that that elevator should be absolutely safe if it is to be used by men and toolboxes, but when the elevator is not in use, it would be a ridiculous cost to assume that an operating engineer would sit and wait until somebody wanted to go from the fifth to the sixth floor or from the sixth to the seventh or the seventh to the eighth

THOMAS E FITZGERALD, *International Vice President and Regional Business Agent, Elevator Constructors International:*

The information available to my committee pertaining to accidents of workmen climbing ladders and in construction stairwells that are incomplete, includes the following items In 1962 throughout the nation, the information states that there were 14,000 deaths and two million disabling injuries, a large percentage of which were due to climbing. In 1962 in California alone, 752 lost-time accidents were construction workers, directly attributable to falls from ladders and injuries sustained due to incompleted stairwells There is no possible way to isolate trauma or cardiac conditions brought on by excessive climbing, this being a dangerous activity whether ascending or descending According to a recent report by Albert B Tieburg, State Director of Employment, out of $11,500,000 in claims paid out in the second months of 1962, $5,800,000 was paid to 7,400 persons for heart disease during this same period

The State of California is investing millions of dollars in training and enriching our skills to meet the demands of the construction industry Our investigation also showed that the highly skilled and more qualified men of the building trades were of an average of 42 years We found that by checking progress of the workmen of all ages, walking up six floors, there was an average loss of time of 28 minutes to the sixth floor On a building of some 10 to 15 floors, this loss of time sharply increased above the sixth floor Our report to you does not take into consideration the items of falling objects that are encountered on all construction work and cause crippling injuries and lost-time accidents

Our recommendation to this body is that on every construction site of five floors or over, for the protection of the workmen, a personnel elevator be provided free from the incumbrances and danger of freight or building material

I am sure that the contractors on an item of this nature are interested in the immediate costs On a large-size construction site, a building of 15 to 20 stories, there are 10 or 11 crafts involved in its construction by the time the project has reached the third or fourth floor. This represents approximately 150 to 250 men and the average wage rate for these crafts is $4 62 per hour For the sake of argument, say that 100 of these men are working around the sixth floor Your arithmetic will show you that something like $231 per half-hour is involved in nonproductive time A slow-speed personnel elevator, depending upon the stops involved, will travel 10 floors per minute Here is a saving to a contractor of several hundreds of dollars The elevator not being provided for the purpose of hauling freight or building material, there should be no tieups or delay in expediting personnel throughout the building. We have found that subcontractors are happy to pay a nominal cost to expedite the movement of their workmen and have them arrive at an upper level with no loss of efficiency

I would like to take this opportunity to say that state and city codes of the Elevator Division are being rewritten at the present time to cover the installation of workmen personnel elevators This will include the periodic tests and inspection by their personnel.

VINCENT L. WHITE, *Assistant Chief, Division of Industrial Safety, Department of Industrial Relations:*

Speaking briefly on the subject, as I understand it this proposed legislation would do two things it would provide elevators on buildings under construction five or more stories high, and it would further provide a very good type of elevator Both of those are worthwhile goals The division favors this move The only question we would have at all is the matter of timing, and I am sure this committee is more alert to this than our division as to whether the industry is ready to take a big step like this We particularly believe that the industry should take the step on providing elevators on buildings five or more stories high In fact, we have a proposal right now in our construction orders They, by the way, are up for adoption now. And we have a proposal in there that would call for this same thing. It would call for elevators on multistory buildings for construction workers So we're thinking along the same lines as this committee in that respect. We were not thinking of making these elevators as good, as permanent, as those that go in buildings, and I see that that is proposed here. We believe that there should be two classes of elevators One for the building that must last 50 years, and another for the construction job that maybe lasts two or three years But we agree that it should be a good, sound, safe elevator.

JACK VALOV, *Supervisor for the Construction Section, Division of Industrial Safety:*

The Construction Section has, for some time, been holding meetings with what we consider our revision committees to form proposals and to bring out most recent thoughts so that we might revise the construction orders and aim at modernizing or keeping in touch with construction problems as they change in this rapidly changing business. There has been a proposal made, Section 1630, which refers to access to multistory buildings The original proposals, as brought to our committee, called for six stories or more on highrise buildings to provide a method or means of carrying men and material to these high reaches. At subsequent hearings or meetings, our committee changed this to four stories or more. I am sure that before this becomes law we will have quite a bit of opposition—perhaps we'll fail to achieve or reach this four-floor limit

It appears, with many contractors, that five or six or perhaps seven stories is the economical breaking point for making money in raising materials and men If you take a large building and you have 300 men working there, it becomes quite obvious that if you walk stairs all day long with 300 people, you are losing a lot of money.

The committee did not consider the separation of men or material in these hoists In other words, we were concerned with providing some access where the law did not require any at this time It may be that men will be mixed with material It may be, as some contractors do every five minutes when they do run an elevator, that they run a load of material, the next load will be men This issue was not brought out at the committee meetings.

The division is concerned with the design, the erection, and with other features of construction elevators for men or materials In our new revisions, we say that in lieu of a construction elevator, installations complying with the elevator safety orders may be used as construction elevators

The Labor Code is precise in the elevator section, but it lacks that precision in the construction section It points out a construction elevator to lift men or materials and then says the division shall inspect But at no time does it say, as it does to the elevator people, that you shall inspect, that you shall permit, that no elevator shall operate without a permit, without a fee, without a precise date and time of inspection; and it is my personal feeling that at this time this hearing and other hearings that have occurred are attempting to break through and to point out some of these areas of perhaps, shall I say, evasion, or lack of precision We feel that there is a necessity for annual inspections and for identification Not only of elevators but of cranes and other types of hoisting equipment We feel, in general, that a stiffening of minimum standards, or we'll say a new form of higher minimum standards, is necessary It is my hope that we can make a transition with labor and with industry without jolting this particular industry or asking for such great minimums that we cannot achieve these things The necessity is there How we do it is another problem

Safety in Lumbering and Related Industries

FINDINGS

Although the frequency rate of injuries is relatively high in the lumber industry, the local safety committees appear to be functioning well in cooperation with employers and the Division of Industrial Safety in identifying and directing attention to unsafe operations in the various phases of the industry

Safety provisions are also given close attention in most contract agreements between employers and labor unions

Good relations with Division of Industrial Safety personnel appear to exist with the employers and workers in the industry

RECOMMENDATIONS

1 Clarification may be needed as to workmen's compensation coverage on proprietary drivers of logging trucks

2 The Division of Industrial Safety should consider amending its safety orders covering the loading and securing of logs on hauling equipment and logging trucks

Hearing in Eureka, September 28, 1964

The following are pertinent excerpts from testimony given at this hearing:

FRANK E GORDON, *Local 98, International Woodworkers of America, AFL-CIO:*

There are just a few things that I would like to call to the attention of the committee that are giving us trouble. One in particular is the

manhandling of heavy timber in sawmills In most of the larger plants these heavy timbers are handled by the crane method, but in some of the plants they send them out on the green chain So they have to be handled off the green chain, and we're getting a lot of back injuries and ruptures from it

The green chain is the chain that carries the lumber from the mill out to be piled or to be shipped to some other kind of mill When you're handling them by hand it takes quite a bit of lifting Some of these operations, with respect to men, you take 8 by 10's and 6 by 10's, 6 by 12's, in fact in one mill I've come into, they're handling 4 by 16's, I think they were.

These are about 42 feet long and they had two men taking those things out They said they were giving them lots of time But if they need more men, we'll put more men on it There was one man in the hospital when I was out there because one of the other men slipped a little bit and the load dropped on him and threw his back out, and a back injury of that kind can be serious for these men So we maintain that all of that stuff should be put over a separate chain where it can be handled with some kind of crane.

The excuse that is given by the operator in most instances is that they put more men on it when they have the heavy timbers to handle, but we find that is practically as dangerous as having one man handle it, because if two men are handling one of those timbers and one of them happens to slip or something, why the other one gets the whole load on him unexpectedly and you have an injury There's no limit set, as I understand it, in the program on this thing, but something should be done about it

In this part of the country, you have a lot of large timbers and most of the union-operated mills have a limit in their contracts of what the men are supposed to handle on the green chain for that type of timber.

Another thing that has been brought to our attention is the breakage on the highway of hauling equipment, with the logs spilling on the highway and things of that kind, and we were wondering if there couldn't be some kind of inspection or something of the hauling equipment to prevent that It seems to be mostly gyppo haulers that have this trouble, and in fact the most recent ones have been that Certainly it's nervewracking to think, every time you meet a load of logs, that that load might be dumped right in your lap, and it seems to me rather unnecessary to have a setup of that kind

Another thing that we are wondering about is if there's ever anything done about the hours of work for people driving heavy equipment Now we find there again people who are driving their own trucks working in the neighborhood of 20 hours a day regularly They take off at two in the morning and they get in around seven or eight at night, and then put in several hours monkeywrenching on their trucks It's the opinion of our people that a man just isn't working at top efficiency when he's putting in that kind of hours on the job.

LEONARD CAHILL, *Secretary-treasurer, Redwood District Council of Lumber and Sawmill Workers, AFL-CIO:*

In most of the mills we have a safety committee that is set up to meet each month for the inspection of the various mills and to turn in the

violations, if any, and these are usually worked out within the next 30 days with the employer. If not, then we call in the state safety inspector, and he makes an inspection and takes the violation to the employer and tells him he's in violation of the law

We find that the top officers in the operation many times let things go that we haven't found out about There are violations that they let go and they are not always taken care of and sometimes it takes time.

We've been fighting and insisting through the meetings they had between the employers and the Division of Industrial Safety that there are not enough teeth in the law many times to enforce an unsafe condition There are too many and it takes too long, and there are too many loopholes in the law to enforce safe conditions when they come up right away In other words you may see something unsafe but we can't just say, "Shut this job down," because we think it's unsafe, unless we have something that's real.

I'd like to state that we have no quarrel with the Division of Industrial Safety. We have good relations with Mr. Batterton and Mr. Brubaker whenever we call on them As far as what I was mentioning and what the staff was talking about was this green chain, and Mr. Batterton has agreed to look at it next week and to get something done about it.

CLARENCE E STARTT, *General Superintendent, Lorenz Lumber Company:*

Load Binders: On checking Article 12, Division of Industrial Safety Code of Logging and Sawmill Safety Orders, we have the framework set up to cover the binding and safe transportation of logs, however, the $\frac{3}{8}$-inch cable binders set forth in Article 5288 are not adequate for off highway loads This should be given consideration as an addition to this article and not as a new law. I would suggest that nothing less than $\frac{1}{2}$-inch I W R C rope be used on the off highway loads for both gut and top wrappers This, I am sure, can be enacted with the present framework of these orders.

Weight Lifting I would protest any such enactment of law by the Division of Industrial Safety as I do not believe there is any realistic approach to this problem The size of the article, the position in which one must lift, how and when this lifting is to be done are all factors that would be impossible to delineate in any written set of rules This would lead, I am sure, to considerable confusion and would in no way help the safety factor in manual labor

Workmen's Compensation I wish to reiterate that we need a definite clarification of the workmen's compensation law as it covers the proprietary driver of logging trucks and other vehicles As it now stands, every operator who employs a so-called "gyppo trucker" is subject to the opinion of one hearing officer in the event of accident to this trucker as to whether or not the employer has, as the law states, adequate workmen's compensation on every employee The law specifically states that one cannot be self-insured which leaves a doubt in an employer's mind as to who is responsible for workmen's compensation on a proprietary trucker.

Hours of Labor of a Gyppo Trucker Here again this subject, I believe, is pretty well taken care of in the Gaffney Law that requires every operator of a heavy-duty vehicle to have in his possession at all times a chauffeur's license or a class B license which entitles him to operate heavy-duty trucks regardless of ownership Any violation of the Vehicle Code is cause for revocation of this chauffeur's license, and, since the Vehicle Code states no registered chauffeur will be allowed to operate a vehicle for longer than 16 hours out of each 24-hour day, here again we already have the framework set up to take care of this problem

Economics of Safety I believe that this is one factor in the safety programs of our Department of Industrial Relations as well as in the field of top management that has been overlooked in trying to sell safety to the employer It is an impossibility to write regulations that will provide all of the adequate safety measures that would be required We cannot legislate safety, we can only set up the framework under which good safety programs, an adherence to good common sense methods will accomplish our goal As one of the other gentlemen testified "our insurance rates on workmen's compensation have almost tripled in the last 12 years" This is a deplorable situation and I doubt that few operators have really taken into account the cost factor involved Safety and efficiency cannot be separated; the reverse is true Once every employer realizes that he cannot continue to pay his insurance premiums and let someone else head the safety program for him, we will be able to cut the rate considerably as well as keep down this incidence of more and more legislation which on the broad plan can only be enforced by the employer himself

D. R MITCHELL, *Georgia-Pacific Corporation:*

I have just a few comments I would like to make in reference to the previous discussions relative to back injuries Numerous references have been made to injuries resulting from lifting an a number of pounds Over the past five years, we have been experiencing numerous back injuries The difficulty is to legislate a specific amount of weight any one individual could or could not lift safely

The other reference I would like to make is in regard to what we often call "moonlighting" in the industry, which has a reflection, I feel, in regard to the truckdrivers driving so many hours per day. I'm sure that the Georgia-Pacific Corporation has employees, and I'm certain likewise that there are other employers in this group, who have employees who work an eight-hour shift in our operations and then in some instances work another eight-hour shift elsewhere, or at least a half shift of four hours I feel that if you were to legislate for a certain number of hours for one type of occupation, it seems it should also fit the same pattern of various other occupations

EDWARD A BRUBAKER, *Supervising Engineer, Division of Industrial Safety, San Francisco:*

In terms of statistics, the latest figures on accidents in this industry have been published by the DIVISION of Labor Statistics for 1963 In this industry the total number of injuries was a little over 7,000—

actually 7,500 injuries This is not a large number of injuries, yet when you think of this in terms of frequency rate, the frequency rate of 46 for the lumber industry, it means that this is about 90 injuries per thousand employees in terms of normal statistics, and this happens to be the highest frequency rate for injuries per thousand of any major industry in this state that we know of Next to this is construction, which has about 88 injuries per thousand So even though the record has improved, and very decidedly improved, there's still a long way to go, with a lot to be done

I think as far as our function is concerned, this probably will relate to the number of people who are assigned to work in this industry and what we try to do about it safetywise We have had the same thing for the past several years now, with approximately five to six man-years of effort in this industry When you consider that this is devoted to 7,000 in the logging industry, this is a large percentage of our manpower assigned to this sole function For the other industry that the industrial section is responsible for, we have approximately 130,000 injuries, lost-time injuries, with a total manpower of about 55 engineers in the field, so normally the average man is assigned a workload of 2,300 injuries, whereas, for the lumber industry and forest products, it has 1,000 to 2,000—actually it averages out about 1,200 I think in our own efforts we have certainly concentrated and put our manpower in this field because of its extremely high frequency rate

CHAPTER 5

SUBCOMMITTEE ON APPRENTICESHIP TRAINING

The Subcommittee on Apprenticeship Training was created to study the provision of H R 160 (Foran) 1963 General Session, and A B 604 (Dymally and others) 1963 General Session Assemblyman John Francis Foran was appointed chairman The other members of the committee were Assemblymen Robert E Badham, Lou Cusanovich, Mervyn M Dymally and Alfred H Song

The subcommittee held the following hearings July 21, 1964, San Francisco; September 15, 1964, Los Angeles, October 21, 1964, Sacramento

The general subject of these hearings was the overall effectiveness of the California apprenticeship program, means to bring about fuller participation by labor and management; and possible incentives to participation The subject matter was largely embodied in House Resolution 160, which was introduced in the 1963 Regular Session by Assemblyman John Francis Foran The subcommittee also heard related testimony on AB 604, by Assemblyman Mervyn M Dymally, which was referred to it for interim study by the Assembly Rules Committee of the 1963 Regular Session

HR 160 recognized the crucial importance of a skilled labor force in California It also suggested that apprenticeship could substantially contribute to the building up of such a skilled force in the state if properly utilized The resolution therefore called for thorough study of the existing program in order to induce maximum participation and cooperation

Since the scope of the resolution was a very broad one, a brief summary of some of the concepts of apprenticeship may be desirable to indicate the general direction of the subcommittee's inquiry In the first place, the objective of apprenticeship is naturally to train an adequate number of youths to meet the needs of industry for skilled workers Ever since the enactment of the Shelley-Maloney Act of 1937, California's apprenticeship program has developed to a point where we lead the nation in this particular activity Apprenticeship programs are training some 24,000 apprentices in roughly a hundred different trades

If we are satisfied with simply comparing our own progress with that of other states, there would be little purpose in attempting to improve it On the other hand, if we examine some rather elementary facts of economic life in California, there is a great deal to be done Thus the subcommittee was concerned not only with the quality of the present program, but with the quantity of skilled workers which can be produced

California's economy will grow and prosper in direct relation to industry's ability to expand its facilities in operation But in the face of an increasingly accelerated technological development, industry

cannot expand without a sufficient skilled work force It was with this in mind that the subcommittee sought for means to develop an apprenticeship program capable of meeting the present and future needs of this state for a well-trained work force This issue, of course, is compounded by the rapid disappearance in our economy of the job opportunities for the unskilled and the semiskilled The technological revolution that is going on in California and the nation places a premium on the services of skilled workers. Still another complicating factor is the massive migration of people to this state, many of whom bring little or no skills to find such jobs as may be available.

One of the areas the subcommittee explored was in the direction of determining what methods would be effective in making a promise of apprenticeship clear to those entering the labor force and to those who may hire them Because of the voluntary nature of apprenticeship, it was felt that a greater effort toward generating interest is necessary A part of this generation of interest would be to make it abundantly clear to our younger people that their earning capacity will be significantly enhanced by the possession of a needed skill At the same time it should be made equally clear to industry that the existence of sufficient journeymen in their respective industries depends on full and active cooperation in an effective apprenticeship program.

The practice of pirating journeymen from one company to another is pretty widely regarded as self-destructive for the result is a scarcity of skilled workers so as to create an excessive demand for their services ultimately causing wages to spiral higher and higher

There are some 40,000 occupations in California, at least designated occupations, and approximately 400 of these are classified as apprenticeable Of these occupations classified as apprenticeable only about 25 percent actually participate in apprenticeship programs Noncraft skills, electronics and other technical skills which are developing in our economy demand a more substantial part in our apprenticeship program

In the matter of fuller participation, incentives need to be found to assure a most vigorous participation by both labor and management The possibility has been suggested that there should be tax incentives, rebates or reimbursements Whatever the answer, the subcommittee has felt that this is a matter that must be fully explored

One of the most important factors which must be taken into consideration is that of the minority groups as they relate to the job market in the State of California At present unemployment is more than twice as high among minority citizens, and it is recognized that they generally represent the least skilled and least educated of our society. In California this problem is intensified by mass migration from the southern states and other rural areas

In 1920 the agricultural employment represented one-third of the total labor force Today it constitutes approximately 8 percent These newcomers to California settling in our urban centers which seek highly specialized and industrial skills soon discover that California is not the land of opportunity they expected. They have neither a specialized skill nor a needed skill nor educational background, and they become practically unemployable The result in social and political problems is clear to everybody.

Finally, the subcommittee endeavored to explore ways to diminish the number of apprentices who drop out of the program before acquiring the necessary skill The apprentice dropouts not only diminish their own chances of finding permanent and productive employment but they drain the resources of the employers so as to seriously impair full and continued participation by management in the program Ultimately this in turn weakens the overall effectiveness of the program

Finally, with our rapid technological development, we find that the economy is demanding more diverse skills, and when we train one man for a particular trade or craft he may not stay in that craft for a very long period of time, and consequently we must look to making his training as flexible as possible so as to meet the ever-changing needs of industry.

FINDINGS

While California has one of the most advanced, if not the most advanced, apprenticeship training programs in the nation, it lags far behind its potential There are about 24,200 apprentices in the program in California at the present time This represents probably about one-fifth of the number that should be in apprenticeship programs

There are about 400 occupations in California considered to be "apprenticeable." But only about 25 percent of these occupations have apprenticeship programs.

If incentives were provided, management and labor might be induced to a fuller participation in apprenticeship programs

In recent years there have been developed industrial in-service training programs, public and private school training programs that overlap into the "apprenticeable" trade area and meet a great deal of current occupational training needs

The impact on the unemployment problem in California of an expanded apprenticeship training program does not promise to make as much of a contribution to the reduction of the unemployment rate as all persons of goodwill would hope Nevertheless, the committee feels that all reasonable efforts should be made to encourage such an expansion

RECOMMENDATION

That the Division of Apprenticeship Standards of the Department of Industrial Relations, in cooperation with the State Department of Employment, develop and submit to the Legislature a program designed to create incentives to employers and others, including but not limited to, direct reimbursement for cost of training, such a program to be administered under the California apprenticeship law and regulations It is proposed that such a program be presented on a pilot project basis which would be directed to creating new opportunities for unemployed youth to learn apprenticeship trades in industries where there is already a need for additional craftsmen

Assembly Minority Report on Apprenticeship Training

The undersigned members of the Subcommittee on Apprenticeship Training cannot agree with either the findings nor the recommendation of the subcommittee for the following reasons

1 Although the Director of the Division of Apprenticeship Standards claimed that there is a pressing need for the expansion of the state's sponsored apprenticeship programs, there was little or no evidence of such need aside from this self-serving assertion

2 Industry spokesmen demonstrated that private industry now has efficient training programs which adequately provide for their needs Little desire to have the state expand its apprenticeship programs was expressed by employers As a matter of fact, opposition to the intrusion of the state in-training programs was rather forcibly expressed

3. It is fair to assume that if industry believed the state could be of any real assistance in this field, it would have had representatives appear before the committee to urge state action

4. No convincing evidence was produced to support the assertion that an expanded apprenticeship program would reduce unemployment

The minority feels that an incentive plan such as recommended by the majority would entail an unnecessary and wasteful expense of state money, and the pilot project should not be undertaken in the absence of convincing evidence of a need for an expanded state program

ASSEMBLYMAN ROBERT E BADHAM
ASSEMBLYMAN LOU CUSANOVICH

The following testimony is pertinent to the key phases of the subcommittee's inquiry:

DR. LOUIS DAVIS, *Professor of the Department of Industrial Engineering, University of California:*

Perhaps I should indicate at the start that my interests in appearing before this committee are perhaps restricted to a particular segment of the considerations that the committee is looking into I might say that, as of this month, we have at the University of California the establishment of a research group—the first of its kind—particularly devoted to the study of human performance in technological settings, and one of the new studies that we are about to begin is being financed by the United States Department of Labor It is particularly directed at looking at evolving jobs and evolving skills with implications for training and education with advancing technology, and this study is expected to be started within the next month We are in the final stages of working out the details So that this particular group of investigators, some of whom have been drawn from different countries of the world, will have in fact carried on over the years the only significant studies in this area and will be available for advice and counsel in the conduct of studies as these may develop

I think I've mentioned two publications, and perhaps I might mention a third that should be looked at One is the review called "Apprenticeship in Europe," which was written by Gertrude Williams at the request of the Minister of Labor in England two years ago It reviews every apprenticeship program in western Europe The other is a study called "Automation in Skill," done by Dr. Crossman at the request of the British government. He is one of our new staff members, a professor

at the university, a former professor in England Here he particularly looks at jobs and skills in automated industry A third study is called "Vocational Training in View of Technological Change," which was conducted by a man by the name of King at the request of the European Productivity Agency Here again they particularly looked at what is happening to jobs, and what kind of training is likely to be needed as technology evolves

My own interests, of course, are informational interests, research interests I don't have any particularly program that I would bring before the committee It's rather early for me to make any such statement, but I would like to direct the committee's attention to a series of developments which are taking place in very diverse sectors which seem to be pointing in the direction of some new combination of tasks, some new combination of skills, which are likely to have an impact not only on apprenticeship training, but on vocational training in general They are likely to pose some real problems in areas which concern present established job boundaries as they exist in industry

These developments are probably spurred on by innovation itself, by new products, by research and development, and by changes in technology All of you seem to be pointing in a direction of individuals whose training is such that they can be useful in advanced industrial situations to carry out a number of related tasks which we now carry out in more specialized fashion Mainly such tasks, for instance, as servicing of automatic equipment in which the individual would need to know something about electronics, electricity, hydraulics, pneumatics, something about control theory and so on

Now the French National Vocational Training Establishment has already embarked upon these particular changes They call it the polyvalent craftsman, which I think we can interpret as the multiple-skilled craftsman This program in France is now underway, probably about five to seven years It is done under their apprenticeship arrangements, and those apprenticeship arrangements are rather different from ours In fact they have a variety of apprenticeship arrangements in which apprenticeships are based in schools from which apprentices go out and get practical experience in related industries, and also where they are in industries working on the job and are assigned to schools for a certain number of hours per day and so on

There are three or four arrangements that the French have These are described in the Williams' book on "Apprenticeship in Europe" The French have been on the way for some time in this regard in turning out mixed electromechanical craftsmen, hydraulic-pneumatic electrical craftsmen, and so on Now when one looks at the technological developments that are going on, one looks at the development of machinery, one looks at the costs of owning and using this machinery by an industry From all of these indications we can fairly forecast that the demands will be in this direction and the reasons are economic

The greatest single cost in a highly automatic piece of equipment is when it is not being used, so-called "down time" trouble And this is now being solved in a number of ways, largely through overtime using specialized craftsmen available working overtime to make sure they are on a standby basis so that this "down time" trouble does not become excessive Now with these particular pressures it's not very difficult to forecast that industry, when it can, will be asking for and looking for these particular multiple-skilled or polyvalent types of craftsmen

Now beyond that there have been some other studies, and these are of two kinds One has been the series of economic studies on how industries are to be organized, given the fact that the products that they are producing are to be changing all the time More new products constantly facing the industry, and these studies again seem to be pointing in a direction indicating that what will be the wave of the future, if one can speak of it in this sense, is multiple-skilled people, less specialized organizational groupings within industry, more multiple-skilled people

They are already in California One or two companies that are so organized in the electronics field in the southern part of the state are moving in the direction which has been predicted by these earlier studies.

Another group of studies are those that I am involved in, which are studies looking at the consequence of the contents of jobs on the performance of individual workers, supervisors, and the performance of the company Recently we finished a study in a chemical plant not far from the bay area and here maintenance craftsmen were retrained by the company, given multiple training so that each maintenance craftsman, whereas before he may have been a welder *or* a pipefitter, became a welder *and* a pipefitter He had two major skills and two minor skills The company paid for this retraining, reevaluated the jobs, adjusted the wages, and so forth The consequence of this change that took place was a marked improvement in the company's costs for maintenance, and also an improvement in the quality of its product Because of our research interests we were looking at the reaction of the men and the reactions of their satisfaction over the variety of tasks that individuals have to carry out and the way in which they could organize their work

We are just finishing a study at a large naval aircraft installation right here in the bay area where again the results are pointing in the same direction. Here again jobs were made larger and individuals who formerly simply did mechanical repair work were now doing the mechanical work and inspection activities as well, as part of their standard job Again performance is improving for the firm and the satisfaction of the individuals is very much enhanced I point to these straws in the wind, if you wish, which would seem to indicate that in planning an apprenticeship program, or in the planning of any vocational training, it is likely that the pressures are going to come for economic reasons from management's desire to minimize its costs of "down time" in the use of machinery

The chemical plant is the only concrete reference I can offer where this has specifically been done It was done about four years ago and is still in operation In the naval aircraft installation, which is under civil service, this is now a matter of policy They have observed the results of our experimentation and they too are now moving definitely in this direction This poses a vast variety of questions on the jurisdictional distinction between types of crafts and jobs which I don't want to enter into The utility of individuals in a world in which technology is going to force constant changes in what people do, the demands of industry in using their equipment and the restructuring of organizations—all of these seem to be pointing in the same direction, namely multiple skills, polyvalent crafts, and the like How it's going to be worked out I really don't know We never have looked specifically at how to do it The French have looked at it publicly That is, their program is not a private program carried out by a few employers on their own, but a public program established through the state's vocational training schools and the state's apprenticeship program In fact, in the report on apprenticeship in Europe the polyvalent type of craft training is raising some serious questions as to the efficiency with which apprenticeship training can be given On the one hand there are the large groups that will say apprenticeship which is entirely based within industry doesn't permit this type of training That there has to be a strong element of schools involved, whether or not the craft, whether or not the apprenticeships are based in school and put into industry for the particular practical experience, or whether they are in industry getting their practical experience, and then are required as a given part of their daily activities to be in schools to pick up these particular additional skills to provide this particular background

Right now, if one reads this review of apprenticeship in Europe, one is struck very quickly by the fact that you can furnish your programs across the board They are not restricted to any section of the economy Here in California our apprenticeship program by historical circumstance—and this is no criticism, it just happens to be this way—seems to be concentrated in those segments of our economy which are largely associated with construction, whereas in the European reports they are across the board In any kind of skilled work required in any kind of industry in European countries individuals enter into these either through organized apprenticeship programs or through the vocational training programs where these are linked together The state links the vocational training and apprenticeship together in various forms Different countries go about it in different ways We even have a highly industrialized western country such as Sweden which has no apprenticeship program whatsoever All of it is done through vocational training supported by the state and governed by a tripartite board of labor, management and others The major difference, of course, is that in western Europe all technical jobs, all skilled jobs are part of the programs and are not restricted to any one segment of the country This seems to me to be one thing that needs to be looked at here Why do we have the restriction? And what perhaps is more important, what can be done about the developing of the program?

Now once we get beyond construction, then of course, I think my remarks in the future would begin to be something to be looked at If we are to look at industrial type activities, manufacturing—although you would have to look at administrative clerical types of activities which are based on advanced pieces of machinery, advanced pieces of technological equipment—then my remarks become important

CHARLES F HANNA, *Chief of the Division of Apprenticeship Standards, Department of Industrial Relations*·

I believe we have clearly established that there is a need for more apprenticeship and other training on-the-job, and that this varies from occupation to occupation Some crafts are doing a very fine job and some are woefully short of skilled craftsmen This has identified, first of all, a need for some good research, which none of us has been able to do, to find out more specifically which crafts need more craftsmen and secondarily, how we could go about expanding those programs where the need exists Secondly, we must not overlook the fact that while we're concerned with quantity, we are also equally concerned with quality And even though a craft may not need any additional journeymen over a period of time, certainly they need to expand the apprenticeship training so as to improve the quality of those craftsmen who practice the occupation.

We have submitted that our program is voluntary and that the governmental effort has been promotional in nature There is nothing in apprenticeship that's enforceable, no one is required to train apprentices But we also submit that the voluntary system has not been exploited to its fullest potential Certainly, the promotional effort of our division is very limited, and except in instances where industry itself has appropriated funds, very little promotion in apprenticeship is being done, and this is an area that we need to look into We have also submitted that until a full effort is made in the promotional field, we will not determine whether the voluntary nature of apprenticeship is a success or failure, and I would even suggest that before mandatory provisions are even considered, that serious consideration be given to doing the full job of promotion and development in apprenticeship I I am satisfied that much more can be accomplished if the means to properly promote a voluntary apprenticeship system is made available What is needed is a comprehensive program and I doubt that any one particular suggestion that I have made, or that others have made, would tend to solve the whole problem And in the several discussions that we have had, I have suggested a number of areas of consideration

As an example, and this is controversial, it is a fact that the government is one of the largest of all employers of skilled craftsmen, and that generally speaking with some minor exceptions, the government does not employ apprentices They do employ a great many journeymen and this is at all levels of government, the federal, the state, the county and municipal This is a complicated and complex area, and proposals to develop apprenticeship in civil service have met serious opposition, while at the same time, most groups wish to have their journeymen employed as a matter of excessive force account work, etc , which creates objection to civil service, but from our standpoint and the

standpoint of the public, we who preach apprenticeship to private industry feel that government itself might well set an example in doing all they can do.

We have discussed incentive systems We looked at other countries that have developed such systems, and by incentives we mean something that would attract more employers to train apprentices One of the objections of many employers to participate in the apprenticeship system is that they say it costs too much money, and therefore we suggest consideration of reimbursement to employers for cost of training We feel that an experimental program along these lines might well attract many more employers to participate The employers who do participate and contribute all they possibly can object to having their skilled craftsmen pirated by those employers who contribute little if anything to the program.

The Defense Department, as you well know, has a lot of work going on, as do other agencies in the aerospace industry They plan to reach the moon and other planets in the near future and they employ many journeymen in many different crafts, but here again in California the record of apprenticeship is deficient to say the least The records indicate that in California all of the defense industry have about 200 apprentices in training in all of their skilled craft occupations We submit that something needs to be done about this The incentive system here apparently isn't going to work because the Defense Department does reimburse the cost of training, including the wages of the trainee And even so, in apprenticeship we don't find very many.

This is, of course, a federal government problem basically, and the Secretary of Labor has developed a task force of which I am a member to study this matter, and we have conferred with the Defense Department and haven't gotten very far, so we're still seeking a solution to that one

I have already mentioned that a broad, comprehensive, well-financed promotional program would persuade many more employers to hire apprentices than do so now, and employ up to agreed ratios Direct reimbursement for cost of training additional apprentices is also a matter for consideration In the area of job development there is one agency of government at least that does a substantial amount of this, but in the apprenticeship area they've done very little

The Department of Employment has cooperated with us during Apprenticeship Month, and we have found that by having people going out and actually seeking jobs for apprentices, many jobs are found During this one month when we could find time to concentrate, we increased the number of apprentices there by five or six hundred simply by doing some specific job development The point here is that governmental agencies do not have very much time to do this I am satisfied that if more people were hunting more jobs for apprentices we would find more of them An employer will essentially call for a skilled craftsman, if that's what he wants, and seldom will he call for an apprentice

This leads us to another point which deters the employment of apprentices in some trades more than in others, and it is the preparation of youths for entry into an apprenticeship system or an on-the-job training system There are certain minimum requirements for academic

and basic work habit skills that must be met, and we find too often that our youth of today have been deprived of this basic opportunity to ever learn how to work.

A number of apprentices who are motivated, who are now in apprenticeship, found their own jobs, nobody found them for them They were motivated, they were qualified They vigorously sought these programs and this is particularly important to the minority community where the story in the press thus far has been that it's no use to look for apprenticeship, you will be discriminated against We have a program to bring the facts to the public regarding minority youth in apprenticeship California, I am happy to say, has I think led the nation in solutions to this problem Most joint committees have adopted a fair and impartial selection process, taken the pledge so to speak, and much of what remains is for the minority people to prepare and compete for the apprenticeship jobs that there are available This won't increase the number of minorities even if they all compete successfully, because the number of jobs is limited, and so we're going in two directions One, to help the minority people to compete successfully; and second, to expand the number of those jobs that are available to all.

A little more on the incentive system, I think California has operated the most successful apprenticeship program, certainly of any state, and equally as successful as any program operated by the Federal Bureau of Apprenticeship in states where there are no state programs We've increased apprenticeship in the last 10 years by about 30 to 40 percent. We've increased our productivity of each individual by about 3 percent per year But this is certainly not enough It is the line between the increase in apprenticeship and the total population that is getting wider all the time

In some instances, there needs to be an accelerated number of young people trained to meet the needs of industry There have been proposals, and it seems the most popular one at the moment, although I have some reservations about it, is a tax incentive system By that we would mean that there would be a tax offset to defray the cost of training for employers who could show that they were doing the training My reservation is simply on the basis that this would be a very complex type of program to administer Incentive systems which would provide for direct reimbursement to those who would expend the money for training, I think would be more direct and should not involve any more agencies than are absolutely essential, and should be very simple in their administration In apprenticeship, it would seem to me that where there is an apprenticeship system, all that would have to be shown is that the man is training apprentices according to an established program, not to develop a whole new batch of papers such as we have to do in MDTA. We have the one or two programs that we can look at to consider whether the incentive-type system is going to do the job We got the federal government to agree in a limited way to approval of a program to expand the nongoing apprenticeship system to 50 apprentices, where there was a clearly established need for 200 more journeymen The Joint Apprenticeship Committee will administer the program, the federal government is going to reimburse the total program including

our administrative cost and that of the employment service in the school to somewhere around $60,000, or approximately $1,300 per apprentice per year

The program will be supported only for one year, and it is expected after that that they will carry it on themselves A reimbursement to the employer will be in the amount of one journeyman-hour per apprentice-day The amount equal to that on the basis that the journeyman spends at least that much time in instructing the apprentice In addition, they will pay partial costs of the apprenticeship coordinator and clerical costs and the agency administrative costs, and that's all that there is in there There is no training allowance involved and there is no direct reimbursement to the labor organization involved either Although the labor organization has expended substantial sums of its own money to support the ongoing apprenticeship system There is also a guarantee that this will not replace the ongoing system The act requires that there be a maintenance of effort, and this I think is a reasonable requirement And from this we shall see whether the employers — and I call them the tough ones, those who have not participated thus far — will be attracted to participate by this offer of direct reimbursement to them

Now we've already found places for 25 of these added apprentices and we expect to find the 25 other jobs in the near future by going to other employers who could use them and should have been using them all along by offering them this incentive

There is a hazard in this, in that the cooperative employers, the employers who have been spending their time and money all down through the years, are not likely to receive any reimbursement at all because they now have a full quota of apprentices But the committee is a very knowledgeable group and they are willing to do this experiment and almost anything else they can to bring that program up to a point where it produces the needed number of journeymen This is in San Francisco and all down through the years there have been 200 good journeymen machinist jobs vacant This is a substantial piece of industry that San Francisco doesn't have because we haven't trained enough men

I might mention a few other types of incentives that are worthy of consideration I won't dwell on them at any great length The tax incentive has been endorsed by the Federal Bureau of Apprenticeship and the National Committee on Apprenticeship, and it may well be that it will appear in the form of legislation at the next session of Congress The details have not been worked out In France, there is a direct 4-percent payroll tax on all employers They have an option of paying this payroll tax, and this is a tax for training purposes, or they can demonstrate that they themselves are spending up to this amount and that tax is then offset and they don't pay it In Great Britain recently there was legislation enacted in an appropriation of $140 million to bring apprenticeship out of the doldrums One of the authorities of the board that is established under this $140 million appropriation will have the authority to impose a tax, a training tax, on industry Again, to build their program so that they can compete with the other European countries that have done much more than Britain has in training skilled craftsmen,

The matter of training allowance is one worthy of consideration also By training allowance I mean a training allowance to support a young person while he might be in a preemployment class for a short period of time to sustain him and subsequently a training allowance on the job, particularly during periods of unemployment This type of system is used in Canada In the winter months we lose a great many apprentices because they are unemployed, they're married, have responsibilities, and they must continue to work so they take other jobs And quite often rather than risk the hazard of intermittent employment, they quit the program And so it would seem to me that a training allowance, again properly developed and administered, might tend to reduce the number of dropouts and complete total losses in current apprenticeship systems

In justification of these proposals for incentives, reimbursements, I think we might look to almost any other system of education and training and find that all of these have expended substantially more than the government has expended altogether for apprenticeship I have already mentioned MDTA and the fact that they're willing to spend up to $1,300 per apprentice year to do that job They feel that this is well justified

In our Youth Conservation Program down at Oak Glen, the state, to do something for our underprivileged youth, is willing to appropriate $300,000 to administer that program Here again the objective is to straighten the young people out in some basic work skills And if they have 200 men per year, which would be 100 for every six months, this would cost about $1,500 per man per year in that program And the purpose there is much the same and would accomplish less than we accomplish if we can spend that kind of money for apprenticeship I don't suggest that the incentive system would solve all of our problems because apprenticeship is very complex There are many and varying views on this subject and I'm sure you have heard many of them And yet in representing the public interest we have to try to cut through the positions taken by many others occasionally, they have for their own special reasons taken this position Labor has its objectives Management has its objectives But we have a public objective, and that is to provide all of the opportunities that we possibly can for our youth to acquire a skill in which they can make a decent living And so I think there are three interests that have to be met None of us, I think, can override the views of the other, and we have to have some means of compromise in the putting together of views I think this is our job and it is a tough one Yet the need is very definitely there and certainly the needs of youth for these opportunities are there I think we have to do something about it That, I believe, briefly summarizes this I am suggesting that at least we ought to consider a pilot project here in California Certainly we haven't any great amount of money that we can put into it, but a pilot project would enable us to test and find out with reasonable certainty whether this kind of a system will work

CHAPTER 6

SUBCOMMITTEE ON SPECIAL EMPLOYMENT PROBLEMS

The chairman of the Subcommittee on Special Employment Problems was Assemblyman Alfred H Song Members of the subcommittee were Assemblymen Clair W. Burgener, Mervyn M. Dymally, Edward E. Elliott, and Victor V. Veysey.

The subcommittee held hearings at the following times and places:

January 10, 1964, in Los Angeles, on the subject of special employment problems of Mexican Americans

October 8 and October 9, 1964, in Los Angeles, on the subject of problems in public employment.

Special Employment Problems of Mexican-Americans

FINDINGS

Americans of Spanish surnames make up the largest single minority in the State of California and their tremendous contributions to our culture and economy have been an important factor in the progress and development of our state

Among these Californians of Spanish surnames there presently exist serious problems in the areas of education, employment opportunities and housing.

The committee recognizes the socioeconomic circumstances that presently exist and handicap many of the members of the Spanish-speaking communities of our state.

Both the State Legislature and the administration should give constant scrutiny and attention to these unique problems, and accelerate their efforts to assist this vital element of our population to achieve its full potential in our society and in our economy.

RECOMMENDATIONS

1. The extension and expansion of the McAteer Compensatory Education Act of 1963 and its continuance on a permanent basis

2. An immediate and comprehensive study by the Legislature of the conditions adversely affecting the Spanish-speaking communities and an immediate implementation of programs designed to ameliorate these conditions.

3. Greater attention to children with language handicaps, with emphasis on reading, writing and arithmetic in the early elementary grades.

4. The inclusion of the "national origin" category in all laws banning undemocratic discrimination.

The following are pertinent excerpts from the testimony given at the hearing in Los Angeles, January 10, 1964:

J J RODRIGUEZ, *Los Angeles Community Service Organization:*

For the past 17 years, C S O has participated with many prominent groups, locally and throughout the State of California, in an effort to end discrimination in employment and other injustices imposed upon human beings because of race, color, creed or national origin.

In spite of our successes, we feel that we have not yet eliminated discriminatory practices adequately enough to insure equal opportunities for all All these years we have fought for justice for the Mexican American and Spanish-speaking people in many fields; therefore, we understand through these many years of experience and many campaigns in these endeavors, the nature of the problems and the bitterness felt by the Spanish-speaking people in relation to employment and unemployment.

At this time, I would like to point out a few references to education, and how it relates to this hearing today.

In a report of the National Conference on Office Education in Washington, D C., May 1960, the following statements were made:

"The shortage of trained manpower is one of the most acute problems facing the United States today The maximum development of the capacities of all citizens becomes essential to the continuation of economic and social development of the nation. Office education, as part of Adult Education, can help in the development of trained manpower.

"Technological change is increasingly rapid The retraining of employed persons is a pressing problem Office education can contribute to this retraining program through the development of specialized education."

These two quotations refer to officeworkers in our country. And if this can be said of officeworkers, and their need is so important, C S O believes that it cannot be said enough times about the immediate need for the Spanish-speaking skilled, semiskilled and unskilled, to receive immediate consideration and action Certainly the need is even greater than for officeworkers

C S O would also like to refer to the tremendous impact of modern technology and automation in employment for the Mexican American.

The insidious thing about automation for two major groups, the Negro and Mexican American, is that it operates in several special ways to keep them out—ways that cannot be met by the passage of a Fair Employment Practice Act of the State of California or any other legislative bar to job discrimination

First, and most obvious, automation has its most drastic effect in eliminating unskilled and semiskilled jobs In factories, mines, packinghouses, and many other fields, the jobs that have been wiped out are those in which Negroes and Mexican Americans used to find it easiest to qualify This is especially true for those who never got past high school Most work that used to be done by people without a high school diploma, can now be done more cheaply by a machine Two-thirds of today's jobless are in that class.

Negroes and Mexican Americans experienced both more frequent spells and longer periods of unemployment.

So many youngsters are coming into the overcrowded labor market that it would require 25 000 extra jobs every week throughout this 10 years just to keep abreast of the inflow No one has the faintest idea how much higher this figure has to be to take account of the shrinking effect of automation on total job opportunities The Bureau of Labor Statistics estimates the loss each week at only 4,000 jobs John L Snyder, Jr., chairman of the U S Industries, Inc., an important maker of automated machinery, puts the figure at 10 times that Senator Jennings Randolph of West Virginia stated, after listening to scores of expert witnesses at Senate manpower hearings, that he was convinced it was really 80,000 a week, or four million jobs a year

KMEX, Channel 34, research established facts that there is a sufficient number of Spanish-speaking people in this area for private enterprise to appeal to and advertise on their channel

The same 1960 census figures used by KMEX also revealed that there are more than a sufficient number of Mexican Americans untrained, at the lower end of the socioeconomic scale, and therefore *that they can* certainly *appeal* for immediate consideration and direct action from local, state and governmental bodies in generating new and additional programs, like the youth training and employment project in East Los Angeles The latter program is aimed at youth between the ages of 16 to 21 We are concerned with the rest, above 21 through 65 years of age

C S O would favor direct action from the State of California in promoting and establishing training and retraining programs for semi-skilled and unskilled workers immediately A 6-month or 60-month training program is less costly than 6 years' time of unemployment insurance, Bureau of Public Assistance aid, aid for the needy, et cetera

Besides the monetary aspect to be considered, there is the stronger moral emphasis of self-pride, regained confidence of once more being a productive, self-sustaining and taxpaying individual citizen of the overall community

C S O has always advocated participation for all members in a given community during elections, in voicing opinions, et cetera, in order to have a stronger and improved citizenry *Now* C S O *also urges* overall consideration and action from members of the State Legislature to effect a program, and/or programs for the immediate and long-lasting betterment of the Spanish-speaking citizens of this community, and that of the State of California, so that they may be in a position to reciprocate and participate in society as a whole

MRS GEORGIANA HARDY, *California School Boards Association, Los Angeles:*

If I may speak for a moment on Los Angeles, making it quite clear that I am not now speaking for C S B A, we have a large manpower development and retraining program The major problem with a large number of people who have tried to come into this program is their lack of basic English and basic math Under the present federal legislation, the manpower redevelopment program will permit us to go back into these subjects before we start training for jobs because in this day and age, and I am not now speaking only about the Mexican American, but to a very large degree this does affect him It also affects many people who come from our southern states, and so forth If they cannot

speak adequately, if they cannot read adequately, and if they cannot at least do algebra, it is very difficult for us to put them into manpower retraining except in such jobs as, let us say, pressing for cleaning firms which are very low income jobs and I have some reservations about this retraining because what it does is to continue to hold down the wage structure because these jobs which are specified as being unfilled by the State Department of Employment are the jobs that nobody wants to fill because they pay so badly

Many people assume that we should be teaching English to children of Spanish background in kindergarten and first grade, but many of them come into our schools at the sixth grade, the seventh grade, the eighth grade and have moved in from Mexico within the last three weeks and at the present time we do not have funds for special training programs for these students at the high school, junior high and senior high school level We put in remedial reading teachers into elementary grades for our non-English-speaking children We very desperately need teachers to work with three or four or five seventh graders or ninth graders, and we need state funds for this I know we are not involved with education funds, but the problem of these students is just as desperate as the problem of the deaf student or the blind student or the polio student for whom the state does give us additional funds The retraining that they need, their education and concepts that motivate ambitions, all of these things at the age of 13, 14 and 15, this is as important to us as what we do in the second grade And we have no additional funds for this and no leeway within our budget for special programs for these students

WILLIAM ACOSTA, *Community Services Coordinator, Youth Training and Employment Project, Youth Opportunities Board of Los Angeles:*

Typical of the feelings of most minority groups which have been labeled as "culturally deprived," there still exists a strong feeling among most of the Mexican-American population that for the most part they still are the "last to be hired and first to be fired " This strongly suggests that in many areas of industry there still exists de facto discrimination in relation to employment opportunities Language differences and cultural isolation have usually been emphasized as two of the major problems belonging to the Mexican-American population which have tended to generate resistences to being hired, while among employers, attitudes toward cultural differences, including the stereotyping of minority groups, have tended to prolong this problem Yet, we must recognize that as a result of the Fair Employment Practice Commission and other organizations at all levels of government and private concerns, this problem has decreased within the recent years However, continued work and effort in this field remains an absolute necessity

Among the Mexican-American population living in East Los Angeles, research indicates that 38 1 percent of the work force is involved in some kind of work generally classified as "unskilled " Comparing this population to other local areas, we find that in Hollywood only 3 1 percent of the work force is involved in unskilled work, while in Van Nuys 10 2 percent is involved in unskilled work, and in central Los Angeles, 18 6 percent is involved in unskilled work Of this same work

force, namely, among the Mexican-American population, only 1 5 percent is involved in professional or managerial type of work In fact, the percentage of workers in all work categories and classifications is much lower than the average for Los Angeles County except in the unskilled occupations.

WILLIAM GUTIERREZ, *Consultant, Los Angeles County Commission on Human Relations:*

Let me begin with the high dropout rate Mexican Americans It is a foregone conclusion that school dropouts generally have greater difficulty in finding employment It is also a foregone conclusion that Americans of Mexican descent in this area have the highest rate of dropouts. Most definitely, therefore, it can be stated that unemployment among them is double that of the so-called equal "white boys "

It has been my experience that Mexican Americans leave school, not so much because they seek remunerative alternatives as other non-Latins do, but because they have no interest whatsoever sometimes in school

This is a precarious condition At least members of the majority and even Negroes, perhaps, will drop out of school and yet are able to speak and read and write adequately, often enough to be getting opportunities at least unskilled for menial jobs Not so with Mexican Americans Invariably, these Hispanic dropouts were being carried by schools only marginally. In fact, at times, some schools were just waiting for some Mexican-American pupils to become of age when they could be suspended or expelled because of behavior problems, when in reality, the youth had become illiterate

Thus, an illiterate Mexican American redoubles his already poor opportunity in employment Need I go into the ramifications of this last fact, of this condition? Suffice to say, that in a progress report by Mr. Joe Maldonado, a few months ago, he said, "Sure, we are reaching many unemployed Mexican-American youths; that is no problem The problem is that they are untrainable because they cannot even read, much less write This is the problem "

Concerning prejudice and discrimination as the cause of the factor, many Mexican Americans have not learned to exert their civil rights on employment matters Perhaps if they were as alert as the other large minorities, the Mexican American would have fewer employment problems. But such is not the case Few will deny that there is discrimination against Mexican Americans All that has to be done is to take a survey of employment in any civil service agency to determine if members of this ethnic group are working in government in proportion to their numbers in the general population And of those who are in civil service, do they hold a substantial number of positions of any importance commensurable with the number of their people whom they represent?

Perhaps under an aura of inferiority complex domination, the Mexican American has developed characteristics not advantageous to his personal and economic growth Certainly FEPC investigators frankly say this is a problem because they sense that the Mexican American is "scared stiff" or "afraid" to make complaints against abuses against him

Briefly, I said this: Our American economic pattern of highly technical nature demands, not tomorrow, today, now, that we shift resources (money, material, ideas and imagination) to bear heavily on doing away with those forces that are known to many of us and are keeping the Mexican American from developing his potential workmanship. This is necessary now because all Americans must be developed to meet the onslaught of technology The Mexican American needs more attention because he has more problems He is considered a member of a minority He has traditionally the highest rate of school dropouts, and when he drops out of school, he may be a functional illiterate All these factors combined mean (1) he cannot take advantage of future opportunities open to him in employment; (2) lack of opportunities will triple for this marginal excluded citizen; (3) he will do less and less meaningful work, losing interest in himself, his family and his community; (4) he will not earn enough to sustain his family, thus losing respect all the way round, and (5) finally, he will join the island group of the unemployed, an island where such terms as "the lonely crowd," "nothingness," "godless," "powerless," "reduced to nullity," and the "alienated man" describes the natives

SAM HAMERMAN, *Administrator of Urban Affairs, Board of Education, City of Los Angeles:*

The employment problem of the Mexican American is typical of that of the other minority groups; that is, "last to be hired, first to be fired," and he is encountering an increasing difficulty in finding jobs suited to his talents . and in many cases he lacks the necessary skills

In the case of the Mexican American, this situation is further aggravated by a lack of communication skills, his inability to speak English proficiently enough to get along from the point of view of the employer

So it is, too, that in attempting to succeed in school, this same language barrier proves to be an obstacle, and in some cases so insurmountable, we can conclude that it is a significant factor in the high dropout rate which is typical of schools with large concentrations of Mexican-American youth

A survey was taken recently in the Lincoln Heights, Boyle Heights, City Terrace and surrounding adjacent areas by the Youth Opportunities Board of Greater Los Angeles in conjunction with the current employability project headed by Mr Maldonado It showed that 2,400 young people between the ages of 16 and 21 must be given help if they are to become contributing citizens of their community. These are individuals who have been out of school six months or longer, out of work, and in many cases, two or three time losers who realize this may be their last chance to "make good" Assistance for these persons is now being provided through means of a pilot program of which you may have heard, the East Los Angeles Youth Training and Employment Project, being conducted by the Youth Opportunities Board of Greater Los Angeles

The Los Angeles school system is one of the five agencies which make up the board's membership, and is responsible for all education and training aspects of Youth Opportunities Board programs. We have

found, in the initial phases of this project, that many of these young people lack the same communication skills that I mentioned earlier, that there is a need for remedial programs in English and basic mathematics, as well as the need to instruct these young people in the mechanics of applying for and holding a job

We are providing these specialized remedial programs, as well as providing opportunities for training in marketable skills, especially in such shortage occupations as clerical work, drafting and auto mechanics Many of these opportunities are being made available through our adult education program, found at convenient locations throughout the East Los Angeles area

The things we have learned from this first phase of the East Los Angeles project have merely served to reinforce our previous convictions—that many of the problems attendant with a failure to adjust to school situations, which lead to dropouts and unemployability—can be corrected if students, early in their school career, acquire a sound basic knowledge of fundamentals, specifically reading

Many of our specialized programs in compensatory education for "culturally different" children are centered around this concept We know they provide an answer Our problem is to find the means to implement these programs on a wide scale

MARION J WOODS, *State Supervisor, Minority Employment Program, California Employment Service:*

It is clear that many of the occupations in which Mexican Americans are employed are occupations which have relatively low status and offer smaller wages These are the occupations mostly affected by automation and technological change and some of them are simply disappearing. A few months ago I made a valiant effort to compare 1960 occupations with 1950 occupations as given in the census and we had to give it up because many of the occupations stated in the 1950 census did not exist in 1960.

Our analysis shows that the automation is not the only menace for the Mexican American worker Another job discrimination—another problem he often faces is his cultural, language and educational handicaps Attorney Carlos F Borja, Jr , president of the Council of Mexican-American Affairs, in his speech before the Regional Conference on Equal Employment Opportunities in Los Angeles on November 14, 1963, pointed out, and I quote, "In many cases the worst economic disadvantage that a Mexican American faces today is not prejudice based on his racial background, but it is his lack of preparation " Dionicio Morales, in his presentation, *The Need for a Social Service Agency to Serve the Mexican American Community,* in his discussion of the problems of the new immigrant, points out that "employment usually becomes an immediate problem primarily due to the language barrier "

The Mexican American's lack of preparation can, in large part, be traced to a bilingual environment which has interfered with the Mexican American attempts to adjust in American society I hasten to point out here that we do not—that this is not a reflection on the Spanish-speaking culture or the policies of the government of Mexico—but it is merely an immediate and practical reflection upon the difficulties of a

person trying to exist in two cultures In one culture in which he resides, he speaks one language but he is forced to earn his living by mastering fluently another language. In addition, many who have migrated to California from Mexico and other states have been illiterate or, at least, poorly educated For this group, and frequently for their children also, the lack of an education poses an additional handicap.

RAFAEL VEGA, *Consultant, State Fair Employment Practice Commission:*

Between September 1959 and December 31, 1963, a total of 3,048 complaints charging discrimination in employment and investigation requests were filed with the State Fair Employment Practice Commission Of the above total, 143 complaints were filed by persons with Spanish surnames, the majority being Mexican Americans Forty-three of the Spanish surname cases were reported in northern California and 80 cases were reported in southern California. Of the 80 cases reported in southern California, 24 were filed in 1962 and 44 were filed in 1963 During the years 1962–1963, 51 cases named private employers, 9 named public employers, 2 named unions and 4 named schools as respondents

It is necessary to point out that the relatively small number of complaints received by the Fair Employment Practice Commission from Spanish surname complainants cannot be assumed to be an index of the incidence of discrimination against Spanish surname workers We are aware of the heavy concentration of Mexican Americans who have been victims of a history of unequal opportunity in jobs, education and training However, it is necessary to have an individual complaint or a request for an investigation before the Fair Employment Practice Commission opens a case

We were unable to obtain figures on the unemployment of Mexican Americans The Los Angeles *Times* reported recently that in an area where one-fifth of the Los Angeles population lives—and where large numbers of Negro and Mexican American workers are concentrated, the rate of unemployment ranges up to 29 8 percent of the work force, compared to 6 6 percent for the city as a whole

There is a very limited statistical and factual picture on the entire subject of minority employment, particularly as regards the Mexican Americans There is an obvious need to gear research and to develop statistics on the employment problems of our Spanish surname population, some of which are as follows:

1 A large part of the Spanish surname labor force in southern California consists of Mexican immigrants, most of whom speak little or no English. When they have a need to visit public agencies for services such as job referrals, claims for unemployment and disability compensation, filing of wage claims, complaints of unlawful employment discrimination, or reporting of infractions of industrial safety and industrial welfare regulations, if they are unable to communicate their problem because of a language difficulty, they go away discouraged Usually, they are unable to return with an interpreter as they are frequently requested to do Consequently, they fail to receive services to which they are entitled.

It must be acknowledged that some agencies have recognized that in order to fulfill their service function they must recruit bilingual staff persons Among the state agencies who have established job classifications calling for ability in Spanish, in addition to the other job requirements, are the Fair Employment Practice Commission and the California Department of Employment

2 A very small number of the Spanish surname complainants are referred to the Fair Employment Practice Commission by Mexican American organizations This would indicate that organizations are not reaching the average working person; or, if they do, they are not informing him about his rights. Those who do know their rights under the law more often than not hesitate to file complaints because they do not want others to know they have been discriminated against.

3 Mexican Americans are often unaware that they are being refused a job because of their ethnic identification, mainly because of the subtle manner in which discrimination is practiced against them Sometimes it is not so much a case of overt discrimination on the part of an employer as it is ignorance or misunderstanding of the potential of the Mexican American as an employee

4 The World War II G I. Bill enabled many of us Mexican Americans to obtain a college education. We now have a new generation of Mexican Americans Among them there are many children whose families need financial help if they are to get an education There is need for legislation which would offer assistance to the average student on the basis of need.

Problems in Public Employment

FINDINGS

The committee heard frequent and detailed criticism of the present weight given to the oral portion of civil service examinations based on a variety of objections Among other things it was contended that the applicant, in the event of rejection, is usually left in the dark as to the reasons for his failure, that factors other than capability often determine the decisions of examining boards, that the present procedure may permit covert discrimination as to race, color, age or national origin; and that no record is normally kept in case of appeal from the boards' decisions

It was also suggested that in many cases a written examination may put too much emphasis on verbal skill and facility of expression without giving a sufficient measure of the applicant's ability to perform

The professional qualifications of examining boards were also brought into question, particularly in the areas of public employment involving technical skills and training

RECOMMENDATIONS

The committee recommends the creation of a citizens' commission for the purpose of studying

(1) The feasibility of reducing the weighting of the oral phase of civil service examination,

(2) Substituting, to the extent practical, on-the-job practical demonstrations for oral examination;

(3) An interview board composed of permanent professionals,

(4) Drastic revision of the written examination, to minimize emphasis on verbal skill and facility, on the assumption that the best qualified are not necessarily possessed of these skills

The following are pertinent excerpts from testimony given at these hearings:

FERNANDO DEL RIO, *Job Development Consultant, Youth Opportunities Board of Los Angeles:*

This is specifically in relation to the oral portion of the entrance examination in the civil service procedure I want to point out a specific case involving a Mexican American and it may reflect some of the reasons why you don't find Mexican Americans in high civil service positions and, for that matter, perhaps even lower positions This is the case of a Mexican-American male. He was a qualified journalist and he qualified to take a public relations test with the City of Los Angeles He took two written examinations, this was specifically for the Los Angeles International Airport Having the mastery of both the Spanish language and the English language, and Los Angeles being a port of entry from South America and Mexico, he felt that he had quite high qualifications He took a test for a public relations representative as a staff member and also another one for a principal public relations representative, which is a supervisorial position He was notified of the written examination and he passed both examinations; he then was subsequently notified of an oral interview but without being told which of the oral examinations he was to take, that is, either the public relations staff or the supervisorial position However, he did go to the oral examination and the oral interview and nothing was stated by the interviewers, at the time, regarding the nature of the interview or which two of the positions he was being interviewed for. But when he received the results of both the oral interview and the composite written and the oral score, a strange thing happened In the oral score for the public relations representative, which was the lower staff position, each interviewer gave him a different score and the composite of the oral and the written score for this position placed the subject fourth from the top on the examination However, on the principal public relations representative, which was the supervisorial position, he received a unanimous low 60 score from each interviewer, which disqualified him from the principal position

The subject then subsequently filed a written protest and he was advised of the hearing During the protest hearing he was questioned about his insistence on qualifying for the high supervisorial position due to the fact that he had never been a government employee, although it was an open examination He received the results of the hearing, which was negative, on the protest hearing From that time—perhaps a year and a half following—he had interviews, oral interviews, for 10 or 11 different openings with the City of Los Angeles (in this same category in different agencies or different departments) and for one reason or another he could not qualify for any position He then charged dis-

crimination based on racial reasons and on the fact that the departments, within the City of Los Angeles, would shuffle employees from lesser positions into the public relations positions and, therefore, there was never an opening in those areas Up to this time, no Mexican American has been put in this position

MRS CARMEN H WARSCHAW, *Past Chairman, State Fair Employment Practice Commission:*

The California Fair Employment Practice Commission has now had more than five years of experience in dealing with employers, both private and public, on matters related to equal opportunity and the elimination of discrimination

Let me first state some general conclusions based on our experience in more than 3,700 cases over a five-year period, of which 780, or about one in five, involved charges of discrimination by a public agency—city, county, school or other district, or state

We observe that, historically, civil service has provided better opportunities in the lower levels than private industry for the employment of minority workers, that this has resulted in more minority applicants for public employment, and thus FEPC receives more complaints of alleged discrimination, proportionately, against government agencies, and frequently the red tape of civil service regulations makes the work of FEPC more difficult

We observe from our experience that government agencies, as respondents in cases of alleged discrimination, offer greater resistance and less cooperation than do private employers

The rule of three is more often than not used to cloak discriminatory attitudes and practices Many Negroes have been referred literally dozens of times, but never chosen Investigation covering months of referrals may be required to uncover the subtle discrimination in which the rule of three has been misused

Among the types of personnel actions involved in charges brought to FEPC are these. (1) refusal to hire on the part of an individual agency after referral of the applicant by the civil service office, (2) discriminatory dismissal from employment before the end of the probationary period, or failure to give tenure; (3) denial of permission to take a civil service examination—rejection as "not qualified"—or failure to pass an oral examination after the written examination is passed; (4) suggestion to Negroes that they waive their rights on an eligible list, or abolition of the list when Negroes are at the top or in the first three

We have found that in the majority of cases Negroes are taken into city or county government employment in token numbers in the lowest positions in public works, sanitation, and maintenance crews, and then do not receive opportunity to advance to foreman or to fill vacancies in other departments

You will note that my references are to alleged or proved discrimination against Negroes It is true that about 90 percent of all FEPC cases, both in employment and housing, are concerned with problems of that racial group. We are aware, however, that the Mexican-American population of southern California is quite as large, and that Mexi-

can Americans are just as much the victims of a history of unequal opportunity in education, jobs, income and housing

I remind you, however, that it is necessary to have an individual complaint or a request for investigation before FEPC opens a case Although we emphasize the problems of Mexican Americans and other minorities in our information and education and affirmative action programs, only a small fraction — 4 or 5 percent — of our employment cases come from Mexican Americans

Of the 3,620 individual complaints filed with FEPC from September 1959 through September 1964, a total of 513 charged discrimination by school or other districts or by city or county governments Another 236 complaints were filed against state agencies Then there were 29 investigations initiated by the commission on receiving information other than individual complaints that the fair employment law had been violated by such public agencies

You may be interested in some further statistics based on our experience here in southern California In this part of the state, 90 complaint or investigation cases named schools or school districts as respondents, 49 named the civil service or personnel agency of the city or county, 15 named public hospitals; another 31 named local utilities or public transit systems, and 13 named local law enforcement agencies Various city departments were named in 42 cases, and county departments in 35 cases

More than one-quarter of the completed cases in this area have shown clear evidence of discrimination and have been resolved through conference and conciliation Other cases contained elements of discrimination or inequities in the handling of applications or treatment of minority employees In a large number of these cases improvements in recruiting, interviewing, referral and other practices were made by the agencies concerned

Statewide, more than one-third of the cases against California state agencies have been settled through conciliation, and the remaining two-thirds have been dismissed. I am pleased to report that Governor Brown's directives and the ethnic census of all state employees which he ordered have brought about many worthwhile changes and improvements in making job opportunities available to minority people This does not mean that every problem has been solved But I congratulate the State Personnel Board and many other agencies on their intergroup training programs for supervisors and their moves to recruit qualified workers of every racial and ethnic group

Some of the same things are being done by cities, counties, and school districts, and in a number of instances with the advice and consultation of FEPC For example, I urge you to read the report of an FEPC investigation of the San Diego city civil service by Commissioner Dwight R Zook, and the report of an investigation of the Oakland city schools by Commissioner C L Dellums

I believe you will want me to give you some detail on the kinds of inequities we have found in civil service jurisdictions

Typically, in the past, and now as well in many places, a survey of the ethnic pattern of employment in a city government shows that Negroes are generally relegated to lower-paid, lower-status jobs, with a high percentage of Negro and Mexican American employees in such

activities as street maintenance. There are many Negro clerical and other workers in lower classifications, but Negro supervisors are almost unheard of, and there is little horizontal movement from one section or department to another. Negro professionals are relatively few

One source of difficulty is the oral examination system, which leaves so much room for free play of prejudice The few Negroes or other minority persons who serve on oral panels are chosen because of their prominence in the community, whereas the other panelists are picked for their knowledge of the specific job Our suggestion is that Negro, Mexican American, and other minority engineers, office managers, and others specially qualified be sought as panel members.

For another example, take the probation department of a large county Certain of the lower classifications have a substantial proportion (30 to 50 percent) of Negro employees At the higher, supervisory levels, the percentage of Negroes is drastically reduced To some degree, this may be accounted for by earlier discriminatory practices which prevented Negroes from acquiring sufficient experience for certain positions But it also appears that there are current barriers to advancement which result in the small number of Negro supervisors at the higher levels.

Housing discrimination, of course, limits the Negro executive to certain localities

A study was conducted by the Los Angeles City Administrative Officer and the city's civil service agency, taking as data 371 certifications comprising persons of more than one ethnic group to some 41 city departments or bureaus The rule of three applies. In all but four departments or bureaus, the percentage of eligible Caucasians appointed was greater than the percentage of eligible Negroes appointed (Of the four exceptions, two involved large numbers of custodial or labor positions The other two involved only three or four jobs each, and the percentages may not be significant.)

The figures for the great majority of these certifications are of special interest because they obviate the frequent question of whether qualified Negroes were available Thus, even if the certification process itself, including the oral examination, is entirely free of bias (an assumption I would not make), the consistently lower percentage of eligible Negroes who were appointed strongly indicates racial discrimination in selection under the rule of three

One extremely important point for public employers is this· It is not enough for high-ranking officials to declare themselves in favor of equal opportunity They must be certain that all supervisory personnel, up and down the line, are not only dedicated to such a policy but instructed in methods of making it effective. They must conduct periodic reviews of procedures and test the results in terms of ethnic pattern among the employees

Private employers, I believe, realize this They know that policy becomes practice only when it is carried out at the lower echelons as well as the higher ones It must be stated and restated to all supervisors Public employers, too, cannot afford to take these matters for granted.

It should be made clear that what the Fair Employment Practice Commission is interested in is equal opportunity for those who are

qualified. We administer the law, which prohibits employment discrimination on grounds of race, religion, or ancestry It is not a law for one group, but is intended to protect all Californians. The affirmative action program of the commission, by widening access to good jobs for members of every group, strengthens our economy and our way of life. All employers, public and private, will benefit when recruiting, hiring and upgrading are truly equal.

HAROLD JAEGER, *Business Representative, Local 11, International Brotherhood of Electrical Workers, AFL-CIO:*

For the record, I would like to state that it is our view that an oral examination should be recorded and, in connection with this, I have a figure which may be of interest to the Committee. During the years 1954 to 1958, in the City of Los Angeles, there were 365 protests of oral examinations Of this number, the commission, after hearing, allowed three of the protests I think it is rather farfetched to feel that 362 out of 365 people, who felt they had been done an injustice, were entirely wrong. Without any record, it must of necessity be a rather subjective thing and not conducive to the objectivity we seek in public employment.

Additionally, I would comment that after an applicant has undergone the procedures of filing an application, having the application approved—which shows, of course, that he does possess the minimum qualifications to fill the position—he then takes the written examination, then is subjected to this oral interview; as a result of a composite score his name is placed on an eligibility list. He then is interviewed by the appointing authority; in other words, the person under whose jurisdiction he will be employed This comprises another oral interview because that person has the authority to choose one out of the top three; that's called the rule of three. I would like to suggest that, if possible, a step toward correcting obvious opportunities for bias and discrimination would be to require, by law, that where the appointing authority selects other than the top man of the three he be required to furnish in writing his reasons to the Civil Service Commission having jurisdiction

The percentage of the composite score given to the oral examination in the City of Los Angeles varies between 30 and 50 percent depending on the specific examination If I may make a recommendation, we feel very strongly that this should be reduced if we must retain the oral, and I am quite sure that people who administer the civil service system will be able to give convincing reasons as to why it should be retained, but I do feel it should be limited to the maximum value weight of 15 percent rather than 30 to 50

ARTHUR E GREEN, *Business Representative, Local 434, Los Angeles County Employees Union, AFL-CIO:*

For many years this organization has been dissatisfied with the administration of the oral part of civil service examinations In consultation with other unions throughout the country which represent civil service employees, we have found general agreement on the various points of dissatisfaction.

At the convention of the Building Service Employees International Union held in Los Angeles in May of 1964, the convention adopted the general policy statement on oral civil service examinations, which we are herewith submitting to you

(a) Each test, written or oral, conducted by a public agency, shall conform to measures or standards which are sufficiently objective to be capable of being challenged and reviewed, and shall be recorded in a manner and to a degree sufficient for this purpose

(b) No applicant for public employment shall be questioned as to his political views, religious beliefs, labor affiliations or racial extraction

(c) Any member of an oral examining board who personally knows an applicant shall disqualify himself from questioning or rating the applicant, and staff members of the agency or personnel board shall not participate in the oral examination.

(d) The weight given to any oral examination shall not be more than 15 percent of the total examination score

(e) The original rating sheets, as marked by the oral board, accompanied by written statements as to how each examiner arrived at his rating of the applicant, shall be a public record available for examination by the applicant or his representative, and all examination scores, showing the details from all types of tests, shall be published following the completion of the grading process

(f) The right to a direct and unqualified appeal from an oral examination shall be granted to all employees.

(g) Uniform oral examinations should be given to all applicants.

(h) Inclusion of members of minority groups on oral board panels should be encouraged

(i) The applicant or his representative should have the right to challenge members of oral board panels

MRS NESTA GALLAS, *Faculty Member, U S C School of Public Administration:*

I am particularly interested in the matter of the use of oral interviews and the use of written tests, and I submit that the written test is as discriminating against certain groups as the oral interview for this reason Much of our research in the field of written tests shows that it is loaded in favor of the sophisticated, educated person, and that those persons, who come from a kind of family background where English skills are not as good as other backgrounds, do not do as well in the written tests; so I find myself facing great difficulty in saying the written test doesn't discriminate, but the oral interview does.

For example, let's take a field of social work or a field of probation where you have, say, a heavy weight on a written test, the field of police work, the field of fire work Research on written tests indicates they favor the person with high memory, high recall, high verbal skills Our work in written tests is not developed to the point of science where we know exactly what we do tell from written tests, and I submit that if I happen to have high memory skills, high verbal recall skills, I will do better on written tests but I may not know any more about the subject matter of the field, and I think this is a significant point to remember.

The oral interview, too, I submit, neither creates nor eliminates bias I mean it's one person sitting in judgment of another, and if those doing interviewing are biased to begin with then there is going to be bias The oral interview to me does not necessarily create bias because we do have one person sitting in judgment of another I do believe that the individual interview creates a greater opportunity for the exercise of bias or prejudice than some other interviewing techniques, and I think this is why some jurisdictions are moving to a different kind of interviewing technique than the individual interviewer I come before the three of you and I try to make a good impression but I am dependent on this kind of a situation which is a quite different kind of interview technique than if it is what we call a group interview or a leader of this discussion where the people sit around the table and we observe them over a period of time, so I think the technique of interviewing is an important one to look at.

NORMAN E. WOODBURY, *Executive Director, California Municipal Utilities Association:*

At our first receipt of your notice, we felt that the subject matter might be a little more general than it has turned out to be, so I am going to be rather brief and just make some general observations.

I represent a management organization. It is composed of some 55 cities and special districts such as public utility districts, municipal utility districts, and the managers or the local authorities representing these agencies are members of my association. I think, by and large, that we have not found that there is a better system yet devised than the selective process usually found in your competitive examinations, including your oral interviews and then permitting management to have its selection of either one or more of those who basically have qualified on the basis of the civil service system I am sure you are aware there are systems which force the employer to take the single man as the top man on the list I think probably the prevailing practice is the choice of three—one out of three. There are other systems that say, "Here is a list of employees or persons who have passed an examination and we say these persons are qualified, and you then make your selection from however many might be on that list; you can choose the bottom man, if you want to " So, it is rather a wide gamut as to the ability of management to select, and we have no particular recommendations to make.

Some of our agencies are located in large cities such as the City of Los Angeles, we have also very small cities where the city council acts as the personnel board and, in probably too many instances, the selection committee as well We have municipal utility districts—some large and some small—also the public utility districts Generally, our feeling is that the local elected representatives of these districts do have the foresight and the interest of the general program there to do the best selecting they can of their employees They authorize the general manager then to set up a personnel selection system. This may be through examination If it's a very small district, it's merely publicizing to the effect that a position will be open and asking those persons who might be interested to apply This may be solely on the interview basis, but I do want to leave the point with this committee that generally

our people who are in charge of these utility operations are satisfied that the selective civil service process or the selective process has been doing a good job. We are, of course, interested in your interest in improving it. We do feel any discrimination on the basis of race, ancestry, national origin or politics certainly has no place in the public employment field.

I might also make this observation: I'm not without some experience in the field of public personnel management, having been the chief examiner for the City of Glendale, also having been personnel officer for some of the large state departments and having worked with the State Personnel Board in many examination processes I merely point this out: If you have the rule of three and you appoint one, there are always going to be two disappointed people who are going to, in their own minds, try to rationalize how come they were discriminated against. To management, this is always a tough part of having three rather well-qualified employees appearing before the one man who makes the final decision, and he may want to be in a position to say, "I would like to employ you all," but he has to choose one.

CARLOS BORJAS, *President, Council of Mexican-American Affairs:*

I am chairman of the Los Angeles County Mexican-American Ad Hoc Committee on Employment This ad hoc committee was brought together by the Los Angeles County Commission on Human Relations primarily to look into these problems of employment, not only in the area of civil service but also in private employment Our ad hoc committee has been working in the area of civil service in trying to determine the number of Spanish surname people working with civil service In the early part of 1963, we requested government agencies at all levels to take a census and to obtain statistics so that we could be able to determine the reasons why there was such a small number of Mexican Americans in civil service. We did not have any statistics at the time, but, going from agency to agency, we could see that there were a very small number of people who spoke Spanish in these various agencies Now the purpose of obtaining the opinion of these statistics was to try to initiate positive programs so that we could get more Spanish surname people to participate in running their own government Now, we wrote to the City of Los Angeles to obtain this type of statistics Unfortunately at that time, we did not receive any cooperation whatsoever. We have written to the County of Los Angeles and here we have had a wonderful response Through the county commission on human relations, the county has made many positive action programs. I will only tell you of one program which has been carried out; it is the program in which we have been able to obtain the cooperation of the Spanish language news media, the radio and the television As you know, unfortunately many of our people do not have excellence in English required to be able to read the English newspapers so they concentrate primarily on T V. programs, especially KMEX KMEX was kind enough to donate one-half hour of their time for a series of 13 programs with the backing of the county And I don't only mean backing by moral support, they actually backed us with money so that we could help buy some of the sets and what have you. The county donated some money for this and we think it's an excellent program

This series of 13 television programs was developed to encourage Mexican Americans and other Spanish-speaking persons to apply for available jobs and to familiarize themselves with civil service policy methods We've had wonderful results from this television series with the County of Los Angeles Now, at the state level, we have had excellent cooperation as well from the State of California A census was made for all minority group people at the state level and this proved to be quite a tremendous job Now the results of these findings in 1963 were that out of this total of a little over 100,000 state employees, 5,467 were Negroes; 3,190 were Orientals, 720 other nonwhites; and 2,209 were Mexican Americans. Our Governor lauded the census and requested a four-point program I might say that the four-point program was a result of the census primarily because it was found that the minority-group people working for State Civil Service were found, of course, in what we call the "blue collar" jobs, in the low-paying jobs—the menial jobs And Governor Brown wanted to know why this was so Was it because of lack of education, or was it because of discriminatory practices within various agencies? Governor Brown, on November 27, 1963, requested a four-point program. In this four-point program, he asked for an implementation of a positive program to eliminate discrimination He called for a conference of university, college, and public school educators to make a thoroughgoing study of educational practices as they pertain to both state and private employment Governor Brown asked for and ordered a study of applications for state employment to determine whether minorities are failing to apply for existing jobs and where minority applicants did not exist, why they were not making their applications The third point was that he asked the State Personnel Board to recommend new programs of in-service training The last point was that Governor Brown directed the then Director of Administration of Health and Welfare, and the Chairman of the Cabinet Committee on Equal Employment Opportunity to examine the feasibility of using existing personnel analysts in the State Personnel Board for auditing all department recruitment, placement and promotion activities so as to affirmatively support the merit system's goal of opportunity. Now this is a wonderful four-point program In the opinion of the ad hoc committee, this program has not been implemented although it is now almost a year since the four-point program was suggested The reason for this we do not know, but we hope that the four-point program will be carried out at the state level.

Now there is a very positive solution as to what can be done on an action-type program. There is one agency that has done an excellent job and that is the Department of Employment They have gone out on a limb, you might say, and sought to obtain people who not only know Spanish but who also know many of the cultural backgrounds and factors and idiosyncracies of our people Thy have tried to obtain people, for instance, the employment security trainee, who have knowledge of both English and Spanish. Not only are they looking for all of the requirements that are needed for an employment security trainee, but they are also looking for this other facet, this knowledge of the peculiar language and cultural things that are needed for our large percentage of Spanish surname people We hope that more state agencies can be prevailed upon to carry on this type of program.

Now I would like to recommend, in closing, that positive steps be taken to encourage minority group people to participate and make applications with the State Personnel Board at the state level I would recommend the type of pamphlets which the Federal Government, for instance, is doing The federal government, the U S Treasury Department, put out a beautiful pamphlet called, "A View of Your Future," in which it shows minority-group people at work and doing work with the Treasury Department It is also being done by private agencies. The Community Relations Conference, the Employment Committee, recently put out this excellent pamphlet in which they said race, creed, color, or national origin need not be a bar for better jobs, it's up to you I can see no reason why the same thing cannot also be done at the state level

In finishing my recommendations, I would recommend that persons of Mexican American descent should be trained as recruitment specialists and be given responsible positions with civil service jurisdictions Such a specialist should be given sufficient freedom from specific duties to be able to devote time to development of new programs In addition, expense funds should be allocated for surveys and new programs so that they can see how Spanish surname people may be brought into state service We would recommend that the Civil Service jurisdictions which have not made a survey of their pattern of employment as to Mexican Americans and other minority-group people be requested to do so by a responsible official body to highlight areas of discrimination or possible discrimination We would recommend there be a more extensive use of adult schools in the Mexican-American communities to be made available for teaching of specific Civil Service classes We would especially recommend that there be no fees in these adult schools, as there are no fees in being able to obtain citizenship or in the classes for English language for foreigners Finally, we would recommend that the Civil Service jurisdictions include questions in their examinations that would determine the fitness of individuals being examined to deal sensitively with the problems stemming from persons with Mexican-American cultural background.

JOSEPH W. WALKER, *Urban League Job Development and Employment Director:*

The function of civil service is to insure honesty and efficiency in government and the placement of properly qualified individuals With this in mind, an evaluation of (1) use and places of the oral interview, (2) the rule of three, and (3) in-service training programs, as possible deterrents in the administration of civil service justice is now in order.

The oral interview is generally justified as a means of measuring certain qualities which are important to a specific examination and yet which cannot readily be treated by other means It should be limited precisely to this function It is generally conceded that the higher the job level, the greater the validity in the use of the oral This also means, parenthetically, that the lower level jobs do not require the use of the oral A probationary period can more adequately give the evaluation required It therefore follows that the oral should be used more on high level entry jobs and on executive promotional opportunities than at any other levels

Civil service career specialists have been quoted as saying that management is better able to pick the best candidates for promotional positions, completely discounting the bias factors which often make for a perpetuation of the good and the bad of past policies and practices and also too often making for the exclusion of minorities from management positions It is to be remembered that, exclusive of the oral interview, management will still have its controls This includes the probationary period

It is therefore highly recommended that civil service commissions hire permanent, qualified oral interviewers, men and women especially trained to conduct oral interviews This should be a new classification of government employees who would not be subject to the control and jurisdiction of staff or top management And if management-controlled staff is allowed to participate in the oral in any way, as a result of a necessary compromise, they should constitute a minority in the decision making

Under present regulations, the rule of three, it is possible for an applicant to be number one on a Los Angeles City examination list and yet never be selected for a job To compound this issue, the applicant may have gone through a series of oral interviews in the course of his rejections Then we must add a third dramatic touch Another examination could not be given and the list combined, and due to stiffer competition our target applicant could not be moved out of a job contention rating The potential racial implications are exceedingly clear Here again, we must note the exceptions The city fire department has made a remarkable about-face in democratizing its selection procedures The problem now is stimulating the recruitment process We of the Urban League, along with community citizens, are doing something about this Another exceptional example, the employment service exhausts its old list before it starts using the new list These exceptions, gentlemen, are not the rule

It is strongly recommended that the State Legislature require the Civil Service Commission of the state, county and city take immediate steps to eliminate this kind of an injustice These problems have been known for a long time and unless the State Legislature, in cooperation with the executive branch of the government, takes action, we of the Urban League see no hope for a brighter future

Reference has already been made to the concentration of Negroes in lower skill jobs Various departments of all three civil service installations engage in informal in-service training programs Few Negroes participate in the promotional plans, but supposing the programs were formalized and made known, many a worker, now reluctant, would come forth requesting to be considered for promotional jobs And if this is not sufficient, our agency's efforts combined with others, could serve as a stimulant to the employees to take advantage of the in-service training programs. We could also seek out persons in the community who would be properly motivated to take in-service training at the point of entry

The State Legislature is urged to establish a proper committee to analyze the proposal of formalizing in-service training programs and to prepare guidelines to be followed by the various departments of civil service in the implementation content and procedure

WILLIAM GREENE, *Local 347, Los Angeles City Employees Union, AFL-CIO:*

Historically, it has been our finding that members of minority groups are in the class of the *helpless* among Los Angeles' city employees These helpless employees include those presently found in such classifications as refuse, street maintenance, recreation and parks, sewer maintenance, custodial, vehicle operator, parking lot attendant, etc Most requirements call for some degree of training or prior experience as an initial qualification for taking a written examination for a higher classified, better paying job in either one of the technical areas or at the lower grade supervisory level This is even true in the same departments in which many members of minority groups are employed Consequently, you find a situation in which members of minority groups are largely found in only certain job classifications or departments, with little or no opportunity for advancement into other job classification or possibility for upgrading within the job classification of pipe fitter

Local 347's recommendation is for the establishment of an apprenticeship training program Such a program would not only serve to alleviate the situation I have just described, but would also serve to assist in the advancement of all public employees who wish to prepare themselves for more skilled jobs with higher pay

The concept of apprenticeship training in public employment is not new in California Apprenticeship training programs are presently in operation in Los Angeles County employment, in the Los Angeles Department of Water and Power, under the Los Angeles City Board of Education, in both San Diego City and County employment, at the Long Beach Naval Shipyard, in a number of northern California jurisdictions, to say nothing of the many areas of private industry that use the apprenticeship training program to get the best and the most out of their employees.

Los Angeles County instituted its apprenticeship training program in 1946 It is set up with 14 separate state-approved programs, including the building trades and a cook's program. Training under the county's programs last from three to five years All programs have the same standards, evaluations and criteria as private industry. The Los Angeles County apprenticeship training programs have an apprenticeship board, which is made up of members of labor and management in county employment, members outside county employment, and representatives from the board of education and the State Division of Apprenticeship Standards Each program has a committee of like composition which supervises the training program for its individual job classification A similar apprenticeship training system would be very useful in Los Angeles' city employment.

For many years Local 347 has been critical of the administration of the oral part of civil service examinations In consultation with other unions throughout the country which represent civil service employees, we have found general agreement on the various points of dissatisfaction.

In 1961, the California State Legislature saw fit to enact A B 2375, which added Chapter 10 (commencing with Section 3500) to Division 4 of Title 1 of the Government Code, giving public employees the right

to representation in all matters relating to employment conditions and employer-employee relations, including but not limited to, wages, hours, and other terms and conditions of employment.

In view of an opinion by the city attorney, we are prevented from representing our members in many areas and in many relations with management in which they need counseling and guidance It is our opinion that this was the original intent of this section of the Government Code.

Local 347 recommends an amendment to Chapter 10, Section 3504 of the Government Code to include language which would clearly spell out a public employee's right to representation on the job. We recommend language similar to that found in the work rules of the Department of Water and Power, as pertains to its clarity and outline of procedure.

Tied directly to Local 347's two foregoing recommendations for an apprenticeship training program and oral examinations is the lack of a seniority system in Los Angeles' city employment. Many of the problems I have described earlier are also attributable to the lack of a seniority system Rule Five, Section 5 21 of the Rules of the Board of Civil Service Commissioners of the City of Los Angeles, as amended to October 10, 1963, state, and I quote "Seniority as used in Section 5 19 relates only to seniority for civil service purposes, namely layoff and displacement, and does not affect any department policy related to vacation, salary, reemployment, or placement on a seniority basis"; end of quotes

Once again, the seniority system is not uncommon to a number of jurisdictions in northern California The seniority system has been found to work well in federal employment and is cherished in private industry. We can see no reason why it would not work equally well as a means of advancing employees after long years of competent, loyal service who have qualified themselves in other areas.

One of the avowed objectives of a civil service system is to insure that advancement is based on merit and ability rather than bias or favoritism The rule-of-one helps to insure the furtherance of this admirable principle. Los Angeles civil service still retains the rule-of-three, which has been replaced in some other jurisdictions, where it has been found to be unfair and outmoded Public jurisdictions provide for a six-month probationary period. Only applicants who have established prior experience, acknowledged skills and other predetermined factors are permitted to take advancement examinations Only the number one person who has placed himself as number one on the eligible list by virtue of the highest score, both in written and oral examinations, should receive the job appointment resulting from such examinations under the present system. We recommend legislation introducing the rule-of-one into civil service, as an important guarantee of a true merit system.

CHARLES A HENDERSON, *Regional Director, Local 411, Union of State Employees:*

For many of the years that we have been in existence as the Union of State Employees, our organization certainly has been dissatisfied with the administration of the oral part of the civil service examination. In

consultation with our other sister organization and unions throughout the country which represent the civil service employees, we have found that they are in general agreement with us on various points of dissatisfaction. Number one would be that each test, written or oral, conducted by the public agencies, shall conform to a measure of forced standards which are sufficiently objective to be capable of being challenged and reviewed and shall be recorded in a manner and a degree sufficient for this purpose.

Number two, we firmly think that no applicant for public employment shall be questioned as to his political views, religious beliefs, labor affiliations, or racial extraction.

Number three, that any member of an oral examining board who personally knows an applicant shall disqualify himself from questioning or rating the applicant and the staff members of the agency or personnel board cannot participate in the oral examination

Number four, that weight given to any oral examination shall not be more than 15 percent of the total examination score. We oftentimes believe it should only be 10 percent or less, or no oral examination at all. The original rating sheets as marked by the oral board accompanied by written statements as to how each examiner arrived at his rating of the applicant, shall be a public record available for examination by the applicant or his representative, and all examination scores showing the details from all types of tests shall be published upon the completion of the grading process The right to direct an unqualified appeal from an oral examination shall be granted to all employees Uniform oral examinations shall be given to all applicants

Number five, that members of the minority groups shall be included on all board examinations or board panels and this should be encouraged by the state, and the applicant as represented should have the right to challenge members of the oral board panels We also believe that the rule-of-one, rather than the rule-of-three, should be practiced throughout the state employment These people have passed the examination and have placed themselves in a position where they should be given the chance if they are number one on the list, to have a chance at the job that they have passed the examination for.

KENNETH R. KNIGHT, *Assistant Superintendent for Personnel Operations, Los Angeles City Schools:*

I should say in opening, that the city school districts are a little unusual because under state law we have two types of employees; two services, each one with its own separate body of rules and regulations In Los Angeles we have about 35,000 employees who come under the certificated service. These are the teachers, the principals, the doctors, nurses, and the supervisors The rules and regulations for this group are governed primarily by our local board of education The state law does not provide how they are to be selected, but merely restricts us from using discrimination because of age, race, religion, sex, and marital status The other major group of employees are the classified employees These are the custodians, the clerks, the technicians, and the Education Code is rather specific in how these people are to be selected In fact, we have our own separate personnel commission, which prepares the rules and regulations for these groups.

I mention this because you may wonder why we handle the same problem in two different ways; it's because we have two different groups In connection with the examination procedures for certificated employees, we give a three-part examination We're trying to find out three things How much does the person know about the area in which he is to be employed. This is a written examination and we give it a weight of 30 percent Then we attempt to determine how valuable is the training and experience this person has had in relation to his job This is a training and experience evaluation done by a committee, however, they do not see the applicant, so it's not an interview This counts 40 percent. Finally, we attempt to discover certain personal qualifications of the employee and this is done by an oral committee and this counts 30 percent. This question was asked yesterday, I think, what was intended to be discovered by the oral committee?

Our oral committee is asked to evaluate the applicant on these nine items: voice, appearance, manner alertness, ability to present ideas, ability to get along with others, maturity of judgment, reaction to criticism, health and vitality We consider these items extremely difficult to get in any other way The mortality rate for this type of selection process goes something like this Out of every 100 applicants there are about 20 who fail the written examination Of the remaining 80, 10 do not qualify in training experience Of the remaining 70, 3 do not qualify under personal fitness Of the remaining 67, 7 fail to qualify on an average of parts On the average of parts, I think it is characteristic of our procedures and I think of other public jurisdictions, a person is required to pass all three parts of the examination and then to reach a certain cutoff score And the cutoff score is determined by looking at a graph of the distribution of the examination and setting the cutoff at a point where sufficient eligibles will be provided In other words, if only 50 people are needed on the list, there is no point for us to put 150 on It can never be below, of course, the former cutoffs, but it can be above.

For the classified service, we have a two-part examination Roughly, a 50 percent weight on the written and a 50 percent weight on the oral The mortality in this type of examination, of course, varies tremendously according to the field, but, in general, out of every 100 people who take the exam, 50 will fail the written examination Of the 50 who go on, about 20 will fail the oral examination and 10 will fail the average of parts Now there's an important distinction between these two. Actually, our purpose for the classified service in the oral examination is the same as it is for the certificated service in both the training and experience in the oral In other words, in the certificated service the oral committee is only responsible for determining such things as speech, appearance, and so on But in the classified service, we have experimented in using the three-part examination that we use with the certificated service The difficulty in applying this at the lower levels has been that frequently the applicant is not able to explain in detail enough for a committee to determine his evaluation of his training and experience without questioning him So one of the important missions of the oral committee is to find out from the employee just what kind of work this was he has done which he feels is applicable to the job at hand

The second area in which we have discussed here is the matter of selection This is the rules under which the appointing authority selects the names of the persons to be given the job

With the certificated service, we operate under a rule-of-five with a pass-over limit In other words, the appointing authority may select anybody who is within the top five on the eligible list, but once a person's name reaches the top of the list, it may not be passed over more than four times.

The next area is the area of transfer which was mentioned Our policy in the certificated service on transfer is that anyone who wishes to transfer, and this is primarily teachers because, of course, 90 percent of all our certificated employees are all in the class of teachers Any teacher who wishes a transfer makes application to either the elementary or the secondary division, and the principals are required to interview all people who have requested a transfer to that particular school However, the principal may choose anyone he wishes until the name of this person has been on the list for three years At that time we have what we call a negotiated transfer, which is another way of saying that the central office places the employees At the present time, there are no names left that have been on that list All the names that have been on that list for three years have been placed.

HOWARD ZUCK, *Chief Personnel Analyst, Civil Service Department, City of Los Angeles:*

Originally, during the summer, we received a letter from this committee inviting information, asking some specific questions, and inviting an appearance here today We did our best to answer this letter as specifically as we could In our reply we pointed out that it is the policy of the board of civil service commissioners that the weight of the interview portion of examinations for positions not involving supervision or an appreciable amount of public contact, shall not exceed 30 percent For classes involving a moderate amount of supervision or public contact, the interview may be weighted up to 40 percent and for classes predominantly supervisory, executive, administrative or dealing mainly in public relations, the interview may be weighted as high as 50 percent.

I might point out that this determination was made by this commission after a protracted period of hearings, approximately three years ago in September, I believe it was, of 1961, this was a new commission which was appointed following the last election and they were very much concerned with this particular phase of civil service examinations Over a long period of time they conducted separate hearings apart from commission meetings, during which they provided an opportunity for members of all interested groups, labor, management, minority groups, community relations organizations, to submit presentations and come in and make personal appearances. They heard all these people out and as a result came up with this general policy to apply in future examinations Whenever examination announcements are proposed in the City of Los Angeles they are finally reviewed and approved by the Board of Civil Service Commissioners and they are always examined pretty closely for adherence to this policy.

The letter asked for statistics showing comparative percentages of successful and other examinees with specific references to those who may pass the written but may fail the oral examinations We had no statistics ready to hand for this purpose, but we made a survey of a random sample of 100 examinations that were given over a one-year period here within the last several years which included something like 6,740 applications Now, of this group, 2,820 were called for interview on the basis of having obtained a written test score of 65 percent or higher, which is provided by the Los Angeles city charter, and 2,650 of these 2,800 appeared for interview There is a certain loss there of people who passed the written and just don't show up for the next stage of the examination A total of 2,400 or 91 percent of the candidates interviewed, received passing scores in the entire examination and were placed on our eligible list There were 2,380, or 90 percent of the candidates interviewed, who received interview scores that were at the minimum satisfactory level of 70 percent or above The remainder is accounted for by 276 candidates, or 10 percent with interview scores below 80 percent We then went a step further to try to show what happens here, into a little greater relief and tried to make some estimate of the difference in performance between written tests and interviews, and this may be of interest In a random selection of 45 of these 100 examinations, representing 3,180 candidates, the average range of scores on the written test was 38 percent, that is, by range I mean the difference between the high score and the low score was 38 percent on the written test compared to 25 percent on the interview The average of the high scores on the interview was 90 percent—take all the high scores and average them—was 90 percent compared to 81 percent for the written test The average of the low scores on the interview was 65 percent, necessarily, because we don't interview anybody with less than 65 on the written, compared to 44 percent on the written What this demonstrates is a feeling, that we all had for many, many years that interviews are far less discriminating than one would have anticipated The range of scores is more restricted, the scores given are higher They, in effect, tend to help people in a respect rather than to hurt them. Now, as far as the relationship between the placement of minority groups and the oral examinations, we do not have that information primarily because we have no means of obtaining such data

I might point out that in addition to the hearings that were held three years ago on the subject of examination weights, the civil service commission at that time made a very extensive investigation of the whole problem of the oral examination as it was used and as it was to be used in city service and the same procedure was followed and that they provided opportunities for representatives of all interested groups to appear before them and to present their arguments, at the conclusion of which they drafted a series of comprehensive policies affecting the use of interviews, which we follow pretty strictly They felt, at that time, and I believe they still do, that an interview is a valid and important part of any examination; that it needs to be given a sufficient weighting so that it bears some result in the outcome of the examination and that its use should be continued They realize that

there are difficulties with the use of the interview as a procedure but this should not necessarily invalidate its use There are difficulties with almost any technique that one can propose We have many, many protests against written tests but we don't, as a result, decide to rule out the use of written tests

I would like to clear up one point on the subject of the rule of three There is a misconception, I think, which is generally prevalent about the rule of three One would think that an operating supervisor can always consider and appoint any one of three people and this is simply not so We certify two more than the number of vacancies, so if an operating department is making one appointment, then it is true, he does have three people to consider If he is making two appointments, he gets four people If he is making three appointments, he gets five people It's not a real rule of three, it's two more than the number of vacancies and he keeps getting back the same people He cannot reject the people who are certified to him and then go down the list and pick up others

OSCAR YORK, *Chairman, Civil Service Subcommittee, Committee for Representative Government:*

We have been concerned, primarily, with the hiring and promotional opportunities in the Bureau of Public Assistance and our information came from rejected applicants as well as certain supervisors on the job and employees who work in clerical positions in this agency, primarily We have had the help of labor organizations and, of course, the Los Angeles Employees Association has members who have given us information

We have found, for instance, that it is arbitrary in the Bureau of Public Assistance in the initial hiring stage that the agency has arbitrarily controlled who shall be acceptable for employment and on what terms; at what specific facility they shall be assigned, how evaluations shall be made of these new personnel and whether or not such evaluations shall remain secret; whether an applicant shall be informed as to why he is not acceptable and the reasons for which an employee may be discharged or pressured to resign in lieu of discharge We consider that such discretions being left to agency officials is inviting of personal whims as well as prejudices which may remain submerged until an opportunity presents itself for overt expression thereof We have found that, over a period of time, various officials in the BPA have established a pattern of hiring practices which reflect bias rather than good judgment.

In the postprobationary period, in addition to the foregoing listed items, the agency determines who shall evaluate an employee, even if the official has no knowledge of the employee's traits and the weight of such an appraisal of promotability For instance, while a supervisor may evaluate an employee, say, rather highly—around 80-something—this supervisor's immediate superior could downgrade this evaluation with no discussion whatever with the supervisor who made the evaluation or with the employee This is done frequently

We find the greatest stumblingblock to applicants for promotion exists in the oral interview I think this is the main crux of our presentation.

We say that an oral interview serves no useful purpose for a promotional examination We say a man who has been working on the job for 10 years with an excellent record has shown that, in that time, he knows his job If in 10 years he is too stupid to prepare himself for a higher position, that's on him, but a man who takes the trouble to prepare himself professionally for a higher position, who has these years of experience, and who passes the examination, should not be overly weighted on an oral interview Specifically, we actually state that we believe the only obvious purpose of all interviews, in lieu of objective examination material, is to study the color of the skin of the applicant, possibly to determine the Semitic curve of his nose or a Latin complexion or even the epicanthic eyefold of the Oriental Certainly, educated applicants with excellent records over a period of years can be properly selected on the basis of qualification with the probationary period on the new job being the determining factor rather than overweighted oral examination

We make only two recommendations to the committee at this time That the Los Angeles County Civil Service Commission be encouraged at the earliest opportunity to implement its duties under Section 34 of the county charter which states that they do have the authority and responsibility to prescribe and amend and enforce regulations in the classified service which shall have the effect of law

We think, particularly, the oral interview is one main evil in the civil service commission, and we are violently opposed to it for the reasons I have stated.

JOHN T LONG, *Personnel Analyst, Los Angeles County Employees' Association:*

Specifically, we would recommend to this committee that they take a long hard look at orals, appraisals of promotability and the employment interviews to the end of changing or eliminating some phases of them Partial resolution may be found in a few of the questions that we have raised here What standards are utilized to guide oral panels? What type criteria are used in the assignment of weights to various parts of examinations? Can appraisals of promotability be based on accumulated data rather than on an instant opinion? What is the value of an appraisal of promotability when a position applied for is in a totally different occupation or profession? Why is a detailed breakdown of the oral score and the appraisal score, in the County of Los Angeles, not made available to the candidate as the information about the written part of the examination?

We have much to do in widening the scope of the advantages of the merit system A survey made in 1963 showed that in 26 local jurisdictions in California reporting, 26 percent offered no recourse to suspended public employees and that one-fourth of these jurisdictions were not covered by any merit system program, 16 percent did not keep complete records of oral examinations and that only about one-half required panel members to be responsible to explain how they assigned scores.

In summation, we are raising questions that I think plunge to the heart of the process of providing ways and means of selecting and promoting public servants To this end we recommend that some of the present roadblocks be removed For example We recommend that the oral panel be excluded when a candidate is applying for promotion within the same group or series of classifications, that the appraisal of promotability be eliminated when a candidate is applying for a position which is totally a different occupation or profession from his current assignment; and that a breakdown of all portions of the examination process be made available to any candidate, upon request, just as he may receive this information regarding his written score or his medical examination

CHAPTER 7

SUBCOMMITTEE ON ECONOMIC OPPORTUNITY

The Subcommittee on Economic Opportunity was appointed in November 1964 in accordance with permission granted by the Assembly Rules Committee to investigate the provisions of House Resolution 197 (1964 First Extraordinary Session of Legislature) Assemblyman Mervyn M. Dymally was appointed chairman Others appointed to the committee were Assemblymen Clair W. Burgener, John Francis Foran, Walter W Powers, and Alfred H Song.

This new subcommittee continued the studies initiated by the Special Assembly Subcommittee on Economic Development and Automation of the Assembly Industrial Relations Committee, which conducted hearings and studies during the 1961–1962 interim legislative period and whose activities were productive of constructive results. This subcommittee's work assisted in the establishment of the California Commission on Manpower, Automation and Technology. It was felt in addition that the new subcommittee could act as an agency through which members of the general public could manifest interest and concerns regarding unemployment, equal employment opportunities, and economic problems of California and thereby serve an important function in providing valuable information to the Legislature

The subcommittee undertook a thorough study of President Johnson's War on Poverty program as embraced by the provisions of S 2642, 88th Congress, Second Session, entitled the Economic Opportunity Act It engaged in hearings with three prime purposes· (1) to assist in expediting the utilization of the act; (2) the gathering of information designed to be useful to the Legislature; (3) the delineation of the state's role with particular reference to any legislative action required of the Legislature

The subcommittee appreciates very much the cooperation and assistance of Dr Paul O'Rourke, special assistant for antipoverty planning, in performing his work.

The subcommittee held hearings at the following times and places November 13, 1964, Sacramento; November 18, 1964, Los Angeles; December 8, 1964, San Francisco; December 14, 1964, San Diego, and December 18, 1964, in Fresno.

FINDINGS

California stands to benefit substantially from the various programs projected under the several titles of the Economic Act of 1964 enacted by the 88th Congress of the United States.

These benefits will extend to vocational training, work experience and education for young men and women; antipoverty programs developed by local communities, loans to low-income rural families and assistance to migrant farm workers; loans to small businesses; and work-experience training for unemployed fathers and needy persons

The full implementation of the overall program in California will call upon the cooperation and initiative of numerous agencies, including the Departments of Education, Employment, Finance, and Social Welfare on the state level, and county boards of supervisors, city councils and nonprofit private organizations on local urban and rural levels

In order to insure the full and prompt development of the various programs as they apply in California, the Legislature will need to give close attention in the 1965 session to the possibility of enabling legislation that may be required for participation on all these levels where clarification or revision of present state law is deemed necessary and desirable to conform with federal specifications

RECOMMENDATIONS

(1) That the state commit itself to the full support of this act and to the prompt expedition of its implementation in California in every feasible manner

(2) That an emergency appropriation bill be considered in the event such an appropriation may be necessary to provide matching funds for those provided by the federal government

(3) That the need be promptly determined for legislation clarifying the eligibility of recipients of categorical aid to participate in the pertinent phases of the program without loss of benefits under state law

(4) That present law relating to the functions and powers of local school districts be examined to determine whether or not additional legislation may be needed to permit their participation in the educational phases of the act

(5) That legislation be considered providing for the creation of an Office of Economic Opportunity to administer the state's participation in the antipoverty program (The subcommittee will submit a proposal providing for the structure, powers, and duties of such an agency, including a state interagency advisory committee, in its supplemental report.)

The following is a brief summary of the Economic Opportunity Act of 1964:

Fiscal 1965 Authorization: $947.5 Million

The Economic Opportunity Act of 1964 establishes an Office of Economic Opportunity in the executive office of the President. The OEO is headed by a director with a planning and coordinating staff. This staff is responsible for coordinating the poverty-related programs of all government agencies.

Within the OEO, separate staffs will operate a Job Corps, a program for Volunteers in Service to America (VISTA), a Community Action Program, and special programs for migrant workers. In addition, the OEO will distribute funds to existing agencies to operate a variety of programs authorized under the bill: work-training programs to be administered through the Labor Department, work-study programs through HEW, adult basic education through HEW, special rural antipoverty programs through Agriculture, small business loans

through the Small Business Administration, and community work and training projects for welfare recipients through HEW.

Following is a summary of the programs available under the Economic Opportunity Act of 1964

Title I—Youth Programs: $412.5 million

Part A — Establishes a *Job Corps* to provide education, work experience, and vocational training in conservation camps and residential training centers, to enroll 40,000 young men and women, aged 16–21, this year, 100,000 next year Administered by Office of Economic Opportunity Total cost, $190 million

Part B — Establishes a *Work-training Program* under which the Director of the Office of Economic Opportunity can enter into agreements with state and local governments or nonprofit organizations to pay part of the cost of full- or part-time employment to enable young men and women, 16–21 to continue or resume their education or to increase their employability, expected to involve 200,000 young adults Administered by Labor Department Total cost, $150 million.

Part C — Establishes a *Work-study Program* under which the Director of OEO will enter into agreements with institutions of higher learning to pay part of the costs of part-time employment for undergraduate or graduate students from low-income families to permit them to enter upon or continue university-level education, expected to involve 140,000 youths the first year Administered by Department of Health, Education, and Welfare Total cost, $71 7 million

Title II—Community Action Programs: $340 million

Part A — Authorizes the Director of OEO to pay up to 90 percent of the total costs of financing antipoverty programs planned and carried out at the community level Programs will be administered by the communities and will coordinate poverty-related programs of various federal agencies Total cost, $315 million

Part B—Authorizes the OEO Director to make grants to states to provide basic education and literacy training to adults Administered by the Department of Health, Education, and Welfare Total cost, $25 million

Part C—Voluntary assistance program for needy children

Title III—Programs to Combat Poverty in Rural Areas· $35 million

Part A—Authorizes loans up to $2,500 to very low-income rural families where such loans are likely to produce a permanent increase in the income of such families or by financing nonagricultural, income-producing enterprises for the same purpose The Director of OEO also may provide assistance to nonprofit corporations, and cooperatives of low-income rural families Administered by Department of Agriculture

Part B—Sets up a program of assistance to establish and operate housing, sanitation, education, and child day-care programs for migrant farm workers and their families Total cost, not more than $15 million

Part C—Indemnities to dairy farmers

Title IV—Employment and Investment Incentives

The OEO would be authorized to make, participate in, or guarantee loans to small businesses of up to $15,000 on more liberal terms than the regular loan provisions of the Small Business Administration Administered by the Small Business Administration Would use $25 million of SBA's regular spending authority.

Title V—Work-experience Programs: $150 million

Authorizes the Director of OEO to transfer funds to HEW to pay costs of experimental, pilot, or demonstration projects designed to stimulate the adoption in the states of programs of providing constructive work experience or training for unemployed fathers and needy persons.

Title VI—Administration and Coordination: $10 million

Authorizes the Director of OEO to recruit and train an estimated 5,000 VISTA volunteers to serve in specified mental health, migrant, Indian, and other federal programs including the Job Corps, as well as in state and community antipoverty programs

Title VII—Treatment of Income for Certain Public Assistance Purposes

Exempts first $85 plus one-half of excess over $85 of monthly payments under Title I or II as income or resources in determining need of recipient or any other individual No payments made to any person for any month shall be regarded as income or resources of any other individual in determining need of such other individual No grant made to any family under Title III shall be regarded as income or resources of such family in determining need of any member thereof under state approved plans.

APPENDICES

AMENDED IN ASSEMBLY APRIL 29, 1963

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL No. 1710

Introduced by Messrs. Burton, Elliott, Stanton, Knox, Beilenson, Dymally, Ferrell, Greene, Kennick, McMillan, Rumford, and Warren

March 6, 1963

REFERRED TO COMMITTEE ON GOVERNMENT ORGANIZATION

An act to amend Sections 1411, 1412, 1419, 1420, and 1431 of the Labor Code, relating to fair employment practices.

The people of the State of California do enact as follows:

SECTION 1. Section 1411 of the Labor Code is amended to read:

1411 It is hereby declared as the public policy of this State that it is necessary to protect and safeguard the right and opportunity of all persons to seek, obtain, and hold employment without discrimination or abridgment on account of race, religious creed, color, national origin, ancestry, or age

It is recognized that the practice of denying employment opportunity and discriminating in the terms of employment for such reasons, foments domestic strife and unrest, deprives the State of the fullest utilization of its capacities for development and advance, and substantially and adversely affects the interests of employees, employers, and the public in general

This part shall be deemed an exercise of the police power of the State for the protection of the public welfare, prosperity, health, and peace of the people of the State of California

SEC 2. Section 1412 of said code is amended to read:

1412 The opportunity to seek, obtain and hold employment without discrimination because of race, religious creed, color, national origin, ancestry, or age is hereby recognized as and declared to be a civil right.

SEC 3 Section 1419 of said code is amended to read

1419 The commission shall have the following functions, powers and duties.

(a) To establish and maintain a principal office and such other offices within the State as the Legislature authorizes.

(b) To meet and function at any place within the State.

(c) To appoint an attorney, and such clerks and other employees as it may deem necessary, fix their compensation within the limitations provided by law, and prescribe their duties

(d) To obtain upon request and utilize the services of all governmental departments and agencies

(e) To adopt, promulgate, amend, and rescind suitable rules and regulations to carry out the provisions of this part

(f) To receive, investigate and pass upon complaints alleging discrimination in employment because of race, religious creed, color, national origin, ancestry, or age

(g) To hold hearings, subpoena witnesses, compel their attendance, administer oaths, examine any person under oath and, in connection therewith, to require the production of any books or papers relating to any matter under investigation or in question before the commission

(h) To create such advisory agencies and conciliation councils, local or otherwise, as in its judgment will aid in effectuating the purposes of this part, and may empower them to study the problems of discrimination in all or specific fields of human relationships or in specific instances of discrimination because of race, religious creed, color, national origin, ancestry, or age, and to foster through community effort or otherwise good will, co-operation, and conciliation among the groups and elements of the population of the State and to make recommendations to the commission for the development of policies and procedures in general Such advisory agencies and conciliation councils shall be composed of representative citizens, serving without pay

(i) To issue such publications and such results of investigations and research as in its judgment will tend to promote good will and minimize or eliminate discrimination because of race, religious creed, color, national origin, ancestry, or age

(j) To render annually to the Governor and biennially to the Legislature a written report of its activities and of its recommendations.

SEC 4 Section 1420 of said code is amended to read

1420 It shall be an unlawful employment practice, unless based upon a bona fide occupational qualification, or, except where based upon applicable security regulations established by the United States or the State of California:

(a) For an employer, because of the race, religious creed, ~~color, national origin, ancestry, or age of any person, to~~ *color, national origin, or ancestry of any person or because of*

the age of any person over 40, to refuse to hire or employ him or to bar or to discharge from employment such person, or to discriminate against such person in compensation or in terms, conditions or privileges of employment.

(b) For a labor organization, because of the race, religious ~~creed, color, national origin, ancestry,~~ or ~~age of any person to exclude, expel or restrict from its membership such~~ *creed, color, national origin, or ancestry of any person or because of the age of any person over 40, to exclude, expel, or restrict from its membership such* person, or to provide only second-class or segregated membership or to discriminate in any way against any of its members or against any employer or against any person employed by an employer

(c) For any employer or employment agency to print or circulate or cause to be printed or circulated any publication, or to use any form of application for employment or to make any inquiry in connection with prospective employment, which expresses, directly or indirectly, any limitation, specification or discrimination as to race, religious creed, color, national origin, ancestry, or age or any intent to make any such limitation, specification or discrimination

(d) For any employer, labor organization or employment agency to discharge, expel or otherwise discriminate against any person because he has opposed any practices forbidden under this act or because he has filed a complaint, testified or assisted in any proceeding under this part.

(e) For any person to aid, abet, incite, compel, or coerce the doing of any of the acts forbidden under this part, or to attempt to do so

SEC 5 Section 1431 of said code is amended to read·

1431 The provisions of this part shall be construed liberally for the accomplishment of the purposes thereof Nothing contained in this act shall be deemed to repeal any of the provisions of the Civil Rights Law or of any other law of this State relating to discrimination because of race, religious creed, color, national origin, ancestry, or age

Nothing contained in this act shall be deemed to repeal or affect the provisions of any ordinance relating to such discrimination in effect in any city, city and county, or county at the time this act becomes effective, insofar as proceedings theretofore commenced under such ordinance or ordinances remain pending and undetermined The respective administrative bodies then vested with the power and authority to enforce such ordinance or ordinances shall continue to have such power and authority, with no ouster or impairment of jurisdiction, until such pending proceedings are completed, but in no event beyond one year after the effective date of this act

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL No. 1710

Introduced by Messrs. Burton, Elliott, Stanton, Knox, Beilenson, Dymally, Ferrell, Greene, Kennick, McMillan, Rumford, and Warren

March 6, 1963

REFERRED TO COMMITTEE ON GOVERNMENT ORGANIZATION

An act to amend Sections 1411, 1412, 1419, 1420, and 1431 of the Labor Code, relating to fair employment practices

The people of the State of California do enact as follows:

SECTION 1. Section 1411 of the Labor Code is amended to read:

1411. It is hereby declared as the public policy of this State that it is necessary to protect and safeguard the right and opportunity of all persons to seek, obtain, and hold employment without discrimination or abridgment on account of race, religious creed, color, national origin, ~~or~~ ancestry, *or age*

It is recognized that the practice of denying employment opportunity and discriminating in the terms of employment for such reasons, foments domestic strife and unrest, deprives the State of the fullest utilization of its capacities for development and advance, and substantially and adversely affects the interests of employees, employers, and the public in general.

This part shall be deemed an exercise of the police power of the State for the protection of the public welfare, prosperity, health, and peace of the people of the State of California

SEC 2. Section 1412 of said code is amended to read:

1412 The opportunity to seek, obtain and hold employment without discrimination because of race, religious creed, color, national origin, ~~or~~ ancestry, *or age* is hereby recognized as and declared to be a civil right

LEGISLATIVE COUNSEL'S DIGEST

A B 1710, as introduced, Burton (G O.). California Fair Employment Practice Act

Amends various secs, Lab C

Makes California Fair Employment Practice Act applicable to discrimination on account of age.

SEC 3 Section 1419 of said code is amended to read

1419 The commission shall have the following functions, powers and duties:

(a) To establish and maintain a principal office and such other offices within the State as the Legislature authorizes

(b) To meet and function at any place within the State

(c) To appoint an attorney, and such clerks and other employees as it may deem necessary, fix their compensation within the limitations provided by law, and prescribe their duties

(d) To obtain upon request and utilize the services of all governmental departments and agencies

(e) To adopt, promulgate, amend, and rescind suitable rules and regulations to carry out the provisions of this part

(f) To receive, investigate and pass upon complaints alleging discrimination in employment because of race, religious creed, color, national origin, ~~or~~ ancestry, *or age*.

(g) To hold hearings, subpoena witnesses, compel their attendance, administer oaths, examine any person under oath and, in connection therewith, to require the production of any books or papers relating to any matter under investigation or in question before the commission.

(h) To create such advisory agencies and conciliation councils, local or otherwise, as in its judgment will aid in effectuating the purposes of this part, and may empower them to study the problems of discrimination in all or specific fields of human relationships or in specific instances of discrimination because of race, religious creed, color, national origin, ~~or~~ ancestry, *or age*, and to foster through community effort or otherwise good will, co-operation, and conciliation among the groups and elements of the population of the State and to make recommendations to the commission for the development of policies and procedures in general Such advisory agencies and conciliation councils shall be composed of representative citizens, serving without pay.

(i) To issue such publications and such results of investigations and research as in its judgment will tend to promote good will and minimize or eliminate discrimination because of race, religious creed, color, national origin, ~~or~~ ancestry, *or age*

(j) To render annually to the Governor and biennially to the Legislature a written report of its activities and of its recommendations

SEC 4 Section 1420 of said code is amended to read·

1420 It shall be an unlawful employment practice, unless based upon a bona fide occupational qualification, or, except where based upon applicable security regulations established by the United States or the State of California:

(a) For an employer, because of the race, religious creed, color, national origin, ~~or~~ ancestry, *or age* of any person, to

refuse to hire or employ him or to bar or to discharge from employment such person, or to discriminate against such person in compensation or in terms, conditions or privileges of employment.

(b) For a labor organization, because of the race, religious creed, color, national origin, ~~or~~ ancestry, *or age* of any person to exclude, expel or restrict from its membership such person, or to provide only second-class or segregated membership or to discriminate in any way against any of its members or against any employer or against any person employed by an employer.

(c) For any employer or employment agency to print or circulate or cause to be printed or circulated any publication, or to use any form of application for employment or to make any inquiry in connection with prospective employment, which expresses, directly or indirectly, any limitation, specification or discrimination as to race, religious creed, color, national origin, ~~or~~ ancestry, *or age* or any intent to make any such limitation, specification or discrimination

(d) For any employer, labor organization or employment agency to discharge, expel or otherwise discriminate against any person because he has opposed any practices forbidden under this act or because he has filed a complaint, testified or assisted in any proceeding under this part.

(e) For any person to aid, abet, incite, compel, or coerce the doing of any of the acts forbidden under this part, or to attempt to do so.

SEC. 5. Section 1431 of said code is amended to read.

1431. The provisions of this part shall be construed liberally for the accomplishment of the purposes thereof Nothing contained in this act shall be deemed to repeal any of the provisions of the Civil Rights Law or of any other law of this State relating to discrimination because of race, religious creed, color, national origin, ~~or~~ ancestry, *or age*.

Nothing contained in this act shall be deemed to repeal or affect the provisions of any ordinance relating to such discrimination in effect in any city, city and county, or county at the time this act becomes effective, insofar as proceedings theretofore commenced under such ordinance or ordinances remain pending and undetermined. The respective administrative bodies then vested with the power and authority to enforce such ordinance or ordinances shall continue to have such power and authority, with no ouster or impairment of jurisdiction, until such pending proceedings are completed, but in no event beyond one year after the effective date of this act

CHAPTER 1

Witnesses who testified were as follows:

Los Angeles, September 19 and 20, 1963:

William D Bechill, executive secretary, Citizens' Advisory Committee on Aging, State of California
W J Fitzgerald, state secretary, Fraternal Order of Eagles
John Anson Ford, Chairman, California Fair Employment Practice Commission
Richard Cartwright, National Council of Senior Citizens, and the United Auto Workers Union
Lawrence T Peyton, Forty-Plus of Southern California
Lorenzo Traylor, assistant program development director, Youth Opportunities Board of Greater Los Angeles
Z L Gulledge, district supervisor, Van Nuys Vocational Rehabilitation, State Department of Education
Miss Eleanor Fait, state supervisor of the Older Worker Program, California State Employment Service
Don Vial, director of research and education, California Labor Federation, AFL-CIO
William Torres, assistant business manager, Monrovia Unified School District
Frank McCarthy, senior deputy, office of the State Fire Marshal, Los Angeles District
Robert E Depue, fire chief, Los Angeles County Fire Department
Clair L Eatough, Bureau of School Planning, State Department of Education
Richard Lawrence, Los Angeles City Board of Education
John W Schaefer, maintenance and operating manager, Business Division, Los Angeles City Schools

San Francisco, October 24, 1963:

Everett Corten, counsel for the Department of Industrial Relations
Edward Howden, Chief of the Division of Fair Employment Practices
Maurice Gershenson, Chief, Division of Labor Law Statistics, Department of Industrial Relations
Dr Edward Goldman, assistant superintendent, Adult and Vocational Education, San Francisco Unified School District
Richard Parino, representative, Division of Apprenticeship Standards, San Francisco
Gerald Parrish, regional director, United States Employment Service, U.S. Department of Labor
Charles Rosenthal, executive director, Careers Unlimited for Women
William Smith, executive vice president, Federated Employers of the Bay Area, California Conference of Employer Associations
Orville Luster, executive director, Youth for Service, San Francisco
Mrs. Vera Haile, administrative assistant, Youth for Service
Herbert P O'Connell, individual, Oakland
Harold Baker, individual, Sunnyvale

Sacramento, December 2, 1963:

Dr Wesley P. Smith, Director, Vocational Education, State Department of Education
John O Longaker, Sr, labor relations consultant, Walnut Creek
Robert D Calkins, deputy director, State Department of Conservation
Kenneth McGilvray, attorney, Fraternal Order of Eagles
Leonard Haidle, field director, Office of Manpower Development and Training, U S Department of Labor
Robert Hill, supervisor, youth employment, State Department of Employment
Charles F Hanna, Chief, Division of Apprenticeship Standards, State Department of Industrial Relations

San Diego, January 17, 1964:

Walter Christian, San Diego manager, State Department of Employment
Lee Ralston, director, Division of Practical Arts Education, office of Los Angeles County Superintendent of Schools
Miss Althea T L Simmons, field secretary, West Coast region, National Association for the Advancement of Colored People
Vernon W Hughes, representative, San Diego County Labor Council, AFL-CIO
Dr F. R Gorton, president, San Diego City College
Dr. Harmon Kurtz, *coordinator of junior employment*, San Diego City Schools
William Steinberg, specialist, practical arts and vocational education, San Diego City Schools
John A Collins, business representative, International Association of Machinists, District 50, City of San Diego
Louis M Harper, executive secretary, Hospital Council of San Diego County

AMENDED IN ASSEMBLY JUNE 9, 1963

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL No. 1202

Introduced by Messrs. Lanterman and Flournoy

February 12, 1963

REFERRED TO COMMITTEE ON EDUCATION

An act to add Section 15815 to the Education Code, relating to proper ventilation of heaters in classrooms.

The people of the State of California do enact as follows:

SECTION 1. Section 15815 is added to the Education Code, to read:

15815 The governing board of every school district shall provide that any *gas* heater or other mechanical means of providing heat ~~located in, or providing~~ *by combusted fuel located in, or providing such* heat to, any classroom is vented in a manner to protect the health, safety and comfort of pupils and district personnel.

LEGISLATIVE COUNSEL'S DIGEST

A B 1202, as introduced, Lanterman (Ed). Ventilation of classroom heaters

Adds Sec 15815, Ed C

Requires the governing board of every school district to provide proper ventilation for classroom heaters.

AMENDED IN ASSEMBLY MAY 31, 1963

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL No. 2896

Introduced by Mr. Foran

April 26, 1963

REFERRED TO COMMITTEE ON INDUSTRIAL RELATIONS

An act to amend Sections 7621, 7625, 7770, 7771, and the heading of Chapter 6 (commencing with Section 7770) of Part 6 of Division 5 of the Labor Code, relating to tanks and boilers

The people of the State of California do enact as follows:

SECTION 1. Section 7621 of the Labor Code is amended to read

7621. "Boiler" as used in this part means·

(a) Any fired or unfired pressure vessel used to generate steam pressure by the application of heat (power boiler).

(b) Any fired or unfired pressure vessel used to heat water at pressures exceeding 160 psi or temperatures exceeding 250 degrees Fahrenheit (high-temperature water boilers).

(c) Any fired or unfired pressure vessel operating at steam pressure or steam safety valve setting of 15 psi or less, or at 250 degrees Fahrenheit or less, or at water pressure less than 160 psi (low-pressure boilers). *This subdivision is not intended to include domestic type water heaters of 120 gallons capacity or less used exclusively to heat potable water.*

SEC. 2. Section 7625 of said code is amended to read:

7625. The following steam boilers are not subject to this part:

(a) Boilers under the jurisdiction or inspection of the United States government, and all other boilers operated by employers not subject to Division 4 of this code.

(b) Automobile boilers and boilers on road motor vehicles

SEC. 3. The heading of Chapter 6 (commencing with Section 7770) of Part 6 of Division 5 of said code is amended to read:

CHAPTER 6 MANAGEMENT OF BOILERS

SEC. 4 Section 7770 of said code is amended to read

7770. Every engineer or other person having charge of any boiler, ~~engine, or other~~ *steam engine, or* apparatus for generating or employing steam, used in any *school buildings or buildings of public assembly or in any* manufactory, railway, or other mechanical works, who willfully, or from ignorance or from gross neglect, creates, or allows to be created, such an undue ~~quantity of steam~~ *internal pressure* as to burst or break the boiler, engine or apparatus, or to cause any other accident whereby human life is endangered, is guilty of a felony.

SEC. 5 Section 7771 of said code is amended to read:

7771 Every person having charge of any boiler, ~~engine, or other~~ *steam engine, or* apparatus for generating or employing steam, used in any manufactory, railroad, vessel, or other mechanical works, who willfully, or from ignorance or neglect, creates, or allows to be created, such an undue ~~quantity of steam~~ *internal pressure* as to burst or break the boiler, engine, or apparatus, or to cause any other accident whereby the death of a human being is caused, is punishable by imprisonment in the state prison for not less than 1 nor more than 10 years.

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL No. 2896

Introduced by Mr. Foran

April 26, 1963

REFERRED TO COMMITTEE ON INDUSTRIAL RELATIONS

An act to amend Sections 7621, 7625, 7770, 7771, and the heading of Chapter 6 (commencing with Section 7770) of Part 6 of Division 5 of the Labor Code, relating to tanks and boilers

The people of the State of California do enact as follows:

SECTION 1. Section 7621 of the Labor Code is amended to read:

7621. "Boiler" as used in this part means ~~any fired or unfired pressure vessel used to generate steam pressure by the application of heat subject to this part.~~ :

(a) Any fired or unfired pressure vessel used to generate steam pressure by the application of heat (power boiler).

(b) Any fired or unfired pressure vessel used to heat water at pressures exceeding 160 psi or temperatures exceeding 250 degrees Fahrenheit (high-temperature water boilers).

(c) Any fired or unfired pressure vessel operating at steam pressure or steam safety valve setting of 15 psi or less, or at 250 degrees Fahrenheit or less, or at water pressure less than 160 psi (low-pressure boilers).

SEC. 2 Section 7625 of said code is amended to read:

7625 The following steam boilers are not subject to this part.

(a) Boilers under the jurisdiction or inspection of the United States government, and all other boilers operated by employers not subject to Division 4 of this code.

LEGISLATIVE COUNSEL'S DIGEST

A B 2896, as introduced, Foran (Ind R) Tanks and boilers safety

Amends Secs 7621, 7625, 7770, 7771, and the heading of Ch 6 (commencing with Sec 7770), Pt 6, Div 5, Lab C

Includes certain boilers which are not presently covered within provisions governing safety in employment with respect to tanks and boilers

~~(b) Boilers on which the pressure does not exceed 15 pounds per square inch.~~

~~(c)~~ *(b)* Automobile boilers and boilers on road motor vehicles

SEC 3 The heading of Chapter 6 (commencing with Section 7770) of Part 6 of Division 5 of said code is amended to read

CHAPTER 6 MISMANAGEMENT OF ~~STEAM~~ BOILERS

SEC 4 Section 7770 of said code is amended to read:

7770 Every engineer or other person having charge of any ~~steam~~ boiler, ~~steam~~ engine, or other apparatus for generating or employing steam, used in any manufactory, railway, or other mechanical works, who willfully, or from ignorance or from gross neglect, creates, or allows to be created, such an undue quantity of steam as to burst or break the boiler, engine or apparatus, or to cause any other accident whereby human life is endangered, is guilty of a felony.

SEC 5 Section 7771 of said code is amended to read.

7771 Every person having charge of any ~~steam~~ boiler, ~~steam~~ engine, or other apparatus for generating or employing steam, used in any manufactory, railroad, vessel, or other mechanical works, who willfully, or from ignorance or neglect, creates, or allows to be created, such an undue quantity of steam as to burst or break the boiler, engine, or apparatus, or to cause any other accident whereby the death of a human being is caused, is punishable by imprisonment in the state prison for not less than 1 nor more than 10 years.

AMENDED IN ASSEMBLY MAY 13, 1963

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL No. 2364

Introduced by Messrs. Alquist, Gaffney, Ryan, Dymally, and Meyers

April 11, 1963

REFERRED TO COMMITTEE ON GOVERNMENTAL EFFICIENCY AND ECONOMY

An act to add Chapter 21 (commencing with Section 9900) to Division 3 of the Business and Professions Code, relating to the licensing and regulation of persons operating or maintaining stationary power plants and making an appropriation therefor.

The people of the State of California do enact as follows:

SECTION 1. Chapter 21 (commencing with Section 9900) is added to Division 3 of the Business and Professions Code, to read:

CHAPTER 21. OPERATING ENGINEERS

Article 1 General Provisions

9900 This chapter may be known and cited as the Operating Engineers Act.

9901. An "operating engineer," as used in this chapter, means a person who operates or maintains a stationary power plant

9902. A "stationary powerplant," as used in this chapter, includes a heating plant, a power or generating plant, or a refrigeration unit

9903 "Major mechanical and electrical equipment," as used in this chapter, means boilers, steam engines and turbines, pumps, refrigeration machines, air compressors, electric motors and circuits, air-conditioning equipment, and other similar equipment used in stationary powerplants

Article 2 Regulation

9910 The Department of Professional and Vocational ~~Standards shall be in charge of the administration of this chapter.~~ *Standards shall be empowered to issue licenses to persons attending or operating boilers upon application by such persons after they shall have been shown to be duly qualified to attend or operate said equipment*

The policing of this act may be delegated to other state agencies at the discretion of the Department of Professional and Vocational Standards

9911 The department may adopt such regulations as may be necessary to enable it to carry out the provisions of this chapter Such regulations shall be adopted in accordance with Chapter 4.5 (commencing with Section 11371) of Part 1 of Division 3 of Title 2 of the Government Code.

9912 The department may employ such additional help as it deems necessary to enable it to carry out the provisions of this chapter

9913 The department shall select a *qualified* chief examiner and ~~two~~ district examiners, each of whom shall ~~be qualified to hold a grade A license issued pursuant to this chapter,~~ *have at least seven years of practical experience as a stationary steam engineer, or the equivalent in technical training, and other pertinent experience.*

9914 The chief examiner shall maintain his office in Sacramento; ~~one~~ *and at least one* district examiner shall be in San Francisco, and ~~one in~~ *at least one district examiner shall be in* Los Angeles. ~~The three~~ *; the* examiners shall compose the Board of Examiners for Licensing ~~Operating~~ *Stationary Steam* Engineers, which board is hereby created

9915 The board shall examine each applicant for a license as an operating engineer Such examinations shall be held at least 12 times each year at such times and places as the board may determine

9916. The examination shall be in writing and shall test the applicant's knowledge of the practical construction, care, operation and maintenance of boilers, ~~steam engines and turbines, pumps, refrigeration machines, air compressors, electric motors and circuits, and air conditioning equipment.~~ *appurtenances, and systems.*

9917 Each applicant for a license as an operating engineer shall make application to an examiner on a form prescribed by the board and shall set forth his name, age, place of residence, the nature and extent of his experience, and the class of license applied for Each application shall be accompanied by the fee specified in Section 9947

9918 Each applicant for a license shall be of good moral character and temperate habits, which shall be vouched for in writing by at least two operating engineers or shall be verified

under oath by the applicant when required by the board Each applicant shall be at least ~~10~~ *21* years of age and shall possess the experience specified as follows for the grade of license applied for·

~~(a) An applicant for a grade A engineer's license shall have at least five years' experience in the operation or maintenance of major mechanical and electrical equipment and shall offer proof satisfactory to the board that he is qualified to have direct charge of or operate such equipment.~~

~~(b) An applicant for a grade B engineer's license shall have at least three years' experience in the operation or maintenance of major mechanical and electrical equipment.~~

(a) Stationary Steam Engineer An applicant for a stationary steam engineer's license shall be a person having at least four (4) years of experience in the attendance and operation of any boiler, other than low-pressure boiler, having more than 500 square feet of heating surface; or a person having a combination of formal education, technical training, practical experience equal to four (4) years practical experience within the criteria established by the board; or a person who has held a valid boiler operator's license (as provided for in this chapter) for a period of four (4) years or more; or a person who has completed a four (4) year state-indentured apprenticeship program for stationary engineers

(b) Boiler Operator An applicant for boiler operator's license shall be a person having at least two (2) years experience in the attendance and operation of boilers or a person having a combination of formal education, technical training, practical experience equal to two (2) years practical experience within the criteria established by the board; or a person who has completed a four (4) year state-indentured apprenticeship program for stationary engineers

(c) An applicant for a grade C license shall have at least one year's experience in the operation or maintenance of major mechanical and electrical equipment or have completed a four-year apprentice training course

9919 The board shall issue a license in the grade applied for to each applicant who has the qualifications required by this chapter and who successfully passes the examination therefor given by the board

~~9920 The board shall issue a license in the grade applied for, without examination, to each applicant who was employed as an operating engineer on the effective date of this chapter or who has had at least one year's experience in the operation or maintenance of major mechanical and electrical equipment prior to the effective date of this chapter and who makes application therefor on a form prescribed by the board within six months from the effective date of this chapter.~~

9920 The board may issue a license in the class applied for without examination to each applicant who was employed

as a stationary steam engineer or a boiler operator on the effective date of this chapter; or to each applicant who has had at least one (1) year's recent experience in the attendance and operation of boilers, appurtenances and systems prior to the effective date of this chapter; or any applicant holding a valid license from a city or county of the State of California; provided, such applicants make application, therefor, on a form prescribed by the board within six (6) months from the effective date of this chapter

Article 3 Disciplinary Proceedings

9930. The board may suspend or revoke a license issued pursuant to this chapter for the following causes

(a) Fraud or deceit upon the board in obtaining the license

(b) Use of any narcotic as defined in Division 10 (commencing with Section 11000) of the Health and Safety Code, or any alcoholic beverage to an extent or in a manner dangerous to himself, any other person, or the public, or to an extent that such use impairs his ability to perform the work authorized by his license with safety to the public

(c) Incompetency or other just cause

9931 The adjudication of insanity or mental illness, or the voluntary commitment or admission to a state hospital of any licensee for a mental illness shall operate as a suspension of the right to practice of any licensee under this chapter, such suspension to continue until restoration to or declaration of sanity or mental competence The record of adjudication, judgment or order of voluntary commitment is conclusive evidence of such insanity or mental illness, and upon receipt of a certified copy of any such adjudication, judgment, voluntary commitment or order by the board it shall immediately suspend the license of the person adjudicated or committed The board shall not restore such license to good standing until it shall receive competent evidence of restoration to or declaration of sanity and until it is satisfied that, with due regard for the public interest, said person's right to practice may be safely reinstated Before reinstating such person, the board may require the person to pass an oral examination to determine his present fitness to resume his practice

9932 The proceeding under this article shall be conducted in accordance with Chapter 5 (commencing with Section 11500) of Part 1 of Division 3 of Title 2 of the Government Code.

Article 4 Revenue

9940 Licenses issued under this chapter shall expire on December 31 of each odd-numbered year, if not renewed.

To renew an unexpired license, the holder thereof, on or before December 31 of each odd-numbered year, shall apply

for a renewal on a form prescribed by the board and pay the renewal fee prescribed by this chapter

9941 A license which has expired may be renewed at any time within five years after its expiration on filing an application for renewal on a form prescribed by the board and payment of the renewal fee in effect on the last preceding regular renewal date If the license is renewed more than 30 days after its expiration, the licensee, as a condition precedent to renewal, shall also pay the delinquency fee prescribed by this chapter

Renewal under this section shall be effective on the date on which the application is filed, on the date on which the renewal fee is paid, or on the date on which the delinquency fee, if any, is paid, whichever last occurs If so renewed, the license shall continue in effect through the date provided for in Section 9940 which next occurs after the effective date of the renewal, when it shall expire if it is not again renewed

9942 A suspended license is subject to expiration and shall be renewed as provided in this article, but such renewal does not entitle the holder of the license, while it remains suspended and until it is reinstated, to engage in the activity to which the license relates, or in any other activity or conduct in violation of the order or judgment by which it was suspended

9943 A revoked license is subject to expiration as provided in this article, but it may not be renewed If it is reinstated after its expiration, the holder of the license shall, as a condition precedent to its reinstatement, pay a reinstatement fee in an amount equal to the renewal fee in effect on the last regular renewal date before the date on which it is reinstated, plus the delinquency fee, if any, accrued at the time of its revocation.

9944 A license which is not renewed within five years after its expiration may not be renewed, restored, reinstated, or reissued thereafter, but the holder of the license may apply for and obtain a new license if

(a) No fact, circumstance, or condition exists which, if the license were issued, would justify its revocation or suspension.

(b) He pays all of the fees which would be required of him if he were then applying for a license for the first time

(c) He takes and passes the examination, which would be required of him if he were then applying for the license for the first time, or otherwise establishes to the satisfaction of the board that, with due regard for the public interest, he is qualified to perform the services regulated by this chapter

9945 The board shall report each month to the State Controller the amount and source of all revenue received by it pursuant to this chapter and at the same time pay the entire amount thereof into the State Treasury for credit to the Operating Engineers' Fund, which fund is hereby created.

9946 The money paid into the Operating Engineers' Fund is continuously appropriated to the department for expenditure in the manner prescribed by law to defray the expenses

of the department and in carrying out and enforcing the provisions of this chapter

~~9947. The amount of the fees prescribed by this chapter is that fixed by the following schedule:~~

~~(a) The application fee for a grade A license is twenty dollars ($20).~~

~~(b) The application fee for a grade B license is fifteen dollars ($15).~~

~~(c) The application fee for a grade C license is ten dollars ($10).~~

~~(d) The renewal fee is five dollars ($5).~~

~~(e) The delinquency fee is ========.~~

9947. The amount of the fees prescribed by this chapter shall be as follows:

Fees for original licenses and application fees shall be as the department shall, from time to time, deem appropriate for compliance with the intent of the act; but in no event shall exceed a maximum of fifty dollars ($50)

Fees for renewal shall not exceed ten dollars ($10)

Fees for delinquency shall not exceed twenty-five dollars ($25) per annum

9948. It shall be unlawful for any person or persons to attend or to operate any boiler covered by this chapter, unless said person or persons holds a valid stationary steam engineer's license or a valid boiler operator's license

9949. It shall be unlawful for any person or persons to attend or to operate any boiler, other than a low-pressure boiler, having more than 500 square feet of heating surface, or any such boilers whose combined heating surface totals more than 500 square feet, unless said person or persons hold a valid stationary steam engineer's license

9950. It shall be unlawful for any owner or user of any boilers covered by this chapter to cause any boilers covered by this chapter, to be attended or operated by any person or persons not holding a valid license as provided for in this chapter

9951. The following boilers are not subject to the provisions of this chapter and do not require a licensed engineer or operator:

(1) Low-pressure boilers having a combined boiler input less than 400,000 BTU per hour.

(2) Miniature boilers.

Any person holding a valid boiler operator's license shall be entitled to operate any low-pressure boiler, and any other boiler or boilers, having a total heating surface of 500 square feet or less

Any person holding a valid stationary steam engineer's license shall be entitled to operate any and all boilers covered by this chapter.

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL No. 2364

Introduced by Messrs. Alquist, Gaffney, Ryan, Dymally, and Meyers

April 11, 1963

REFERRED TO COMMITTEE ON GOVERNMENTAL EFFICIENCY AND ECONOMY

An act to add Chapter 21 (commencing with Section 9900) to Division 3 of the Business and Professions Code, relating to the licensing and regulation of persons operating or maintaining stationary powerplants and making an appropriation therefor.

The people of the State of California do enact as follows:

SECTION 1. Chapter 21 (commencing with Section 9900) is added to Division 3 of the Business and Professions Code, to read:

CHAPTER 21. OPERATING ENGINEERS

Article 1. General Provisions

9900. This chapter may be known and cited as the Operating Engineers Act.

9901. An "operating engineer," as used in this chapter, means a person who operates or maintains a stationary power plant

9902 A "stationary powerplant," as used in this chapter, includes a heating plant, a power or generating plant, or a refrigeration unit.

9903. "Major mechanical and electrical equipment," as used in this chapter, means boilers, steam engines and turbines,

LEGISLATIVE COUNSEL'S DIGEST

A B 2364, as introduced, Alquist (G E. & E) Operating engineers.

Adds Ch 21 (commencing with Sec. 9900), DIV. 3, B & P.C.

Provides for the licensing of operating engineers, defines as persons who operate or maintain stationary power plants Specifies the qualifications for licensing and the grounds upon which a license may be suspended or revoked

Vests authority to administer law in the Department of Professional and Vocational Standards Authorizes department to appoint 3 examiners who are to comprise the Board of Examiners for Licensing Operating Engineers. Gives board authority to examine applicants for licenses.

pumps, refrigeration machines, air compressors, electric motors and circuits, air-conditioning equipment, and other similar equipment used in stationary powerplants.

Article 2 Regulation

9910. The Department of Professional and Vocational Standards shall be in charge of the administration of this chapter.

9911. The department may adopt such regulations as may be necessary to enable it to carry out the provisions of this chapter. Such regulations shall be adopted in accordance with Chapter 4 5 (commencing with Section 11371) of Part 1 of Division 3 of Title 2 of the Government Code

9912 The department may employ such additional help as it deems necessary to enable it to carry out the provisions of this chapter.

9913 The department shall select a chief examiner and two district examiners, each of whom shall be qualified to hold a grade A license issued pursuant to this chapter

9914 The chief examiner shall maintain his office in Sacramento, one district examiner shall be in San Francisco, and one in Los Angeles. The three examiners shall compose the Board of Examiners for Licensing Operating Engineers, which board is hereby created

9915. The board shall examine each applicant for a license as an operating engineer Such examinations shall be held at least 12 times each year at such times and places as the board may determine

9916 The examination shall be in writing and shall test the applicant's knowledge of the practical construction, care, operation and maintenance of boilers, steam engines and turbines, pumps, refrigeration machines, air compressors, electric motors and circuits, and air-conditioning equipment

9917 Each applicant for a license as an operating engineer shall make application to an examiner on a form prescribed by the board and shall set forth his name, age, place of residence, the nature and extent of his experience, and the class of license applied for Each application shall be accompanied by the fee specified in Section 9947

9918 Each applicant for a license shall be of good moral character and temperate habits, which shall be vouched for in writing by at least two operating engineers or shall be verified under oath by the applicant when required by the board Each applicant shall be at least 19 years of age and shall possess the experience specified as follows for the grade of license applied for:

(a) An applicant for a grade A engineer's license shall have at least five years' experience in the operation or maintenance of major mechanical and electrical equipment and shall offer

proof satisfactory to the board that he is qualified to have direct charge of or operate such equipment

(b) An applicant for a grade B engineer's license shall have at least three years' experience in the operation or maintenance of major mechanical and electrical equipment

(c) An applicant for a grade C license shall have at least one year's experience in the operation or maintenance of major mechanical and electrical equipment or have completed a four-year apprentice training course

9919 The board shall issue a license in the grade applied for to each applicant who has the qualifications required by this chapter and who successfully passes the examination therefor given by the board

9920 The board shall issue a license in the grade applied for, without examination, to each applicant who was employed as an operating engineer on the effective date of this chapter or who has had at least one year's experience in the operation or maintenance of major mechanical and electrical equipment prior to the effective date of this chapter and who makes application therefor on a form prescribed by the board within six months from the effective date of this chapter

Article 3 Disciplinary Proceedings

9930 The board may suspend or revoke a license issued pursuant to this chapter for the following causes:

(a) Fraud or deceit upon the board in obtaining the license.

(b) Use of any narcotic as defined in Division 10 (commencing with Section 11000) of the Health and Safety Code, or any alcoholic beverage to an extent or in a manner dangerous to himself, any other person, or the public, or to an extent that such use impairs his ability to perform the work authorized by his license with safety to the public

9931. The adjudication of insanity or mental illness, or the voluntary commitment or admission to a state hospital of any licensee for a mental illness shall operate as a suspension of the right to practice of any licensee under this chapter, such suspension to continue until restoration to or declaration of sanity or mental competence The record of adjudication, judgment or order of voluntary commitment is conclusive evidence of such insanity or mental illness, and upon receipt of a certified copy of any such adjudication, judgment, voluntary commitment or order by the board it shall immediately suspend the license of the person adjudicated or committed The board shall not restore such license to good standing until it shall receive competent evidence of restoration to or declaration of sanity and until it is satisfied that, with due regard for the public interest, said person's right to practice may be safely reinstated. Before reinstating such person, the board may re-

quire the person to pass an oral examination to determine his present fitness to resume his practice.

9932 The proceeding under this article shall be conducted in accordance with Chapter 5 (commencing with Section 11500) of Part 1 of Division 3 of Title 2 of the Government Code

Article 4 Revenue

9940. Licenses issued under this chapter shall expire on December 31 of each odd-numbered year, if not renewed

To renew an unexpired license, the holder thereof, on or before December 31 of each odd-numbered year, shall apply for a renewal on a form prescribed by the board and pay the renewal fee prescribed by this chapter

9941 A license which has expired may be renewed at any time within five years after its expiration on filing an application for renewal on a form prescribed by the board and payment of the renewal fee in effect on the last preceding regular renewal date If the license is renewed more than 30 days after its expiration, the licensee, as a condition precedent to renewal, shall also pay the delinquency fee prescribed by this chapter

Renewal under this section shall be effective on the date on which the application is filed, on the date on which the renewal fee is paid, or on the date on which the delinquency fee, if any, is paid, whichever last occurs If so renewed, the license shall continue in effect through the date provided for in Section 9940 which next occurs after the effective date of the renewal, when it shall expire if it is not again renewed

9942 A suspended license is subject to expiration and shall be renewed as provided in this article, but such renewal does not entitle the holder of the license, while it remains suspended and until it is reinstated, to engage in the activity to which the license relates, or in any other activity or conduct in violation of the order or judgment by which it was suspended.

9943 A revoked license is subject to expiration as provided in this article, but it may not be renewed If it is reinstated after its expiration, the holder of the license shall, as a condition precedent to its reinstatement, pay a reinstatement fee in an amount equal to the renewal fee in effect on the last regular renewal date before the date on which it is reinstated, plus the delinquency fee, if any, accrued at the time of its revocation

9944 A license which is not renewed within five years after its expiration may not be renewed, restored, reinstated, or reissued thereafter, but the holder of the license may apply for and obtain a new license if.

(a) No fact, circumstance, or condition exists which, if the license were issued, would justify its revocation or suspension.

(b) He pays all of the fees which would be required of him if he were then applying for a license for the first time

(c) He takes and passes the examination, which would be required of him if he were then applying for the license for the first time, or otherwise establishes to the satisfaction of the board that, with due regard for the public interest, he is qualified to perform the services regulated by this chapter

9945 The board shall report each month to the State Controller the amount and source of all revenue received by it pursuant to this chapter and at the same time pay the entire amount thereof into the State Treasury for credit to the Operating Engineers' Fund, which fund is hereby created.

9946 The money paid into the Operating Engineers' Fund is continuously appropriated to the department for expenditure in the manner prescribed by law to defray the expenses of the department and in carrying out and enforcing the provisions of this chapter

9947 The amount of the fees prescribed by this chapter is that fixed by the following schedule

(a) The application fee for a grade A license is twenty dollars ($20)

(b) The application fee for a grade B license is fifteen dollars ($15)

(c) The application fee for a grade C license is ten dollars ($10).

(d) The renewal fee is five dollars ($5).

(e) The delinquency fee is _____.

CHAPTER 2

AB 2896

Witnesses who testified at the two hearings on this bill were as follows:

Hearing in San Francisco—October 25, 1963

Albert G. Boardman, director of education and research, California Conference of Operating Engineers
John Edson, boiler inspector, City and County of San Francisco
Robert H Fox, assistant business manager, International Union of Operating Engineers, Local 501, Los Angeles
John Gerhard, chief, Fire Prevention Bureau, City of San Jose
J. D Mack, representative, Plumbing, Heating, and Cooling Contractors of California
Joseph McBride, supervisor, heating and ventilation, Board of Education of San Francisco
Daniel Molles, international representative, International Union of Operating Engineers
William A Nelder, representative of the San Francisco Fire Department, dual fire prevention and investigation
Robert J Owens, safety engineer, P G & E Company
Eric Salo, supervising steam generation engineer, P G & E Company
Arthur I Snyder, supervising engineer, pressure vessels, Division of Industrial Safety, Department of Industrial Relations
Ormond B Stull, associate fire prevention engineer of explosives, State Fire Marshal

Hearing in Los Angeles—August 13, 1964

Albert G Boardman, director of education and research, California Conference of Operating Engineers
Francis L. Cherney, business representative, Air Conditioning and Refrigeration Fitters Division of Local 250
Arthur G Clark, Mechanical Bureau, Department of Building and Safety, City of Los Angeles
Burton A Currie, assistant electrical engineer in charge of operations, Department of Water and Power, City of Los Angeles
Henry B Ely, representative, California Council of Air Conditioning and Refrigeration Contractors of California
Robert H Fox, assistant business manager, International Union of Operating Engineers, Local 501, Los Angeles
Owen H Held, senior inspector, Los Angeles Fire Department
J W. Schaefer, building and grounds services administrator, Los Angeles City School Districts
Arthur I. Snyder, supervising engineer, Division of Industrial Safety, Department of Industrial Relations
Raymond D Stover, operations director, Los Angeles City School Districts

AB 2364

Witnesses who testified on this bill were as follows:

Hearing in Sacramento—October 19, 1964

Albert G. Boardman, representative, California State Conference of Operating Engineers, San Francisco
Frank Corbett, executive vice president, California State Builders' Exchange, Sacramento
Sid E Danenhauer, representing Sid E Parker Boiler Manufacturing Company, Inc, Los Angeles

Richard T Dixon, representing Dixon Boiler Works, Los Angeles
Robert T Durbrow, executive secretary, Irrigation Districts Association of California, San Francisco
William H Enomoto, California State Florists Association
R H Fox, assistant business manager, International Union of Operating Engineers, Local 501, Los Angeles
W L Gerssert, representative, Union Oil Company
Ivan Gennis, representative, California Society of Professional Engineers, Sacramento
Richard Gerbes, Gerbes & Todd, Consulting Engineers, San Jose
Robert Hanley, legislative representative, California Farm Bureau Federation, Berkeley
Messrs Charles Kershaw, E E Adams, and Phil Titsworth, representatives, Imperial County Farm Bureau
Keith Kirstein, executive secretary, California Grain and Feed Assn
Richard McDougal, representative, California Cattle Feeders Assn.
A L Miller, president, Laars Engineers, Inc
Leslie W Miller, legislative representative, Construction Industry Legislative Council, Sacramento
Messrs W Merle Miller and William Clayton, Jr, representatives, Clayton Manufacturing Company, El Monte
Daniel Molloy, representative, International Union of Operating Engineers
J W Schaefer, building and grounds administrator, Los Angeles School District
Karl Schulze, supervising safety engineer, Western Oil and Gas Association, San Francisco
Arthur I Snyder, supervising industrial engineer, Division of Industrial Safety, Department of Industrial Relations
H J Stone, representative, California Employers' Safety Committee

CHAPTER 4

Hearing in Salinas, September 30 and October 1, 1963

SAFETY IN RAILWAY CROSSINGS

Witnesses who testified at this hearing were as follows:

James K Gibson, representative, Public Utilities Commission of California
Walter Swope, investigator, representing Sigmund Arywitz, State Labor Commissioner of California
Captain Francis Summons, California Highway Patrol, Salinas
Randolph Karr, general attorney, Southern Pacific Railroad
Officer Ralph Weston, Jr., California Highway Patrol, Salinas
William A Ingram, counsel for Southern Pacific Railroad
Robert Cripe, engineer, Southern Pacific Railroad
James Walter Cady, fireman, Southern Pacific Railroad
Jack Bias, executive vice president, Growers Farm Labor Association of Salinas
Arden P Jacobsen, supervising driver improvement analyst, Division of Drivers' Licenses, Sacramento
Jesse Lopez, Drivers' License Examiner, San Leandro
George A Sherman, Chief, Division of Industrial Safety, Department of Industrial Relations
Sam C Carrillo, representative, U S Department of Labor
Albert J Reyff, supervising deputy labor commissioner, Salinas
M J Kosty, court reporter, Salinas

AMENDED IN ASSEMBLY MAY 31, 1963

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL No. 2783

Introduced by Messrs. Gaffney, Elliott, Foran, and Dymally

April 25, 1963

REFERRED TO COMMITTEE ON INDUSTRIAL RELATIONS

An act to add Part 8 (commencing with Section 7850) to Division 5 of the Labor Code, relating to safety in employment

The people of the State of California do enact as follows:

SECTION 1 Part 8 (commencing with Section 7850) is added to Division 5 of the Labor Code, to read

PART 8. HIGH VOLTAGE ELECTRICAL WIRES

7850 No employer shall require or permit any employee to perform any function in proximity to overhead high voltage lines, to enter upon any land, building, or other premises, and there to engage in any excavation, demolition, construction, repair or other operations, or to erect, install, operate or store in or upon such premises any tools, machinery, equipment, materials, or structures, including house moving, well drilling, pile driving or hoisting equipment, unless and until danger from accidental contact with said overhead high voltage lines has been effectively guarded against in the manner prescribed in this part. Violation of this section shall be a misdemeanor

7851 The operation, erection or transportation of any tools, machinery or equipment, or any part thereof capable of vertical, lateral, or swinging motion; the handling, transportation, or storage of any supplies, materials or apparatus, or the moving of any house or other building, or any part thereof, under, over, by or near overhead high voltage lines, shall not be undertaken if at any time during such operation, transportation or other manipulation it is possible to bring such equipment, tools, materials, building or any part thereof within six feet of overhead high voltage lines, except where such high voltage lines

have been effectively guarded against danger from accidental contact, by one of the following methods

(a) The erection of mechanical barriers whose adequacy to prevent physical contact with high voltage conductors is approved in writing by the division

(b) De-energizing the high voltage conductors and grounding where necessary.

The provisions of this section shall not be applicable to tools, machinery, or equipment personally used or operated by qualified electrical workers engaged in the construction, reconstruction, operation and maintenance of overhead electrical circuits and conductors and the supporting structures and associated equipment thereof

7852 In addition, in cases coming under Section 7851 there shall be installed an insulated cage-type guard or protective device, approved by the division, about the boom or arm of all equipment, except back hoes or dippers, and where the equipment includes a lifting hook device also approved by the division, all lifting lines shall be equipped with insulator links on the lift hook connection.

7853 All mechanical barriers and all insulated protective devices and links referred to herein shall be of such character and construction as are suited to the work operations, and adequate for the electrical conditions to be encountered

7854 All mechanical barriers and all insulated protective devices and links shall be maintained in such functioning condition as to meet periodic inspection by the division and to conform to the regulations of the division

~~7585~~

7855 As used in this part·

(a) "High voltage" means a voltage in excess of ~~440~~ *600* volts, measured between conductors, or measured between the conductor and the ground

(b) "Mechanical barrier" means temporary devices for separating and preventing contact between material or equipment and overhead electrical conductors, such as.

(1) A series of poles or the equivalent

(2) Nonconductive enclosures around conductors

(c) "De-energizing" means removing the voltage from electrical conductors

(d) "Qualified electrical worker" means a person who:

(1) Has completed a state-indentured apprenticeship program for electricians or linemen or

(2) Has had a minimum of four years' training and experience under the instruction and direction of a qualified electrical worker and is familiar with the hazards involved.

(a) "High voltage" means a voltage in excess of 440 volts, measured between conductors, or measured between the conductor and the ground

(b) "Mechanical barrier" means temporary devices for separating and preventing contact between material or equipment and overhead electrical conductors, such as.

(1) A series of poles or the equivalent

(2) Nonconductive enclosures around conductors

(c) "De-energizing" means removing the voltage from electrical conductors

By Assemblyman Gaffney.

House Resolution No. 525

Relative to a study of safety in employment

Resolved by the Assembly of the State of California, That the Assembly Committee on Rules is directed to assign to the appropriate interim committee for study the subject matter of Assembly Bill No 2783, relating to employers requiring or permitting employees to perform work near high voltage lines without prescribed safeguards, and to direct the committee to report its findings and recommendations thereon to the Legislature not later than the fifth calendar day of the 1965 Regular Session

Resolution read, and referred by the Speaker pro Tempore to the Committee on Rules.

By Assemblyman Gaffney:

House Resolution No. 526

Relative to the creation of the Assembly Interim Subcommittee on Industrial Safety

Resolved by the Assembly of the State of California as follows

1 The Assembly Interim Subcommittee on Industrial Safety is hereby created and authorized and directed to ascertain, study and analyze all facts relating to industrial safety, including but not limited to the drastic economic and social hardship caused by industrial injuries, the need for undertaking concerted efforts to develop and improve means and methods for enhancing the effectiveness of safety measures against personal injury in all industrial or commercial establishments in the State, and the methods and procedures by which adequate industrial safety programs can be developed

2. The subcommittee shall consist of five members who are also members of the Interim Committee on Industrial Relations The chairman of the Interim Committee on Industrial Relations shall appoint the chairman and the other four members thereof Further reference in this resolution to "committee" means by the subcommittee created by this resolution

3 The committee is authorized to act during this session of the Legislature, including any recess, and after final adjournment until the commencement of the 1965 Regular Session, with authority to file its final report not later than the 10th legislative day of that session

4 The committee and its members shall have and exercise all of the rights, duties and powers conferred upon investigating committees and their members by the provisions of the Joint Rules of the Senate and Assembly and of the Standing Rules of the Assembly as they are adopted and amended from time to time at this session, which provisions are incorporated herein and made applicable to this committee and its members.

5 The committee has the following additional powers and duties

(a) To select a vice chairman from its membership

(b) To contract with such other agencies, individuals, public or private, as it deems necessary for the rendition and affording of such services, facilities, studies and reports to the committee as will best assist it to carry out the purposes for which it is created

(c) To co-operate with and secure the co-operation of county, city and county and other local law enforcement agencies in investigating any matters within the scope of this resolution and to direct the sheriff of any county to serve subpenas, orders, and other process issued by the county

(d) To report its findings and recommendations to the Legislature and to the people from time to time, and at any time, not later than herein provided

(e) To do any and all other things necessary or convenient to enable it fully and adequately to exercise its powers, perform its duties and accomplish the objects and purposes of this resolution

The sum of three thousand five hundred dollars ($3,500) or so much thereof as may be necessary is hereby made available from the Contingent Fund of the Assembly for the expenses of the committee and its members and for any charges, expenses or claims it may incur under this resolution, to be paid from the said Contingent Fund and disbursed, after certification by the chairman of the committee, upon warrants drawn by the State Controller upon the State Treasurer

Resolution read, and referred by the Speaker pro Tempore to the Committee on Rules

CHAPTER 4

Employees' Safety in Work Near High Voltage Wires—AB 2783

Witnesses who testified before the subcommittee on this subject at the Los Angeles and San Francisco hearings were as follows:

September 14, 1964, Los Angeles

John E Dowd, business manager, International Union of Elevator Constructors, Local 18, Los Angeles
James E Busher, district engineer, Elevator Section, Division of Industrial Safety, Department of Industrial Relations, L A
Inman S Reid, district engineer, Division of Industrial Safety, Department of Industrial Relations, L A
Charles G Seurich, Steel Form Contracting Company and A G C Safety Committee
John Witte, representative, Associated General Contractors of America
C V Holder, Building and Contractors Association in California
Albert G Boardman, director of education and research, California State Conference of Operating Engineers
Jack Greenstreet, safety engineer, Local 12, International Union of Operating Engineers
Floyd A Goss, Los Angeles Department of Water and Power

Hearing in Eureka, September 28, 1964

SAFETY IN LUMBERING AND RELATED INDUSTRIES

Witnesses who testified before the subcommittee on this subject at the Eureka hearing were:

Frank E Gordon, representative, International Woodworkers of America, AFL-CIO, Local 98
Ralph Talvola, chief inspector, Redwood Inspection Service
G D Hartman, Loggers Local Union 3006
Leonard Cahill, secretary-treasurer, Redwood District Council, Lumber and Sawmill Workers, AFL-CIO
Thomas Batterton, safety engineer, Division of Industrial Safety, Eureka
E. S. Mackins, Simpson Timber Company
Verne Allen, personnel manager, Weyerhaeuser Company, Arcata
Clarence E Startt, general superintendent, Lorenz Lumber Company, Burney
Alder Thurman, safety supervisor, Union Lumber Company, president, C L A P A
D R Mitchell, Georgia-Pacific Corporation, Samoa
Mrs. Frank Lee (Ruth Wells Harper Lee), individual
Edward A Brubaker, supervising engineer, Division of Industrial Safety

CALIFORNIA LEGISLATURE, 1963 REGULAR (GENERAL) SESSION

ASSEMBLY BILL No. 604

Introduced by Messrs. Dymally and Elliott

January 30, 1963

REFERRED TO COMMITTEE ON INDUSTRIAL RELATIONS

An Act to amend Sections 1775 and 1777.5 of the Labor Code, relating to public works

The people of the State of California do enact as follows:

SECTION 1. Section 1775 of the Labor Code is amended to read

1775. The contractor shall, as a penalty to the State or political subdivision on whose behalf the contract is made or awarded, forfeit ten dollars ($10) for each calendar day, or portion thereof, for each workman paid less than the stipulated prevailing rates for any public work done under the contract by him or by any subcontractor under him, and the body awarding the contract shall cause to be inserted in the contract a stipulation to this effect.

LEGISLATIVE COUNSEL'S DIGEST

A B 604, as introduced, Dymally (Ind R). Public works: apprentices

Amends Secs 1775 and 1777.5, Lab C

Requires contractor or subcontractor performing under public works contract or subcontract who employs workmen in an apprenticeable craft or trade to apply for a certificate approving the contractor or subcontractor under the apprenticeship standards for the area of the site of the public work and fixing ratio of apprentices to journeymen to be employed on the public work.

Unless different ratio has been set by a joint apprenticeship committee administering apprenticeship standards of the craft or trade in the area of the site of the public work or by a bona fide collective bargaining agreement, requires the approval certificate to fix ratio of one apprentice for each five journeymen regularly employed in the craft or trade on the public work.

Requires contractor or subcontractor to employ apprentices in number or ratio fixed by the certificate

Provides for penalty of $10 per day for wrongful failure to apply for or comply with such a certificate of approval

Requires such a contractor or subcontractor, if not contributing to a fund for administration of apprenticeship program in a craft or trade in the area of site of the public work to which other contractors in area are contributing, to contribute to the fund in each craft or trade in which he employs journeymen or apprentices on the public work to same extent as other contractors do.

Authorizes Division of Labor Law Enforcement, in certain cases, to bring a court action to recover penalties for wrongful failure to employ apprentices upon public works.

To the extent that there is insufficient money due a contractor to cover all penalties forfeited in accordance with this section, or in accordance with Section *s 1777 5 and* 1815 of this chapter, and in all cases where the contract does not provide for a money payment by the awarding body to the contractor, the awarding body or the Division of Labor Law Enforcement may maintain an action in any court of competent jurisdiction to recover the penalties provided for herein, and either the awarding body or the Division of Labor Law Enforcement may join as party plaintiff in any such action brought by the other Such action shall be commenced not later than 90 days after the filing of a valid notice of completion in the office of the county recorder in each county in which the public work or some part thereof was performed, or not later than 90 days after acceptance of such public work, whichever last occurs No issue other than that of the liability of the contractor for the penalties allegedly forfeited shall be determined in such action, and the burden shall be upon the contractor to establish that the penalties demanded in such action are not due.

SEC 2 Section 1777 5 of said code is amended to read.

1777.5. Nothing in this chapter shall prevent the employment of properly indentured apprentices upon public works

Every such apprentice shall be paid the standard wage paid to apprentices under the regulations of the *craft or* trade at which he is employed, and shall be employed only at the work of the *craft or* trade to which he is indentured

Only apprentices, as defined in Section 3077, who are in training under apprenticeship standards and written apprentice agreements under Chapter 4 (commencing at Section 3070), Division 3, of the Labor Code, ~~shall~~ *are eligible to* be employed on public works ~~and their~~ *The* employment *and training of each apprentice* shall be in accordance with the provisions of ~~such~~ *the* apprenticeship standards and apprentice agreements *under which he is training*.

When the contractor to whom the contract is awarded by the State or any political subdivision, or any subcontractor under him, in performing any of the work under the contract or subcontract, employs workmen in any apprenticeable craft or trade, the contractor and subcontractor shall apply in each such case to the joint apprenticeship committee administering the apprenticeship standards of the craft or trade in the area of the site of the public work, or in the event such a joint apprenticeship committee does not exist in a craft or trade in the area of the site of the public work, to the Division of Apprenticeship Standards, for a certificate approving the contractor or subcontractor under the apprenticeship standards for the employment and training of apprentices in the area of the site of the public work. If an approval certificate is issued, the committee or division, as the case may be, shall fix the

number of apprentices or the ratio of apprentices to journeymen who shall be employed in the craft or trade on the public work. The ratio shall not exceed that stipulated in the apprenticeship standards under which the joint apprenticeship committee operates.

In the event a joint apprenticeship committee does not exist in a craft or trade in the area of the site of the public work and in the absence of a bona fide collective bargaining agreement covering the craft or trade in the area of the site of the public work establishing some other ratio, the Division of Apprenticeship Standards shall provide in the approval certificate issued by it a ratio of one apprentice for each five journeymen regularly employed in the craft or trade on the public work.

The contractor or subcontractor, if he is covered by this section, shall, upon the issuance of the approval certificate in each such craft or trade, employ the number of apprentices or the ratio of apprentices to journeymen fixed in the certificate issued by either the joint apprenticeship committee or the Division of Apprenticeship Standards.

The contractor shall, as a penalty to the State or political subdivision on whose behalf the contract is made or awarded, forfeit ten dollars ($10) for each calendar day or portion thereof during the time journeymen in a craft are employed, that he, or any subcontractor under him, fails to apply for the certificate in the craft or trade or fails to employ apprentices under an approval certificate issued to him as provided in this section.

A contractor to whom the contract is awarded, or any subcontractor under him, who, in performing any of the work under the contract, employs journeymen or apprentices in any apprenticeable craft or trade and who is not contributing to a fund or funds to administer and conduct the apprenticeship program in any such craft or trade in the area of the site of the public work, to which fund or funds other contractors in the area of the site of the public work are contributing, shall contribute to the fund or funds in each craft or trade in which he employs journeymen or apprentices on the public work in the same amount or upon the same basis and in the same manner as the other contractors do. The contractor or subcontractor may add the amount of such contributions in computing his bid for the contract. The Division of Labor Law Enforcement is authorized to enforce the payment of, and collect, such contributions to the fund or funds and for that purpose may take assignments of claims and exercise all powers provided in Chapter 1 (commencing with Section 79) of Division 1.

The body awarding the contract shall cause to be inserted in the contract stipulations to effectuate this section.

RESOLUTIONS

The following resolution was offered:

By Mr. Foran:

House Resolution No. 160

Relative to apprenticeship training

WHEREAS, There is in this State a great, steadily increasing need for skilled labor which is not being fulfilled by the present labor force, and

WHEREAS, This presents a serious problem which demands immediate attention; and

WHEREAS, This problem can, in part, be met by effective, well-planned apprenticeship type and other training programs designed to meet present needs and to anticipate needs which will arise in the future; and

WHEREAS, Such a program should be designed to induce maximum participation and co-operation of management and labor, and

WHEREAS, There is need for expansion of the State's present apprenticeship training program in this regard; now, therefore, be it

Resolved by the Assembly of the State of California, That it is appropriate at this time that a study be undertaken of the operation, administration, and effectiveness of the State's present apprenticeship training program, and be it further

Resolved, That the Assembly Rules Committee is directed to assign the subject matter of this resolution to an appropriate interim committee for study and to direct the interim committee to report its findings thereon, together with its suggestions for proposed legislation, to the Assembly not later than the fifth legislative day of the 1965 Regular Session of the Legislature.

Resolution read, and referred by the Speaker pro Tempore to the Committee on Rules.

CHAPTER 5

SUBCOMMITTEE ON APPRENTICESHIP TRAINING

Witnesses at July 21, 1964 hearing:

Edward J Hibbert, California Apprenticeship Council, San Francisco
Charles F. Hanna, chief, Division of Apprenticeship Standards, Department of Industrial Relations, San Francisco
Professor Lewis Davis, Department of Industrial Engineering University of California
Ernest G Kramer, chief, Industrial Education, State Department of Education, Sacramento
George L Rosencrans, supervisor, Apprenticeship Training, Department of Education, Oakland
Henry Ely, executive secretary, California Council Air-Conditioning and Refrigeration Contractors and Construction Industry Legislative Council
Ray Carey, executive manager, Los Angeles Chapter, International Electrical Contractors Association
Henry Gunderson, coordinator, Electrical Construction Industry, Santa Clara, San Benito Counties
Kilvin Young, chairman, Statewide Electrical Joint Apprenticeship Committee for the Electrical Industry
Gene Connell, plastering contractor, San Francisco, and secretary, Plastering Industry JAC, San Francisco
E A. Brown, director for the 42 Counties Carpenters Joint Apprenticeship and Training Committee
George A Harter, San Francisco Electrical Contractors Association
Robert Hill, state supervisor of Service for Youth, Department of Employment, Sacramento
Otto F Weber, San Francisco Joint Apprenticeship and Training Trust

Witnesses at September 15, 1964 hearing:

Joseph W Walker, program director, Job Development and Employment, Los Angeles Urban League
Eddy Feldman, executive secretary, Furniture Manufacturers' Association of Los Angeles
Richard Lane, representative, Associated General Contractors of Southern California
Vincent Sloane, international representative, Skill Trade Department, United Auto Workers, AFL-CIO, Los Angeles
Henry Ely, executive secretary, California Council Air-Conditioning and Refrigeration Contractors and Construction Industry Legislative Council
Charles F Hanna, chief, Division of Apprenticeship Standards, Department of Industrial Relations, San Francisco
Joe Maldonado, executive director, Youth Opportunities Board, Los Angeles
George A Harter, executive manager, San Francisco Electrical Contractors Association
Clyde S Bell, managing director, California Lathing and Plastering Contractors Association, and chairman of the Construction Industry Legislative Counsel
Joseph C Kiefer, training coordinator, Joint Drywall Training Committee of California, Los Angeles
Seymour Lebrer, president, Commercial Tool & Dye Co , Los Angeles
Lee Ralston, director, Division of Practical Arts Education in Los Angeles County Superintendent of School's Office
A J Imm, assistant personnel director, Los Angeles City Department of Water and Power
Harry Simonds supervisor, Apprenticeship Training Program, Los Angeles City School System.

Witnesses at October 21, 1964 hearing:

Charles F Hanna, chief, Division of Apprenticeship Standards, Department of Industrial Relations, San Francisco
Douglas Baker, administrative assistant to Lieutenant Governor Glenn M Anderson Sacramento
Ernest G. Kramer, chief, Bureau of Industrial Education, Oakland
Dr. Wayman Williams, director of publications, Department of Education, Sacramento
John Walsh, representative, California Manufacturers' Association, Aerospace Group, Los Angeles
William A Stamper, personnel manager, McCulloch Corporation, Los Angeles
Floyd L Pierce, intergroup relations coordinator, Division of Apprenticeship Standards, Department of Industrial Relations
Ernest G Kramm, public relations director, National Electrical Contractors' Association, Hayward
Matt Gallagher, San Mateo
Thomas G Yerby, chairman, California Automotive Services Association of California
Robert Schleh, representative, California Conference of Employers Association, Sacramento

CHAPTER 6

SUBCOMMITTEE ON SPECIAL EMPLOYMENT PROBLEMS

January 10, 1964, Los Angeles

Witnesses who testified at this hearing were as follows:

J. J. Rodriguez, Los Angeles Community Service Organization
Mrs Georgiana Hardy, California School Boards Association, Los Angeles
William Acosta, community services coordinator, Youth Opportunities Board, Los Angeles
William Gutierrez, consultant, Los Angeles County Commission on Human Relations
Albert Hernandez, business representative, Teamsters Local 420, Joint Council 42, Teamsters of Southern California
Sam Hamerman, administrator of urban affairs, Board of Education, City of Los Angeles
Dionicio Morales, executive director, Equal Opportunity Foundation and Representative of the Amalgamated Clothing Workers of America
Dr George Borrell, chairman, Equal Opportunity Foundation, Los Angeles
Richard Tafoya, representative, Council of Mexican-American Affairs, Los Angeles
Marion J Woods, state supervisor, Minority Employment Program, California Employment Service, Sacramento
Rafael Vega, consultant, State Fair Employment Practices Commission, Los Angeles
Joel Leidner, Institute of Industrial Relations, U C L A.

PROBLEMS IN PUBLIC EMPLOYMENT

October 8, 1964, Los Angeles

Witnesses who testified at these hearings were as follows:

Fernando Del Rio, job development consultant, Youth Opportunities Board, Los Angeles
Mrs. Carmen Warschaw, former chairman, FEPC, Los Angeles
Roger P Kuhn, chairman, Personnel Practices Commission, American Federation of Teachers, AFL-CIO, Los Angeles
Harold Jaeger, business representative, Local Union No 11, International Brotherhood of Electrical Workers, AFL-CIO
Arthur E Green, business representative, Los Angeles County Employes Union, Local 434

Mrs Nesta Gallas, faculty member, U S C School of Public Administration
Norman E Woodbury, executive director, California Municipal Utilities Association, Sacramento
Miss Velma J. Mundy, field secretary, Social Workers Union, Local 535, Los Angeles

October 9, 1964, Los Angeles

Carlos F. Borjas, president, Council of Mexican-American Affairs Office of California Attorney General, Los Angeles
Paul Ortiz, maintenance laborer, Los Angeles County Housing Authority, Maravilla Housing Project
Roger Segure, chairman of grievance committee, American Federation of Teachers
Joseph W Walker, program director, Urban League Job Development and Employment, Los Angeles
William Green, representative, Local 347, Los Angeles City Employees Union
Charles A Henderson, regional director, Local 411, Union of State Employees, Los Angeles
Kenneth Knight, assistant superintendent, Personnel Operations, Los Angeles City Schools
Howard Zuck, chief personnel analyst, City Civil Service Department
Sam Hunegs, director of Council 20, American Federation of State, County and Municipal Employees, AFL-CIO, Los Angeles
David Novogrodsky, representative, Council 20, American Federation of State, County, Municipal Employees, AFL-CIO
Oscar York, chairman, Civil Service Subcommittee, Committee for Representative Government, Los Angeles
John T Long, personnel analyst, Los Angeles County Employees' Association

By Assemblyman Dymally 1964 First Extraordinary Session.

House Resolution No. 197

Relative to a study of employment opportunities, economic problems and unemployment

WHEREAS, There exist in the State of California vast and complex economic problems arising out of existing employment opportunities and unemployment, now, therefore, be it

Resolved by the Assembly of the State of California, That the Assembly Committee on Rules is hereby directed to assign the subject of employment opportunities, economic problems and unemployment to an appropriate interim committee for study and to direct such committee to report to the Assembly no later than the fifth legislative day of the 1965 Regular Session of the Legislature

CHAPTER 7

SUBCOMMITTEE ON ECONOMIC OPPORTUNITY

Witnesses appearing at November 13 hearing:

Kirke Wilson, representative for Dr Paul O'Rourke, Governor's Office, Sacramento
Dr Paul O'Rourke, special assistant, Anti-Poverty Planning Program, Governor's Office
Charles W Stewart, associate budget analyst, Department of Finance, Sacramento
A. Alan Post, Legislative Analyst, Sacramento
Frank Mesple, legislative secretary to Governor Edmund G Brown, Sacramento
William Redmond, representative, Albert B Tieburg's Office, Department of Employment, Sacramento
Wilson Riles, chief, Bureau of Intergroup Relations, Sacramento
Lee Nichols, chief consultant to the Assembly, Sacramento
J. M. Wedemeyer, Director, Department of Social Welfare, Sacramento
James Harvey Brown, councilman, City of Los Angeles

Witnesses appearing at November 18 hearing:

Dr. Paul O'Rourke, special assistant, Anti-Poverty Planning Program, Governor's Office
Joe Wyatt, chairman, Los Angeles County Federation of Economic Opportunity
E J Franklin, United Civil Rights Committee, Los Angeles
Dr. Christopher Taylor, N A A C P , Los Angeles
Arthur Morgan, area manager, Division of Public Employment Offices and Benefit Payments, Department of Employment, Los Angeles
Mrs. Lloyd C. Cook, Los Angeles County Federation of Community Coordinating Councils
Honorable F. Douglas Ferrell, Assemblyman, 55th District, Los Angeles
Walt Parker, Youth Opportunities Board of Greater Los Angeles
James Harvey Brown, councilman, City of Los Angeles
Otton J Bloum, president, Unity Society, Los Angeles
Timothy J Sampson, Avalon-Carver Community Center
Victor Oliver, chairman, Avalon-Carver Community Sounding Board
Donahue Ervin, representative, Council of the Unemployed, Los Angeles
Alfred Elmore, representative, Council of the Unemployed, Los Angeles
Mrs Margaret Allen, secretary, Wrigley Field Citizens' Committee, Los Angeles
Joe Walker, regional office, National Urban League
Mrs Cernoria Johnson director, Washington Bureau, National Urban League, Washington, D.C.
Henry Talbert, western regional director, National Urban League
Clinton Benton, president, United Services, Inc , Los Angeles
Arthur Jackson, Youth Musical Opportunity Clinic
Johnny Otis, representative for William J. Williams, chief director, office of Congressman Hawkins, Los Angeles
Phyllis Seldon, director, Civic Research Action Group, Hollywood
Mrs Lucinda E Benge, Committee for Basic Education, Los Angeles
David Novogrodsky, Council No 20, American Federation of State, County and Municipal Employees, AFL-CIO, Los Angeles
Daniel M. Lund, Emergency Committee to Aid Farm Workers, Los Angeles
Percy Moore, staff assistant to the director, Department of Social Welfare, Sacramento
Ramon L Ponce, Social Workers Union, Los Angeles County, Local 535, AFL-CIO
Waunita M Brown, individual
Mrs Joseph C Williams, individual
Mr James A Passow, executive director, Citizens United Responsibility Enterprise, Los Angeles

LETTER OF TRANSMITTAL

Sacramento, January 4, 1965

HONORABLE JESSE M. UNRUH
Speaker of the Assembly, and

Honorable Members of the Assembly
State Capitol, Sacramento

Gentlemen:

In accordance with the provisions of House Resolution 500 22 of the 1963 General Session, your committee has investigated various aspects of transportation and commerce in California and herewith submits the final report of its activities during the interim following the close of the 1963 session.

Contained herein are narratives of the committee's hearings, reviews of testimony received at those hearings and committee findings and recommendations.

Respectfully submitted,

TOM CARRELL, *Chairman*

By Assemblyman Bane:

HOUSE RESOLUTION NO. 500

Relative to Constituting Certain Standing Committees of the Assembly as Interim Committees

Resolved by the Assembly of the State of California, as follows:

1 The following standing committees of the Assembly are hereby constituted Assembly interim committees and are authorized and directed to ascertain, study and analyze all facts relating to (1) the subjects and matters assigned to them by this resolution; (2) any subjects or matters referred to them by the Assembly, (3) any subjects or matters related to (1) or (2) which the Committee on Rules shall assign to them upon request of the Assembly or upon its own initiative

. . . . .

(v) The Committee on Transportation and Commerce is assigned the subject matter of the Vehicle Code, the Streets and Highways Code, uncodified laws relating thereto, and other matters relating to transportation and commerce.

4 Except as otherwise provided above, each committee is authorized to act during this session of the Legislature, including any recess, and after final adjournment until the commencement of the 1965 Regular Session, with authority to file its final report not later that the fifth calendar day of that session All reports shall be printed out of the funds allocated to said committee and shall be in the form prescribed by the Rules of the Assembly and the Committee on Rules

5. Each committee and its members shall have and exercise all the rights, duties, and powers conferred upon investigating committees and their members by the provisions of the Joint Rules of the Senate and Assembly and of the Standing Rules of the Assembly as they are adopted and amended from time to time at this session, which provisions are incorporated herein and made applicable to this committee and its members

6 Each committee has the following additional powers and duties.

(a) To contract with such other agencies, public or private, as it deems necessary for the rendition and affording of such services, facilities, studies and reports to the committee as will best assist it to carry out the purposes for which it is created

(b) To cooperate with and secure the cooperation of county, city, city and county, and other local law enforcement agencies in investigating any matter within the scope of this resolution and to direct the sheriff of any county to service subpoenas, orders and other process issued by the committee.

(c) To report its findings and recommendations to the Legislature and to the people from time to time and at any time, not later than herein provided

(d) To do any and all other things necessary or convenient to enable it fully and adequately to exercise its powers, perform its duties, and accomplish the objects and purposes of this resolution

7 No subcommittee chairman shall be appointed by the chairman of any interim committee or otherwise except upon prior written consent of the Committee on Rules or the Speaker

8 No consultants, staff members, or other employees may be employed by any interim committee except upon prior written approval of the Committee on Rules or the Speaker

9 No contracts for goods or services or otherwise may be negotiated or entered into by any interim committee without the prior written approval of the Committee on Rules

10 No committee or any member or employee thereof may travel outside the State on committee business without the prior written consent of the Committee on Rules or the Speaker in each case

. . . . .

12 In order to prevent duplication and overlapping of interim studies between the various interim committees herein created, no committee shall commence the study of any subject or matter not specifically authorized herein or assigned to it unless and until prior written approval thereof has been obtained from the Committee on Rules or the Speaker

13 Each interim committee shall file with the Assembly a brief general preliminary or progress report of its activities on or before the 5th legislative day of the 1964 Budget Session of the Legislature

14 Each interim committee shall file its final report with the Assembly on or before the fifth legislative day of the 1965 Regular Session of the Legislature

PREFACE

Members of the Assembly Committee on Transportation and Commerce wish to express gratitude to all of those who participated in the work of the committee. Invaluable assistance in the course of preparation for hearings and in testimony presented was given by capable representatives of state agencies and departments; city and county officials, judges, representatives of business, industry and labor, law enforcement agencies, and by citizens offering the viewpoint of the general public

Also, on behalf of the committee members, the chairman wishes to express sincere appreciation for the careful and diligent work and considerable accomplishment of the committee staff Thanks go to Lisa Barrigan for her efficient secretarial and administrative assistance; to William F Scheuermann, Jr, who served most capably as consultant until the end of July, 1964, to Russell FitzPatrick for his difficult task in helping compile data for the final report and to Eva Rutland for her fine secretarial help

TABLE OF CONTENTS

2—L-1464

TABLE OF CONTENTS—Continued

AVIATION STUDY

Sitting in joint hearings with the Senate Factfinding Committee on Transportation and Public Utilities, the Assembly Interim Committee on Transportation and Commerce participated in 11 statewide meetings to make a full assessment of California aviation's present status and projected future needs.

Testimony was presented by airport managers, commercial airlines, general aviation interests, aircraft manufacturers, federal and state aviation officials and others interested in the fields of commercial, executive and private aviation.

Testimony related to the present and future status of the California Division of Aeronautics, airport land availability, airport protection and zoning requirements, the need for assistance to privately operated and small publicly owned airports, intrastate and interstate airline operations and other related matters

Legislation has been prepared and will be submitted to the 1965 General Session of the Legislature by both committees.

HELIPORT FACILITIES IN THE SAN FRANCISCO BAY AREA

This hearing by the Assembly Interim Committee on Transportation and Commerce was called to consider testimony relating to various subject matters referred for interim study by the Assembly Rules Committee following the 1963 General Session, and at the special request of Assemblyman Foran, to receive testimony on the facilities in the San Francisco Bay area. Fourteen witnesses offered testimony.

In his preliminary statement to the committee, Mr Foran pointed out that there at present exists no downtown San Francisco heliport Adding that there is a need for such service between the San Francisco International Aiport and central San Francisco, Mr. Foran also stated that there is a need for a downtown heliport to facilitate transbay traffic to the Oakland Airport and to downtown Oakland and Berkeley, both of which cities have heliport facilities

Subsequent testimony narrowed consideration down to a location on the roof of the Trans-Bay Terminal Building

A proposal by the aviation section, San Francisco Chamber of Commerce, and the board of directors of the chamber made the following recommendations.

1 That the City and County of San Francisco lease the roof of the Trans-Bay Terminal from the state for a consideration of $1 a year,

2. That the city then proceed immediately to construct as a phase of a permanent heliport, a platform for the takeoff and landing of single-engine helicopters;

3 The Division of Bay Toll Crossings be requested to install an elevator to the terminal roof, which would be used by helicopter passengers as well as by bus passengers,

4 Negotiations for federal funds for the project be instituted with the Federal Aviation Agency;

5. That anticipated revenues from the heliport operation, as well as airport revenues, be utilized to finance that portion of the project not receiving federal funds, the heliport should be considered a necessary extension of the airport proper, and

6 The loan be amortized over a longer period of time than the 20-year period previously contemplated

Because state, city, county divisions of toll crossings and San Francisco Airport all share a degree of involvement in the overall problem of locating and developing a downtown San Francisco heliport, it was suggested that enabling legislation may be required

In this connection, Mr. Foran commented, "The importance of developing this testimony before this committee is that, one way or another we will probably have to have some type of legislation, so that if and when I introduce a bill, you will know what I'm talking about"

In conclusion, he added, "I think that the array of witnesses who have appeared before the committee have demonstrated that a heliport facility in San Francisco would do a great deal toward alleviating the congestion on our highways, both with respect to transporting people to and from our airports, and in the intercity operation It's an integrated problem within the total transportation picture of the bay area

It was the consensus of the members present that legislation of the nature indicated by Mr Foran would receive favorable consideration by the committee, upon its presentation in bill form

It is recommended that suitable enabling legislation be presented during the 1965 General Session which will facilitate the development of a downtown heliport facility in San Francisco

LOS ANGELES METROPOLITAN AREA RAPID TRANSIT

Pursuant to the terms of House Resolution 183 (1963), and in response to an invitation by the Los Angeles County Board of Supervisors, the Assembly Interim Committee on Transportation and Commerce held public hearings in Los Angeles October 28–29, 1963, December 10, 1963 and February 17–18, 1964

HR 183 called for a study of the "subject of financing and establishing a jurisdictional authority which will implement and coordinate a transportation system for Los Angeles metropolitan and southland areas"

Prior to the hearings, in response to an invitation by the Los Angeles County Board of Supervisors, the committee chairman met with representatives of the Legislature, the City and County of Los Angeles, the League of California Cities, officials and directors of the Metropolitan Transit Authority and representatives of southern California business and civic groups The purpose of this meeting was to discuss the scope of the forthcoming hearings and to reach a general agreement on the development of a hearing agenda

Although consideration of routes and the suitability of the type of equipment to be used in the development of a rapid transit system lay outside the scope of HR 183, it was deemed advisable in the public interest to hear testimony relating to these subjects This decision was taken because of widespread public interest in varied and conflicting proposals which had previously been given much prominence in southern California news media

During the hearings, testimony was presented by 73 witnesses It ran to over 400 pages of edited and condensed transcript

After hearing proponents of varied methods of organizing, financing, routing and equipping the proposed system, the committee reached the following general conclusions

1 Monorail train operation has been limited primarily to amusement parks and to a short urban run (as in Seattle), where such "rides" have been regarded more as public entertainment than as a means of providing high-speed, reliable mass rapid transit It was evident that explanations of monorail systems were based on theoretical projections rather than on practical, day-to-day mass rapid transit operating experience.

2. It was not demonstrated that an adequate system could be developed and constructed without some form of subsidy According to an overwhelming preponderance of testimony, so-called "farebox financing" has not been achieved anywhere in the United States

3 Testimony indicated that "private financing" through the sale of revenue bonds would be impossible, unless such bonds could be provided with some form of tax-based guarantee It was further indicated that, because of lower interest rates, general obligation bonds would best meet the financing needs of the projected system

4. Testimony indicated that the best corridors for initial rapid transit development (with the highest load factor potentials) would be

San Gabriel Valley—Los Angeles
Orange County—Los Angeles
Long Beach—Los Angeles
Los Angeles—Santa Monica
Los Angeles—San Fernando Valley

5 It was a general consensus that no tax should be levied for rapid transit purposes unless and until the voters in the affected area give their express consent at the polls to a bond issue proposal

6 Testimony by both public officials and community leaders from throughout the Los Angeles metropolitan area urged strongly that the Metropolitan Transit Authority be disbanded and replaced by a new agency whose directorate should be named by elected representatives of the principally affected communities It was urged that such a board would be more responsive to area needs than was the board of MTA as it was then constituted

Pursuant to a prior indication, Governor Edmund G Brown placed Senate Bill 42 (Rees-Carrell) on special call for the 1964 Budget Session of the California Legislature The bill was passed April 28, 1964, and signed into law by the Governor on May 13, 1964

The bill called for the creation of a Southern California Rapid Transit District and set forth a means of financing and developing a rapid transit system by means of a bonding proposal which will be submitted to the voters of the district It also set forth the powers and duties of a newly constituted board of directors

Makeup of the directorate of the newly created agency is as follows Five members appointed by the Los Angeles County Board of Supervisors; two appointed by the Mayor of the City of Los Angeles, subject to city council approval, four named by a panel representing the League of California Cities.

MINORITY REPORT TO THE FINAL REPORT OF THE ASSEMBLY INTERIM COMMITTEE ON TRANSPORTATION AND COMMERCE ON THE SUBJECT OF LOS ANGELES METROPOLITAN AREA RAPID TRANSIT

By Assemblyman William Dannemeyer

Reasonable men may differ on the conclusion that I state, however, based upon the testimony before our committee, it is entirely possible that a rapid transit system in the southern California area can be built and operated and financed out of fare-box revenue exclusively This would, of necessity require bold and imaginative steps with respect to a design for the system It would probably require that the entire system be above ground This would mean that the "sacred" finger scheduled for Wilshire Boulevard would *not* go underground It is my hope that the residents of southern California will not permit themselves to subsidize the preservation of the beauty of Wilshire Boulevard by adopting a rapid transit system that will place the Wilshire Boulevard finger underground and the balance of the entire system above ground There is no question that placing a portion of the system underground greatly increases the cost It is this increase in cost caused by placing a portion of the system underground that causes the projections of income and expense to go beyond the point of financial retirement of the system bonds and operating expenses out of fare-box revenue alone

If the people who live and have businesses along Wilshire Boulevard desire that portion of the system to be underground, then they should be willing to form a special district in their area to pay for the extra cost of installing it underground

To suggest that the other residents of southern California should pay for this extra expense for the preservation of beauty in the area of the Wilshire Boulevard finger is just a brazen attempt to transfer the responsibility for an increase in cost

ANTISMOG DEVICES

(HR 503—Carrell)

The committee held two hearings on this subject—in Los Angeles and Norwalk.

Assemblyman Lanterman repeated previously voiced sharp criticisms of the basic engineering principle of the now state-approved crankcase blow-by devices.

His criticism was echoed by the proprietor of a Los Angles automotive service who qualified his testimony by declaring that he has "been a specialist in carburetion for 30 years."

Device manufacturers and the State Pollution Control Board spokesman contended that problems result only when installations are improperly made or the vehicle operator fails to have his unit maintained at regular intervals.

Asserting that Motor Vehicle Pollution Control Board contentions that mechanics who install the devices are at fault when malfunctions occur are not based on solid fact, it was charged by various witnesses that when these devices are installed on used cars serious damage can result.

A representative of Assemblyman Flournoy, in a communication, voiced a similar complaint regarding the state approved devices.

Further review of existing regulations relating to anti-smog device installations on used cars was strongly indicated.

The following statement of policy sets forth the MVPCB views:

State Standards

A. Legislation should be provided to give the Motor Vehicle Pollution Control Board authority to determine the effective date of State Department of Public Health standards based on engineering ability to achieve those standards. Such law change should insure that target dates would be permissible to maintain progress as an integral part of auto smog control. Change of standards would not have a retroactive effect on vehicles already equipped.

B. Legislative consideration should be given to control of oxides of nitrogen emitted from the exhaust. The board should be permitted to implement standards for this contaminate (if and when they are adopted) without jeopardizing the ongoing program for control of hydrocarbons and carbon monoxide emitted from the exhaust.

Other Legislative Policies

A. Continued Compliance. The law should provide that once a vehicle is required to be equipped with a pollution control device, it should from that date forward be subject to continued compliance. This would apply primarily to 1963 and later model vehicles.

B. Transferred Vehicles. The board now has authority to establish schedules for application of devices on used cars which remain in the

owner's name. That same authority should be granted in respect to transferred vehicles.

Registration Enforcement

The "affidavit under penalty of perjury" in respect to installation and operation of a smog device which now must be signed by the vehicle owner should be eliminated as soon as a satisfactory means of registration enforcement can be established

Statewide Stickers

Inspection stickers should be required statewide for 1963 and subsequent models of motor vehicles This should be displayed on the front license plate A sticker would be used to designate even exempt vehicles Effective date for stickers and annual inspection statewide would probably be the 1967 annual registration.

Inspection Stations

Installation and inspection stations also should be statewide and not restricted to air pollution counties

Fleet Operation

Fleet operators should be covered by a specific section providing for officials status as "installation-inspection stations"

California Highway Patrol

Legislation should give the California Highway Patrol more authority for strict rules and regulations for installation and inspection stations, but no state agency should have the right to fix price ceilings

The committee indicated that the inclusion of the MVPCB policy statement in this report does not reflect committee endorsement of the legislative proposals contained therein

CONTROL OF POLLUTANT EMISSIONS ON VEHICLES USED INSIDE WAREHOUSES AND OTHER CLOSED BUILDINGS

(HR 606 and AB 2748—Carrell)

At a hearing in Los Angeles in July 1964, testimony was presented regarding the problems of pollutants, emitted by internal combustion engine vehicles, such as forklifts, towlifts, and other loading vehicles operated within buildings, which are injurious to workmen operating the vehicles

Testimony was given by representatives of a branch of the aircraft industry, a firm which distributes power trucks, the International Longshoremen's and Warehousemen's Union, State Motor Vehicle Pollution Control Board, the State Department of Industrial Relations, Division of Industrial Safety, State Department of Public Health Vehicle Pollution Control Laboratory, and the California Manufacturers' Association.

Statements by these representatives and ensuing discussion revealed a general agreement that antismog devices on the vehicles used in closed areas was desirable for the protection of the workmen. However, it was clearly shown that present code provisions, administered by the State Department of Industrial Relations and enforceable by the Division of Industrial Safety, are sufficient to enable the division to require such devices

It was brought out that any failure on the part of the division to adequately inspect and report conditions detrimental to the health of workmen has been due to lack of adequate personnel Any legislation proposed to correct the situation would simply require the Division of Industrial Safety to enforce existing code provisions and should supply any means necessary for them to do so The committee makes no specific recommendations

POLLUTANTS EMITTED BY BUS AND TRUCK EXHAUSTS

(Feasibility of Extending Exhaust Pipes to the Rooftop Level of Such Vehicles) (HR 81 (1964)—Young)

Under the authorization of HR 81 the committee discussed the problems created by exhaust pollutants emitted by gasoline engine buses and trucks and by diesel-powered trucks

Testimony was presented by representatives of the State Motor Vehicle Pollution Control Board, Western Greyhound Lines Safety Division, Greyhound Bus Company Shop Maintenance Division; General Motors Corporation Motor Coach Division, Los Angeles Metropolitan Transit Authority, Santa Monica Municipal Bus Lines; and City of Montebello Municipal Bus Lines

The feasibility of extending exhaust pipes to the top of buses was discussed at length The responses to a questionnaire circulated by the American Transit Association to member companies in major U S cities confirmed the testimony and revealed that roof level exhaust pipes had been used experimentally in many cities with conclusively negative results for the following reasons

1 Exhaust emittants from roof level showered pedestrians and vehicles with soot and condensed dirty water

2 Since exhaust gases are heavier than air, they fall through the breathing level of the air

3 Passengers and pedestrians were burned by the heated pipe rising at the back of the bus

4 Jacketing the exhaust pipe created a fire hazard and extended the allowable length of the bus in some cases

5. The extra-length tailpipe required created undesirable backpressure

6 Soot emissions soiled cargo loaded on trucks carrying food products, livestock and merchandise

A film, exhibited to the committee to show such experimentation, graphically confirmed the foregoing results

Diesel-powered trucks emit contaminants which are not laden with hydrocarbons and require different methods of control. They emit visible and odorous contaminants for which there are at present no standards The State Motor Vehicle Pollution Control Board has requested the State Department of Public Health to establish a standard for odor and for smoke (visible emittants), to use as criteria

There is also an indication of some effort on the part of device manufacturers to develop controls for diesel engine emissions and research is currently going on in other parts of the country as to these devices' effectiveness

The concensus of committee opinion is that no remedial legislation is required at this time or recommended as a result of investigation into this subject

LEAD ADDITIVES IN GASOLINE

(AB 2163—Danielson)

Principal proponents of this measure, which would prohibit the use f lead additives (ethyl compounds) in the gasoline refining process ere spokesmen for "United Patriotic People," a student organization, a retired physician and a representative of the "National Health Foundation."

It was their contention that the lead additives were a major factor in the composition of smog and cited one Midwest oil company's product (sold under the trade name "Amoco") as an example of a non-smog-producing internal combustion engine fuel.

This contention was challenged by a spokesman for the Detroit Research Laboratories of Ethyl Corporation and by the Director of the Department of Preventive Medicine and Industrial Health, College of Medicine, University of Cincinnati

Their testimony, backed by research statistics and findings, contended that the amount of the lead particles discharged through an automotive tailpipe is practically negligible.

It was further testified that even these minute particles do not become a significant component of the substances, which, when exposed to sunlight (even sunlight diffused by overcast), produce the photochemical effect that causes eye irritation and other discomforts associated with smog

After hearing lengthy testimony and recalling that this same subject has been submitted for previous legislative inquiry, committee consensus was that no new significant evidence of the smog producing effect of lead compounds in gasoline was adduced It was recommended that no legislative action is indicated at present

ADDENDUM TO THE TRANSPORTATION AND COMMERCE COMMITTEE REPORT ON INTERIM HEARINGS ON THE SUBJECT OF LEAD ADDITIVES TO GASOLINE—AB 2163—DANIELSON

By Assemblyman William Dannemeyer

I cannot challenge the technical data presented by certain representatives who appeared before this committee in connection with the hearing on this matter. My primary reason for saying this is that I lack knowledge in the specialty in which they are employed and are engaged. However, it does appear to me that research in this area has not been conducted to a degree that it should be. I have come to the conclusion that further research in this area by specialists and knowledgeable persons may well produce the conclusion that lead does in fact operate as something other than a minimal factor in the formation of smog.

Since this subject is of such great significance in our state today, it seems to me that the state government should invite proposals from different research organizations in order to determine the extent to which lead contributes to the smog problem.

MISDEMEANOR OFFENSES CLASSIFICATION

(HR 61—Deukmejian)

The Hon Raymond Roberts, Judge of the Municipal Court, Los Angeles Judicial District, represented Mr Deukmejian in support of the provisions of HR 61

Pointing out that traffic violations are now classed as misdemeanors (crimes), Judge Roberts advocated reclassification to "infraction" (as is the case in New York) or "public offense," (as is the case in New Jersey).

His proposal would except such offenses as driving with a license under suspension or revocation, reckless driving, misdemeanor hit-run, and other similar aggravated offenses

He also advocated a broadening of the power of a traffic court magistrate to mete out license suspensions, in cases of repeated infractions, based upon the magistrate's on-the-spot observation of the defendant and evaluation of the seriousness of the offense He argued that the delay between the time a judge recommends suspension or revocation to the Department of Motor Vehicles and the time when the DMV takes action, tends to dull the punitive impact of the penalty.

Conceding that this approach to traffic law enforcement may require later amendment and legislative refinement, he argued that "a start" should be made in (a) removing the "criminal" stigma from persons found guilty of infrequent, minor infractions and (b) streamlining the penalty process by enabling traffic court magistrates to make revocations or suspensions immediately effective.

A representative of the DMV spoke in cautious support of this approach to traffic law enforcement Two spokesmen for automobile clubs advised a "go slow" approach, contending that they wanted to further evaluate all the potential effects of the granting of more latitude in judicial discretion

A spokesman for a group of permitted (privately owned commercial) carriers supported the proposal He argued that the change from Public Utilities Commission inspection and enforcement of fleet maintenance practices to California Highway Patrol enforcement, has had the effect of changing a "violation" to a "crime" He asserted that maintenance practices "are largely a matter of opinion"

It was finally suggested that both the Penal Code Revision Commission and the Assembly Committee on Judiciary should logically be included in a consideration of this proposal.

Committee members present assented to this approach.

Legislation is in process of preparation for introduction in the 1965 General Session and will include the provisions of Mr Deukmejian's HR 61 and Judge Roberts' proposals for reclassification of certain traffic violations based on findings of the committee as a result of testimony presented at hearings after the measure has been introduced

BAIL PROCEDURES

(HR 305—Dannemeyer)

Mr Dannemeyer, speaking on his resolution, pointed out that the posting and/or forfeiture of bail in traffic cases works a hardship on the average breadwinner, while it is a matter of little concern to the wealthy. He urged that more persons "fixed and established in the community" be released on their own recognizance when entering not guilty pleas to traffic offenses

A spokesman for the bail bondsmen, indicating that they do not like it generally, had no objection to the proposal if it was confined to run-of-the-mill traffic offenses He indicated that bondsmen are seldom called upon in such cases.

Mr. Donovan urged that, because of its bearing on the whole area of criminal justice, this question needs a "sweeping study in depth" He related the problem to a need for revision of the Vehicle Code to the Penal Code Revision Commission study currently in progress

Committee members present were in general agreement with this approach.

TRAFFIC CITATION TRIALS

(HR 477—Dannemeyer)

NIGHT TRAFFIC COURTS

(HR 581—Dannemeyer)

For the purpose of this report, both of these resolutions are treated together because they relate to the same general problem, i e , the "hardship" imposed upon a traffic court defendant who wishes to enter a not guilty plea but must appear on separate occasions for arraignment and trial

HR 477 aims at providing that such a defendant would be permitted to enter a plea upon arraignment and stand immediate trial

A discussion of this elicited the suggestion that a provision for entering a not guilty plea by mail might be substituted for a personal appearance on arraignment Upon entry of such a mailed plea the defendant would then be notified as to the time and date set for his trial (The question of bail did not arise in this suggestion)

HR 581 attacks the same asserted "hardship." It would provide for the creation of night traffic courts This study stemmed from a proposal contained in AB 2208, Dannemeyer, introduced during the 1963 General Session of the Legislature.

In a prepared statement supporting his position, Mr Dannemeyer declared that the effect of his bill "would change the presently permissive night court statute relating to all criminal cases, so that, as to those criminal cases arising out of traffic violations, pleas of guilty

or not guilty must be accepted one night each week in populous areas ''
He added that statutes presently permit judges in a judicial district with three or more judges, to schedule night court for any criminal matters—including arraignment, trial and sentencing

Mr. Dannemeyer's argument was summed up in the following paragraph of his statement. "A system which penalizes a worker an additional amount (his day's wages), just for entering his plea and having a later trial date set, encourages the payment of fines when the defendant is not in fact guilty Often he can earn more that day than the fine he would save by proving himself innocent And a system which encourages payment of fines by the innocent merely to avoid collateral and additional loss of wages, implants a belief that the law itself is 'crooked,' 'unfair,' and 'discriminatory' It defeats the American tradition that a man is entitled to his day in court ''

Strong support of the night court proposal was expressed in a prepared statement by Senator Thomas M Rees (38th District, Los Angeles County).

Another prepared statement by the Hon Thomas L Foley, Judge of the Municipal Court, San Leandro-Hayward Judicial District, supported the proposal.

Judge Foley's statement pointed out that he held night traffic court in Hayward for nine years—for arraignment purposes only

This entailed gratis service from his bailiff and clerk, who served two hours every Tuesday night, in addition to their regular day shifts, due to the fact that the Alameda County Board of Supervisors made no provisions for paying overtime for this service

Judge Foley's statement concluded with the following paragraph: "Many offenders came in and posted bail evenings I think your committee should give some consideration to a traffic court evenings so that offenders can post bail or sign a written "not guilty" plea and be given a trial date. Everybody in this community was enthusiastic over the night court *The only criticism I received was from judges in adjoining jurisdictions, who did not want the idea to spread* If your committee recommends legislation establishing night court, (provide for) a clerk and bailiff in your bill and be sure to provide for their compensation."

A prepared statement by John Francis Foran, Assistant General Counsel, Farmers Insurance Group, was also presented It supported the night court proposal.

Mr Foran's statement said in part, "The lack of immediate decision by a hearing judge is so discouraging that I would say in 9 out of 10 cases, or probably 99 out of 100, rather than take time off from work, possibly losing salary and incurring the displeasure of their supervisors, they simply post bail and forfeit it ''

He also cited possible effect upon the insurance rates of innocent persons who cannot afford the time and expense of defending themselves in traffic court. He stated that many insurance companies raise premiums when their assureds are convicted of moving violations

Another prepared statement by Mr C R Greenlee, a citizen, strongly supported the night court proposal.

The Hon. Gosco O. Farley, Judge, Los Angeles Municipal Court, Chairman of the Committee on Legislation of the Municipal Court

Judges Association of Los Angeles County, appeared in general opposition to night courts—even if they were opened up for arraignments only.

As an alternative, he suggested that a defendant might be permitted to enter a not guilty plea by mailing his bail and expressing his desire to so plead in a letter He could then be notified by mail as to the time and place set for his trial

Spokesmen for the automobile clubs expressed support of an experimental approach and, in a prepared statement, a representative of San Diego County raised the question of cost

The San Diego presentation was summarized as follows

1 Insuring that a night traffic court program is instituted only after it is determined that a demonstrated need exists

2 If the decision is made to undertake such a program, cost factors should be of substantial importance in devising the system to be instituted (Advocates that board of supervisors be accorded a role in devising the system.)

3 Counties to receive a larger percentage of fines and forfeitures, in rder to minimize the gap between court costs and revenues

During the taking of testimony, it was pointed out that the courts now have the authority to establish night courts and that the effect of any affirmative legislative action would make the establishment of such courts mandatory in judicial districts having three or more courts

Committeemen present indicated that a reintroduction of a bill containing the substance of AB 2208 (1963) would meet with favorable response

DRIVERS' LICENSE SUSPENSION, REVOCATION AND PENALTIES

(HR 415—Donovan)

This proposal would provide that, when a defendant is convicted of a felony (making his driver's license subject to automatic suspension), and when the trial judge, in the exercise of his judicial discretion, sentences the defendant to a penalty applicable to misdemeanor cases, the Department of Motor Vehicles should be permitted to invoke the right to suspend because of the nature of the (felony) charge, rather than on the basis of the sentence

Department spokesmen explained that suspensions are ordered on the basis of trial court abstracts, which are forwarded to the DMV Sacramento office, following the conclusion of trials

This procedure came under attack based on the premise that the court's findings, arrived at after hearing witnesses in the case, evaluating recommendations by parole authorities, and weighing the evidence, should not be disregarded by an agency of the State

Assemblymen Dannemeyer and Kennick took sharp exception to a DMV contention that the department should be permitted, in effect, to render further and additional judgment, based on the reading of an abstract

Mr Dannemeyer expressed the following, representing a consensus of committee members, and recommended that: "Driver's licenses should be suspended only on direction of judges passing adjudication on convicted felons, rather (as is present practice) permitting Department of Motor Vehicles revocation of a license, based on receipt of an abstract from the court"

MINORS' LICENSES AND INSTRUCTION PERMITS

(HR 121, AB 2645 and Preprint Bill 7—Donovan)

Assemblyman Carrell stated the purpose of this public hearing was to obtain citizen reaction to proposed legislation to the issuance of driver's licenses to minors Under specific consideration was legislation proposed by Assemblyman Richard J Donovan which, in summary, provides that minors between ages 16 and 18 who have satisfactorily completed driver education and driver training courses in a secondary school, or have received specified comparable training, may apply for a driver's license, sets age brackets for instruction permits and raises to 18 the licensing age for juveniles not in the specifically defined trained category.

Assemblyman Carrell invited comments from citizens present, including some 50 persons representing a cross-section of statewide civic leadership Spokesmen for the insurance industry and from volunteer safety groups gave endorsement to the proposed legislation, coupled with endorsement and support of driver education as a vital function of the state's secondary school system

The positions taken by the insurance industry and the volunteer safety movement were enthusiastically endorsed by representatives of the Department of Motor Vehicles who were in attendance

Statistical data presented by the representatives of the Department of Motor Vehicles showed the driving records of minors in the 16-to-18 age bracket are generally excellent

Citizens present expressed the opinion that the establishment of driving privileges under provisions of the proposed legislation would materially assist in curbing the statewide school dropout problem It was stressed that many students inclined to leave school before graduation might well be impelled to remain in school in order to receive their driver education and obtain driving privileges

Throughout citizen remarks during the hearing there was a continuing thread of comments endorsing driver education and calling for improvement and expansion of driver education and driver training.

It was cited repeatedly that in educating a student for life, the schools should also train the student in skills that could save his life

DEMONSTRATED ABILITY TO DRIVE VEHICLE TYPES
(HR 524—Bane)

This resolution directed itself primarily to "undue hardship to drivers applying for other than class D licenses."

It was pointed out that a driver required to demonstrate his ability to drive vehicles in the combination of vehicle class or large motor trucks and tractors, an applicant must borrow, rent or lease such vehicles at his risk and expense. It was further asserted that some drivers have been denied continued employment because of unavailability of renting or leasing or inability to meet the cost.

It was generally conceded that "hardship" possibilities exist in this area of driver licensing and that an effort, preferably administrative, should be made to alleviate it.

In the absence of any presentation of a specific solution to the problem cited, the committee consensus was to view with careful and sympathetic attention any measure introduced at the next general session of the Legislature, designed to assist drivers in the categories mentioned in HR 524.

DRIVERS' LICENSE EXAMINATION EVERY TEN YEARS
(HR 136 and AB 161—Marks)

The committee generally supported the idea that every driver should be required to take the examination given to original applicants at least once in every 10-year period.

Spokesmen supporting the proposal stressed that many changes in physical, mental and visual abilities can change to a marked degree with the passing of years and that, in the interest of public safety, such examinations as proposed should be made mandatory.

Committee consensus was in agreement.

STAGGERED PERIODS OF VEHICLE REGISTRATION
(HR 21—Knox)

Presented in an effort to reduce the "enormous administrative and personnel burden" in the relatively short period of time currently available for annual registration, HR 21 called for study of a proposal to stagger registration deadlines, in order to develop and maintain a steady flow of registration traffic in Department of Motor Vehicle offices

As set forth in a prepared statement by Mr Knox, "Such a proposal is not without initial appeal"

Witnesses appearing on behalf of the DMV were unanimous, however, in their contention that staggering registration periods would create problems of enforcement and administration that would far outweigh any advantage that might be obtained by creating a steady, drawn-out, flow of registration transactions

It was their contention that the present method is more efficient and economical than could be developed through adoption of a staggered period plan

It was further pointed out that, at present, law enforcement officers can spot an unregistered vehicle at a glance and that, in the event the issuance of new registration tabs did not meet a uniform, statewide deadline, considerable confusion would result

After listening to department spokesmen, and in view of the fact that only one witness appeared in support of the proposal, committee consensus was that no change in present methods is warranted

REFLECTORIZED LICENSE PLATES

Testimony presented to the committee submitted that reflectorized license plates have many safety advantages over nonreflectorized plates now used in California They are more readily seen at night for law enforcement identification, as the numbers can be read, oncoming vehicles can identify whether it is an automobile or motorcycle, etc, in case of headlight or taillight failure In case car is parked at side of road in emergency situations, license plate is visible from every angle

Statewide safety groups and women's organizations urge the adoption of reflectorized license plates as a safety measure

STEEL VERSUS ALUMINUM PLATES

Steel is the material now used in plate production, steel costs 45 percent less than aluminum Reflective bead spheres or sheeting can be applied to either steel or aluminum

PRODUCTION AND COST

Department of Corrections recommends bead spheres being used rather than reflectorized sheeting, because very little time and equipment change over present production would be required Converting equipment to use of sheeting would be more costly and take more time

Increased cost, projected by Corrections· 3 cents to 4 cents per plate if only numerals and state name reflectorized with bead spheres 7 cents per plate if background also reflectorized Corrections projected an increased cost of 29 cents to 43 cents per plate if "Scotchlite"-type sheeting were used, however reflectorized material manufacturers' representative states the figure would be 28 cents to 29 cents maximum increase over present cost

Effectiveness: Bead spheres lose reflectibility when wet in rain or fog, sheeting retains full reflectibility under all conditions Life expectancy of bead spheres is 3 to 5 years For reflective sheeting, from 5 to 10 years.

Black numerals, name or background on plate cannot be reflectorized

Department of Corrections, after sending out a questionnaire to manufacturers of reflectorized materials, reported that only one firm, 3-M makes reflectorized sheeting, however, 3-M representative states that other companies do produce this

Legislation to adopt reflectorized plates should specify term of plate issue, i e, 5-year or 10-year Deadline for start of production is July in a year five years prior to the year of issue

Legislation should also propose adoption of blue and gold color combination on California plates, since black cannot be reflectorized, and because blue and gold are California state colors, therefore would be most appropriate.

HIGHWAY ROUTING

The Assembly Interim Committee on Transportation and Commerce conducted a hearing on the general subject of highway land acquisition and routing, pinpointing its survey by making a study of Interstate Highway Route 210 and State Route 167.

Spokesmen for the Highway Commission and the Department of Public Works explained to the committee the methods used to determine routes selected to serve as links between certain key areas.

It was stressed that it is the duty of the Department of Public Works and of the Highway Division to locate routes in a manner that will afford a maximum amount of public benefit at the lowest possible cost While this admittedly causes some inconveniences and dislocations in some areas, it was asserted, the heavy traffic flow, over already established routes, indicates that a very large segment of the population is served at the expense of possible injury to a much smaller segment.

Outlining the heavily populated areas to be linked by the routes under specific committee study and delineating the need for such linkage, spokesmen for the state testified that the criteria generally applied to route selection, had been followed in this instance.

It was explained that public hearings are held in order to permit citizens to voice protests to proposed routes and that it is a general practice to prepare alternates wherever practical In this regard, topography, cost factors and the best means of making direct linkages are all weighed. It was pointed out that "the greatest good for the greatest number of people" must be the governing factor.

It is the opinion of the majority of the committee members that the Highway Commission, in the performance of its public duties, has conformed well both with the letter of the law and with the legislative intent which is expressed in existing statutes

Because this hearing was primarily held to instruct the committee and because no specific legislative proposals were involved, no committee recommendations were indicated.

Mr Lanterman requested permission to submit a supplemental report for committee consideration It was granted

Mr. Lanterman's report not having been received, the Chairman has ruled that it can be made at a later date

SANDBLASTING AND BLOWING ON A RESTRICTED STATE HIGHWAY AREA

The committee met in Palm Springs, November 20, 1963, for the purpose of making a study of problems set forth in House Resolution No. 402 (1963—Cologne)

This was a joint meeting with the Senate Fact-finding Committee on Transportation and Public Utilities, under the chairmanship of Senator Randolph Collier

The meeting was convened following a morning field trip along Interstate Highway 10, where there exists a six-mile stretch described as an area of very serious sandblast damage

Testimony indicated that the sandblast damage in this area became very acute following the opening of a new freeway, completed in 1956, on a broad, alluvial, windswept fan with coarse-textured soil and sparse desert vegetation In this particular area, frequent, low-velocity winds pick up small quantities of very hard and sharp sand High-velocity winds pick up large volumes of this material The low-, intermediate-, and high-velocity winds all cause damage to automobile glass and paint, in direct proportion to the wind velocities encountered

Testimony indicated that high-velocity winds cause the highway to be closed to all traffic—but not until considerable damage has already been sustained.

It was brought out that the Division of Highways, in an attempt to alleviate the situation, had expended some $80,000 on the construction of a dike running parallel to the highway, which was designed to serve as a windbreak. This effort was conceded to have proved ineffective

Pinpointing the serious nature of the problem in the sandblast area, testimony indicated that the diversion of traffic from Highway 10 through the City of Palm Springs had been necessary on 129 occasions in a year's time.

Captain Lloyd Watson, California Highway Patrol, estimated that approximately $1,600,000 per day in terms of property damage is done during those days when wind velocities are high He projected his estimate by 50 (the average number of days per year when an acute condition exists) and arrived at an annual estimated loss of $80 million

He further testified that the CHP has 12 patrol cars operating in the area and that they avoid running into heavy sandsweep unless it is absolutely necessary. Despite the best possible precautions, he said, the CHP annual repairs due to sand damage amounts to about $8,000

This testimony was bolstered by a representative of the Farmer's Insurance Group. He cited an instance where one day's loss in the area under discussion amounted to slightly less than $54,000 Setting forth the idea that only about 50 percent of the cars traversing the area are covered by comprehensive coverage, adding that his company insures only approximately 9 percent of the cars on California highways, this

witness declared that his company's statisticians estimate a one day's loss from windstorm at about $1,496,000 Basing his estimates on a 1956 figure, this witness indicated that, because of the numerical increase of vehicles subsequent to that estimate, current losses could now approximate close to $2 million per storm day

He further testified that this is "the worst and almost catastrophe area" in the state

He added that, with the exception of a stretch between Colton and Ontario, the area in question contributes all of what he termed "catastrophe" loss conditions

The pinpointing of the area was confirmed by a deputy state highway engineer of operations, a representative of Allstate Insurance Company, and a representative of the Imperial County Insurance Agents Association It was further pointed out that the residents of Imperial County pay three times the comprehensive rate charged those living in San Diego County—primarily because of wind damage

A representative of the Palm Springs Independent Insurance Agents Association declared that, "We cannot write full coverage comprehensive for people in Desert Hot Springs who work in Indio or Palm Springs" He added that they can write $50 deductible, "if we can write them at all . . ."

A consensus of suggested solutions to the problem stressed the need for adequate planting to divert the wind patterns, trap shifting sand and provide "storage areas" where sand can be deposited before it reaches the highway in any substantial quantity

Several alternative methods were suggested by agriculturalists, who have learned to protect their croplands by planting protective barriers and cover, and by representatives of the U S Department of Agriculture and the Coachella Valley Soil Conservation District

It became evident that, because of the damage sustained, not only by area residents, but by interstate travelers, a possible responsibility to remedy the hazard potential rests with the State of California This was underscored by testimony which indicated that the problem only became acute subsequent to the opening of the new freeway route in 1956

(Mr Dannemeyer objected to the term, "possible responsibility," in the preceding paragraph, declaring that it should be, "a clear responsibility" Chairman Carrell declared that Mr. Dannemeyer's objection should be noted in this report)

Following the November 1963 hearings, the Division of Highways has embarked upon a planting program designed to reduce the losses sustained by vehicle operators traversing the area in question It is the consensus of the committee to applaud the initiation of this program by the Division of Highways The committee feels further that if legislation is needed to support and accelerate this project, such needed legislation should receive full committee support

In this connection, the committee recognized and took cognizance of the costs of installing and maintaining such plantings versus the cost of constructing other controls It was recommended that a full determination of what costs are involved and what allocation of state highway funds would be necessary effectively to cure this particular problem in the limited section of state highway affected in order that such

allocation may be "specifically made and included in any propsosed legislation."

It was recognized that this condition is unique and that legislative action in this instance need not necessarily establish a precedent for similar protective action in other areas where this peculiar condition does not exist

The committee called attention to the fact that state highway funds are currently being expended for snow removal on state highways, and that such funds could be expended for similar "acts of God" in the case of sandblasting.

Finally, it must be stressed that the conditions studied during this hearing did not include such circumstances as wind-carried dust which may create a traffic hazard because of reduced visibility The committee hearings were confined to consideration of the property damage created in a narrowly restricted area by a unique combination of highway location, the peculiar nature of the sharp sand in the area and prevailing desert winds.

HIGHWAY MEDIAN OR DIVIDER STRIPS

(HR 509—Unruh)

In a prepared statement, Mr Unruh, referring to HR 509 and HR 403, declared that the resolutions were offered to "stimulate discussion by the committee, the engineers of the State Highway Division, experts from public and private safety agencies and the public, of these two causes of head-on collisions Hopefully, from these discussions, can come lifesaving suggestions for reducing this type of accident" (HR 403 directs itself to the problem of wrong-way entries to freeways HR 509 calls attention to head-on collisions across median strips)

A discussion of the effectiveness of painted double line median separators on state highways, which also happen to be the main streets of cities pointed up the fact that, because speeds are low on such traffic arteries, the head-on collision hazard is not great

On freeways, however, where fixed barriers have not been erected, head-on collisions frequently result in fatalities

Spokesmen for the Division of Highways explained to the committee the research program which has resulted in the development of the flexible, cable, chain link median barrier, which has proved to be highly successful in preventing head-on freeway collisions

The division presentation included the showing of a motion picture, illustrating tests of various types of median barrier

It was explained that barriers are now included in budgeting on high-traffic-density highways and freeways

EMERGENCY FREEWAY CALLBOX DEVICES

(HR 51—Waldie)

This hearing related to the study of results of a pilot installation of roadside emergency callboxes on freeways in the Los Angeles area and a proposal that this pilot study be continued by means of extending the facilities to other freeway stretches

It was revealed that the callboxes previously installed on certain stretches of the Hollywood, Harbor, San Bernardino and Santa Ana Freeways had received a limited public use and acceptance

Reasons for this limited use were outlined as (a) the boxes are not at present adequately designated by large enough signs, (b) the freeway stretches at present supplied with callboxes are subject to very frequent patrol by the Los Angeles Police Department, and motorists are usually contacted by a patrolman before they can go to a callbox; (c) many motorists have indicated that they did not use the callbox because they were uncertain as to what it might cost them—they chose to seek help by other means; (d) it was suggested that the word "emergency" inhibits people from using the callboxes when only minor assistance is needed and further suggested that the word "assistance" be substituted.

It was proposed that callboxes be installed along the Golden State Freeway between Burbank and the intersection with the San Diego Freeway on Highway 99, and on the San Diego Freeway between Mulholland Drive and the intersection with the Golden State Freeway. It was argued that these sections of the freeway system are not so heavily patrolled and that, with proper signing, might present a better test of these facilities than they are now receiving

A presentation was made by a representative of the Hoffman Electronics Corporation, the company which installed the test system

A representative of Pacific Telephone, in a prepared statement, urged that such a study should be made on a comparative basis before a final determination on an expansion of the present system is made

This comparison would call for the installation of leased Pacific Telephone lines providing two-way voice communication, as contrasted to the present push button electronics device

FREEWAY EXIT RAMP BARRIERS

(HR 403—Unruh, AB 2602—Carrell)

Spokesmen for the Division of Highways explained to the committee the research project now under way in an attempt to halt wrong way freeway or expressway entries

A suggestion that spikes similar to those used on some self service parking lots may prove effective, was found to be not feasible because of speeds involved, and the fact that the heavy traffic over the ramps would create a very large maintenance problem

Some of the methods now under study include the erection of "wrong way" activated signs, equipped with flashing red lights and signal horns or bells designed to warn the wrong-way driver, larger "Do not enter" signs, with white on red lettering, and other warning devices

It was indicated that a fuller report on the efficacy of these warning devices can be made to the committee during the 1965 General Session of the Legislature

MAXIMUM AND PRIMA FACIE SPEED LIMITS

(AB 1730—Deukmejian)

The effect of this bill, according to a prepared statement by Mr Deukmejian, would be to eliminate the "gray area" in enforcement of prima facie speed limits.

Contending that the basic distinction between a prima facie and a maximum speed law is one of evidence, Mr Deukmejian pointed out that in establishing a violation of a maximum speed law, the prosecution need only prove that the defendant was traveling at a speed in excess of such a limit, without regard to the condition of traffic, visibility or the roadway.

The effect of AB 1730 would be to change all prima facie speed limits to maximum limits

Prepared statements by two municipal court judges were in support of the bill

An automobile club spokesman's testimony can be summed up in the following quote "From the record to date, we believe that California's prima facie speed limits in the lower ranges have worked well over the years We submit that this record can be maintained, and even improved upon with the retention of our state's prima facie speed limits"

A spokesman for the California Highway Patrol declared that, "We think that the maximum-type limit is a much clearer type speed law, and if you are going to get voluntary compliance or any type of compliance by the motorist, he must understand the law, and we think that a prima facie limit is very difficult to understand"

He pointed out that in Michigan they have retained prima facie limits in residential and business districts, but that the rest of their speed limits are maximum

A spokesman for the Department of Public Works indicated that to effect a change from prima facie to maximum speed limits would require resurveys and the changing of some 7,400 signs, and also would mean changing pavement markers It could run as high as a million dollars just on the state highway system alone"

The committee preferred not to make specific recommendation for new legislation in line with the Deukmejian bill studied, however. Mr Dannemeyer stated that he would introduce a similar measure in the 1965 legislative session (Chairman Carrell asked that this be noted in report)

SPEED SAFETY DEVICES

(AB's 214, 215, 216—Petris)

These bills call for a very complicated installation of five coded colored lights on the fronts and backs of vehicles, together with matching pushbutton controls mounted on vehicle dash panels, combined with five coded colored fluorescent paint street and highway lane striping, as a means of providing for signaling and speed control.

Because of its complicated nature and projected high cost, it was a committee consensus that legislation implementing such a system is completely inadvisable

FOG ZONES

(AB 1552—Garrigus)

Mr. Garrigus' proposal would have the Department of the California Highway Patrol set up signs limiting speeds in certain highway zones during periods of heavy fog.

Mr Garrigus pointed out in his argument supporting the measure that speed zones are now fixed for schools, hospitals, playgrounds and other similar special zones

A discussion of the problem brought out the following complications· Because fog is a vapor that comes and goes, frequently within minutes, it would be difficult to establish clearly the areas to be posted; patrolmen would have to set up and remove signs at times and in places not clearly spelled out, a manpower distribution problem would be created automatically wherever a fog condition develops

It was pointed out that the basic speed law now prohibits excessive speeds during times when visibility is reduced by heavy rain, fog, snow, or for any other reason.

A spokesman for the Division of Highways indicated that a research project relating to fog-aggravated highway accidents is in process but declared that its progress has been retarded, due to a "fog scarcity" Three test areas and test methods were described

It was indicated that the subject matter of AB 1552 is included in the research project.

One member suggested that the committee recommend that the Division of Highways explore the possibility of coordinating with studies now being conducted at the University of California Berkeley, at the university's new "fog chamber" developed for testing and experimenting under fog conditions.

The committee recommendation by majority was: "Inasmuch as adequate statutory prohibitions for driving under unsafe conditions, including conditions of heavy fog, smog, dust and rainstorms now are in force, zoning by fixed areas with signs would be unnecessary and superfluous, and that further studies would be inconclusive and an unjustified expenditure of time and funds"

MOTOR VEHICLE SAFETY INSPECTION

At a hearing in Chula Vista, California, on Friday, September 18, 1964, the Assembly Interim Committee on Transportation and Commerce heard testimony on Assemblyman Richard Donovan's proposed legislation for periodic motor vehicle safety inspection

Testimony opposing an inspection program was given by representatives of Northern California Auto Club, California Highway Patrol, Highway Carriers Association, and by a private citizen

Opposition was based on the following

Motor vehicle inspection is not a primary factor in highway accidents and fatalities, the CHP is in fact conducting an inspection program at present; statistics show that some states with an inspection program have a higher accident and fatality rate than some states without inspection, motor vehicle inspection would inflict an inconvenience upon the California motorist, and finally, a state inspection program would inflict a financial hardship on the motorist.

Support for Mr Donovan's proposed measure was given by representatives of the Automotive Wholesalers' Association, Safety Systems Corporation; California Automotive Service Association, with the arguments that there is no clear basis upon which to compare figures published by various national organizations as to the success and effectiveness of other state inspection programs, for statistics are as flexible as the conclusions they seek to establish The point was emphasized that no highway safety program can be embarked upon with any hope of success without the consideration of the automobile as a basic factor, as well as the driver and the highway

Recent new studies, it was stressed, indicate that motor vehicle inspection plays a far more important part in highway safety than has been previously conceded, and that such a safety inspection program provides not only a social and lifesaving feature, but also is an important economic saving to the motorist, in that it discovers potential mechanical ailments and recommends their repair before accidents resulting from brake failure, tire blowout, or related mishaps, can occur Testimony brought out that mechanical condition of thousands of California automobiles on the highways is deplorable, and recent conclusions do show inspection under state auspices to be an effective deterrent to highway accidents and deaths

A significant position was expressed by the representative of the California Trucking Association, and the representative of Western Greyhound Division It stated that inasmuch as the legislation proposed by Mr. Donovan did not contain any attempt to include further regulation over the existing stringent safety and maintenance requirements already in effect on commercial carriers, they no longer would oppose it, as they have in the past.

In summation of both testimony and discussion, it was resolved that due to the significance and scope of motor vehicle inspection, additional study should resolve the administrative cost factor and implementation of a state program prior to any final recommendation by the committee.

BRAKE AND HEADLIGHT INSPECTION CERTIFICATES

(AB's 2837, 2840—Gaffney)

The safety inspections called for in both of these bills are included in the scope of Assembly Preprint Bill 1 (Donovan), and it was decided that these provisions should be included in the committee study of that bill when presented during the 1965 General Session of the Legislature.

THEFT AND CONVERSION OF RENTAL EQUIPMENT AND VEHICLES

Testimony presented to the committee by representatives of the rental industry explained in detail the difficulties owners of rental vehicles and equipment have experienced in recovering stolen vehicles and equipment under existing law

California Highway Patrol testified that there is difficulty in getting district attorneys to issue complaints and recommended that Section 10855 of the Vehicle Code should be reworded to strengthen it and include a requirement that district attorneys issue complaints to law enforcement agencies.

The American Rental Association made copies of statutes from other states covering stolen property and asked the committee to revamp California statutes more in line with those of states having tighter and more effective recovery provisions

Legislation should define

1 What constitutes intent of embezzlement or theft

2. Should provide means of legal notice to recalcitrant customer that he is in violation of criminal law if he fails to return rented property within some statutory period (10 days in most states).

3 Should require district attorneys to issue complaints to law enforcement agencies.

A Legislative Counsel's opinion, requested by the committee, stated that the above suggested legislation could be drawn to broaden the scope of the present law.

The committee recommends suitable corrective and/or enabling legislation be prepared for introduction during the 1965 General Session

ABANDONED VEHICLES

(HR 172—Gonsalves)

At issue generally was the lengthy delay in obtaining title through liens on low value cars

Testimony revealed that low-value vehicles towed to garages occupy valuable space for extended periods while "red tape" is unraveled in the determination of legal ownership of such vehicles which have been abandoned

Testimony on behalf of garage owners indicated a desire on their part to cut the present mandatory 15-day hold period and to speed up appraisals so that disposition of these vehicles can be expedited

This viewpoint was expressed by three witnesses

Spokesmen for the automobile clubs concurred

A spokesman for the auto dismantlers declared that the present practice is for garages to hold a number of abandoned vehicles and then to notify the dismantler that he has purchased them He disclosed that this makes it impossible to comply with the DMV 24-hour reporting provision, as it relates to abandoned vehicles and makes it impossible to obtain waivers on fees and penalties charged against the titles to such vehicles

A spokesman for the California Highway Patrol suggested that the last owner should be held responsible for abandonment He also urged "streamlining the paperwork" involved in clearing vehicles destined to be scrapped

The problem of the vehicle designated as junk that is then sold for reconditioning and possible future use could be solved, according to a suggestion by Assemblyman Donovan. He suggested the simple expedient of using a snap form, a copy of which would go to DMV in Sacramento to be attached to the vehicle's record there In the event that this particular vehicle's title is up for a transfer at a future date, it will be automatically flagged as having been previously certified as junk.

It was generally conceded that present methods are cumbersome.

It was also agreed that anything which will contribute to removal of jalopies from the streets and highways will constitute a major contribution to public safety

It was the consensus that means should be sought to provide for faster processing of the titles of junked or abandoned vehicles.

It was stressed that the legal owner or owner's equity must be protected in any newly devised method of speeding up the processing of junked or abandoned vehicles so that a stolen car can be traced to its rightful owner and there will be no doubt that it is truly abandoned.

VEHICLE TOWING

(HR 71—Meyers)

It was the consensus that Vehicle Code Section 22952 which currently applies only to cities of over 700,000 population, should be amended so as to apply statewide because of its effectiveness in curbing so-called "quickie" towing practices in San Francisco

UNLAWFULLY PASSING SCHOOL BUSES

(AB 1032—Winton)

Mr Winton, in his presentation of AB 1032, pointed out that, "Section 22454 of the Vehicle Code provides that it is unlawful for anyone to overtake a schoolbus which is stopped for discharging or receiving schoolchildren and displaying the flashing red light and to pass that bus until the flashing signal has ceased to operate."

He further testified that when a bus driver is out of the bus assisting children and when the bus is passed by a motorist, it is frequently difficult for him to get the license number However, a license number under the present situation is not sufficient to prosecute Reason for this is that a prosecutor's first question is usually, "Can you identify the person who was driving the vehicle?"

It was explained that AB 1032 would put in the provision similar to the parking statutes wherein, if it can be proven that a particular automobile was the one that made the violation, prima facie evidence exists that the registered owner was the one who was driving Thus, the burden of proof would be shifted to the registered owner, who would have to establish that he was elsewhere when the violation took place

It was the consensus that AB 1032 should be resubmitted

PURCHASING PROCEDURES OF STATE AGENCIES

(HR 584—Carrell)

The committee met to consider whether or not there were any discrepancies in the purchasing procedures of the Department of Motor Vehicles relative to the purchasing of certain filing cabinets to be used by the department

A number of witnesses complained that they had submitted bids on the filing cabinets in question and that these bids, initially lower than the successful bidder's bid, were all rejected and a new invitation to bid was let. In the second bid opening, one of the previous bidders whose bid was second lowest was awarded the bid The lowest bidder's bid was rejected by the Purchasing Department of the State of California because the lowest bidder indicated that he was not able to meet the delivery date All other bidders save and except the successful bidder indicated that they would be unable to meet the delivery deadline called for in the specifications The successful bidder indicated that he could meet the delivery deadline

The original delivery deadline on the first bidding was November 15, 1962. The Director of the Department of Motor Vehicles testified that the department was constructing a new Headquarters Building in Sacramento The filing cabinets in question were to be placed in this building and the filing cabinets were to be particularly tailored for this building The Division of Architecture informed the Department of Motor Vehicles that the original completion date of the Headquarters Building was to be December of 1962 Based upon this completion date, the Department of Motor Vehicles set November 15 in the original bid invitation as a delivery date in order to obtain the file cabinets in advance of the 1963 license plate year

Following the original bid opening, the lowest bidder delivered to the Department of Motor Vehicles a sample file cabinet At the behest of his division chiefs, the Director of the Department of Motor Vehicles personally inspected the file cabinets He found them to be incomplete and not of the type of workmanship that the department had requested The Department of Purchasing was satisfied with the cabinets Because of the disagreement between the Department of Motor Vehicles and the Department of Purchasing, the matter was referred to the Board of Control

Based upon an informal opinion of the Attorney General of the State of California, the Board of Control declared that it did not have jurisdiction over the type of dispute involved Ultimately, the General Services Department decided that there was considerable confusion in the required specifications for the original bid and all of the first bids were discarded and a new invitation to bid was let The reason why the bids were relet by the General Services Department was because of confusion between the specifications, the drawing and the sample set forth in the invitation to bid

A second invitation to bid on the file cabinets was made and a new completion date for the Headquarters Building of the Department of Motor Vehicles had been obtained The second bid required completion dates in the specifications of 60, 90 and 120 days A portion of the units were to be completed and delivered within 60 and 90 days, respectively and the entire order was to be delivered within the 120 day period The reason for the delivery deadline was because the Division of Architecture had informed the Department of Motor Vehicles that their new building would be completed in March of 1963 Subsequently, the Division of Architecture informed the Department of Motor Vehicles that their new building would be completed May 15, 1963 Ultimately, the building was not completed nor occupied until June of 1963

At the second bid opening in January, the lowest bidder and all other bidders except the successful bidder took exception to the delivery date. The successful bidder was the second lowest bidder and the successful bidder agreed that he could make delivery within the delivery schedule set forth in the specifications in the invitation to bid The successful bidder posted a performance bond to guarantee the delivery

All units of file cabinets were offered for delivery to the Department of Motor Vehicles on the final date required by the specifications The successful bidder was late in the delivery of the units set forth in the first delivery date only

The performance bond posted by the successful bidder is still open and may be executed upon The Director of the Department of Motor Vehicles indicated that it had not been executed upon because there was no damage to the Department of Motor Vehicles because of the delayed completion of the Headquarters Building

An inspector brought in by the Purchasing Department from a different department of state government submitted a report indicating that the cabinets ultimately delivered by the successful bidder were comparable to other cabinets utilized by the department and of substantially good workmanship quality

In view of the testimony, the committee finds that a series of circumstances contributed to the creation of some confusion in the designing of specifications of the cabinets for the new building and the delayed completion dates of the Headquarters Building of the Department of Motor Vehicles It was obvious that there was unsatisfactory interdepartmental coordination in requisitioning and purchasing procedures

Chairman's comment·

I feel that the Legislature may be interested in taking note of the following excerpt from an informal opinion submitted by Paul M Joseph, Deputy Attorney General, relating to the scope of the authority of the State Board of Control

" I have previously, on a number of occasions, expressed the view, on a purely personal basis, that the State Purchasing Act contains so many ambiguities and contradictions that it should be entirely revised so that a workable and complete competitive bidding procedure for state purchases of supplies and equipment may be set forth "

CHP PRACTICE AMMUNITION PURCHASING

(HR 584—Carrell)

A San Francisco manufacturer testified that he was low bidder on an order for 1,384 M rounds of 38-caliber reloads He said that he had made an initial delivery of 700,000 rounds as scheduled and that these had been rejected He subsequently sold "400 or 500,000" rounds to another manufacturer, located in the San Joaquin Valley, at a loss, he testified

Next low bidder was a Berkeley distributor who had previously ordered 5 million rounds for shipment to Viet Nam from the San Joaquin Valley manufacturer The CHP order was also supplied by the same manufacturer

Testimony by a CHP Administrative Services Officer indicated that inspection of reloads included test firing of random samples and that, because of some bad past experience, reloads are tested very rigorously

It was unclear whether or not some of the originally rejected reloads had been reworked and found their way back to the CHP or whether they had all gone to Viet Nam

CHP spokesmen declared that the department has discontinued the use of reload practice ammunition because of its general quality instability

"And it came to pass in those days,
that there went out a decree
from Caesar Augustus, that all
the world should be taxed."

—Luke 2 :1

PREFACE

All laws need periodic review to determine their adequacies and weaknesses in the light of changing times. This is particularly true of our tax laws which have such a profound effect on our lives. Property taxation is a perennial and universal problem, and many studies, often of a very critical nature, have been made of this revenue source in the past 50 years.

This examination of the property tax is the fifth of a series of reports on the entire tax structure as a part of a major tax study of the Assembly Committee on Revenue and Taxation It should be noted that it does not pretend to be an exhaustive study of all phases of property taxation. Areas of minor importance have been omitted. Even areas of major importance—such as the assessment practices of the State Board of Equalization—have not been studied in the depth that would have been most desirable. Limitations of time and money have been the primary factors in the decisions to concentrate on some areas at the expense of others. To do a complete job of studying the property tax would take several years and an expenditure many times our present budget.

In view of the need to allocate time and resources, emphasis has been placed on a broad review of the tax, on the areas of the most significant impact, on the areas of greatest weakness, and on areas which have not been as thoroughly explored in previous studies.

Our primary emphasis in this report is on the problems of the property tax—what is wrong with it This may give the impression that we have written a complete indictment of the tax, but that is not a proper conclusion. It is not necessary for us to extol the virtues of this tax, we wish to correct its deficiencies

This study is a joint effort of David R. Doerr and Raymond R. Sullivan, members of the staff of the Committee on Revenue and Taxation in consultation of Dr. Harold Somers, the committee's consulting economist.

In addition certain segments of this report have been prepared by specialists from our academic institutions. Dr. Yung-Ping Chen is responsible for the material on the old age exemptions. Dr. Guenter Conradus is responsible for the material on timber taxation The material on property tax burdens was prepared by Dr. Bruce McKim Dr Harold Somers is responsible for the material on business inventories. Mrs. Yvette Gurley has contributed a thorough study of the California bank tax, which is levied in lieu of personal property taxes on banks. And Dr. Levern Graves has contributed the section comparing property tax burdens with state tax burdens.

The recommendations in this report are those of the researchers and should not be construed as representing the views or decisions of the committee. The committee recommendations will be made in due course.

SECTION ONE

INTRODUCTION

Storm clouds have been gathering over the property tax for a number of years. As the tax burden keeps rising, and as there is little or no effort to reform and modernize this tax, the trickle of criticism has grown to a torrent. This torrent could well sweep aside the property tax altogether. Yet the property tax is the mainstay of local government and the most prolific revenue producer in the state-local tax structure.

In this report, the property tax is examined from various standpoints· from the standpoint of who pays and how much; from the standpoint of who doesn't pay and why not; from the standpoint of administration and maladministration, from the standpoint of special problems deserving immediate attention; and from the standpoint of the burden of the property tax on our citizens

We hope that the report will be read in this light We are discussing the weaknesses of the property tax, not the strengths; we are seeking ways to improve, not destroy; we are seeking ways to reduce burdens and make the tax more equitable—not ways to increase revenue.

BACKGROUND

The ad valorem property tax is one of the oldest forms of taxation known to mankind In the Old Testament. it was decreed that the Pharaoh should have the fifth part. That form of taxation—the fifth part of production of the land—was exacted from the landowner for the privilege of holding and enjoying land.

With the development of more complex cultures, exemptions began to creep into the tax structure Roman law granted a form of veteran's exemption from property tax to retired members of the Roman legion

In Great Britain, the early taxes imposed were principally taxes in kind—usually consisting of a certain portion of the produce of the land. After the Norman conquest of England, William the Conqueror revived this form of taxation and ordered a general survey of the lands This survey was both a census and an assessment roll The results were published in 1086 as the Domesday Book.

The land tax or "danegeld" was continued under the Norman Kings as a regular impost at various rates which generally averaged two shillings per 100 acres [1] Administration and collection of the tax was the responsibility of the county sheriff The legendary battles of Robin Hood with the Sheriff of Nottingham were not over the administration of justice but over the collection of taxes

Personal property taxes were first introduced on the occasion of the Saladin tithe in 1188 King Henry ordained that all subjects were to give one-tenth of their rents and movables [2] Assessment practices came

[1] Stephen Dowell, *A History of Taxation and Taxes in England*, Longmans, Green, and Company, London, 1888, p 35
[2] *Ibid*, p 61.

to be fairly standardized. Movables were taxed at "full value." Exemptions were granted in counties to armour, riding horses, jewels, and clothes of knights and gentlemen and their vessels of gold, silver, and brass. In cities, a suit of clothes for every man and another for his wife, a bed for both of them, a ring and a buckle of silver or gold, a girdle of silk in ordinary use by them and a cup of silver or mages from which they drank were exempt. Everywhere, the goods of any person not amounting to five shillings in value were also exempt. In later years, exemptions were granted to the universities of Oxford and Cambridge and to the lands of schools and hospitals.

In practice, assessments dropped below full cash value with Sir Walter Raleigh stating in Commons that the Queen's "backs" were "not the hundred part of the wealth of some of the persons assessed "[3] governments.

In colonial America, the property tax was not widely used. Governments were supported rather by fees and fines Subsequently, in New England, where the distribution of property was fairly equal, the first taxes were levied on property In other colonies, due to economic conditions, import and excise taxes were imposed [4] However, in the 19th century, the property tax came to be universally applied throughout the country and was the main source of revenue for state and local government.

Upon entry into the union in 1850, California immediately adopted a system of property taxation to finance government services. The first Legislature adopted a statewide property tax of $0 50 per $100 of assessed value. The Revenue Act of 1850 provided for the assessment of all taxable property in each county by the county assessor between the first Monday in March and the first Monday in August.

For 60 years after statehood, the property tax continued to be the backbone of the state and local revenue systems. When the "separation of sources" plan was adopted in 1910, the state relinquished the general property tax to local government and the tax began to decline as a percentage of total state and local revenue. This tax still represents approximately one-half of the total revenue collected by state and local governments.

SECTION TWO

WHO PAYS

I. TAXABLE PROPERTY

Section I of Article XIII of California's Constitution provides that ". . . all property in the State except as otherwise in this Constitution provided, not exempt under the laws of the United States, shall be taxed in proportion to its value . . ." Property is generally classified as real or personal property and also as tangible or intangible property.

The Legislature has been given the power to classify or exempt personal property and intangibles by Section 14 of Article XIII However, a two-thirds vote of both houses of the Legislature is required for such action. Exemptions cannot be granted to real property without a statewide vote of the electorate

Real property is land together with any permanently attached improvements—except telephone and telegraph lines.[1] Personal property is all other property—basically property which is movable.

Eighty-four percent of all taxable property in California is real property.

TABLE I

Gross Assessed Value of Property Subject to Tax in California: 1964

(in thousands of dollars)

	State assessed	*Locally assessed*	*Total*	*Percentage*
Land	$290,187	$11,428,392	$11,718,579	30.6
Improvements	2,501,554	18,091,555	20,593,109	53 7
Personal property	1,650,388	4,375,947	6,026,335	15.7

SOURCE: Board of Equalization, *Annual Report*, 1963–64

In 1964, Los Angeles County with a net assessed value of $13,499,-903,385 had approximately 37 percent of the total assessed value of property in the state.

II. YIELD OF THE PROPERTY TAX

Local government received the astounding total of $2,805,152,000 in revenue from property taxation in 1963–64 This amount is more than that received by the state from all state taxes combined. Of this total, 50.3 percent, more than half was spent in the support of local public schools. County levies of $868,723,000 amounted to 30.9 percent of the total with levies of cities (13 0 percent) and special districts (5 6 percent) comprising the balance.

Los Angeles County understandably leads the state in property tax collections, with $1,065,933,000 levied by governmental entities in 1963–64. However, Alameda County had the highest average[2] combined tax

[1] *Revenue and Taxation Code*, Section 105
[2] For definition of average see footnote to Table III

rate for all governmental units—$9.73 per $100 of assessed value. Enjoying the distinction of having the lowest average tax rate in the state for 1963–64 was Plumas County at $4 36 per $100 of assessed value.

Over the past 25 years, the assessed valuation of the state has increased fivefold—from approximately $7 billion in 1939 to ap-

[a] Excludes special assessments levied on limited categories of property to finance activities from which owners of such properties derive special benefits. Detail may not add to totals because of rounding.

[b] Total levies divided by net total assessed values in column 6, Table 6A and/or column 4, Table 7, of the Board of Equalization's annual report for the 1962–63 fiscal year.

[c] Uniform rate throughout the State.

SOURCE: Board of Equalization, *Annual Report*, 1963–64.

proximately $37 billion in 1964. However, the revenue collected has increased almost tenfold or twice the rate of increase in assessed value. Approximately $284 million was collected in 1939–40 compared to $2.8 billion in 1963–64. During this 25-year period, the average statewide rate jumped from $4 13 per $100 of assessed value to $8 00. It must be kept in mind, however, that in the 1930's, assessed values were approximately 50 percent of market value while the present ratio is below 25 percent.

SOURCE Board of Equalization *Annual Reports*, 1954–55, 1961–62, 1962–63, and California State Controller *Annual Report of Assessed Valuation and Tax Rates*

The actual percentage of personal income of Californians which is used to pay property taxes dropped from 5 5 percent in 1939 to 2.2 percent in 1944 and rose to 5.3 percent in 1963 Since the end of World War II, the property owner has experienced a constant increase in the percent of personal income going for property taxes. As Table IV illustrates, in almost every year since World War II except for two Korean War years, the taxpayer has seen an increase in the property tax as a percentage of his personal income

The property tax paid by Californians, while increasing dramatically since World War II, is comparable to that paid in other urban-industrial states California ranked 11th among all states with respect to the percentage of personal income going for property taxes in 1962. Table V contains comparisons among all states for 1962.

III. SPECIAL TYPES OF TAXABLE PROPERTY

A. SOLVENT CREDITS

Webster calls intangibles "those assets which are not corporeal" such as good will, a patent, the trust which goes with a brand name, stocks and bonds, etc These examples suggest the difficulty of assessing an intangible for tax purposes They are obviously of great value to an individual or a business, but it is difficult to assign them a dollar value when taxation is the purpose

The only intangible which we attempt to value for taxation in California is the solvent credit. These are amounts owing to a party from the sale of a good or service which are not secured by a mortgage, trust deed, contract or other obligation where land is pledged as a security. The value of debts of like character owed to Californians are deductible from the credits. All notes, debentures, shares of capital stock, bonds, deeds of trust, and mortgages are exempt from taxation. Solvent credits are assessed at full cash value and the statutory rate of one mill per dollar is applied as tax. While this amounts to only 10 cents per $100 of value, real and personal property are assessed at 25 percent of value so the comparable tax on solvent credits is 40 cents per $100 of assessed value. In 1963 this tax produced $5 million for local government in California (compared with a total collection from property taxes of $2.6 billion). While the assessed value of tangible personalty

increased from $10 billion to $36.7 billion between 1947 and 1964, the value of solvent credits increased to only $5.1 billion from $1.8 billion. Where solvent credits were 18 percent of tangible values in 1947 they are now only 14 percent of that value.

TABLE VII

Assessed Value of Solvent Credits in California

1947–1963

	Solvent credits assessed value	*Net assessed value all tangible property*
1947	$1,864,845,384	$10,993,637,255
1948	2,090,863,120	12,193,020,000
1949	2,134,361,024	13,227,731,000
1950	2,238,452,260	13,618,915,000
1951	2,761,782,101	14,736,439,000
1952	3,094,542,999	16,107,000,000
1953	3,407,792,340	17,170,270,000
1954	3,579,795,750	18,228,961,000
1955	3,903,903,661	19,993,440,000

1963	5,138,400,000	35,066,088,000
1964	5,190,439,000	36,743,364,000

SOURCE: Board of Equalization *Annual Reports*, 1947–48—1963–64.

Why are solvent credits taxed in California while all other forms of intangibles are exempt? The exemption of most intangibles is discriminatory with respect to tangible property, it encourages the transfer of capital into intangibles rather than into real estate and tangible goods.

The taxation of intangibles has always been a difficult problem. It was summarized by the California Tax Commission in 1929 in these words:

> "The history of taxation in this country since the Civil War is largely the history of the gradual disintegration of the general property tax. With the growth of the corporate form of organization and the development of the technique of subdividing the incidents of ownership in property with the aid of various types of paper instruments it became increasingly difficult to provide satisfactory methods of offsetting liabilities against assets and the general property tax gradually became a very unjust tax because of the large amount of double taxation necessarily involved in the efforts to include intangible property on the assessment rolls. The various evidences of ownership were easily concealed, and it proved entirely feasible for the taxpayer to escape most of the evils of double taxation by the simple process of the refusal to disclose his holdings of intangibles. In a majority of the states of the Union, the hopelessness of attempting to administer successfully the general property tax under these conditions was recognized to a greater

or less extent, and modifications were introduced in the tax systems of the states in the form of special low-rate taxes on intangibles or in the form of taxes on income In California evidences of this movement are found in such provisions as the following:

"(1) The constitutional provision adopted in 1910 exempting real estate mortgages from taxation;

"(2) The exemption of shares of stock in corporations to the extent that the property of the corporation itself is taxed in this state; and

"(3) The solvent-credits amendment to the constitution, passed in 1924, together with the legislation based upon it" [3]

In 1929, the Legislature enacted the Bank and Corporation Franchise Tax Act and a solvent credits law with the hope that a low rate would lead people to disclose their intangibles and pay the tax The rate was fixed at 1 mill to the dollar for solvent credits and 2 mills on stocks and bonds Subsequent legislation exempted stocks and bonds.

In 1933, the California Tax Research Bureau began to evaluate the results of the 1929 law. Their studies indicated that almost all of the intangibles were escaping taxation. With respect to solvent credits, they observed:

"The taxation of bank accounts and such solvent credits as book accounts, conditional contracts of sale and unsecured notes, is also productive only in small measure, the current annual tax product being only about $400,000 for the entire State *The taxation of solvent credits as a class presents no very different problem from that of taxation of intangibles generally, except the distinction between savings deposits and deposits in commercial banks*" (Emphasis in the report.)[4]

Bank deposits are not taxable as solvent credits since they do not arise from the sale of goods and services.

In addition to the difficulty of locating and assessing intangible personal property there is the problem of double taxation since property represented by mortgages and stocks is already taxed. Other types of intangibles may be reached more equitably by some other form of levy —the income tax for instance

Since most intangibles are not now taxed in California, this field of property taxation has received little attention in recent years. There are only nine states (not including Alaska where there is local option) in which all intangible property is legally part of the base for local general property taxation In Illinois and New Mexico some of the intangibles are subject to state assessing while others are left to the local assessors. There are 15 states not taxing intangibles through property taxation. Table IX shows the assessable values of intangibles in states subjecting them to general property taxation (except in Alaska, New Mexico, and Tennessee where information was not available) and also lists the states in which no property tax applies to intangibles

The other 25 states each have some complicated formula for assessing a tax on intangibles or certain classes of them

While it is a very persuasive argument that "solvent credits" should be tax exempt as it is illogical to exempt all other intangibles and tax this form, we must weigh this against a $5 million loss of revenue to local government and consequent shift of the tax base to other forms of property.

B. POSSESSORY INTERESTS

1. *Definition and Nature of Possessory Interests*

A possessory interest constitutes a private right to the possession and use of publicly owned property. In California private leases of government-held real property and improvements have been held to be assessable and taxable to the lessee. [*San Pedro R.R. Co.* v. *Los Angeles* (1914), 167 Cal. 425; *Kaiser Company, Inc.* v. *Reid* (1947), 30 Cal. 2d 610.] However, under the provisions of the Harbors and Navigation Code, possessory interests in property owned by the San Francisco Port Authority are exempt from taxation.

Section 107 of the *Revenue and Taxation Code* defines possessory interests to mean:

a. Possession of, claim to, or right to the possession of land or improvements, except when coupled with ownership of the land or improvements in the same person.

b. Taxable improvements on tax-exempt lands.

However, there is presently no statutory authorization for taxation of possessory interests in personal property. [*General Dynamics Corporation* v. *County of Los Angeles* (1958), 51 Cal 2d 59.]

Possessory interests in California are widespread. They range from harbor leases in Los Angeles to Indian land in Palm Springs to national park and forest land in various parts of the state. Many of the most valuable possessory interests in California can be characterized as unusual property rights in real estate. A concessionnaire running the only restaurant in a national or state park can, because of the location, increase earnings due to his monopoly operation. This unique situation makes the possessory interest more valuable since competitors are not nearby.

2. *Value in California*

Possessory interests in real estate in California amounted to more than $165 million in assessed value in 1963 Of this total, $77 million was in Los Angeles County. Using the average $8 00 tax rate, possessory interests contribute approximately $13 million in tax revenue to support local government.

A breakdown of possessory interests assessment by county in 1963 is shown in Table X.

3. *Method of Valuation*

The evaluation of possessory interests in government owned real property has been a continuing source of controversy since the California Supreme Court, in *DeLuz Homes, Inc.* v *San Diego County* (1955), 45 Cal. 2d 546, ruled that there can be no deductions for rental or amortization in arriving at the taxable value of the leasehold

This case overturned the earlier case of *Blinn Lumber Company* v. *County of Los Angeles* (1932), 216 Cal 474, which established the assessed value of a possessory interest as the bonus value of the lease The Blinn case held that in valuation of possessory interest in government-owned land, deductions should be made from gross income for rentals to become due under the lease and for amortization of the costs of improvements by the lessee that would revert to the lessor. In effect, the court in the Blinn case declared it to be unfair and improper to assess a leasehold on any value other than that which could be directly realized on an open market sale.

For over 25 years, possessory interests in California were assessed on a "bonus value" basis During that time, many long term leases were negotiated on publicly owned lands.

In the DeLuz case, the court overturned the Blinn case and revolutionized the method of valuing possessory interests.

The court said that in valuing a leasehold interest in exempt lands and improvements by the capitalization of income method it is improper, in computing the anticipated net income to be capitalized, to deduct from anticipated gross income the lessee's charges for rent, amortization of his investment, or payment of principal or interest on his mortgage debt. According to the manual published by the State Board of Equalization, an appraiser can determine the value of possessory interest by three methods:

1. By determining the present worth of the benefits of use of the property for the probable period of possession without deducting the rentals or other so-called "burdens"
2. By determining the present worth of the reversionary value to the public agency and subtracting that from the present full fee value of the property
3. By using sales prices of the lessee's equities in comparable possessory interests plus the present worth of the future rents

Recognizing that many owners of long-term leases would be adversely affected by the decision, the Legislature, by statute in 1957, required that possessory interests created and still operating under an unrenewed lease contracted before December 25, 1955, must continue to be assessed under the old Blinn rule.[6] In these instances, the value of the taxable interest is actually the bonus value of the lease.

In almost every legislative session since 1955, an attempt has been made to restore the Blinn rule to all possessory interests. After a favorable recommendation of the 1961–63 Interim Committee on Revenue and Taxation, AB 460 was introduced in the 1963 Legislature for that purpose. This measure passed the Assembly but failed in the Senate.

Three factors enter into the consideration of a change of method of evaluating possessory interests: equity, economic effects and constitutionality.

EQUITY

To some, it is inequitable that possessory interests are taxed at all because the fee is in public ownership even though the right to present use and possession is privately held. On this point, the California Supreme Court said in *The Texas Company* v. *County of Los Angeles*, (1959) 52 CA. 2d 55:

> "As we pointed out in the DeLuz Case, the value of a long-term possessory interest may approach the value of the fee, and even in the case of land that does not depreciate in value, the present value of a reversion that cannot be enjoyed for many years may be small compared to the present value of the use in the interim. Thus, the value of the right to use the land in perpetuity may be little greater than the value of the right to use it for the duration of a long term lease, and in such a case a purchaser of the fee of unleased land would pay or agree to pay little more than a lessee would for a long term lease. We would trifle with reality to hold that nevertheless the lessee received nothing of value whereas the purchaser received full value of the fee"

[6] *Revenue and Taxation Code*, Section 107.1.

The real dispute centers on the method of valuation, however, rather than on the question of taxability. Persons supporting a return to the Blinn rule claim that the DeLuz rule puts a tax on a liability (i.e., future rentals) and that this is highly inequitable It is argued that the value of a leasehold is worth no more than the capitalized difference, if any, between the actual rent and a fair rental value. They contend that the bonus value of the lease—the amount for which the lease could be sold—is the equitable method of taxing a possessory interest. However, if carefully evaluated, it can be seen that the DeLuz method of valuation is not inequitable compared to the treatment of like fee-owned property. The rental value of the possessory interest is an indicator of value—just as the sale price is an indicator of value of fee-owned property. If the possessory interest is very valuable, the payments for the lease will be high. Conversely, if a possessory interest is virtually worthless, it can be leased for very little.

If a person leasing a possessory interest pays a lump sum for the privilege at the outset and makes no further payments, then the market price for which he could subsequently sell his interest would reflect the value of the possessory interest If future rents are unpaid, the sales price serves only as an indication of the equity value. This can be compared to fee-owned property where the sale of the equity takes place but the total market value is the sum of the equity and the mortgage which is assumed In other words, if the concept of the old Blinn rule were to be extended to residential property owned in fee, the homeowner would pay property taxes only on his equity in the property rather than on the total value of the property, and the owner of the mortgage, if not a tax exempt entity, would pay tax on the mortgage.

This is not to say that a tax system based on the Blinn rule per se would be inequitable. If all property were to be taxed under this concept the tax might be as sensible or even better than the property tax as it exists in the United States. A net worth tax, as used in some European countries, is a tax on equity—the net assets of a person minus his liabilities. However, much more study of this system of taxation is needed before any moves toward the net worth tax are contemplated in California

ECONOMIC EFFECTS

Valuation of possessory interest under the DeLuz rather than Blinn rule will primarily affect the rentals the governmental lessors are able to secure [6] Instead of being able to charge the lessee high rentals to reflect the tax advantage, governmental units will not get more in net rentals than a private owner of a similar piece of property. Prospective tenants would be unwilling to pay a premium for being on public property Competition between government and private lessors will more nearly be equalized.

The extent of this shifting will result in the distribution of the "tax money" on a broader base—to schools, cities, counties, and special districts—rather than just to the governmental unit leasing the property.

[6] In some instances, the lessor is not a governmental body As an example, in Palm Springs, tenants of tax-exempt land held by the United States government for Indians had possessory interest assessments totaling $3,492,000 placed on their interests

Many of the possessory interests in California are in federal land. The DeLuz rule results in transfering the tax in part at least to the federal government in these instances.

Prior to the DeLuz rule, the premium rentals obtained by airports and harbors were often used to improve physical facilities to the indirect benefit of the tenants. If improvements cannot be financed out of normal operating revenues without the "tax premium," the tax rate of the district must be raised or fees charged to the users of the facilities will have to be increased, or some other type of governmental subsidy will have to be obtained For example, at the public airport, the costs could be charged against the airlines using the field. If the subsidy route were to be used, it would be a visible subsidy rather than a subsidy hidden through reduced assessments, and the public would be in a better position to evaluate the benefits received for the money expended. At this point, the question is always raised as to the equity in subsidizing one form of the transportation industry—airlines and shipping—directly or indirectly through tax preferences while not providing the same help for railroads.

CONSTITUTIONAL QUESTION

There is some question whether the Legislature can reverse the DeLuz rule by other than a constitutional amendment, although the Legislative Counsel has concluded that a basis exists for a statutory change[7] This opinion is based upon *Forster Shipbuilding Company* v. *County of Los Angeles*, (1960), 54 Cal. 2nd, 450, where the court said:

> "This method of determining value was held improper in the DeLuz case, but plaintiffs maintain that the case was based upon a construction of "full cash value" as used in the applicable statutes rather than in the Constitution. We do not, however, reach the question of whether DeLuz declared a statutory or constitutional rule."

4. Tax-exempt Possessory Interests

In 1953, Los Angles County began assessing and taxing the possessory interest in government-owned personal property in the possession of a private party, usually a defense contractor. The United States Supreme Court in 1958 upheld the constitutionality of this form of taxation.[8]

Subsequently, the California Supreme Court struck down this tax in California. In *General Dynamics Corporation* v. *County of Los Angeles* (1958), 51, Cal. 2nd 59, the court ruled that the statutes of California did not authorize such a tax. As a result, Los Angeles County had to refund over $60 million to the contractors Legislation, which was destined to become highly controversial, was introduced at the 1959 legislative session to allow this form of taxation AB 487 passed the Assembly but was killed in the Senate. This defeat was one of the reasons for the ill-fated attempt to reapportion the state Senate in 1960.

While it would appear illogical to tax possessory interests in land and improvements but not in personalty, there has been some fear that if California were to tax possessory interests in personalty we could

[7] Legislative Counsel *Opinion #18121*, dated May 15, 1963
[8] *City of Detroit* v. *Murray Corporation* (1958), 355 US 489.

not compete as effectively for the defense contract dollar. Because of the great volume of the defense contract business done in California, the question is of major concern. Recent figures show that approximately 23 percent of all prime contracts awarded by the Department of Defense and 61 percent percent of the prime contracts awarded by NASA went to California firms.[9] As a result, according to reports of the California Department of Industrial Relations, 35.3 percent of California's manufacturing workers are employed in the aircraft, missiles, and electronics fields.

Anticipated reductions in federal spending on defense contracts make the problem even more critical and interstate competition even more intense. California's share of military prime contracts for the first three months of 1964 amounted to $1,113,871,000 or 18.7 percent of the national total, compared with $1,508,376,000 or 23.4 percent of the national total for the 1963 period.

Over a longer term the decline was softer. California's share of prime contracts for the nine months through March 31, 1964, totaled $3,695,312,000 or 21 4 percent of the national total, compared with $4,149,594,000 or 23 2 percent a year earlier. This was offset, however, by a doubling in California's share of contracts of the National Aeronautics and Space Administration for the latter half of 1963, the latest statistical period available. The state's share jumped from $371,308,000 in the first half of 1963 to $717,250,000 in the second half—50% of the national total.

The net result of military and NASA contracts combined so far has been a slight sag in statewide manufacturing employment—in an ever-growing labor market—but not an acute decrease. For June, 1964, combining the four federal categories principally involved in aerospace and missiles—ordnance, electrical equipment, aircraft, and instruments—in the Los Angeles-Long Beach metropolitan area that is the industry's heart, employment slipped from 356,800 of a year before to 350,200, a drop of 1.8 percent.[10]

In 1959, New York Governor Nelson A. Rockefeller vetoed three measures which would have permitted the taxation of possessory interests in government-owned personal property in New York. In his veto message, Rockefeller said:

> "These bills by imposing an unexpected burden, may cause these firms to leave the state Many of the affected firms are large, multi-plant companies which keenly compare the cost of the operations of their several plants located in different states. They are in a position to shift production to plants in other parts of the country.
>
> "Even more drastic could be the effect of these bills on the awarding of defense contracts by the federal government. The burden which would be imposed by these bills could be a sufficient make-weight in federal decisions to cause contracts and new installations to be placed elsewhere." [11]

[9] Statement by Hon Robert W Crown, Chairman of the California Assembly Committee on Ways and Means, before the United States Senate Subcommittee on Employment and Manpower. November 7, 1963.
[10] New York Times News Service reported in the *Sacramento Bee*, August 16, 1964
[11] Quoted in Karl E Wolf, "Taxation of Contractors' Possession and Use of Government Property," *Proceedings of the National Tax Association*, 1961, Harrisburg, Pennsylvania, pp. 507-509

Philip Watson, Los Angeles County Assessor, has determined that the enactment of a possessory interest tax would add 3 1 cents per labor hour to contract costs [12]

It would be folly to argue, however, that the possessory interest in government-owned personal property is of no value to the lessee In many cases, the value to the lessee is as great as if the property were owned outright In a limited way, the tax exemption frees capital for other types of activities To the extent that these businesses compete with businesses which do not enjoy this kind of tax exemption, there is an equity.

If the Legislature were to allow local governments to tax possessory interests in government-owned personal property, the tax base in a number of areas would be broadened substantially Assessor Watson, an advocate of this plan, estimates that an additional $550,000,000 in assessed value could be placed on the tax rolls in his county.[13] Over $30,000,000 in additional tax revenue from this source would permit a property tax reduction for all other property owners The tax impact would also be great in other aerospace oriented centers such as San Diego, Sacramento, Santa Clara and Santa Barbara Counties. Revenue estimates must be hedged by the assumption that the tax impact will not cause relocation of contractors or shifting of contracts If this were to happen, potential revenues could be substantially reduced. If economic activity is not reduced, a possessory interest tax simply means that part of California's tax burden can be shifted onto the federal government or onto the defense contractor.

It has been reported that some industry opposition to a possessory interest tax has been diminished as a result of a decision by the Armed Services Board of Contract Appeals in February 1964.[14] The board upheld the government position, ruling, in effect, that personal property taxes on property owned in fee by the contractor and used for commercial businesses were not allowable as an allocable cost against defense contracts since possessory interests in government-owned personal property are not taxable under California law

The desirability of tax-exempt status for possessory interests in government-owned personal property essentially hinges on two questions·

1. Would a possessory interest tax, raising costs approximately 3 1 cents per contract hour, have any measurable impact in causing defense contracts to be shifted to states without such a tax?

If the answer to this question is no, then the possessory interest tax would be highly desirable as it would enable Californians to ·shift some of their property tax burden to the federal government. However, a categorical yes or no cannot be given to this question.

Most defense contracts are not awarded as a result of competitive bidding. The government recognizes other factors, such as plant facilities and skills of the labor force in awarding contracts.

However, the percentage of prime contracts awarded by the Department of Defense through open competition was up from 32 9 percent

[12] Letter from Philip Watson to Hon Edmund G Brown, Governor of California, April 3, 1964
[13] Letter from Philip Watson to Hon Nicholas C Petris, dated Ferbuary 11, 1964
[14] Armed Services Board of Contract Appeals, Appeals No. 6196, 6197, 6386 of Lockheed Aircraft Corporation, Decision, February 3, 1964.

in fiscal 1961 to 38 6 percent in fiscal 1964.[15] Under competitive bidding, a contractor obviously must add the cost of a possessory interest tax to his bid. This is an increase in the cost of doing business. Whether this marginal cost will be enough to influence the outcome of the bid is speculative. Procurement under noncompetitive bidding is at the whim of the buyer. Higher costs due to a possessory interest tax would not necessarily preclude a contractor from obtaining a contract even though these costs may be raised above those of a competitor. As an alternative, the defense contractor may choose to absorb this added cost rather than including it in his bid To this extent the possessory interest tax would be absorbed by the stockholders of the company.

2. Should the state, in effect, subsidize certain industries by giving tax relief?

If one accepts the universality of the property tax, then an exemption which primarily benefits one industry can be called an indirect subsidy The desirability of such an approach will depend on one's point of view. However, a decision to grant tax relief to one industry can only be justified under exceptional circumstances, most would agree. Other California industries in addition to the aerospace industry, are in competition with firms in states with no personal property taxes. The taxation of personal property, particularly business inventories, may be inequitable and economically undesirable per se. If this is the case, there is no merit in singling out possessory interests in personalty for taxation. This question will be examined in some detail in a subsequent section of this report.[16]

It should also be kept in mind that if a possessory interest tax were to be enacted, the benefits would accrue only to a very limited number of taxing jurisdictions. Not more than five or six counties and 10 or 12 school districts would receive any substantial benefit. This new revenue could be spread statewide by the elimination of the present exemption from the sales tax of sales to the United States Government Such a tax would hit approximately the same property that a possessory interest tax would hit.

C. TAXABLE PUBLIC PROPERTY

Not all publicly owned property is exempt from taxation By virtue of a constitutional amendment adopted in 1914, the property of a city, county, or municipal corporation located outside its own borders is taxable if it were taxable to its prior owner. However, only the land is taxed, none of the improvements constructed by the government owners are assessed or taxed

This clause was added to the Constitution to protect counties from one another. The mountain counties, already burdened by expanses of undeveloped acreage and much federally owned land, saw still more property taken from their rolls when it was purchased as watershed by the urban counties. In turn the urban counties were protected by sections of this amendment which limited the taxable valuation to the condition in which the land was when it was purchased. Publicly owned summer camps, dams, and bridges, for example, are assessed

[15] George C Wilson, "Cost Cutting Set as Major Industry Factor," *Aviation Week and Space Technology*, July 13, 1964, p 18.
[16] See Section Five, Part One, p 146.

as land only and in one case a modern jet airport runway and terminal building are assessed as unimproved land In fact, the airport is actually assessed as underwater land, since it has been constructed on land filled since the purchase. Without the provision for taxation of this publicly owned land the small tax base of many counties would be even further diminished by the holdings of other government units. One county could actually buy another into bankruptcy if it weren't for the clause allowing taxation of the land if it were subject to taxation at acquisition

This property is assessed by the local county assessor, but the figure is "subject to review, equalization and adjustment"[17] by the State Board of Equalization. We have found it impossible to get an accurate value of the total assessment placed on taxable public property in this state.

KNOWN GRAND TOTAL: $125,480,135

SOURCE: Information supplied the Assembly Committee on Revenue and Taxation by the county assessors of California

As shown in Table XI, eighteen key county assessors reported that they have no idea how much public property in their county is taxable. Forty other assessors reported a total assessed value of $125,000,000 for public property in 1963. The total could easily be double this figure

The major point of dispute among the counties in the taxation of publicly owned land is the assessment of water rights. This is not to

[17] *Constitution of California*, Article XIII, Section 1.

be confused with watershed which has been subject to taxation since 1914.

Watershed is the land itself, the hillside from which the runoff from melting snow is captured and diverted to storage reservoirs. Water rights are the privileges which accompany ownership of land through which a stream runs. Large cities and municipal utility districts have purchased mountain land traversed by streams to serve as water supply sources for people living hundreds of miles away. The "counties of origin" point out that these rights are taxable to the owning jurisdiction under Section 1 of Article XIII which defines property to include moneys, credits, bonds, stocks, dues, franchises, *and all other matters and things*, real, personal, and mixed, capable of private ownership.[18]

Since 1934, the courts have held that water rights accompany the public ownership of land and that these rights are taxable to their government owner if the land were taxable when the government acquired it [*City and and County of San Francisco* v. *County of Alameda* (1934), 5 Cal 2d 243.]

This tax status is generally accepted, but the standards for assessing have never been agreed upon Even the court is undecided.

> "Placing a value on the usufructuary right to divert water separate and apart from the structures which are necessary to divert it, presents a knotty problem which does not admit to an entirely satisfactory solution.[19]

The dams, sluices, and other structures constructed by the government owners are free of taxation, but the "right to the water" remains assessable and the subject of much controversy.

The jet airport mentioned earlier is the San Francisco International Airport, located in San Mateo County The entire complex has been developed by bond issues voted by the people of San Francisco and financed by their taxes with supplements from airport revenues. The airport, the airlines based there, and the services attendant to this facility create the largest single employer for San Mateo County By law, the San Mateo County Assessor must assess the airport property in the condition in which the land was when acquired and he may not tax improvements constructed by San Francisco The land on which the main terminal is situated as well as runways themselves were all under water when San Francisco purchased the property, and they are assessed with this understanding Yet the taxable figure jumped from $1,100,000 in 1962 to $3,900,000 in 1963

The law covering assessment of government property held outside the owning jurisdiction's boundary was designed to protect the smaller counties from economic oppression by their larger neighbors, but through interpretation, especially in the field of water rights, it has worked to the economic oppression of the larger counties In the case of San Francisco Airport, the law puts a burden on a small group of taxpayers for the support of a regional facility The airport serves the needs of six million people and firms in the bay area, including those in San Mateo County, and yet only San Francisco taxpayers are re-

[18] *Constitution of California*, Article XIII, Section 1 (Emphasis added)
[19] *County of Tuolumne* v. *State Board of Equalization* (1962) 206 Cal. App. 2nd 352.

quired to pay the tax tab for the airport. While San Mateo County provides the airport with certain services such as police and fire protection the county benefits from the facility in many ways and takes in much more in revenue than the cost of the services which are provided. If San Mateo County had built the same airport in the same location it would be tax free, but in the present situation, San Mateo derives a tax windfall from a facility it did little to develop San Franciscans had the foresight to build the airport, but San Mateo County takes the tax revenue San Francisco has spent $65 million in bond funds and the federal government has added $11 5 million ($10 million in development money as a trade for Treasure Island) to produce a modern international airport. The airport's annual payroll comes to $150 million and is drawn mainly by residents of San Mateo County. The county derives sales tax from this payroll when it is spent in local shops, but it continues to tax the public source which offers it. This is a unique situation in the state, and it appears that San Franciscans deserve some relief.

IV. INEQUITY OF RESOURCES IN TAXING JURISDICTIONS

Every county, every city, and every school district must provide certain services for its citizens. In turn the citizens of these cities and counties must pay property taxes to support these local governments. Their individual property tax burden is measured by the total assessed valuation of property in the taxing jurisdiction divided by the yearly budget to be met.

This sounds simple and reasonable enough until the division is performed If the taxable resources are seriously limited in the taxing jurisdiction, high rates must be charged to meet costs The boundaries of the government units are political boundaries, not economic boundaries, so the need within the county may not reflect the ability to pay. Certainly as assessed valuation rises the level of service will rise, but there is a basic demand which is not always sufficiently covered by the tax capacity of the district. It will be noted in a subsequent section of this report that there are certain difficulties in using assessed value as a measure of fiscal capacity.

In the nine counties which surround San Francisco Bay per capita assessed value ranges from $1,380 to $2,227, and the high and low are found in bordering counties as shown in Table XII

TABLE XII

Per Capita Assessed Valuations Subject to General County Taxation, San Francisco Bay Area Counties: 1963

Solano	$1,380 49
Napa	1,475 47
Alameda	1,675 53
Sonoma	1,816 29
Marin	1,913 81
San Mateo	1,952 65
Santa Clara	2,085 09
San Francisco	2,106 59
Contra Costa	2,227.66

SOURCE Computed from Board of Equalization, *Annual Report*, 1962–63, and Department of Finance provisional population estimate for 1963.

Such disparity can only be reflected in differing levels of services, and when the counties are adjoining the difference is exaggerated. In southern California the range is just as pronounced. San Diego has a per capita assessed valuation of $1,543, while Santa Barbara County shows $2,127 per capita. Even more widely separated per capita valuations can be found within single counties. Emeryville, in Alameda County, has a figure of $19,640, while the City of Alameda had only $1,093 to back up each citizen as shown in Table XIII.

TABLE XIII

Per Capita Assessed Valuations Subject to City Taxation, Cities of Alameda County: 1963

Alameda	$1,093 26
Pleasanton	1,108 02
Livermore	1,251 48
Albany	1,276 70
Hayward	1,460 61
Fremont	1,546 74
Newark	1,683 64
Berkeley	1,687 54
Oakland	1,859 52
Union City	2,308 82
San Leandro	2,365 60
Piedmont	2,423 54
Emeryville	19,640 21

SOURCE: State Controller, *Annual Report of Financial Transactions Concerning Cities of California, 1962–63.*

The wide differences in city figures do not affect individual county taxes, but they do create hardships for local school districts and cities. Using the example above, we see that Emeryville, an industrial city with approximately 600 students in its school system, hasn't the financial problems of neighboring Alameda, which has approximately 11,000 students in its school district.

The poorer areas in the state must make a hard choice—either provide lesser quality services or charge higher tax rates, a decision which is likely to turn many a representative out of office. Under the generally accepted pattern of like treatment of like properties some of these districts could not exist. A $20,000 home in the poorer area must bear a heavier burden than would the same home were it in one of the richer districts. The person in a city with limited tax resources may have to pay twice as much as his neighbor living across the street but in a different city, for the same services, although the value of their property is the same.

The creation of special districts in part demonstrates the inadequacies of older forms of local government in the supply of needed services. For the most part the city and county boundaries are fixed. Social needs of growing communities, changing technology, and rapid development are not restricted by political subdivisions. Possibly the

area encompassed by special districts are better indicators of need than rigid city or county lines. But the problem remains that the counties and cities are the basic units of local government, and they are defined by political boundaries which do not represent taxable capacity, population, geography, or resources, both human and mineral.

The local school boards, in cooperation with the state, solve this problem with equalization aid and basic aid, which insure at least a statewide minimum level of education It may be possible to remedy the city and county disparity by some formula of state aid. If a taxing jurisdiction has a capacity below a stated level, it might be aided by the state, however, the level at which state aid would begin should be carefully defined before such a program is proposed.

V. INCIDENCE OF THE PROPERTY TAX

Who actually bears the burden of the property tax in California? Measuring tax incidence [20] even under most favorable circumstances is difficult and fraught with danger In the area of property taxation, a precise determination of tax incidence is impossible. Many useful data are available, however, from which the initial distribution of property tax burden by class of property and by income group can be determined within a limited tolerance range

Statewide distribution of assessed value in 1961 by various types of property was as follows:

TABLE XIV

Gross Assessed Value—Statewide: 1961

	Assessed Value (millions)	*Percent*
Railroads *	$344	1.0 †
Gas and electric companies *	2,246	6 7

SOURCE Census of Governments, 1962, *Taxable Property Values*, p 47

Property tax burdens cannot be assumed to be in the same proportion to the above tables due to the different tax rates and assessment practices within the various taxing jurisdictions Tax rates are almost uniformly lower in the rural counties and the portions of the populous counties with heavy industrial development An analysis of the distribution of assessed value by class of property in four counties with some of the highest average tax rates illustrates this point:

TABLE XVI

Distribution of Assessed Value by County (San Francisco Bay Area): 1961

ALAMEDA COUNTY

	Percent of assessed value
Single family	41 0 †

SOURCE Computed from U S Department of Commerce, Bureau of the Census, *Census of Governments*, 1962, *Taxable Property Values*, and State Board of Equalization, *Annual Report*, 1961–62.

From an analysis of assessed valuations on a county-by-county basis, using average county tax rates, it is possible to generalize on property tax incidence by classes of property. Due to the variations in tax rates within counties, the percentages below are only approximate guides and not absolute.

TABLE XVIII

Estimated Percentage of Property Tax Paid by Class of Property in California: 1961

	Percent of assessed value

More accurate determination of actual property tax incidence by class of property requires one further step—an analysis of the shifting of the tax from one class of property and one taxpayer to another

Some positive statements with respect to shifting can be made

1. The tax on real and personal property owned by individuals who do not itemize their deductions for federal income tax purposes will not be shifted. Taxpayers who itemize will be able to pass on from 14 to 70 percent of their property tax to the federal government depending on their income class

According to the United States Treasury Department, deductions are itemized on 39 percent of all tax returns. Of these, 69 percent include deductions for real estate taxes. The total amount deducted from the federal income tax for real estate taxes in 1961 was $4,136,718,000—or 35 percent of the total amount of property taxes collected from individuals in the United States.[21] Assuming California is typical, approximately 7-8 percent of the property tax paid by individuals is passed on to the federal government.

2. For corporations, 50 percent of the tax paid by firms earning more than $25,000, and 22 percent of the tax paid by all other corporations can be passed on to the federal government. Ability to shift the balance of the tax will depend on the nature of the corporations.

With respect to shifting the balance of the tax, certain limited generalizations have been widely accepted.

For public utilities, it is quite likely that the property tax can be passed on to consumers.

For other property, taxes on land value will not be shifted but can be capitalized when the property is purchased. It will be possible to shift property taxes on business improvements and personal property to consumers, depending on competitive conditions. Taxes on rental property may be shifted to renters except that long-term leases, rent controls, and competitive conditions in declining neighborhoods may block such shifting.[22]

In considering the impact of the property tax by income groups, several studies point to the fact that the tax as a percentage of income is higher for low income groups (regressive). Dr. Gerhard Rostvold of Pomona College presented evidence to this committee in Los Angeles in November 1963, showing the regressive nature of the portion of the property tax falling on homeowners A survey of several hundred householders in eastern Los Angeles County in 1959, by Dr Rostvold and his associates disclosed the following relationship between household income and property tax payments:

[21] U S Department of Commerce, Bureau of the Census, *Government Finances in 1961*, Washington, D C , GPO, 1962, p 18 and U S House of Rep Committee on W & M, *President's 1963 Tax Message*, Part 1, Washington, D C GPO, 1964, pp 232, 235 and 236

16,000	2 90
17,000	2 86

SOURCE Testimony of Gerhard N. Rostvold before Assembly Committee on Revenue and Taxation, Los Angeles, November 15, 1963

This study, however, does not consider shifting. Several other studies have attempted to measure property tax incidence considering the effects of shifting. These studies are based on assumptions of shifting rather than from the collection of empirical data. They exclude the shadowy area of shifting at the time of sale of the property.

All of the recognized studies have reached the same conclusion: The property tax is definitely regressive. Probably the best known of these studies is the one by Richard Musgrave for a congressional subcommittee on tax policy in 1955 For the purpose of his study, Musgrave assumed that property taxes on business and tangibles, inventories, implements, equipment, and improvements to land all shift to consumers while property taxes on residences either shift to the owners or tenants and property tax on farm and business land are also borne by the owner. The findings of this study are shown in Table XX.

TABLE XX

1954 Tangible and Intangible Property Taxes Paid in the United States as Percent of Income

$5,000 under $7,500	3 8
$7,500 under $10,000	3 6
Over $10,000	3 4
All incomes	3 8

SOURCE Richard A Musgrave, *"The Incidence of the Tax Structure and Its Effects on Consumption," Federal Tax Policy for Economic Growth and Stability*, Papers submitted by Panelists Appearing before the Subcommittee on Tax Policy, Joint Committee on the Economic Report. U.S. Government Printing Office, Washington, 1956, p 93.

Musgrave also made a study of property tax incidence in Michigan for that state's 1958 tax survey. His assumptions were:

— Property taxes on owner-occupied residences do not shift

— 75 percent of the property taxes on local industries and retail establishments shift to consumers with the balance falling on the owners of land and not shifting.

— Property taxes on manufacturing firms in Michigan which dominate the national market (such as automobiles) shift while those on national industries where Michigan firms' contribution to the total national market is small do not shift.

— Property taxes on public utilities are shifted to the consumer.

— Property taxes on farms do not shift.

His findings are shown in Table XXI.

The report of the University of Wisconsin tax study committee in 1959 described the regressivity of property taxes in Wisconsin as follows:

TABLE XXII

1956 Wisconsin Property Taxes as Percent of Money Income

Income class	*Percent of money income*
Under $2,000	13 77
$2,000 under $3,000	7 40
$3,000 under $4,000	6 05
$4,000 under $5,000	5 33
$5,000 under $6,000	4.87
$6,000 under $7,500	4 70
$7,500 under $10,000	4.49
Over $10.000	4 63
All incomes	5 53

SOURCE University of Wisconsin Tax Study Committee, *Wisconsin's State and Local Tax Burden*, Madison, Wisconsin, 1959, pp 49 and 57. See also pp 38–48

The assumptions of shifting for this study are much the same as those made by Musgrave with the exception of an estimate that 25 percent of the taxes on land (other than owner-occupied residences) shift.

In the *National Tax Journal* of December 1962, Thomas F. Hady discusses the incidence of the personal property taxes in Minnesota After allocating proper shifts to the federal government, Hady concludes that retailers can shift the balance of their personal property taxes to consumers, that manufacturers can shift one-third of the balance to the residents of the other states but must absorb the rest, that public utilities will shift the balance to the consumers and that the property tax on farms will not shift.

His conclusion as to the regressivity of the personal property tax in Minnesota is shown in Table XXIII.

TABLE XXIII

Distribution of Personal Property Tax Incidence Among Minnesota Income Groups: 1958

Income class Allocation 1 (most likely)	*Tax as percent of income*
$0 to $2,000	1.6
2,000 to 3,000	1.1
3,000 to 4,000	.8
4,000 to 5,000	.6
5,000 to 7,000	.6
7,000 to 10,000	.5
10,000 plus	.7
Total	.7

SOURCE Thomas F Hady, "The Incidence of the Personal Property Tax," *National Tax Journal*, December, 1962, pp 368–384

As a part of the tax study conducted by the California Assembly Committee on Revenue and Taxation, Dr. Levern Graves of California State College at Fullerton, has made a study of the tax incidence of the total tax structure in California In this study he has also broken out the incidence of the property tax

His findings are shown in Table XXIV.

TABLE XXIV

Property Tax Payments as a Percentage of Family Personal Income After Federal Income Tax

Income group	*Percentage*	*Income group*	*Percentage*
Under $2,000	9 21	$5,000– 5,999	7 42
2,000–2,999	10 44	6,000– 7,499	7 03
3,000–3,999	9 05	7,500– 9,999	6 19
4,000–4,999	7 99	10,000–14,999	5 01
		15,000–over	5 63

Considering virtually unanimous agreement among the many studies of property tax regressivity, it is safe to conclude that the property tax in California is regressive in that those with lower incomes will pay a higher percentage of their income in property taxes than will those with higher incomes.

VI. STATE AND LOCAL TAX BURDENS IN CALIFORNIA: THE PROPERTY TAX COMPARED WITH STATE TAXES

by
LEVERN F. GRAVES
Associate Professor of Economics
California State College
at Fullerton

A. *Introduction*

The present study endeavors to estimate the distribution of the burden of state and local taxation in California. The method employed for this purpose is the standard one of allocating the taxes collected during a specific year among consumer units [1] The year selected was 1961 because this is the latest year for which the necessary data was available. A comprehensive estimate of this kind for California has not been undertaken before, in fact, a careful search of the literature published on this subject in recent years reveals that similar studies are available for only three other states [2]

There are at least two good reasons for the relatively small amount of research that has been done in this area. In the first place, tax burden estimates require large amounts of data on such diverse subjects as the distribution of aggregate income and various types of income, the distribution of total and specific consumption expenditures, the amounts and types of taxes collected and the ownership and distribution of taxable property to mention only the most obvious. Such data are, if not entirely absent, at least seriously deficient in a number of respects.

More important than inadequacies in the data, perhaps, are problems having to do with questions of tax shifting and incidence. Accurate tax burden estimates require a high degree of knowledge with respect to the shifting and incidence of particular taxes However, there is very little empirical evidence available with respect to this important subject. Therefore, it is necessary to employ more or less arbitrary assumptions based on theoretical reasoning. Such assumptions can, at best, be regarded as no more than a reasonable approximation of the actual situation This means, of course, that in a very real sense the investigator assumes the conclusions which later emerge from his statistical analysis. It also means that tax burden estimates, including those presented in this study, must be viewed as approximations of the actual distribution of the tax load, rather than as empirically verified facts.

[1] I am indebted to Professor Paul T Kinney of the California State College at Fullerton, and Professor Frank H Jackson of Alma College, Alma, Michigan, for their helpful comments and criticisms I would also like to take this opportunity to express my appreciation to the staff of the Assembly Committee on Revenue and Taxation, especially David R Doerr, the committee consultant, and Raymond R. Sullivan, assistant consultant Their cordial willingness to assist me in numerous ways made a difficult task much easier.

A Musgrave, D W Daicoff, and W Darwin, "Who Pays Michigan Taxes," *Michigan Tax Study, Staff Papers*, 1958, 131–83, O H Brownlee, 'Estimated Distribution of Minnesota Taxes and Public Expenditure Benefits," University of Minnesota 1958 (mimeographed), and *Wisconsin State and Local Tax Burdens: Impact, Incidence and Tax Revision Alternatives* (Madison, University of Wisconsin Tax Study Committee, 1959), pp 36–61.

The uncertainty associated with tax incidence has led some economists to question the wisdom of attempting to statistically determine the tax burden falling on any particular group These economists prefer to confine their appraisals of the distribution of the tax burden to the realm of theory where the *ceteris paribus* assumption may be invoked [3] While there is much to be said for the point of view, it ignores at least one of the basic facts of life This is the fact that, whatever the state of our knowledge of the incidence of particular taxes, legislators are faced with the necessity of making decisions concerning the tax structure In so doing, the way in which the tax burden is being distributed among income classes should be an important consideration It is with the view that these decisions are better made on the basis of imperfect knowledge than no knowledge at all that the tax burden estimates in this study are presented

B. *Income Concepts*

Since the burden estimates presented in this paper are designed to show the proportion of their income which consumer units in various income classes devote to the payment of taxes, the initial problem that is encountered is the selection of an income base against which the burden of taxation can be measured The importance of this problem cannot be overemphasized Earlier studies have shown that while a considerable amount of latitude employed with respect to shifting and incidence assumptions does not greatly affect the overall pattern of burden distribution, an equal amount of latitude employed in the selection of an income base does have a significant impact.[4]

The income concept used in the computation of the tax rates which appear in this study is family personal income (as defined by the Office of Business Economics of the U S Department of Commerce), minus federal income taxes Other concepts which might have been employed and which have been used by other writers include: adjusted gross income, taxable income, and money income before or after personal income taxes. The principal reason for selecting family personal income rather than any of these latter concepts is that it includes various types of income in kind which are not included in money income or in income reported for tax purposes Since such income contributes to economic well being, it must be included in the income base against which the tax burden is to be measured Indeed, failure to do so would lead to burden estimates that give a distorted picture of the actual distribution of the tax load.

Appropriate though it may be as an income base for measuring tax burdens, an income concept can be used for this purpose only if its distribution among income classes is known While data relative to the

[3] See in this connection Professor Jackson's excellent paper on the Hawaiian tax burden F H Jackson, *The Tax Burden and the Hawaiian Tax System* (Honolulu, Economic Research Center, University of Hawaii, 1960), 47 pp, and R F Colli er, "Some Empirical Evidence of the Tax Shifting," *National Tax Journal*, Vol XI (March 1958), pp 16–50

[4] R A Musgrave, "Distribution of Tax Payments by Income Groups A Review," *Proceedings of the Forty-fifth Annual Conference of the National Tax Association* (1952), pp 119 ff, and R S Tucker, "Distribution of Tax Burdens in 1948," *Ibid*, pp 195 ff

distribution of family personal income is available for the United States as a whole, similar data is not available for the State of California or for any other state. Thus, before any tax burden estimates could be computed it was necessary to estimate a California distribution of family personal income The precise method that was used to accomplish this task is discussed in detail in Part H. Suffice it to say here that the general procedure followed was to compare Department of Commerce estimates of the distribution of consumer units by family personal income class for the United States as a whole with a similar distribution by money income class available from the Bureau of Labor Statistics From this comparison there was obtained a series of population relatives. These population relatives were then applied to a B L.S estimate of the distribution of California consumer units by money income class in order to derive the distribution of California consumer units by family personal income class For example, if the national income distributions indicated that the percentage of the total number of consumer units within a particular personal income class was twice as large as the percentage within the same money income class the population relative obtained was two On the assumption that this same relationship would hold for California, the B L S. estimate of the percentage of California consumer units within that money income class was multiplied by two. A repetition of these computations for each income class resulted in the family personal income distribution that is shown in Table XXV. The personal income class means that are shown in this table were estimated by an analogous procedure.

Although time considerations precluded the application of appropriate statistical techniques to test its accuracy, there are at least three reasons to believe that the estimated distribution represents a reasonably good approximation of the actual distribution of family personal income in California In the first place the estimated distribution behaves in precisely the manner one would expect on the basis of *a priori* reasoning. Since both the per capita and the median income in California are well above those for the nation as a whole, one would expect to find a larger proportion of California consumer units in the higher income brackets than would be the case nationally. As can be seen by comparing Table XXV with Table XXVI in which the national family personal income distribution is shown, the derived California distribution conforms to this expectation. Second, and more significant, is the fact that the distribution shown in Table I can be used to estimate aggregate family personal income in California with a relatively small amount of error An estimate of this aggregate figure obtained from the Department of Commerce places it at $42 333 billion. As is shown in Table XXV, the aggregate obtained by multiplying our consumer unit figures by the estimated class means and summing the resulting products exceeds the Department of Commerce figure by only $119 million or 0 4 percent. Finally, the mean family personal income of the estimated distribution ($7,429) exceeds the actual mean ($7,408) by less than 0 3 percent.

SOURCE Survey of Current Business (April, 1964), pp 5-9.

C. *Tax Exporting*

Tax exporting provides one of the most difficult problems encountered in determining the distribution of the tax burden within a particular state This term refers to the fact that the burden of a given state's taxes is not entirely borne by the residents of that state. A portion of it is certain to be shifted to nonresidents.

Tax exporting occurs for a variety of reasons An important part of it arises because many state and local taxes are deductible in computing taxable income for federal income tax purposes To the extent that such deductions are taken by either consumer or business taxpayers, a portion of the burden of state and local taxation is assumed by the federal government or, more realistically, is shifted to federal taxpayers in the country at large An even more important source of tax exporting is associated with the fact that to a considerable degree the taxes for which business concerns are liable are shifted forward in the form of higher selling prices This tends to be true, for example, of all sales and excise taxes paid on business purchases and of taxes levied on business property To the extent that locally produced goods are sold outside the state, therefore, a portion of the burden of these taxes comes to rest on nonresidents A third type of tax exporting occurs in connection with taxes on corporate income A large part of the burden of these taxes is almost certainly borne by stockholders Since it cannot be assumed that all of these stockholders are residents of the state in which the tax is levied, a portion of the total burden of these taxes must also be shifted out of the state Finally a portion of the sales and excise tax collections of any state are derived from out of state visitors or individuals passing through the state.

Although tax exporting unquestionably has an important impact on the distribution of tax burdens, no account of this phenomenon is taken in the computation of the burden estimates that appear in the remainder of this study One consideration that dictated this decision was the relatively short time that was available for the completion of the estimates Even if the time factor had been absent, however, it is not clear that any extensive consideration could have been given to this knotty issue. The chief reason for this is that with the exception of that portion of tax exporting which occurs as a consequence of the deductibility of state and local taxes in the computation of taxable income for federal income tax purposes, there is virtually no data upon which to base an estimate of the amount of tax exporting that takes place More important, it should be recognized that if it is true that a portion of the taxes levied by California are exported to the residents of other states, it is also true that a portion of the taxes levied by other states is imported by the residents of California In the absence of data that would permit an evaluation of the relative importance of these two phenomena, it seems best to assume that their effects on the distribution of tax burdens are offsetting—in short, to assume that the entire burden of California taxes is borne by Californians

Finally, the primary concern of this work is with the relative rather than the absolute burden of taxation borne by the various income classes

and there is some reason to believe such relative tax burdens are not greatly influenced by tax exporting.[5]

D. Shifting and Incidence

It was noted earlier that this study relies almost entirely on theoretical reasoning to determine the shifting and incidence of particular taxes In this section, the assumptions employed with respect to each tax are discussed along with the reasons for selecting these particular assumptions.[6] Following the procedure employed in the Wisconsin study, taxes are for this purpose divided into two broad categories· (1) taxes with an initial impact on individuals and (2) taxes with an initial impact on business concerns.

1. TAXES WITH AN INITIAL IMPACT ON INDIVIDUALS

Governments in California levy four taxes that have an impact on individuals. Included are. the personal income tax, registration and license fees on consumer owned motor vehicles, property taxes on owner-occupied housing, and the inheritance and gift taxes. These taxes present no real problem with respect to the determination of incidence The avenues open to individuals for tax shifting are at best minimal. Tax shifting can occur only through price changes, and individuals generally have little direct influence on the prices they pay or receive

There are, of course, some exceptions For example, some shifting of the personal income tax may take place if the tax reduces work incentives or if it induces unions or the owners of unincorporated enterprise to insist on higher wages and prices[7] In addition partial shifting of taxes levied on owner-occupied housing and consumer-owned motor vehicles may occur because the tax may induce a reduction in the demand for and the prices of these goods. However, there is little evidence that any of these types of tax shifting is of any great consequence Indeed, what empirical evidence is available suggests the contrary[8] In this study, therefore, it is assumed that the monetary burden of taxes with an initial impact on individuals falls on the individuals who are legally liable for the payment of the tax.

2. TAXES WITH AN INITIAL IMPACT ON BUSINESS

The remainder of the taxes levied in California have their initial impact on business concerns. In contrast with those discussed above,

---

[5] In the 1959 Wisconsin study it was found that relative burdens were not greatly changed by adjusting them to take account of tax exporting even though great care was exercised in estimating the extent to which Wisconsin taxes were exported *Wisconsin's State and Local Tax Burden, op cit*, p 60

[6] In connection with this discussion, it may be useful for the reader to keep in mind the following comment made by the authors of a study of the incidence of Michigan taxes "In all cases more refined procedures might have been applied But experience with projects such as this suggests that refinement yields rapidly diminishing returns" R A Musgrave *et al Ibid*, "Who Pays Michigan Taxes," *op cit*, p 131

[7] It should be noted also that some shifting of this tax occurs because of differences in the degree to which different individuals are able to take advantage of the provisions in the tax law covering exemptions and deductions and also because the possibilities of tax avoidance are unevenly distributed However, it seems unlikely that such shifting is very significant, if only because it entails resource transfers which, in the long run, induce compensating changes in wages and other resource prices

[8] In this connection see G F Break, "Income Taxes and Incentives to Work," *American Economic Review*, Vol XLVII (September 1957), pp 529–49, R Goode, "The Income Tax and the Supply of Labor," *Journal of Political Economy*, Vol LVII (October 1949), pp 428–37.

the incidence of business taxes is more difficult to determine For this reason, each of the major types of taxes in this group is considered separately in the paragraphs that follow.

Sales and Excise Taxes

Sales and excise taxes provide the State of California with its most important source of revenue.[9] A wide variety of state and local taxes fall into this category. In addition to the sales and use tax, these include business license fees, horseracing fees and taxes on gasoline, diesel fuel, L P. gas, alcoholic beverages, cigarettes, and insurance premiums.

With respect to incidence, this study follows the prevailing practice of assuming that the monetary burden of sales and excise taxes is entirely shifted forward to consumer in the form of higher selling prices of the products involved. This procedure may be justified on the grounds that it is in accord with the mainstream of economic thinking on the subject of tax incidence and with what little empirical evidence that is available [10]

However it must be admitted that while forward shifting of sales and excise taxes appears to be the rule, complete forward shifting of all such taxes is extremely improbable, since all of the conditions required for this to take place are rarely, if ever, present. Further, in those industries in which resources are specialized to a taxed commodity, backward shifting in the form of lower returns to the owner of such specialized resources is almost certain to occur [11] It must be admitted also that the capacity of business firms to shift taxes applied at the state and local level is likely to be somehat smaller than their capacity to shift similar taxes applied at the national level The reason for this is that in the former case, some business firms in any given state (e g , California) are certain to be competing in a national market with firms operating from states where similar taxes are not levied or if levied are set at lower rates.

The significance of the above remarks is that the assumption that consumers bear the entire burden of sales and excise taxes represents no more than an approximation of actual conditions However, for purposes of allocating tax burdens to income classes, it is undoubtedly a sufficiently close approximation that no serious distortions are intro-

[9] In recent years such taxes have on the average accounted for approximately 58 percent of the state's total tax revenue

[10] See for example R F Collier, "Some Empirical Evidence of Tax Shifting," *op cit*, pp 35-50, and J F Due, "The Effect of the 1954 Reduction in Federal Excise Taxes on the List Prices of Electrical Appliances," *National Tax Journal*, Vol VII (September 1954), pp 222–26

[11] A small minority of American economists is of the opinion that the entire monetary burden of sales and excise taxes is always shifted backward to the owners of resources producing the taxed commodities For the most complete statement of this view see E R Rolph, *The Theory of Fiscal Economics* (Berkeley, University of California Press, 1954), Chapters vi and vii It is interesting to note that if the highly unorthodox viewpoint of Rolph and his followers is correct, most of the arguments for the many exemptions to sales taxes as well as those for allowing the deduction of such taxes in computing taxable income for income tax purpose, are invalid This is because, for the most part, these arguments are based on the explicit assumption that sales taxes are shifted to consumers For this reason, if for no other, Professor Rolph's position with respect to tax shifting should, in the opinion of the present writer, be given more attention by both economists and legislators than has thus far been the case.

duced. In this connection, it is important to take note of a number of factors that tend to promote forward shifting even when completely rational economic behavior would dictate otherwise One such factor is that most consumer markets tend to be dominated by conditions of oligopoly For a variety of reasons this type of market structure tends to be characterized by full and immediate forward shifting.[12] Perhaps more important is the widespread practice of setting prices by applying a standard mark-up to average costs Since a sales or excise tax appears to the seller as an addition to his costs, this practice virtually insures that such taxes will be shifted forward. A third factor is the existence of statutory provisions requiring the separate statement of the tax Such provisions facilitate forward shifting because they make it more likely that the consumer's purchase decision will be made on the basis of price net of the tax It is of significance for the present study that California's sales and use tax law contains such a provision. A final consideration is the fact that the sales and excise taxes with which this study is concerned have been in existence in substantially their present form for a relatively long period of time This fact lends strength to the assumption that the burden of them falls entirely on consumers because it increases the likelihood that the market adjustments necessary to forward shifting have taken place.

Property Taxes

Business Property

With regard to incidence, taxes on business property are in most respects similar to those discussed in the preceding section. This is because the tax in both cases constitutes a direct expense of doing business which must be recovered by the firms in the long run if they are to continue operations As a general rule, therefore, taxes on business property tend, in the long run, to be shifted forward to consumers by means of increased commodity selling prices. However, there is at least one important exception to this general rule. This exception concerns the portion of the tax which is levied on land. Traditional incidence theory takes the position that a tax levied on a good in fixed supply cannot be shifted Since land is such a good, a portion of the burden of taxes on business property must be assumed to remain with the owners of business enterprise

Yet, in spite of this fact, the treatment accorded to business property taxes in this paper is to assume that such taxes are entirely shifted forward. The considerations that account for this treatment are three in number First, it seems probable that most business firms treat the whole of any property tax as an expense of doing business. When this is true, it can be argued that even that portion of the tax which falls upon land can be shifted [13] Second, the statistical data necessary to accurately segregate the portion of the tax falling on land is simply not available Finally, since the amount of tax attributable to land is a relatively small proportion of the total collected on business property, an estimate made on the basis of date available might well intro-

[12] J F Due, *Government Finance: An Economic Analysis* (Homewood, Illinois, Richard D Irwin, Incorporated, 1959), p 291 ff

[13] J F. Due, *Government Finance, op cit.*, p. 397

duce a larger amount of error than the assumption that the whole of the tax is shifted forward to consumers in the long run.[14]

Rental Property

The incidence of taxes on rental property is identical with that of taxes on property used for other business purposes. That is, the portion of the tax which falls on improvements will tend, in the long run, to be shifted to consumers, while the portion which falls on the land involved will be difficult to shift. The only difference to be observed is that, in the case of rental property, the portion of total tax collections attributable to land is much more significant. Accordingly it is assumed for purposes of this study that one-fourth of the taxes levied on rental property falls on the property owner, while the remaining three-fourths is shifted forward to consumers in the form of higher rental charges The selection of these particular proportions reflects the view that no more than one-fourth of the total assessed value of rental property is attributable to land.

Agricultural Property

Taxes on agriculture property have a threefold base—land, farm residence, and the value of improvements, including any improvements in the basic quality of the land due to the use of fertilizer or other soil conditioning ingredients To the extent that the tax base reflects the value of unimproved land and farm residences, such property taxes are absorbed by the property owner To the extent that the base reflects improvements, they tend to be shifted forward, in the long run, to the consumers of food and other agricultural products.

From these few remarks, it might be concluded that the incidence of the property tax is relatively easy to determine Yet, this is far from true, because any attempt to estimate the proportions in which total tax collections should be divided between property owners and consumers encounters problems that are virtually impossible to solve Not only is available statistical data sparse, it is also not very useful. For example, in the published data on land, the values given include certain improvements, e g those due to the use of fertilizer, etc. Equally important, it is almost never possible to distinguish clearly between land and improvements Further, since almost all farm residences are at least partially used for business purposes, some portion of the taxes upon such residences is subject to forward shifting There is, however, no reasonable basis, statistical or otherwise, upon which this amount can be determined

Because of the difficulties it involves, it is necessary to deal with the problem of determining the incidence of agricultural property taxes in a more or less arbitrary fashion Thus in the present study, it is simply assumed that 60 percent of the total tax levy is shifted and that the remaining 40 percent is absorbed by the owners of agricultural property No defense of these particular proportions will be attempted,

[14] It is recognized, of course, that in the short run, full forward shifting is extremely unlikely This consideration may be an important one in a state like California where property taxes have been rising more or less continuously over a relatively long period of time However, in this regard, it should be remembered that many of the factors which promote the immediate and forward shifting of sales and excise taxes are also applicable to those levied on business property

except to remark that, in part, they represent a compromise between the procedure followed in the Wisconsin incidence study, in which the authors concluded that 25 percent of agricultural property taxes were shifted, and that followed in a similar study for Michigan, in which the authors concluded that 75 percent of such taxes were shifted [15] If anything, the 60-40 ratio employed here probably underestimates the amount of tax shifting that occurs One reason for believing this to be the case is that, in the absence of improvements permitting irrigation, much of the present agricultural land in California would be virtually valueless Hence, the proportion of the tax on agricultural land that California farmers are able to shift forward to consumers is certain to be high Also significant in this regard is the importance of corporate agriculture in California Shifting of taxes seems much more likely in the case of incorporated farms than in the case of the family operated farms, which predominate in much of the rest of the county, because in the former case the resources involved are much more likely to have equally profitable alternatives

Corporation Profits Taxes

California levies two taxes that fall into this category—the Bank and Corporation Tax and the Corporation Income Tax The incidence of these taxes is more difficult to ascertain than that of any of the other taxes considered in this study Economic opinion on this subject is divided into at least two schools of thought [16] The older of the two schools takes the position that taxes on corporate profits cannot be shifted The reasoning that is employed to support this view may be summarized as follows: Since the tax is levied upon net income, it has no effect on costs and, therefore, does not alter profit maximizing prices Under these circumstances, it is unprofitable for a corporation to shift the tax because, if profits are being maximized, any increase in price will lower profits before taxes and hence, also, profits after taxes

The newer school of thought takes issue with this viewpoint on a number of grounds First, it is pointed out that the net income upon which the tax is levied actually contains at least two cost elements One of these is an implicit return to the owners for any labor they supply and for which they are not explicitly compensated, while the other is the minimum return which must be paid to invested capital to prevent it from being withdrawn and invested elsewhere The significance of this is, of course, that the tax does affect costs and profit maximizing prices and, hence, can be shifted to some degree A second argument offered in favor of at least partial shifting of this tax is that the prices being charged at the time the tax is levied or raised may not be those that would maximize profits Indeed, under conditions of oligopoly a good case can be made to the effect that prices are typically below the maximum profits level [17] If this is the case, there is a strong likelihood that the tax will be shifted Finally, it is argued that

[15] R A Musgrave, *et al*, "Who Pays Michigan's Taxes," *op cit*, p 145 and *Wisconsin State and Local Tax Burdens*, *op cit*, p 39

[16] The most complete discussion of the various aspects of corporate income taxation including its incidence is R Goode, *The Corporation Income Tax* (New York, John Wiley & Sons), 1955

[17] J F Due, *Government Finance*, *op cit*, p 225

for shifting to occur, it is not necessary that the tax be an element of cost, it is necessary only that corporation managers regard it as such. If they do, they will attempt to recover it by increasing prices [18] In this connection it is important to note that the widespread use of standard markup and similar pricing practices encourages the treatment of the tax as a cost

One conclusion that is suggested by the foregoing analysis is that, while there is a strong possibility that at least a portion of the corporation income tax is shifted to consumers, full shifting of this tax is extremely improbable. Moreover, it is clear that the capacity of some firms to pass the tax on is considerably greater than that of others. Further, some corporations may not be able to shift any of the income taxes for which they are liable. Generally speaking, these conclusions are consistent with the empirical evidence that has been assembled on this subject For, while some investigators have found considerable evidence of tax shifting, others have found none at all [19] On balance, however, the case for at least partial shifting would appear both empirically and logically somewhat stronger than its opposite.

Yet, even if it were possible to be perfectly certain that some part of the burden of corporation income taxes is passed on to consumers, there would still remain the problem of determining the size of the shifted and unshifted portions. This problem cannot be satisfactorily solved On the other hand, there does appear to be some agreement that the proposition that no more than two-thirds of the burden of the tax falls on corporate stockholders is at least a reasonable one [20] In the absence of any convincing evidence to the contrary, it is this assumption that is employed in the present paper

E. Allocation of Burden Among Income Classes

The final step in estimating the distribution of California's state and local tax burden is the selection of statistical series which can be used to distribute particular taxes to income classes in accordance with their assumed incidence. The distribution bases which are employed to make the burden estimates presented in this study are summarized in Table XXVII The taxes to be allocated are presented in Table XXVIII. A detailed discussion of the distribution of each of the amounts shown in Table XXVIII is presented in Part G It will suffice here to illustrate the general procedure employed by apportioning the burden associated with a single tax. The tax on motor fuels is selected for this purpose.

[18] As in the case of commodity taxes, it is also possible for taxes on corporate income to be shifted backwards in the form of lower returns to resource owners However, backward shifting is much less probable than its opposite

[19] The volume of empirical work that has been done in this area precludes the citation of all the studies that have been published For alternative views see E M Lerner and E S Hendrikson, "Federal Taxes on Corporate Income and the Rate of Return in Manufacturing," *National Tax Journal*, Vol IX (September 1956), pp 193-202, and M A Adelman, "The Corporation Income Tax in the Long Run," *Journal of Political Economy*, Vol LXV (April 1957), pp 151-57

[20] See R A Musgrave, J J Carroll, L D Cook and L Frane, "Distribution of Tax Payments by Income Groups A Case Study for 1948," *National Tax Journal*, Vol IV (March 1951), pp 1-53 and "Wisconsin State and Local Tax Burden, *op cit*, p 79 For an argument that more than one-third of the tax is shifted see G A Bishop, "The Tax Burden by Income Class, 1958," *National Tax Journal*, Vol XIV (April 1961), pp 41-58

In 1961, the State of California collected a total of $352,597,000 from taxes on motor fuels The distribution of this amount to income classes was accomplished in two steps.

The first step was to determine the proportion of the total which could be attributed to the gasoline purchases of consumer units and to allocate this amount to family personal income classes To accomplish this, an estimate of the average annual gasoline expenditures of consumer units within each income bracket was divided by an estimate of the average price paid per gallon This calculation yielded the average number of gallons consumed which was then multiplied by the tax per gallon in order to obtain the average tax paid by consumer units in each income class Finally by multiplying these averages by the population distribution shown in Table XXV the total amount of tax to be allocated to each income bracket was obtained.

The second step in distributing the burden of motor fuel taxes was to determine the amount of the tax attributable to business purchases This was done by the simple expedient of subtracting from total fuel tax collections the amount which had already been allocated directly to consumer units On the assumption that any taxes paid on business purchases would be shifted forward to consumers, the amount obtained by this calculation was distributed to family personal income classes on the basis of an estimate of the percentage distribution of total consumption expenditures.[21]

TABLE XXVII

Assumed Incidence and Bases for Distribution of Tax Payments

Type of tax	Incidence	Distribution bases
STATE		
Personal income	Income recipient	Distribution of taxes by income class as reported by the Franchise Tax Board
Corporation	1/3 on consumers, 2/3 on stockholders	Two-thirds on the basis of the distribution of dividend income as reported by the Franchise Tax Board and one-third on the basis of the distribution of total consumption expenditures
Sales and use	Consumers of taxable commodities	Distribution of taxable consumption expenditures
Motor fuel	Auto owners and consumers	67 1% on the basis of the distribution of consumer gasoline expenditure, 32 9% on basis of the distribution of total consumption expenditures
Motor vehicle	Auto owners and consumers	67% on basis of the distribution of consumer expenditure on automobiles, 33% on the basis of the distribution of total consumption expenditures
Cigarette	Consumers of cigarettes	Distribution of consumer expenditures on tobacco
Alcoholic beverage	Consumers of alcohol	Distribution of reported consumer expenditures on alcoholic beverages
Horseracing	Consumers of recreation	Distribution of consumer expenditures on recreation.
Private car	Consumers	Distribution of total consumption expenditures
Insurance	Policyholders	Distribution of consumer expenditures on personal insurance
Gift and inheritance	Recipient	Distribution of property income as reported by the Franchise Tax Board
LOCAL		
Property	55 6% on consumers residential housing, 10% on owners of rental property, 4% on farm owners, 30 4% on consumers	55 6% on the basis of the distribution of consumer expenditures on shelter, 30 4% on the basis of the distribution of total consumption expenditures, 4% on the basis of the distribution of the family personal income of farm operator families, and 10% on basis of distribution of rental income
Sales and use	Consumers of taxable commodities	Same as State
Licenses and permits	Consumers	Distribution of total consumption expenditures

[21] No attempt was made in this study to estimate the tax payments of governments on the grounds that, since the funds for these payments must themselves come from taxes, the overall burden distribution is unlikely to be significantly affected

F. Conclusions

The results of the tax burden computations undertaken in this study are summarized in the tables that appear on the following pages Table XXIX shows the absolute dollar amounts of taxes that have been allocated to each of the several income classes In tables XXX and XXXI, these absolute amounts are converted into percentages Both of these sets of percentages are designed to measure the distribution of the tax burden.

Table XXX, which is perhaps the more significant was obtained by expressing the aggregate amount of each major tax and of total taxes allocated to an income bracket as percentage of total family personal income after taxes received by families in that bracket These figures, therefore, may be viewed as the effective rates of taxation applicable to an income class Table XXXI in contrast shows the average amount of tax paid per family expressed as a percentage of the average family personal income after taxes within the various income groups

In appraising their significance, the reader should keep in mind that owing to the arbitrary assumptions employed in some instances and the tentative character of much of the data, the findings presented in these tables are somewhat speculative Among other things, this means that no great significance can be attached to relatively small differences in the tax rates applicable to different income classes However, even when this is taken into account, at least the following conclusions appear to be warranted

1. The overall state and local tax structure in California tends to be quite regressive throughout almost the entire range of incomes covered.

This is revealed by the fact that the effective rate of taxation declines continuously between a family personal income of $2,000 and one of $15,000 (see Table XXX) Below $2,000, the structure appears to be slightly progressive and above $15,000, it appears to be quite progressive. However, both of these latter conclusions must be viewed with

TABLE XXXI

Average Taxes Expressed as a Percentage of Average Income After Federal Income Taxes

After-tax income	*Total state*	*Total local*	*Total state and local*
Under $2,000	5 9	10 3	16 2
2,000–2,999	4 9	11 2	16 1
3,000–3,999	5 9	9.9	15 8
4,000–4,999	5 1	8 8	13 9
5,000–5,999	4 9	8 2	13 1
6,000–7,499	5 5	8 0	13 5
7,500–9,999	5 3	6 8	12 1
10,000–14,999	4 8	5 7	10 5
15,000 and over	9 0	6 5	15 5

considerable caution because it is with respect to these two income classes that the data on both consumption and income is the least reliable. On the face of things, it seems probable that additional data would show that the regressivity extends farther up the income scale than the figures presented here indicate This is suggested by the fact that the majority of the taxes levied are related directly or indirectly to consumption expenditures and the proportion of income spent on consumption is likely to decline rapidly as income rises above $15,000.

2. While the overall tax burden falling on families with very high incomes may be less than is indicated by the effective tax rate shown for the $15,000 and over class, it is nevertheless clear that the burden imposed by the tax structure on families with incomes between $4,000 and $15,000 is significantly less than that imposed on families with incomes above and below these levels In addition, it is equally clear that highest effective tax rates imposed by the system are those applicable to families with relatively low incomes (below $4,000) However, the significance of this latter fact should not be evaluated without taking into account at least two important characteristics of the very low income classes First, this group contains a significant number of families that normally have much higher incomes This is because, at any given time, it includes those whose incomes have been reduced temporarily by illness or unemployment. Equally important, the low income brackets contain many retired individuals who, although their current incomes are low, possess substantial savings On the other hand, it also needs to be kept in mind that any tax induced reduction in income is likely to do more damage to the living standards of a low income family than one which reduces the income of a high income family by an equal percentage [22]

3. From even a cursory examination of Table XXX, it is clear that the regressivity of the overall tax structure has its sources at the local rather than the state level The incidence of the state tax structure tends toward proportionality. This is due primarily to the fact that the state government draws a significant portion of its total revenue (approximately 20 percent) from personal and corporate income taxes the burden of which falls largely on these with incomes in excess of

[22] I am indebted for this point to *Wisconsin's State and Local Tax Burdens*, op cit, p. 56.

$15,000.[23] In the absence of these two taxes the state tax structure would be slightly regressive as can be seen from an examination of Table XXXII.

TABLE XXXII

Effective Rates of State Taxation
Exclusive of Taxes on Corporate and Personal Income

Income class	*Tax rate*
Under $2,000	4 84
$2,000–2,999	4 10
$3,000–3,999	5 04
$4,000–4,999	4 44
$5,000–5,999	4 21
$6,000–7,499	4 93
$7,500–9,999	4 32
$10,000–14,999	3 81
$15,000 and over	3 83

4. More specifically it is possible to say that the regressiveness of the overall tax structure is associated primarily with two related facts . . . the fact that local governments rely so heavily on property taxes to finance their expenditures and the fact that this tax is highly regressive.[24] This regressiveness is revealed in Table XXX by the fact that the effective rates of taxation imposed by property taxes on families with incomes above $4,000 are substantially lower than those imposed on families with income below this level. More significant perhaps, the property tax rates of the two lowest income groups are almost twice the rates of the highest income groups Furthermore, since expenditure on housing does not rise as rapidly as income, the effective rates of property taxation imposed on families with very high incomes is almost certain to be substantially less than the 5 09 percent shown in Table XXX for the income class $15,000 and over

5 Finally, if the average amount of taxes allocated to consumer units in an income class is expressed as a percentage of the average after tax income in that class, the pattern of burden distribution that emerges does not differ in any significant respects from that shown in Table XXX. As is clearly evident from Table XXXI, the overall tax structure continues to be regressive to $15,000 and progressive thereafter. Again, this regressiveness is the result of local rather than state taxes. Indeed the percentage figures shown in Table XXXI reveal both the proportionality of the state tax structure and the regressiveness of the local tax structure even more clearly than those shown in Table XXX

G. *Explanation of Tax Distribution by Income Group*

It was noted earlier that in order to determine the effective tax rates that are shown in Table XXIX, it is necessary to distribute the amounts of each of the numerous types of taxes collected to each of the several income classes in accordance with the assumed incidence of the tax However, at that time, only an illustrative computation

[23] The regressivity of the corporate income tax below $7,500 is undoubtedly less than that shown in Table XXX The reason for this is that no attempt was made to adjust the corporate income tax data to take account of the difference in the definition of income for tax purposes and the family personal income concept employed in the computation of effective tax rates

[24] In 1961, property taxes accounted for 88 percent of local tax revenues and 49 percent of total tax revenues

utilizing the motor fuel tax was made In this section the specific procedures that were employed with respect to each major type of tax and the data utilized are considered in somewhat more detail.

SALES AND USE TAXES

The basic source of the statistical information used in this study to allocate state and local sales and use taxes, as well as certain portions of other taxes was sample data reported by the Bureau of Labor Statistics in its *Survey of Consumer Expenditures*, 1960–61.[25] However, for a variety of reasons, it was necessary to adjust this data in several ways before it could be utilized Two of these adjustments deserve to be mentioned

First, since data was not available for California as a whole, but only for the Los Angeles, San Francisco, and Bakersfield metropolitan statistical areas, it was necessary to average the three sets of data available in order to get some idea of the distribution of consumption expenditures in the state as a whole In computing this average the most important difficulty encountered was in the selection of weights Sample weights could not be used because, with the exception of Los Angeles, the proportions which each city represented of the total sample differed greatly from the proportion which it represented of the total population of consumer units within the state To solve this problem, the median incomes reported by the 1959 decennial census for the various sections of the state were compared From this comparison it was learned that 1959 median incomes fell into three size groups, and that each of these groups contained one of the cities for which sample consumption data was available On the assumption that consumption patterns are closely related to income, each sample city was then assigned a weight equal to the proportion which the population of its group represented of the total population of the state.

The necessity for the second adjustment arose from the fact the B L S consumption data is not reported in the detail that is necessary for allocating the sales and use tax to income classes given the many exemptions which characterize this tax. In some catagories only a portion of the expenditure reported is taxable Before any tax distribution could be undertaken, therefore, it was necessary to divide the total expenditures reported in each such category into taxable and nontaxable proportions. Although recent data upon which such a division could be made is unavailable, the portion of each major category of expenditure subject to the California Sales and Use Tax was estimated by Professor William H. Hickman in 1958 [26] The procedure followed in the present study to estimate taxable expenditures was to apply Professor Hickman's proportions to the amounts of the various types of expenditure that were reported for 1960–61.

It is recognized that the use of this procedure is certain to reduce the reliability of the estimates of the distribution of the sales and use tax Particularly in view of the fact that Professor Hickman's estimate of the proportions of taxable and nontaxable expenditure was based on

data for the year 1950 On the other hand, it is equally probable that the amount of error introduced is of no real significance It seems highly unlikely that the taxable proportion of any particular category of expenditure changes very much over time Much more important, insofar as any estimate of the tax burden is concerned, are changes in the proportions of total consumption expenditure going to each major expenditure category (e g food, housing, etc) Since Hickman's proportions were applied to each expenditure category rather than to total consumption expenditures, any changes of this sort which may have occurred between 1950 and 1961 were taken into account.

OTHER TAXES ON CONSUMPTION EXPENDITURES

In addition to the sales and use tax, California levies four other taxes on consumer expenditures. Included are those on motor fuels, cigarettes, and alcoholic beverages, and insurance premiums Since the first of these has already been considered, the discussion in this section will be confined to the latter three Neither the cigarette tax nor the insurance premium tax raises any serious problems of allocation. Expenditures on both items are reported separately, and since the assumed incidence of the tax is on consumers, the allocation of total tax collections from these sources could be made on the basis of the percentage distribution of the expenditures involved. By contrast, an attempt to allocate alcoholic beverage taxes does encounter a serious problem. The reason for this is that expenditures on alcoholic beverage are characteristically underreported Thus if reported expenditures are multiplied by the distribution of consumer units and aggregated, the total expenditure figure obtained falls far short of that which is necessary to account for the taxes collected One way of resolving this problem would be to undertake an estimate of the degree to which underreporting of expenditures takes place within each income bracket Because of weaknesses in the data available, however, such an estimate would be extremely crude. For this reason, no such estimate was attempted Instead taxes on alcoholic beverages were allocated on the basis of the percentage distribution among income groups of the expenditures on alcoholic beverages reported in the B L S survey.

INHERITANCE AND GIFT TAXES

It is appropriate to take up the taxes on inheritances and gifts immediately following the discussion of taxes on cigarettes and alcohol because these taxes are also excise taxes They are excise taxes on the transfer of property from one person to another. For this reason, a distribution of property income based on data drawn from state income tax return was used as the basis for allocating the burden of these taxes.[27]

PERSONAL INCOME TAX

The basic source material used in allocating taxes on personal income was a distribution of tax payments by income class available from the Franchise Tax Board [28] However, owing to the fact that the tax data in this distribution was reported by adjusted gross and taxable income classes, it was necessary to reallocate the reported tax payments to

[27] *Annual Report of the Franchise Tax Board*, 1962, p A-40
[28] *Ibid*, p A-3.

family personal income classes before the distribution of the burden of this tax could be determined This reallocation was based on the assumption that approximately the same relationship would exist between the distribution of state income taxes by adjusted gross class and the unknown distribution of state income taxes by family personal income class as existed between the distribution of federal income taxes by adjusted gross and family personal income class Thus if the percentage of the total federal income taxes that had been allocated to a family personal income bracket was half as large as that in the same adjusted gross income bracket, it was assumed that this relationship would hold for state income taxes. To find the percentage of total state income taxes to be allocated to this family personal income bracket, therefore, the percentage allocated to the same adjusted gross income bracket by the Franchise Tax Board was divided by two.

CORPORATE INCOME TAX

As noted in the text, it is assumed for purposes of this study that one-third of the burden of taxes on corporate income is shifted forward to consumers in the form of higher prices, while the remaining two-thirds of the burden rests on the owners of corporate stock In line with this assumption, one-third of the $270,168,000 of tax revenue derived from corporation income taxes in 1961 was distributed to income classes in accordance with the percentage distribution of total consumption expenditures. The remaining two-thirds was distributed in accordance with a percentage distribution dividend income based on state income tax returns [29] With respect to the latter portion, however, a problem similar to the one discussed in the preceding section arose Available distributions of dividends are by adjusted gross rather than family personal income brackets In this instance, however, no attempt was made to reallocate the tax to the appropriate personal income bracket Had such a reallocation been made, the effect would have been to place more of the burden of this tax on those in the higher income classes

MOTOR VEHICLE TAXES

The procedure used in allocating of the revenue derived from motor vehicle registration and operators license fees and the "in lieu" tax among income classes is similar to that employed with respect to motor fuel taxes The first step was to divide the total collected into that which could be attributed to commercial vehicles and that which could be attributed to consumer owned vehicles Fortunately, the data needed to make this division was available from the California Department of Finance [30] Once determined, the amount collected on commercial vehicles was allocated to consumers in accordance with the percentage distribution of total consumption expenditures The remainder was also allocated to consumers but on a different basis The base used for this latter allocation was the percentage distribution of expenditures on automobiles.

PROPERTY TAXES

For the purpose of determining the burden of property taxes, the total revenue from this tax was divided into three parts corresponding

[29] *Ibid*, p A-40
[30] I am indebted to Mr Ralph Currie for providing me with this information

to the three major types of property upon which such taxes are levied Accordingly, 65 6 percent of the total collected was allocated to nonfarm residential property, 26 5 percent to commercial and industrial property, and the remaining 9 9 percent to agricultural property [31] Each of these amounts was then allocated to income classes in accordance with the assumed incidence of property taxes Thus, 90 percent of the amount allocated to nonfarm residential housing was apportioned on the basis of the percentage distribution of consumer expenditure on shelter and 10 percent on the basis of the distribution of rental income.[32] The amount allocated to industrial and commercial property, on the other hand, was distributed in accordance with the percentage distribution of total consumption expenditures This base was also used to distribute the portion of the tax levied on agricultural property that was assumed to be shifted forward The remaining portion of the agricultural share, that allocated to farm land and residences was, in the absence of more reliable data, allocated on the basis of a California percentage distribution of the family personal income of farm operators estimated by the writer using data for 1959 drawn from the decennial census of that year and a distribution of the family personal income of farm operators published by the Department of Commerce.[33]

HORSERACING AND BUSINESS LICENSE FEES

The assumed incidence of horseracing fees is on the bettor However, no data exists on distribution of such individuals by income class In the absence of such data, this tax was allocated in accordance with the distribution of expenditures on recreation. Business licenses were assumed to be shifted forward and were allocated to income groups in proportion to their total consumption expenditures.

H. Explanation of Estimate of California Personal Income

In order to estimate the distribution of family personal income in California, three different sets of data were employed. These included a percentage distribution of the United States population by family personal income class (column 1, Table XXXIII), a similar United States distribution by money income after tax class (column 2, Table XXXIII), and a percentage distribution of the California population by money income after tax class (column 4, Table XXXIII) The first two sets of data were available in the form needed from the Department of Commerce and the Bureau of Labor Statistics respectively.[34] The last however, was not and, therefore, had to be estimated from B L S. sample data drawn from the Los Angeles, San Francisco, and Bakersfield metropolitan statistical areas.[35]

As noted in the text, the procedure employed involved the use of the two national distributions to obtain a set of population relatives which

[31] This division was based on the assessed values of various types of locally assessed taxable real property as reported in U S Bureau of the Census, *Taxable Property Values, 1962*, p 47

[32] *Ibid*

[33] U S Bureau of the Census, *United States Census of Population, 1960, Detailed Characteristics, United States Summary*, p 599, U S Bureau of the Census, *United States Census of Population, 1960, Detailed Characteristics, California*, and U S Office of Business Economics, *Survey of Current Business* (April 1964), p 7

[34] *Survey of Current Business, op cit*, pp 7–11, and U S Bureau of Labor Statistics, *Survey of Consumer Expenditures, Consumer Expenditures and Income, B L S Report*, 237–38 (April 1964).

[35] *B L S Reports*, 237–52, 237–70, and 237–72.

were then applied to the California data in order to obtain the percentage distribution of the California population by family personal income class Thus column 3 of Table XXXIII in which the population relatives are presented was obtained by expressing column 2 as a percentage of column 1. Column 5 in which the percentage distribution of California consumer units by family personal income class is shown was obtained by multiplying column 4 by column 3 Column 6 which shows the number of California consumer units in each family personal income bracket was obtained by multiplying column 5 by 5,714,000, the estimated number of consumer units in California

The derivation of this latter figure deserves some additional mention because of the key role it plays in determining the proportion of the total amount collected from certain tax sources (e g motor fuel taxes) to be allocated directly to consumers. The data readily available for estimating the total population of consumer units in California consisted of Bureau of the Census estimates of the total population as reported in the *California Statistical Abstract, 1963,* and a B.L S. estimate of the average number of individuals per consumer unit.[36] However, when these data were used for this purpose, the figure obtained was clearly too large. Since the data on the total number of individuals in the population were known to be the more accurate, this indicated that the B.L.S estimate of the number of individuals in a consumer unit was too small. Therefore, data from Current Population Reports and from the Survey of Current Business were used to make an independent estimate of the number of individuals in a consumer unit.[37] It was this figure (2 92) by which the total population was divided to obtain the 5,714,000 figure mentioned above.

The next step in deriving a family personal income distribution for California was the estimation of personal income means for each income class. With one exception the procedure employed to obtain the esti-

mated means was completely analogous to that used in obtaining the distribution of consumer units That is, personal income and money income class means for the U S. were used to obtain relatives which were then applied to money income means for California in order to obtain the class means for the California personal income distribution [38] The exception related to income class "above $15,000." A comparison of the initial mean obtained for this bracket with the United States mean for the same bracket strongly suggested that the California estimate was much too low A new estimate of this mean based on independent data and was therefore obtained The technique utilized to accomplish this was to separate this income class into four subclasses · $15,000–$19,999; $20,000–$24,999; $25,000–$49,999; $50,000 and over. The number of consumer units and the personal income mean for each of these subclasses was then estimated on the basis of personal income data from the Department of Commerce and adjusted gross income data drawn from federal income tax returns.[39] Finally, these data were used to compute the mean which appears in Table XXX.

The final set of computations which was necessary in order to obtain the income distribution from which the tax burden ratios in Table XXX were calculated was to estimate the amount of federal income tax to be allocated to each personal income class This allocation was made on the basis of an estimate of the federal income tax rates which were applicable to each income class. This in turn was accomplished by simply adjusting Department of Commerce estimates of the tax rates which would apply nationally to account for the differences between the estimated California within class mean incomes and those reported for the United States as a whole.[40]

SECTION III

WHO DOESN'T PAY

I. PROPERTY TAX EXEMPTIONS: PURPOSE IN GENERAL

There are several major purposes for exempting various classes of property from the property tax Exemptions can be granted for administrative reasons, social policy reasons, or economic reasons

Government property is customarily exempt for administrative reasons As there is no revenue gain if a taxing jurisdiction taxes its own property, administrative costs of assessing and taxing would be expenses which could otherwise be saved. In general terms, property of one governmental jurisdiction will be exempt in another for similar reasons (but this does not hold true in all cases) see Section two, Part III C, page 20 Exemptions of government property can also be defended on social policy grounds There is no justification for taxing government property if the cost of imposing the tax exceeds the amount of revenue collected. Exemptions are also granted to properties which are more efficiently and equitably taxed in a different manner

Another justification for a property tax exemption is the manner in which the property is used If the property is used to provide functions which otherwise might have to be provided by government or used to further some social good, such property may be exempt from the burden of taxation. Most of the present exemptions can be justified under this theory. By means of a tax exemption, religious programs, youth activities, private schools, charity programs and homes for the poor and aged can be encouraged Care of the sick and promotion of health are also commonly accepted as activities resulting in public benefit. The concept of the public good is elusive, however, and the problem of drawing the line at what logically should be taxable is almost insurmountable.

Property tax exemptions are also granted for economic reasons By this means, special economic incentives can be created. Property might also be exempted if it is determined that taxation would have serious detrimental economic effects or create undue burden on certain classes of property.

All property tax exemptions involve a shifting of the tax burden to properties still on the tax rolls Often, however, the "savings" in governmental expenditures for certain activities, such as schools, care for the poor, etc, will exceed the cost of the exemption Where exemptions are granted to promote the public good or pursue some economic policy without compensating "savings" in governmental expenditures it is imperative that each exemption be fully evaluated to determine if it is fair, equitable and in the public interest for the balance of the taxpayers to pick up the tab for the exempt property

In summarizing the problem of property tax exemptions, the Advisory Commission on Intergovernmental Relations has stated·

> "The seemingly endless process of narrowing the property tax base has progressed so far, and in such diverse directions, as to

necessitate some forthright determination not only of where it should stop but how much of it should be repealed Step by step, exemptions place heavier burdens on those still required to pay, or reduce the responsibility of local governments by inducing them to depend increasingly on fiscal aid. No brief commentary can attempt to deal with all the legal, administrative, economic, social, and political pros and cons of property tax exemption; thus attention is restricted here to certain types of exemptions whose use may be seriously questioned or at least needs more careful control

The kinds of exemptions that should be curtailed or abolished include·

1. Exemptions that foster inequity and special privilege
2. Exemptions which are veiled subsidies to private interests that would be difficult to justify as frank State budget appropriations
3. Exemptions which are an ill-chosen and defective method of granting subsidies and awards and recognizing needs that may in themselves have been justifiable
4. Exemptions which unnecessarily and heedlessly complicate the tax system and add to the difficulty and expense of its administration "[1]

II. BACKGROUND

In California, real property tax exemptions are granted under provisions of the State Constitution Any change in the exemption status on such property can come about only through an amendment to the Constitution approved by the electors of this state The Legislature has been authorized to exempt from property taxation or classify any or all personal property.

Under the 1849 Constitution, there were no valid exemptions from property taxation, except for government property Prior to 1900, under the 1879 Constitution, exemptions were limited to growing crops, government property, fruit and nut bearing trees under four years of age, grape vines under three years of age, and privately owned property used for public libraries and museums.

In 1900, the proliferation of privilege began with an exemption for churches and Stanford University. Public bonds were added in 1902 and a limited amount of personal property of householders and the California Academy of Science were exempted in 1904.

Liberalization of the exemption provisions continued with the adoption of the veterans exemption (1911), exemption of vessels of more than 50 tons (1914), nonprofit colleges exemption (1914), orphanage exemption (1920), immature timber (1926), cemetery exemption (1926), exhibition exemption (1935), motor vehicle in-lieu tax (1935), and the welfare exemption (1944). Some of these exemptions have been extended in scope in recent years

[1] Advisory Commission on Intergovernmental Relations, *The Role of the States in Strengthening the Property Tax*, Vol 1, Washington, D.C, Government Printing Office, June 1963, pp 77–78

III. TOTAL ASSESSED VALUE EXEMPT

It has been virtually impossible to ascertain the total value of all untaxed property in the state Complete and reliable statistics are available only for a few exemptions—the veterans', church, college, welfare, and orphanages These properties are assessed by county assessors and values are reported to the State Board of Equalization In an attempt to close this knowledge gap, the Assembly Committee on Revenue and Taxation asked all county assessors to supply the committee with their best estimates of values for the various types of untaxed property within their jurisdiction [2]

The major stumbling block has been property owned by governmental units It has been impossible to get any reliable data as to the value of government property. Since government property is excluded from the tax base, it is not assessed and the county assessors have been unable to supply more than the crudest estimates of its worth Even these estimates do not include the value of highways, streets, and roads The securing of actual values by appraisal and the computing of adjustments would cost a fortune. Such an expenditure cannot be justified

From the information provided by the assessors and from other sources, we can say only that the total assessed value of property not on the tax rolls (including all government property) will fall somewhere between $6 5 billion and $28 billion A more precise estimate would only be misleading Of this total, the exempt categories which are recorded—veterans', church, college and welfare—had an assessment value of $1 57 billion in 1964.

There has been a decrease in the total dollar value of exemptions for the last two consecutive years However, these itemized exemptions as a percentage of total assessed valuation have been dropping since 1954, as Table I illustrates

TABLE I

Property Tax Exemptions Recorded by the State Board of Equalization

Year	*Assessed Value of Combined Exemptions*	*Percentage of Total Net Assessed Value*
1947	$414,152,000	3 76%
1948	500,316,000	4 10
1949	576,361,000	4 35
1950	654,123,000	4 80
1951	765,171,000	5 19
1952	843,449,000	5 23
1953	917,236,000	5 34
1954	1,012,161,000	5 55
1955	1,102,387,000	5 51
1956	1,206,425,000	5 52
1957	1,324,178,000	5.44
1958	1,401,768,000	5 39
1959	1,472,678,000	5 36
1960	1,546,147,000	5 22
1961	1.587,741,000	5 03
1962	1,639,338,000	4 91
1963	1,604,430,000	4 57
1964	1,572,389,000	4 27

SOURCE Computed from Board of Equalization *Annual Reports*, 1947–1964

[2] All but three counties—Sierra, Amador and Inyo—responded to the committee's request

IV. DISTRIBUTION PATTERN OF EXEMPTIONS

Exemptions are not evenly distributed among all taxing jurisdictions statewide In some, the assessed value of exemptions from the tax rolls is extremely high, while in others, exemptions are miniscule. The exemptions for which accurate statistical data are available—the veteran's, welfare, church and college, and orphanages—vary from a high of 7 5 percent of the taxable value in Napa County in 1964 to 6 percent in Mono County. See Table II.

TABLE II

Recorded Property Tax Exemptions by County: 1964

County	Amount	As a percent of taxable property	County	Amount	As a percent of taxable property
Alameda	$80,459,000	4 6	Orange	$82,329,000	4 0
Alpine	46,000	1 8	Placer	4,615,000	2 7
Amador	735,000	1 5	Plumas	863,000	1 1
Butte	6,549,003	3 2	Riverside	27,118,000	3 3
Calaveras	940,000	2 5	Sacramento	52,464,000	5 0
Colusa	618,000	1 1	San Benito	680,000	1 3
Contra Costa	38,047,000	3 4	San Bernardino	44,375,000	3 8
Del Norte	931,000	3 2	San Diego	108,957 000	5 8
El Dorado	3,183,000	2 4	San Francisco	88,897,000	5 4
Fresno	31,987,000	3 6	San Joaquin	28,953,000	5 5
Glenn	1,083,000	1 8	San Luis Obispo	5,214,000	2 2
Humboldt	7,185,000	3 7	San Mateo	46,416 000	4 4
Imperial	3,347,000	2 3	Santa Barbara	19,040,000	3 6
Inyo	878,000	1 8	Santa Clara	132,960,000	7 1
Kern	22,662,000	2 8	Santa Cruz	10,624,000	4 9
Kings	4,250,000	2 9	Shasta	6,220,000	3 3
Lake	1,176,000	2 4	Sierra	209,000	2 9
Lassen	1,218,000	4 5	Siskiyou	2,477,000	3 2
Los Angeles	563,667,000	4 2	Solano	10,737,000	4 8
Madera	2,364,000	2 0	Sonoma	13,344,000	4 1
Marin	16,239,000	4 3	Stanislaus	13,418,000	4 7
Mariposa	427,000	2 5	Sutter	2,827,000	2 2
Mendocino	3,354,000	3 5	Tehama	2,015,000	2 8
Merced	6,221,000	3 0	Trinity	420,000	2 5
Modoc	445,000	1 8	Tulare	10,448,000	2 8
Mono	178,000	6	Tuolumne	1,386,000	2 8
Monterey	14,432,000	3 2	Ventura	25,564,000	3 8
Napa	8,440,000	7 5	Yolo	3,025,000	2 9
Nevada	1,787,000	3 3	Yuba	2,711,000	3 7

The relative impact of these exemptions is even greater on governmental units within the county The cities of Los Angeles County have been selected as a representative sample to illustrate this phenomenon. In 1963, the statistical exemptions in the City of Claremont amounted to 33.74 percent of the total assessed value while in Vernon these same exemptions amounted to only 0 01 percent of the total assessed value Eight other cities in Los Angeles County have exemption ratios exceeding 10 percent—which is more than double the statewide average. (See Appendix III for relationship of exemptions to assessed value for all cities in Los Angeles County)

Citizens in a few cities are required to bear an artificially high tax burden due to a statewide exemption policy over which they have no control Richard Malcolm, City Manager of Claremont, told the Assembly Committee on Revenue and Taxation in Palm Springs.

"Local jurisdictions have little or no control over matters pertaining to exemptions. Although our fine colleges and retirement homes confer benefits beyond the city limits of Claremont, although

the functions of higher education and welfare for the aged are as much the concern of the State as they are of the community, our local jurisdiction and local citizens and taxpayers are carrying the major burden in financing municipal and other ad hoc services required by such institutions."[3]

Other local jurisdictions also have an unduly high proportion of public property within their borders. The loss of tax base often presents formidable challenges to the community to provide adequate local services.

The Advisory Commission on Intergovernmental Relations has recommended, as a partial solution to this problem that·

"In the instance of mandatory tax exemptions extended to individuals for such purposes as personal welfare aid and expressions of public esteem, the state should reimburse the local communities for the amounts of the tax loss."[4]

V. SPECIFIC EXEMPTIONS

A. *Public Property*

Most government-owned property in California is tax exempt—as it is in other states There are several reasons for this. Some United States government property is exempt under the Act of Congress admitting California to the union. Admission was granted on the condition that the state "shall never levy any tax or assessment of any description whatsoever upon the public domain of the United States[5] . . ." Most other federally owned property is exempt under this doctrine of intergovernmental immunity that stem from the U S Supreme Court's decision in *McCulloch* v *Maryland.* Property belonging to the State of California, counties, cities and school districts is exempt under Article XIII, Section 1 of the State Constitution.

"Property . . . as may belong to this State, or to any county, city and county, or municipal corporation within this State shall be exempt from taxation. . . ."

To tax government-owned property would, in effect, be taking money from one pocket and putting it into another. The additional cost involved in assessing and taxing such property would be nonproductive, and the cumulative effect would be an increase in governmental costs

Where a substantial amount of this type of tax exempt property is located in one taxing jurisdiction, it can severely restrict the tax base and create undue hardship. The federal government has a number of programs under which it attempts to compensate local governments on an "in-lieu" basis for the loss in tax revenue Probably best known is the P.L. 874 program under which California school districts were allocated $44,365,917 in 1962–63 because of the federal "impact" on the school districts. The State of California also provides local units of government with substantial financial support, however, the subventions are not correlated with state-owned property in an area

[3] Statement to Committee, February 29, 1964
[4] Advisory Commission on Intergovernmental Relations, *The Role of the States in Strengthening the Property Tax*, Washington, D C , G P O , June 1963, p. 12
[5] *9 United States Statutes at L*, Ch 50, p. 452, approved Sept 9, 1850.

Approximately 50 percent of the land area of California is owned by the United States government or the state itself. The federal government holds 49.7 million acres of land, while the state owns another one million acres, not including congressional land grants.[6] It is virtually impossible to get an accurate figure for the value at which this property would be assessed if listed on the tax rolls. In the course of our study we have received various estimates ranging from $3.5 billion to $19.7 billion.

B. Private Property Exempt Under United States Constitution

In addition to government-owned property, several classes of private property are protected from taxation by provisions of the United States Constitution.

Under the Commerce Clause of the United States Constitution, goods strictly in interstate transit are exempt from taxation if they happen to be passing through a state on the lien date. [*Vonn Hamm-Young Company, Ltd* v. *City and County of San Francisco* (1947) 29 Cal. 2nd 798.]

Imports and exports are exempt from taxation under Article 1, Section 10, Clause 2 of the United States Constitution, which states:

> "No State shall, without the consent of Congress, lay any imposts or duties on imports or exports except what may be absolutely necessary for executing its inspection laws."

One of the major problems in this area is the determination of what is an import or export. In so far as imports are concerned, for many years the "original package doctrine" was used to determine the taxability of imports. Under this doctrine, an import was not subject to any state tax so long as it remained the property of the importer in the "original package" or form in which it was delivered to him. [*Brown* v *Maryland* (1827) 12 Wheaton 419.]. In 1959, the United States Supreme Court further clarified the taxability of imports by ruling that the immunity from taxation is lost when imports are "irrevocably committed" to use in manufacturing at their point of final destination. [*Youngstown Sheet and Tube Company* v. *Bowers* (1959), 358 U.S. 354.]

As a result of this decision, beginning in 1960 some imports formerly tax exempt were assessed as personal property and taxed by local governmental units. It is reported that taxable imports that would have been exempt under earlier interpretation of the commerce clause had an assessed value of $16,516,478 in 1961.[7] In the Legislature, bills were introduced and passed the Assembly both in 1961 and 1963 which attempted to restore the "original package doctrine" to certain classes of imports.[8] All these measures were killed in the Senate. As the problems attendant to the taxation of all business inventories will be discussed subsequently, it will suffice at this point to note that the state Senate study of this problem came to the conclusion that, although this new tax burden caused considerable hardship on various industries using imported raw materials, the solution to the problem "does not

appear to lie in granting exemptions to certain types of personal property while leaving other types to bear the burden "[9]

C. Church Exemption

Churches and their equipment and property attendant thereto have been exempt from property taxation in California since 1900 After minor amendments in 1952, 1954, and 1956, Section 1½ of Article XIII of the State Constitution now provides·

> "All buildings and equipment, and so much of the real property on which they are situated as may be required for the convenient use and occupation of said buildings, when the same are used solely and exclusively for religious worship, and any building and its equipment in the course of erection, together with the land on which it is located as may be required for the convenient use and occupation of the building, if such building, equipment and land are intended to be used solely and exclusively for religious worship, shall be free from taxation; provided, that no building so used or, if in the course of erection, intended to be so used, its equipment or the land on which it is located, which may be rented for religious purposes and rent received by the owner therefor, shall be exempt from taxation "

All church property is not exempt under this section—just buildings, equipment used solely for religious worship, and that portion of the land necessary for the use of the church Additional church property not eligible for the church exemption may be exempt under the welfare exemption to be discussed later If only a portion of a parcel of property is used for church purposes and the balance is used for nonreligious purposes, a partial exemption can be granted

TABLE III

Church Exemptions

Year	*Number*	*Value*	*Church exemption as a percentage of total statewide assessed value*
1947	6,875	$56,254,000	51%
1948	7,193	61,445,000	50
1949	7,791	67,675,000	51

[9] California, Senate, *Inquiry, op. cit.*, pp 8–9.

Property tax exemptions for churches are based on the premise that the maintenance and encouragement of religion is of great benefit to society. A tax on church property would seriously cripple, if not destroy, the activities of a number of churches in California. In 1964, the total number of church exemptions was 13,919 with an assessed valuation of $288,940,000 Since 1947, the assessed value of property exempt coming under the church exemption has been increasing at a much more rapid rate than the assessed value of the state as a whole. From 0 51 percent of the total in 1947, the church exemption represents, as of 1964, 0 78 percent of the total assessed value of the state

To illustrate the magnitude and diversity of the exemption, churches receiving the exemption in the City of Berkeley have been selected as a sample Eighty-seven churches with an assessed value of $3,444,480 were off the tax rolls in Berkeley in 1963:

CHURCH EXEMPTIONS IN BERKELEY: 1963

Shepherd of the Hills Lutheran Church

One of the ambiguities of the constitutional provisions granting the church exemption is the term "religious worship" as used in Section 1½ of Article XIII. What is "religious worship"? Belief in a supreme being is not a prerequisite. In *Fellowship of Humanity* v. *Alameda County* (1957) 153 Cal 2nd 673, the court defined religion to include "(1) A belief, not necessarily referring to supernatural powers; (2) a cult, involving a gregarious association openly expressing the belief; (3) a system of moral practice directly resulting from adherence to the belief; and (4) an organization within the cult designed to observe the tenets of the belief."

The state would run into serious trouble if it set up a program to certify "bona fide" religions for the purpose of the property tax exemptions. But, on the other hand, the definition of religion is so loose as to open the door to various groups not generally thought of as religious groups but rather as associations of people. By proclaiming themselves religions, it is possible for fringe organizations to apply for tax exemptions for their property.

It is not necessary for property to be owned by a church to be eligible for a church exemption An individual who owns the land and the building where religious services are conducted regularly, but who receives no rent or other compensation for the use of such property may claim an exemption from taxation [*Havens* v. *County of Alameda,* (1916) 30 Cal App 266] Under this interpretation of the church exemption, it would be possible, providing the circumstances were right, for a land speculator to acquire a piece of potentially valuable property, allow a church to use the property for a period, and then boot the church out when the time for development is ripe. In this way, the speculator can hold a highly appreciating piece of property and pay no property taxes at all until he decides to develop it.

D. The Veterans' Exemption

The veterans' exemption from the property tax became a part of the California Constitution in 1911 by a vote of the people of the state It passed 106,554 "yes" to 96,891 "no". That total vote wouldn't be a respectable tally in some of our city council elections today but it has given the state a 53-year headache.

The original purpose of this exemption was to bring new citizens to the sparsely settled West A $1,000 exemption on all holdings up to $5,000 was of substantial value in 1911, and the $5,000 limit rarely applied Thus the exemption became blanket coverage for any man who had served in the wars of his country The veterans were from the Civil War, the Spanish-American War, and the Indian skirmishes of the wild West No one dreamed of the great wars which would follow 1911, but it is not fair to say we wouldn't have the exemption if these conflicts had been forecast

The exemption was never conceived as a reward, for military service in war or peace cannot be compensated in dollars and cents Appreciation for such service had been expressed in farm and home loans, educational funds, civil service preference, and a host of lesser known but equally important benefits If it were to be a reward, it would no doubt be restricted to men entering the service from California, and any reward would not be given only to specific classes of the veterans Those unable or unwilling to purchase a home or other locally taxable property are not eligible for the exemption

The property tax is now the revenue source for local government It supports our police, our fire departments, schools, libraries, and all the other vital services which touch our lives every day However, the statutes which govern the assessment and collection of this tax are all written at the state level

The exemption is granted by the state but really involves no cost to the state since the property tax supports local government; the state continues to grant exemptions to a tax it does not collect or administer, but the political effects of making any changes are staggering to imagine In 1964, the 845,959 veterans who received the exemption took more than $785,462,000 of assessed valuation from the tax rolls and shifted $62,800,000 in tax burden to noneligible veterans and nonveterans

TABLE IV

Number and Assessed Value of Veterans' Exemptions and Average Value of Veterans' Exemptions: 1964

County	Veterans' exemptions			County	Veterans' exemptions

SOURCE Computed from Board of Equalization *Annual Reports*, 1947–1964

The exemption is available to all veterans who own property in the state—if they don't own too much property In 1960, 55 percent of the male veterans, 25 and older, in California were receiving the exemption The other 45 percent were not eligible because their assets were too extensive or because they were renters rather than owners.

CENSUS FIGURES FOR 1960 SHOW:

Population—State of California	15,717,204
Population—State, 25 and older	8,873,827
Population—State, 25 and older, male	4,343,271
Population—State, 25 and older, male, veteran	2,155,629
Population—State, 25 and older, male, veteran, receiving exemption	1,168,961

Over three-fourths (77%) of the men in California between the ages of 40 and 44 are war veterans. Forty-eight percent of the men 25 and older have served in the armed forces during a war period

SOURCE *Veterans in the State of California, 1960*. Research Statistics Service, Office of Controller, Veterans' Administration, Washington, D C, April 1963 Contra Costa Grand Jury Report, 1963

Renters can't take advantage of the exemption on their living quarters and property owners with assets over $5,000 ($10,000 for married veterans) are not eligible Assets include assessed value of home or homes, assessed value of all other tangible property, and full value of savings accounts, cash, checking deposits, stocks, bonds, savings bonds, motor vehicles, cash surrender value of life insurance, noncompulsory retirement funds, and money owed the veteran on mortgages, trust deeds, and personal loans There should be very few veterans eligible for the exemption when all these items are carefully evaluated and totaled.

It is conceivable that a higher percentage of veterans will receive the exemption in one county than a group of equally situated veterans in another county due to the manner in which the exemption is administered by the county assessor, particularly the method by which the $5,000 limit is verified. The forms used by the 58 county assessors have not been uniform in their general questions nor specific enough in sections which deal with property problems peculiar to the geographic area involved. Rural county land holdings present different situations from those found in urban areas The State Board of Equalization has been working on a standard form which will improve this situation.

Some assessors say that they have neither the staff nor the authority to conduct an investigation where they feel the claim may be fraudulent The Contra Costa County Grand Jury report for 1963 indicated that in many cases business and professional men do not consider their business property when totaling their assets, hoping they can squeeze under the $10,000 limit This same grand jury found that in Contra Costa County 87 percent of those who claimed the exemption on homes assessed at $7,000 and above were not entitled to it. Most of these faulty claims were the results of misunderstandings rather than outright perjury on the part of the claimant.

Since eligibility for the exemption only involves service during a war or military action, between dates specified in the Revenue and Taxation Code, many men who never left the continental United States and others who served their wartime duty in military headquarters in large European cities are entitled to it. Some of these men lived in

more comfort during their service days than they could have found at home. Many other men performed their complete tour of duty between cessation of hostilities and declarations of peace—yet they may claim the same privileges as those who risked their lives in combat.

Once the veteran has qualified for the exemption he may claim it by mail in subsequent years This procedure seems too loose. We can't expect the assessor's office to hire staff to conduct an average of 10,000 to 20,000 personal interviews in the office (262,000 in Los Angeles County), nor can we imagine the physical problem of 20,000 veterans waiting in line at the assessor's office However, the simple post card form now sent out can only ask if the veteran's assets have changed enough during the year to disqualify him and allow a place for his signature. The temptation to sign your name when it will take $1,000 from the amount which will be taxed to you is too much for some people If the full form were mailed the individual would have to evaluate his holdings for the record each year The temptations to continue claiming the exemption would be reduced and proof of eligibility could more easily be established. As an alternative—or better, to supplement this method of application—a personal visit to the assessor's office one time in each four-year period would not be too much to ask. It might cost the claimant one hour or two from his job but two hours in four years is a small price compared with the value of the exemption.

The original intent of the exemption has been served adequately and long since forgotten Changes in the administration cannot be said to deny a right to those now receiving the benefit since "the reward for service" theory is a misunderstanding on the part of the recipient Suggested improvements in administration are designed to dissuade those who are claiming fraudulently or through some misunderstanding of the intent of the exemption Even with administrative improvements, it is clear that this exemption is unfair in its coverage, unfair in its enforcement, and unfair in its application.

E. College, library and museum exemption

California's Constitution contains a series of sections pertaining to property tax exemptions for private colleges, free museums and free public libraries In general, all private, nonprofit educational institutions of a collegiate grade are exempt from property taxation under Section 1a of Article XIII In addition, there are separate sections allowing the exemption of property of Stanford University (Article IX, Section 10), California School of Mechanical Arts (Article IX, Section 11) and Cogswell Polytechnical College (Article IX, Section 13)

Exemptions are also extended to free museums (Article XIII, Section 1), the California Academy of Sciences (Article IX, Section 12), free public libraries (Article XIII, Section 1) and the Henry E Huntington Library and Art Gallery (Article IX, Section 15)

The purpose of these exemptions is to encourage the improvement of educational opportunities for the people of the State of California to the end that they will become more useful and productive citizens. These institutions are also performing a function which might otherwise have to be provided by government

As of 1964, the total assessed value of the tax-exempt private colleges was $135 million This represented slightly more than one-third of 1 percent of the state's total assessed value The college exemption remained relatively constant from 1947 through 1959 In 1960, this pattern changed and the college exemption recently has been growing faster than the assessed value of the state as a whole

TABLE VI
College Exemption: 1947–1964

Year	*Number*	*Value*	*College exemption as a percentage of the total assessed value of the state*
1947	75	$31,102,000	28

It should be noted that the private college exemption has a very uneven distributional pattern statewide In most counties this exemption results in no loss in assessed valuation from the local tax base As table VII illustrates, in the remaining 20 counties, the private college exemption ranges from 2 79 percent of the total assessed value of Santa Clara County to 0 01 percent of the total in Fresno County.

TABLE VII
College Exemption by County: 1964

County	*Number*	*Value*	*Percent of total county assessed value*
Santa Clara	8	$52,001,000	2 79
Napa	1	963,000	86
Marin	5	3,110,000	82
San Joaquin	2	3,476,000	66
Los Angeles	49	48,440,000	35
San Mateo	7	3,520,000	33

Monterey	1	104,000	02
Fresno	1	157,000	01

SOURCE Board of Equalization *Annual Report*, 1963–64.

Prior to 1963, the private college exemption was limited to 100 acres for each institution. This provision was repealed by a vote of the people in November 1962 While the 100-acre limit was very unrealistic,[10] the present wording of the exemption which allows an unlimited exemption is equally unrealistic. It would be possible for a private college to be founded with a campus of thousands of acres This property could be used exclusively for educational purposes—such as intensive wildlife study—and be tax exempt If this were to happen, the tax base of the local governmental units might be severely restricted. A limit of 2,000 to 3,000 acres might be more realistic.

Another problem with the college exemption is in the determination of "collegiate grade" It is doubtful that it was the voter's intent in establishing this exemption to grant tax relief to diploma mills. Therefore, the Legislature has defined "collegiate grade" as·

> ". . . an institution incorporated as a college or seminary of learning under laws of this State, which requires for regular admission the completion of a four-year high school course or its equivalent and confers upon its graduates at least one academic or professional degree, based on a course of at least four years in liberal arts and sciences, or on a course of at least three years in professional studies, such as law, theology, education, medicine, dentistry, engineering, veterinary medicine, pharmacy, architecture, fine arts, commerce or journalism "[11]

It is clear that our forefathers acted wisely in approving the college exemption. The development of our human resources through education has created in California a standard of living unmatched anywhere in the world In this achievement, our private colleges have played an important part.

F. The welfare exemption

1. ADOPTION OF THE WELFARE EXEMPTION IN CALIFORNIA

In 1944, the "welfare exemption" (Article XIII, Section 1c) was added to the California Constitution, by a vote of the electorate[12] This amendment authorized the Legislature to exempt from property taxation the property of various types of "welfare" organizations used for religious, hospital or charitable purposes Subsequently, legislation was enacted exempting such property from property taxation bringing California into conformity with the 47 other states which had already allowed this exemption.[13]

In support of this amendment, proponents advanced the argument that while the loss in the tax base would cost the taxpayer possibly 1 cent per $100 of assessed value, "additional health and welfare services resulting from the exemption would save the entire exemption cost" They also assured the voters that "the meaning of every phrase has been clearly defined by the taxing authorities and by the courts"

[10] Only three state colleges, Humboldt (96), Los Angeles (97), and San Francisco (93), operate on campuses of less than 100 acres Fresno State has a 1,423-acre campus, and San Luis Obispo has 2,536 acres

[12] This amendment, Proposition No 4 at the general election on November 7, 1944, carried by a vote of yes 1,532,141 to no 1,277,160.

[13] *Statutes of 1945*, Chapter 241.

and that competent legal authority had advised "that schools other than colleges will not be exempted under this amendment because the Legislature expressly eliminated the term 'educational.'"[14]

Assemblyman T. Fenton Knight, opposing the measure, challenged the principle of letting the Legislature control the exemption and observed that a tax exemption was

> "a subsidy by the entire community . . . [for an enterprise] in which only a small part may have any interest or even be in sympathy."

He also noted that each additional exemption establishes a precedent for future ones.[15]

Despite the assurances given the voters in 1944, the 1951 Legislature extended the welfare exemption to property used exclusively for schools of less than collegiate grade owned and operated by nonprofit religious, hospital or charitable organizations.[16] This action was put to the electorate in the form of a referendum and sustained 2,441,005 to 2,363,528. Voters were told by the proponents that private schools relieve the overcrowded public schools and save the taxpayers hundreds of millions of dollars and that "penalty taxation" of church school was a violation of the principle of the separation of church and state.[17]

The opposition also used separation of church and state as an argument, charging a tax exemption is a subsidy and a violation of the principle of the separation of church and state. They also complained about the narrowing of the tax base and the fact that assurances had been given to the voters that schools would not be included in the welfare exemption.[18]

In *Lundberg* v. *Alameda County* (1956) 46 Cal. 2nd 644, the California Supreme Court ruled that the term "charitable" as used in Article XIII, Section 1c of the Constitution authorizes the exemption of schools of less than collegiate grade.

In 1954, the only subsequent amendment to Section 1c was approved to allow an exemption for property in construction that would otherwise qualify. At present, Article XIII, Section 1c reads as follows:

> "In addition to such exemptions as are now provided in this Constitution, the Legislature may exempt from taxation all or any portion of property used exclusively for religious, hospital, or charitable purposes and owned by community chests, funds, foundations, or corporations organized and operated for religious, hospital, or charitable purposes, not conducted for profit and no part of the net earnings of which inures to the benefit of any private shareholder or individual. As used in this section, 'property used exclusively for religious, hospital or charitable purposes' shall include a building and its equipment in the course of construction on or after the first Monday of March, 1954, together with the land on which it is located as may be required for the use and occupation of the building to be used exclusively for religious, hospital, or charitable purposes."

[14] California, Secretary of State, *Proposed Amendments to the Constitution, General Election, November 7, 1944*. California State Printing Office, 1944, p. 4.
[15] *Ibid.*
[16] *Statutes of 1951*, Chapter 242.
[17] California Secretary of State, *Amendments to the Constitution, General Election, November 4, 1952*, California State Printing Office, 1952, p. 4.
[18] *Ibid.*, p. 5.

It should be noted that the welfare exemption extends to taxes on property but not to special levies [*Cedars of Lebanon* v. *Los Angeles County* (1950) 35 Cal 2nd 729.]

2. ELIGIBILITY FOR EXEMPTION

It has been the general rule in California that tax exemptions are the exception and that ambiguities are to be construed strictly against the taxpayer [*Cypress Lawn Cemetery Association* v. *San Francisco* (1931) 211 Cal 387] although more recent decisions have held that the statutes should receive a fair and reasonable interpretation which should carry out the apparent intent of the Legislature. [*Moody Institute of Science* v. *Los Angeles County* (1951) 105 CA 2nd 107.]

To qualify for a property tax exemption under the welfare exemption, property must meet the criteria set forth in Section 214 of the Revenue and Taxation Code as follows:

A—*Property must be owned and operated by community chests, funds, foundations, or corporations organized and operated for religious, hospital, or charitable purposes and must be used exclusively for religious, hospital or charitable purposes.*

There are no definitions of these terms in the code and, due to their ambiguous nature, wide differences of opinion on interpretation result In the absence of legislative declaration, the courts have established some guideposts for county assessors to follow.

What is a religious purpose? The law is unclear as to just what is included and what should be included under the term religious purpose. The term religious does not require a belief in a supreme being. In *Fellowship of Humanity* v. *Alameda County* (1957) 153 CA 2nd 673, the court defined religion to include:

"(1) a belief, not necessarily referring to supernatural powers;
(2) a cult, involving a gregarious association openly expressing the belief;
(3) a system of moral practice directly resulting from an adherence to the belief; and
(4) an organization within the cult designed to observe the tenets of the belief."

In *House of Rest* v. *Los Angeles County* (1957) 151 CA 2nd 523, the court stated the test for determining whether the property is used exclusively for religious or charitable purposes is not whether such property is essential, indispensable and necessary for the accomplishment of such purposes but whether the use is incidental to and reasonably necessary for the accomplishment of such purposes.

The space occupied by a pantry snack bar, a gift shop, and a beauty shop on the grounds of a religious organization (the "I Am" sect) were declared to be tax exempt due to the evidence which the court said indicated these facilities were operated by the organization, not primarily for profit, but to serve the convenience of persons assembled for religious purposes. [*Saint Germain Foundation* v. *County of Siskiyou* (1963), 212 CA 2nd 911]. The residential facilities of this same

religious organization were declared tax exempt where these facilities were used by the followers who assembled in conclave in the Siskiyou mountains for two weeks each year for religious instruction. The residential quarters of the caretakers required to reside there for reasons of institutional necessity were also declared tax exempt

What is a hospital purpose? A hospital purpose may be easier to define than a religious purpose, but litigation has resulted from problems of interpretation in this area too Generally speaking a hospital is an institution which is operated for the diagnosis, care and treatment of the ill and is equipped to provide room and board A hospital is entitled to a welfare exemption even if it is not a charitable activity, providing it otherwise qualifies [*Cedars of Lebanon Hospital* v. *Los Angeles County* (1950) 35 C 2d 729] In this case, the court also ruled that property of a hospital devoted to housing of essential hospital personnel, to the conduct of a nurses' training school and to a tennis court maintained as a recreational facility for hospital employees was also exempt.

A sanitarium and a clinic are distinguishable from a hospital under the Cedars of Lebanon decision and do not qualify for the exemption However, Section 214 9 of the Revenue and Taxation Code, enacted in 1959, extended the welfare exemption to "outpatient clinics" where emotionally disturbed children are treated.

What is a charitable purpose? Webster defines "charity" as "an organization or institution engaged in the free assistance of the poor, incapacitated, distressed, etc." and "an institution founded by a gift and intended for use of the public."

California's courts have expanded the definition of "charity" to include almost any public good Charity has been defined as "a gift to be applied consistently with existing laws for the benefit of an indefinite number of persons—either by bringing their hearts under the influence of education, or religion, by relieving their bodies from disease, suffering or constraint, by assisting them to establish themselves in life, or by erecting or maintaining public buildings or works, or by otherwise lessening the burdens of government." [*Lundberg* v. *County of Alameda* (1956), 46 Cal 2nd 644; *Samarkand of Santa Barbara, Inc.* v. *County of Santa Barbara* (1963) 216 ACA 3807.]

In the Samarkand case, the court noted that if the benefit conferred has a sufficiently widespread social value, a charitable purpose exists and observed that gifts or trusts for educational institutions, the promotion of woman's suffrage, the publishing of religious writing and even the relief of dumb animals have been held charitable.

Charity includes the needs of the rich as well as the poor. [*Fredericka Home* v. *San Diego County* (1950) 35 Cal 2nd 789; *Fifield Manor* v *County of Los Angeles* (1961) 188 Cal. App. 2nd 1.] In the Fifield case, the court held:

> "The test is not found in the question of what financial ability does the recipient possess, but what are his needs, alleviation of which constitutes a worthy social value. We apprehend that the financial test becomes pertinent only when the occupants of an old age home pay more than the cost to the home of what it furnishes them."

Any standard of care, no matter how lavish or exclusive, would appear to meet the standards for qualifying as "charitable." Implicit in the Fifield decision is also the view that "charity" can include furnishing a "social good" at cost rather than at some expense to the donor.

California's Supreme Court has also ruled that the word charitable is broad enough to include nonprofit schools of less than collegiate grade of religious, hospital and charitable institutions [*Lundberg* v. *County of Alameda* (1956) 46 Cal. 2nd 644.] Section 214.5 of the Revenue and Taxation Code specifically exempts such schools under the "welfare exemption."

Court definitions of charity and charitable purpose as cited above are sufficiently broad to invite many organizations which have not qualified for a property tax exemption but which do qualify for an exemption from the Bank and Corporation Tax (Revenue and Taxation Code, Sections 23701–23705) to file for this further exemption. Only 4,287 organizations received a property tax exemption in 1963, while 62,631 organizations were granted an income tax exemption.

B—The owner and operator of the property must not be organized or operated for profit

There is no general definition of profit in the property tax law. However, Section 214 defines profit for hospitals, as the excess of operating revenue, exclusive of gifts, endowments or grants-in-aid, over operating expenses by more than 10 percent of the operating expenses.

C—Private Benefit.

No part of the net earnings of the owner may inure to the benefit of any private shareholder or individual, and the property must not be operated to benefit anyone through payment of excessive charges or compensations or through the more advantageous pursuit of their business or profession.

This requirement attempts to close the large loophole whereby an operation may be technically "nonprofit" but huge amounts are being taken out through excessive salaries, sales of assets at reduced rates, payment of excessive sums for contracts, etc.

What is "excessive"? As a standard, Section 254.5 of the Revenue and Taxation Code directs that a comparison of the amount paid for services and salaries in comparable public institutions be made as one test. Similarly, operating costs must bear a reasonable relationship to operating costs of like nonexempt property. Problems relating to this requirement will be examined in some detail in a subsequent section.

D—Property Use.

The property must not be used by the owner or members thereof for fraternal or lodge purposes or for social club purposes except where such use is incidental to the primary exempt purpose.

E—Irrevocable Dedication.

The property must be irrevocably dedicated to exempt purposes and upon dissolution must not inure to the benefit of any private person except a fund, foundation or corporation organized and operated for religious, hospital, or charitable purposes. However, Section 214.3 provides that property used for 20 years for charitable or hospital pur-

poses need not be irrevocably dedicated. This requirement of irrevocable dedication has been seriously eroded by court decisions, legislative amendment and administrative practice and will be discussed in detail in a subsequent section.

3. PROCEDURE FOR OBTAINING EXEMPTION

To gain a welfare property tax exemption, an organization must, by April 1, file an application with the assessor in each jurisdiction which assesses the property. This would normally be the county, but in several cases cities do their own assessing. In past years the Legislature has made it a practice to pass legislation excusing from taxation those institutions which would otherwise qualify but which failed to file by April 1

Applicants for an exemption must furnish assessors with information about the use of the property and the financial records of the organization. If it is the first claim by an organization, a copy of the articles of incorporation must be included These are checked for the nonprofit clause, the irrevocable dedication clause, the dissolution clause and the purpose of the organization.

The assessor reviews this material and sends it, along with his comments and findings, to the State Board of Equalization for a recommendation. The state must review the affidavits and statements and may institute an independent audit for verification of the operations of the owner and operator to ascertain whether both meet the requirements for an exemption The findings of the board are then returned to the county assessor, who may approve or deny the application regardless of the board's findings The board has no authority to compel the counties to accept their findings; the county may do as it wishes All authority for granting exemptions from the property tax resides with the local assessor A borderline organization may receive the exemption in one county and have a branch office denied in another county For that matter, a single piece of property may be granted the exemption by the county and denied by a city assessor within the county.

4. INSTITUTIONS NOW EXEMPT

An examination of the applications for the welfare exemption in the files of the State Board of Equalization indicated at least 4,351 welfare exemptions were granted in 1963 On 44 other applications, the board has received no word from the county assessor on whether the board recommendation for denial had been sustained [19]

Of the total, charitable exemptions constituted the largest segment—1,922 exemptions Schools accounted for 1,317. The largest single group is Catholic schools—784 of which qualify for an exemption A group by group breakdown of the types of organizations receiving a property tax exemption follows

[19] The annual report of the State Board of Equalization will show 4,265 welfare exemptions This statistic is compiled by the Division of Research and Statistics from information furnished in aggregate by the county assessors The figures used here are taken from the compilation of the applications which are processed individually through the Division of Assessment Standards of the State Board of Equalization The slight discrepancy between the two figures may be accounted for by the county assessors lumping several exempt parcels in one county owned by the same organization as one exemption while the state board counted each exempt property separately.

GRAND TOTAL	4,351	310	44

* Prepared by the staff of the Assembly Committee on Revenue and Taxation. Based on information in the files of the Division of Assessment Standards of the State Board of Equalization.

Of the 4,705 requests for an exemption in 1963, the state board recommended that 455 be denied The board recommendations are not binding on county assessors, so the final tally shows only 310 denied and 44 others on which information is not available. If the State Board of Equalization's recommendations had been followed in all cases, taxes would have been imposed on approximately $3,000,000 of assessed valuation that was listed in the exemption column

5. FISCAL IMPACT OF WELFARE EXEMPTION

Property totaling $362,360,000 in assessed valuation was exempt from taxation under the welfare exemption in 1964 This amounted to almost one percent of the total assessed valuation of all property in the State of California The welfare exemption has continued to grow each year both in gross amount exempt and in amount exempt in relationship to total assessed value It has increased drastically in comparison with the other major exemptions—the church, college and veterans exemptions (See Tables IX and X)

Los Angeles County had the largest gross amount of property exempt under the welfare exemption in 1964—$155,874,000—but, in percentage of total assessed valuation, San Francisco County had 2 51 percent of its total assessment off the tax rolls as a result of this tax provision, compared with 1 15 percent in Los Angeles County.

6. PROBLEM AREAS

a. Excessive Salaries

Section 214 of the Revenue and Taxation Code prohibits the payment by tax-exempt organizations of "excessive charges or compensations" in an attempt to close an obvious loophole by which a "nonprofit" organization can be lining the pockets of its promoters. As a guide to what is excessive, Section 254 5 directs attention to comparable salaries in public institutions

Yet, this is hardly adequate as a definition or even as a benchmark. In many instances, there are no comparable public institutions; where there are, jobs may not be comparable. What should be the annual salary of a professional fund raiser? for an administrator of an old folks' home? for a tenor in a religious singing group?

The Welfare Federation of the Greater Los Angeles Area, an organization which raises approximately $9 million a year, in 1963 paid salaries as follows:

Secretary and general manager	$23,700
Campaign director	21,000
Twelve others over	10,000
Nineteen others over	7,500

Clifford Weinning received $20,000 as the executive manager of the Fifield Manors Are these salaries excessive? What would comparable public salaries be? A large salary for a large organization may be more readily justified than a medium-sized salary of a small organization.

An example of an organization which received a welfare exemption in 1963, although the State Board of Equalization recommended a denial on the basis of excessive salaries, is the Crew of the Good Ship Grace, Inc. of 2400 Hyperion Avenue, Los Angeles. The Crew of the Good Ship Grace produces religious radio programs which are distributed on tapes to radio stations around the world Of their total expenditures, $243,327 94 is spent for radio time and tapes; $217,116.73 is spent for payroll; $41,020.28 for miscellaneous, and $1,172 20 for gardening service to maintain a very modest garden.

The state board stated that the following salaries are "in excess of those generally acceptable for religious organizations and appear to enhance private gain":

"First Mate Bob," President	$500/week	($26,000)
Vice President	245/week	(12,740)
Secretary	205/week	(10,660)
Quartet bass, music librarian	225/week	(11,440)
Station relations	220/week	(11,440)
Office manager	220/week	(11,440)
Quartet baritone, music arranger	220/week	(11,440)
Quartet tenor, tape editor	220/week	(11,440)
Organist	220/week	(11,440)
Head of printing department	205/week	(10,660)

Another organization, the International Communications Foundation, 870 Monterey Pass Road, Los Angeles, expended, according to information filed with the Board of Equalization in 1963, $105,118 of $260,056 total expenditures for salaries not including $10,371 for sales commissions and $8,488 for advertising The president of the organization receives $291 per week ($15,132 annually).

b. Conflicts of Interest

Closely akin to the problem of excessive salaries is the problem of conflicts of interest If the director of a nonprofit organization has an interest in a closely associated profitmaking organization, he can deal with himself at a nice profit and keep part of the activity tax exempt. The problem is compounded where the nonprofit organization sells assets at less than market value or buys goods or services at inflated prices

A recent case turning on this point was *St. Germain Foundation* v. *County of Siskiyou* (1963) 212 CA 2nd 911. The St. Germain Foundation is a nonprofit corporation organized in Illinois to propagate the teachings of the "I Am" religion. The foundation, founded in 1932 by Edna W Ballard, has a number of exempt properties in California including grounds for the holding of conclaves and pageants in Siskiyou County. The St Germain Press is a corporation organized for profit, and Edna W. Ballard is the sole stockholder of record. The Press is the sole source where official literature pertaining to the "I Am" religion may be obtained

In denying an exemption, Siskiyou County argued that "since The Press was admittedly a profit corporation and since all members of the organization had to buy their religious literature from The Press, the holding of the conclaves benefited The Press."

The court, in overturning Siskiyou County and allowing the exemption, said:

> "But the evidence shows that The Press advanced funds to the Foundation; that the benefits flowed from The Press to the foundation; and that no net profit was made by The Press We do not believe that the fact that The Press sold books at the pageant required a determination that the property was used for the advantageous pursuit of The Press. The sale of religious literature at the conclaves was to promote and foster the precepts of the foundation, and even though The Press could benefit from such activities this would not prevent the foundation from being exempt from taxation." [*Saint Germain Foundation* v. *County of Siskiyou* (1963), 212 CA 2d 911]

c. Lack of Accurate Assessing

Statistical data on the amount and value of property off the tax rolls under the welfare exemption are not precise as there is no incentive for the assessor to spend a great deal of time on properties which are exempt from taxation. Ronald B. Welch, Assistant Executive Secretary of the Board of Equalization and an expert on property taxation, has stated:

> These assessments (on life care homes) are frequently unrealistic since no taxes hang in the balance when the tax exemption is not in dispute [20]

d. Veterans' Halls

Section 215 of the Revenue and Taxation Code purports to bring property owned by veterans' organizations chartered by Congress and used exclusively for the purposes of such organizations under the

[20] Letter from Ronald B. Welch to Arthur E. Buck, Jr., dated December 13, 1961.

umbrella of the "welfare exemption." It was the intent of the Legislature at the time (1945) that these properties be exempt from taxation. However, this section has been ruled as unconstitutional by the Attorney General (See Ops Atty Gen 46-132). In arriving at this position, the Attorney General stated, in part:

> We believe that in view of the strong evidence that the voters believed that the welfare exemption was to be confined within narrow limits (see argument to voters) this extension of the definition of the word "charitable" was beyond the power of the Legislature.
>
> It will be noted that Section 215 applies only to organizations which are chartered by Congress. It does not apply to corporations organized by local posts or chapters of such organizations for the purpose of holding title to their property (*Compare Legion Clubhouse, Inc.* v. *City of Madison*, 248 Wis. 380)
>
> Section 215 purports to exempt all property used for the purposes of these veterans' organizations and would, therefore, apply to buildings used for their meetings and social gatherings
>
> We are of the opinion that property so used is not used for charitable purposes within the meaning of Article XIII, Section 1c of the Constitution and that Section 215 is unconstitutional to the extent that it purports to exempt real property not actually used for charitable purposes.

In 1963, four county assessors were granting tax exemptions for veterans' halls, as follows:

County	*Number*	*Assessed value*
Fresno	15	$84,080
Los Angeles	97	1,047,720
Siskiyou	2	2,835
San Luis Obispo	2	7,960

In 1964, Los Angeles County placed these veteran halls on the tax rolls.

e. *Exemptions for Housing*

INTRODUCTION

A number of nonprofit institutions providing housing for various groups of persons have been granted property tax exemptions as a result of court decisions, interpretations of those decisions and by administrative action Aside from the fiscal implications of these exemptions, a basic underlying problem is that of equity.

Is it fair for most of the citizens of California to pay, directly or indirectly, property taxes on their living quarters while a segment of the population resides in tax-exempt institutions? Can exempting the living quarters of those who can afford expensive institutional housing and taxing the inferior housing of others be justified? Is there enough of an overriding social purpose to make a genuine distinction? If so, where and how should the line between taxable and tax exempt housing be drawn? What *quid pro quo* should be required of the exempt property?

There is nothing in the Constitution or Section 214 specifically mentioning a tax exemption for housing This exemption has been inferred

from the exemption of charitable institutions. There are primarily three types of living quarters exempt from taxation—quarters available to all, quarters for special groups, and quarters for the aged. (See Appendix II).

GENERAL HOUSING

Classified in the first category—living quarters for all—would be the YMCA's and the Salvation Army which also maintain residence hotels that compete with surrounding taxable residential quarters.

SPECIAL HOUSING

Quarters for special groups include housing for those who, for reasons of institutional necessity, must be domiciled at an institution It would also include housing at summer camps sponsored by religious or charitable institutions. Also exempt are institutions such as the Hamburger Home and the Huntington Hartford Foundation.

The Hamburger Home at 7357 Hollywood Boulevard in Los Angeles is a residence for approximately 56 girls away from home. On the application for an exemption, the home stated that the primary focus is on the adjustment process of unattached girls living away from a home environment. The home provides low cost room and board and counseling on an individual basis for social problems Amount of exempt property at the home totals $69,930. There are other tax-exempt homes for wayward youth which serve the same charitable purpose It can be argued that homes such as these are laudable and should be encouraged by all means available including tax favors in this age of increasing juvenile delinquency. They provide a service which might otherwise have to be maintained by government. On the other hand, it can be pointed out that many young girls away from home live at places which are fully taxable.

The Huntington Hartford Foundation of Pacific Palisades provides housing and working facilities for artists and writers Property of the foundation which is tax exempt for this function totals $98,620. The foundation, in presenting its case for a tax exemption, asserts that the creation of works of art and of a literary character are clearly objects beneficial to the community.

In *House of Rest* v. *County of Los Angeles* (1957) 151 AC 2d 523, a home for missionaries while residing in the United States was held to fall within the religious element of the welfare exemption.

HOMES FOR THE AGED

The third category—homes for the aged—is the most controversial of the three. Tax-exempt status has been given to nonprofit homes for the aged in order to encourage private charities to perform functions at private expense which the state otherwise might have to perform with tax revenue

The Department of Social Welfare states that such homes are designed for persons needing a substitute home where services are available to support their maximum independence and to encourage their continuing participation in the activities of normal living Those served by such homes include. (1) socially isolated persons who need or prefer a living plan where friends and companionship are available; (2) frail persons who are no longer able to carry housekeeping responsibilities,

and (3) persons who need or want some oversight or personal assistance of the kind normally provided by relatives to an aged member of the family

The controversy in this area stems from the fact that many of these tax exempt homes are rather opulent in nature and charge entrance fees, life care fees or other fees which are beyond the means of the average person Many older citizens who barely make ends meet live in their own homes or other lodging on the tax rolls

While attempts have been made by local assessors to restore the more expensive homes for the aged to the tax rolls, the courts on a number of occasions have stated that charity includes much more than the care of the poor or needy. The rich have needs too, the courts have ruled, the satisfaction of which is a worthy social value [*Fredericka Home for the Aged* v. *County of San Diego* (1950) 35 Cal 2d 789, *Fifield Manor* v *County of Los Angeles* (1961) 188 CA 2d 1, *Samarkand of Santa Barbara, Inc.* v. *County of Santa Barbara* (1963) 216 ACA 380 as cited above]

A distinction is generally drawn between the life-care homes for the aged and those operating on a monthly payment basis Life-care homes—homes licensed by the state to enter into contracts with old people to provide care for a period of not less than a year and usually for life—have drawn the most attention This is primarily due to the high "accommodation" and "life care" charges which are required at some homes as a prerequisite to entrance [21] An "accommodation" or entrance fee is considered to be the payment for living quarters for life It is usually graduated with the size of the accommodations In addition, the age of the resident at the time of entry will determine what charge is made. Examples of some of the higher entrance charges at selected homes are·

Samarkand—$7,000 minimum and up
White Sands of La Jolla—$7,500 minimum and up
The Sequoias—$21,500 for couple—age 65
Fifield Manors—$8,377 average admission fee

The "life care" fee, if paid in monthly installments, usually runs from $100 to $350 per month At Fifield Manor, the average is approximately $245 a month. Lump sum life care will vary with the age of the resident At age 65 at Samarkand, the life care lump sum charge as stated in the Board of Equalization records is $18,800 for a woman and $15,750 for a man.

It is impossible to generalize with respect to these homes which provide care for the aged. They range from very small, modest buildings to those of the most recent construction and modern design to palatial estates Some have bungalow living units, others have apartments within one institutional building, while still others provide only dormitory-type living quarters Medical facilities vary from the most minimal requirements to elaborate clinics Some are closely related to a church, while others are completely secular.

On January 1, 1964, there were 141 homes for the aged receiving tax exemptions in California on an aggregate assessed valuation of $25,495,525. Of these, 51 were licensed by the Department of Social

[21] In lieu of a lump sum, however, the "life care" fee can usually be paid on a monthly basis.

Welfare to enter into life care contracts. The aggregate assessed value of these 51 homes as of January 1, 1964, was $14.833,875 This represents an increase of $4,667,609 in assessed valuation of life-care homes in a two-year period

The six life care homes with the highest assessed valuations are:

Wesley Palms—San Diego	$1,142,970
Congregational Homes—Pomona	1,059,790
The Sequoias—Portola Valley	764,320
Kingsley Manor—Los Angeles	756,640
White Sands of La Jolla—La Jolla	735,810
Southern California Presbyterian Homes—Duarte	713,660

The six homes for the aged, other than life care, with the highest assessed value are:

Senior Citizens Village—Fresno	$1,027,780
Portola Senior Citizens Village—Antelope Valley	823,950
Masonic Home of California—Union City	686,100
Channing House—Palo Alto	628,210
Pilgrim Place—Claremont	610,770
Eastern Star Homes of California—Los Angeles	368,120

A complete list of all homes for the aged receiving tax exemptions in 1963 can be found in the appendix, with assessed valuations and additional statistical data.

The question of a tax exemption for life-care homes was studied intensively by the Assembly Revenue and Taxation Committee during the 1961–63 interim. In a report filed with the Legislature in 1963, the committee recommended that the exemption be limited to "$1,000 of assessed value for each aged resident of the institution.[22] " AB 641 was introduced at the 1963 session of the Legislature patterned after the committee's recommendations After several amendments, this measure was referred for more interim study.

A meeting for this purpose was held February 28, 1964. Propopents and opponents testified at length on the bill and on the problem in general A summary of their main points follows.

Arguments for a Tax Exemption:

1 Decent housing for the aged is a pressing social need which has not been met. According to a recent study by the State Senate Subcommittee on Housing and Recreational Needs of Elderly Citizens,[23]

> "There exists in California an acute shortage of sanitary and safe housing facilities for older persons of low income which has resulted in thousands of senior citizens being denied adequate housing at rents they can afford to pay; and . . . the number of elderly persons in California is so rapidly increasing that unless emergency steps are immediately taken to provide additional housing which meets their needs, the shortage will constitute a grave menace to the health, safety and welfare of the citizens of this state."

[22] California Legislature, Assembly, *Final Report of the Assembly Interim Committee on Revenue and Taxation*, Sacramento State Printing Office, January 1963, p 11

[23] California, Legislature, Senate *Report of the Senate Subcommittee on Housing and Recreational Needs of Elderly Citizens*, Sacramento State Printing Office, 1961, p 87

In 1961, the Legislature placed a $100 million housing-for-the-aged issue on the ballot Although the measure was defeated, it expressed the intent of the Legislature, through a companion bill (SB 414) that homes constructed by nonprofit corporations with the aid of bond funds would be tax exempt The March 1963 report of the California Citizens' Advisory Committee on Aging also underscores the pressing need for more adequate housing for older people

Through a tax exemption, this type of development can be encouraged

2 Homes for the aged are saving the taxpayers money to the extent that the residents might otherwise have to be maintained at state expense or be dependent on the state program of medical assistance for the aged.

3 The relatively high fees for entrance should not disqualify a home for the aged from a tax exemption Many residents, even at the most expensive centers, have their entrance fees and expenses paid by third parties Funds are also donated directly to the home Other social service agencies receiving tax exemptions cater to the needs of both the rich and the poor, such as the Y M C A , private schools, etc.

4 Residents of homes for the aged do not require to the same degree as most citizens the services which are supported by the property tax Most obvious of these services are the schools.

5 Payment of real estate taxes would work an unjust hardship on institutions which have entered into life-care contracts on the assumption that property taxes would not be a cost factor

6 Higher costs resulting from a loss of the tax exemption would further restrict the clientele of these homes.

7 The amount shown to be taken off the tax rolls is deceiving Some of this assessed value would never have been added in the first place if the exemption did not exist

8. The attractiveness and facilities of these homes which encourage older people to come to California are a boon to the extent that the state will be able to increase its inheritance tax collections.

9 Older persons, living on fixed incomes, are having difficulties meeting their ever-increasing property tax bill This is becoming a serious social problem as property taxes are in some cases taking more than 10 percent of a person's income. Exemptions from this type of taxation should be expanded to include all over 65 who can meet certain qualifications

Arguments Against a Tax Exemption:

1 Tax exemptions are a form of public subsidy as a reduction in the tax base requires a redistribution of the tax burden to remaining taxpayers There are many activities, although very worthwhile, which should not be subsidized—directly or indirectly.

2. Many elderly people in other types of housing are forced to pay property taxes Is it equitable for one group to be favored from a tax standpoint over another?

3. Public services, such as police and fire protection, park facilities, public health and sanitation activities, etc, are required by those in exempt institutions as well as those on the outside.

While the above arguments are applicable to homes serving the rich and poor alike, several additional arguments have been made against a tax exemption for institutions which charge fees beyond the means of the average elderly person.

4. A tax exemption for a retirement spa for the wealthy aged violates almost all of the principles of tax policy—equity, ability to pay and benefits received. Living accommodations including all the latest modern conveniences, heated swimming pools, spacious landscaped grounds and extensive maid services, cannot conceivably be classed as charities Extraneous charges and life-care fees preclude most elderly from enjoying the benefits of such institutions The Senate Subcommittee on the Housing and Recreational Needs of the Elderly estimated the average aged couple would require an income of $500 a month to cover all expenses and living costs at these institutions According to the 1960 census, only 24 percent of all Californians over 65 had an income of $3,000 a year or above.

5. It is unlikely that many residents of these homes would become public charges in the absence of such institutions It is unlikely that such institutions would have to close their doors if payment of property taxes were to be required.

6 These homes could afford to pay property taxes—either from their own strong financial position or by passing the tax through to residents. An examination of the cash reserves required by the state and the cash reserves available to life-care homes (see appendix) will show most homes are in extremely good fiscal condition. If the tax were to be passed through, the burden on the residents would be minimal At Samarkand, for example, the property tax would amount to only $5 per month per person

7 Under a recent ruling of the Internal Revenue Service, persons making charitable contributions to the Fifield Manors may no longer deduct these contributions in preparing their personal income tax returns This ruling does not apply to all homes for the aged but does indicate that there are grounds for challenging the charitable nature of some of these homes.[24]

8 According to the 1963 report of the Assembly Committee on Revenue and Taxation,[25]

> "the first generation of residents pays for the original investment in land and buildings; the succeeding generations pay for improvements on the buildings, or more significantly, subsidize the creation of new homes in other locations."

If this much money is available, it would seem that the payment of taxes would present little difficulty

9. The removal of significant amounts of property from the tax rolls is of concern to a number of communities Particularly hard hit are San Francisco, San Diego, Los Angeles, Claremont, and Santa

[24] See United States Treasury Department Internal Revenue Service, *Supplement to Publication No 78* (Rev 12-31-62), *Cumulative List of Organizations, January–June 1963*, p 16

[25] California Legislature, Assembly, *Final Report of the Assembly Interim Committee on Revenue and Taxation, op. cit.*, p. 18.

Barbara. The trend to build even more of these homes appears to be accelerating In February 1964, the Episcopal Diocese announced the construction of an $8 million, 22-story retirement home near Lake Merritt in Oakland and a $1 6 million 10-story facility near San Jose State College in San Jose.

f. Irrevocable Dedication

As defined in Section 214, paragraph 6, property used for religious, charitable, scientific or hospital purposes must be irrevocably dedicated to these purposes to qualify for an exemption from the property tax. However, those organizations in the charity business for over 20 years need not irrevocably dedicate their property for exempt purposes The clause appears loosely enforced in that its terms are not specifically required in articles of incorporation. If the articles imply that the corporation is organized solely for exempt purposes, the Supreme Court has ruled that the property is impressed with a trust for exempt purposes and an irrevocable dedication clause is superfluous The requirement of irrevocable dedication is concerned with ultimate purposes rather than present uses.[26]

Records of the State Board of Equalization indicate that fully half the corporations receiving the welfare exemption do not include the "irrevocable dedication" per se in their articles of incorporation. The dedication then must be implied and must be determined by intent.

The usual exemption sought by nonprofit corporations is from the provisions of the laws relating to the corporation franchise tax. An exemption in this case doubly benefits the organization since it makes contributions to it deductible for personal income tax purposes. The franchise tax exemption is extended not only to religious, charitable, and scientific corporations but also to those organized for literary and educational purposes and for the prevention of cruelty to children or animals.[27] Most of the groups which incorporate in the charitable field include the words "literary" and "educational" in their articles of incorporation to make their purposes as broad as possible. However, these purposes are not included in the sections of the code dealing with property tax exemptions. As mentioned above the courts construe the exemption to follow a "charitable purpose" rather than a strict use of the words of the Revenue and Taxation Code An acceptable interpretation of articles of incorporation including religious, hospital, charitable, scientific, literary, and educational purposes would allow the proceeds of a foundation, on dissolution, to be distributed to any one of six purposes. However, the code sections dealing with property tax exemptions allow only four purposes.

The court again says:

> It thus appears, we think, that the words "educational, scientific, or literary," when construed distributively or collectively, lend themselves readily to the settled concept of a charity and their inclusion in appellant's statement of corporate purposes does not spell absence of a charity.[28]

---

[26] *Pacific Homes* v *County of Los Angeles* (1953) 41 Cal 2d 844
[27] *Revenue and Taxation Code*, Section 23701d
[28] *Samarkand of Santa Barbara, Inc* v. *County of Santa Barbara* (1963) 216 ACA 380.

However, the court has also said

> If such powers (from their articles) permit the ultimate and permanent diversion of all corporate assets to nonexempt purposes, there can not be said to be an irrevocable dedication of such assets to exempt purposes and the exemption must be denied [20]

The problem then is the express inclusion of an irrevocable dedication clause in the organization's articles of incorporation and the express and implied purposes in which the organization may indulge

It is estimated that only 25 percent of the organizations presently receiving the exemption have language in their articles which specifically reflects the language of the Revenue and Taxation Code No one denies the value to society of many of these organizations, but without specific reference it is difficult to imagine the ultimate purpose to which benefits of a property tax exemption may be put

g. Other Selected Exemptions

Several other examples of property which was exempt in 1963 and which does not fit conveniently into any category are worthy of note All of these examples were recommended for denial of exemption by the State Board of Equalization but approved by county assessors Due to limited time, only a very small sample of exemptions was chosen for examination

BUSINESSMEN'S ART INSTITUTE

The Businessmen's Art Institute is a nonprofit organization owning property at 905 Beacon Street in Los Angeles with a 1963 assessed valuation of $14,350. A tax exemption was granted because of the purported educational features of the institute Members received instruction in painting at a cost of approximately $100 per year The organization received $13,290 in income in 1962 including $11,305 from tuition and $50 from the Los Angeles Dodgers As the students must be at least 25 years of age, the state board recommended a denial as it was not a "school of less than collegiate grade."

LIAHONA CLUB

The Liahona Club of 600 Plateau Drive, Berkeley, had exempt property assessed at $4,920 in Alpine County which was used as a camp for club members and their families. In addition, girls from the Church of Jesus Christ of the Latter Day Saints were allowed to use the camp and the club stated: "We serviced in excess of 900 girls in 1962." The state had recommended denial of this application as it was property of a private club and not irrevocably dedicated to exempt purposes.

BAYWOOD PARK WOMEN'S CLUB

The Baywood Park Women's Club at 337 Seventh Street in Baywood Park, California, received an exemption of $6,980 in 1963 The group is a civic and social club which, the State Board of Equalization says, does not meet the requirements of law for an exemption.

[20] *Pasadena Hospital Association* v *County of Los Angeles* (1950) 35 Cal 2d 779

INTERNATIONAL COMMUNICATIONS FOUNDATION

The International Communications Foundation, 870 Monterey Pass Road, Monterey Park, reproduces and distributes materials on Turkey, Pakistan, Afghanistan, Iran, Nepal, Egypt, Thailand, and Mexico to educational institutions Property with assessed value of $36,370 was exempt in 1963 although the state recommended denial as the organization's primary purpose is the sale of educational material. Forty percent of the foundation's income is derived from the sales while the balance is contributed, partly by the nations involved.

MOODY INSTITUTE OF SCIENCE

The Moody Institute of Science, with exempt property assessed at $591,270 in 1963 at 11428 Santa Monica Boulevard in Los Angeles, conducts scientific experiments and produces and exhibits religious motion pictures The institute also owns a Beech Twin Bonanza Airplane (N696T) which is being used for a film on flight instrumentation and aerial navigation as related to modern methods of blind flying. The state had recommended a denial stating that the property was not being used exclusively for religious or charitable purposes.

PHILOSOPHICAL RESEARCH SOCIETY

The Philosophical Research Society, 3341 Griffith Park Boulevard, Los Angeles, holds classes and gives lectures on philosophy, psychology and comparative religion The state recommended a denial of the exemption on the ground that the organization's activities do not qualify as it is not a school of less than collegiate grade The county assessor allowed the exemption of $71,650 in 1963, on the grounds that the activities are religious.

7. SUMMARY

The "welfare exemption" approved by California voters in 1944 to allow a property tax exemption for property used exclusively for charitable, hospital or religious purposes took $338,880,000 in assessed valuation from the property tax rolls in 1963 Of more significance, the amount of tax-exempt property is increasing much faster than the assessed value of the state as a whole and is approaching 1 percent of the total assessed value of the state.

One of the major problems with this exemption centers around the definition of just what is charitable The courts have given the term a liberal definition which includes educational functions and activities that confer a social benefit rather than those that just help the needy or underprivileged An area of controversy in this regard is the question of whether homes for the aged which are beyond the means of the average elderly citizen should receive a tax exemption. One hundred and forty-one such homes received an aggregate total exemption of $25,495,525 in 1963

To qualify for a tax exemption, property must be irrevocably dedicated to exempt purposes or have been used for such purposes for over 20 years In actual practice, most property is not so dedicated—partly as a result of court decisions giving a broad definition to irrevocable dedication, partly as a result of administrative practice and partly as result of the 20-year-use provision.

Another problem concerns the question of profits. What is profit? What are excessive salaries? What should be done to regulate conflicts or interest whereby one person with two hats can make a profit for his nonexempt firm by dealing with the tax-exempt institution he also controls.

G. Orphan Asylums

Orphan asylums have been exempt from property taxation in California since 1920 In order to qualify for the exemption, an institution must be "sheltering more than 20 orphan or half-orphan children receiving state aid" This exemption does not extend to all real property, only to the buildings and so much of the real property required for the occupation of the asylum Further, the property so used cannot be rented and still qualify for the exemption [30]

In 1963, 11 orphanages in 7 California counties were exempt from property taxes These orphanages had an assessed value of $2,131,105 As with the college exemption, the orphanage exemption has a very uneven distribution pattern and the property taxpayers of only seven counties are picking up the tab for a service which benefits all the citizens of the state.

TABLE XI

Orphanage Exemption by Counties: 1963

County	*Number of orphanages*	*Assessed value*	*Exemption as a percentage of total county assessed value*
Marin	1	$941,790	.28
Mendocino	1	189,140	.19
Sacramento	3	204,380	02
San Francisco	2	424,035	.02
Santa Clara	2	156,180	01
San Diego	1	142,590	01
Riverside	1	72,990	.01
Statewide total	11	$2,131,105	006

SOURCE Computed from data furnished by State Board of Equalization, Division of Research and Statistics

There is little to be gained by taxing orphanages as they are supported by governmental funds or private charitable donations It is generally most desirable for relatives to assume the care of orphaned children, but, short of this, foster homes are sought. Society has always had the responsibility to see that children without parents are properly cared for Orphanages which shelter orphan children who do not have the opportunity for normal family life should not be put in the position of paying taxes to government agencies that, in turn, pay orphanages for the care of the children.

H. Exemption of Agricultural Resources

Exemptions and partial exemptions covering certain agricultural resources have been written into the State Constitution at various times beginning with the exemption of growing crops in 1879

[30] *California Constitution*, Article XIII, Section 1¼a.

After a Supreme Court decision which ruled that trees and vines are not growing crops and that the exemption was limited to annuals [*Cottle* v. *Spitzer* (1884) 65 Cal. 456], fruit- and nut-bearing trees under four years of age and grapevines under three years of age were granted a property tax exemption by the adoption of Section 12¾ of Article XIII in 1894.

In 1926, the people adopted a constitutional amendment exempting immature forest trees planted in areas 70 percent logged off or on land not previously bearing merchantable timber. This exemption will be discussed in some detail in a subsequent section (see page 357)

Among the justifications of a "growing crop" exemption are

1 To assess growing crops on the lien date would be impractical as most crops are not at their peak at this time.

2. A tax on growing crops would be inequitable as it would hit hardest the farmers who produce crops in February and March.

3. Assessment of growing crops would be difficult due to the many uncertain factors which determine the value of a crop.

4. Growing crops do not enhance the permanent value of the land

5. A tax on growing crops, to the extent that it could be passed on, would constitute a tax on the basic commodity needed for life—food—and would be very regressive.

The total value of crops growing in California in 1963 was approximately $2 5 billion. It would be virtually impossible to get an accurate figure for the value of crops growing on the first Monday in March.

The exemption for immature fruit and nut trees and vines is more difficult to justify. These are permanent improvements to the land and have value if an owner were to sell the property for agriculture use. By exempting immature trees and vines, the state is recognizing in an imprecise manner that these trees will return no income to pay taxes until they are mature The exemption also serves as an incentive to further the fruit, nut and grape industries in California.

The county assessors estimate that $30 million in assessed value could be added to the tax rolls if this exemption were to be repealed. On the other hand, loss of the exemption would undoubtedly reduce the new plantings of trees and vines so the increase in assessed value would not necessarily be a continuing thing.

I. Exhibition Exemption

In 1935, the Legislature exempted from property taxation all personal property brought into California for exhibition purposes, provided the property is removed from the state following such use and is subject to taxation in another state [31]

This exemption has little impact on the property tax base The county assessors estimate that only $5,468.900 in assessed value was lost in 1963 under this exemption This figure does not include the possible additional value which might be found in San Francisco County, whose assessor reported that data relating to this exemption were not available.

This exemption gives California residents the opportunity to see exhibits, such as private collections of paintings, they might not see if exhibitors were to be liable for property taxes.

[31] *Revenue and Taxation Code*, Section 213.

J. Cemetery Exemption

Property used for the burial of the dead, except as used or held for profit, is exempt from property taxation in California. Section 16 of Article XIII of the State Constitution provides

> "All property used or held exclusively for the burial or other permanent deposit of the human dead or for the care, maintenance or upkeep of such property or such dead, except as used or held for profit, shall be free from taxation and local assessment."

It should be pointed out that the portion of cemeteries in which human remains are buried would have little value, even if not exempt, as a potential buyer of the property would have to rebury the bodies. Any money derived from the sale could be used only for certain limited purposes.[32]

According to estimates by county assessors, approximately $33 million in assessed value was exempt from taxation under the cemetery exemption during 1963.

TABLE XII

Known Assessed Value of Exempt Cemetery Property, by County: 1963

Alameda	$3,029,775	Orange	$3,812,650
Alpine	None	Placer	60,200
Amador	None	Plumas	None
Butte	None	Riverside	Unknown
Calaveras	42,000	Sacramento	1,500,000
Colusa	Unknown	San Benito	21,620
Contra Costa	150,000	San Bernardino	298,000
Del Norte	1,000	San Diego	1,527,330
El Dorado	50,000	San Francisco	None
Fresno	Unknown	San Joaquin	1,153,500 (est.)
Glenn	8,550	San Luis Obispo	1,000,000
Humboldt	56,760	San Mateo	1,452,420
Imperial	18,710	Santa Barbara	150,000
Inyo	None	Santa Clara	2,900,000
Kern	50,000	Santa Cruz	132,290
Kings	200,000	Shasta	600,000
Lake	2,000	Sierra	None
Lassen	None	Siskiyou	22,500
Los Angeles	13,000,000	Solano	350,000
Madera	24,100	Sonoma	500,000
Marin	107,930	Stanislaus	125,000
Mariposa	None	Sutter	60,000
Mendocino	10,300	Tehama	100,000
Merced	110,000	Trinity	500
Modoc	None	Tulare	100,000
Mono	310	Tuolumne	None
Monterey	250,000	Ventura	176,580
Napa	138,500	Yolo	33,000
Nevada	1,000	Yuba	38,400

Grand Total: $33,364,725

SOURCE: Computed from material supplied to the Assembly Revenue and Taxation Committee by county assessors of California.

By granting this tax exemption the state recognized the paramount social importance in the decent disposition of the remains of deceased persons and maintenance and care of their graves. In *Cypress Lawn*

[32] See *Health and Safety Code*, Sections 7500–8005.

Cemetery Assn v. *City and County of San Francisco* (1931) 211 Cal. 387, the California Supreme Court said:

> "It is in accordance with the common wish of mankind that the places where the dead are buried should be protected and preserved against interference of possible sales for unpaid taxes and be kept free from molestation or desecration. Exemptions of cemetery property from taxation are but the expression of that wish That this is true as regards Section 1b of Article XIII, supra, appears from the argument made in favor of the proposed constitutional amendment and sent to all of the voters prior to the election at which it was adopted The proponents of the measure urged that it 'should have been adopted long ago in order to protect the last resting place of the departed . The county assessors know that they cannot under the law seize and sell a burial lot containing a body and yet under the present law, they are compelled to levy an assessment against such a plot, thereby expending the time and money of the county in bookkeeping, etc, to no avail, and jeopardizing the title to a property that may be containing the last remains of some dear one . . .
>
> " 'Finally, only the cemetery property not held for profit and owned by those [sic] exclusively for burial purposes is exempted. It will not relieve from taxation property of cemetery associations and others which is to be sold for profit, but only property to be used exclusively for the burial of the dead, and this sacred property should be kept tax free . . .' "

One of the problems with the cemetery exemption involves the concept of profit The Constitution requires that the cemetery must not be used or held for profit However, in *San Gabriel Cemetery Assn* v. *Los Angeles County* (1942) 49 Cal App. 2d 624, the court held that the word profit does not refer to the financial benefit that accrues to a cemetery association through the sale of burial space in excess of cost, but means net earnings, the benefits of which accrue directly or indirectly to the stockholders or an individual

A cemetery can be nonprofit but be closely associated with a profitmaking enterprise This type of an arrangement was discussed in connection with the welfare exemption.[33] The nonprofit corporation can buy from a profitmaking company at high prices or sell to one at a loss. When the directors of one are the directors of another, an opportunity exists to make one operation nonprofit while siphoning off all profits to the other.

The administration of this exemption could be improved if claimants were required to file an application each year, similar to applications for the welfare exemption.

K. *Exemption for Vessels of More Than 50 Tons*

California's Constitution (Article XIII, Section 4) provides an exemption for vessels of more than 50 tons registered at any port in this state and engaged in the transportation of persons or freight.

[33] See *St. Germain Foundation* v. *County of Siskiyou* (1963) 212 Cal 2d 911.

The county assessors estimated that had these vessels been taxable in 1963, over $595 million in assessed value would have been added to the tax rolls. The breakdown by counties where these vessels are registered follows:

Alameda	Unknown	San Diego	$929,500
Contra Costa	Unknown	San Francisco	422,260,000
Los Angeles	$170,134,500	San Joaquin	2,000,000
Marin	4,600	San Mateo	250,000
Sacramento	40,000	Santa Barbara	200,000

L. Householder's Exemption

An exemption for $100 worth of personal property of every householder was approved by the voters in 1904 and added to the State Constitution.[34]

In 1960, there were approximately 5,208,000 occupied household units in California.[35] Assuming the number of households increased in proportion to the increase in the state's population from 1960 to 1964, the approximate number of occupied households in California in 1964 would be 5,989,000. The householder's exemption represents an estimated loss of approximately $500 million in assessed valuation to the state's tax base.

The theory behind this exemption is that at least $100 worth of personal property is necessary for the very minimum level of subsistence, and, with this exemption, an assessor can dispense with the assessment of property of many transients where the amount of the tax that could be collected would not equal the cost of collection.

M. Other Exemptions

Several other classes of property have been exempted from the property tax. Aircraft in California on the first Monday in March for the sole purpose of being repaired are exempt (*Revenue and Taxation Code*, Section 220), as is the stock in trade up to $1,500 of a blind vending stand operator (*Revenue and Taxation Code*, Section 216).

Motor vehicles and bank personal property are also exempt from property taxation but are taxed by the state on an in-lieu basis. A separate study of the bank in-lieu tax has been made for the committee this year. (See Section Five, Part Seven.) The motor vehicle in-lieu tax is discussed in the "Fees and Licenses" report issued by the committee in 1964[36] and will also be touched upon in a subsequent section on the taxation of house trailers. (See Section Five, Part Six.)

SECTION FOUR

ADMINISTRATION OF THE PROPERTY TAX

I. INTRODUCTION

Responsibility for the administration of the property tax has been scattered among a number of public officials. The assessment of property—which is the listing and valuation of property—is the joint responsibility of the 58 county assessors and the State Board of Equalization The county assessor, who is an independent, locally elected official, assesses all property within his jurisdiction, except state-assessed utility property. These assessments can be changed, after a hearing, by the local county boards of supervisors or board of tax appeals The total assessment roll, as a unit, can be raised or lowered in equal percentage by the State Board of Equalization. The Board of Equalization also assesses most utility property and allocates these values to each local jurisdiction.

After the value of property is determined, the local taxing jurisdiction (city, county, school district, special district) fixes a rate at which this property will be taxed The tax rate multiplied by 1/100 of the assessment (value of the property) will determine how much money each person will have to pay in property taxes Bills for payment of the property tax are then sent out by the county tax collector, generally an independent county officer, who has the responsibility for the collection of the tax.

When a case against property taxation is made, administrative weaknesses are frequently cited. Good assessment requires technical competence of the highest order since no two parcels of real estate are ever exactly alike. Location is always unique, and markets for certain types of property are often thin.

It is freely admitted that the assessor's job is an impossible one. In a recent document, the State Board of Equalization admits, "no assessor, even one given unlimited resources, could produce an assessment roll in which the appraisal of property was strictly current and precisely accurate in other respects."[1] Considering the magnitude of the property tax, even slight unevenness in assessments can create grave inequities among taxpayers. Although it is widely recognized that California has, as a group, the finest assessors in the United States, a great many problems exist in the equitable administration of the property tax.

In the sections which follow we examine the laws relating to property tax administration, the nature of present assessment practices under these laws, and the provisions for review and adjustment of the assessments.

[1] California State Board of Equalization, *Property Tax Assessment—Yolo County*, (mimeo), 1962, p. 3.

II. GENERAL PROVISIONS RELATING TO THE ASSESSMENT OF PROPERTY

A. Full Cash Value

In order to tax property, it is first necessary to place a value on the property on which the tax is to be levied California's Constitution gives local assessors a somewhat conflicting mandate in this respect Article XI, Section 12 requires that "all property subject to taxation shall be assessed for taxation at its full cash value." However, Article XIII, Section 1 provides "all property in the state except as otherwise in this Constitution provided, not exempt under the laws of the United States, shall be taxed in proportion to its value to be ascertained as provided by law, or as hereinafter provided "

It appears from the wording of the two sections that property must be assessed at full cash value, due to the "as provided by law" phrase in Article XIII, Section 1 and *Revenue and Taxation Code*, Section 401 which requires the assessment of property at full cash value Assessors have not been assessing at full cash value in this state.

Value is a very difficult word to define A piece of property will have differing values for different purposes and to different buyers for the same purpose. Section 110 of the Revenue and Taxation Code defines value as follows:

"Value, 'full cash value', or 'cash value' means the amount at which property would be taken in payment of a just debt from a solvent debtor."

In *DeLuz Homes, Inc.* v *San Diego County* (1955) 45 Cal 2d. 546, the court defined full cash value as the "price property would bring to its owner if it were offered for sale on an open market under conditions in which neither buyer nor seller could take advantage of the exigencies of the other; it is synonymous with market value "

Assessors have not been and are not assessing property at full cash value in California. In 1964, the average statewide assessment ratio for locally assessed property was 22 1 percent of full cash value according to the State Board of Equalization, a drop of one full percentage point from the previous year.

In justifying this practice, the assessors cite *Rittersbacher* v. *Board of Supervisors of Los Angeles County* (1934) 220 Cal 535, in which the court held:

> ". . it is the assessor's recognized duty that valuation placed on various kinds of property shall be in proportion to the worth of such properties. If all are proportional and all are treated alike, no one contends that the taxpayers must be charged a full one hundred percent, for such is not required by the law."

This statement only had the effect of dictum as there was no issue as to the legality of this practice in the case

More recently, a suit was filed in Los Angeles County in an attempt to force the local assessor to assess at full cash value As of October 15, 1964, this case was pending in the California State Supreme Court.

California's practice of fractional assessment is not unique According to the Advisory Commission on Intergovernmental Relations,

> "The laws of nearly two-thirds of the states appear to contemplate assessment at full value and the language of many of them is very specific on this point In 12 states there are general provisions for assessment at specified percentages of full value: Alabama, 60 percent, Arkansas, 18–20 percent, Indiana, 33⅓ percent, Iowa, 60 percent; Kansas, 30 percent, Nebraska, 35 percent; Nevada, 35 percent, Oklahoma, 35 percent; Oregon, 25 percent; South Dakota, 60 percent, Utah, 40 percent, Washington, 50 percent In Hawaii the law contemplates the use of 70 percent but authorized the State Director of Taxation, who is responsible for the assessment of all property, to use another ratio if he so indicates The laws of four states, Maryland, Minnesota, Montana, and Ohio, have somewhat more complex provisions involving the use of fractional assessment,[2] and Connecticut, New Jersey (in a 1960 law not yet in effect), North Carolina, Pennsylvania, and Vermont provide some form of local option
>
> "The assessment practice in most of the states bears little resemblance to the legal requirements The actual level of assessment is below the full-value or fractional-value level prescribed by constitution or statute The notable exceptions are a few states, such as Arkansas and Oregon, in which the law has been adjusted recently to approximate the existing local practice and the state supervisory agencies have been pressing for conformity "[3]

Sales data for 1961, compiled by the United States Census Bureau, show that the ratio of assessed value to sales price for nonfarm residential property in the United States was 31 9 percent This ratio ranged from 65 8 percent in Rhode Island, to 19 6 percent in California, to 5 6 percent in South Carolina[4]

One of the consequences of this fractional assessment is to distort the use of assessed value as an index to fiscal capacity Limits on local government's power to tax and borrow are based on the assessed value of the property in their jurisdiction

Assessed value has no consistent relationship to actual value from year to year and differs among the various counties Due to these factors, it is a very unreliable measuring standard Assessed value as a percentage of full cash value may go up and down like a yo-yo over a period of time

Assessed value is also used in the measurement of the veteran's exemption The eligibility for and value of the exemption will depend on the level of assessment Constitutional limitation on the exemption can be circumvented by lowering the assessment ratio. It was once possible for an assessor, by lowering his fractional assessment, to get

[2] Maryland, full value except fractional assessment of stock in trade for county tax purposes, Minnesota and Montana, various specified percentages of full value for different classes of property. Ohio, full value except 50 percent for manufacturing and agricultural tangible personalty and 70 percent for other business tangible personalty

[3] Advisory Commission on Intergovernmental Relations, *The Role of the States in Strengthening the Property Tax*, Vol 1, Washington, D C, June 1963, p 43

[4] United States Department of Commerce, Bureau of the Census, *Taxable Property Values*, Washington, D C, June 1963, p 40

more state aid for the schools in his county than they would otherwise be entitled to receive. The use of assessed value as an indicator of fiscal capacity was modified by the adoption of the Collier factor and the Winton countywide recoupment tax An assessor is still wise to use low fractional assessment, however, as the utility roll is delivered to each county by the State Board of Equalization without a correction for the differences in fractional assessments among counties In a county with low fractional assessment and a high tax rate, the utilities will pay more taxes than in a county with a higher fractional assessment and lower tax rate.

The use of low fractional assessments by the assessor will also help reduce the tax liability of the taxpayers in his county who reside in overlapping school and/or special districts In the bay area, for example, San Francisco, Alameda, and Contra Costa Counties are all in the San Francisco Bay Area Rapid Transit District The district must levy a uniform tax throughout the three counties. Both Alameda and San Francisco County Assessors valued property at 21 7 percent of its full cash value in 1963, according to the State Board of Equalization, while Contra Costa had an assessment ratio of 23 4 percent.

As a result, a taxpayer in Contra Costa County with property worth $100,000 would pay a tax on $23,400 of assessed value while in San Francisco the owner of property worth $100,000 would pay a tax on $21,700, although both properties were worth exactly the same. This is obviously unfair to the residents of Contra Costa County and completely unjustified

A more serious problem is the use of fractional assessment to confuse and mislead the taxpayer The Advisory Commission on Intergovernmental Relations has observed:

> "The existence of underassessment diminishes the taxpayer's chances of protecting himself In the first place, it increases his difficulty in determining whether he is being equitably treated. To find that his property is assessed at less than the legal basis of full value or designated fraction of full value offers no assurance While his property, for example, is assessed at 50 percent of the legal base, it may be that the prevailing level of assessment for other property is only 25 percent of the legal base The assessor is not likely to make a voluntary disclosure of this state of affairs and, in fact, may not know with any degree of precision what the actual situation is In the second place, the taxpayer must obtain data that not only satisfy him as to the inequity of his assessment but may be introduced as evidence in his appeal for adjustment Such evidence usually has been hard to come by; but the assessment ratio studies that are being conducted by an increasing number of states are dispelling for the taxpayers some of the obscurity that has surrounded assessment levels and also appear to have potentialities for facilitating taxpayer efforts to obtain equitable treatment." [5]

The average taxpayer is not aware of the fractional assessment level in his county unless, by chance, he happens to read about the ratio findings of the State Board of Equalization.

[5] Advisory Commission on Intergovernmental Relations, *op cit*, p 46

The solution to this problem is either legalization of a fractional assessment ratio or the enforcement of the present constitutional and statutory requirements that property be assessed at full cash value. As the code now requires a full cash value assessment, enforcement of existing law would appear to be the simplest solution. However, adjustments in tax rate limitations and bonding capacities would have to be made by the Legislature if assessors were to make full-value assessments This could easily be done by dropping all limits to 25 percent of their present levels

Adoption of either approach, with appropriate enforcement, will give the taxpayer a tool with which he can make a judgment of the equity of his own assessment In addition, if all counties were assessing at the same ratio, intercounty tax differentials and other problems of measurement would cease to be major problems.

B. Lien Date

For uniformity, property is assessed for tax purposes as to its condition on a given date called the lien date In California, the lien date is the first Monday in March,[6] and property is assessed at its value and to its owner on that particular day As it would be impossible to assess all property at a given date by personal inspection, the assessors, using various indicators of value, must make a judgment as to the property's value on the lien date, even though the actual appraisal may be made several weeks or months before or after this date

There has been a considerable amount of discussion as to whether or not the first Monday in March is the most desirable date to use as the lien date Obviously, any one date will be advantageous to some taxpayers and disadvantageous to others, particularly with respect to the assessment of personal property

At any one given date, some businesses will require larger inventories than others A subsequent section will go into detail on the problem of taxation of business inventories (See Section Five, Part One).

California is unique in using the first Monday in March as a lien date A majority of states use January 1 as the assessment date, and only three have dates which fall on other than the first day of the month. (See Table I)

A lien date coinciding with the end or beginning of the month is much more practical because of the greater ease in checking and assessing business property January 1 would be preferable as it is the end of the normal business year for most businesses This date would also give assessors more time in which to complete their work In the past, agricultural interests have been reluctant to see any change made in the lien date[7]

Although almost all states assess property as of a fixed date, it is also possible to assess property at its average value over a period of time Representatives of local government and some business interests have suggested this method of assessment with respect to personal property Although this promotes greater equality among various types of business and probably would mean additional revenue to local government, an average assessment date has some administrative difficul-

TABLE I

State by State Summary of Property Tax Lien Dates

(Tangible Property)

Alabama	October 1
Alaska	January 1
Arizona	Between 1st Monday, January and May 1
Arkansas	Farm crops July 31 All other January 1
California	1st Monday in March
Colorado	January 1
Connecticut	October 1
Delaware	No fixed date
Florida	January 1
Georgia	January 1
Hawaii	January 1
Idaho	2nd Monday in January
Illinois	Real property: January 1 —Personal property April 1
Indiana	March 1
Iowa	January 1
Kansas	January 1
Kentucky	Bank deposits: September 1 Manufactured tobacco September 1 Other January 1
Louisiana	January 1
Maine	April
Maryland	By state: January 1 By Baltimore. October 1
Massachusetts	January 1
Michigan	December 31
Minnesota	May 1
Mississippi	January 1
Missouri	January 1
Montana	January 1
Nebraska	January 1
Nevada	Between July 1 and December 31
New Hampshire	April 1
New Jersey	Real property: October 1 —Tangible personal property used in business January 1 —Tangible personal property not used in business. October 1
New Mexico	January 1
New York	May 1 In New York City, property is assessed on January 25 of the preceding fiscal year
North Carolina	January 1
North Dakota	April 1
Ohio	January 1
Oklahoma	January 1
Oregon	January 1
Pennsylvania	No fixed assessment date. Statutes prescribe date by class of county when assessment must be completed —1st class counties, 3rd Monday in September —2nd class counties, 1st Monday in September —3rd class counties, no date fixed —4th to 8th class counties, September
Rhode Island	December 31
South Carolina	December 31 except certain farm produce
South Dakota	1st, 2d, 3d, class cities, certain farm produce January 2 —All other. May 1
Tennessee	January 10
Texas	January 1
Utah	January 1
Vermont	April 1
Virginia	January 1
Washington	January 1
West Virginia	July 1
Wisconsin	May 1
Wyoming	February 1

SOURCE Commerce Clearing House, *State Tax Reporter*, data current through July 1, 1964

ties. According to Eugene Wilson, resident counsel for the California Retailers Association,[8]

> "Our people have consistently opposed the concept of averaging for assessment of business inventories, because they do not feel there is any assurance that it would introduce any equity into the system whatsoever, but they are quite sure that it would increase administrative costs of taxpayers and in all probability would increase the tax burden for most retailers in this state As an example of administrative costs, many of our stores use four week accounting periods Therefore, their accounting would rarely coincide with the dates mentioned in the bill This would have the effect of increasing the task of multiplying their accounting dates and assessment dates quite substantially. Also there are multitudes of small retailers in this state who compute their inventory values only once or twice a year and they have no desire to increase the number of times that they have to do so.
>
> "For these reasons combined with the fact that averaging would not decrease their assessed valuations, most retailers would not elect to use an averaging system if it were optional I think it's apparent that the only ones who would elect to use averaging are those whose inventory values would be thereby reduced The effect of this would be to reduce the personal property tax base in each county, making an increase in the tax rate necessary to raise the same amount of revenue The effect of this is to shift a portion of the burden of the tax from those who elect to average to those who don't. I want to emphasize this point, because so many people say to us, 'why are you opposed to an optional averaging system, you can take it or leave it' But we do feel that it will increase our tax burden We don't feel that mandatory averaging is the answer to this particular objection Whether other taxpayers' inventory valuation will be increased or decreased depends upon the pure chance of what dates happen to be chosen to average The five dates mentioned in the Marks' bill might be good for some taxpayers and might be bad for others I think the only way you can get a true average is to use a 365-day system because any other method ignores the quirks and circumstances that determine what a particular business' inventory will be from time to time. Obviously a 365-day system is impossible"

As noted earlier, a more detailed look at business inventory tax problems will be found in a subsequent section

Another problem resulting from the concept of a fixed lien date is that of damaged property. Loss or damage of property immediately following the lien date does not reduce the assessment, with the result that the assessee pays a full tax share although his property value may be considerably reduced The concept of lien date involves value at a given time, not average value; therefore, damaged property cannot be reassessed for one-half or the balance of a year The same concept holds true if property is improved during the year Once assessed, the assigned value remains for 12 months The property tax assessment is

[8] Statement of Eugene Wilson to Assembly Committee on Revenue and Taxation, San Diego, June 25, 1964

not concerned with average values as influenced by economic fluctuations or disasters, but is concerned only with value of property at 12 o'clock meridian of the first Monday in March All property is assessed to the person owning, claiming, possessing, or controlling it at that time, and a tax bill reflecting this condition is issued.

If the building or its contents are damaged or destroyed by fire, the assessment must remain fixed because the figure represents value at a particular moment in time—the first Monday in March at noon. If a piece of real property is demolished after lien date and replaced by a structure of double or triple value, the assessed value for that location will reflect the increase the following March and the property will be taxed accordingly.

It should be noted, however, that the Legislature has enacted bills to allow for reassessment of damaged property in special situations such as the Bakersfield earthquake and Crescent City tidal wave. In November 1964, a provision allowing the reassessment of property damaged in an area proclaimed by the Governor to be a disaster area was approved by the electorate However, most property damaged after the lien date will continue to reflect the higher predamage assessment because it will not lie within a disaster area.

C. *Place of Assessment*

Assessors have little difficulty in correctly establishing the "situs" or place of assessment for land and improvements Being immobile, the situs is fixed. Section 10 of Article XIII of the State Constitution provides that

> "all property, except as otherwise in this Constitution provided, shall be assessed in the county, city, city and county, town or township, or district in which it is situated in a manner prescribed by law."

The importance of the "situs" of property is that the place of assessment will determine which local governmental jurisdictions will get the revenue from a tax on the property A number of "situs" problems have arisen with respect to personal property, which is easily moved. The courts have distinguished between permanent situs and temporary situs and ruled that property is assessable at its permanent situs For example, a jewelry company in Los Angeles flew jewelry to Hawaii for a period of less than a month; however, the property was out of the county on the lien date Los Angeles sought to assess and tax this property and was upheld by the court [*Brock and Company* v. *Board of Supervisors of Los Angeles County* (1939) 32 Cal. App. 2d 550.]

One of the major problems of situs concerns commercial airplanes. Aircraft operated by certificated airlines are assessed on an apportioned basis, i e, the aircraft are assessed as other personal property at approximately 25 percent of market value, but this assessed value is then apportioned for the amount of time a given plane is located within the county plus one-half the time between the airport within the county and the port at which it next lands in the state or all the time between the airport in the county and the state line if it next lands outside the state. This information is obtained by schedules, logs, etc

A test period of one week to several months may be used, depending on the density of operations, to determine the average air and ground time allocable to the county This time is then expressed as a percentage of the total time in the test period, and the percentage is applied to the value of the plane to arrive at the allocated value for tax purposes.

D. *Assessment of Special Types of Property*

1. AIRCRAFT

County Assessors are required by *Revenue and Taxation Code*, Section 5363, to assess noncommercial aircraft at "market value" This could be confusing to the assessor in view of Section 401 of the code, which requires all property to be assessed at full cash value To make this distinction clear, Section 5363 of the *Revenue and Taxation Code* further provides:

> ". . . in determining the market value of aircraft, the assessor shall not take into account the existence of any custom or common method, if any, in arriving at the market value of any class or classes of aircraft"

A special tax rate of 1 5 percent of market value is also fixed by law for noncommercial aircraft. This tax is in lieu of all other property taxes In 1964, noncommercial airplanes had a value of $108,105,000 which produced $1,621,575 in revenue for local governments. The only argument for continuing this specific tax rate—or specifying any rate for that matter—is the argument of uniformity.

The extreme mobility of aircraft allows owners to select the airport they choose for storage purposes Without the statutory protection aircraft could easily be registered and stored in the nearest county with the lowest tax rate By fixing the rate in the *Revenue and Taxation Code*, the Legislature has assured that this portion of the county tax base will not be shifted to another county to escape the tax Shifting would cause problems at the local private airport, lower its revenues, and further limit the private airport owner in meeting his own property tax bill At municipal or county airports in high-rate counties, the landing, parking, and storage fees would diminish if aircraft were to be transferred to another county, all to the detriment of the public airport facility The average property tax rate is now approaching 2 percent of full value in California so the aircraft rate, set by statute at 1 5 percent, may be slightly below average If the property tax continues to increase, the Legislature may wish to consider raising the 1 5 percent tax rate to a more comparable figure

2. BALED COTTON

A special assessment and taxation procedure has been established for baled cotton Bales of cotton produced in California are assessed at their market value and taxed at a rate of one-tenth of 1 percent of this value There are both similarities and differences between this and the provisions relating to the assessment and taxation of noncommercial airplanes. Both baled cotton and airplanes are to be assessed at their

market value rather than at a percentage of market value However, bales of cotton produced in California are exempt from the lien date provisions In 1964, the value of baled cotton in California was $254,423,000. This produced a tax revenue of $254,423 for the eight cotton-growing counties of this state The purpose of this special assessment and tax procedure is to keep a large part of California's 1½ million bales of cotton in California warehouses until they are ready for shipment to the textile centers of the world

3. WORKS OF ART

Creative artists are in the unique position of having their works assessed at cost of production rather than at current sale value Section 986 of the *Revenue and Taxation Code* provides "the cash value of a work of art, still owned by the artist who created it and which has never been sold nor exhibited for profit, is the cash value of the materials which constitute the work of art" Works of art assessed under this provision have a value of approximately one million dollars according to the county assessors. Although this method of assessing works of art may seem inequitable at first blush, it would be difficult to assess them in any other manner because there has been no sale to establish value This exemption serves to create a healthy artistic climate within the State of California After works of art have been sold they are subject to normal taxation

4. GOLF COURSES

In 1960, California voters enacted a special provision for assessment of privately owned, nonprofit golf courses. These courses, if they are 10 acres or more in size and have been used for nonprofit golf course purposes for two prior years, must be assessed on the basis of present use rather than of potential use or highest and best use This provision was added because many of the private golf courses were in areas in which land value and assessments on surrounding property were skyrocketing. If golf courses were to be assessed according to standard methods of assessment, the tax burden would be too great to be met by the revenue they produce There is nothing in the constitutional provision to insure that these courses will be kept in their present use. After a number of years of special assessment and low taxes, the owners of these nonprofit enterprises can sell them for another use and realize a huge profit If the golf course were assessed as other property rather than under the special assessment provision, the county assessors estimate that assessment rolls would be increased over $10 million However, this provision does serve to preserve some vitally needed open space in cities

5. AGRICULTURAL, AIRPORT AND RECREATION LAND

Section 402 5 purports to set up special assessment provisions for land owned and used exclusively for agricultural, airport, or recreational purposes However, as the following Legislative Counsel's opinion indicates, it does not require special assessment but merely reinforces the assessment the assessor would normally apply to these uses:

"Section 402 5 of the Revenue and Taxation Code reads as follows·

> '402 5 In assessing property which is zoned and used exclusively for agricultural, airport or recreational purposes, and as to which there is no reasonable probability of the removal or modification of the zoning restriction within the near future, the assessor shall consider no factors other than those relative to such use.'

"We construe Section 402 5 of the Revenue and Taxation Code as having the effect merely of limiting the assessors to a consideration of factors relevant to agricultural, airport or recreational purposes, if there is no reasonable probability in the near future of the removal or modification of the zoning restriction[9] Furthermore, we believe that in so providing the section is consistent with a prior court-sanctioned rule to the effect that in valuing land for tax purposes, it is proper for the assessor to take into consideration every use which would enhance the value of the property As the court stated in *Wild Goose Country Club* v. *County of Butte* (1922), 60 Cal App. 339, 341.

> ' . In arriving at the value of the land it was proper to take into consideration every use to which it was properly adapted and which would enhance its value in the estimation of persons generally The question is not what its value is for a particular purpose, but its value in view of all the purposes to which it is naturally adapted.'

"To the same effect are *H & W Pierce, Incorporated* v *County of Santa Barbara* (1919), 40 Cal App. 302, and *Ballerino* v. *Mason* (1890), 83 Cal 447.

"It appears obvious that if there is no reasonable probability of removing or modifying a zoning restriction applicable to property zoned and used exclusively for agricultural, airport or recreational purposes, it would be improper to use other factors as a basis for valuation This seems implicit both in the rule mentioned and in Section 402 5

"It is to be noted that in the field of eminent domain a zoning restriction may be taken into consideration in determining the value of property in the making of compensation awards (see 17 Cal. Jur 2d 648-649; *Los Angeles City High School District of Los Angeles County* v *Hyatt* (1926), 79 Cal App 270, 272; *The City of Beverly Hills* v *Anger* (1932), 127 Cal App 223, 226-229; *Long Beach City High School District of Los Angeles* v *Stewart* (1947), 30 Cal 2d 763) The effect of such a restriction as a factor in such determination is, however, evidently less than it might be otherwise where there is a reasonable probability that it might be modified or removed in the near future (*Long Beach City High School District of Los Angeles* v *Stewart*, at pp 768-769) Since the value of property for eminent domain purposes has virtually

[9] In assessing property for tax purposes the assessor is bound by a requirement in Section 12 of Article XI of the State Constitution for the use of "full cash value" as the standard of value in carrying out the mandate in Section 1 of Article XIII that all taxable property "shall be taxed in proportion to its value" See *De Luz Homes, Inc.* v. *County of San Diego* (1955), 45 Cal 2d 546, 562

the same meaning that it has for property tax purposes (see *City of Daly City* v. *Smith* (1952), 110 Cal App. 2d 524, 531, and *De Luz Homes, Inc.* v. *County of San Diego* (1955), 45 Cal. 2d 546, 562), it is not unlikely that these rules, even in the absence of Section 402.5, would have a persuasive effect in property taxation. In any event, the section and the rules are clearly in consonance.

"Section 1 of Article XIII of the State Constitution provides that property 'shall be taxed in proportion to its value, to be ascertained as provided by law. . .' Our Supreme Court has said that this provision is not self-executing, but imposes on the Legislature the duty of prescribing a method or the machinery for ascertaining the value of property for tax purposes (*San Pedro, Los Angeles & Salt Lake Railroad Company* v. *City of Los Angeles* (1919), 180 Cal. 18, 21; *McHenry* v. *Downer* (1897), 116 Cal. 20, 24). A similar provision in the 1849 California Constitution (Art. XI, Sec. 13) was construed by the same court as empowering the Legislature to determine the manner in which the value of taxable property is to be ascertained (*Houghton* v. *Austin* (1874), 47 Cal. 646, 661-662). It appears to us that Section 402 5 of the Revenue and Taxation Code manifests a legislative performance of the duty or exercise of the power thus described, and that it is to be construed simply as legislation in implementation of Section 1 of Article XIII.

"The Legislature is also directed by Section 13 of Article XIII to 'pass all laws necessary to carry out the provisions' of the article. Subject to any applicable constitutional limitations, it has, of course, full power to determine what is 'necessary' for such purpose (see *Ex parte Smith and Keating* (1869), 38 Cal 702, 707). Any such limitation on the power is strictly construed, however (*Delaney* v. *Lowery* (1944), 25 Cal. 2d 561, 568), and every presumption is in favor of the constitutionality of legislation enacted pursuant to the power (see 11 Cal. Jur. 2d 407, 'Constitutional Law,' Sec. 74).

"To summarize, we construe Section 402 5 as legislation which merely implements the requirement in Section 1 of Article XIII for the taxation of property 'in proportion to its value,' and as a statutory provision which is consistent with the judicially recognized rule that in the assessment of property an assessor must take into consideration every use of the property that might enhance its value. We perceive nothing in the section which can reasonably be construed as requiring the assessor to assess property zoned and used exclusively for agricultural, airport or recreational purposes at any amount or on any basis different from that which the Constitution requires [10]

III. WORK OF THE ASSESSOR

Most of the criticism of the property tax is directed at the deficiencies in assessing. A tax that is administered so that one taxpayer is

[10] Legislative Counsel's Opinion, #956, written by Edward F. Nowak, September 11, 1963.

treated unfairly in respect to another cannot be defended To safeguard the future of the property tax, assessments must be of the highest quality.

The key to a good property tax system rests with the local assessor in each county in California. This section is devoted to how the local official meets this challenge—the appraisal principles which are used, the problems in keeping appraisals current, the staffing of assessor's offices and extraneous interests which might interfere with impartial assessment administration.

A. *Appraisal Principles*

It is worth spending some time in discussing appraisal principles which are used to determine the value of a given piece of property. Differences in the method of ascertaining value create the greatest problems in reviewing the work of the assessor—particularly in the relationship of one assessment to another.

Section 110 of the Revenue and Taxation Code defines value as " . the amount at which property would be taken in payment of a just debt from a solvent debtor " California's courts have interpreted this to mean the price that property would bring to its owner if it were offered for sale on an open market under conditions in which neither the buyer nor the seller could take advantage of the exigencies of the other. [*De Luz Homes, Inc.* v *San Diego County* (1955) 45 Cal. 2d 546; *A. F. Gilmore* v. *Los Angeles County* (1960) 186 Cal. App. 2d 471]

There are several approaches that are used to find this value. When sales of a given class of property are numerous enough to develop a pattern and these properties are very similar in nature, the value can be determined from an analysis of sales.[11] This does not solve the problem of determining value where there are no sales or where properties to be appraised are dissimilar and cannot easily be compared with those recently sold In such situations, a variety of approaches or combinations thereof can be used Most commonly used are replacement cost minus depreciation; capitalized earnings; value computed from stocks, bonds, and other debts of a company; and historical cost less depreciation. In valuing a single property using these several approaches, it is quite possible to arrive at a number of different conclusions This is one of the fundamental weaknesses of property tax assessment.

A word about each of the approaches which can be used to determine value:

1. SALES ANALYSIS

By maintaining a complete collection of sales prices for properties being sold, an assessor can use sales as an indicator of the value of the property being sold and the value of like property not recently sold In using sales, the assessor must be aware of the limitations of

[11] Some assessors deny that sales prices represent value Hugh Plumb, then Orange County Assessor, told the Assembly Revenue and Taxation Committee that many sales represent future potential and these sales must be discounted to an amount equivalent to present worth Statement to the Assembly Committee on Revenue and Taxation, Los Angeles, November 13, 1963.

the sales approach and make sure that the transaction was at "arms length." When sufficient sales data are available, this is probably the most satisfactory indicator of value

2. CAPITALIZED EARNINGS

The theory of capitalized earnings represents the principle that buyers and sellers of property translate anticipated future income into present capital value In arriving at a purchase price for a property, the buyer converts the future productivity he predicts to current capital value In this manner property worth is calculated from what it will earn. Past earnings have no real importance for assessing value except as they indicate future potential.

3. MARKET VALUE OF STOCK AND DEBT

By accurately assessing the value of stock in a corporation, the assessor can judge its worth The value of corporate stock is determined by knowledgeable investors, so if the stock value can be determined, the worth of the company is known Stock and debt are on the liability side of a balance sheet, but an appraisal of the liabilities represents an appraisal of the property on the asset side. Despite a considerable amount of uninformed buying, market prices of stock are controlled by men who have an understanding of the financial condition of the company in which they invest and who buy if the price goes below their concept of value and sell if it goes above that value. Thus the market price of the stock cannot go far above or below the informed opinion of corporate value This approach to value cannot be used where stock is held closely and there is no market established for it.

4. HISTORICAL COST LESS DEPRECIATION

As seen from the title, this approach to value substracts depreciation from total investment to date To the original investment are added all enlargement and improvement costs and then normal depreciation, based upon the life of the improvement, is subtracted to achieve an assessment This method is normally confined to utility property because the Public Utilities Commission will not knowingly allow a company which it regulates to earn more than a fair return on historical cost less depreciation Depreciated historical cost is a recorded fact on the balance sheet of regulated utilities, making the determination of assessed value much easier than applying an arbitrary schedule of depreciation.

5. REPLACEMENT COST LESS DEPRECIATION

If the assessor applied current prices to all the items that make up a piece of property, he would know the cost of replacing the facilities. In a competitive setting—that is, for residential or commercial properties, but excluding monopolistic enterprises and regulated utilities—replacement cost less depreciation is a sound judgment of value. However, other factors must also be considered in arriving at a final valuation Among these factors are location, available services, and other subjective influences on worth

No one of the systems described above alone meets the test of determining value However, a reasonable combination of them or applica-

tion of factors of each can give a very good indication of what the property would bring on an open market even though a pattern of sales has not been established on which to base a more firm estimate These methods may seem imprecise and arbitrary to the general taxpayer, but no better device has been perfected to firmly establish property worth for tax purposes They have worked to the satisfaction of taxpayer and tax administrator alike, have stood the tests of time and the assault of men who attacked but could provide no more certain method of ascertaining value.

B. Frequency of Reappraisal

An assessor not only has a problem of finding value for a parcel of property but a problem of keeping that value current and up to date from year to year Obviously, the assessor does not have the staff to reappraise on an individual unit basis each parcel of property every year. A survey of this practice by county reveals that most reassess on a continuing four- to five-year rotation period.

Most appraisers use a rotating plan whereby a designated area—such as a supervisorial district, school district, or large city—is reappraised one year and another subpart of the county is reappraised in the subsequent year. The legality of this cyclical reappraisal program has been upheld in the courts. [*Lord* v. *County of Marin* (1953) 214 A.C.A. 25]

This assessment procedure has been severely criticized One of the critics, Los Angeles County Assessor Philip Watson, comments as follows:

> "To those who immediately protest that if market value rises we must reflect the increased value, I hasten to wholeheartedly agree. We must, however, reflect any increased value equally and proportionally throughout our jurisdictions, and this is precisely the thing we have failed to do This is precisely where we have procrastinated and made excuses for doing a bad job.
>
> "We have reflected in our assessed appraisals and assessment roll the addition of new construction and the increased value of land, but we have done it by an immoral and devious assessment practice commonly called 'piecemeal assessment.' Piecemeal assessment is a system of dividing the whole county area into a number of geographical subunits and each year confining our reappraisal revaluation program to one of the geographical subunits, until the whole area is reappraised In our county the plan used a five-year cycle. The time varied from place to place, but always with the same result. When one geographical subunit was reappraised, assessments generally were increased from 100 percent to 200 percent on land because in our rising market the previous values were five

years outdated This bad job was justified with the rather poor excuse that it was impossible to reappraise every property in the county each year, that we had to adopt some other kind of plan. What we should have done, was to insist that we have a sufficient number of competent appraisers to do the job each year.

"And what happened as a result? This piecemeal reassessment practice was a working proof of the practical application of Parkinson's Second Law as expounded in his book, *The Law and the Profits.* That law, as stated by Professor Parkinson, is 'Expenditures rise to meet income.' The public, in more basic and realistic terms than Professor Parkinson, usually expresses in this way, 'The government will spend every penny it can get its hands on'

"What I am saying to you, frankly, is that by doing this bad job of reappraisal, by not maintaining assessments at a constant relationship to market value, we assessors provided the ever-increasing tax base which made possible the ever-increasing higher spiraling budgets without an increase in the tax rate. We assessors, therefore, in the public mind, shifted the responsibility and blame, for higher taxes squarely to our own shoulders For example, Los Angeles County, with the five-year plan, each year revalued 20 percent of the properties and increased assessments 100 to 200 percent. The 100 to 200 percent increase on 20 percent of the properties in the county usually produced a total tax roll which was increased some 6–7 percent over the preceding year's tax roll How else could taxes have increased 300 percent with only a 14 percent increase in the tax rate?

"It also had very practical political advantages for, while it is true, the people blamed the assessor for the higher tax bill and called him the 'Tax Assessor,' only 20 percent of the people were angry each year. The other 80 percent were happy—theirs hadn't gone up Next year the second 20 percent were angry, the third year the third 20 percent But those who had been on the inequitable merry-go-round the preceding year were so grateful for no increase they forgot all about the previous increase So, come election time, the assessor was regularly reelected, with, of course, the customary nominal protest vote "[12]

Since becoming assessor, Watson has designed a program to keep his assessment rolls current. In an appearance before the Assembly Revenue and Taxation Committee, Watson explained the changes he had made

> "We have taken the approach in our county which, although not perfect, and which requires us to operate within some limits of tolerance, will, after we complete our initial reappraisal period, permit us to make an annual review of all our properties This continuing review of the ratio in relation to sales price will permit us to keep our assessments current each year within let's say a 10 percent limit of tolerance from the standard I brought with me the approach we have taken to do this We call it a sales ratio study, and in this we do it by field book We have some 2,850 field

[12] Address by Philip E Watson, Los Angeles County Assessor, before the Western States Association of Tax Administrators, September 6, 1963.

books dividing our county into 2,850 areas. We collect the sales data of properties actually sold within the field book areas—compare the sales price to the assessed value of the property, and compute a ratio for each field book We use this to plan our work to plan how we are going to make the appraisals We then chart them—line chart—such as I have here. Draw, if you can see the red line here, this is the 25 percent line. There is a slight green line that you probably cannot see that is a 20 percent line. The properties that fall outside this range in relation to sales price we then say are those areas which need work, which need bringing into the limits, either brought up or brought down. In line with this, in this year we are working on everything below 20 percent in our county—about 425 thousand or 450 thousand parcels throughout the county. We think this system, when we complete our general reappraisal to bring everything within the limits will permit us to constantly maintain it at that level, and we won't have to do it geographically. We realize that it will be fairly hard to convince the individual in this field book whose property will be reappraised that we are not doing it on a sectional basis, I recognized that, but I think we can demonstrate it by getting someone to sit down and look at the way we approach this."[13]

Without proper staffing, frequent appraisal is impossible, and of course it is unreasonable to ask the assessor to do the impossible However, better guidlines relating to reappraisals could be established by the Legislature For example, rather than using supervisorial districts as subunits in a reappraisal program, school districts could be used The use of school districts would even the tax impact of an increase in the assessment as all in the taxing jurisdiction which takes the largest bite from the property tax would be treated the same

C. *The Assessor and His Staff*

The quality of the assessor and his staff will ultimately determine whether the assessments in a given county are reasonably uniform and fair to all or whether they stand as an outrage to every principle of legal, social and moral justice.

Placing a value on property is a technical job requiring great skill and exacting professional qualifications With skillful and dedicated assessors, the property tax system can be made to work in California, without them it cannot

All county assessors in California are independent public officials elected to office by the voters. Much has been written as to the desirability of this method of selecting assessors In *American Public Finance*, Shultz and Harriss observe:

> "Experts favor appointment of assessors, preferably as part of a civil service merit system. The elected assessor is too often a votegetter instead of a competent appraiser and administrator, worse yet, he may be a creature of the local political 'machine' and misuse his office to further the 'machine's' ends. When election

[13] Statement by Philip E Watson to the Assembly Committee on Revenue and Taxation, Los Angeles, November 15, 1963.

puts an honest and able man into an assessor's office, he labors under a heavy handicap He has a wide range of discretion, an ability to grant favors that is great indeed. If he hopes for reelection, he must retain the backing of his party organization and curry favor with the voters Such divided interests reduce his efficiency

"Dangers, however, also lurk in a system of appointment If the office is at the disposal of a county board, it will often be made a political gift, a reward for political effort rather than fitness for the office. This hazard can be reduced by requiring appointment to be made from a list of candidates certified as to fitness by a competent and impartial agency—say, the state tax commission As a further safeguard, the state agency may be empowered to remove appointed assessors upon proof of incompetence or malfeasance. Although the exercise of such removal power might be rare, its existence would help toward maintaining statewide standards of assessment practice Better yet, assessors should be made part of the permanent civil service, as in New York City Tested competence should be the basis of selection and promotion, with examinations open to all." [14]

The Advisory Commission on Intergovernmental Relations, after viewing this situation, reported that,

"Local governments are accustomed to employing trained accountants, engineers, health officers, social workers, and school teachers, but they seem willing to elect as assessor any resident citizen who is old enough to vote and does not have a criminal record, and pay him less than the school janitor Very fortunately this is not the universal procedure, but it is sufficiently widespread to explain in part why assessing is mediocre to poor in many areas" [15]

In some states, the assessor is appointed by local governmental boards Primary district assessors are appointed in Delware, Georgia, Iowa, Maryland, and North Carolina The State of Kentucky has a unique system which retains the elected assessor while at the same time insures he is competent to hold the office Before a candidate can have his name placed on the ballot, he must be certified by the State Department of Revenue that he is qualified for office. [16]

The advisory commission recommends that·

1. "All assessors should be appointed to office, but with eligibility for appointment based on state certification as to qualifications
2. "There should be no requirement of prior residence in the assessment district for appointment to the office of assessor.
3. "Assessors should be appointed by chief executives of local governments when assessment districts are coextensive with such government . ." [17]

However, there are certain persuasive arguments for retaining the assessor as an elective officer Boards of supervisors have a natural af-

[14] William J Shultz and C Lowell Harriss, *American Public Finance*, Englewood Cliffs, N J . Prentice-Hall, 1960, p 375
[15] Advisory Commission on Intergovernmental Relations, *The Role of the States in Strengthening the Property Tax*, Washington, D C, June 1963, p. 104
[16] *Ibid*, p 104–105.
[17] *Ibid*, p 105–106.

finity for high assessment rolls. In this way, they can keep the tax rate low. An appointive assessor may feel pressure to increase the level of assessment to please his bosses. In addition, in most counties, the Board of Supervisors acts as a Board of Equalization to which taxpayers can appeal their assessments. By keeping the assessor and the board divorced, a better judicial atmosphere can be maintained In California the office of assessor is nonpartisan and many assessors first acquire office by appointment There are further arguments for continuing the county assessor as an elective officer. The Kentucky system where assessors are elected by the people but where candidates are certified as to their competence has much to commend it It keeps the office of the assessor independent from the tax rate setting body but insures that a qualified person will be elected.

Salaries paid to county assessors, for the most part, are low. Considering the vital importance of the job of the assessor, the remuneration for the work should be such as to encourage the best possible candidates to compete for the position. In 27 counties, the assessor makes less than $10,000 a year. The average salary of a county assessor is less than $12,000 per year. (See Table IV)

TABLE IV

Salaries of Assessors in California

Alameda	$17,010	Orange	$16,800
Alpine	4,800	Placer	11,500

SOURCE. Figures supplied by county assessors and State Board of Equalization, 1964.

Staffing of the county assessor's office is as important as the selection of the assessor The deputies who are out in the field making the appraisals will ultimately bear the responsibility for the quality of the assessment roll. Regardless of the size of the office, the appraisal staff

must be professionally qualified for their responsibilities The Advisory Commission on Intergovernmental Relations recommends that property should be "appraised for taxation only by appraisers certified as to qualifications on the basis of examination by a public agency authorized to perform this function." [18] In California, only 23 counties require the passage of a civil service examination as a condition of employment. (See Table V.)

Salary will be an important factor in attracting and keeping qualified individuals in staff positions in assessor's offices If an inadequate salary is offered, the most highly qualified candidates will consider other employment. In addition, inadequate salaries result in costly personnel turnover.

The State Board of Equalization has recommended that the salary levels for staff appraisers should be comparable to those paid for similarly qualified personnel by the State of California.[19] The size of a county should make little difference (other than for adjustments in the cost of living) in the salary of an appraiser. An equally qualified person is needed to appraise a residence in a small county as in a big one.

[18] *Ibid*, p 105.
[19] State Board of Equalization, *Property Tax Assessment in Santa Cruz County* (mimeo) 1962, p. 20.

In many counties, particularly the smaller ones, the salary schedule is below comparable salaries paid to appraiser personnel working for the state. In a few cases, the county salary is higher than that of the state. It should be noted that the counties have been making a determined effort to improve their salary schedules over the past few years.

SOURCE Information supplied to the Assembly Committee on Revenue and Taxation by county assessors of California

For the year 1963–64, the state salary schedule for junior property appraisers was $440–510/month.[20]

A quality assessment not only depends on a highly trained and competent staff but on a staff which is large enough to effectively fulfill a normal appraisal and equalization program. The size will vary depending on the nature of the county and the number and types of property which must be assessed. Approximately 4,500 people were involved in the assessment of property at the county level in California in 1963.

A breakdown of this total shows:

Administrative	162
Field appraisers	1,619
Marine appraisers	28
Timber appraisers	12
Seasonal personnel	1,010
Clerical	1,667 [21]

On an average, there is one field appraiser for every $20 million of locally assessed value in the state. In a further effort to improve the quality of assessments, most county assessors' offices have an inservice training program. This program is generally oriented toward (1) a review of the "basics," particularly for new personnel, and (2) advancing the professional capabilities of permanent staff members. Over 73,000 man-hours were spent in training in 1963.[22]

[20] The state salary during the second half of the 1963–64 fiscal year was 10 percent higher than the one shown

[21] Figures supplied the Assembly Committee on Revenue and Taxation by the county assessors of California.

[22] *Ibid.*

As the Advisory Commission on Intergovernmental Relations observed:

> "There is no satisfactory substitute for the continuous inservice training, much of it informal, provided by competent, well-equipped state supervisory agencies through provision of manuals, guides, and other assessing tools along with personal instruction in their use by means of field service and regional conferences and schools, collaboration of technical staffs in solving difficult assessment problems, guidance in measuring and analyzing assessing results, and broadening the local assessor's range of professional equipment by acquainting him with the best technical reference material and the wealth of aid available in the publications and services in numerous federal and state government departments and agencies and in the state colleges and universities [23]

Progress in improving the training of deputy assessors is being made by Philip Watson, Los Angeles County Assessor Watson told the committee:

> "By and large, almost exclusively in the past, deputy assessors are trained within assessors' offices There has been very little effort made in the schools to train deputy assessors There are appraisal courses given at the various schools and some real estate courses which bear on it and from which we can build We have our own trainee course. It has been conducted in the office for some time We currently have 81 students in our trainee program Further than that, I have contacted representatives of UCLA, USC, and Los Angeles State attempting to persuade those people of the need for education in this field. Only a week ago, I met with the department head and the President of Los Angeles State They have given us a copy of the program of training they have in the appraisal field, and we are in the process of developing so that they can add to their regular curriculum program of training for deputy assessors in our real estate section I think this has been the first breakthrough, but we definitely see a need for more education But we are on the way with this particular program as well as our inservice training within the department "[24]

The State of Oregon has postwar legislation designed to improve the quality of assessments in the counties in that state. This law provides that only certified appraisers who have passed a state examination may appraise property. In addition, a minimum salary for these appraisers, tied in with the state's salary schedule, is required, and the law further provides that each county must have one certified appraiser for each $30 million in full value. (This compares with an approximate ratio of one field appraiser for every $90 million of full value in California)

According to Kenneth C Tollenaar, Executive Director of the Association of Oregon Counties, there have been no problems with respect to the examination and certification of appraisers. The examinations

[23] Advisory Commission on Intergovernmental Relations, *op cit*, p 122
[24] Statement of Philip Watson to Interim Committee on Revenue and Taxation, Los Angeles, November 14, 1963.

cause little additional work for the State Civil Service Commission, since the examinations are coordinated with those they must administer for state personnel. However, Tollenaar reports that other requirements have presented problems:

> "The second point—minimum salary—has given rise to much misunderstanding and disagreement between the county governing bodies, the county assessors, and the State Tax Commission. Such a provision is contrary to the home rule principle that each locally elected governing body should be responsible to the voters for the expenditure of tax money Moreover, it is in direct conflict with county civil service concepts. The Oregon Supreme Court has ruled that this provision governs only the salary paid for entry-level appraisers, and does not require each county to adopt the state's classification plan. This ruling helped, but there are still a lot of unresolved problems in this situation
>
> "These problems are insignificant in comparison to those which have been stirred up by the third provision—that counties must employ one certified appraiser for each $30 million of true cash value
>
> "The counties have come to regard this statute in the same light as prohibition The law is widely ignored, but it has a nuisance effect which is highly offensive to the counties.
>
> "The counties' objections are numerous The statutory standard is, above all, arbitrary, $30 million of true cash value in central Oregon wheat land or in a single industrial plant constitutes much less of a demand on appraisal personnel than does $30 million in mixed commercial and residential property in small ownerships A given number of identical $20,000 buildings require much more personnel time to appraise if they are dispersed in the wide open spaces of eastern Oregon than if they are located side by side in some residential subdivision $30 million in personal property is a different kind of appraisal job than $30 million in real property.
>
> "There is moreover, nothing magical about the figure of $30 million It was arrived at subjectively by certain individuals when it was written into the law, and even if it had been based on a careful study of statewide averages it would be far out of date today, considering the impact of inflation on property values" [25]

Considering the Oregon experience, California should consider the establishment of a program of certifying appraisers through a system of state examinations As previously noted, the Advisory Commission on Intergovernmental Relations recommends that all states adopt this procedure.

D. Outside Interests of Assessors

Those who conduct the public business must be guided by the highest standards of ethical behavior Because of the great power of an assessor to determine a person's property tax liability by the setting of the assesssment and because the underassessment of a few parcels on a county roll would go completely undetected due to the normal dispersion of assessments, assessors must be of the highest integrity and

[25] Letter to Committee on Revenue and Taxation from Kenneth C. Tollenaar, Executive Secretary, Association of Oregon Counties, March 4, 1964.

maintain conduct beyond reproach In the normal course of events, the assessor's job is a full-time job Outside business activities would hardly be compatible with the public responsibility of the assessor Of particular concern are special situations in which an assessor might be involved.

An assessor who offered his services as a "tax counsel" to taxpayers whose property he assessed would be subject to criticism He would also be subject to criticism if he were in partnership with local taxpayers in business ventures within or without his county. If the assessor did not invest in these ventures in proportion to his participation but was "cut in" by the other parties, a very serious conflict of interest could result.

California's conflict of interest laws do not cover these situations. (See *Government Code*, Section 1090 et seq) Because of the sensitive nature of the assessor's work, it may be desirable for the Legislature to strengthen the conflict of interest laws as they relate to assessors

IV. BOARD OF EQUALIZATION: PROPERTY TAX ACTIVITIES

In addition to the responsibility for collecting most of California's state tax revenue, the State Board of Equalization has important responsibilities in the property tax field Public utilities are assessed by the board Assistance is given to county assessors through the Division of Assessment Standards The board also has the responsibility of determining an assessment ratio for each county. These ratios are used in computation of state school apportionments and as the basis for issuing equalization orders where a county's total assessment ratio is too high or too low. A final function of the board in the property tax field is to hear and decide appeals between governmental agencies with respect to taxable government-owned property

A. Assessment of Utility Property

Section 14 of Article XIII of the State Constitution provides that certain enumerated public utilities—railroads, private railroad car companies, express companies, intercounty pipelines, telephone and telegraph companies, and gas and electric companies—shall be assessed by the State Board of Equalization In 1964, the property of these utilities was assessed by the State at $4,442,129,980 or approximately one-eighth of the assessed value of property on the county tax rolls. As Table VII illustrates, the assessed value of state-assessed utility property increased 90 6 percent since 1954, while the assessed value of all property increased 101 6 percent In the last three years, the percentage increase of the utility roll was markedly lower than that of the total roll

A source of great controversy over the years has been the question of whether the board is assessing utility property at the same ratio to full value as county assessors are valuing locally assessed property. In 1957, the Legislature appropriated over $200,000 to study assessment practices—a study which was primarily devoted to the state and local assessment ratio question This study came to the conclusion that state-assessed property was being assessed at 50 percent of market

TABLE VII

Assessed Value of Tangible Utility Property Compared With Assessed Value of All Tangible Property: 1954–55 to 1964–65

Fiscal year	*Assessed value of all tangible property*		*Assessed value of tangible property of state-assessed utilities*	
	Amount (in thousands)	*Annual percentage change*	*Amount (in thousands)*	*Annual percentage change*
1954-55	$18,220,059	6 2%	$2,330,923	8 5%
1955-56	19,093,440	9 7	2,558,415	9 7
1956-57	21,819,642	9 1	2,854,805	11 6
1957-58	24,308,208	11 4	3,102,728	8.7
1958-59	25,966,688	6 8	3,391,672	9.3
1959-60	27,434,577	5 7	3,639,879	7 3
1960-61	29,600,832	7 9	3,784,455	4.0
1961-62	31,549,630	6 6	4,065,461	7 4
1962-63	33,326,914	5 6	4,206,140	3 5

Percentage change 1954-55 to 1963-64	--	101 6%	--	90 6%

SOURCE State Board of Equalization, *Annual Reports*, 1954–55 through 1964–65

value, while locally-assessed property was being assessed at 25 percent of market value.[20] This situation developed from the change in local assessment practices over a period of years. In 1935, when the state first began to assess public utility property, both state and county assessors were using a 50-percent ratio. After the war, the local ratio gradually dropped to 25 percent while the state maintained its ratio at 50 percent.

In commenting on their finding, the committee stated.

> "Several persons in testimony at our hearing questioned this conclusion [the committee's findings]. Their question stemmed in part from the fact that a utility is valued in a somewhat different way than a local property, than a factory for example.
>
> "It should be kept in mind that the basis of property taxation is that properties can be compared by their market value, not by the means of arriving at that market value. In other words, market value is a bridge or a common denominator for comparing unlike things.
>
> "Market value is found in many ways, the exact way depending upon the characteristics of the property being valued For example, depreciated replacement cost is a very significant factor in valuing a home or a factory. But no one would contend that replacement cost has any significance in valuing an out-of-date movie An even more extreme case, there is no such thing as replacement cost for land.
>
> "But a ranch and a factory can still be compared through the common denominator of value. In these cases market value of the building is arrived at by giving depreciated replacement cost considerable weight. The valuation of the ranch takes into consideration such things as productivity and sales. By using the correct

[20] Joint Interim Committee on Assessment Practices, *Final Report*, Sacramento, May 1959, p 30–33.

evidence of value for each, the common denominator of value is arrived at.

"To say that a utility should be valued like a factory is to say in effect that a utility is economically like a factory. But does anyone really believe that a public utility is economically like a factory building? Does anyone really believe that the unique features of a utility—its monopoly, stable income, regulation, limitations on earnings, and all the other features—should be ignored in valuing a public utility?

"It seems clear to the committee that the argument, in effect, that a utility is a factory has completely collapsed. It is wholly unrealistic to think that the many unique characteristics of a utility should be ignored in finding its value

"A variation of the argument is sometimes made to the effect that market value of a utility cannot be compared to that of a common property because somewhat different value indexes are used. The contention is made that a 'different' value is arrived at for a utility because depreciated replacement cost is not given major weight, as it is in some types of locally assessed property The argument is strongly inconsistent on its face It implies first of all that one set of indexes is applied uniformly to all locally assessed property, in effect that farms, factories, homes, stores, and furniture are all valued by one, precise, mathematical formula Nothing, of course, could be farther from the fact

"The local assessor uses the indexes and gives them the weights that in his judgment are correct for finding the value of the particular property being appraised He is not concerned about the fact that he uses depreciated replacement cost as an evidence of value on a factory even though, as mentioned previously, there is no such thing as replacement cost for valuing farmland He recognizes that if he uses the correct indexes for each type of property he will come to figures that can be compared; in short he will find market value

"By the same token, if the correct indexes for valuing utilities are used, market value of the utility will be found and that value can be directly compared to the value of any other property, whether it be a factory, home, ranch, or office building

"This point of comparability of properties of various types through the medium of market value was rather clearly expressed in our consultants' report:

> 'There are economic differences between many types of locally assessed properties Homes are different from apartment houses. These same apartment houses are different from other businesses, which in turn have peculiarities because of being manufacturing, farm or retail Utilities are economically different because of being a regulated industry, with prescribed territories, fixed rates, an exact earning base, and a limited earnings on that base. But all the differences do not prevent an appraiser from arriving at a common basis for taxation. By recognizing the individual characteristics of each class and type of property and by varying his appraisal

method accordingly, he arrives at a true common denominator, "full cash value."

"Whatever the type of property, there is one and only one standard—"full cash value." The prevailing economics for each type of property will determine how the standard will be reached and the methods used to arrive at the standard will be varied. But there is a common denominator for assessment purposes for all types of taxable property and that standard is "full cash value."'

"The committee has found that confusion exists between market value and the rate base found by the Public Utilities Commission. Contentions have been made that the State Board of Equalization uses a method of valuation designed to establish a base for utility rate making. This misunderstanding apparently stems from a lack of knowledge of how the Public Utilities Commission establishes a rate base.

"The Public Utilities Commission uses the cost of each item of utility property when it was first devoted to public service. The summation of all these costs, after appropriate depreciation, becomes the rate base upon which the utility company is permitted to earn a reasonable return

"The Board of Equalization takes this depreciated historical cost into account when it computes the market value of a utility, but much greater weight is given in total to other factors—such as capitalized income, stock and debt values and depreciated reproduction cost Thus, because the rate base of a regulated utility is important in estimating its market value, the board considers depreciated historical cost, but only as one of several pertinent factors and never as the sole factor The board's market value findings can, and often do, differ substantially from the rate base

"Having heard many times the misconceptions analyzed above, we had repeatedly urged that people go beyond them and tell us at our hearings how a utility should be valued. In our announcement of the hearings we again urged it and urged that witnesses apply their ideas to the figures available on various utilities.

"It is highly significant that no witness offered testimony directly on how a utility should be valued. No witness offered to apply his ideas to a particular utility."[27]

According to Board Member Richard Nevins, the assessment ratio for utility property has been gradually reduced in the past few years Nevins told the Assembly Interim Committee on Revenue and Taxation, meeting in Los Angeles on November 13, 1963.

"The board . has been making a gradual adjustment downward of the ratio, doing what Oregon did at a prior time, and I would say the ratio is somewhat in the neighborhood of 42 percent at the present time"

Spokesmen for utility companies confirm the fact that the ratio is being reduced According to Raymond E Marks, general tax commissioner of the Southern Pacific Company, the board has reduced the as-

[27] *Ibid*

sessment ratio on his company's property, beginning in 1959, from 50 percent to 44 percent.[28] E. F. Harding of Pacific Telephone says his company's ratio has dropped to 43 percent.[29] Discrimination against one type of property violates all the principles of tax equity and tax neutrality. All property should be assessed equally regardless of what level of government is doing the assessing. However, a gradual reduction in the state assessment ratio is necessary so as not to destroy local government where the utility roll is a large part of the tax base.

B. Assessment Standards

Through an Assessment Standards Division, the State Board of Equalization offers local assessors help in improving local assessment practices. This division prescribes standard forms for the assessment of property, reviews and makes recommendations on all welfare exemptions, publishes material helpful to assessors and conducts training sessions for county assessors and appraisers.

In 1962–63, it conducted 24 training courses, with 353 participants receiving certificates of successful completion. The division also publishes the *Assessor's Handbook*, a tome of over 2,200 pages, which covers all phases of property taxation in California. This is an invaluable aid to local assessors and has been a great help in standardizing assessment practices within the state.

State law requires the Board of Equalization to:

> "make surveys in each county and city and county to determine the adequacy of the procedures and practices employed by the county assessor in the valuation of property for the purposes of taxation and in the performance generally of the duties enjoined upon him by law."[30]

Recent surveys have been limited to studies of personnel, salaries and office procedure, rather than a full evaluation of the work of the county assessor in terms of the equalization of assessments throughout the county, but these studies have been initiated by the county assessor rather than by the state board. Since June of 1959, the division has surveyed 17 counties and filed reports with the Legislature. See Table VIII.

C. *Intercounty Equalization*

The reason for the establishment of the Board of Equalization in 1870 was to equalize assessments among the counties This was extremely important at the time as the state was imposing an ad valorem property tax and differences in assessment ratios among counties could mean that counties with high assessment ratios would pay more than their fair share in state taxes

With the withdrawal of the state from the property tax field, this function has assumed a less important role in the board's operations. It is still important to keep county assessment ratios as uniform as possible because many schools and special districts cross county lines and state aid to schools is apportioned on formulae based on district assessed value modified by the Collier factor.

The board has not issued any intercounty equalization orders in two years In 1962, the board ordered Mariposa County to raise the assessed values on its secured roll by 21 percent and Tehama to increase the assessed value on its secured roll by 20 percent.

TABLE IX

SOURCE Board of Equalization, *Annual Reports, 1954–55 and 1963–64*

It should be noted that the board has issued equalization orders only to those counties whose assessment ratio deviates from the statewide average by more than approximately 20 percent [33] Considering that this deviation could result in a 40 percent differential in tax liability on property of the same value, the board should give some thought to reducing the tolerance limits.

Of more significance at the present time is the use of county assessment ratios in computing the amount of state aid school districts are

[31] Figure indicates the percentage increase in the roll as ordered by the board
[32] Tulare did not comply and was sustained by the Tulare County Superior Court
[33] See 1963 assessment ratios
Statewide average assessment ratio 23 1
High ratio Sierra 27 1
Low ratio Nevada 19 1
In this particular example, assume a property is worth (full value) $100,000 In Sierra County it would have an assessed value of $27,100 while in Nevada County it would have an assessed value of $19,100 Assume a junior college district levied a 35¢ tax on both properties Although both are of equal value, the Sierra County taxpayer will pay $94 85, while the Nevada County taxpayer will pay $66 85, a difference of $28 Due to the differences in assessment ratios the Sierra County taxpayer will pay 40 percent more in taxes than the Nevada County taxpayer on the same tax rate to the same unit of government on property with same value

entitled to receive A portion of the money apportioned to California school districts is distributed on the basis of need In measuring need, the "modified" assessed valuation of a district is used A district with a low assessed value may be a "needy district" or it may be a district where a low assessment ratio is being used To insure that all districts are treated equally in the measurement of need, the assessed value in each district is adjusted upward or downward by a factor determined by the county's assessment ratio.

There has been some controversy over the way the board arrives at a determination of county assessment ratios Essentially this process involves sampling and trending techniques Each county is physically appraised once every three years by personnel in the board's Division of Intercounty Equalization The assessment ratio is derived from a trending process based on statistical data In the counties that are physically appraised, a stratified random sample of properties on the county's last completed roll is selected, and the full value of these properties is determined by the board's well-trained appraisers The sample is obtained by dividing the assessments on the local roll into a series of groups For example, all property assessed at less than $2 000 on the secured roll constitute group 1. Properties are then picked at random from among those in each of the groups A relatively smaller percentage of properties in the lower value group are selected, while a relatively higher percentage of properties in the lightly populated groups, which are the high value groups, are picked

By expanding the findings from this sample, an estimate is made of the full cash value of all locally assessed property within the county This estimate is then projected for one, two, or three years The projected full cash value is then compared with the value shown on the county's assessment roll to determine the assessment ratio for the county.

To project the full value estimate, the board uses a statistical process known as trending This trending is done by economic indicators and three are used specifically—school enrollment, sales of retailers, and wages in covered employment These indices are processed into a multiple regression equation to forecast the full cash value of a county for a given year

Counties may formally appeal this assessment ratio only if the Board of Equalization proposes to issue an intercounty order to increase or decrease the county roll. However, the county assessor is privileged at all times to discuss and review with the board's appraisers the assessments which are being made There is also an opportunity for the county assessor to discuss the assessment ratio with the top staff of the board and the board itself during the month of August.

The procedures for the appeal from the findings of the Board of Equalization need to be improved because of the importance of an assessment ratio to a county in the allocation of school funds If the lien date were moved back to January 1 as previously discussed, this would allow adequate time for all counties that wish to appeal to do so Under the present calendar, a substantial number of appeals would either wreak havoc with the operations of the board or result in very perfunctory hearings

Criticisms of the board's work in the determination of assessment ratios are frequently heard from those at the county level. Individual appraisals made by the board's appraisers are always subject to dispute. San Francisco Assessor Russell Wolden, told the Assembly Committee on Revenue and Taxation that the board is "working *from* sales prices which we don't think are value."[34] According to Ronald Welch, the board's Assistant Executive Secretary, for property taxes:

> "A complaint that we frequently hear from assessors is that our men always appraise at the upper end of the range within which differences of opinion are expected of equally competent appraisers. Those of us who hear only of the appraisals with which the assessors disagree tend to feel this way, too, but the best tests we can run do not support the conclusion In a paper that I circulated among you in September, I pointed out that the recent sales-ratio studies of the Bureau of the Census produced results closely comparable to ours for residential properties—by far the most important segment of most county assessment rolls. A second test that we have run in a number of counties is a comparison of sales prices with our appraised values of urban properties that were in one of our triennial surveys and were sold under value-indicative conditions before we next surveyed the county The aggregate sales price of such properties in a county is usually 5 to 10 percent more than the aggregate value ascribed to them by our appraisers Undoubtedly we do overappraise some properties, but I think it can safely be asserted that we underappraise others On balance, it seems probable that the underappraisals at least equal the over-appraisals in number and in their contribution to a county's assessment ratio."[35]

The trending of assessed value for two years for the determination has been attacked as not being statistically valid Mr Welch responds:

> "Oddly enough the criticism usually is that we project too high a full cash value The fact of the matter is that we project too low a full cash value and when we come around and make a new survey, we find that we haven't projected fast enough. I think this is a difficulty that those of us in California face almost constantly. We cannot believe that market values are increasing as rapidly as they are And we have not been able to formulate a mathematical expression that gives effect to this very rapid rise in values that we are experiencing We are still striving to find this answer."[36]

An evaluation of the board's work in the intercounty equalization area was made by the Joint Interim Committee on Assessment Practices. Professor George M. Kuznets, of the Department of Statistics at the University of California, made the study and concluded:

> "1. Control of fieldwork appears to have been adequate enough to insure that significant selection biases did not occur.

[34] Statement to Assembly Committee on Revenue and Taxation, December 16, 1963, in San Francisco.
[35] *A Second Look at Intercounty Equalization*, speech by Ronald B Welch, assistant executive secretary, California State Board of Equalization, for the 1963 Conference of County Assessors of California in Los Angeles, November 20, 1963
[36] Statement by Ronald Welch to the Assembly Committee on Revenue and Taxation on April 15, 1964.

"2. The relative standard errors of estimates of base-year market value of locally assessable property were small, ranging from about 1 to 4 percent.

"3 Stratification by total assessed value was effective in controlling sampling variability. Samples many times larger than those used would have been required to attain the sampling reliability without stratification.

"4. The trending equation appears to have performed satisfactorily as a short-term extrapolation device. While the statistical basis of this procedure is not as well established as that of the sampling estimates, its use was justified by the large savings it made possible.

"It should be emphasized that our review was restricted entirely to the statistical aspects of the board's determinations. We have not examined the validity of the appraisal methods used by the board in the valuation of assessable property." [37]

Although there is no reason to believe that these conclusions are not still valid, in view of the criticisms which continue to be made, it may be wise to restudy this process in depth during the next interim period.

V. CITY DUPLICATION OF PROPERTY ASSESSMENT

Assessment of property for tax purposes is a function of each of the 58 counties in the state At one time all the cities also assessed property, but most have recognized the savings available for local budgets by accepting the figures of the county assessor and having the county collect city taxes. Of the 385 cities in the state with authority to levy 1964–65 taxes, only 54 still had an office of assessor and determined their own assessments for property tax purposes. Records of the Board of Equalization indicate that in the fiscal year 1961–62 these 54 cities spent $1,560,000 to do assessing, a job which their counties would have performed at the maximum statutory rate specified in *Government Code* Section 51514 for $145,000. Since the county had to assess each parcel of property in the city during its own assessment review the process was duplicated by the city.

General-law cities are limited in their bonding capacity to 15 percent of their assessed valuation, but they can raise their debt limit at will by arbitrarily adjusting assessed values. Retaining this assessment function to allow oneself to override a safe bonding capacity is no justification for the duplication; it is another argument for transfer to the county level. The 15 percent bonding limit was put on the books to keep cities from spending themselves into too much debt, but with present loopholes it does not work in practice Last year one city which did not have its own assessor recreated the office and tripled the previous county assessment in order to float a large bond issue As soon as the bonds were safely sold, the assessing job went back to the county

Many of these 54 cities do not actually do the field assessing themselves. They simply take the county roll and use it as-is or factor its values, but all these cities collect their own taxes.

[37] Joint Interim Committee on Assessment Practices, *Final Report*, Sacramento, May 1959, p. 96.

By factoring the county assessed valuations upward the cities create artificially lower tax rates.

> "We are not doing any independent assessing. The county does a lot of it for us Just as a matter of some mechanics, we do wish to inform you that we take the county values and then double them, and apply the tax rate which we have." [38]

If the county assesses a particular piece of property at $5,000 and applies a tax rate of $6 per $100 of assessed value the homeowner pays $300 in taxes. By factoring the $5,000 valuation up to $7,500, the city need levy a rate of only $4 per $100 to derive the same income At first glance the city appears to have lower taxes, but the truth will become apparent when the tax bill arrives In addition, the city bill will contain costs of the assessment roll which they buy from the county, labor and machine time to factor the roll, and the cost of processing thousands of individual bills. The postage alone is a sizeable added expense

No trained group of property assessors is needed by a city which simply adjusts the roll prepared by county technicians One person with the title "assessor" supervises a group of clerks who do the same job as a similar group of clerks at the county level.

> "This does not, in my opinion, reflect a completely satisfactory and current assessment program, and the maintenance of an *adequate* field-assessing staff would certainly add many thousands of dollars to the figure." [39]

The city must prepare bills, meet the cost of mailing the extra bill, and receive, record, deposit, and audit all the payments and accounts The only advantage to be gained by this procedure is a possibility of earlier receipt of funds Since the city tax share is normally only one-fourth of the total tax bill sent by the county, many property owners will pay the smaller separate city bill quickly to get it out of the way. A larger, combined bill means slightly slower payment and because of county administrative procedure distribution of county collected funds to cities may lag collection by individual cities.

Some cities feel that by retaining their own assessment department they can control the distribution of the taxload and thereby favor particular types of development or industry. Due to transportation routes, climate, business opportunity, or some other factor equally difficult to foresee the county seat is not always the largest city in the county In these cases the larger city, which naturally represents a majority share of the total assessed valuation of the county, wishes to retain an assessor to prevent a shift of tax burden This is especially true in agricultural counties where one or two cities fear that the courthouse is dominated by rural interests. One city has said:

> "We have a higher valuation on farm land which is potential subdivision land than the county has Also, two of our major arterials have, within the past five years, gained quite a number of businesses which we have reappraised and the county has not If we

[38] Letter from E Earl Udall, city manager, City of Merced, to Hon Nicholas C Petris, January 6, 1964.
[39] Letter form H D Weller, City Manager, City of Alameda, to Hon Nicholas C Petris, January 6, 1964 (emphasis added)

accept the county roll we would of course realize the same amount of money but the homeowners would be paying tax that has formerly been paid by the farmer and by the new businesses "[40]

However, the opposite may be just as true. In Plymouth, the assessor uses:

". . . the county values but factors them by multiplying land values by 3, improvement values by 1½, and personal property values by 1. This action is designed to penalize the large land owners of the city. In this instance five or six owners of acreage within the city are being excessively taxed for the benefit of homeowners and small businessmen [41]

A survey in 1964 by the State Board of Equalization found that the City of Isleton was apparently assessing property on the secured roll at a level 45 percent higher than that used by the county while the property on its unsecured roll was being assessed at a fraction of the assessed values on the county roll It was found that the overall ratio was not as bad as it appeared on first blush because some of the property that the county assessed on the unsecured roll appeared on the secured roll of the city After adjustments were made for this situation, it was found that the property on the city's unsecured roll was being assessed 9 percent higher than the comparable property was assessed by the county Compare this with the 45-percent figure for properties on the secured roll

The situation really is bad when assessments on individual properties are related A comparison of the assessed values of 53 properties on the county's unsecured roll with the comparable values that the city placed on these same properties disclosed that the city's values ranged from a low of 11 percent to a high of 464 percent of the county values It is impossible to justify such wide deviations There were 16 cases where the city had not assessed personal property Most of these represented boats, but a few involved household personalty City assessments came within 50 percent of those of the county in only 16 cases

It is difficult to understand why a property owner will not register a protest when his property is assessed almost three times as much as it should be and 40 times as much as the property most grossly underassessed on the city roll Perhaps people don't know what steps to take to obtain redress or don't believe enough city taxes are at stake to warrant protesting their assessments and appearing before the city council when it sits as an intracity equalization board

Where assessors are elected and have been political powers in their communities, they naturally expound the view that assessing is one of the strong arms of home rule—a very effective political argument when, as in several charter cities, a vote of the people is necessary to approve a transfer to the county.

In one city still doing its own assessing, the personal property of a city councilman is assessed at $400 while the county has a value of

[40] Letter from Fay C Short, City Clerk and City Assessor, City of Delano, to Hon Nicholas C Petris, January 29, 1964

[41] Letter from John B Marshall, State Board of Equalization, to Raymond R Sullivan, May 22, 1964.

$2,200 on the same property. This city assesses all other property substantially higher than the county.

For many years general-law cities were restricted by law to a tax rate of $1 per $100 of assessed valuation for their general fund revenues This limitation was lifted by the 1961 Legislature by enactment of Section 43072 of the *Government Code.* This new section allows general-law cities to factor their $1 rate limit rather than forcing them to factor the assessed values. This permits these cities to use the county's rolls and effect savings in their municipal budgets. But some cities feel more secure with their $1 rate:

> "The city at present adds 50 percent to the county assessor's figures before calculating the tax bills This enables us to stay within the $1 tax limit for the general fund Although recent legislation allows a tax rate in excess of the $1 limit following the transfer of tax collection functions to the county, the tax rate limit would then be no less arbitrary than the present figure of $1 "[42]

This city has probably had a $1 tax rate since it was first incorporated and hopes never to change it They can point "proudly" to the constant rate. They may never raise their tax rate, but they can change the assessment level every year to accomplish the feat

Cities doing their own assessing are burdened with further administrative procedure which duplicates county programs Applicants for the veterans' exemption and the welfare exemption (which includes religious, hospital, and charitable organizations) must file in both the city and the county In many cases a man eligible for the veteran's exemption at the county level will find himself with the same total assets but ineligible at the city level after the city factors up his assessed valuations These city councils must also sit as boards of equalization every year to hear the complaints of their citizens and explain the difference in city and county assessments on the same piece of property.

The transfer of the assessing function from these 54 cities to their counties would involve no extra work for the county staffs since they already assess each piece of property the city is assessing

> "I feel that the county assessor's office, with its large staff of trained appraisers, can more equitably assess property within the city than any *one* man we might hire as city assessor. The county presently employs eight appraisers who specialize in residential, rural, and commercial property as well as three personal property appraisers In addition, three timber appraisers are employed who would also assess lumber mills within the city The utilization of these specialists as opposed to one full-time general appraiser should result in more equitable assessments throughout the city. . . . This, I feel, reflects the trend to higher quality of service at a lower cost to the city which we hope to achieve for Eureka "[43]

Surveys by the Board of Equalization show that cities could reduce their tax rates an average of 5 percent by discontinuing their assessing

[42] Letter from Race N. Wilt, City Manager, City of Coronado, to Hon Nicholas C Petris, January 24, 1964.
[43] Memorandum from city manager to mayor and council of Eureka, October 18, 1963 (emphasis added).

and collecting programs, and individual cities could slice from 2 percent to 30 percent off their budgets One city is actually spending 30 percent of its property tax income on administration of the tax[1]

Early in 1964 the chairman of this assembly committee wrote to the mayors and managers of the 59 California cities that had assessed and were in the process of collecting 1963–64 taxes, asking them to consider transferring the duties to their counties Seven of the replies indicated that action was being taken to transfer, four said a thorough study was being made of the advisability of continuing local assessing. There seems to be no reason why the few remaining cities which have not transferred cannot do so The only satisfactory argument presented to this committee, in its hearings during the 1963–64 interim period, was that funds were available to the city earlier in the year Almost 400 cities operate now on the "delayed" income basis, and the 54 remaining should recognize the savings available in spite of the minor financial problem to be encountered in the first year after transferring.

After an exhaustive two-year study, the Advisory Commission on Intergovernmental Relations published a detailed report on the property tax and its administration in the 50 states One of their recommendations for improvement in the administration of the levy stated·

> "The geographical organization of each state's primary local assessment districts should be reconstituted, to the extent required, to give each district the size and resources it needs to become an efficient assessing unit and to produce a well-ordered overall structure that makes successful state supervision feasible No assessment district should be less than countywide and when, as in very many instances, counties are too small to comprise efficient districts, multicounty districts should be created All overlapping assessment districts should be abolished to eliminate wasteful duplication of work." [44]

The obvious savings in salaries alone should make the transfer appealing to local government units In many cities the assessor also has several other titles so the savings would not be equivalent to the total budget he supervises; however, the cost of maintaining maps, records, data on property transfers, and the salaries involved in an active and accurate appraisal and reappraisal program with continuous audit seems to indicate a possibility for budget relief in financially beleaguered cities.

One final point deserves note The individual cities do not relinquish any part of their local fiscal control by transferring Although the county assessments are equalized by state law, *cities set their own tax rates* and receive payment from the county treasurers With supervision by the State Board of Equalization, the county board of supervisors, city government officers, and a myriad of citizens' committees, the taxpayer should never fear any loss of home rule If this assessing and collecting function were transferred from the city level to the county level, there would be no loss of autonomy, but there would be substantial savings to local taxpayers

VI. ASSESSMENT UNIFORMITY

Sound tax principles require all property to be assessed equally in relation to value The State Constitution requires that all property be assessed in proportion to value Yet property in California is not being assessed equally. Data available to the committee show wide disparities in assessments of property in some counties. Some people are paying more than their fair share of the tax burden due to a higher than average assessment, while other people are paying less than their share because of a lower than average fractional assessment.

The committee has received some statistical data on property tax uniformity at its public hearings However, the primary sources of information are the United States Census Bureau's 1962 study of taxable property values and information developed from the records of the State Board of Equalization

United States Census Bureau Study [45]

Information about real property that changed hands during a six-month period in 1961 was gathered by the Bureau of the Census on a sample basis From this survey, the sales price, assessed value and the sales assessment ratio of real estate involved in "measurable sales" was determined. This information was published in 1963 as part of the second report of the 1962 Census of Governments

According to the Census Bureau:

> "This survey was undertaken primarily to ascertain the relationship between assessed value and sales price for properties changing hands on an ordinary market basis—i e , between buyers and sellers dealing at arm's length with one another The survey procedures were so planned, therefore, as to exclude transfers between relatives and other types of transactions in which the total money consideration involved might not be reasonably regarded as the current market worth of the property changing hands [46] Necessarily excluded also were (1) those sold properties for which a distinct assessed value amount could not be obtained from local tax records (mainly, pieces of real estate that, as sold, represented only a portion rather than the entirety of an item on the tax roll) ; and (2) those sold parcels for which information on type of property and sales price could not be obtained from the buyer or seller, as more fully explained below under 'Data Sources and Survey Procedures' " [47]

Caution in the use and interpretation of the statistics is urged by the bureau, as certain limitations are inherent in their development Factors that must be taken under consideration include.

> "1. The assessment ratios presented deal directly only with the relationship found between assessed value and sales price for prop-

[45] U S Bureau of the Census, *Census of Governments 1962*, Vol II, *Taxable Property Values*, Washington, D C , U S Government Printing Office, 1963

[46] Standards used to guide this selection process followed closely the recommendations of the *Guide for Assessment-Sales Ratio Studies Report of the Committee on Sales Ratio Data of the National Association of Tax Administrators* (Chicago. 1954).

[47] U S Bureau of the Census, *Census of Governments· 1962*, Vol. II, *Taxable Property Values, op cit.*

erties subject to arm's length sales This is, inevitably, a market-selected group, and it comprises only a relatively small portion of all taxable real property.[48]

"Classification of sales by kinds of property and by assessed-value size classes, as reflected in various tables of this report, is designed to take account of differences that may exist among the several categories, the possibility remains that properties changing hands may have been subject to special influences that make the assessment ratios measured for them not closely representative for such property as a whole.

"2. The percentages of all taxable property of various kinds found to be involved in 'measurable sales' should not be interpreted as measuring the gross turnover rate of realty, since certain transfers that are not meaningful for ratio calculation were necessarily excluded.

"3. Being based on a sample rather than upon coverage of all inscope transfers, the assessment ratios shown in this report are subject to sampling variability Such variability has been measured and reported for the simple sales-based average ratios that appear in various tables. In some instances, it is evident that a relatively large variation is involved "[49]

The findings of the census bureau based on sales data show that there are substantial differences among classes of property in terms of their assessed value and sales prices.

As Table XII indicates, the ratio of assessed value to sales price is almost twice as high for residential property as it is for farms

TABLE XII

Ratio of Assessed Value to Sales Price by Classes of Property: 1961, July–December

	California		*United States*	
Class of property	*No. of measurable sales*	*Statewide size-weighted average*	*No of properties*	*Statewide size-weighted average*
Nonfarm residential	107,730	19 6%	711,679	31 9%
Acreage and farms	11,024	10 9	114,301	18 6
Vacant lots	26,034	13 9	219,381	19 9
Commercial and Industrial	7,499	17.8	40,156	N/C

SOURCE *1962 Census of Governments*

Another measurement of assessment uniformity is the coefficient of dispersion. This shows to what extent individual assessments vary from the average. If all properties were being assessed uniformly at the same percentage of value, the coefficient of dispersion would be zero. Where the assessment practices are very poor and a number of properties are assessed at a high fraction of full value while a number of properties are assessed at a low value, the coefficient of dispersion will be high.

[48] An alternative approach is applied by some state tax agencies, which compare assessments with appraised valuations specially made for this purpose The appraisal method permits preselection of a sample scientifically designed to represent all taxable property subject to consideration, but necessarily involves some degree of subjectivity of individual judgment.

[49] U.S. Bureau of the Census, *Census of Governments: 1962*, Vol. II, *Taxable Property Values, op. cit.*

The procedure used to compute the coefficient of dispersion may be illustrated by the following example·

House	*Ratio* *	*Deviation from median*
A	10%	15
B	20	5
C	25 (median)	--
D	35	10
E	50	25
	Total of deviations	55
	Average deviation	11
	Coefficient (11/25) or	.44 or 44%

* Ratio of assessed value to full value.

The coefficient of dispersion of assessments on nonfarm residential properties during a six-month period of 1961 in selected California counties ranged from a low of 11 4 percent in Merced County to a high of 36 4 percent in Humboldt County.

TABLE XIII

Coefficient of Dispersion from Median Sales Based Assessment Ratio on Non-Farm Residential Property, Six-Month Period, 1961, for Selected California Counties

County	*Number of sales*	*Sales-based median assessment ratio*	*Coefficient of dispersion from median ratio*

For 1,356 tax assessment areas of the United States, the median coefficient of dispersion for nonfarm residential property was 25.8 percent, compared with 20 percent for the above counties. Only 30 percent

of the assessment districts in the United States had a coefficient of dispersion less than 20 percent, while almost 50 percent of the above California counties were below 20 percent

State Board of Equalization Data

As a result of its duty to equalize property assessments among the various counties, the State Board of Equalization has collected data on assessments in each county. From this information, the county assessment ratios are determined, as has been explained The assessment ratios for 1964 range from 18 2 percent in Butte and Lake Counties to 25.9 percent in Yuba County.

Assessments made by the board's appraisers for use in computing county assessment ratios can also be used to compute assessment ratios for classes of property and coefficients of dispersion for each county. At the request of the Chairman of the Assembly Committee on Revenue and Taxation, this information was prepared from board records

We are refraining from a general publication of assessment ratios by classes of property for all counties as the figures developed from the board's sample, while reliable for the county as a whole, are not as highly reliable for a class of property within the county because of the small size of the sample When used, it must be pointed out that the ratio for a class of property does not represent an absolute figure Further, the assessment ratios are for land and improvements (real property) only. According to Ronald B Welch, Assistant Executive Secretary, State Board of Equalization, the ratios for personal property are highly debatable because of the fact that household personalty is virtually impossible to appraise But when the assessment ratio for a class of property in a county exceeds the assessment ratio for another class of property by more than two to one, the figures are of significance—not indicating a definite two-to-one ratio but showing

there may be a serious question of disparity in the equality of assessment on classes of property within the county.

As discussed above, the coefficient of dispersion is also a measure of assessment uniformity A coefficient of dispersion can be computed for each California county from the appraisals made by the board to compute the county assessment ratio Figures prepared for the Assembly Committee on Revenue and Taxation indicate that the coefficient of dispersions in California range from a low of 12 in Santa Clara County to a high of 184 in Lake County. A zero rating would represent complete assessment uniformity. The higher the figure the more the variation in assessment ratios between properties.

SOURCE Computed from sample appraisals made by State Board of Equalization, Division of Intercounty Equalization

In view of the above assessment ratios and coefficients of dispersion, it is clear that all property is not being assessed uniformly in proportion to its value

Standard Ratio

To provide for more uniformity in assessments, it has been suggested that the Legislature require all property to be assessed at a certain percentage of value more descriptive of actual practice than the present full value requirement. Richard Nevins, member of the State Board of Equalization, who has been advocating a standard ratio for a number of years, cites several reasons why a standard ratio is needed. According to Nevins, protection for the taxpayer is the most important reason for a standard ratio.

> . . . "He is protected two ways. First, he understands how his assessment was made. Second, he is assured that every other taxpayer is being treated the same.
>
> "Let us remember that my board, the State Board of Equalization, was created in 1879, to deal with unequal payment of state property tax In fact, as I understand it, one of the reasons for calling the constitutional convention of that year was to deal with tax abuses.
>
> "People are not too happy to pay any taxes, but they are exceedingly unhappy when they believe that they are paying more

than their share. The property tax is harsh enough—a standard ratio will improve its acceptability."[50]

Los Angeles County Assessor Philip Watson, appearing before the Assembly Committee on Revenue and Taxation, also supported the standard ratio:

"I believe we should have legislation fixing the ratio of assessed value to market value at the level of 25 percent The property owner should be able to determine whether his assessment is equalized with every other assessment in the county. The ability to do so requires that the taxpayer have knowledge of the market value upon which his assessment is based, plus the assessment percentage generally prevailing throughout the assessing jurisdiction Our Supreme Court has ruled in all its recent cases that this is so that the road to equalization is demonstrated by knowledge of these two factors Mr Nevins appeared before you yesterday in support of a standard ratio of 25 percent."[51]

Mr. Watson told the Assessor's Convention, held at Sacramento in September 1964, that·

"It has been the experience of Los Angeles County that since announcement of its 25 percent standard ratio the assessor's task has been made easier to the benefit of all—disputes on the matter of assessments are confined to the value of the property in proportion to the announced ratio. Despite personnel and budgetary considerations which impose limits on the capacity to physically reappraise each parcel of real estate every year, the establishment of a standard ratio raises a public yardstick against which every taxpayer at any time may gauge the equity of his assessments Furthermore, elimination of the guessing game has created greater public understanding, acceptance and confidence "

Opposing the concept of a standard ratio is San Francisco Assessor Russell Wolden:

"Previous witnesses before this committee have recommended amending our State Constitution to remove the full cash value provision and substitute in its place a standard ratio of 25 percent of assessed market value. Your committee rejected such a proposal during the last legislative session. The assessors of California, the State Board of Equalization and the County Supervisors Association have consistently opposed such legislation We are satisfied that establishing such a standard ratio would result in a decreased value of state assessed property and a consequent shift of taxes to local property Additionally, our local tax base would be drastically cut and the victims of this proposal would be homeowners and small businessmen, those least able to pay.

"The present state law dealing with apportionment of state school funds is adequate to equalize any difference in ratio which the board finds to exist between counties. County assessors work-

[50] Speech by Hon Richard Nevins to 59th Annual Conference of the State Association of County Assessors, Palm Springs, October 31, 1961

[51] Statement of Philip Watson to Assembly Committee on Revenue and Taxation, Los Angeles, November 15, 1963.

ing closely with the State Board of Equalization, are constantly improving intracounty equalization procedures It is, therefore, my considered opinion that a mandatory standard ratio would fail to serve any useful purpose.'' [52]

The opposition to a standard assessment ratio by the county assessors is strong. At the assessors' 1964 convention, only two assessors (Watson of Los Angeles and Broemmel of Marin) voted for an amendment which softened a strong antistandard ratio resolution [53]

One of the problems inherent in a standard ratio is enforcement. What if an assessor assesses property at a lower figure? The State Board of Equalization could be required to equalize all counties to a 25 percent figure—with a very narrow tolerance allowed. This would not help intracounty equalization, however, as those properties which are underassessed would continue to be underassessed in proportion to other properties if the entire roll were to be boosted Individuals who are underassessed will not complain about the fact at a county board of equalization hearing However, this flaw is in the administration of the ratio, not in the standard itself The standard ratio, by itself, will not achieve intracounty equalization, although it would be an improvement over the present situation.

As noted above, as an alternate to a standard ratio, the Legislature could insist that the present law requiring full cash value assessments be enforced. This would require the reduction of tax rate and bond limits but it would be easier than the enactment of a standard ratio which might require a constitutional amendment.

Other Suggestions

It has also been suggested that better assessment uniformity might be achieved if the State Board of Equalization were given the authority to go into a county to help rectify a situation where assessment administration has completely broken down. This would be analogous to the power of the Attorney General to move into a county where law enforcement has broken down [54] Board action could be triggered by a finding of an assessment ratio on one of property twice that of another or a coefficient of dispersion of over 100. As this would be used only in extreme cases, it would not solve the problem in the situations where assessment inequalities exist but are not serious enough to necessitate state intervention

It has also been suggested that the board increase the assessment samples it takes in a county so that the results would be statistically sound for all classes of property, then publish the results for the taxpayers of the county to see This would not correct unjust assessments, as the ratios are not published until after the appeal period is over but it would give citizens more information from which to work for improved assessment practices within the county

Another solution to the problem is to make the taxpayer responsible for the accuracy of his assessment and prohibit payments in eminent

[52] Statement of Russell Wolden to Assembly Committee on Revenue and Taxation, December 16, 1963

[53] Assessors from Alpine, Amador, Calaveras, Colusa, Lake, Mariposa, Modoc, Mono, Placer, Plumas, San Joaquin, Santa Clara, Santa Cruz, Shasta, Sierra, Tehama, Trinity, and Yuba Counties were absent or did not vote All others voted no

[54] See *California Constitution,* Article V, Section 21.

domain proceedings exceeding five or six times the assessed value of the property. It is unlikely that this would improve the uniformity of assessments to any great extent, however, as many taxpayers probably would fail to self-equalize in the hope or knowledge that their property would not be required for public purposes during the year

The problems of assessment uniformity are the most baffling in the whole property tax structure and will never be completely solved short of abolishing the propterty tax.

VII. NOTIFICATIONS AND APPEAL OF ASSESSMENTS

In the normal course of reappraising within a county, assessments are often adjusted sharply In most cases of drastic revision, the cause is obvious—new construction since last lien date, extensive remodeling, or mistaken valuation in previous years To warn taxpayers of these reappraisals and in effect to prepare them for their new tax bill, the Legislature has provided that the assessor must notify property owners when their assessment is increased by more than 25 percent of the previous year's value. The local board of supervisors may require notification when increases exceed some lesser percentage of the last assessment but at 25 percent a notice is mandatory throughout the state [55] The notice of increase must also tell the taxpayer how and when to file a protest of the new assessment. Many of these notices go to the bank or lending institution responsible for the tax payment and do not reach the property owner

Beginning on the first Monday in July the county board of supervisors are directed to convene as a county board of equalization to equalize the local assessment rolls This becomes a period of great activity for the board since they must have the equalizing completed by the third Monday in the same month [56] Before this group comes any property owner who feels his assessed value is not equalized or in line with his neighbor's He cannot complain about the value itself, he must confine the request to "equalization." and ask that his assessment in relation to the value of his property be in the same ratio as is generally applied throughout the county. As the court said in *Eastern Columbia, Inc.* v. *Los Angeles County,* (1943) 61 Cal. App 2d 734, the function of the board is to see that all properties in the county are assessed at a constant level of opinion as to market value and have their proper relationship to each other.

Petitioners before the board of equalization may have counsel and must present evidence to support their claim for reduction in assessment. The board is not bound by the ordinary rules of evidence, but may admit and act upon any evidence which has a direct bearing on the question before it. As a practical matter, the assessor and his staff appear at the hearings to answer the questions of the board and explain the assessment on the petitioner's property The board may not raise an assessment without evidence, nor may it deny a reduction based on evidence taken subsequent to the hearing and out of the presence of the property owner. Although the board of supervisors is an elective body whose members require no special technical training, as is expected of a judge, their decision is almost final in assessment equal-

[55] *Revenue and Taxation Code,* Section 619
[56] *Revenue and Taxation Code,* Section 1603.

ization. The question before them is not the size or amount of the assessment, but its equity in comparison with other properties The board reviews one assessment in relation to another.

If the petitioner is not satisfied with the results of his hearing, he may appeal his case in superior court; but his argument must be based upon procedural error by the board He may not question the decision, only the manner in which it was reached. In the absence of fraud or arbitrary use of its powers, the county board is the sole judge of questions of fact and of the values of property The decision of the board upon the evidence cannot be attacked by new evidence on the point in a superior court.[67]

We can see then that complete authority for review and settlement of assessment disputes remains with the county board of supervisors. At first glance this may seem unfair; many people would expect a court to settle these questions. But there is no law in dispute, only a matter of opinion of value—the assessor versus the property owner, and the supervisors as elected responsible citizens should be able to determine if the assessee has shown conclusively that an incorrect assessment has been placed on the property being reviewed However, there has been serious criticism of this method of judging taxpayers appeals

Richard Nevins, member of the State Board of Equalization, has proposed that a system of tax courts be established to deal with the problem of assessment review These courts would take the question from the board of supervisors without sending it to the superior court of the respective county.

> "I think one of the most serious deficiencies in property tax administration in California is the lack of a tax court which would deal adequately with value problems We can see from samples that there are great disparities from the county averages—and it seems to me that the property taxpayer in California needs a court in which to seek redress [68]

At present the courts are limited in their jurisdiction to a review of the procedure used by the board of equalization They cannot review the assessment itself as we stated earlier In *Best et al.* v. *County of Los Angeles* it was stated:

> "The court feels that the plaintiff herein have presented convincing evidence that as between these property assessments in their area . . . and the assessments made in the adjacent areas . . there is substantial inequality. At the outset this court is frank to state that had the plaintiffs' evidence been presented to him in a trial de novo, or had this court been called upon to pass upon the evidence as an officer of the county board of equalization, he would have no hesitancy but to grant assessment reductions to the plaintiffs"

The judge then stated he had no alternative under the law but to deny relief to the plaintiffs

[67] *Bank of America* v. *Mundo* (1951) 37 Cal 2d 1
[68] Hon Richard Nevins to Assembly Committee on Revenue and Taxation, Los Angeles, November 14, 1953.

The State of Oregon has established a tax court whose purpose is to:

> ". . . enable a taxpayer to contest a relatively small disputed assessment before an impartial judge in a manner which involves the lowest feasible expense to the taxpayer at the earliest appropriate stage and at a place reasonably near his residence.[59]

Giving the taxpayer the protection he requires and deserves involves the organization of a really effective review board and a set of comprehensive rules under which it may operate It is obvious that sound standards of review must be established and maintained in order to protect the taxpayer from arbitrary assessments and an unusually constituted board of equalization which is not capable of true equalization

PART I

BUSINESS INVENTORY TAX

by

DR HAROLD M SOMERS

Chairman of the Department of Economics and Professor of Economics
at the University of California at Los Angeles

Assisted by

JOSEPH J. LAUNIE

Few taxes have led to such loud outcry as the tax on personal property, including business inventories At the present time business inventories in the State of California are subject to property taxation and are assessed, at approximately 25 percent of their full valuation,[1] on the first Monday in March of each year. Estimates show that this assessed valuation is about $3 billion at the present time [2] Taking an average tax rate of 8 percent, this means that this revenue source yields approximately $240 million to the local governments

INCENTIVES TO TAX AVOIDANCE

The fact that this tax is assessed on a single day each year has led to some ingenious, although not illegal, avoidance behavior on the part of business firms The tax presents a decided incentive for the business firms to have their lowest possible inventory on the first Monday in March The routes to this result are many and varied Most firms draw down their inventories after the first of the year and attempt to get by on the lowest possible stock until the tax date has passed A great many firms have goods stored in transit in other states such as Nevada, where goods stored in transit are tax exempt, until the tax date has passed The tax thus places a burden upon the business community to engage in avoidance techniques.

TREATMENT OF INVENTORIES IN OTHER STATES

California's treatment of business inventories, while not unique, is in the minority among the states in the treatment of goods stored in transit While Nevada is most often mentioned in this connection, every state that borders California has some provision in its laws for the tax exemption of goods stored in transit

Table I lists the special tax treatment afforded business inventories in the several states As can be seen from this table, 35 of the 51 jurisdictions considered have some provision for exemption of business inventories. With the exception of California, the states that do not have any provision for the exemption of business inventories are small and primarily agricultural.

SIGNIFICANCE OF "FREEPORT" PROVISIONS

By far the most prevalent provision is the exemption of property stored in transit In practice, this usually means storage in a warehouse at some point along the regular route to the destination. The property remains under the original bill of lading, thus preserving for the shipper the through or "long-haul" rate There is a limitation of one year on such storage under current Interstate Commerce Commission railroad tariffs The shipper pays a rather nominal fee for this storage in

[1] This percentage varies with counties and runs as high as 50 percent in some areas
[2] A breakdown of assessed value by counties is given in Table III

TABLE I

Business Inventory Tax Exemptions of the Several States

State	*Business inventory tax provisions*
Alabama	No exemption
Alaska	No exemption
Arizona	Property stored in transit is exempt.
Arkansas	No exemption.
California	No exemption.
Colorado	No exemption.
Connecticut	Property held in public warehouse which is owned by non-resident persons or corporations is exempt
Delaware	No personal property tax.
District of Columbia	Property stored in transit is exempt.
Florida	No exemption
Georgia	No exemption
Hawaii	No exemption.
Idaho	Property stored in transit is exempt
Illinois	Property stored in transit is exempt
Indiana	Property stored in transit is exempt
Iowa	Property stored in transit is exempt
Kansas	Property stored in transit is exempt.
Kentucky	No exemption.
Louisiana	Property stored in transit is exempt.
Maine	Property stored intransit, food products produced in Maine while stored for shipment outside the state, pleasure vessels stored in the state by nonresidents are exempt.
Maryland	Tangible personal property of Maryland corporations whose stock is subject to taxation is exempt
Massachusetts	Property stored in transit is exempt.
Michigan	Property stored in transit is exempt.
Minnesota	Property stored in transit is exempt
Mississippi	Property stored in transit; and manufactured products produced in Mississippi for later shipment elsewhere are exempt.
Missouri	Property stored in transit is exempt
Montana	No exemption.
Nebraska	Property stored in transit is exempt.
Nevada	Property stored in transit is exempt.
New Hampshire	Goods for out-of-state delivery, held by the manufacturer after title has passed to the purchaser are exempt.
New Jersey	Property stored in public warehouses is exempt.
New Mexico	No exemption.
New York	No personal property taxation.
North Carolina	Tangible personal property held at any seaport awaiting shipment to a foreign port is exempt; as are farm products stored in public warehouses.
North Dakota	Property stored in transit is exempt.
Ohio	Property stored in transit is exempt.
Oklahoma	Property stored in transit is exempt
Oregon	Property stored in transit is exempt
Pennsylvania	No personal property tax.
Rhode Island	No exemption
South Carolina	Property stored in transit is exempt
South Dakota	No exemption
Tennessee	Property stored in transit is exempt.
Texas	Property stored in transit is exempt.
Utah	Property stored in transit is exempt but it can only be stored for 12 months.
Vermont	No exemption
Virginia	No exemption.
Washington	Property stored in transit is exempt.
West Virginia	No exemption

State	*Business inventory tax provisions*
Wisconsin	Property stored for out-of-state shipment; and property shipped into the state which is stored in public warehouses is exempt
Wyoming	Property stored in transit is exempt but it can only be stored for 9 months

SOURCE: Commerce Clearing House, *State Tax Guide (Second Edition), All States,* Commerce Clearing House, Inc (Chicago 1964).

transit. For example, Tariff 264-I, which provides for storage in transit in Nevada and Arizona on shipments to California, contains the following rates.

Item 3580 Household Appliances ..... $135 per hundred lbs
Item 3445 Heating or Cooking Apparatus .. $135 per hundred lbs. $35 71 minimum per carload

These rates mean that storage in transit can be provided on these items for $35 to $40 per carload When this is measured against the value of a carload of appliances and against the inventory tax that would have to be paid on these goods, it can be seen that this is a very small amount For items with a higher value-to-weight ratio there is even more advantage to be gained by storage in transit. Conversation with railroad officials indicates that it is not unknown for a taxpayer to load up a boxcar with his inventory before the tax date, ship the boxcar to Phoenix, leave it on a siding and then bring it back after the first Monday in March Other shippers have their goods routed by a zigzag route (at no extra charge) so that they arrive after the first Monday in March.

CONSEQUENCES OF TAX AVOIDANCE

All of these maneuvers, taken solely for the purpose of tax avoidance, reduce the productivity of the firms involved and represent a burden upon them in the nature of the costs incurred If there were at hand some method of obtaining the same amount of tax yield without causing this tax avoidance burden, then the costs to the business community would be greatly lessened without reducing the revenue received by the local government units Some of the consequences may be enumerated.

(1) The $3 billion estimate cited above relates to the inventories actually on hand on the first Monday in March We know that some inventories are *exported* temporarily to avoid the tax. It seems apparent that the actual inventory figure on that date would be much higher in the absence of the present tax How much higher is a matter for much interesting speculation but it cannot be easily estimated. A moment's reflection will show that the distribution of the burden of the business inventory tax is both uncertain and inequitable The amount of tax burden that a particular firm must bear is a function not of its sales or even of its lack of sales, but of the *flexibility* of its inventory. This is determined partly by the nature of its business Some businesses, such as motor vehicle parts sales, must keep an inventory on hand of thousands of different items A firm in this business may be able to draw its inventory down to only a few of each item, but the firm would still have

to have a huge inventory if the doors were to be kept open at all. Another firm may sell only a few types of items This firm would be able to draw down its inventory to almost nothing when the tax date rolled around Another important variable would be the supply practices of the particular industry If a new supply of goods can be obtained in 24 hours, the inventory level can be drawn down much lower than if three months' lead time is required The burden of the tax is distributed, not according to the ability to pay or any other principle, but simply by the nature of the business involved. This hardly seems to be an equitable type of taxation.

(2) The *customer* suffers an immeasurable loss where the selection available to him is reduced on account of the tax He really ends up on a lower level of utility.

(3) It should also be noted that an inventory tax falls most heavily on the firm that has not been able to sell its stock rather than on the firm that has been able to sell its goods The tax then falls on the firm that is *least able* to pay it. The inequity of this feature of the tax hardly needs comment Unlike the sales tax, the inventory imposes a a penalty on *not* selling; unlike the income tax, the inventory tax imposes a penalty on *not* making a profit

The great lengths to which most firms go to avoid the inventory tax seems to indicate that the firms believe that the tax cannot be wholly shifted Therefore, at least part of the final burden of this tax is borne by the firms upon whom it is levied The capriciousness of this burden distribution has been noted above.

While we are concerned with questions of equity, we cannot ignore the claim made that the elimination of inventory taxation "would free many classes of business from the only form of local taxation to which they are presently subject "[3] Even assuming the literal validity of this statement, it refers only to "local" taxation A new or increased state tax (e g, income tax) collected in behalf of localities could, for all practical purposes of equitable revenue burden, make up the difference.

(4) In an open economy such as that of California, it is quite easy for some firms to avoid a tax such as the business inventory tax as indicated above Other firms cannot avoid it, except at prohibitive cost. It is impossible, therefore, for such a tax to be equitable The tax *discourages* business from locating here and particularly causes a great deal of warehousing activity which otherwise would take place in California to be shifted elsewhere[4] This causes a loss of both jobs and income to the state

The following specific example of the effect of the tax on warehousing activity was presented at the committee's hearing in San Diego on June 26, 1964[5]

> Recently the Burroughs Corp announced that they were moving their warehousing to a neighboring state because one computer

[5] Presentation of John Nagy, President, Statewide Homeowners Association, p. 8.

in a crate carried a tax of $6,500 That's just one, and they had a warehouse full.

The claim of an unfavorable impact on warehousing activity in the state is consistent with the data on unemployment As shown in Table II, compensated unemployment in public warehousing in California in 1963 was 7 1 percent of covered employment whereas it was only 4 8 percent for all industries. (It should be noted that statistics are available only for "public warehousing" as a separate industry and not for warehousing generally)

The seasonal fluctuations within the year are not so convincing The present business inventory tax may be expected to cause increased unemployment in the California warehouse industry during February and March when firms are drawing down their inventories to the lowest possible level Data on employment and unemployment in the public warehousing industry in California together with similar data for all California industries, as shown in Table II, do not indicate such fluctuation Warehousing unemployment does rise in February and March from the January figure, both in absolute and relative terms However, if this were substantially caused by the business inventory tax, we would expect this unemployment to level off quickly after the March assessment date This is not the case The peak of unemployment in fact is during the months of July and August. Covered employment went up by 2 workers from February to March while unemployment went up by 28 workers, in April, when we would expect the warehouse business to pick up if the business inventory tax were having great effects upon it, we find that unemployment drops by 8 workers while employment drops by 341 workers

The figures for all industries show that February, March and April have the highest relative unemployment of the entire year The relative rise in unemployment at that time can certainly not be attributed entirely to the business inventory tax There are a great many other factors which cause a seasonal dip in business activity at this time in California and throughout the country In short, if the inventory tax has a seasonal effect on warehousing, the effect is submerged in strong seasonal factors which affect business and industry as a whole

The above discussion has been concerned with the possibilty of the warehousing industry leaving the state on account of the business inventory tax How much other business and industry leaves the state —or is discouraged from ever entering it—we cannot say It takes little insight, however, to imagine that a tax that penalizes those who cannot transfer their inventory out-of-state over assessment day, and penalizes those businesses that fail to sell and accordingly fail to make money, must act as a damper on plans to locate in this state This is not inconsistent with the well-established view that enlightened business looks at what services it gets for its state and local taxes before deciding where to locate[6] We are dealing with a particular, peculiar tax whose "incentive" power is out of proportion to its magnitude.

[6] As well outlined in the presentation on behalf of the Commissioner of the California Economic Developement Agency, Lewis M Holland, before the Assembly Interim Committee on Revenue and Taxation, San Diego, June 25, 1964.

SOME POSSIBLE SOLUTIONS

Solution: Changing Assessment Date

It has been suggested that "the first Monday in March" is a particularly awkward assessment date for most businesses because it does not coincide with the end of either the business or fiscal year. A change to "the last day of February" or the end of the firm's fiscal year has been suggested [7] On the other hand, this would fall on different days of the week, which also involves certain inherent disadvantages In any case, a change of this sort is of secondary importance In fact, a nearby month-end or fiscal year-end inventory is often used as the basis of the March 1st assessment. Moreover, the change would not deal with any of the fundamental problems discussed above

Solution: Averaging

It has been suggested that many of the faults of the present single date tax system can be avoided by the institution of some type of average inventory. County Assessor Philip Watson presented a comprehensive summary of the argument at the 1964 assessors' convention·

> "Historically, the fixed lien date for assessing was established in an agricultural economy. Assessment law and administration were developed in the 19th century, with assessment date in the

[7] Presentation of Mr. Dewey Dunn, Director, California Automotive Wholesalers Association, before Assembly Interim Committee on Revenue and Taxation, San Diego, June 25, 1964.

spring when the assessor could get out in his buggy after a long, hard winter Payment date was in the fall after the crops were harvested These dates correlate poorly with a modern industrialized, urban economy Assessment dates that differ from state to state afford considerable opportunity for interstate taxpayers, like chain stores, to manipulate inventories so as to have a minimum stock on hand in a particular state on its assessment date.

"The present system of inventory taxation as it applies to merchants is criticized as unfair and inequitable. The theory of the assessment as of a single day seems to be that much capital is constantly in motion and, as in the game of musical chairs, someone will halt the procession for a moment and take account of the situation. At that moment the usual amount of capital will be about and in somebody's hands Since the property tax is an impersonal tax, it makes little difference in whose hands it is found. If a livestock shipper happens to have on hand a large consignment of stock, even for only a day—assessment day—he can be assessed upon this property. The merchant who sells agricultural machinery may be heavily stocked on a spring lien date, whereas the merchant who sells coal may be virtually "cleaned out" at that time This does not mean that one has more business or capital than the other or that one has more "ability to pay" or "benefits received" than the other. It is thus alleged that a snapshot picture of all businesses on a particular day gives no fair evidence of their taxpaying power. The contention is that a time exposure might give a very different picture In view of the fact that the day of the snapshot is advertised in advance most merchants try to have as little on hand as possible. Where merchandise in the hands of merchants is assessed as inventory, active retail selling campaigns requiring more wholesale purchases are postponed until after assessment day so as to avoid large inventories on the lien date Commercial storage warehouses, when their contents are assessable, may experience a rapid falling off in business about assessment time, particularly when they are in competition with warehouses in states which exempt such properties from taxation

"(However, with the announcement of a standard ratio and with encouragement by the Los Angeles County Assessor's Office to study the cost of moving inventory as compared to tax savings, commercial warehouses experienced a minimum of falling off of inventory in 1964. For example, in the cold storage business in prior years, occupied space fell to about 40 percent of capacity on the lien date, but in 1964 occupied space on the lien date was 91 percent)

"As applied to merchants, the present inventory tax is.

(1) Usually erratic in gauging inventory values, because of assessment as of a particular day.

(2) Prejudicial to the merchant with a slow inventory and high capital investment (e g a retail furniture store), as he is unable to "unload" as easily as a fast turnover business.

(3) Discriminatory against the small independent merchant as compared with the chain store since the chain store as a rule operates with a *relatively* small stock and a rapid rate of turnover. There may not be very much in such a store at any one time but a great deal passes through during the year.

(4) Creates considerable movement of inventories, with resultant disruption of business.

"As a partial remedy for some of these difficulties, certain states now attempt to assess merchants on the basis of their average inventories for the year. This appears to be a sound innovation but is dependent, of course, upon keeping of accurate books Moreover, the average inventory is not very easy to calculate. If it is interpreted to mean the average of the inventories on hand during the first day of each month, merchants can still manipulate their stock to some extent if they take the trouble to watch 12 days instead of 1. No simple method of calculating an average for all 365 days of the year has yet been devised.

"However, it is argued that an average inventory may be more equitable than a fixed date inventory. The business which is at the peak of its activity on the lien date would be averaged downward; the one which is at a low point on the lien date would be averaged upward While certain inequities may remain under the proposed system, the overall inequity would be minimized as well as some of the criticisms of the ad valorem property tax as regards business inventories. The most severe criticism of the present fixed inventory tax is the great disruption of the ordinary flow of business which it causes.

"An average inventory would eliminate any reason for storing goods outside the state, and avoid any disruption of business that now occurs at lien date time. The effect of this reform would be to reduce assessments for those businesses whose seasonal operation demands peak stocks on or near lien date time—for example, the textile or the farm machinery business In the case of the business that can cut its stocks to the bone as the lien date approaches, the annual average would result in some increases—for example, the fuel oil or coal business in areas dependent on them for winter heating.

"Some of the ADVANTAGES of the average inventory are.

"(1) It would prevent inequities arising from high as compared to low seasonal inventories required on a single specific lien date.

"(2) Business enterprises would not have to rely on planned stock depletion on the lien date to minimize taxes.

"(3) It would maintain a more even flow of purchases and sales which would tend to stabilize economic activity in the county

"(4) Demurrage expense now paid by firms to delay the receipt of stock in interstate commerce would be eliminated.

"(5) May result in higher assessments. Most unseasonal retail businesses deplete their stocks in January and February. It would be difficult to 'unload' every month.

"A number of states have recently studied and favored repeal, reduction or separate treatment of inventories for ad valorem tax purposes. Colorado recently considered abolishment, with a turnover tax as a substitute; however, strong reaction by retail and chain store pressure groups prevented this. Other states recently considering revision have been Florida, Michigan, Minnesota, Wisconsin, and Connecticut.

"However, no specific recommendations were made because of revenue considerations.

"Some states now using average inventories are Ohio, New Jersey, Kansas, Colorado, Nebraska, Arkansas, New Mexico, Washington (optional), and Oregon (optional).

"Legislation was introduced at the 1963 session to allow permissive or optional use in California of the average inventory method. This we opposed It would benefit only those taxpayers whose lien date inventories are unreasonably high, and while it would afford a measure of tax relief to personal property taxpayers in this classification, it would not bring any corresponding increase in tax from those personal property taxpayers whose lien date inventories are at a low level, and who would be permitted to continue to report their inventory value as of that date

"Though it is not anticipated that the assessment of average inventories would precipitate a sizeable increase in the tax base, we believe it would prove more equitable to all taxpayers

"*We recommend legislation requiring the assessment of inventories on an average basis, without option.*"

The average proposal would require that inventories be taken 4 or 12 times per year and the tax levied upon their arithmetic mean level This proposal creates many new problems, some of which may be quite far reaching in their consequences.

First, the annual average method would have to be compulsory unless it is to be a device for reducing the tax base If it is not compulsory, it would only be elected by those firms whose tax bills would be reduced by so doing The assessor would then be faced with 4 or 12 inventories per taxpayer to check on rather than the present one This would almost certainly raise the compliance costs of both the taxpayer and the assessor [8] Physical inventory-taking on a frequent basis would be very costly, and mere estimates would lead to much dispute

If the system were a quarterly one, it would seem to encourage drawing down the inventories four times a year rather than one This would be expensive but might nevertheless occur More important, the attrac-

[8] Presentation of Mr Eugene Wilson, Resident Counsel, California Retailers Association, before Assembly Interim Committee on Revenue and Taxation, San Diego, June 25, 1964.

tiveness of free port warehouses in Nevada would be greatly increased The low storage-in-transit rates, two examples of which were cited above, indicated that if annual averaging were instituted in California, the amount of storage in transit would undoubtedly increase greatly. Firms that stored a large quantity of goods in transit in either Nevada or Arizona would be able to report low annual average inventories and avoid most of the tax It might be that annual average inventory taxation would produce even a lower yield than the present system. On the other hand, it would help stabilize wholesaling in the state [9]

Solution: "Free Port" Provision

Since California is such a huge final market for goods, exemption of goods in transit would *not* deal with the problem for this state. Only a negligible portion of inventories held in this state is "in transit" and would benefit from a "free port" provision.[10]

Solution: Reduced Rates

The measures taken to avoid this tax do involve cost to the firm. If the tax rate were gradually lowered as some have suggested, the tax base would be found to broaden after some given point This would result from the fact that the lower tax rate becomes less than the costs of avoidance States that have taxed "intangible" personal property (stocks and bonds) have found that a nominal tax yielded a higher revenue than a substantial tax

Solution: Exemption of Business Inventories

As indicated above, the yield of the present business inventory tax has been estimated at about $240 million in California Thus, complete exemption of business inventories would cause a substantial loss of revenue. Its magnitude may be judged by comparing it with compensating changes in other taxes For instance, exemption of all business inventories from taxation could be offset by a 3 3 percent surtax on the business income tax (Since the present 5 5 percent business income tax rate yields about $400 million per year, the surtax would have to be about 3 3 percent in order to produce $240 million per year to offset the revenue loss, assuming no other effects.) This surtax would have to be levied by the state and then distributed to the various local governments according to some type of formula

Another approach would be to exempt business inventories entirely and make up the lost revenue from a completely different tax source The sum of $120 million is the estimated yield from a 5¢-per-pack increase in the cigarette tax and would partially compensate for the loss of revenue. This tax revenue, of course, would then have to be distributed in some manner to the local governments

Merely to exempt business inventories without making alternative sources of revenue available would result in shifting the burden to other forms of property through higher property tax rates

[9] Presentation of Mr Bernard Coyle, Southern California Beverage Distributors, similarly

PART II

ASSESSMENT AND TAXATION OF HOUSEHOLD GOODS

DAVID R DOERR

and

RAYMOND R. SULLIVAN

INTRODUCTION

Of all the weaknesses of the property tax, the assessment of household goods and furnishings is the most glaring. Assessment of this type of property is completely inequitable and administratively impossible. The requirement that household personalty be assessed in proportion to its value is an invitation to every assessor to violate the Constitution of the State of California.

According to an assessor's manual, "The Assessment of Household Personalty," published by the State Board of Equalization in 1961:

> "Household furniture and personal effects vary so widely in purpose, make, and quality, the quantity of such items is so different from one home to another, and they are so encrusted with sentimental value that their valuation for property tax purposes is one of the most baffling problems faced by assessors.
>
> "The potential revenue from such property is not large enough to warrant a painstaking appraisal, and such an appraisal would probably produce unfavorable public reactions even if it were economically justified For these several reasons, many assessors have developed simplified procedures for valuation of this property that are designed to produce a reasonable degree of accuracy at reasonable costs."

REVENUE IMPACT

Property taxes on household goods and furnishings raised an estimated $43 million dollars in revenue for local governments in 1963—less than 2 percent of the total amount raised from the property tax The net assessed value of household goods and furnishings in 1963 amounted to approximately $548 million, based on estimates received from county assessors.

SOURCE Estimates made by staff of Assembly Committee on Revenue and Taxation based on figures furnished by county assessors and other statistical data available to the committee

Most assessors do not physically appraise household goods and furnishings. No longer does a deputy assessor go door to door attempting to find out the contents of each domicile In response to a questionnaire [1] county assessors reported a great variety of methods are being used to value household personalty Most use the "educated guess" method—either basing the value on the number of rooms or the value of the improvement (the house).

Obviously this is completely inequitable and probably unconstitutional There is no perfect correlation between the number of rooms or the value of the improvement and the value of the household goods in a given house By guessing, an assessor cannot be sure that all property is "assessed in proportion to its value." [2]

Use of a "per room" method gives rise to other major inequities:

1. Homes of modest construction are generally not as well furnished as homes of superior quality (A lesser value per room could be applied)
2. The number of rooms is not always a good indicator of the quantity and type of furniture.
3 The recent trend toward "built-ins" which are included in improvement value may result in a double assessment

Where a percentage of assessed value of the improvement is used, there are almost as many different schedules in use as there are assessors Some counties use a flat percentage rate (10 percent is popular), while others have a progressive sliding scale The state board has recommended the percentage guide shown in Table II.

If the assessed value of the residential improvements exceeds $15,000, a physical appraisal of the furnishings is recommended

SOURCE State Board of Equalization, *Assessor's Handbook,* "Appraisal of Residential Personalty," August 1961

In addition to the fact that this method is just a guess, borne out by averages in general, there are a number of inequities which arise from using a schedule based on percentage of value

1. The house may be completely unfurnished, or it may be furnished in Japanese style with a very minimum amount of furniture
2. Due to its size a well-kept older house may have more furniture than a newer house with a higher improvement value Yet this new house will have a higher personalty assessment than the older one.
3 The value of "built-ins" may be included both in the improvement price and the percentage figure used to compute the value of the personalty without a physical appraisal There is no way of knowing what is built in and what is moveable
4 A residence in a commercial zone may have a high land assessment and low improvement assessment due to location. Yet, the value of the personalty is probably the same as a house of equal value in an area where the land value is not as high.
5 When a homeowner moves from a less expensive to a more expensive home but does not purchase any appreciable amount of new furniture, he still sees his personal property assessment increase substantially This is unjust and unconstitutional

Some counties still use the traditional method of assessing household goods by onsite inspection If a good job is done, the administrative costs in making the assessment will probably exceed the revenue derived therefrom Even under these circumstances, an appraiser has an exceedingly difficult job in establishing a value for household personalty. What is residential personal property worth? Should it be valued at the price it might bring if the owner wished to sell it? Under these circumstances, the value will be almost nil, as those who have attempted

to sell secondhand furniture can verify It is almost impossible to sell secondhand clothing and other personal effects To compound the problem, there are few sales from which comparative values can be derived.

In most instances, onsite assessments are not this thorough, rather, the extent of these appraisals is a peep through a window or door half-blocked by a hostile housewife or a judgment based on the evidence of a TV aerial.

INEQUITIES

Under any system of assessment—onsite inspection or percentage of value—many inequities exist in the taxation of household furnishings Much of this property escapes assessment—such as jewelry, silverware, watches, stamp and coin collections, works of art, antiques, and rare books Even when an onsite inspection is made, it is a rare appraiser who can value all of these items with any pretense of accuracy

It is also widely believed that the tax on household furnishings is regressive—at least as regressive as the property tax in general and even more so where a percentage of improvements is not used.

Assessment of Household Personalty in Other States

Many states have abandoned the assessment and taxation of household goods At last report (1963), 18 states exempt household goods and furnishings entirely [3] A number of others have such high exemptions as to effectively exempt household goods [4]

Recommendations on the Taxation of Household Goods

A number of recommendations have been made for the complete exemption of household goods in California At least one county assessor—E. F. Wanaka of Contra Costa County—has granted a de facto exemption to household goods in his county Wanaka told the Committee on Revenue and Taxation that:

> "Contra Costa County has, wherever possible, included those portions of the household goods, such as drapes, built-in stoves, built-in refrigerators, built-in coolers, wall to wall carpets, etc as a part of the real estate Now this is a growing trend in the last 10 years All of these are built in So we have considered this a part of the real property and in most cases considered the cash value of the remaining personalty to be covered by the $100 householder's exemption We believe that this is probably as equitable as any method in use, and results in a considerable savings to the taxpayer through the elimination of additional budget that would be required by the assessor if he were to hire the number of qualified people necessary to inspect and appraise household personalty and do it right " [5]

---

[3] Colorado, Connecticut, Delaware, Hawaii, Idaho, Kentucky, Louisiana, Maine, Mississippi, New Hampshire, New York, Ohio, Oregon, Pennsylvania, South Carolina, Utah, Washington, Wisconsin

[4] Vermont has a $3,000 exemption, Massachusets a $5,000 exemption, Michigan a $5,000 exemption, and Florida and Tennessee a $1,000 exemption

[5] Statement of E F Wanaka, Assessor of Contra Costa County, to Assembly Committee on Revenue and Taxation, October 4, 1963

Los Angeles County Assessor Philip Watson, a strong advocate of a property tax exemption for household goods, told the committee·

> "I advocate the elimination of the assessment and taxation of household furnishings and personal effects in private residences. The tax is in the nature of a nuisance It does not yield enough revenue to justify its continuance. It is impossible, under any kind of system so far devised, to equitably appraise household furnishings and personal effects which may represent a great investment on the part of the property owner but which may have little or no market value due to the personal nature of such items. About 10 percent of our budget in the assessor's office in Los Angeles County is devoted, even under our improved system, to household furniture assessments and less than 1 percent of the total revenue from ad valorum property taxation is derived therefrom . . . The only argument which has heretofore been presented against eliminating assessment and taxation of household furniture in private residences is the age-old, trite and hacknayed argument that we must prevent erosion of the tax base. I believe we must now ask why. Here's one exemption which would apply to the public in general, and it is vastly different from the special interest exemptions which are presented to the Legislature each year. Every homeowner would benefit "[6]

The Advisory Commission on Intergovernmental Relations recommends that,

> ". . . to protect the integrity of its tax system, no state should retain in its property tax base any component that it is unwilling or unable to administer with competence."[7]

This recommendation would appear to apply directly to the assessment and taxation of household goods

A statement in favor of continued assessment and taxation of household goods was made to the committee in San Francisco by Assessor Russell Wolden·

> "I do not favor the elimination of the personal property tax on household goods The Assessors' Association of the State of California is on record against this proposal."[8]

The County Supervisor's Association is also on record as opposing any new property tax exemptions

CONCLUSION

The evidence is overwhelming in support of an exemption for household furnishings and personal effects It is impossible to achieve equitable assessment of this type of property The discovery and valuation of the property and collection of the tax is fraught with difficulties. Great expenditures of time and money result in a relatively small amount of revenue. Exemption of residential personal property will eliminate one of the blights on the integrity of the property tax.

PART III

HOMESTEAD TAX EXEMPTIONS FOR THE AGED WITH SPECIAL REFERENCE TO THE REVENUE EFFECTS OF ALTERNATIVE EXEMPTION LAWS IN CALIFORNIA

by

YUNG-PING CHEN
Department of Economics
University of California at Los Angeles

A. Introduction

The years following the Second World War have witnessed an increasing concern with the economics of an aging population in the United States. One phase of the concern relates to the economic problems of the aged (defined generally as the age group 65 years and over). Tax policies at all levels of governments have mirrored such a concern

In income taxation, both the federal and state governments have accorded tax favors to the aged Additional personal exemptions for the aged were first provided in 1948 in the federal individual income tax. Other provisions have been added in 1950, 1954, and 1964 At the state level, on the other hand, among the 35 states (including the District of Columbia), many have additional personal exemptions or credits, liberalized deduction requirements for medical expenses and expenses for medicine and drugs. (See Appendix A) Moreover, many state legislatures have in recent years either considered adopting some of these provisions, or liberalizing their existing provisions for the aged

Under property taxation, state and local governments, following the practice of homestead tax exemptions for small homeowners and for veterans, have instituted homestead tax exemptions for the aged. (See Appendix A) Many states have under consideration in recent sessions a variety of property tax concessions to the aged.

This study is concerned with homestead tax exemptions for the aged. The first section presents the existing and the proposed legislation in an effort to indicate both the present status and the dominant trend in this area The second section discusses two of the commonly required conditions of eligibility for tax concessions—income limitation and exemption limitation.

The third section indicates the fiscal significance of property taxes in state and local government finances in California It also shows the relative importance of single-family houses and of the owner-occupied single-unit properties headed by the aged, variously defined. The fourth section estimates the property taxes which the aged groups contributed in California in 1960 It deals with (1) the estimated distribution of taxes, (2) the household income status of the aged among the age-of-head groups, and (3) the average tax per housing unit and the average tax-income ratio

The fifth section discusses the revenue effects of several possible exemption schemes for California Finally, a summary of the highlights of the study is offered.

B. Present Status of Property Tax Concessions to the Aged [1]

This section first catalogs the existing laws in the states which offer property tax concessions to the aged It then presents some representative pieces of legislation which have been proposed in recent years in a number of states considering similar tax measures The emphasis in both cases is to indicate their major features.

1. EXISTING PROVISIONS

There are at present three principal forms of property tax relief for the aged: tax exemption, tax deferment, and tax credit Indiana, Massachusetts, and Oregon use tax exemptions Oregon alone offers, in addition to tax exemptions, tax deferment to certain aged New Jersey grants tax credits; Maryland authorizes its county governments to grant tax credits; and Wisconsin provides property tax relief in the form of income tax credits and refunds New Jersey and Maryland, it may be added, have abandoned, for different reasons, the use of tax exemptions.

Indiana grants an exemption of $1,000 in assessed valuation to a resident 65 and over who owns and occupies a homestead (ownership for at least one year) assessed at $5,000 or less, whose total annual gross income from every source plus that of his spouse, if any, does not exceed $2,250 a year, and who receives no other property tax exemptions.

Maryland passed in 1963 a law which gave its county governments the authority to grant a tax credit or a limited property tax rate based on age or income. (The Acts of 1964 deleted all references to limited rates) The law repealed all previous tax exemption provisions of county governments [2] There are 24 major political subdivisions in Maryland comprising Baltimore City and 23 counties Baltimore and 15 counties have granted tax credits under the provisions of the Acts of

[1] For verifying existing provisions and collecting proposed laws, two sets of questionnaires were sent to legislative reference agencies in the states, in addition to using the *State Tax Reporters* and *State Tax Review*, both published by the Commerce Clearing House, Inc The author is grateful for the assistance from the following persons Charles M Cooper (Alabama), Jules M Klagge (Arizona), Marcus Hallbrook (Arkansas), Kenneth Pettitt (California), George W Oberst (Connecticut), Maurice A Hartnett, III (Delaware) Frank E Blandenship (Georgia), Dick Macrorie (Hawaii), Loren M Bobbitt (Illinois), Russell W Smith (Indiana), Allan E Reyhons (Iowa), Richard Ryan (Kansas), Samuel H. Slosberg (Maine), Carl N Everstine (Maryland), Herman C Loeffler (Massachusetts), William R Nelson (Missouri), Samuel A Alito (New Jersey), Lauren A Glosser (Ohio), Dick Jones (Oklahoma), Robert W Oliver (Oregon), Edwin W Tomkins (Pennsylvania), and Kathleen R Kepner (Wisconsin) Although unfortunately no response was received from Michigan, Minnesota, New York and Rhode Island, information relative to the legislative activities in these states was gathered from other sources

[2] Homestead exemptions for the aged began to appear on the Maryland scene in 1957 It was always on a county basis Prior to the 1963 law, some 15 counties (listed below) had provided tax exemptions for the aged The change from the provision of exemptions to that of credit was occasioned by the persistent complaints of assessors about the constant change in assessed valuation depending upon whether the owner was or was not above the specified age Under the new law, the assessors will not have to change the assessment on a particular piece of property when ownership changes *Letter* to the author by Carl N Everstine, Director, Maryland Department of Legislative Reference, November 13, 1963

According to the *State Tax Reporter* for Maryland, Commerce Clearing House, the following jurisdictions had exemption provisions as of July 1, 1964 Allegany, Anne Arundel, Baltimore, Carroll Charles Frederick, Harford, Howard, Montgomery, Prince Georges, Saint Marys, Somerset, Washington, Wicomico, and Worcester

1963 The amounts of credit and the conditions under which the credit is granted are not known at present but are expected to be available in the near future [3]

Massachusetts exempts $4,000 of assessed value to persons 70 and over who have lived in the state for the preceding 10 years, who have owned and occupied the homestead (for at least five years) which is assessed at $14,000 or less[3], and whose net income from all sources, both taxable and nontaxable, does not exceed $5,000 for a married couple and $4,000 for a single person.

New Jersey grants a tax credit of up to $80 against the property tax on the self-owned dwelling of persons 65 and over who are citizens and residents of the state (for at least three years) and whose annual income does not exceed $5,000 Income is defined to include money from whatever source, including but not limited to realized capital gains and the entire amount of pension, annuity, retirement, and social security benefits

This current provision was implemented by the Laws of 1963 following the passage of a constitutional amendment. Previously, however, the Laws of 1961, likewise following a constitutional amendment, provided an exemption of $800 in assessed valuation for homeowners 65 and over with income not exceeding $5,000.[4]

Oregon offers tax exemptions for the aged with gross receipts less than $2,500. It exempts a percentage of the first $10,000 of the true cash value [5] of the principal personal residence of persons 65 and over meeting the income test Gross receipts include but are not limited to pensions, disability compensation, retirement pay, public welfare and social security payments, and receipts from sales or services rendered. The percentage of the true cash value exempt from taxation is allowed according to age of the taxpayer, or of the oldest of the taxpayers sharing the residence· 10 percent for those 65 to 68, 30 percent for those 69 to 71, 50 percent for those 72 to 74; 70 percent for those 75 to 77; 90 percent for those 78 to 79; and 100 percent for those 80 or more In other words, the amount of the true cash value exempted is $1,000, $3,000, $5,000, $7,000, $9,000, and $10,000 to persons in these respective age groups

Those who are unable to obtain a complete exemption may arrange for tax deferment And those with income over $2,500 may do the same. The homestead for which the deferment is claimed must not be income-producing property and there must not be any delinquent property taxes on the property The deferred taxes become a lien against the

[3] Information on the amounts of credit and eligibility requirements in these political subdivisions will soon be assembled by the State Department of Assessments and Taxation, according to William H Riley, Chief Supervisor of Assessments *Letter* to the author, June 17, 1964

[4] The 1963 constitutional amendment was proposed and adopted as a result of a New Jersey Supreme Court decision In 1962, the court in *Switz v. Kingsley*, 182 A 2d 841, held that the tax exemptions for the aged must be computed by deducting the amount of the exemption ($800) from the *true* value of the property and not the *assessed* value Since most of the municipalities in the state assessed their real property at a fraction of their true value, this court interpretation meant a reduction in tax advantage for the aged The new law, implementing the latest amendment to the state constitution, allows up to $80 against property taxes otherwise liable in place of the $800 exemption on the assessed value *Letter* to the author by Samuel A Alito, Research Director, Division of Legislative Information and Research, Law Revision and Legislative Services, State of New Jersey, June 8, 1964

[5] The true cash value is generally interpreted to mean a fair market value, as of the assessment date.

property until the death of the owner, or the sale of the home, or a status change of the property (i e , when it is no longer a homestead or becomes income-producing). An interest rate of 6 percent per annum is charged on the deferred taxes

Wisconsin law (effective June 10, 1964 and applicable to taxes for 1964) provides income tax credits and refunds to persons 65 and over as a relief from property taxes The relief is available to both homeowners and renters, but the maximum appropriation is set at $10,300,000 a year from 1965 on [6]

For an aged homeowner with household income of $1,000 or less, the relief amounts to 75 percent of the property tax (up to $300) in excess of 5 percent of the household income If his household income is over $1,000, the relief is 50 percent of the property tax (up to $300) in excess of 5 percent of the household income [7] Household income means income of all the persons who are related to and live with the aged taxpayer Income means adjusted gross income, plus alimony, pensions (less the return on investment), social security payments, and nontaxable interest, except gifts and income in kind up to $300.

Moreover, an aged renter likewise benefits from the same provisions as described above, except that his property tax liability is assumed to be 25 percent of his gross rent The gross rent is defined as the payment solely for the right of occupancy, exclusive of charges for utilities and the like.

Finally, refunds are issued to an aged homeowner or renter if the amount of property tax relief for which he is qualified exceeds the income tax otherwise payable (or when his income does not require him to file an income tax return).

It can be seen from the above that no two laws are identical. But similar characteristics may be noted All have an age test—with the exception of Massachusetts, 65 years of age is the requirement All have a resident test—the dwelling unit must be owner-occupied, except in Wisconsin where renters are also qualified for the relief All require a test of income, but differ in both the definition and the amounts of allowable income Furthermore, all impose a limit on the exempt property value, but again differ in the amounts exemptable from taxation These latter two eligibility requirements—income limitation and exemption limitation—give rise to some difficulties which will be discussed in the following section.

Among the provisions in the existing laws, the following are of special interest First, in terms of the age requirement, Massachusetts' is the most stringent; and Oregon's is uniquely elaborate, since it grants greater concession as age advances The Oregon law, secondly, is more elaborate because it offers tax deferment to some aged, and this feature is also unique.

[6] The most important reason for the use of a system of credits and refunds through the income tax is the constitutional requirement of a uniform property tax which makes any homestead tax exemptions for a certain class of taxpayers unconstitutional A constitutional amendment, as was adopted by New Jersey, would have been required if homestead tax concessions were to be carried out under the property tax Regarding the maximum annual appropriation, there are, however, no provisions relative to years in which claims exceed that amount

[7] It is widely understood that, due to a drafting error during the rush of legislative actions, the law as now written would offer more concessions to the aged taxpayers The error occurred in connection with the income test in the law It is also widely understood that this error will be corrected (by a corrective bill) when the Legislature convenes later this year The provisions reported in the text reflect the law as it is. (August 1964)

Thirdly, Wisconsin law deserves some mention It appears at first as if it is an income tax, rather than a property tax, relief It is in fact, however, a property tax concession requiring a *different form of income test.* Another noteworthy feature of the Wisconsin law is that, if the amount of property tax relief allowable to an aged person is greater than his income tax liability, he would receive the difference from the state treasury with which to pay his property taxes. Lastly, still another distinctive feature is that renters will benefit as well

2. PROPOSED LEGISLATION

In the last few years, more than one-half of the states in the union have considered property tax concessions to the aged They include Alabama, Arizona, Arkansas, California, Connecticut, Delaware, Georgia, Hawaii, Illinois, Indiana, Iowa, Kansas, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Ohio, Oklahoma, Oregon, New Jersey, New York, Pennsylvania, Rhode Island, and Wisconsin Many of the proposals resemble the existing laws noted above. They are basically of the same varieties: tax exemption, tax deferment, and tax credit. However, there are significant differences between and among the proposals A survey of proposed legislation in the various states regarding property tax concessions offers the following illustrations In reading the exempt assessed values in these bills, it will be well to keep in mind the wide range of assessment ratios among the states For the states reported below, assessment ratios in 1961 ranged from about 13 percent in Arkansas to some 54 percent in Delaware. This point is significant when interstate comparisons regarding the "generosity" of tax exemptions are made; it is not relevant, however, when different bills in the same state are compared.

In *Arkansas,* there was one proposal which would exempt the first $5,000 in full market or actual value on the homestead of a resident 65 or over, with no other qualifications. Age constitutes the sole test Another bill would exempt the first $10,000 of actual value on the homestead of a resident 65 or over who is retired and not gainfully employed Here the unique feature is the explicit requirement of retirement A third bill would exempt the first $5,000 of assessed value of the homestead of a resident 65 or over. Assessed value rather than actual value is specified in this proposal.

Among some 20 pieces of legislation introduced in the *Connecticut* Legislature in 1963, the following five are of interest. One bill would limit property tax savings to $125, and in addition it contained the usual requirements of age (65 or over), of income (not exceeding $4,000), and of exempt assessed value ($3,000). Another proposal would exempt $20,000 of assessed value of homes owned and occupied (for at least 10 years) by a person 75 years of age or over Here, while the age test is more stringent, the amount of assessed value exempt is more generous, compared with existing laws and most proposed legislation. The third one would exempt assessed valuation of $2,000 and $3,000 to homeowners 65 to 71 and 72 and over respectively—a variant of the Oregon law noted above.

The fourth bill would provide an exemption equal to 30 percent of the tax levied on the home (and land on which it stands) owned and occupied by a person 65 or over (either owner or spouse) who has been

the owner for the preceding three years and who has no children attending school in or below the 12th grade Benefit principle seems to underscore this proposal, since the stated purpose was to relieve homeowners over 65 from the burden of maintaining schools (The bill was also advocated to discourage the migration of senior citizens to other states with tax exemptions for the aged)

Still another proposal worth mention is one which would exempt $3,000 in assessed valuation of homeowner-occupier 65 or over who is a U S. citizen and who receives less than $600 income annually therefrom either as rent or from the sale of produce grown thereon Further, it provided exemption of all assessed value if it is below $3,000, no exemption if assessed value is over $15,000, and amounts of exempt assessed value are graduated at $200 intervals from $2,400 down to $200 as the assessed value increases from $3,000 to $15,000, at $1,000 intervals.[3] Noteworthy features in this bill are. (1) the requirement of U S. citizenship; (2) the allowance of income-producing element for an owner-occupied home; and (3) the incorporation of the vanishing exemption arrangement, relating, in this case, the exempt amount of assessed value to the assessed value.

Delaware had in 1963 two proposals exempting the homestead of persons 65 or over from school levies ($10,000 of assessed value and all assessed value respectively). Two features deserve mention. First, one proposal was as generous as to exempt all assessed value. Second, both would apply to school levies alone. A third bill would exempt from taxation no more than $5,000 in assessed valuation of homes owned and occupied by a resident (for a period of three years) who is 65 or over and whose annual income is less than $3,000. Income is defined to mean all income from whatever source derived including, but not limited to, realized capital gains and the entire amount of pension, annuity, retirement and social security benefits

Among the resolutions proposing constitutional amendment in *Georgia* was a bill which would exempt $6,000 in assessed valuation of a home owned and occupied by a retired person 65 or over whose income from any source does not exceed $3,600 per year, exclusive of social security benefits and payments from any retirement or pension system to which the State of Georgia, or its political subdivision has contributed funds. This definition of income provides a contrast to the one chosen by Delaware cited above.

Included among a number of proposals in *Hawaii* was one which would grant full exemption from property tax on the homestead of persons 60 and over who are retired, provided that the assessed valuation does not exceed $10,000. Deserving mention are the low age requirement, the rather generous amount of exemption, and the retirement test. Another bill would offer total exemption for a 10-year period to a homeowner 60 or over. This is unique because it specifies a definite time period for tax forgiveness.

[3] Some examples: (1) If the assessed valuation of a property is over $3,000 but not over $4,000, $2,400 of the assessed value would be exempt (2) If the assessed valuation is over $4,000 but not over $5,000, $2,200 of the assessed value would be exempt (3) If the assessed valuation is over $14,000 but not over $15,000, $200 of the assessed value would be exempt.

Iowa considered in 1963 a bill allowing homeowners 65 and over a homestead tax credit twice the amount now allowed all owner-occupiers of a homestead of an assessed value of less than $2,500, with the tax credit not exceeding 25 mills for each dollar of eligible homestead valuation. The distinctive feature of this proposal is that the tax credit for the aged would double the existing tax credit for all homeowners, resembling the double personal exemption in the federal and some state income taxes.

One of the proposals in *Kansas* was to grant a tax credit of up to $150 against taxes otherwise due on a homestead and personal property of persons 65 and over who receive no more than $1,200 annually in addition to pensions and no more than $3,000 per year from all sources including pensions This bill is interesting for three reasons One, it would grant a tax credit in place of a tax exemption. Next, it would include personal property of the aged under the tax relief measure Finally, it implicitly specified that income from pensions might not exceed $1,800.

In *Massachusetts* where property tax relief is in effect as noted earlier, several bills were considered One proposal would provide for a reduction of one-half of the tax assessed on the dwelling of an owner-occupier of 70 or over (having resided in the state for 10 years) with a maximum of $400 This relief would also be granted to renters 70 or over. Tenants of rented property, who are 70 or over and have resided in the state for 10 years, would receive from the assessors certificates of credit not to exceed $400 which shall be equal to one-half of the tax assessed upon the property and attributable to rented portion of the property. These certificates would be accepted in payment of rent by the owners of the property and would be valid as abatements of the taxes levied on the property. Another bill would exempt $5,000 of assessed value on the homestead of persons 65 or over with no taxable income under the federal individual income tax

The special features of these bills are. (1) forgiveness of 50 percent of property taxes up to $400; (2) renters would receive benefits This provision is unique among the bills in the several states and it is highly commendable in its spirit; (3) the required income test is also unique because it will be affected by changes in the federal income tax law

Under a bill considered in 1960 by the *Michigan* Legislature, the homesteads of persons over 65, who have resided in the state for at least 10 years and whose annual income is less than $2,000, would be exempted from taxation to the amount of $3,000 of the state equalized value unless such value should exceed $7,500 This bill mentioned equalized value, as opposed to market value or assessed value

In 1961 the *Missouri* General Assembly considered a bill which would grant an exemption of no more than $500 in assessed valuation in the case of personal property (ownership for more than six months), and an exemption of not more than $3,000 in assessed valuation in the case of real property (owned and occupied) to a person over 65 years of age This proposal would exempt certain amounts of both personal and real property form taxation

A 1963-64 legislative bill in *Ohio* would put an upper limit on the rate of taxation and on the true assessed value on the homestead of

persons whose sole means of support is from pensions, social security, or other regular retirement allowances The upper limit would be the rate of taxation and the true assessed value which were in effect when the above-mentioned payments became the sole means of support This form of tax relief is unique, for it freezes the rate of property taxation and the assessed valuation at the level when a person completely retires. Another point worth emphasis is the lack of an explicit age requirement. Also, the retirement test is most stringent

Among the bills introduced in the *Wisconsin* Legislature in the last two years, which adopted a bill reported earlier, mention should be made of the two approaches represented. One was to grant an income tax credit or refund as a relief from property taxes, which embodied most of the features of the law just passed (Effective June 10, 1964)

The other was to allow property tax deferment Unlike the law in Oregon, the Wisconsin proposal would provide tax deferment as the sole means of assisting the aged There were two proposals—one would allow 50 percent and the other 100 percent tax deferral on the homestead property tax to persons 65 and over. The deferred taxes would be charged with an interest rate of 5 percent per annum; they would become a lien on the homestead until the death of the owner or the sale of the home Moreover, the amount of taxes deferred, under one proposal, may not exceed the amount of equity on the home

This bill is similar to the existing law in Oregon described previously with one important distinction. There is no mention in the Oregon law on the maximum amount of accumulated taxes deferrable on the homestead of the aged

Property tax deferment plans have also been considered in the *California* Legislature. One bill in 1961 would allow postponement of taxes on the homestead until the sale of the property or the death of the owner if the property had an assessed valuation of less than $5,000 and if it is owned by a single or married male over 65, or an unmarried widow over 60 The distinguishing feature of this proposal is the different age required of male and female aged taxpayers

Another bill introduced in 1963 was of the same variety. It proposed granting a loan (with which to pay real property taxes) to any person 60 or over who owns and occupies the home if the gross annual income of all persons who occupy and maintain the home does not exceed $2,500 No loan would be made in case one of the coowners of the property is under 60 years of age. Further, no loan would be made if the total of the amounts loaned on the home exceeds an amount equal to 50 percent of the full cash value of the property. There are three noteworthy features. (1) the age requirement of 60; (2) the requirement that coowners must be at least 60 years of age; and (3) loans can only be granted up to one-half of the property value.

The above represents a sketch of the major and interesting characteristics of the existing and the proposed pieces of legislation in a number of states regarding property tax concessions to the aged. This sketch reveals the wide diversity of provisions that are in force and under proposal Of special significance among these provisions are the income limitation and exemption limitation which the following section will discuss.

C. Income Limitation and Exemption Limitation

Variety of Income Limitation. One of the usual conditions of eligibility is the so-called income test, which sets the upper limit of income a taxpayer may have and still qualify for a tax privilege Although some bills (e.g, one in Arkansas) require no income test, all existing laws and most proposals stipulate some test of income. The allowable income ranges from $2,250 (Indiana) to $5,000 (New Jersey). There are a few bills which, while requiring income test, do not explicitly spell out the amounts of income allowable. For instance, a bill in Arkansas simply requires the taxpayer to be "retired and not gainfully employed." A bill in Hawaii requires simply retirement, which presumably implies low income or lower than preretirement income. "No taxable income under the federal income tax" is the condition under a Massachusetts bill.

Just as the amount of income allowable by each law or bill differs, so does the definition of income. Some laws or bills, such as in Indiana, New Jersey, Oregon, and California specify *gross* income; but others, such as in Massachusetts, designate *net* income; and Wisconsin chooses adjusted gross income plus other items. They differ in addition in the treatment of social security benefits, retirement payments and other nontaxable incomes Some (e g, in Massachusetts, Oregon, Delaware, Kansas) specifically *include* these receipts as income. One bill in Georgia, on the other hand, explicitly *excludes* from the definition of income receipts from social security system and from the retirement or pension system of the state and its subdivisions Further differences in defining income may be noted. The New Jersey law and a Delaware bill define income to include realized capital gains. Some bills in other states such as in Indiana simply mention "income from every source," and in other cases, "income from all sources." Apparently, formal regulations or informal rulings would be required in these latter cases to determine precisely what receipts constitute income. Moreover, some laws and bills, such as Indiana, include spouse's income, if any, in the allowable amounts of income, others do not The Wisconsin law and a bill in California represent a third approach in that they consider the combined income of all household members.

Problems with Income Limitation Income limitation is often resisted on emotional grounds for it is a means test and is therefore considered distasteful by some In addition, there are technical problems associated with the test of income The first two difficulties arise out of the definition of income itself First, when income is defined to *exclude* nontaxable sources of receipts, the income test becomes ineffective because it fails to "discriminate", as it is intended to do, against those taxpayers with sufficient income who are presumably not in need of tax privileges. On the other hand, if income is comprehensively defined to *include* all types of income, then the ascertainment of income appears highly difficult because it will require "self-assessment"—a problem becoming more acute in view of the "notch" problem pointed out below.

Another problem with the present arrangements of the income test is the so-called "notch" problem. Since there will be no tax advantage if income is beyond a specified upper limit, the abrupt termination of

tax privilege is undesirable. It is undesirable because the economic differences between two persons with incomes above or below the specified level by small amounts are not such as to justify tax benefits for one but not for the other It is undesirable also because the abrupt termination of tax benefits makes strong the temptation, in the case of self-reporting of income, to under-report income.

Variety of Exemption Limitation Another frequent eligibility condition deserving some analysis relates to the limitation on the exemptable assessed valuation

In addition to the diverse amounts of assessed valuation (ranging from $1.000 in Indiana to $20,000 in Connecticut) exemptable under different laws and bills, the forms of tax exemptions are also different Property tax exemptions may be differentiated as: conditional, uniform, and vanishing exemptions

First, a conditional property tax exemption may be defined as one under which the assessed value below the exemption level is fully exempt, but the entire amount of assessed value will be subject to tax if it is above the exemption level A proposal in Hawaii to grant, as reported in Section B, full exemption if the assessed value does not exceed $10,000, falls into this category A variant of such an arrangement is found in the laws in Indiana (exempting $1,000 of an assessed value of $5,000 or less), and in Massachusetts (exempting $4,000 of an assessed value of $14,000 or less) [9]

Secondly, a uniform property tax exemption may be defined as one under which a given amount of assessed value is exempted, regardless of the total amount of assessed valuation Belonging in this category are the law in Oregon (exempting the first $10,000 of the true cash value), the bills in Arkansas (exempting the first $5,000 and the first $10,000 of assessed values respectively), in Connecticut (exempting the first $20,000 of assessed value), in Delaware (exempting the first $5,000) and in Georgia (exempting the first $6,000) and in Missouri (exempting the first $3,000)

Thirdly, a vanishing property tax exemption may be defined as one under which the amount of exemptable assessed value declines as the assessed valuation advances over the amount of exemption, until the exemption disappears The only example from the survey reported in the previous section is the one proposal in Connecticut The bill, as described earlier, would grant full exemption on an assessed value below $3,000, but no exemption on an assessed value above $15,000 And for the assessed values between $3,000 and $15,000, the amounts of exempt assessed value are graduated at $200 intervals from $2,400 down to $200 as the assessed value increases from $3,000 to $15,000 at $1,000 intervals

Problems with Exemption Limitation. Briefly, conditional property tax exemptions present, as do personal exemptions in some U S municipal income taxes, a "notch" problem—the tax privilege will be abruptly removed when the assessed value is above a certain level This feature is undesirable because the differences in economic circumstances

[9] What exists in Indiana and Massachusetts may be described as a mixture of uniform and conditional arrangements.

of two persons as reflected by the small differences in assessed valuations above or below the specified level do not seem to require tax benefits for one as opposed to the other Moreover, it may be considered undesirable from the standpoint of assessment, for the assessor is burdened with an additional psychological factor His technical judgment of property value may succumb to the emotional involvement, resulting in assessing the property either substantially above or below, when the property value being assessed is near, the statutory amount

Uniform property tax exemptions, on the other hand, have the disadvantage of offering tax privileges to everyone, regardless of the amount of assessed value which may be taken to reflect partially the economic circumstances of homeowners This characteristic is similar to the personal exemptions in the federal and state income taxes. These exemptions are criticized for granting tax benefits to some persons who are not in need.

As in the case of personal exemptions in income taxes, vanishing property tax exemptions are to be preferred to either the conditional or the uniform variety The major advantage of vanishing exemptions lies in the fact that the tax relief can be related to the presumed economic positions of taxpayers.

The preceding comments on the income limitation and exemption limitation strongly suggest that most of the laws and proposals to date leave much to be desired on both counts The obvious remedy is that income should be defined comprehensively and both income and assessed value be used as indices of the economic position of the taxpayer. Ideally, the vanishing feature, as discussed above, should be incorporated in both eligibility requirements—allowable maximum income and exemptable assessed value.

Since exemption laws, by definition, would reduce the tax base, a logical question relates to the revenue effects of property tax exemptions for the aged The remainder of this paper is intended for such an inquiry.

D. Fiscal Significance of Property Taxes in State and Local Finances in California [10]

In order to appreciate the revenue effects of property tax relief measures for the aged, it is instructive to analyze first the fiscal importance of property taxes in the revenue structure of state and local governments What follows is to indicate (1) the importance of property taxes in the general revenue of the state and local governments combined *and* of the local governments alone, and (2) the importance of property taxes from the homesteads.

The importance of property taxes in state and local government finances in California can be seen in Table I. In 1960, the combined state and local property taxes ($2,114 million) constituted nearly 50 percent of all taxes ($4,409 million) and over 40 percent of all general revenue from own sources ($5,197 million). Revenue from real property $1,602 million) constituted more than 75 percent of property taxes and over 35 percent of all taxes.

[10] See Section Two for a more detailed discussion of this subject.

Table I also shows that property taxes provide little support to the state treasury and they are very strong supporters of local finances, as expected. Local property taxes ($1,989 million), represented in 1960 some 87 percent of all taxes ($2,285 million) of local governments in California. They represented more than 70 percent of all the general revenue from local sources ($2,835 million) in 1960 Real property taxes ($1,602 million) represented nearly 80 percent of the local property taxes and about 70 percent of all local taxes.

The preceding suggests the significant position which property taxes occupy in the state and local *and* in the local revenue structures. It also suggests the important contribution which real property taxes make to the property tax revenue Since this report is concerned with the taxes on homesteads of the aged, it is necessary to inquire as to how much residential properties (particularly those of the aged) account for the real property tax base.

The fiscal importance of nonfarm residential properties can be observed in Table II. In 1960, they accounted for almost 63 percent of the local real property taxes and over 50 percent of the total local property taxes in California Table II also demonstrates the importance of single-family houses They made up almost 88 percent of the nonfarm residential property tax base; nearly 55 percent of the local real property tax base; and over 40 percent of the total local property tax base.

Furthermore, as also shown in Table II, the owner-occupied single-unit nonfarm residential properties headed by the aged (hereafter referred to as "aged homesteads") contributed not insignificantly to the property tax revenue If the aged is conventionally defined as those 65 and over, the tax contribution of aged homesteads is estimated at about $121 million in 1960 This amount represented almost 14 percent of the taxes attributable to all the nonfarm residential single-family houses, and approximately 12 percent of the taxes from all nonfarm residential properties.

If the aged is generously defined as those 60 and over, they were estimated to have contributed approximately $180 million in 1960. This amount constituted over 20 percent of all the single-family nonfarm residential property taxes, and about 18 percent of the total taxes on nonfarm residential properties.

If, thirdly, the aged is defined rather restrictively to include only those 75 and over, the tax contribution in behalf of aged homesteads is estimated at approximately $35 million in 1960 This amount still accounted for almost 4 percent of the taxes on all the nonfarm residenial single-family houses and about 3 5 percent of all the taxes on nonfarm residential properties

The foregoing paragraphs serve to indicate that the aged, excepting when they are defined as 75 and over, are important contributors to the local property tax base, especially as it relates to nonfarm residential properties This being the case, it appears necessary to investigate how each of the aged groups (i e., 60–64, 65–74, and 75 and over) is affected by the property tax, both in terms of the absolute amount of property taxes on aged homesteads and in terms of the relationships between property tax payments and household incomes. (See Addendum B.) The following section is devoted for this purpose This aspect of prop-

erty tax contributions by the aged is particularly important because of the implications which it holds for the selection of property tax schemes for the relief of the aged.

E. *Property Tax Contributions of Aged Homesteads in California: Estimates for 1960 on the Basis of 1960 Data*

In order to analyze the property taxes on aged homesteads contributed by different age-of-head groups, Tables III, IV, and V are prepared.

Table III shows the estimated distribution of property taxes of the aged by household income (see Appendix B for definition) and by age-of-head groups The 60–64 group contributed some $59 million in property taxes in 1960. Only 6 percent of this amount came from households with incomes less than $1,000; about 5 percent each from households with incomes between $1,000 and $1,999 and between $2,000 and $2,999 Next, the 65–74 group contributed some $86 million in 1960. Nearly 10 percent of this amount came from households with incomes less than $1,000, about 14 percent from those with incomes between $1,000 and $1,999; and approximately 12 percent from households with incomes between $2,000 and $2,999 Thirdly, the 75 and over group was called upon to contribute some $35 million in 1960 About 18 percent of this amount came from households with less than $1,000, almost 22 percent from those with incomes between $1,000 and $1,999; and some 14 percent from those with incomes between $2,000 and $2,999.

In other words, while only less than 17 percent of the taxes paid by 60–64 group was contributed by those with incomes less than $3,000, the proportion increases to 36 percent for the 65–74 group, and to 54 percent for the 75 and over group. It may be said that, comparatively, the 75 and over group was worse off than the 65–74 group and the 65–74 group was in turn worse off than the 60–64 group in terms of the proportion of those with incomes below $3,000 in each group who contributed to the property tax payments of the group.

Table IV records the estimated number of aged homesteads by household income and by age-of-head groups Thus, this table enables a broad view of the household income status of these units While 21 percent of these houses headed by those 60–64 belonged to households with income less than $3,000 in 1960, the corresponding proportion for the 65–74 group was 45 percent, and that for the 75 and over group was almost 65 percent.

If $3,000 of household income may serve as a benchmark for delineating groups in terms of economic welfare, the above comparative figures seem to suggest that the 75 and over group fared less well than the 65–74 group and the 65–74 fared less well than the 60–64 group in terms of household income. It must be borne in mind, however, that the household income is measured by *current money* income which may not be an adequate measure of the economic wellbeing and hence the taxpaying ability of the household. (More on this later.) Even with this important qualification, the comparative figures quoted above for the three aged groups are still meaningful for suggesting the relative economic circumstances of these groups in terms of the same measure, household income.

Lastly, Table V presents some estimates for the average property tax per unit and for the average "property tax-household income" ratio. It is interesting to observe that the average tax per unit first declined as income increased from less than $1,000 to $1,000–$1,999 and then increased as income advanced beyond $2,000. On the other hand, the average tax-income ratio decreased as income increased throughout the income range. This somewhat inverse movement between the average tax and the average tax-income ratio holds true for all three age-of-head groups.

For the 60–64 group, the average tax moved from $274 down to $253 as income moved from less than $1,000 to $1,000–$1,999. The average tax then climbed up from $253 to $267, $277, and $367 as income moved upwards from $1,000–$1,999 to $2,000–$2,999, $3,000–$4,999, and $5,000 and over This general trend can be noted for the other two groups as well

In terms of average tax-income ratios, it is significant to point out that the ratio declined from, for the 60–64 group, some 36 percent down to 17 percent, 11 percent, 7 percent, and only 4 percent, as income advanced from less than $1,000 to $5,000 or over This general trend can also be found for the other age groups.

These average tax-income ratios seem to confirm a widely held belief that property taxes are regressive. However, cognizance must be taken of the fact that the measure against which the tax is compared is the current money income of the household By definition, the current money income does not include nonmoney income such as the imputed service value of the owner-occupied house, nor does it include the value of income "in kind," such as goods and services produced and consumed in the home Moreover, this measure of income does not allow for the value of income in the form of tax concessions to the aged Finally, this measure of income may be inadequate as a gauge for the taxpaying ability of a household, for it fails to include other indices of economic welfare, such as asset and wealth holdings and family budgetary responsibilities In short, while the average tax-income ratios as estimated above are revealing, care must be taken in any interpretation of these figures for purposes of policy formulation

From the standpoint of policy, care must also be exercised in the selection of tax measures for the relief of the aged, because alternative measures will produce diverse results in terms of revenue losses and with respect to the number of the aged who would benefit. The following section will discuss this important phase of the inquiry

F. Revenue Effects of Alternative Exemption Schemes in California: Estimates for 1960 on the Basis of 1960 Data

1. CONDITIONAL EXEMPTIONS

As defined in Section C, under the conditional exemption, the assessed value below the exemption level is fully exempt, but the entire amount of assessed value will be taxable if it is above the level of exemption.

Table VI indicates the estimated remaining homestead tax attributable to aged homesteads under alternative exemption levels and eligible age-of-head groups for the conditional variety of exemption.

First, the tax accountable for by the the age-of-head group 75 and over may be examined. Without exemption, this group contributed, as earlier indicated, some $35 million in property tax in 1960 If $1,000 of assessed value were exempt, 0 5 percent of this tax or some $172,000 would be reduced If, on the other hand, $6,250 of assessed value were exempt, almost 75 percent of this tax or some $26 million would be reduced.

Secondly, the tax assignable to the age-of-head group 65 and over may be studied. This group was responsible for some $121 million of property tax in 1960. If $1,000 in assessed valuation were exempt, 0.4 percent of this tax or some $435,000 would be removed. If, however, $6,250 in assessed valuation were exempt, more than 70 percent of this or some $87 million would be removed.

Thirdly, the tax contributed by the age-of-head group 60 and over may be analyzed. This group accounted for some $180 million in property tax in 1960 If $1,000 of assessed value were exempt, 0 3 percent of this tax or some $550,000 would be lost If, alternatively, $6,250 of assessed value were exempt, slightly more than 70 percent of this tax or some $126 million would be lost

2. UNIFORM EXEMPTIONS

Under the uniform exemption, as defined previously, a given amount of assessed value is exempt, regardless of the total amount of assessed value.

Table VII shows the estimated remaining homestead tax attributable to aged homesteads under alternative exemption levels and eligible age-of-head groups for the uniform type of exemption.

First, consider the age-of-head group 75 and over. The tax accountable for by this group, as noted above, was $35 million in 1960 If $1,000 of assessed value were exempt, this tax would be reduced by almost 7 percent or by $2.4 million If $6,250 of assessed value were exempt, this tax would be reduced by more than 90 percent or by nearly $32 million.

Next, consider the age-of-head group 65 and over The tax assignable to this group, also noted above, was $120 million in 1960. If $1,000 in assessed valuation were exempt, this tax would be reduced by more than 6 percent or by nearly $8 million. If $6,250 in assessed valuation were exempt, on the other hand, this tax would be reduced by almost 90 percent or by some $108 million.

Thirdly, consider the age-of-head group 60 and over The tax contributed by this group, as noted previously, was $180 million in 1960. If the exempt assessed value were $1,000, approximately 6 percent of this tax or some $11 million would be removed If, on the other hand, the exempt assessed value were $6,250, almost 90 percent of this or some $160 million would be removed

It is of significance to note that uniform exemptions would require greater revenue loss than do conditional exemptions, comparing the foregone revenues under these two exemption methods The reason is that the former offer benefits to those properties with assessed values above the exemption level as well as to those with assessed values up to the level of exemption It may be mentioned in passing that the uniform type of exemption tends to offer tax privileges to some homeowners who, with high assessed values, presumably do not require tax relief.

3. VANISHING EXEMPTIONS

The vanishing exemption is a tax scheme, also defined in Section C, under which the amount of exempt assessed value declines as the assessed value advances over the amount of exemption, until the exemption disappears.

Three variants of the vanishing exemption may be differentiated: type A, exemptable assessed value declines as the assessed value increases; type B, exemptable assessed value declines as the household income of the homeowner increases, and type C, exemptable assessed value declines as both the assessed value and the household income of the homeowner increase.

Table VIII exhibits the estimated remaining homestead tax attributable to aged homesteads under alternative exemption schemes and eligible age-of-head groups for the vanishing sort of exemption

First, the group 75 and over. This group was responsible for $35 million in property tax in 1960. Type A vanishing scheme would remove this tax by more than 40 percent or by $14 5 million Type B vanishing scheme would remove this tax by 45 percent or by almost $16 million. Type C vanishing scheme would only remove some 23 percent of this tax or $8 million

Secondly, the group 65 and over. This group contributed $120 million in property tax in 1960 If type A scheme were used, this tax would be reduced by about 38 percent or by some $46 million If type B scheme were used, this tax would be reduced by about 35 percent or almost $42 5 million If type C scheme were used, this tax would be reduced by only 17 percent or by $21 million.

Thirdly, the group 60 and over Some $180 million in property tax came from this group in 1960 Type A scheme would remove from taxation nearly 37 percent of this tax or $66 million. Type B scheme would remove from taxation almost 30 percent of this tax or $52 million Type C scheme, finally, would remove from taxation only approximately 14 percent or $25 million

Preceding discussions of different revenue effects under various exemption programs may fruitfully be followed by two considerations. The first is a summary of the losses in revenue under alternative schemes to permit comparisons in more convenient form The other consideration is an analysis of the number of housing units among the aged groups which would not benefit from the alternative schemes under consideration.

Table IX permits a comparison of revenue effects between conditional and uniform exemptions of an identical amount, e g , $1,000 It also enables selections of different combinations of exemption level and eligible age group with revenue effects in mind For instance, for a revenue loss of about $15 5 million in 1960, it was possible to adopt either a conditional exemption of $2,500 in assessed valuation to those 65 and over, or a type B vanishing exemption (vanishing according to household income) to those 75 and over

If the sustainable sacrifice of property tax revenue were approximately $20 5 million in 1960, there existed a choice between granting a conditional exemption of $2,500 in assesed valuation to those 60 and

over and granting a type C vanishing exemption to those 65 and over And there are other possible comparisons

It is of interest to observe the widely differing amounts of revenue loss which different tax schemes would produce. The scheme that would result in the least revenue loss is granting a conditional exemption of $1,000 of assessed value to those 75 and over, for an estimated amount of $172,000 in 1960 The scheme that would bring forth the most revenue loss is, on the other hand, adopting a uniform exemption of $6,250 of assessed value to those 60 and over for an estimated amount of $160 million in 1960.

It is also interesting to state again that uniform exemptions would reduce more revenue than conditional exemptions for every exemption level within each age group The least amount of revenue loss would be $172,000 in 1960 in the case of $1,000 conditional exemptions to those 75 and over. The greatest revenue loss would be $160 million in the case, as cited above, of $6,250 uniform exemptions to those 60 and over.

Also worthy of note is the fact that vanishing exemption schemes benefit all but the most favorably placed in terms of assessed valuation, or of household income, or of both. (Benefits may accrue to all if the vanishing scheme is such that those most favorably placed are not precluded from tax privileges) The most commendable feature of vanishing exemption schemes is that they offer more benefits to the less favorably situated and less to the more favorably situated, either in terms of assessed valuation, or income, or both. Mention must be made, however, of the fact that it is not altogether an effortless task to devise a scheme that "vanishes" practicably and reasonably But the difficulty in devising a practicable and reasonable vanishing scheme should in no case discourage the use of vanishing method for tax concessions, if the vanishing method is accepted in principle

Aside from the fact that diverse amounts of revenue loss would result from different exemption methods, it must be emphasized that the amounts of foregone taxes are also an important function of the age group eligible for the tax privilege, as amply evidenced in Table IX. Therefore, the selection of the cutoff age, like the choice of the exemption device, should be a matter requiring serious consideration

Not only are the revenue losses importantly affected by the employment of specific exemption method and the stipulation of eligible age group, the number of housing units which would or would not benefit from a certain tax measure is likewise determined Under the uniform type of exemption, all units would receive tax favors. Of course, the amount of tax benefit which each unit would receive will depend upon its assessed valuation For instance, if the exemption level were $2,500 in assessed valuation, units with assessed values of $2,500 or less would receive full exemption, but those with assessed values over $2,500 would receive partial exemption

On the other hand, under the conditional and vanishing varieties of exemption, the number of affected units is subject to considerable variation As shown in Table X, if conditional exemptions were used, the number of units without tax benefits would range between 9 percent and 95 percent of the total units in the age group, for exemptable assessed values ranging from $6,250 to $1,000 in assessed valuation

If, alternatively, vanishing exemptions were used, the number of units with no tax savings would vary from 9 percent to 44 percent of the total units in the age group, for the three different types of vanishing scheme.

G. *Summary*

The major findings of this study may be summarized as follows.

(1) The existence of property tax concessions to the aged is noticeable and the sentiment and movement toward tax relief measures for the aged is worthy of attention. Although there exists wide diversity in both the existing and the proposed laws, there are three principal forms in which tax favors are offered: tax exemption, tax credit, and tax deferment. Tax exemptions are in use in Indiana, Massachusetts, and Oregon; tax credits are offered in Maryland, New Jersey, and Wisconsin; and tax deferment as a supplement to the exemption law, is in force in Oregon for certain aged.

(2) Among the provisions of these relief measures, both in existence and under proposal, income limitation and exemption limitation bear special emphasis. Income limitation refers to the maximum amount of annual income which a taxpayer may have and still is eligible for the tax favor. Exemption limitation, on the other hand, relates to the maximum amount in assessed valuation of a homestead which is excused from taxation. Both provisions have as their purpose to accord tax privileges only to those who are presumed to require tax relief. This purpose is commendable in spirit But in terms of the ways in which these limitations are imposed, they leave much to be desired.

So far as the income limitation is concerned, three major problems exist One concerns the definition of income Another relates to the ascertainment of the defined income The third difficulty with existing arrangements is the so-called "notch" problem—the tax privilege will be abruptly removed when the income is above a certain level

With regard to the exemption limitation, there are three variants: conditional, uniform, and vanishing exemptions. Conditional exemptions present a "notch" problem; namely, the tax benefit will be withheld when the assessed value is above the specified amount They also may create a circumstance under which the assessor will be burdened with an additional psychological factor in assessing the homes of the aged.

Uniform exemptions are also looked upon with disfavor for the reason that they offer tax advantages to all taxpayers, with no regard for the assessed valuation of their houses, which may reflect in part their economic circumstances

Thirdly, vanishing exemptions have the merit of attempting to relate tax benefits to the economic status of the taxpayer, according to some chosen criteria It must be added, however, that there are a number of relevant criteria for the measurement of economic circumstances and that the task of selecting the most relevant of criteria and weighing the relative importance of each is highly difficult But the difficulties encountered in devising a rational and workable vanishing scheme should not form a barrier, as long as the vanishing method is accepted as a principle.

(3) While the state government in California does not rely on property taxes, property taxation looms large on the financial scene of local governments Of the local property tax, over 80 percent comes from real property Among the sources of the local real property tax, nonfarm residential housing units constitute almost two-thirds of its revenue Moreover, of the nonfarm residential property tax, nearly seven-eighths of it come from single-family houses. The fiscal importance of residential housing properties is thus readily seen.

Also can be appreciated is the fact that aged homesteads (defined as the nonfarm residential owner-occupied single-unit properties headed by those 60 and over, or 65 and over, or 75 and over) constitute a considerable part of the local real property tax base attributable to nonfarm residential properties and to single-family houses alone, except when "75 and over" is taken to denote the aged.

(4) In terms of the estimated property taxes on aged homesteads in 1960, the 60–64 group contributed some $59 million; the 65–74 group, some $86 million; and the 75 and over group, some $35 million. The total contribution amounted to approximately $180 million by the group 60 and over This amount represented about 18 percent of all the local property tax from nonfarm residential properties. Even when aged is defined to include only those 65 and over, taxes in behalf of aged homesteads were still some $121 million, which constituted about 12 percent of all the local property tax from nonfarm residential properties. Only when "75 and over" is taken as the aged do aged homesteads contribute relatively insignificantly to the local real property tax.

(5) From the standpoint of property taxes in relation to household income (defined in Appendix B), there existed considerable differences among the aged groups in terms of the proportion of property taxes which came from those with income less than $2,000 in 1960. Only 11 5 percent of the taxes contributed by the 60–64 group came from those with income below $2,000, but the proportion became 24 percent for the 65–74 group and nearly 40 percent for the 75 and over group.

This pattern holds true also for those with income less than $3,000. Whereas less than 17 percent of the taxes from the 60–64 group was contributed by those with income below $3,000, the share was more than 36 percent in the 65–74 group and 44 percent in the 75 and over group

(6) Also from the standpoint of property taxes in relation to household income, there existed some evidence of the regressiveness of property taxes *in terms of income* Generally speaking, the average of property tax-household income ratio declined from over 30 percent to about 15 percent, to about 10 percent, to about 7 percent, and finally to about 4 percent as income moved up from less than $1,000, to $1,000–1,999, to $2,000–2,999, to $3,000–4,999 and $5,000 or over, respectively. This pattern holds true for all the three age groups.

Care must be taken, however, in reaching policy conclusions on the basis of the above information The principal reservation to keep in mind is that the economic status of taxpayers (aged or otherwise) must be viewed in the context of many variables, of which income is only one, affecting the economic welfare of a household or an individual

Variables such as asset and wealth holdings, family responsibility, and budgetary requirements should logically be taken into account.

(7) Finally, alternative exemption programs have been suggested. And the effects of each of these measures on property tax revenue and on the number of the affected units have been estimated for the alternatively defined age groups. Revenue effects are presented for both the remaining tax base and the revenue losses under the various schemes. These figures will not be repeated here. One of the outstanding impressions from a perusal of the calculations relating to the revenue effects and the number of affected units is that alternative exemption measures and eligible age groups will bring forth, at times, vastly different results. The policy implication of this observation is that a large amount of attention must be given to the determination of both the exemptable assessed valuation and the allowable income, as well as the eligible age of the taxpayer.

Although these calculations relate specifically to the various possible exemption laws, it should be added, these figures may easily be used to shed some light on the likely effects of other forms of property tax relief, such as tax credit and tax deferment for the same aged population in California.

TABLE I

Fiscal Importance of Property Taxes in the General Revenue of State and Local Governments in California, by Levels of Governments: 1960

(In millions)

Sources of revenue	State and Local governments [a]	State government	Local governments [c]
All general revenue from own sources	$5,197	$2,362 [b]	$2,835
Charges and miscellaneous general revenue	788	237 [c]	550
All taxes	4,409	2,124 [d]	2,285
Other taxes	2,295	1,999 [d]	296
Property taxes	2,114	126 [e]	1,989
Intangibles *	4	---	4 [f]
Tangibles *	2,111	126 [e]	1,985
Real property *	1,602	---	1,602
Personal property *	509	126 [e]	383

SOURCES:

[a] *From Governmental Finances in 1960* (G-GF60 No 2), U S Bureau of the Census, p 25, excepting the items with the asterisk (*). The breakdowns on property taxes are taken *from Communication* to the author *by Ronald* B Welch, California State Board of Equalization, dated October 15, 1964

[b] From *Compendium of State Finances in 1960*, U S Bureau of the Census, p 12, by subtracting intergovernmental revenue ($685 million) from the total general revenue

[c] From *ibid*, p 12.

[d] From *ibid*, p 13

[e] This amount is made up of $124 million on motor vehicles and $2 million on private railroad cars From Welch, *op cit* According to the *Annual Report*, 1962–63, of the California State Board of Equalization, about 96 percent of the motor vehicle tax, which yielded about $147 million in fiscal 1963, was remitted to local governments, p 6 According to the same source the tax on private railroad cars, assessed by the board on rolling stock operated on the state's railroads but not owned by railroad companies, is the "state's one property tax "

[f] By subtracting state figures from the state and local totals for the respective items

* This amount represents the only remaining tax on intangible property in California It is imposed on the "full value of credits arising out of the sale of goods and services less debts of the like character owed to California residents" The rate is 10 cents per $100 of the full value of such credits *Annual Report*, 1962–63, *op cit*, p 7

NOTE: Details may not add to totals due to roundings

H. Addendum A:

PREFERENTIAL TREATMENT OF THE AGED IN INCOME AND PROPERTY TAXATION: A STATEMENT OF THE PROVISIONS IN THE UNITED STATES

Tax policies at all levels of governments in the United States have reflected a growing concern over the economic problems of the aged, a concern which has occupied the increasing attention of the public policy-maker and the academician alike, particularly since the end of World War II. Preferential provisions for the aged are found in both federal and state income taxation. Provisions benefiting the aged are also found in property taxation.

At the federal level, additional personal exemptions for the aged were first provided in the Revenue Act of 1948. Another provision, the

liberalized treatment of deductible medical expenses and expenses for medicine and drugs, was enacted in 1950 Still another provision, retirement income credit, was adopted in 1954 The trend to accord special treatment to aged taxpayers was continued in 1964, when the new Revenue Act added (1) additional minimum standard deduction and (2) certain capital gains exclusion, and liberalized (1) the treatment of deductible expenses for medicine and drugs and (2) the computation of retirement income credit. Social security and railroad retirement benefits have been exempted since the beginning of these programs.[1]

In state income taxes, special provisions for the aged are common. Twenty-five of the 35 states (including District of Columbia) imposing state income taxes have old age exemption or credit provisions Nineteen of the 35 states allow liberalized medical deductions for the aged. Moreover, social security benefits are not taxable in nearly all of the states In addition, Hawaii taxes income from Hawaii sources only for those individuals establishing residence in Hawaii after the age of 65 and California provides a retirement income credit.[2]

Provisions favoring the aged exist in property taxes as well Property tax concessions are granted in six states. The principal forms of these measures are: Tax exemption, tax deferment, and tax credit. Indiana, Massachusetts, and Oregon use tax exemptions. Oregon alone offers tax deferment, in addition to tax exemptions, to certain taxpayers New Jersey grants tax credits. Maryland authorizes its county governments to grant tax credits. And Wisconsin provides property tax relief through a system of income tax credits and refunds.

Although the existence of these provisions is noticeable, and the interest in the aged is widespread, an inventory of existing tax provisions under both income and property taxation is not readily available in convenient form. Designed to fill such a gap, this statement presents the up-to-date information in the following six tables.

[1] It may be of interest to compare the treatment of certain income tax items concerning the aged in the United States with that in Canada The only tax favor in the federal and (ten) provincial income taxes on individuals in Canada is the so-called "age exemption" for persons 65 and over in the amount of $500 (Basic personal exemption is $1,000) There is no liberalized medical expenses deduction for the aged Medical (including medicine and drug) expenses are deductible only when the total of the allowable expenses exceeds 3 percent of "net income" and only the amount in excess of 3 percent of "net income" may be deducted While there is no social security system in Canada comparable to that in the United States, all taxpayers in Canada pay an old age security tax, which contribution is not deductible from income, although the subsequent pension (paid at age 70) is taxable income *Letter* to the author by H F Herbert, Director, Planning and Development Branch, Taxation Division, Department of National Revenue, the Government of Canada, June 18, 1964

[2] In California, "the maximum [retirement income] credit is $15 24 per taxpayer or $30 48 in the case of a married couple Under a 1964 amendment the credit was increased for certain married couples from $15 24 to $22 86 The increase applies to a married couple filing a joint return, if both are over 65 where one spouse fails to meet the earned income test The increase is based on allowing one-half ($762) of the existing $1,524 maximum to the spouse not meeting the earned income test" *Letter* to the author, by James W Hamilton, Senior Counsel, Franchise Tax Board, the State of California, June 16, 1964

TABLE XI

Tax Provisions Specifically Affecting the Aged Under the Federal Individual Income Tax: 1964

Category	*Provisions*
1. Additional minimum standard deduction	$100 per aged (65 or over)
2 Additional personal exemption	$600 per aged.
3 Deduction for medicine and drug expenses	Fully deductible.
4 Deduction for medical expenses	No floor, with ceiling. $5,000 (single), $10,000 (couple), $20,000 (with 2 or more dependents), $15,000 (single and disabled), and $30,000 (couple and disabled).
5 Social security or railroad retirement benefits	Excluded from gross income.
6 Retirement income credit	[a]
7 Capital gains from personal residence	Exclusion from taxable income any gain attributable to $20,000 of sales price [b]

SOURCES Compiled from *President's 1963 Tax Message*, and *The 1964 Revenue Act and the Elderly Taxpayer* (TP-3), U S Treasury Department, March 1964.

NOTES

Items 1 and 7 are new provisions under the Revenue Act of 1964 Item 3 is affected by the new act since it removes the one-percent floor requirement in the prior law Item 6 is also affected by the new act, as explained in (a)

[a] Persons over 65 are allowed a tax credit on retirement for investment or pension income which they receive. However, the income taken into account for this credit must be reduced for tax-exempt social security or railroad retirement income and, for those under age 72, for income derived from work above a specified income level The income eligible for the credit is to be multiplied by the tax rate on the first $2,000 of taxable income Under previous law, this rate was 20 percent

The new act, however, splits the single person's first bracket of $2,000 into four brackets of $500 each and applied four tax rates ranging from 16 to 18 percent in 1964 and from 14 to 17 percent in 1965 Therefore, to keep the rate in computing the credit at the rate *applicable to the first $2,000*, the new law provides that the rate in computing the credit is to be 17 percent in 1964 and 15 percent in 1965 This is approximately the average of the four rates applicable to the first $2,000 of income

Previously, an aged person was allowed to take a tax credit on retirement income up to a maximum of $1,524 provided he had ample work experience (at least 10 years) His spouse, however, who did not have such work experience, was not allowed a similar credit even though she may have had some retirement income

The new act allows the couple to elect to combine their retirement incomes and it increases the maximum to $2,286, on which the couple may compute their retirement income credit

[b] Assume a capital gain of $9,000 from selling a residence, which cost $21,000, for $30,000 Since the sales price is one third larger than the allowable $20,000, only two-thirds of the gain (i e, $6,000) can be excluded from taxable income Then one half ($1,500) of the remaining gain ($3,000) is subject to tax

This tax privilege is available only once in a lifetime, and it requires ownership of residence of at least five years

TABLE XII

Old Age Exemption or Credit Provisions in State Personal Income Taxes: 1964

State [a]	Provision	
	Exemption [b]	Credit [b]
1. Alaska	$600	—
2. Arizona	1,000	—
3. Colorado	750	—

21. Vermont	500	—
22. Virginia	600	—
23. West Virginia	600	—
24. Wisconsin	—	5
25. District of Columbia	500	—

SOURCES: Compiled from *State Tax Guide*, Commerce Clearing House, and verified by tax agencies in the respective states

[a] This list excludes New Hampshire and Tennessee which impose an income tax on interests and dividends alone Of the 35 states (including District of Columbia), 25 states are currently granting tax exemptions or tax credits for the aged (65 or over) Those 10 states without such tax considerations are Alabama, Arkansas, California, Louisiana, Massachusetts, Mississippi, Missouri, North Carolina, Oklahoma, and Utah

[b] These exemptions or credits are granted the aged (65 or over) in addition to the exemptions or credits allowable for all taxpayers

[c] This amount is for an unmarried aged person For a married individual living with spouse, the credit is $15 for each spouse 65 or over

TABLE XIII

Treatment of Medical Expenses [1] of the Aged in State Income Taxes: 1964

A. Allowing *liberalized* medical deductions for the aged (19 states)

Alabama *	Maryland *
Alaska *	Massachusetts *
Arizona	Montana *
California *	New Jersey *
Delaware	New Mexico *
Georgia	New York *
Hawaii *	Vermont *
Idaho *	Virginia
Iowa *	West Virginia *
Kentucky *	

B. With *no liberalized* medical deductions for the aged (13 states)

Arkansas	Missouri
Colorado (full deductions for all taxpayers) [2]	North Dakota (full deductions for all taxpayers)
District of Columbia	North Carolina
Kansas (amount over $50 deductable for all taxpayers)	Oklahoma
Minnesota (full deductions for all taxpayers)	Oregon
	South Carolina
	Utah
	Wisconsin

C. With *no deductions* for *any* taxpayer (3 states)

Indiana
Louisiana
Mississippi

SOURCES: *State Tax Reporter* for the respective states, Commerce Clearing House, and verified by tax agencies in the respective states

[1] Medicine and drug expenses are included in medical expenses in full except in those states marked by *, which deduct 1 percent of adjusted gross income from drug expenses before including them in medical expenses. This provision is the same as in the federal individual income tax prior to the Revenue Act of 1964. Some of the states will presumably treat this item as does the new act. It is known that New York follows automatically the Internal Revenue Act and California has removed the 1 percent floor by law.

[2] For taxable years after December 31, 1964, Colorado will follow the federal income tax treatment of medical expenses deduction.

TABLE XIV

State Income Taxes with Liberalized Medical Deductions for the Aged: 1964

State (19)	*Provisions in Summary*
1. Alabama	Same as federal income tax treatment *
2. Alaska	Same as federal income tax treatment.*
3. Arizona	Maximum deductions are $2,500 for individuals and $5,000 for married couples. No maximums for the expenses of the taxpayer and spouse if either is 65 or over.
4. California	Medical deductions in excess of 3 percent of adjusted gross income are allowable. Expenses for taxpayer and spouse if either is 65 or over, and expenses for dependent parents 65 or over, are not subject to 3 percent rule. Maximums of $1,250 for individuals and $2,500 for couples are applicable to all taxpayers except that it is $15,000 if either, $30,000 if both, taxpayer or spouse is at least 65 and disabled.

TABLE XIV—Continued

State Income Taxes with Liberalized Medical Deductions for the Aged: 1964—Continued

State (19)	*Provisions in Summary*
5 Delaware	Medical expenses which exceed 5 percent of gross income are deductible. If taxpayer or spouse is 65 or over, their expenses are not subject to the 5 percent rule
6 Georgia	Expenses for the medical care of (a) dependents who are 65 or over and parents of taxpayer or spouse, and (b) taxpayer and spouse either of whom is 65 or over, are not subject to the rule which allows deductions only for that in excess of 3 percent of adjusted gross income. If either taxpayer or spouse is 65 or over and disabled, it is possible to qualify for maximum limitations greater than the usual $2,500 per person up to $5,000
7 Hawaii	Follows I R C except (a) provision for dependent parents 65 or over does not apply, and (b) maximum limitations are the same for all ages except it is $15,000 if either, $30,000 if both, taxpayer or spouse is 65 or over and disabled
8. Idaho	Same as federal income tax treatment.*
9 Iowa	Same as federal income tax treatment.*
10 Kentucky	Generally follows federal provisions except that *3 percent rule still applies to "dependents" 65 or over*
11 Maryland	Expenses for medical care of taxpayer and spouse, if either is 65 or over, are not subject to the rule which limits deductions to that in excess of 3 percent of gross income. Maximums of $1,250 for individuals and $2,500, couples, are the same for all ages
12 Massachusetts	Same as federal income tax treatment *
13 Montana	Same as federal income tax treatment *
14 New Jersey	Same as federal income tax treatment *
15 New Mexico	Same as federal income tax treatment *
16 New York	Same as federal income tax treatment *
17 Vermont	Same as federal income tax treatment *
18. Virginia	Expenses for medical care of taxpayer and spouse, if either is 65 or over, are not subject to the rule which limits deductions to that in excess of 5 percent of adjusted gross income Maximums for all taxpayers· $1,250 per person up to $5,000 except it is $15,000 if either, $30,000 if both, taxpayer or spouse is 65 or over and disabled [$15,000 limit on each]
19 West Virginia	Same as federal income tax treatment.*

* Some states follow automatically the Internal Revenue Code and others require new legislation to conform to the federal law, in case of future changes (Cf footnote 1 in Table XIII)

TABLE XV

Treatment of Social Security and Railroad Retirement Benefits [1] and Employee Contributions [2] in State Income Taxes: 1964

A. Social security benefits nontaxable and employee contributions for social security and railroad retirement nondeductible (29 states)

Alaska	Indiana	North Dakota
Arizona	Iowa	Oklahoma
Arkansas	Kentucky	Oregon
California	Maryland	South Carolina
Colorado	Minnesota	Utah
Delaware	Montana	Vermont
District of Columbia	New Jersey	Virginia
Georgia	New Mexico	West Virginia
Hawaii	New York	Wisconsin
Idaho	North Carolina	

B. Social security benefits nontaxable and employee contributions for social security and railroad retirement deductible (5 states)

Alabama	Louisiana	Missouri
Kansas	Massachusetts	

C. Social security benefits taxable and employee contributions for social security and railroad retirement nondeductible (1 state)

Mississippi [3]

SOURCES: *State Tax Reporter* for the respective states, Commerce Clearing House, and verified by tax agencies in the respective states

[1] Title 45, Section 228L of the United States Code Annotated disallows the taxation of railroad retirement benefits by any state, territory, or District of Columbia
[2] Employer contributions are deductible in all cases
[3] Social security benefits in excess of the contributions to social security constitute a part of the gross income for Mississippi state income tax purposes

TABLE XVI

Property Tax Concessions to the Aged: 1964

	State	*Form of concessions*	*Provisions in summary*
1	Indiana	Tax exemption	(a) Exempts $1,000 in assessed valuation to a homestead assessed at $5,000 or less, (b) Owned and occupied by a resident 65 and over (ownership at least one year), (c) If his total annual gross income from every source (plus that of his spouse) does not exceed $2,250
2	Maryland	Tax credit	[1]
3	Massachusetts	Tax exemption	(a) Exempts $4,000 in assessed valuation to a homestead assessed a $14,000 or less, (b) Owned and occupied (for at least five years) by a person 70 and over (having lived in the state for the preceding 10 years), (c) If his net income from all sources, both taxable and nontaxable, does not exceed $5,000 for a married couple, and $4,000 for a single person

TABLE XVI—Continued

Property Tax Concessions to the Aged: 1964

State	*Form of concessions*	*Provisions in summary*
4 New Jersey	Tax credit	(a) Allows a tax credit of up to $80 against the property tax on, (b) Self-owned dwelling of a citizen and resident (for at least three years) 65 and over, whose (c) Annual income does not exceed $5,000, defined to include money from whatever source, including but not limited to realized capital gains and the entire amount of pension, annuity, retirement, and social security benefits
5 Oregon	1 Tax exemption and 2 Tax deferment	(1a) Exempts first $10,000 of the true cash value (interpreted as a fair market value) of (1b) The principal residence of persons 65 and over, with (1c) Gross receipts less than $2,500, defined to include but not limited to pensions, disability compensation, retirement pay, public welfare and social security payments, and receipts from sales or services rendered (1d) The true cash value exempt from taxation is allowed according to age of the taxpayer, or the oldest of the taxpayers sharing the residence 10% for 65 to 68 30% for 69 to 71 50% for 72 to 74 70% for 75 to 77 90% for 78 to 79 100% for 80 and over. (2a) Allows tax deferment to those who are unable to obtain a complete exemption or those whose income is over $2,500 (2b) To claim tax deferment, the homestead must not be income producing, nor have any delinquent property taxes on the property (2c) The deferred taxes become a lien against the property until the death of the owner, or the sale of the home, or a status change of the property (i.e., when it is no longer a homestead or becomes income producing) (2d) The deferred taxes are charged with an interest rate of 6 percent per annum
6 Wisconsin	Tax credit	(a) Grants property tax relief in the form of income tax credits and refunds to (b) persons 65 and over, (c) either homeowners or renters (d) For the homeowner with household income of $1,000 or less, the relief amounts to 75 percent of the property tax (up to $300) in excess of 5 percent of the household income. The relief is 50 percent of the property tax (up to $300) in excess of 5 percent of the household income, if the household income is over $1,000.

TABLE XVI—Continued

Property Tax Concessions to the Aged: 1964

State	Form of concessions	Provisions in summary
		Household income is defined as income of all the persons who are related to and live with the aged taxpayer.
		(e) Income means adjusted gross income, plus alimony, pensions (less the return on investment), social security payments, and nontaxable interest, except gifts and income in kind up to $300
		(f) An aged renter also benefits from the above provisions, except that his property tax liability is assumed to be 25 percent of his gross rent (i.e., the payment solely for the right of occupancy)
		(g) In cases where the amount of property tax relief exceeds the income tax otherwise payable, refunds are issued to the aged owner or renter

SOURCES. Compiled from *State Tax Reporter* for the respective states and verified by legislative reference agencies in the respective states

[1] Maryland passed in 1963 a law giving its county governments the authority to grant a tax credit or a limited property tax rate based on age or income (The Acts of 1964 deleted all references to limited rates.) The law repealed all previous tax exemption provisions of county governments. There are 24 major political subdivisions in Maryland comprising Baltimore City and 23 counties. Baltimore and 15 counties have granted tax credits under the provisions of the Acts of 1963. The amounts of credit and the eligibility requirements in these political subdivisions are not known at present but are expected to be available in the near future, according to William H. Riley, Chief Supervisor of Assessments. *Letter* to the author, June 17, 1964.

According to the *State Tax Reporter* for Maryland, Commerce Clearing House, the following jurisdictions had exemption provisions as of July 1, 1963: Allegany, Anne Arundel, Baltimore, Carroll, Charles, Frederick, Harford, Howard, Montgomery, Prince Georges, Saint Marys, Somerset, Washington, Wicomico, and Worcester.

I. Addendum B: METHODOLOGICAL NOTES

The analyses in Sections E and F are based on the specially tabulated data for California by the U.S. Bureau of the Census. The special tabulations are a part of the 1960 Census of Housing, but its volume VII, *Housing of Senior Citizens* does not contain the information necessary for a study such as this.

Specifically, Sections E and F rely on the tabulations of the number of *units* of nonfarm residential single-unit properties owner-occupied by those 60–64, 65–74 and 75 and over, which are respectively cross-classified by house value [1] and household income.[2]

[1] House value is the respondent's estimate of how much the property would sell for on the market in April 1960. A property generally consists of the house and the land on which it stands. The estimated value of the entire property including the land was reported, even if the occupant owned the house but not the land, or the property was owned jointly with another owner. According to Census Bureau officials, the respondent's estimate of his house value is generally regarded as fair. One indication of the fairness in the self-estimate is that the Bureau has not received complaints from users of these estimates. Another piece of evidence supporting the belief that these estimates are fair comes from the probing which the Census Bureau conducted for internal use with reference to the 1950 Census of Housing. It was found that the "errors" in the estimated house values ranged from $1,000 (for lower value houses) to $2,000 (for upper value houses).

[2] Household income refers to income of the primary family or primary individual occupying the household unit. (A primary family refers to the head of a household and all persons in the household related to him by blood, marriage or adoption. A primary individual, on the other hand, refers to the head who lives alone or with nonrelatives only.) Specifically, household income consists of the sum of the income of the head of the primary family and all other members of the family 14 years old and over, or the income of the primary individual, during the calendar year 1959. The inclusion and exclusion of specific sources of

For our purposes, market values of these units as tabulated have been converted into assessed values by dividing the former by a factor of four, because the average assessed valuation has been estimated at about 25 percent of the market value.[4] Property taxes on these units, on the other hand, have been derived by multiplying the assessed value of the unit by a factor of 0 0765, on the basis of the estimated average tangible property tax rate for 1961–2.[4]

Since the basic tabulation shows only the number of units belonging to each value-income category, and since both value and income are given in intervals, it was necessary, in obtaining the market values of these units, to multiply the number of units belonging to a specific value interval by the midpoint of the interval. For the "less than $5,000" interval, $4,000 was assumed to be the average and for the "$25,000 or more" interval, $40,000 was the assumed midpoint. Both figures were chosen in consultation with the Census Bureau.

With reference to the basic tabulation of the number of units, a word of explanation is in order. According to Census Bureau officials, the figures on housing units headed by the aged groups (i e, 178,762 units by those 60–64, 280,247 by those 65–74, and 126,605 by those 75 and over) were underestimated by 3 percent However, the underestimation, they emphasized, was unbiased; namely, underestimation occurred across the board.

In light of the above information, the more accurate estimates of the number of units belonging to the above groups should be 184,125 for the group 60–64, 288,654 for the group 65–74 and 130,403 for the group 75 and over (cf Table IV) Next, the number of units belonging to the group 60 and over should be 603,182 instead of 585,614; to the group 65 and over, 419,058 instead of 406,852; and to the group 75 and over, 130,403 instead of 126,605. (cf. Table IV's footnote)

By the same token, the more accurate estimates of tax contributions by the 60–64 group should be $61,185,000 rather than $59,403,000; by the 65–74 group, $88,117,000 rather than $85,550,000; and by the 75 and over group, $36,132,000 rather than $35,080.000. (cf. Table III)

---

money receipts in the definition of income can best be appreciated from the following

Total income—the sum of money received, less losses, from the first three sources below (before deductions for personal income taxes, social security, bond purchases, union dues, etc), excluding the sources of income not counted

Wage or salary income—total money earnings for work performed as an employee, includes wages, salary, pay from armed forces, commissions, tips, piece-rate payments, and cash bonuses earned

Self-employment income—net money income (gross receipts minus operating expenses) from a business, farm, or profession

Income other than earnings—money income from sources other than the above two, such as net income (or loss) from rents or receipts from roomers or boarders, royalties, interest, dividends, and periodic income from estates and trust funds social security benefits, pensions, veterans' payments, military allotments for dependents, unemployment insurance, and public assistance or other governmental payments, and periodic contributions for support from persons who are not members of the household, alimony, and periodic receipts from insurance policies or annuities

Excluded sources of income—money from sale of property, unless the recipient was engaged in the business of selling such property the value of income "in kind" (e g, free living quarters or food produced and consumed in the home) withdrawals of bank deposits money borrowed, tax refunds gifts and lump sum inheritances or insurance benefits

The above is summarized from *Special Text, Housing of Senior Citizens* (1960 Census of Housing), p 8

[3] Statement by Dr Ronald Welch, in *California's Tax Structure, 1964—A Major Tax Study Part I* Assembly Interim Committee on Revenue and Taxation, California Legislature, Volume 4, No 8, January 1964 p 113

[4] *Annual Report*, 1962–63, California State Board of Equalization, p 8

Next, the tax contributions estimated for the 60 and over group should be $185,435,000 in place of $180,034,000, for the 65 and over group, $124,250,000 in place of $120,631,000; and for the 75 and over group, $36 132,000 in place of $35,080,000. (cf. Table II, VI, VII, and VIII)

Similar adjustment would be necessary also for the estimates of revenue losses (cf Table IX) and of the units without benefits under different exemption schemes (cf Table X).

But Table V on the average tax per unit and the average property tax-household income ratio would be unaffected by the underestimation because both the numerator and the denominator are underestimated by 3 percent Simultaneous upward adjustment by the same percentage will result in the same quotients

For this study, however, the *unadjusted* or the originally tabulated figures are used for the following reasons (1) Although the Census Bureau believes that there were no important biases in the underestimation, it remains possible that some biases still exist If this suspicion holds, then upward adjustment of all figures by 3 percent would nevertheless bring forth inaccurate estimates. (2) The correction of 3 percent across the board will not alter the analyses that are based on relative terms, such as tax contributions by income groups, the average tax per unit, and the average tax-income ratio. (3) Since the estimates of the possible revenue effects under alternative exemption laws are intended to be no more than an educated guess, a difference of 3 percent, as long as it is borne in mind, does not appear to be detrimental And (4) to increase all figures by a certain percentage is a time-consuming task. But given time, it will be a simple matter and can be accomplished when the need for such a conversion is felt

Finally, in connection with (3) above, an explanation is also in order regarding the estimates which are done for 1960. The principal reason for presenting estimates for 1960 is twofold. First, to project tax contributions, average tax per unit, average tax-income ratio, revenue losses and the like into the future (e g., for 1965 or 1970), on the basis of the 1960 census data, will require assumptions relating to the number of units in each value-income category, the average assessment ratio, and the average property tax rate It will require some time to develop reasonable assumptions Secondly, the presentation of estimates for 1960 will permit users of this study and the writer himself to attempt at projections at a later date.

J. *Addendum C:*

NOTES ON THE SCALES FOR THE VANISHING EXEMPTION SCHEMES

The calculations presented in Section F with respect to the three types of vanishing schemes are based on the following table Specifically, for the type A scheme, which vanishes according to assessed valuation alone, the percentages used are 100, 90, 80, 65, 55, 45, 35, 25, and zero, corresponding to the assessed value intervals ranging from "less than $1,250" to "$6,250 or more " For the type B scheme, secondly, which vanishes according to household income without regard for the assessed value, the percentages used are 100, 75, 50, 25, and zero, corresponding to the household income intervals ranging from "less than $1,000" to "$5,000 or over." Thirdly, all the percentages in the table are used for each value-income category only in the case of type

C scheme, which vanishes according to both assessed value and household income. The percentages other than those in the first column (vertical percentages) and the first row (horizontal percentages), which are chosen arbitrarily, are derived from multiplying the vertical percentage by the corresponding horizontal percentage, for a particular combination of value and income. Thus, the percentage of 67 50 for the category falling into the value range of $1,250–$1,850 and the income range of $1,000–$1,999 is the product of multiplying 90 percent by 75 percent. The percentage of 6.25, as another example, for the category belonging to the value range of $5,000–$6,250 and the income range of $3,000–$4,999 is the product of 25 percent times 25 percent.

TABLE XVII

Percent of Exemptable Assessed Value According to Levels of Assessed Valuation and Household Income

	Household income				
Assessed value	*Less than $1,000*	*$1,000–$1,999*	*$2,000–$2,999*	*$3,000–$4,999*	*$5,000 or over*
Less than $1,250	100 00%	75 00%	50 00%	25 00%	zero
$1,250–$1,850	90 00	67 50	45 00	22 50	zero
$1,850–$2,500	80 00	60 00	40 00	20 00	zero
$2,500–$3,100	65 00	48 75	32 50	16 25	zero
$3,100–$3,750	55 00	41 25	27 50	13 75	zero
$3,750–$4,350	45 00	33 75	22 50	11 25	zero
$4,350–$5,000	35 00	26 25	17 50	8 75	zero
$5,000–$6,250	25.00	18 75	12 50	6 25	zero
$6,250 or more	zero	zero	zero	zero	zero

The scale represents one of the numerous possible ways of tailoring tax benefits according to the economic position of the taxpayer. While there are other indices of economic status of the taxpayer such as family size and budgetary requirements, only assessed value and household income are recognized here.

The intervals for both the assessed value and the household income indicated above are based on the cross-tabulation intervals of the Census Bureau. It is possible to combine adjacent intervals, however. For example, in place of assessed values between $1,250 and $1,850 and between $1,850 and $2,500, we can have an interval between $1,250 and $2,500. Similar grouping can be achieved on household income. Then, percent of exemptable assessed value can be applied to them. Of course, if the number of intervals is reduced, the differences in the exemptable percentages between adjacent intervals will be larger than the ones that are shown in the above table In this case, "notch" problem will become more significant

This statement represents a part of the factual findings of the author's research project on the taxation of the aged, which was supported by a Brookings research professorship, 1963–64, from the Brookings Institution, while on leave from Seattle Pacific College No comments on the advisability and adequacy of the special provisions for the aged are here attempted Together with other information, this statement forms a basis for an analytical volume on the preferential tax treatment of the aged

The information in Tables II through VI was first gathered from publications of the Commerce Clearing House *(State Tax Guide* and *State Tax Reporter)* and then verified by the tax agencies (in the case of income tax provisions) and the legislative reference agencies (in the case of property tax provisions) in the states concerned The verified information is presented here The author is grateful to the following individuals for their assistance For income tax provisions: E A Erwin (Alabama), M C Kennedy (Alaska), Robert L Merrill (Arizona), Roby Bearden (Arkansas), James W Hamilton (California), Stanley B Schwartz (Colorado), Charles A Glennon (Delaware), Fred L Cox (Georgia), John A. Bell (Hawaii), Floyd West (Idaho), R. Stanley Beaman

Oliver (Oregon), and Kathleen R Kepner (Wisconsin). Bruce Biermeier assisted in the project

The author is an assistant professor of economics at UCLA and a member of the Social Systems Research Institute, University of Wisconsin He will be grateful for communications from users and readers if they find inaccurate information in this statement or if they bring him up-to-date when laws are changed His address is Department of Economics, University of California, Los Angeles, California 90024

PART IV

PROPERTY TAXATION AND LAND USE

DAVID R. DOERR and RAYMOND R SULLIVAN

A. Introduction

In any discussion of the relationship of the property tax to land use, one must keep in mind that there are a great many social, economic, and psychological factors which influence land use patterns. Many treatises on planning and urban ecology have been written discussing these factors.

Among the factors which influence land use patterns are public improvements bought with tax money and the tax policies instituted by various levels of government Particularly germane are the income, inheritance, and property taxes. Relatively little is known of the interaction of these various taxes and public spending patterns as they affect land usage and urban development.

In Dr Corrine Gilb's report on Income Tax Conformity[1] published by this committee in September, 1964, some attention was given to the provision of the state and federal income tax laws which bear on land use—particularly depreciation and capital gains provisions. Dr. Gilb also noted the interrelated impact of various taxes and suggested a major study to fully develop the effect of governmental tax and expenditure policies in shaping the environment.

Considering the interrelationships of various types of taxes on land use and the need for a comprehensive study in that area, this section will review only briefly the general impact of the property tax on land use More attention is given to the problem in which the property tax plays a central role—the shifting of agricultural land into urban uses A summary of the arguments for and against a proposal to tax only land, which was before the interim committee for study, is also included.

B. Impact of Property Tax on Land Use

For the most part, the property tax is not the major factor affecting land use patterns within an area These patterns will develop as a result of a great many economic and social forces, aided and abetted by governmental decisions in the area of public expenditures, planning and zoning.

Tax rates and assessment practices may determine the location of commercial and industrial enterprises in marginal cases. In some cases, the property tax may act as a restraining influence on a decision to add improvements to property or to repair and improve existing buildings A homeowner contemplating the addition of a room to his improvement may feel that this addition will cause a reassessment of his entire property. At our San Francisco hearing, E. Robert Scrofani said:

> ". . . we discovered that very often when homeowners wanted to make repairs that the feeling was a great deal that the best way to have your home reassessed was to take out a building permit, no matter how small. And we feel that neighborhoods of any com-

[1] California Legislature, Assembly Interim Committee on Revenue and Taxation, *Conformity of State Personal Income Tax Laws to Federal Personal Income Tax Laws*, Vol. 4, No 10, California State Printing Office, 1964

munity constitute a very large and important asset, and that capital maintenance and rehabilitation of the buildings in the neighborhood are essential, of course, to the economic health of the community, and when they decline, not only is it a serious loss to the community, but then we have to call in the experts like Mr. Herman to take care of them."[2]

Businessmen face the same dilemma. To put extra money into developing attractive buildings will result in higher property taxes. The businessmen must decide whether the goodwill created by an attractive building is worth the increased tax cost.

Land is assessed in proportion to its value. Value may reflect the contemplation of a use for the site other than its present use. Under these conditions, the property tax will accelerate the changing land use—from lower to higher use—because the changed assessment which reflects the higher use may result in a much higher tax. Where a house is located on land assessed as potential commercial use, the owner must decide whether to pay the higher tax or move to another house where the tax reflects the lower value. A farmer will face the same decision when his farm is assessed in proportion to a value that reflects its residential or commercial potential.

Perhaps the most significant impact of the property tax on land use stems from the desire of local governmental units to expand their tax bases In far too many instances, local communities have granted zoning concessions to industrial or commercial developments or apartment house complexes because of the high assessed value of these improvements compared with the assessed value of existing land uses, irrespective of good planning principles or of the needs of the community or region Property tax considerations influence the decision of communities to expand As an example, many cities and counties in the San Francisco Bay area are anxious to expand into San Francisco Bay to increase their assessed value subject to property taxation. This expansion requires filling portions of the bay despite the adverse effects of filling on economic and open-space resource needs of the Bay Region. Thus the desire for more property tax base can breed bad planning—bad zoning and produce a chaotic land use pattern.

C. *Assessment and Taxation of Property in the Urban-Rural Fringe Area*

During the 1963–65 interim period, the Assembly Committees on Revenue and Taxation and Agriculture held two joint meetings to consider the extent and seriousness of the problem stemming from the assessment of agricultural properties in the urban fringe areas. Testimony on the problem was received from all interested parties—from farm groups and planners to tax administrators and assessors.[3]

The problem is a simple one In the absence of effective planning and zoning controls, farm land in a close-in rural area is purchased by a developer who is interested in relatively cheap land for a subdivision development. Once the urban intrusion is made, other farmers in the

[2] Statement by E Robert Scrofani to the Assembly Committee on Revenue and Taxation, San Francisco, December 16, 1963 (Mr. Herman is executive director of the San Francisco Redevelopment Agency.)

[3] Meetings were held in Fresno on January 30, 1964, and in San Jose on July 2, 1964.

area also sell to developers. They are primarily motivated by the opportunity to make a large profit on the sale which will be taxed at a favorable capital gains rate or the fear that the developing urban uses will be reflected in high assessments and tax rates As a result of urban encroachment, the assessed value of farm land in rural-urban fringe areas must, by law, be increased by local assessors to reflect increased value as potential residential land The new assessment, reflecting potential urban values, and higher tax rates reflecting the urban communities' need for new schools and other governmental services may put the farmer's property tax liability in excess of farm income. Thus, the property tax adds to the pressures that force land out of agriculture long before it is ready for another use

The situation in the prune industry in Santa Clara County is an illustration of property taxes rising to the level of gross income of the land for farm use. The average value of prunes per acre in the valley during the past 10 years has been $468 In the Cupertino area of the county, the average property tax on an acre of prunes amounted to $380. In the Gilroy area of the county, not yet reached by suburbia, the average property tax on an acre of prunes was only $28 50 [4]

Statewide, farm property taxes have increased from $7.1 million dollars in 1949 to $175 5 million in 1962, an increase of 147 percent. During this same period of time, net farm income before taxes declined slightly from $543 million in 1949 to $532 million in 1962.[5]

PROBLEMS IN ASSESSMENT

Accurate assessment of land in transition zones is one of the most difficult problems facing the assessor. Sales of comparable property may be misleading indicators of market value.

According to C. Curtis Harris, agricultural economist at the University of California at Davis:

> "No two parcels of land are alike; even the differences in location distinguish the product, for location is part of the product. There are not many buyers and sellers, and the bargaining of only two participants can set the price. The frequency of sales is low, with many of the buyers and sellers being once-in-a-lifetime participants with lack of knowledge. Under these conditions, extreme prices are not ruled out. Prices can be based on unrealistic expectations of future income and other events There is no averaging or consensus of expectations as in the stock market.
>
> "The land market conditions cause prices to vary widely from sale to sale without any recognizable pattern, making explanations of the variations difficult This is especially true in the rural-urban fringe, as it is borne out in our study of land prices in Sacramento County. In the fringe, the unpredictable effects of the market conditions is compounded by the uncertainty of the rate and direction of urban growth." [6]

[4] Statement by Henry J. Voss, President of the Santa Clara County Farm Bureau, to the Assembly Committees on Agriculture and Revenue and Taxation, San Jose, July 2, 1964

[5] U S Department of Agriculture, *Farm Income, 1949–62, State Estimates*, August 1963

[6] Statement of C Curtis Harris to the Assembly Committees on Revenue and Taxation and Agriculture, Fresno, January 30, 1964

The assumption that the farmer is free to sell his property for urban uses may be erroneous. Where overbuilding and a hasty transfer of land has taken place, the farmer adjacent to such overdeveloped property is not free to sell at any point in time.

Another problem facing the assessor in his attempt to correctly value property in the fringe area is the rate of absorption of rural property in the area. It is almost impossible to determine the exact year the land will be converted. As Professor Harris observed:

> "The year of conversion is a crucial element in determining value Two parcels of land being used for the same agricultural purpose and both having the same expected urban use would have different values if one parcel is expected to convert 5 years from now and the other in 10 years Because of uncertainty, individuals who make estimates of the year of conversion for a particular parcel of land come up with many different answers Thus, we observe a wide variation in prices and appraised values in the rural-urban fringe."

Yet the assessor has the responsibility of finding the value of this property and assessing it in the same proportion to value as all other properties. If he overassesses a farm, he may be driving a farmer out of business, yet if he underassesses this property, he is guilty of violating the law and he is permitting some landowners to pay relatively low taxes on land that can and may shortly be sold for a substantial capital gain.

LOSS OF AGRICULTURAL LANDS

As a result of the expansion of urban areas and the high property taxes on farms in the urban-rural fringes, much of California's best agricultural lands are being lost forever. Dr. J. Herbert Snyder, agricultural economist at the University of California at Davis, described the changing patterns of California's agricultural resources in a recent paper.

> "The total physical land resource of California approximates 100,000,000 acres, but not all of this is used or usable for agriculture. As of 1959, approximately 36,800,000 acres was reported as being 'in farms' but of this only 12,966,000 acres was reported as 'cropland' and 7,396,000 acres was reported as being 'irrigated ' The last two figures are most important to us in our consideration of pressures on land used for agricultural production. They are of importance because of the locational aspects of this land. The land that is highly productive for agricultural purposes tends to be found in the valleys and on the broad alluvial fans that form at the margins of the point where the mountains meet the valleys This is alluvial soil, washed into place by nature over periods of geologic time that place the time orientation of civilized man in the last few seconds of a 24-hour geologic clock. For this reason, we cannot expect nature to replace land resources at a rate bearing any operational relation to the rate at which man seems capable of utilizing this natural resource.
>
> "The Soil Conservation Service has surveyed the total physical land resource of California, and on the basis of land use capability

classification, estimated that some 17,561,000 acres of land may be placed in the first four quality categories of land with the remainder being, largely, land that is not suitable for intensive agricultural production And even of this total, well over half cannot be used without resort to some level of conservation management practices that will permit stabilized long-run use for intensive crop production.

"Please note, however, that I have not said we have 17½ million acres of land available for intensive agricultural use, prior to 1942 nearly 2 million acres of this land had been removed from agriculture. Since 1942, the average rate of withdrawal of land suitable for agricultural use from agriculture has averaged well over 60,000 acres per year and in recent years has been approaching 150,000 acres per year. Projected estimates of withdrawals to the year 1975 indicate, conservatively, that approximately one-fourth of our land suitable for agricultural use will be converted to nonagricultural use And the situation for the so-called 'prime' agricultural land is even more striking · several years ago, for example, I estimated that the City of Los Angeles had 'occupied' approximately 90 percent of the best agricultural land in Los Angeles County "[7]

According to University of California Dean of Agriculture, Daniel J. Aldrich, Jr , only two million acres of California's agricultural lands are class I soils and only five million additional acres are rated as class II soils. These seven million acres produce the greater part of California's three-billion-dollar farm income It is also this seven million acres that is in the most danger from the builders of tract homes, factories, and supermarkets This is because many of California's cities were located in the center of rich farm lands to serve the needs of the surrounding farmers. As these cities have expanded and nonagricultural activities become an important part of a region's economy, the rich farm land has disappeared.[8] Land that is good for growing crops is also good for growing houses. It has the short-run advantage of being cheap and easy to develop.

Santa Clara County is a good example of what has happened in parts of California and what can happen in the future in other areas.

In the past 10 years, approximately 100,000 acres have been withdrawn from agricultural use in Santa Clara County. The value of agricultural production in the county has dropped from over $100 million in 1955 to $72 million in 1962 At present rates of absorption, approximately 30,000 additional acres will be converted to urban uses by 1970[9]

In the long run, the urbanization of prime agricultural lands will be a problem of very serious proportions Assuming the state's population continues to double every 20 years and that cropland continues to be suburbanized at the rate of 200 acres per 1,000 population, Rodney J.

[7] J Herbert Snyder, "The City as Seen From the Farm," paper presented at a conference at Davis on March 13 1963

[8] As reported in Harold Gilliam, "The Vanishing Gold of California," San Francisco *Chronicle* August 9 1964

[9] From the statement of Karl Belser, Planning Director of Santa Clara County, to Assembly Committees on Revenue and Taxation and Agriculture, San Jose, July 2, 1964.

Arkley, University of California Soil Scientist, predicts all of this state's cropland will be lost before the year 2020.[10]

ECONOMIC IMPACT

The continued loss of prime agricultural land represents a net loss of millions of dollars of farm income each year. Considering California's efforts to attract industries to the state, it is ironic that an existing economic asset is being systematically destroyed. Although California's farm income has been increasing in recent years, the increase has been small compared with the increase in population and personal income. Agriculture now generates over three billion in new money which is pumped into the economic bloodstream of the state. This industry also supports a number of related industries representing an income of $8 4 billion.[11]

California's 7,500,000 acres of irrigated cropland produce 42 percent of the nation's fruits and nuts and 43 percent of the nation's vegetables. It should also be pointed out that most of California's crops are not in surplus production. In fact, a number of specialty crops grown in California have markets throughout the world.

TABLE I

Selected Specialty Crops Grown in California

Crop	*Percent of U.S.*	*Rank among California crops by dollar value*	*Value 1960 (in $1,000)*
Almonds	100 0	20	$14,129
Artichokes	100 0	51	--
Avocados	94 7	36	7,360
Dates	98 5	56	2,701
Figs	99 1	46	5,106
Garlic	100 0	52	3,534
Grapes	89 9	3	131,761
Honeydew melons	83.7	43	5,297
Lemons	93 8	19	28,899
Nectarines	99 8	49	4,464
Olives	99 8	31	10,500
Persian melons	100 0	60	1,012
Plums	92 4	30	12,240
Prunes	93 6	10	53,515
Walnuts	97.1	13	37,100

SOURCE: "Some Facts About California Agriculture," University of California Agricultural Extension Service, July 1961.

If the destruction of agricultural land continues, some of these specialty crops may be removed permanently from the American diet as they cannot be grown in the same quantity and quality anywhere else in the world. On the other hand, one might argue that the consumer should be willing to pay a high enough price for these specialty crops so that no subsidy is necessary through reduced assessment. Of particular concern is California's wine industry which brings many dollars into the state and produces fine wines that rank with the best produced anywhere in the world. Grapes from which certain special wines are made can be grown only with very special soil and climatic conditions. When these vineyards are plowed up for tract homes, not only will the

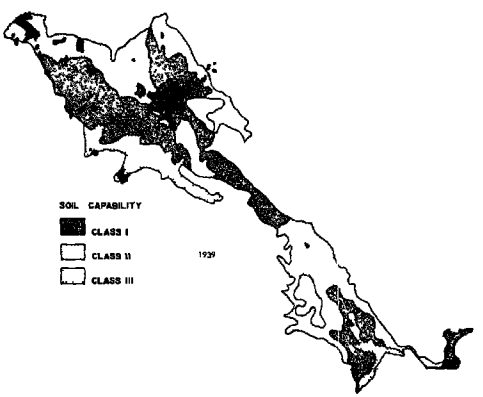
[10] Reported in Harold Gilliam, *op cit*
[11] *Ibid*

California economy suffer, but there will be a permanent loss of several varieties of fine California wines

Another result of the destruction of prime farmland will be, in the long run, the increase in cost of food to the consumer Farming on poorer quality soils is more expensive As food is imported from other areas, costs to the consumer will increase and the quality and variety of foods to which many Californians have become accustomed may not be as readily available.

URBAN SPRAWL

Urban sprawl, the leapfrogging of urban growth in the transitional zone around urban centers, is related to and aggravated by the assessment of agricultural lands to reflect potential urban uses Because of the nature of the farming business, high assessments and taxes will force some farm operators out much faster than others Those who remain find that, as their neighbors are forced to sell for urban developments, their assessments and taxes climb even higher The result, a classic example of urban sprawl California's Santa Clara County is a prime example of this phenomenon The maps below illustrate how prime farmland has been covered by haphazard urban developments



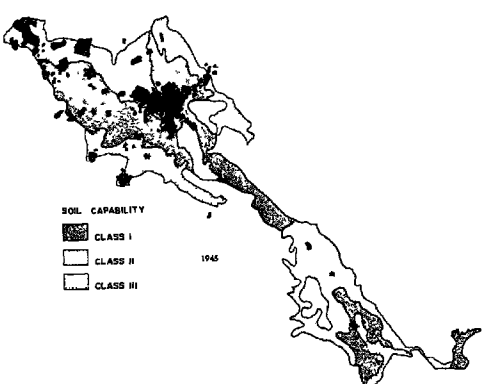
A GARDEN OF EDEN

For many years, the Santa Clara Valley has been one of the unique places on the face of the earth because of its mild climate, long growing season, rich deep alluvial soil, water, and nearby markets All these worked together to create a combination of circumstances almost ideal for intensive irrigated production of pears, apricots, prunes, cherries, strawberries, vegetables, and other specialty crops Over a century ago towns began to take shape on the valley floor. These communities became important agricultural service areas serving the farms around them For almost a hundred years, ending with World War II, this essential balance remained stable and dependable In some respects the growth of these towns was extensive, but city-farm relationships remained in proper balance and no serious maladjustments took place During this 100-year period, crop yields became steadily larger, and finally most of the best class I and II soils on the valley floor were farmed intensively

Urban sprawl is expensive to all concerned—to the taxpayers of the area due to the increased costs of providing general services to the pockets of urban development, to the homeowner in the new urban development who will face special assessments to bring special services such as sewers into the area, and to the farmer due to the restrictions which must be placed on his operations in semiurban areas

The costs of urban sprawl to the community are succinctly stated in a brochure published by the Santa Clara County Planning Department entitled "Land Use Issues in Santa Clara County."

> "The physical results of sprawl can be seen by even a cursory examination of the land use map. In some fringe areas, farm lands predominate but residential subdivisions may be scattered at random within the rural setting. In other areas, residences predominate, with bypassed farm lands apparently struggling for existence in their midst. The impression derived from this view of the map is that of a jumble of uncoordinated parts which may take years to jell into comprehensive, stable and efficient units
>
> "Aside from this chaotic appearance, sprawl has its costs—some apparent—others hidden. Some can be measured in monetary terms, others are social and can be calculated only in terms of inconveniences and lack of amenities. Listed here are just a few of the costs which sprawl exacts from county residents every day.



ENTER THE APPLE OF DISCORD

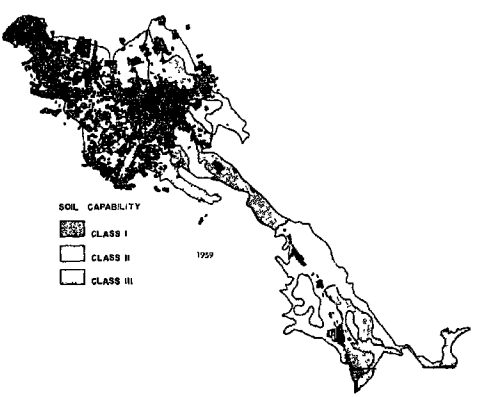
The urban centers grew slowly and conservatively During the first 75 years of this 100-year period the towns remained small, largely because the horse and buggy was the fastest means of transport available, and travel over long distances from home to work would have taken too much time However, the advent of the automobile as a popular means of mass transportation in the 1920's made it possible for urban areas to extend their tentacles out onto the rich fertile land. Nevertheless, even as late as 1945, the cities and towns in Santa Clara County were still well concentrated within reasonable size limits.

—There are the costs of money, time, and aggravation caused by long distance commuting between bedroom communities and places of work. If past development trends persist, these trips will become longer. Are these costs of significance to the commuter?

—There are the financial costs of providing a widespread highway network to accommodate these commuters. A more close knit urban pattern might allow other means of transportation to be fostered.

—There are the costs of extending utilities far beyond the existing urban areas through agricultural lands How long will it be before the extensions are used fully by the areas they pass through? If the growth of these intervening areas slackens, how will the debts be paid?

—There are the costs of duplicated facilities and services resulting from interjurisdictional competition. There are even situations where the separate sewer lines of two jurisdictions parallel each other in the same roadbed. How much does this add to the community's utility bill?



UNDESIRABLE RESULTS

Since the war the growing pains associated with urban sprawl have become one of the major problems of the county "Go West, Young Man" has truly become a reality In 1949 there were approximately 280,000 people residing in Santa Clara County In a single decade the population increased to about 600,000, or 32,000 people a year In the same 10-year period cropland decreased from 247,000 to 187,000 acres, or a total of 60,000 acres. In fact, since World War II more agricultural land has been withdrawn for urban use in the valley than in all the previous time of development.

—There are the immeasurable social costs resulting from incomplete communities. It is assumed by both the cities and the home owners involved that once a new neighborhood is started, it will be completed within a reasonable period. Presumably each neighborhood would have a full complement of urban facilities and services at that time. What happens if development is arrested before such neighborhoods have matured? What kind of urban living can be achieved by the residents of half-completed neighborhoods?

—Associated with the previous point, there are costs to local government from trying to disperse its limited financial resources among many competing semicompleted neighborhoods If so many new neighborhoods are started that the demand for housing is dissipated, the prospect of each neighborhood receiving all the necessary public facilities is diminished.

—There are costs resulting from poor interim locations of certain facilities serving a dispersed population. The spreading and scattering of new developments dictates that some facilities must serve unusually large areas. When an area finally becomes fully urbanized, will these facilities be in their proper locations to adequately serve the area for the years to come?

—There are the costs to the older areas of our communities which already are fully developed but may need maintenance or additional facilities to conserve their utility and amenity, and to prevent blight and expansive redevelopment. How can these needs be accommodated if funds are diverted to aiding many newer areas?" [12]

Aside from tax increases, sprawl is costly to the farmer in a number of other ways. As the urban density of the transitional area increases, the farmer will find that normal farm practices—such as spraying with pesticides—will have to be abandoned in favor of more costly methods of cultivation. The farmer will also see costs increase as a result of population density problems such as vandalism, dog attacks, theft, transportation of equipment, etc.

Urban sprawl also involves the loss of an open-space resource. As William H. Whyte observed:

"It takes remarkably little blight to color a whole area; let the reader travel along a stretch of road he is fond of, and he will notice how a small portion of open land has given amenity to the area But it takes only a few badly designed developments or billboards or hotdog stands to ruin it, and though only a little bit of the land is used, the place will look filled up.

"Sprawl is bad aesthetics; it is bad economics. Five acres are being made to do the work of one, and do it very poorly. This is bad for the farmers, it is bad for communities, it is bad for industry, it is bad for utilities, it is bad for the railroads, it is bad for the recreation groups, it is bad even for the developers." [13]

[12] Santa Clara County Planning Department, *Land Use Issues in Santa Clara County*, December 1963, p 6

[13] William H Whyte, Jr, "Urban Sprawl," *The Exploding Metropolis*, Doubleday & Co, Garden City, N Y, 1958, pp. 116–117.

The problem of urban sprawl as it relates to open space resources and urban planning has been extensively studied and much has been written on the subject Time nor space do not permit an extensive review of all this material in this report.[14]

Frederick Stocker also cites a corollary problem stemming directly from the high assessments and taxes which force a farmer to sell his land before it is ready for urban development.

> "Many years may elapse between the time when land becomes too valuable and too heavily taxed for the farmer to hold, and the time when, in the hands of an investor, it reaches its optimum for development I refer to the so-called ripening process, about which we know relatively little except that it exists.
>
> "Of course, it is not inevitable that farming cease during this period. While awaiting the opportune moment for development, the owner may lease the land to a farmer, perhaps even the former owner, and perhaps at a rent that will cover the taxes But such an arrangement is not always feasible To the nonfarm investor whose eye is on the big prize, the modest rental income may not warrant the bother of seeking a tenant In a semiurban environment, farm operators willing and able to enlarge their operations by renting more land are not always easy to find The insecurity of tenure on land held for future development also may scare away potential tenants
>
> "The more common result is that land is left idle, once it comes into the hands of an owner who regards it as a source of capital gain instead of farm income Farm buildings abandoned to deteriorate become an eyesore; fields, abandoned and eroding, produce mud and silt for streams, brush to blight the landscape, and weeds to plague all hayfever suffers.
>
> "Sometimes, instead of idle land, ad valorem taxation fosters premature development of land in uses that are inconsistent with the optimum development of the entire area. Where this occurs, both the individual property owner and the community at large suffer. A farmer who finds his land assessed at a value commensurate with its worth as building lots may be impelled to subdivide a portion of his property and try to sell a few lots. His hope, perhaps, is to receive enough to pay his taxes, make ends meet, and enable him to hold on a little longer. Often he succeeds only in running the value of his property for later development, and leaves the community a legacy of scattered homes and strings of developed properties along roads." [15]

[14] Karl H Baruth, *The Northern California Metropolis* (Palo Alto, California), distributed by the National Press, 1960, 24 pp maps, California, Department of Natural Resources, Land Use and Metropolitan Sprawl, by DeWitt Nelson, address to Western Resources Conference, Colorado State University, Fort Collins, Colorado, August 7–11, 1961, 23 p , California, Legislature Senate, Senate Resolution No 35 April 1963, 6 pp (In *Senate Journal* April 5, 1963, 1st Ex Sess, pp 241–246) California Tomorrow, *California Going, Going* our states struggle to remain beautiful and productive by Samuel E Wood and Alfred E Heller (Sacramento), 1962 63 pp , California Tomorrow *The Phantom Cities of California* by Samuel E Wood and Alfred E Heller (Sacramento), 1963, 66 pp , Humphrey Carver, *Cities in the Suburbs* University of Toronto, 1962, 150 pp , F Stuart Chapin, Jr., "Taking Stock of Techniques for Shaping Urban Growth Based on Address," *American Institute of Planners, Journal* 29 76–87 May 1963 Winston W Crouch "Challenges of Urbanism in California" *BGR Observer*, June 1962 pp 1–4, Burton Danziger, "Control of Urban Sprawl or Securing Open Space Regulation by Condemnation or by Ordinance?" *California Law Review*, 50: 483–499, August 1962.

[15] Frederick Stocker, *op. cit.*, p. 467.

However, the preferential assessment of agricultural land without other controlling provisions would do little to solve the problem of urban sprawl. This would make it easier for land owners to maintain agricultural operations in a transitional area. Those who wished to sell could still do so and the result would be the same haphazard development as before—except that the sprawl may stretch farther out from the urban core because land owners in the near transitional areas could maintain this operation for a longer period of time as their taxes would continue to be predicated on the rural use of the land.

If preferential assessment is limited to prime agricultural lands and is accomplished by an agreement by all landowners in the area to keep this land in agricultural use for a period of time, sprawl may be better controlled and rich agricultural lands better preserved Changes in assessment practices alone will not solve problems created by urban sprawl.

EQUITY

In discussions of the problems stemming from the assessment of agricultural land in the urban-rural fringe area, the question of equity is important. Equity implies fairness; fairness to the farmer and fairness to the other taxpayers.

It first must be recognized that the farmer has done nothing to create this problem—it is thrust on him from the outside. It hardly seems fair under these conditions to increase the taxes on his land to the point that he must sell if he wishes to continue to farm and if it is the public interest for him to do so. Further, if he is forced to move, it involves not only moving a business, but moving a home—disrupting social ties which may have developed over generations.

From the standpoint of equity, the taxation of agricultural land as a potential site for tract homes cannot be justified under the benefits received principle of taxation. The property tax is an imperfect tax based on the value of the property held, notwithstanding income of the owner or the benefits received from public services. It is, in a sense, a tax on the ownership of wealth.

As a tax on a limited resource, land, the property tax has general social value as a brake on land price inflation. Without a tax on land, it is quite likely that less property would be available for sale in the market place—reducing supply. The demand for land would increase under these conditions as land would be a more desirable investment. The reduction of supply and the increase in demand would result in serious inflation in the price of land.

However, the wealth represented by prime agricultural land is unique. Preferential assessment of this wealth can be justified if some public purpose is served by such a course of action, such as the preservation of this land in agricultural use for a period of time. However, if no public purpose is served, preferential assessment of one type of wealth *vis-à-vis* another would be inequitable.

On the question of fairness, Stocker further observes:

> "From the viewpoint of tax equity, preferential tax assessment contains one glaring weakness. It confers a unilateral benefit on the owner of agricultural property, while requiring nothing of him.

"In return for this favored tax treatment, he makes no pledge as to the continued agricultural use of his land. He gives his neighbors no guarantee that the open spaces they think they are preserving will actually be preserved any longer than it is in his own interest to do so. He is not even under any compulsion, if he does develop his land or sell it for development, to see that the development pattern conforms to any overall community plan. What is more, he is free, when he finally does sell his farmland to a developer, to pocket his entire gain (subject only to the capital gains tax). In short, he owes the community nothing.

"To me, it seems only equitable to require a quid pro quo. In exchange for preferential assessment, the owner of farmland ought to be required to repay the community the abated taxes, perhaps with interest, at the time he sells his land Such an arrangement would resemble the tax-deferral proposal considered by the 1961 Legislatures of Nevada and Hawaii and put on the ballot . . . by the California Legislature in 1962 In addition, I believe the interest of the community at large requires as a condition for preferential assessment or tax deferral that the owner accept some limitations on the future use of his land Preferred-tax treatment could be limited to land earmarked or zoned exclusively for agricultural use, as was specified under the 1957 California law. More thorough going would be a requirement that the owner divest himself of his development rights, placing them in trust for public use. In this case, the market value of the property rights he retains would approximate the agricultural value of the land and could be taxed accordingly." [16]

THE VIEW OF THE TAX ADMINISTRATORS

In general terms, tax administrators oppose further deterioration of the ad valorem property tax base. They also oppose granting a tax privilege to one group of taxpayers at the expense of all other taxpayers.

Richard Nevins, member of the State Board of Equalization, has stated that preferential agricultural assessment:

"would create a privileged class of taxpayers. Their land would be taxed differently from other residents of the same area whose land is not in agricultural production Of course there would be no decrease in the general taxes, for we still must send our children to school and provide the civilized protection that our cities and counties need This means that the same taxes would have to be paid, but the privileged taxpayer would be shifting his tax burden onto the shoulders of others. While it would decrease taxes for a few landholders, it would increase taxes for other property owners . . . for home owners, industrial land owners and other farmers." [17]

[16] Frederick D Stocker, "How Should We Tax Farmland in the Rural-Urban Fringe?" *1961 Proceedings of the National Tax Association*, Harrisburg, Pennsylvania, p 469

[17] Statement of Hon Richard Nevins to the Junior Chamber of Commerce, Long Beach, August 11, 1962.

Preferential assessment of agricultural lands, with a recapture provision of some sort, carries the implication that assessors will have to keep two sets of books. Tax officials see such a program as an administrative nightmare. Additional costs to keep such books, including additional appraisal and clerical help, would not return any additional revenues to local government.

Another fear of tax administrators is that special treatment for agricultural lands in urban fringe areas will invite a horde of owners of other classes of property to claim they deserve special property tax treatment too. The homeowner in a commercial area or the private airport owner in an area ringed with factories may feel that he is entitled to a preferential assessment of his land on the basis of actual use. Timber owners have similar problems. Perhaps most disturbing to tax administrators in the attack which preferential assessment represents on the basic valuation policy which has been established over the years. Value of property will depend on what use it represents. When there is a conflict in usages and the likelihood of a change in use, the value of the property will reflect the higher potential use.

However, the highest use economically for all property is not necessarily the best use of this property for society as a whole. In discussing this point, Stocker says:

> "I think it is necessary, however, to question whether the most profitable use of land is likely to be the most desirable from the viewpoint of society at large. In an earlier day it was perhaps possible to believe, with Adam Smith, that each owner, by seeking the most profitable use of his land, would automatically benefit his neighbors Today, such a belief is patently naive Public support for land use plans and the very existence of such controls as zoning offer proof that in this day and age society will no longer permit the property owner to use his land most profitably unless such use is consistent with the overall welfare of the community So we must avoid the easy assumption that the most profitable use of land is the most desirable, and that the ad valorem tax or any other measure that encourages the most profitable use of economic resources is automatically good." [18]

THE ROAD AHEAD

A variety of proposals have been put forth as possible solutions to the problems stemming from assessments and taxation reflecting potential urban usage of agricultural lands in the urban-rural fringe area Some suggestions, such as subsidies to farmers, types of zoning plans, or government acquisition of the development rights in or title to the land, do not involve direct changes in structure of the property tax. Other suggestions, which generally involve some form of preferential assessment, imply a major change in existing tax policy

Santa Clara County Planning Director Karl Belser has suggested that the state "begin to acquire the fee title or an easement on the development rights and begin the creation of a permanent agricultural land reserve." Belser further commented: [19]

[18] Frederick Stocker, *op cit*, p 466
[19] Statement of Karl Belser to Assembly Committees on Revenue and Taxation and Agriculture, San Jose, July 2, 1964.

"Now these are strong and, to some, fighting words, but they are not unlike those heard on various other conservation fronts. We have all advocated the conservation principles as epitomized in national forests, national parks, and other national efforts along these lines—yet the one indispensable resource, our finest land for growing agricultural products, seems to have no defenders and, consequently, is falling prey to the exploiters. Even the farmer is not really concerned with land protection, except insofar as it enhances the economic viability of his operation, which is completely understandable when considered in the context of the value system under which our economic system operates.

"But just as we do not allow the lumberman to make policy on proper use of the national forest, or the cattle and sheep ranchers to make policy on the proper use of government range and watershed land, so we cannot look to the farmer to save the good land for all the people Individual operations having relatively short-term significance have to be disciplined so as to produce long-range continuing benefits to all."

In other states, various solutions to this problem have been devised. The general approach taken has been through some form of preferential assessment.

In New Jersey, following a State Supreme Court decision that a statutory preferential assessment was invalid, voters approved a constitutional amendment in 1963 requiring the assessment of land actively devoted to agriculture or horticulture at its agricultural or horticultural value alone. Under this plan, when the land is taken out of such use, taxes which would have been paid in the two preceding years in the absence of an agricultural assessment requirement must be paid.[20]

Maryland's problems have been similar to those in New Jersey. In 1956 the State Legislature enacted a measure requiring the assessment of agricultural lands on the basis of use. This was overturned by the Maryland Court of Appeals in 1960. As a result, a constitutional amendment, giving the Legislature the power to provide for the assessment of agricultural land solely on the basis of use, was passed by the voters, and a new preferential assessment was subsequently passed by the Legislature. According to Stocker, the definition of agricultural use and the measurement of agricultural value are the problem areas which have caused the most trouble. In 1963, Maryland created a special legislative committee to reexamine the preferential assessment problem.

Since 1959, Florida has required by statute that land which is zoned and used for agricultural purposes shall be assessed on the basis of such use This law was recently sustained by the State Supreme Court.[21] The Florida law defines agricultural purposes as "bona fide farming, pasture or grove operations" and excludes shed nurseries. In addition only land which was in agricultural use prior to the effective date of the law is eligible for protection.[22]

[20] Frederick D Stocker, "Taxing Farmland in the Urban Fringe," *Tax Policy*, December 1963, p 3

[21] *Tyson v Lanier*, June 5, 1963, reported in Stocker, *op cit*, p 3.

[22] William H Geyer and Peter Hanover, *Preserving Agricultural Land in Areas of Urban Growth: A Look at the Record*, California Legislature Assembly, mimeo, May 20, 1964, p. 4.

A preferential assessment law was passed by the Connecticut Legislature in June 1963. Under the terms of this measure, assessors are permitted to value land classified as farmland, forest land or open space land "on its current use without regard to neighborhood land use of a more intensive nature."[23]

Three of California's neighboring states—Nevada, Oregon and Hawaii—have also adopted special methods for the assessment and taxation of agricultural lands Nevada's preferential assessment law, passed in 1961, and recently declared unconstitutional was similar to those in other states, except that it had an additional provision requiring the payment of five years' back taxes (computed on the basis of the difference between the preferential assessment and an assessment under normal assessment practices) when the property was sold or changed use[24]

Oregon has adopted a two-phased plan for the special assessment of agricultural lands In 1963, the Oregon Legislature amended an earlier preferential assessment statute to provide for:

1 Automatic preferential assessment of farms at agricultural use in designated farm use zones, and

2 Special assessment of farms outside of such zones, on the application of the owner, with the provision that when the property fails to qualify, the owner will pay taxes representing the difference between the preferential assessment and the assessment that would have otherwise been made for the five years preceding.

Land in farm use zones, which are designated by the proper planning authorities, can only be used for farms, schools, churches, golf courses, parks and necessary public utilities, and no other purpose. In the first year of operation of the law, only two Oregon counties—Washington and Polk—established farm use zones. All told, approximately $2,400,000 of assessed value was removed from the tax rolls[25]

Hawaii has adopted a statewide zoning law which provides that all lands in the state be classified into four groupings—urban, rural, agricultural, and conservation; Hawaii's four counties have supplementary zoning power in the first three categories, but uses in conservation areas are under state control. Assessments within the zones are based on the value for the zoned use only.

Still another approach to the problem of urban expansion, the acquisition by the government of conservation easements, is advocated by many. In an article by William H. Whyte (see: Whyte, William H., *Securing Open Space for Urban America: Conservation Easements*, Washington, D.C., 1959: Urban Land Institute), it is suggested that the agricultural zoning and tax laws now in effect in California and other states are both inadequate and unfair. They are inadequate because there is no way of insuring the continuation of the agricultural

use of the land, any farmer being free to take his property out of the agricultural zone with a minimum of difficulty. Furthermore, the zoning does not insure low valuations of the farming land Many tax experts feel that measures such as preferential assessment do not meet the existing problem head on and are only of a temporary value Such laws are felt by Whyte to be unfair from two standpoints· Since the securing of open spaces is a benefit to the public, then the powers of eminent domain, rather than the zoning powers, should be exercised, and the farmers should be compensated for the potential loss in market value of their land This would be accomplished by having the government purchase the development rights to a piece of the farmer's property The present law is also unfair to the public, since it allows the farmer to have lower taxes while he continues to farm, and yet permits him to reap the benefits of urban expansion by selling his property at subdivision prices after he has taken it out of the agricultural zone.

California, among a few other states, presently has legislation enabling the state to acquire rights in land for the purposes expounded by Whyte. Section 6950 of the *Government Code* reads as follows:

> "It is the intent of the Legislature in enacting this chapter to provide a means whereby any county or city may acquire by purchase, gift, grant, bequest, devise, lease or otherwise, and through the expenditure of public funds, the fee or any lesser interest or right in real property in order to preserve, through limitation of their future use, open spaces and areas for public use and enjoyment."

It is important to note that these easements must be secured by negotiation, and no provisions have been made for the use of the power of eminent domain. Without eminent domain, the acquiring of scenic easements uniformly over a broad area is very difficult [26] The approach taken by California in attempting to deal with the urban-rural fringe problem has been through a combination of zoning and assessments based on such zoning. To date, California has relied on a combination of exclusive agricultural zoning and special assessments based on such zoning in dealing with urban-rural fringe area assessment problems. Section 402.5 of the Revenue and Taxation Code, enacted in 1957, provides that:

> "In assessing property which is zoned and used exclusively for agricultural, airport or recreational purposes, and as to which there is no reasonable probability of the removal or modification of the zoning restriction within the near future, the assessor shall consider no factors other than those relative to such use."

This statute has not been as effective in dealing with the urban-rural fringe problems as the proponents had originally hoped [27] The major weakness is that under this statute there is no assurance that lands

[26] Donald A. Cotton, "Open Space, Its Value and Conservation in the Urban Environment," *Southern California Law Review*, 37 304–331

[27] See comments of William Staiger, representing the Agricultural Council of California, to the Assembly Committees on Agriculture and Revenue and Taxation, Fresno, January 30, 1964.

will be held in agricultural use for any given period of time. Land can be rezoned at the whim of the local board of supervisors, or land can be annexed to cities, thus breaking up the agricultural zone The Attorney General and Legislative Counsel have both ruled that the statute is only a restatement of existing law [28] Such being the case, the assessor must assess the land on the basis of value as the Constitution requires; and if he feels the zoning may not be permanent and the value of the property still reflects potential urban use, he must assess it at this value. Adoption of exclusive agricultural zones has not been widespread, in fact, only 20 to 25 counties have adopted them, and few ordinances contain any restraints on rezoning.[29]

In addition, there is no definition of the type, size or location of lands which can be included in an agricultural zone. Spotty agricultural zoning and agricultural zoning on land admittedly purchased for future subdivision development, as occurred in Sacramento County in 1964,[30] further discredits Section 402.5 as an effective tool for use in preserving prime agricultural land.

To remedy the weaknesses of Section 402.5, a constitutional amendment was placed before the voters at the 1962 general election. This proposed amendment, Proposition 4 on the ballot, provided on a local-option basis that, upon application of the property owner, land used exclusively for agricultural purposes for the two preceding years must be assessed on the basis of agricultural use. If the land changes use or upon application for a regular nonagricultural use assessment, the owner was to be responsible for back taxes and interest equal to the difference between the agricultural assessment and standard assessment for the preceding seven years.

Although the measure carried 37 counties, it was defeated by vote of 2,147,761 yes to 2,384,064 no. Critics of the measure directed their fire at several points:

—The measure did not insure that prime agricultural land would in fact remain in agricultural use for any given period of time.

—The lack of definition of "agricultural purposes" made the measure vague and possibly extended its scope to canneries, grain warehouses and other similar types of agricultural activity.

---

[28] See 30 Ops. Cal Atty Gen 246 (1957). Calif. Legislative Counsel Opinion No. 956, dated September 11, 1963

[29] Statement of Don Collin, research director, California Farm Bureau Federation, to 1964 conference of State Association of County Assessors, Sacramento, September 28, 1964.

[30] A 5,260-acre ranch south of Sacramento was purchased for $750 an acre ($4,000,000) in 1961 with the express purpose of developing it for urban uses On February 26, 1964, this property was zoned for exclusive agricultural use by the county board of supervisors over the objections of the county planning commission County Assessor Richard Blechschmidt appraised it at $475 per acre in 1964 based upon the owners' admitted plan to develop the site in seven to eight years The owner successfully argued before the county board of equalization (board of supervisors) that the long-term exclusive agricultural zoning, and other factors precluding its immediate use, warranted lower values A motion to uphold the assessor died for lack of a second, and the appraisal was subsequently reduced to $350 per acre This appraisal is lower than that of surrounding farms held and used exclusively for agricultural purposes Only four of the five supervisors were present, and two of these were lame ducks (See Sacramento *Bee*, July 29, 1964, for further details)

—All farms in a county—those on marginal land, in areas of high urban density, and those operated as a hobby and not for profit—would be eligible for reduced taxes.

—Orderly urban expansion would be aggravated by allowing all agricultural property to be assessed at its use.

—Allowing county options breaks a precedent of having uniform property tax administration in the state and would disrupt school aid formulas and tax jurisdictions crossing county lines.

—Because of the preferential treatment and the ability to sell for urban development at any point in time, agricultural land would become a better area for speculation and the price of good farm land would increase.

—The amendment would lead to pressures to assess all lands on the basis of use rather than on the basis of value.

In view of the rejection of Proposition 4 in 1962, the experiences in other states and the continuing problems in the urban-rural fringe area, it would appear that a solution to the problem is to be found by the use of some form of preferential assessment—conditioned on the continued use of agricultural land for agricultural purposes. In order to meet the objections raised to the passage of Proposition 4, a critical element of any plan is the guarantee that land will remain in agricultural use.

Speaking before the Assembly Committees on Revenue and Taxation and Agriculture on this point, Henry J. Voss, president of the Santa Clara County Farm Bureau, stated:

> "If the problem that faces us is to make it possible for an individual farmer to stay in agriculture as long as he chooses by giving him some tax relief today, only to allow this same prime land to be lost forever a few years later when he chooses not to remain in agriculture, I must say that I am opposed to this solution.
>
> "On the other hand, if a method of compensation combined with zoning can insure that this land will not be lost from its productive capacity, and that the general public realizes and favors this set aside in the public interest, we may yet be able to preserve the 'green gold' of California's vast agricultural industry which enables us to have the highest standard of living of any people at any time and in any place."[31]

The fiscal impact of preferential assessment on local governmental units may amount to upwards of $40 million revenue loss, according to estimates furnished the Assembly Revenue and Taxation Committee by county assessors. The committee asked the assessors for their best judgments as to the loss in assessed value if legislation such as Proposition 4 on the 1962 general election ballot were to pass. The county by county response is as follows:

[31] Statement of Henry J. Voss to the Assembly Committees on Agriculture and Revenue and Taxation, San Jose, July 2, 1964

ESTIMATED GRAND TOTAL $498,710,026

(Including faulty estimates from Los Angeles and Orange Counties)

* This estimate appears to be high According to the U S Bureau of the Census, acreage and farms represents 1 5% of Los Angeles County's $11,283,000,000 locally assessed roll and 6 2% of Orange County's $1,740,000,000 locally assessed roll Thus the total farm assessed value in Los Angeles County would be only $169,000,000 and in Orange County would be only $105,000,000. The loss of assessed valuation in these two counties if Proposition 4 had passed would be substantially less than the assessed value figures shown above

SOURCE Computed from information supplied to the Assembly Committee on Revenue and Taxation by the county assessors of California

Considering the faulty figures supplied by Los Angeles and Orange Counties and that the total property tax revenue from farms in this state amounts to less than $170 million (see section on property tax incidence), the assessors' estimates appear to be on the high side. It should also be kept in mind that Proposition 4 was all encompassing in its scope, and the revenue loss as a result of a more restricted preferential assessment proposal would be substantially less.

In setting up a preferential assessment system, some determination would have to be made as to which property would be eligible to participate What is an agricultural use? What types of lands should be preserved for agricultural use? What should be the minimum size farm eligible for such tax abatement? One of the weaknesses of Proposition 4 was its lack of a definition for "agricultural use." These problems, however, are technical rather than fundamental, and can be resolved.

Provisions must also be made for the orderly expansion of urban centers. To tie up all land presently in agricultural use around an urban center may, in the long run, have a deleterious effect on the

economic growth of California. It should be noted that even a limited program or plan which reduces the amount of land for sale in the market place will have the temporary effect of increasing the price of land unless steps are taken to increase the amount of nonagricultural land for sale. A special assessment on unimproved lands in cities or metropolitan areas is one approach which could be considered to restore the balance.

Property eligible for preferential assessment should be determined by local governmental bodies—such as the county planning commission and county boards of supervisors—and the state. A new zoning classification—perhaps designated as a preserve—could be established. Farms in these preserves would then be eligible for a preferential assessment. In considering the establishment of these zones, present urban density and soil capability should be used to determine eligibility. Such a program should be limited to bona fide agricultural soils, based on soil classification maps developed by accepted sources, and closely adjacent land needs to logically complete a unified preserve area By limiting the preferential assessment to farms in the preserves, orderly urban expansion can take place in the areas not included in the preserves Land not in the above categories used in the production of such specialty items as wine grapes might also be included

In return for a preferential assessment, the owner of agricultural land must give some assurance to the public that the land will be kept in an agricultural use A contractual arrangement between the farmer and the county and state may be the best solution Under the terms of the contract, the landowner would agree to keep the land in agricultural use for a certain number of years, 10 for example, in return for a preferential assessment. The owners could be required to renew the contract every year, in effect, always being a party to a contract having 10 years to run. Farmers who did not wish to participate in the program would not enter into the contract, and their lands would continue to be assessed at a value representing highest and best use

In short, a plan for the preferential assessment of agricultural lands might include provisions:

1. To limit the applicability to bona fide farms in certain agriculture preserves designated by county and state officials under recognized guidelines.

2. To require a "quid pro quo" from the landowner in the form of a contract, renewable each year, to keep the land in agricultural use for a period of x years.

If it becomes apparent, under these conditions, that the state is still losing too much valuable agricultural land, the state could then step in and acquire development rights to the land.

Under these conditions, a "preferential assessment" plan will avoid the weakness inherent in Proposition 4 and the integrity of the property tax can be maintained.

It should be noted in conclusion that these ends might also be accomplished outside the tax structure In lieu of a preferential assessment, the farmer could continue to pay his property taxes based on current

assessment practices, and through a contractual arrangement designed to meet the above criteria, be reimbursed by the state for the difference in taxes actually paid and taxes that would have been paid under preferential assessment. This approach is being thoroughly explored by the Assembly Committee on Agriculture.

D. Taxation of Airports

Privately owned airports in California are subject to the same ad valorem taxes as other property. With the increase in population, cities have expanded outward from their central core into the open spaces which formerly surrounded airports. This urban expansion has put great pressure on airport owners due to increased assessments on this land With "highest and best use" assessments reflecting the surrounding homesites, the operator finds he cannot earn enough from his airport facility to meet the new tax levies. Airports, by federal safety regulations, must maintain certain free areas alongside and beyond their paved runways, and as part of their operation they must have gasoline storage and shop areas protected from nearby buildings For these reasons large expanses of land are necessary for the safe, efficient, and continued use of airports If residential assessments are placed on hangar and runway land, the airport cannot remain in business Several solutions for this problem have been suggested, including a varia-

tion of the proposal for agricultural land assessment.[32] If private airports are to remain in existence, some new formula for assessing their property must be found.

If all existing airports were to be completely exempted from the property tax, the county assessors have estimated that approximately $8.5 million in assessed value would be removed from the tax rolls.

E. Land Value Taxation

Some property tax reformers advocate a fundamental change in the concept of the property tax by imposing the tax on land value only. This untaxing of personal property and improvements is referred to by some supporters as the "incentive taxation plan." They claim that this proposal would attract industry and trade, encourage home ownership, check the speculation in land and tax the profit out of slums.

Early active champions of land value taxation were Henry George and the "single taxers." They argued that a single tax on land value, in addition to checking the holding of unimproved land for speculative purposes, would provide enough revenue for all government services. The debate on this proposal or related ones such as the "incentive tax plan" has occupied Californians for many years. The "single tax" was put to a vote of the people of California four times in the period 1916 through 1922. Each time it was defeated overwhelmingly.[33] In 1938, the measure reappeared on the ballot along with the "ham and eggs" proposal. At this election the single tax was rejected by the voters by the lopsided margin of 17 percent for, 83 percent against.

There have been very few major experiments with land value taxation in the United States. The City of Pittsburgh, Pennsylvania, in 1913 adopted a graded tax plan providing for a changeover of property taxes from improvements to land values over a 12-year period. In Pittsburgh, land is now taxed at twice the rate of improvements. In commenting on the Pittsburgh experiment, the research director of the Urban Land Institute said:

> "In the City of Pittsburgh, wherein heavier land taxation has been in effect for nearly three decades, there is little evidence to suggest that slums have been discouraged by this tax; however, the capitalization effect, and the fact that the tax is only partially shifted toward land, make the proof of any contention difficult, if not inconclusive.[34]"

Land value taxation is common in other countries, particularly Australia and New Zealand. In Australia, almost two-thirds of the municipalities, representing 92 percent of the municipal area of the commonwealth, are making use of site taxation.[35] In other emerging countries of the world, land value taxation is often used as a device to break up large landholdings.

---

1918 yes 118,088, no 360,334.
1920 yes 196,649 no 543,503
1922 yes 124,401, no 515,590.

[34] Jerome P. Picard, *Changing Urban Land Uses as Affected by Taxation*, 1962, Urban Land Institute, Washington, D.C., 1962, p. 31

[35] Mabel Walker, "Land Use and Local Finance," *Tax Policy*, July–September 1962, p. 21.

In 1961, Assemblyman Vernon Kilpatrick introduced a constitutional amendment which provided for a shift of the property tax to land values on a county and city option basis This measure, ACA 43, was referred for interim study. As a part of ensuing study, Griffenhagen-Kroeger, Inc. was commissioned by the Committee on Revenue and Taxation to analyze the effect of the proposal on various kinds of property. Fresno County was selected as a representative area where the effects of the proposal could be studied.

The Griffenhagen-Kroeger study concluded that a land value tax would shift the property tax from homeowners and most businesses to farms.

TABLE IV

Tax Shift Caused by Tax on Land Only: Fresno County

Class	*Number by sample*	*Total tax increased*	*Total tax decreased*
Private residence	161	9 9%	89 5%
Multiple residential	9	4 4	55 6
Commercial	42	31 0	69 0
Industrial	19	5 3	94 7
Farms with trees/vines	54	92 6	7 4
Farm without trees/vines	58	75.9	24 1
Miscellaneous			
Secured	36	72 7	27 8
Unsecured	18	0 0	100 0

SOURCE Griffenhagen-Kroeger, *The Effects of Tax Exemption for Improvements and/or Personality*, November 1962, p 43

The findings of the Griffenhagen-Kroeger study do not consider the further changes in the incidence of the property tax which would accompany a shift to land value only. If, as is widely assumed, the tax on improvements on business and commercial property can be shifted in whole or in part, while the tax on land cannot be shifted but is capitalized, the net result would be an even greater tax impact on business and industry than the above figures indicate.

It should be pointed out that the property taxes on private residences are not reduced to any significant extent for most parcels in the sample. For the average homeowner in the sample, the plan would represent a 10.9 percent tax decrease. However, as illustrated in Table V, homeowners paying more than $450 in property taxes would get a 12.6 percent reduction under the plan, while those paying less than $100 in property tax would only get a 7 7 percent reduction.

TABLE V

Effect of Land Value Tax on Residential Property in Fresno County

Class of property	*Number in sample*	*Present average property tax*	*Ave. tax of property tax shifted to land value*	*Reduction in tax liability*	*Percent decrease in tax*

Residential property: more than $450 tax payment	15	830 20	725 38	105 82	12 6

SOURCE Computed from statistical data in Griffenhagen-Kroeger, *The Effects of Tax Exemption for Improvements and/or Personality*, November 1962, pp. 54–59.

In conclusion Griffenhagen-Kroeger recommended:

> "We conclude that ACA 43 is worthy of further serious consideration by the California Legislature. It has the virtue of providing local option in the choice of property tax base and thus affords an opportunity to test in practice theories that have long been debated in the abstract. There is evidence in this report that through proper local application, the measure could bring greater tax equity and stimulate economic activity, while continuing to provide a full measure of support to necessary local governmental services.
>
> "The measure would be objectionable if it could not assure continued support of local government without imposing a confiscatory rate of taxation on the remaining tax base. We find no basis for such objection.
>
> "We do find, however, a number of practical problems to be solved through a more careful statement of the provisions of ACA 43." [36]

At the 1963 General Session of the Legislature, a similar constitutional amendment, ACA 20, was introduced and again was referred for interim study The Assembly Committee on Revenue and Taxation met in San Diego on June 26, 1964, to hear testimony on the proposal In addition, the committee staff reviewed previously published material on the subject.

The arguments for a land-only tax are·

1. Land is a fixed commodity, and the only way to prevent land price inflation is to tax land more heavily than improvements
2. Such a tax will make it less profitable to speculate in land
3. Individuals would be encouraged to improve their property without tax penalty, thereby stimulating economic activity.
4 The community is responsible for a portion of the increase in land value and is entitled to recapture this portion for public purposes.
5. A land value tax would reduce the property tax burden on most residential properties and many commercial and industrial properties

The arguments against a land-only tax are·

1 The highest and best use of land economically, on which this plan is predicated, is not necessarily the best use of land in the interests of society as a whole
2. The plan seeks to solve, through taxation, problems which are a result of a complex interaction of a number of social, economic, and psychological forces.
3. The plan would make it difficult to maintain privately held "open spaces" in urban areas.
4 The development and improvement of land requires the investment of capital and labor. Without the prospect of rising land values such investments may not be made.

[36] Griffenhagen-Kroeger, *The Effects of Tax Exemption for Improvements and/or Personality*, November 1962, p 12

5. Serious assessment problems would result from such a plan It is difficult to separate the value of the land from the value of the improvement In such cases, it would be much harder to maintain assessment uniformity among all classes of property

6. The plan doesn't necessarily restrain speculation in land The greatest boom in land values ever to occur in western Canada took place during 1909–1913 when land value taxation in the area was at its peak [37]

7. It is unfair and inequitable as persons who have purchased land in good faith would suffer an indefensible loss.

8 This proposal will increase the tax burden on most farm properties It will also give expensive residential property much greater tax relief in proportion to more modestly priced residential property

9. Although commercial and industrial properties appear to benefit from the plan, if the tax on land cannot be shifted as the tax on improvements, the tax burden of these types of property might actually increase.

Hawaii will begin next year a new system of taxation which embodies the concept of land-only taxation According to State Tax Director E J. Burns, the new law embraces features of both the conventional method of property taxation used throughout the United States and the "site value" system of taxation of Australia and New Zealand In 1965, only 90 percent of the net taxable building values can be taxed This percentage will be lowered by units of 10 percentage points until a minimum of 40 percent is reached As a result of the mechanics of the new law, separate land tax and building tax rates will be set for four classes of property—residential, hotel-apartment-resort, commercial, and industrial Under this method of taxation, a portion of the property tax will be shifted from improvements to land

It should be noted that in Hawaii agricultural lands are assessed and taxed under separate greenbelt zoning provisions and are not affected by this new law

Evaluating the advantages and drawbacks to the plan, Tax Director Burns observed that:

> "Speculation in land and prices will be reduced Unused, underdeveloped and improperly used land will be forced into highest and best use The building construction industry will be stimulated. These results will occur but to a degree that is not now measurable.
>
> "Most serious of disadvantages are the inequity of burdening taxpayers unequally; disregard in certain instances of sound tax principles; i e, 'ability to pay' and 'benefits received', encouraging overimprovement of land; the lack of understanding by most taxpayers of a complex formula; and last but not least—the apparent necessity and high cost of changing from a mass appraisal system to individual property appraisals to provide equitable treatment of taxpayers under the differential tax rate application of the law.[38]

PART V

PROBLEMS IN THE APPLICATION OF THE PROPERTY TAX TO CALIFORNIA PRIVATE FOREST LAND AND STANDING TIMBER

by

GUENTER M CONRADUS
Professor of Economics,
Occidental College

INTRODUCTION

A rapidly increasing population and increased demand for services rendered by all levels of government, including county government, require increased revenue streams. Between the fiscal years 1949–50 and 1961–62, total costs of counties, cities, schools and special districts increased approximately 228 percent at an annual average of 17.5 percent Receipts, slightly larger than payments in the fiscal year 1949–50, rose by approximately 223 percent, at an annual average of 17 2 percent, during the same period Bonded indebtedness of all counties rose by 383 percent, at an annual average of 29.5 percent.[1]

The major local source of revenue is the property tax. Total county-assessed valuation rose approximately 145 percent, while county-assessed land valuation (land including standing timber), rose by 209 percent for the same period.[2]

In several counties the assessed valuation of forest land and timber accounts for more than 25 percent of the total locally assessed secured tax roll, with a high of approximately 40 percent for one county These percentages exclude wood conversion plants of all types whose existenee depends upon an economic supply of the basic raw material—wood. Thus, in a number of counties, the timber industry will be the major source of revenue required to meet the increased demand for county government services

The purpose of this study is to investigate the application of the existing property tax structure to forest land and timber.

This study is by no means complete More information than could be gathered in three months is necessary for a complete report. The information on which this study is based was gathered in only six of the major timbered counties of the state The problems enumerated and discussed below, however, are applicable to all timbered counties and do affect the whole of California's timber and wood-based industries.

I am grateful for the assistance and support of Mr W. L Brown, Assessor of Mendocino County and Chairman of the Timber Standards Advisory Committee; Mr A W. Sauer, Senior Timber and Range Land Appraiser of the State Board of Equalization, and Mr. John Callaghan, Secretary-Manager of the California Forest Protective Association.

Without the candid information, much of it confidential, and the insights provided by the many county assessors and timber appraisers this report would have little basis in fact Aware of the magnitude of the problem facing them with respect to the assessment of forest land and timber and aware of the fact that this inquiry may lead to future demands on their time and resources, they have freely given of their already scarce time, even on weekends. I am greatly indebted to them

PROBLEMS IN THE ASSESSMENT OF FOREST LAND AND STANDING TIMBER

Section 12 of Article XI of the Constitution of the State of California states that "All property subject to taxation shall be assessed for taxation at its full cash value." Every county assessor is charged

[1] Economic Development Agency of the State of California, *California Statistical Abstract* (Sacramento, 1963), p 202
[2] *Ibid*, p 196

with annually assessing all the taxable property in his county, except for those properties assessed by the state.[3] The full *present* cash value of forest land and standing timber depends, among other things, upon the following factors:

(1) Total acreage, its quality, topography
(2) Expected future revenues received from either the use or the sale of forest land
(3) Present or future alternative uses for forest land
(4) Total timber volume
(5) Timber specie
(6) Timber quality and accessibility
(7) Price, present and future, of stumpage (standing timber)
(8) Time period over which or at which income from the sale of timber is realized
(9) Safe rate of return at which future incomes are discounted
(10) Percentage allowance for taxes
(11) The safety factor

THE PRESENT VALUATION OF LAND

The total acreage of forest land owned by each owner is relatively easily ascertainable since a legal description of land must be filed with the county assessor each lien date. What, however, is the value of an acre of forest land?

In the absence of known present or future alternative uses of forest land, indicated by someone's willingness to pay a specific price per acre, the value of forest land is derived from the value of the timber crop it is capable of growing. Forest land is highly differentiated by the species of timber it can support, by topography and by distance from the market for timber. Few counties have adequate site maps, describing in detail the quality of forest land.

Because most or all of the information required to determine present forest land value is lacking, 19 of California's timbered counties assign a flat assessed value to every acre of forest land. In the six counties studied, the predominate range of assessed valuation per acre was from $3 to $6. Only four counties vary the assessed valuation on the basis of quality, topography and location, but without taking into consideration future income streams from the sale of timber on the land or from the sale of the land itself. The determination of present value of forest acreage thus appears to be based more on convention than on economic determinants.

Increasingly, forest land is being acquired for commercial purposes, residential subdivisions and individual homesites. The total acreage involved is as yet very small, and the assessment presents little or no problem since it is based on the recorded sales prices The problem arises in appraising adjoining forest land. In cases where there is evidence that adjoining forest land may have a higher and better use than the present one, growing timber, the assessed valuation of such land will change in accordance with the assessor's judgment regarding the land's alternative value.

[3] *Revenue Laws of California* (Annotated), 1963, Sect 405

THE ASSESSMENT OF TIMBER

Basic to the determination of the present value of timber owned by an operator is a timber inventory Timber inventories, cruises, are conducted either by firms of professional cruisers or by timber owners But because the techniques of taking timber inventories may vary from firm to firm and from owner to owner, it is desirable, for uniformity's sake, that only one firm cruise the whole county or that all cruises are conducted in like manner. It would, of course, be highly desirable that all timber property throughout the state be inventoried on the basis of a statewide standard.

It is also very important that timber cruises not be outdated. At present, only seven counties are using countywide cruises. Two of these cruises are over 40 years old; only three have been conducted within the last 10 years. Thirteen counties base their timber assessment on cruise information supplied by the timber owners. And in many instances, no information as to the date when the cruise was last conducted is available. In the opinion of several assessors and timber appraisers, the owner-provided information in many instances grossly underestimates the actual taxable timber volume.

One reason for the lack of recent county cruises is the relatively high cost A professional cruise may cost 50 cents or more an acre and may involve a total expenditure of up to $500,000. Even sample cruises are costly, and boards of supervisors appear very reluctant to appropriate the necessary funds. If recent cruise information were available, it would have to be analyzed for assessment purposes, which would require experienced timber appraisers; yet several major timbered counties lack timber appraisers!

On the basis of whatever inventory information the assessor has, he must determine annually the full present market value of that inventory Since he lacks information of prices received by the owners, information which should ideally be broken down by species, age, quality and proximity to markets of the timber when cut, the assessor or the appraiser presently uses some average stumpage price per species as a first approximation to the actual unit value. Sixteen of the timbered counties use a countywide average stumpage price for each species. The countywide average stumpage prices are simple averages for timber sold off federal as well as off privately owned land. Only three counties differentiate between stumpage values by physical condition and accessibility. No attempt is made to construct a weighted average.

Once a present stumpage price for each species has been established, the present value of a stand of timber must be determined If a stand of timber is cut during the assessment period, the determination of its full present market value is simple· volume harvested $\times$ stumpage price Should harvesting take place over a period of time, or at some time in the future, the determination of the *present* value becomes more difficult

First, future income streams are determined by multiplying *expected future* timber harvests by *present* stumpage price. The longer the time period over which, or the more distant the time at which, the income

is earned, the less precise is the estimate of the future income stream because of fluctuations in stumpage prices and possible loss of timber due to fire, wind and other hazards.

TABLE I

Stumpage Prices for Timber Sold in the United States

(Dollars per thousand board feet)

Year	*Douglas fir*	*Sugar pine*	*Ponderosa pine*
1950	$16 40	$25 00	$18 30
1951	25 40	40 40	33 60
1952	27 80	36 40	27 40
1953	20 20	30 20	25 00
1954	18 20	31 20	27 20
1955	28 90	30 00	26 10
1956	37 70	34 90	27 20
1957	26 20	30 00	24 20
1958	21 80	23 50	19 10
1959	36 80	26 70	20 60
1960	32 00	29 00	19 10
1961	27 60	18 40	12 10

The present value of a future income stream is determined by discounting the total future income for the time period over which it is received. If the procedure outlined in the *Assessors' Handbook* [4] is followed, the total discount factor depends upon the "safe" rate of interest, an allowance for taxes and a "safety factor " While the allowance for taxes used by the counties is identical, 1.5 percent, the "safe" rate of interest chosen may vary from 3 to 4 5 percent. What rationale underlies the choosing of one "safe" rate of interest versus another is not clear. It appears to be a matter of convention Clear is, however, that the greater the "safe" rate of interest chosen to discount any given future income stream, the smaller will be the present value of that stream.

Assume identical stands of timber, in two different counties, each yielding an annual gross receipt from the sale of timber of $100,000 for a period of 10 years, or a total of $1 million. Assume further that the "safe" rate of interest plus allowance for taxes, the latter identical for both counties, used for discounting the future streams are 4 5 percent in county A, 5 5 percent in county B. The respective present values for equal future income streams then are. county A—$791,300, county B—$753,800 Assuming further, equal appraised-to-assessed value ratios of four to one, and equal tax rates of 7 percent of assessed valuation, the respective present tax liabilities are county A—$13,847 75, county B—$13,191 50, a difference of $656 25 Compounding only the first year's difference for a period of 10 years, the lifetime of the total income stream, at 5 percent per annum increases the additional tax liability borne by the owner in county A to approximately $1,069 Obviously, all additional future tax payments arising out of the difference in assessed valuation must be compounded and summed

[4] The California State Board of Equalization, *The Appraisal of Timber Property* (Sacramento, 1961).

in order to arrive at the total increased tax liability borne by the owner in county A.

The total discount factor also depends upon the "safety factor" chosen by the assessor. The timber industry is thought to be subject to extraordinary risk due to fire, wind and insects. Recognizing this fact, the *Assessors' Handbook* recommends a number of safety factors, to be used in determining the actual discount factor, which range from .65 to .75 and can presumably be further varied in either direction. In using one safety factor over another, the assessor is in fact determining the risk to which a particular stand of timber is, may be, or has historically been subject. It is doubtful that these safety factors do indeed reflect with any precision the actual risk involved. It appears that safety factors are more often than not an heirloom inherited from a predecessor and adopted without specific rationale.

The larger the numerical coefficient of the safety factor, "safe" rate of interest and tax allowance being equal, the greater the present value of a future income stream. To return to the above example. Assume that the assessor of county A assigns a safety factor of .75 to the risk to which our hypothetical operator is subject; the same factor applied in county B is .65. Then, the present value of two identical income streams, one discounted at 4.5 percent and the other at 5.5 percent, are: county A—$593,500, county B—$490,000. Using the same assumptions as above, the respective present tax liabilities are: county A—$10,386.25, county B—$8,575.00, a difference of $1,811.25. The increased tax liability of the owner in county A in the first year alone, if compounded at 5 percent over a 10-year period, now amounts to $2,950.34. The above examples, while hypothetical, do reflect the real world of assessment of forest land and timber in California today.

While, even if the valuation procedure outlined in the *Assessors' Handbook* is followed, present values and tax liabilities for identical future income streams may vary greatly from one county to another, the differences may further be aggravated by the use of other valuation approaches. Five counties use an approach other than those suggested in the handbook; eight counties assess the timber volumes without any reference to an appraisal.

Another major factor determining the present value of a stand of timber is the period of time over which or at which it produces revenue. Obviously, the longer the time period over which a given income is received, the smaller the present value of the total income. In determining economic life for a given parcel of land, the assessor divides the presumed total volume of merchantable timber by the reported annual cut. Changing market conditions, however, may either increase or diminish the rate of cutting, thereby increasing or decreasing the present value of a future income stream. Unless the assessor annually reappraises the timber volume, the assumed present value is inconsistent with the "true" present value of the future income stream.

The effective tax liabilities borne by similar stands of timber located in two different counties, or in different taxing districts within a county, are further dependent upon the ratio of appraised to assessed valuation and the respective tax rates.

The present application of the property tax system to forest land and timber gives rise to gross inequities In many cases, information about the quality of the land, timber volume, specie, quality of timber, accessibility, and other factors determining present value of both forest land and timber is lacking Techniques of estimating present values of future income streams, including the use of different "safe" rates of interest and safety factors, may lead to vastly different valuations of like property and therefore to different tax burdens

THE PROBLEM OF SECTION 12¾

Section 12¾ of Article XIII of the Constitution of the State of California provides in part that

> . . . all immature forest trees which have been planted on lands not previously bearing merchantable timber, or planted or of natural growth, upon lands from which the merchantable original growth timber stand to the extent of 70 percent of all trees over 16 inches in diameter has been removed, shall be exempt from taxation, and nothing in this article shall be construed as subjecting such . forest trees to taxation; provided, that forest trees or timber shall be considered mature for the purpose of this act at such time, after 40 years from the time of planting or removal of the original timber as above provided, as a board consisting of a representative from the State Board of Forestry, a representative from the State Board of Equalization and the county assessor of the county in which the timber is located, shall by a majority thereof so determine.

WHAT IS MERCHANTABLE TIMBER?

When Section 12¾ was amended in 1926, the major timber product was dimensional lumber Since then, and in particular since the end of World War II, the rapid technological change has brought about an increase in the number of products made out of wood and has greatly improved harvesting techniques While it may have been uneconomic to harvest a relatively young tree 20 or 30 years ago, today a similar tree may be profitably converted into such products as particle board or woodpulp and subsequently paper products.

The pulp and paper industry is primarily market-oriented. Between 1950 and 1962, California's population rose by about 60 percent [5] A recent study estimated California's civilian population in 1980 to be at 24 4 million, an increase over 1962 of approximately 43 percent [6]

Paper and paper products are also assumed to be relatively income-elastic Personal income in California rose by slightly more than 150 percent between 1950 and 1962,[7] compared to an increase of only approximately 93 percent for the United States as a whole during the same period.[8] While in 1962 California's population amounted to about 9 2 percent of total U S. population, and California's personal income amounted to 11 2 percent of U S. personal income, California's produc-

tion of paper and paperboard amounted to about 3 9 percent of total U S production. It can be safely assumed, therefore, that the future will bring an increase in the number of plants producing woodpulp, paper and paperboard, evidenced by the recent construction of three new pulp mills, and that the demand for the basic raw material, wood, is going to increase.

According to an industry spokesman, the relatively young particle board and the woodpulp industries are at present mainly relying on the residue of lumber, plywood and veneer mills for the major proportion of their raw materials [9] An increase in the number of pulpmills, however, may lead to the logging of smaller diameter young growth for the particle board and pulpmills, thus making smaller diameter young growth timber merchantable.

A recent opinion of the Attorney General of the State of California stated that ". . . Section 12¾ grants to the Timber Maturity Board discretion in the determination of when timber is to be considered mature for taxation purposes " [10] While Timber Maturity Board hearings for the purpose of declaring previously exempt timber mature, hence taxable, can be initiated by either the assessor or the owner of the timber, all such hearings held to date were initiated by the assessor Ultimately then, it depends upon the assessor's definition of maturity (merchantability) of timber to determine what stands of timber shall be assessed.

At present, the respective assessors' definitions of mature timber differ greatly. In one county mature timber is defined as that 100 years old or older. Other counties move to have timber declared mature and taxable when a stand reaches 40 years or 16 inches or more dbh (diameter at breast height). From 1955 to 1963, Timber Maturity Board hearings were held in only six counties Eighteen out of 24 hearings were held in two counties, and one county accounted for 78 5 percent of the total timbered acreage the timber on which was returned to the tax rolls The wide latitude given to Timber Maturity Boards by the Attorney General's opinion in defining maturity (taxability) of timber results in considerable volumes of timber being taxed in one county while timber of like quality is exempt in other counties. Because of lack of adequate cruise information for all counties, it is impossible to determine the magnitude of the resulting inequity.

EXEMPTION OF RESIDUAL OLD GROWTH

The same opinion of the Attorney General stated that

> . . it was the intent of the 1926 amendment to Section 12¾ that, once 70 percent of the merchantable timber has been removed from an area, the remaining timber stand is to be exempt regardless of whether some of the individual trees (stems) are merchantable.[11]

The legislative history of Senate Bill No 401, introduced by Senator A. B. Johnson in 1923, a bill which passed both houses of the Legislature but was pocket-vetoed by the Governor, and of the subsequent

[9] Statement by John Callaghan, Secretary-Manager, The California Forest Protective Association
[10] Office of the Attorney General of the State of California, OPINION 61/104 (1962), p. 8
[11] *Ibid.*, p 16.

Senate Constitutional Amendment No 10, amending Section 12¾, makes it appear that the exemption granted to the residual 30 percent or less of old growth was intended to enhance reforestation.

The question of the necessary reseeding period for any given area, and for different species of timber, cannot be answered by an economist. The fact remains that reseeding will not take 40 years. Thus, at present, substantial volumes of tax exempt residual old growth timber are being cut throughout the state. Because of the tax exemption granted by Section 12¾, timber owners do not file reports of the annual cut of exempt old growth with the assessor. According to one assessor, however, the total annual cut of one timber operator in his county exceeded the total volume of taxable timber owned by him, presumably due to the exemption granted to residual old growth timber by Section 12¾ The approximate magnitude of the problem can be seen in the following table.

TABLE 11

Total Assessed Volume, Exempt Old Growth Residual Timber, and Ratio of Land Bearing Assessed Timber to Total Private Commercial Forest Land

	Total assessed timber volume (mill. board ft.)	*Exempt old growth (mill board ft.)*	*Exempt old growth/ total assessed volume (percent)*	*Land bearing assessed timber/total private commercial forest land (percent)*
County I	7,878	8,212	104 2	20.3
County II	13,000	3,200[a]	13 9	35 5
County III	3,453	675	19 5	47 2
County IV	2,329[b]	452[b]	17 9	n a [c]
County V	3,500[c]	6,000[d]	171 4[e]	n a [c]

[a] Assessor's very conservative estimate
[b] Volume for 74 percent of total private commercial forest land only.

SOURCE Information provided by county assessors
Source for Total Private Commercial Forest Land California Forest and Range Experiment Station, *Forest Statistics for California* (Berkeley, California, 1954), Forest Survey Release No 25.

Even the most conservative estimate for County II shows that the tax exempt residual old growth accounts for 13 9 percent of the total assessed volume. In that county, according to the assessor, the annual cut of residual old growth timber is "very significant."

Harvesting residual old growth long after the optimum reseeding period may in addition run counter to the purpose of exempting that old growth, namely, reforestation, because in the process of harvesting the old growth, the existing young growth may be either damaged or destroyed.

PERPETUAL EXEMPTION

The third question relates to whether Section 12¾ provides for only one exemption for any particular piece of land or whether successive crops of immature timber are entitled to the exemption. In our opinion, Section 12¾ provides for successive exemptions.[12]

[12] *Ibid*, pp 17–18.

Given this interpretation, it is entirely possible that some timber will, in the future, be entirely exempt from property taxation Assume an immature timber stand which is exempt for 40 years. In the 41st year, it is entirely cut. If the stand were to be assessed and taxed in that one year, assuming an appraised-to-assessed ratio of four to one and a tax rate of 7 percent of assessed valuation, the effective property tax rate for timber would amount to 1 75 percent of gross revenue. Under the present interpretation of Section 12¾, any young-growth timber which is regenerated on that same parcel of land will again be exempt for a period of 40 years, and the process can repeat itself ad infinitum.

Assuming an increased demand for young growth timber due to an increased demand for forest products mentioned above, and as California continues to move in the direction of a second-growth timber economy, future property tax revenues from timber may drop drastically.

ALTERNATIVES TO THE PROPERTY TAX

The general problems of the application of the property tax to timber have been discussed elsewhere at length [13] According to a recent estimate, the property tax is still applied to about 90 percent of the total private commercial timber stands in the United States.[14] While other growing crops are exempt from property taxation, timber, a crop which may need from 40 to 80 years to mature, pays an annual property tax which, compounded, does appreciably reduce the net income derived from the sale of the crop. This may lead to excessive cutting in the existing stands, i.e., run counter to desirable sustained yield forestry (annual cut = annual growth), and may discourage future investment in timber.

In order to encourage sustained yield forest management, several states have provided exemption for growing stands of timber According to Williams,[15] the exemption provided by California law is the most far reaching of all. One way of exempting growing timber from the property tax is the application of the yield tax, either mandatory or optional, presently used by about 17 states

The yield tax is a gross income tax, payable at the time income from the sale of timber is realized, and levied in lieu of an annual payment of property taxes [16]

[15] *Ibid*., p 122
[16] R. W Marquis, *Forest Yield Taxes*, U S Department of Agriculture, Circular No 899 (Washington, D C, 1952)

As any other tax, the yield tax has certain advantages and disadvantages. It is easy to administer. Timber owners, aware of the yield tax rate, can calculate future tax burdens with reasonable certainty. If the yield tax is optional, i e , a timber owner has the choice of being taxed either under the property tax or the yield tax, it will limit the effective rate of the property tax. Since a yield tax rate applies equally to incomes from the sale of timber by all timber owners, the yield tax eliminates inequities which arise under the property tax because of different appraisal techniques and different tax rates levied by the respective taxing districts within which the timber is located. Forest land devoted entirely to the growing of a timber crop may be assessed equally and at low valuations, thus eliminating imperfect judgment of the quality of the forest land on the part of the assessor, and reducing the tax burden borne by the crop over the growth period.

The major disadvantage of the yield tax is the uneven flow of revenue it provides Since revenue depends upon the volume and the frequency of timber sales, revenues needed for the provision of local services may not be forthcoming in any one particular year. This may result in the increase of assessed valuation of other property or an increase in the property tax rates

Because of the lack of information on the total value of the annual cut of exempt old growth timber, it is impossible to estimate the gain in revenue, if a yield tax were levied on it, offsetting losses incurred because of the discontinuance of the property tax

Since tax structures and actual tax burdens are major considerations in determining the investment in the timber industry, it is of interest to take a look at Oregon and Washington, states which compete with California for such investment.

Oregon In 1929 Oregon enacted a mandatory yield tax which has been administered on an optional basis.[17] Under the present terms of this law, land which has been classified as "reforestation land" bearing immature or nonmerchantable timber is entirely exempt from property taxation. In lieu of the annual property tax, an annual fee of 5 cents per acre is imposed upon land located west of the Cascade Mountains, 2½ cents per acre on land located east of the Cascade Mountains.[18] A 12 5 percent yield tax is imposed upon the value of timber harvested. Prior to harvesting an owner must secure a permit from the State Tax Commission The unit value of the crop is determined by the State Tax Commission on the basis of prevailing market prices for timber of the species and quality harvested All forest fees and yield taxes are paid to the county tax collector and are disbursed as property tax revenue.

In 1961 Oregon enacted three different tax laws, applicable to forest lands and timber, the most important of which is a mandatory differential assessment law [19] The law applies to all forest land and timber situated west of the Cascade Mountains, the bulk of Oregon's prime commercial forest land, except to such land classified as "reforestration land" under the 1929 optional yield tax law.

[19] *Laws of the State of Oregon*, Ch 659, 1961.

Land continues to be assessed at its highest and best use value, which presumably is that derived from growing timber [20] All timber of less than 12 inches dbh (diameter at breast height) and not in excess of 90 years old is assessed at immediate harvest value, that value at which the timber could be sold voluntarily in the open market Any timber over 90 years of age is assessed at 30 percent of its immediate harvest value, except in cases where less than one-thirtieth of the total old growth has been harvested in the preceding year, in which case the present true cash value for assessment purposes is 25 percent of immediate harvest value. Since 1963, an additional property tax has been levied on all old and young growth harvested in the preceding year In the case of old growth, the additional property tax amounts to the differential between the actual tax paid on a 30 percent valuation of immediate harvest value and the total tax due had the timber been assessed at 70 percent of harvest value. The additional tax imposed upon young growth harvested is based upon 100 percent of harvest value, clearly a penalty tax designed to discourage the cutting of young growth.

The second tax passed in 1961 is an optional timber tax for small owners in western Oregon [21] An owner of no more than 1,000 acres of forest land west of the Cascade Mountains, not classified under the 1929 optional yield tax law may, for tax purposes, have his land classified under this particular act, if the average age of timber does not exceed 60 years and the land is actually devoted to timber production.

Land is differentiated by quality and assessed on appraised values ranging from $80 per acre for site I land to $5 per acre for site V land. The timber itself is entirely exempt from separate ad valorem taxation. The appraisal of taxable forest land and timber is undertaken by the State Tax Commission, which in each case determines the immediate harvest value of the timber, as well as the full cash value of the land.

The third law applies to forest land and timber east of the Cascade Mountains [22] The land continues to be assessed and taxed under the general property laws. Timber, however, is entirely exempt from property taxation. At the time of harvest, a 5 percent yield tax is imposed on "the immediate harvest value of the timber." The Oregon State Tax Commission determines the value by species and by general growing area, taking into account the size and quality of the timber, distance from conversion plant, cost of removal, etc Timber owners must file quarterly returns with the State Tax Commission indicating the amount harvested during the preceding three months. Taxes, derived by determining the harvest value and applying the 5 percent yield tax rate, are payable quarterly to the State Tax Commission, which in turn credits the eastern Oregon counties with the tax receipts on the basis of the ratio of the county's total appraised timber valuation to the total timber valuation for eastern Oregon. A reserve fund is administered by the State Tax Commission, which each quarter is credited

[20] The present technique of valuing forest land has been subject to considerable criticism See for instance I A Zivnuska, "The Valuation of Forest Land in Western Oregon for Property Tax Purposes," Berkeley, California, 1963, mimeographed
[21] *Laws of the State of Oregon*, Ch. 714, 1961
[22] *Ibid*, Ch. 627.

with any monies not disbursed to the counties. Only 80 percent of the yield tax revenues is distributed. Should the revenues received during the fiscal year 1963–64 and during later years amount to less than the revenues received in the 1962–63 fiscal year, the reserve fund will be utilized to make up the deficiency. In order not to diminish the total appraised value of taxing districts, eastern Oregon timber is kept on the local tax rolls.

Washington. The State of Washington has an optional yield tax which was enacted in 1931.[23] Under its provision land which bears nonmerchantable young growth or immature timber left after the mature timber has been harvested may be classified as "reforestration land" by the State Forest Board. Reforestration land is taxed on a fixed assessment of $1 per acre for land west of the Cascades and $0.50 per acre for land east of the Cascade Mountains. The timber itself is subject to the yield tax imposed upon the full cash value of timber when harvested. The yield tax rate is 1 percent per year for each year after classification as reforestration land, not to exceed a 12.5 percent maximum tax rate. The tax bill is computed on the basis of the annual cut reported by the owner to the State Forest Board and the county assessor and the stumpage prices determined by the State Forest Board Prior to cutting, the owner must obtain a permit from the State Forest Board and must, in addition, post a surety bond to cover the approximate amount of yield taxes payable. The taxes are paid directly into the county treasury.

EVALUATION OF OREGON AND WASHINGTON ALTERNATIVES VS. CALIFORNIA TAX

Additional research is required to make a comparison of the tax liabilities borne by similar stands of timber in Washington, Oregon, and California. It is clear that the tax liability of Washington forest land, assuming identical tax rates, is less than that of California forest land. On the other hand, the tax burden on timber may be considerably greater in Washington than it is in California. If timber, previously exempt under Section 12¾, is cut during the first year after it has been returned to the tax rolls, the effective tax rate as a percent of gross revenue amounts to 1.75 percent, assuming an appraised-to-assessed valuation of four to one and a tax rate of 7 percent of assessed value. Under similar circumstances the effective tax rate of gross revenue in Washington would amount to 12.5 percent.

The major advantages of Oregon's and Washington's tax laws are their relative simplicity, their general applicability to all owners of forest land and timber, the fact that such risks as fire, wind and insects need not be borne by the owner; and a certainty about future tax liabilities. Most importantly, the application of a yield tax to incomes received from the sale of timber would reduce or eliminate the glaring inequities which result from the application of the property tax on a county-to-county basis It would certainly reduce an apparent "competitive undervaluation" practiced by some California timber counties.

[23] Williams, *State Forest Tax Law Digest*, pp. 68-70.

SUMMARY

Throughout this paper the term "inequity" has been used recurrently, because the present application of California's property tax to private forest land and standing timber places greatly differing tax liabilities on similar properties in different counties or in different taxing districts within a county.

The annual determination of full present value of property, required by the Constitution of the State of California is an extraordinarily difficult task even if the assessors were in possession of relevant economic information. Many assessors lack even the basic information, a reliable inventory of the property to be assessed

The present value of timber property depends upon future incomes derived from such property. The value of future income streams is a function of the volume of timber harvested, the time period over which it is harvested and the price at which it can be sold. Yet the volume of future harvests, the harvest period (for operations other than sustained yield) and unit prices of timber are not predictable with any degree of certainty. Thus, determination of *present* value based upon *future* income streams is subject to the vagaries of the market place which cannot be anticipated Even if a future income stream has been "determined" (agreed upon), it must be discounted in order to derive the present value thereof The magnitude of the discount factor which determines the present value and present tax liability, following the procedure outlined in the Assessors' Handbook (4), is a conglomerate of a "safe" rate of return, an allowance for taxes, and a "safety factor." The "safe" rate of return and the "safety factor" used in deriving the discount factor vary considerably from county to county, resulting in different present values and tax liabilities borne by like timber properties.

The California Constitution provides for certain tax exemptions for nonmerchantable young-growth timber and merchantable old-growth timber left on cutover land for purposes of reforestation The Constitution further grants to the county timber maturity boards the authority to determine what constitutes "mature timber."

Because of rapid technological changes, the definition of mature timber, upon which the constitutional provision rests, does not hold today. There appear to be as many definitions of mature timber as there are timbered counties The result is exemption from the property tax for a given stand of timber in one county, assessment and taxation of a like stand in another county. Furthermore, tax exempt merchantable old-growth timber is being harvested in significant volume in several counties.

Because a major proportion of the property tax base of some counties consists of forest land and timber, and because significant percentages of total employment in some counties are generated in the timber- and wood-using industries, some counties appear to "competitively undervalue" timber properties in order to "not drive the industry out."

As an alternative to the property tax, the yield tax, levied on gross income from the sale of timber, has the distinct advantage of letting the market place determine value. Since the yield tax rate applies to all sellers of timber in like manner, the yield tax eliminates the inequities arising from differential assessments and tax rates which typify the present application of the property tax to California's timber.

The major disadvantage of the timber yield tax is that tax revenues are dependent upon harvest and sale of timber, which may fluctuate from year to year. This will affect the ability of county governments to provide necessary services, or will require increased assessed valuation of other property or increased tax rates.

PART VI

TAXATION OF HOUSE TRAILERS

RAYMOND R SULLIVAN

The property tax is not applied to house trailers, mobilehomes, or motor vehicles Instead a license fee is charged as an *in-lieu* tax; that is, a state fee in lieu of the local property tax State licensing of motor vehicles has the obvious advantage of uniformity in license plates rather than 58 different county plates and it also assures central record keeping for ease in identifying stolen, damaged, or abandoned automobiles. The ease with which motor vehicles could be registered in the lowest tax rate counties would create inequities for most owners, dealers, and fleet operators. The same problem prevails in the location and assessment of mobilehomes, so they are included within the *Revenue and Taxation Code* sections on taxation of motor vehicles.[1] In addition to the in-lieu tax of 2 percent, there is a basic registration fee of $8 which is added to the fee and collected as one bill

The code contains a depreciation schedule which must be used to determine value of the vehicle.[2] The single depreciation schedule in the code applies to motor vehicles—those propelled by their own power—and mobilehomes which must be towed to their sites It covers nine years of declining rates; values for years after the ninth are equal to the value for the ninth year. The license fee for trailers has the advantage of easy collectibility and little escape but it seems a strange method of taxation for a vehicle which cannot move under its own power and often can be moved only by a special vehicle and then with a travel and route permit because of the extreme size The in-lieu tax is computed against the California delivered price (by price classes) in the year the vehicle is first offered for sale in this state For the first year the tax is based on 85 percent of the figure which represents the class of the vehicle as determined by the department. Subsequent rates are 70 percent for the second year, 55 percent for the third, 40 percent, 30 percent, 25 percent, 15 percent, 10 percent, through the eighth year and 5 percent for the ninth and succeeding years.

Chairman Petris asked the Department of Motor Vehicles to prepare a separate depreciation schedule for mobilehomes which would more closely represent their actual value He suggested that the *Mobilehome Market Report* (trailer blue book) be used as a guide in determining value for tax purposes and received the following reply:

> "We have given considerable study to your request and find that a review of the *Mobilehome Market Report* indicates that the information therein is much too sketchy to support any type of depreciation schedule except for possibly a very few standard makes that have been in constant production for at least nine years.[3]

[1] *Revenue and Taxation Code*, Section 10701 ff.
[2] *Revenue and Taxation Code*, Section 10753 2c
[3] Letter to Hon Nicholas C Petris from Mr. Tom Bright, Director of the Department of Motor Vehicles August 19, 1964

House trailers and mobilehomes are now offered for sale with wall-to-wall carpeting, electric ranges, refrigerators, and complete furnishings including pictures on the walls. All this equipment is legally part of the motor vehicle at sale as accessories and becomes part of the depreciable purchase price, not subject to any personal property tax as is household furniture.

Since the present depreciation schedule for motor vehicles does not appear to reflect actual current values when applied to trailers and the blue book information is too sketchy to be the basis for a new schedule, some other system must be proposed The most promising suggestion has been to eliminate the *in-lieu* tax on the house trailer and mobilehome vehicle while retaining some small basic registration fee for a license plate. This would insure compliance and locate all the trailers by county. The county assessor would then be authorized to assess the coach as he assesses all other taxable property in the county. The assessor would recognize the depreciation of the coach, and he would assess the property accordingly, but the assessment for tax purposes would more closely reflect actual value than the present fixed and rapidly declining depreciation schedule found in the Revenue and Taxation Code.

The two tables which follow indicate the number of house trailers registered in this state and the revenue derived from their taxation The average in-lieu tax on house trailers is slightly more than $16 and the average 1965 in-lieu tax on new trailers purchased in 1964 will amount to about $53 38 It is interesting to compare these figures with the property tax on a new, furnished home purchased in 1964

PART VII

THE CALIFORNIA BANK TAX

by

MRS. YVETTE E. GURLEY

A. Introduction

This study of the bank tax in California follows a long line of predecessors. The most recent study was the Hulse Committee report in 1951.[1] At that time the State of California was being sued by the banks over the legality of the part of the franchise tax which was *in lieu* of property taxes The suit was decided in California's favor, but the tax is still being protested by the banks. Therefore, it is appropriate, in connection with the full and complete study of the state tax structure which the Assembly assigned to the Committee on Revenue and Taxation, to review once again the problems of bank taxation in California.

At the present time, all business corporations, including banks, in California have to pay a 5.5 percent income tax. However, corporations other than banks pay personal property taxes to local governments; state and local governments are prohibited from taxing such property of national banks, and so state banks are not taxed on personal property either. Instead, California imposes a supplementary tax on bank income at a rate equal to the ratio of nonfinancial corporations' personal property taxes to their net income, but this rate cannot exceed 4 percent.

This additional tax, in one word, is the bank tax problem. From what has just been said, it is clear that the discussion of bank taxes cannot be limited to these taxes alone The fact is that they are integrally bound up with matters related to corporation income taxes and personal property taxes. One is therefore forced to widen the scope of the study to include these other taxes, and to consider such questions as whether banks bear larger tax burdens than other corporations or savings and loan associations.

This study attempts to deal with these issues in a systematic way. It first looks at the legal methods open to the states of taxing national banks It then turns to the methods that have actually been used by California, and the current situation is outlined Next, the study evaluates the various objections to the present method of taxing banks in California, raising the question whether California banks are discriminated against in any significant way. Finally, it takes up alternatives to the present method of bank taxation, and makes recommendations at the end.

B. Legal Methods of Taxing National Banks

The taxation of banks by the states is restricted by the existence of our dual banking system. Banks may be chartered by the states; and it turns out that every state has a system of state-chartered and state-supervised banks. Banks may also be chartered by the federal govern-

[1] *Report of the Senate Interim Committee on State and Local Taxation*, Part 3 (Sacramento, 1951), p. 203-224

ment; and throughout the country we have a system of national banks supervised by the Comptroller of the Currency Since national banks are creatures of the federal government, they may be taxed by the states only in a manner established by Congress [2] The states have a natural reluctance to tax their state banking systems at rates higher than those applied to national banks, so the law which effectively governs the state taxation of all banks is federal law

Over the years, Congress has established four methods of taxing national banks. Only one method of taxation may be used by any state, except that a state may, under certain conditions, impose a tax measured by net income of the banks and also tax individuals on the dividends received from those banks, as explained below

1. TAXATION OF BANK SHARES

The first statute by which Congress permitted the states to tax national banks was Section 41 of the National Banking Act, approved June 3, 1864. It permitted the taxation of the shares of stock in the hands of the stockholders In less than four years the system was changed By act approved February 10, 1868 the statute was altered—in the now-famous Section 5219—to permit the taxation of the shares of the bank as a block, the assessment being on the bank, with the bank paying the tax for its shareholders and having the right to secure reimbursement from the shareholders The tax could not be at a rate higher than that on "other moneyed capital" in the hands of individual citizens of the state coming into competition with the business of national banks Section 5219 also provided that real estate owned by the bank might be taxed like other real estate.

As in the case of general property taxation, taxes on bank shares may be based on actual value, fair market value, true value, etc Each state sets up its own guides for determining the value of the stock The rate on bank shares is the same as or lower than that on other forms of intangible personal property owing to the provision noted above.

Most states use this method of taxing banks It was the only method available from 1864 to 1923 and it has remained in force up to the present time in 27 states However, this taxing method is not without complications The tax rate cannot be higher than that on "other moneyed capital," but the meaning of this term has been repeatedly questioned. And there have been allied questions which we will presently turn to It has been said that "the problem of discrimination under the share tax method has proven by far the most complex problem in bank taxation." [3]

2. TAXATION OF BANK DIVIDENDS

The states may include dividends derived from bank shares in the taxable income of the dividend recipients The tax cannot be at a rate greater than that assessed upon the net income from other moneyed capital. If a state has an individual income tax, it may include the dividends of national banks (if other dividends are also included) in such income, but it cannot use this method along with the share tax

[2] *McCulloch v Maryland*, 4 Wheat, 316 (1819).
[3] *Commerce Clearing House*, 1963, p. 1814.

method However, it may use this method along with either the third or fourth methods, which are described below, if both corporate income and dividends are generally taxed

The dividend tax was approved by Congress in 1923 along with the tax on banks' net income The states were given the privilege of taxing dividends in addition to bank income to induce them to switch from the share tax method. The reason for this inducement was that a 1921 Supreme Court decision [4] in effect defined "other moneyed capital" to include a large portion of all intangible assets, and many states were taxing bank shares at rates higher than those on some intangibles.

3. TAXATION OF BANK NET INCOME

The states may impose a tax on the net income of national banks if the rate does not exceed that on other specified classes of corporations (mercantile, manufacturing, and business)

This tax did not prove to be popular. The revenue from the tax would have been too small, particularly since the tax on the net income would have excluded tax-exempt interest on government bonds from the income base Banks hold large amounts of these securities owing to the high federal income tax on bank net income.

This tax has been applied in several states, but at the present time it is confined to Wisconsin and South Carolina

4. THE FRANCHISE OR EXCISE TAX

In 1926 Congress added a fourth method of taxing national banks, an excise tax upon the franchise of a bank, the value of the franchise measured by net income [5] In this case, net income comprises income "received from all sources," including the interest on government bonds, otherwise tax exempt. The rate of "excise tax" cannot "be higher than the highest of rates assessed by the taxing state upon mercantile, manufacturing and business corporations doing business within its limits." Since 1926, 18 states have switched from the share tax method to the franchise tax method The two new states, Alaska and Hawaii, have adopted the franchise tax

National banks cannot be taxed on their personal property, but ordinary corporations are so taxed by states and local governments Consequently, even if the net income tax were the same on both national banks and corporations, the former would be subject to lower overall taxes Some states therefore add several percentage points to the net income tax rate on banks, the additional points based on the personal property taxes paid by other corporations as a percentage of their net income Thus, Massachusetts and California each provide for a rate to be fixed by the taxing official, which is intended to equalize the tax burden upon banks and other corporations Other states, which levy additional percentage points, but not so scientifically, are Colorado, Minnesota, Missouri, and South Dakota

[4] *Merchants National Bank* v *City of Richmond*, 256 U S 635 (1921)
[5] Hence this tax may be termed excise, franchise, or income In this study it is referred to as a franchise tax

C. *Bank Taxation in California*

1. TAX METHOD, 1911–1928

California adopted Constitutional Amendment No. 1 in 1910 to enable it to tax national banks under the authority granted by the federal government in 1864 and 1868.[6]

The Legislature provided for the following method of taxing banks. (1) taxation by local governments of the real property of banks as other real property was locally taxed; and (2) taxation by the state of the shares of stock. The shares were to be assessed at their "book value" plus the pro rata of the accumulated surplus and profit with a deduction for the assessed value of the bank real estate.

This method of taxation remained in force from 1911 to 1928. The experience with the share tax was satisfactory both from the point of view of the state and of the banks. The yield of the tax was substantial, the tax method used was apparently straightforward, and there was no complaint of discrimination among banks.[7]

California got into difficulty with this tax through a series of actions which came into conflict with the provision that the tax rate on national bank shares could be no higher than that on "other moneyed capital." This term was for a long time interpreted to mean state bank shares. However, in 1921, the Supreme Court decision referred to above widened the definition of "other moneyed capital" to include individual investments in bonds, notes, and other evidences of indebtedness that came into competition with national banks in the loan market. This, in effect, included a wide range of intangible assets. In 1910, prior to this Supreme Court decision, California exempted mortgages from taxation by constitutional amendment. And in 1925, authorized by constitutional amendment in 1924, the Legislature enacted the Solvent Credits Act which gave preferential treatment to many intangibles, not including bank shares. Next, the California Supreme Court in 1928 declared the classification of intangibles invalid, and the situation reverted to the status of 1917, namely, the assessment of all property, intangibles included, at full cash value.

Meanwhile, in response to the 1921 U.S. Supreme Court decision and to the resulting protests from the states, Congress (in 1923) amended Section 5219 by providing for two new methods of taxing national banks. And in 1926 still another method was added, the franchise (excise) tax.

Consequently, by the late 1920's, it was clear that California's share tax on banks was higher than rates imposed on many other intangibles which had been defined as "other moneyed capital"; and this fact confronted the federal government's provision of alternative methods for taxing national banks. In California, it was felt that an emergency existed because "recent litigation and court decisions have thrown the tax administration of the state into confusion and have placed in jeopardy an amount of state revenue estimated to be in excess of $22,000,000."[8]

---

[6] November 1910 Art. XIII, Sec. 14, of the Constitution relates to taxation of banks by California.

[7] *Special Report of the California Tax Commission* (Sacramento, 1928), p. 15.

[8] 1928 Special Report, *op. cit.*, p. 7.

2. BANK TAXATION, 1929–1933

The California commission set up to study the problem recommended abandonment of the share tax method, mainly because California wanted to reestablish lower tax rates on specified intangibles. Of the alternatives described in Chapter B, the fourth—the franchise tax—was selected. The second alternative, the dividend tax, would have required the enactment of a personal income tax. The third method, an income tax, was discarded in favor of the fourth because the latter had the added advantage of allowing the inclusion of what would otherwise be tax-exempt interest in the tax base. The exclusion of federal bond interest would have reduced the tax base of banks by one-fourth and the exclusion of all interest exempt from the federal income tax would have reduced that base by more than one-half.[9]

Therefore, the commission recommended, the Legislature voted, and the people approved the 13th Amendment to the California Constitution The Legislature then enacted into law the Bank and Corporation Franchise Tax Act of 1929.[10] A levy of 4 percent according to or measured by income was imposed upon both banks and corporations. "Provision was made, as a temporary expedient for an offset for real estate taxes as well as for personal property taxes paid to localities Personal property taxes and 10 percent of real property taxes paid locally could be used as an offset with the proviso that the total offset could in no instance exceed more than 75 percent of the franchise tax." [11]

Owing to the decline in bank income in the depression and to the low tax rate imposed by the new tax, revenue from the banks fell drastically The taxes paid by banks in 1929, 1930, and 1931 averaged only one-sixth of the taxes paid in 1926, 1927, 1928, the last years of the share tax.[12]

Concern with the low yield of the new tax led to reexaminations of the problem by various groups. The 1931 joint legislative committee pointed out the unique advantage enjoyed by the banks: "Where they are taxed only upon their real property and by an excise tax, while all other corporations are taxed either directly or by a commutated tax upon their real property, their intangible assets (franchise) or by an excise measure." [13]

3. BANK TAXATION, 1933 TO PRESENT

The Tax Research Bureau Report of 1933 concluded that the total tax burden on corporations was heavier than that on banks: " . . it is clear that banks are now paying a smaller percentage of their net income than are other corporations in total taxes." [14]

The remedy offered by the Tax Research Bureau had two facets First, the report recommended elimination of the offset provision for equity reasons. Second, it recommended a new tax rate on banks and

[14] Tax Research Bureau, *op cit*, p 79

corporations "If the offset should be abolished, a rate of 1 89 percent applied to the net income of corporations would have produced the same revenue. However, this rate would have produced much less revenue from banks To equalize the total tax burden, state and local, of corporations and banks, it will be necessary to ascertain the average percentage of net income paid by corporations in the form of personal property taxes Addition of this percentage to 1 89 percent would produce a corresponding burden in terms of net income on banks." [15]

The bureau recommended setting the bank tax rate partly in terms of the percentage of net income of general corporations consumed by personal property taxes [16] Legislation in 1933 made this recommendation effective

The provision for setting part of the bank tax rate according to the ratio of personal property taxes paid by corporations to their net income has been a source of controversy and litigation from that day to this A formula rate on banks was provided which was equal to the income tax rate paid by general corporations plus the percentage of the personal property taxes to the net income of those general corporations, with provision for a maximum rate The basic income tax rate on general corporations and banks was initially set at 2 percent, with the maximum tax *in lieu* of property tax upon banks at 4 percent Subsequently, the basic rate was raised to 4 percent and then to 5½ percent, where it now stands. The *in-lieu* (or 2nd installment) rate has remained at a maximum of 4 percent Thus, the total tax rate on banks may be as high as 9½ percent

The corporation tax rates and other provisions, as they prevailed from 1929 to 1959, are shown on Table 1

The Executive Officer of the Franchise Tax Board is charged with the responsibility of determining, by the 31st of December each year, the formula rate for the supplementary tax on banks The rate is set after a public hearing for examination of the data on which the rate is based

This formula method of determining the supplementary tax rate has consistently been criticized by the California banks as unconstitutional and as being improperly applied by the Executive Officer. The allegation of unconstitutionality was disposed of by the U S Supreme Court decision of October 9, 1961,[17] which denied review of the appeal of California banks from an adverse decision of the Supreme Court of California [18]

The allegation that the tax was improperly applied by the Franchise Tax Commission was considered by the 1945 Legislature, which provided for the deletion of the personal property of public utilities and of their income as factors in determining the formula rate applicable to banks

a Tax rate[4]	--	--	--	4%	3 4%[3]	4%	5½%

* 100 percent of personal property and 10 percent of real property taxes up to 75 percent of franchise tax

† 10 percent of real property taxes up to 75 percent of franchise tax.

‡ All personal property taxes, 1933 through 1936, all taxes and license fees except real property and franchise taxes, 1937 through 1938, personal property taxes, motor vehicle "in lieu" tax, and personal property brokers' license fees, 1939 through 1946, all of foregoing plus license fees for privilege of loaning money, 1947 through 1950, all of foregoing plus use tax paid by savings and loan associations, 1957 to date

[1] The bank and corporation franchise tax was extended to Massachusetts and business trusts, which heretofore had been exempt from taxation (Stats 1933, p 708). Six years later, these firms were removed from the scope of the bank and corporation franchise tax and subjected to the corporation income tax (Stats 1939, p 2902)

[2] The bank and corporation franchise tax was extended to public utilities which heretofore had been taxed on gross receipts (Stats 1935, p 960)

[3] Temporary provisions enacted during World War II reduced the franchise tax rate by 15 percent This temporary reduction, which commenced with December 31, 1943 income-year returns, was renewed in 1945, 1947, and 1948, but was allowed to lapse in 1949 with income years ending on or before November 30, 1949 (Stats 1943, p 1679; Stats. 1945, p 1290, Stats 1947, p 1866, Stats 1948, p 15) The temporary reduction in the minimum tax from $25 to $21 25 was withdrawn for returns for income years ending on or after July 31, 1947 (Stats 1947, p 2852).

[4] There is no minimum tax imposed on banks or on corporations subject to the corporation income tax

[5] The second installment rate is the lower of two figures· a maximum rate and a figure which approximates the ratio of the aggregate personal property taxes of income-earning nonfinancial (and 1944 to date, nonutility) corporations to their aggregate net income

[6] The minimum tax imposed on credit unions was reduced from $100 to $25 provided their gross income is $20,000 or less This reduction was effective with income years ended on or after April 1, 1960 (Stats 1960, Ch 1). The minimum tax imposed on gold mining companies which have been inactive since 1950 was reduced from $100 to $25 effective with income years beginning after December 31, 1960 (Stats 1961, p 1413)

SOURCE Franchise Tax Board. *Annual Report, Calendar Year 1963*

The 1963 amendments to the Bank and Corporation Franchise Tax Act provided for paying tax liabilities at an earlier date than heretofore. First, the privilege of paying the tax in installments was eliminated; second, the payment of taxes was accelerated by providing for the payment of a portion of an estimated tax each year on the basis of the estimated income for that year.[10]

[10] Senate Bill No. 5, Chapter 2.

At the present time, all California business corporations, financial and nonfinancial, pay a franchise tax at the basic rate of 5 5 percent of their net income. Nonfinancial corporations pay *ad volorem* taxes on their personal property at the local rates Commercial banks, which are exempt from these local personal property taxes, pay a tax *in lieu* of property tax to the state on their net income, the rate of which is fixed annually as previously described, up to a maximum rate of 4 percent.[20]

D. Revenue from Bank Tax: California and Other States

Before considering the objections to the present method of taxing banks and the alternatives to this method, we shall look at the annual tax revenues collected from California banks from 1950 to 1960; and then compare these revenues with those collected by other states.

1. REVENUE FROM BANK TAX IN CALIFORNIA

Table 2 records the net profits of banks and the federal and state and local taxes paid by these banks during the years 1950–60. It may be seen that net profits rose markedly during the period along with tax revenue to federal, state, and local governments. However, there was very little overall increase in the proportion of net income absorbed by taxes. This proportion, for the federal government, did rise during 1952 and 1953, when an excess profits tax was imposed on corporations, but it fell back again and ended the decade about where it began The average percentage of income paid by California banks to the federal government from 1950 to 1960 was 40 6 percent.

The state tax rate on bank net income was increased from 4 percent in 1950–58 to 5½ percent in 1959, the level which prevails today. This increase is reflected in total state and local taxes for 1959 and 1960. From 1950 to 1960 California banks paid an average of 11.7 percent of net income in total state and local taxes. It is interesting to note that the California Tax Commission found that the banks paid 11.6 percent of their net income in bank share taxes to the state in 1927.[21] Thus, since the 1927 figure does not include local property taxes, which

[20] The bank tax rate, r_b, is the sum of two tax rates the basic corporation income tax rate, r_y, and an *in lieu* tax rate, r_l. The latter is equal to

$$(1)\ r_l = \frac{T_p - r_y T_p}{Y + T_p},$$

where T_p is the personal property taxes paid by nonfinancial corporations, and Y is the net income of these corporations If corporations were not subject to personal property taxes, their net income would be increased to this extent (T_p) and consequently they would pay more income taxes ($= r_y T_p$) Hence, personal property taxes increase corporations' total taxes, not by T_p, but by $T_p - r_y T_p$, which is the numerator in equation (1) r_l is subject to a ceiling of 4 percent Also for purposes of this tax, nonfinancial corporations exclude some corporations, such as public utilities.

Thus, the overall bank tax rate, r_b, is

$$(2)\ r_b = r_y + r_l = r_y + \frac{T_p - r_y T_p}{Y + T_p},$$

and this is equivalent to

$$(2a)\ r_b = \frac{T_p + r_y Y}{Y + T_p},$$

or to the sum of corporations taxes on personal property and net income divided by their net income (including personal property taxes)

If we write $r_p P = T_p$, where r_p is the average property tax rate and P is assessed value of property, then

$$(3)\ r_b = \frac{r_p P + r_y Y}{Y + r_p P} = \frac{r_p p/y + r_y}{1 + r_p p/y}$$

Therefore, the bank tax depends on four factors (A) the average property tax on corporations, (B) the basic corporation income tax, (C) the assessed value of personal property of corporations, and (D) the net income of corporations

[21] 1928 Report, *op cit.*, p 34

are included in the data in Table 2, the banks still are not paying as much in taxes to the state as they did when they were taxed on bank shares

TABLE II

Taxes on California Banks: 1950–1960

Year	Net profits of banks before taxes (in millions)	Federal taxes on net income		Total state and local taxes	
		Amount (in millions)	As percent of net income	Amount (in millions)	As percent of net income
1950	$155 6	$58 3	37 4%	$19 3	12 4%
1951	158 9	58 6	36 9	17 5	11 0
1952	178 0	75 0	42 1	16 2	9.1

2. STATE AND LOCAL BANK TAXES IN CALIFORNIA AND OTHER STATES

California banks do not pay an unusually large percentage of their net income in taxes to the state and local governments. Table 3 shows that 16 states collect more taxes from banks (relative to their income)

TABLE III

Percent of Net Income Paid in State and Local Taxes

(1) State	(2) Percent	(3) Principal method	(1) State	(2) Percent	(3) Principal method
1 Rhode Island	22 0	Income	26 New Hampshire	9 4	Share

Average 1956–1960 FDIC, *Annual Reports*
Based on Appendix Table 5

than does California The table ranks all states according to this criterion, and it records the percentage of income paid in taxes to each state and the principal taxing method used

It is interesting to note that, of the 16 states which collect more taxes from banks than California, 12 use the share tax as their principal taxing device. The remaining four use the franchise tax If the top 24 states are examined, it is found that twice as many states (16) use the share tax as use the franchise tax (8). In the bottom half, more use the franchise tax (12) than the share tax (11). (Washington uses neither.) It is clear that the share tax can be and has been used by the states to collect relatively large amounts of revenue.

Since 1960, two states, Kansas (effective January 1, 1964) and North Carolina have switched from the share tax to the franchise tax Also, the new states, Alaska and Hawaii, adopted the franchise tax with rates of 2 percent and 10 percent respectively.

Among the states already using the franchise tax in 1950, the main trend has been an attempt to get more revenue by raising the rates. Table 4 shows the states which increased their rates during the 1950's and the rate increases

TABLE IV

Increases in Income Tax Rates During the 1950's

State	*(1) From*	*(2) To*
California	8 0%	9 5%
Connecticut	3 0	5 0

3. RELATION OF PERSONAL PROPERTY TAX RATE TO REVENUE FROM BANK TAX

The revenue from the bank tax is made up of two parts The first payment is 5 5 percent of bank net income from all sources This payment is not diretely affected by any change in the personal property tax rate. The second payment is based on the rate which is set by the Franchise Tax Commissioner each year As described in Chapter C, this rate is based on the (adjusted) amount of personal property taxes paid by corporations and by the net income of corporations (including personal property taxes paid).

Table 5 presents the computations of the second-payment rate during the period 1950 to 1962. The ceiling rate was 4 percent throughout the period, and in the last six years of the period the ceiling was effective.

The adjusted personal property tax is found by taking the personal property tax paid by corporations (T_p) and subtracting from it $r_y \cdot T_p$, where r_y is the basic corporation income tax rate of 5 5 percent This subtraction is made because, if property taxes were not imposed, corporations' income taxes would be increased by $r_y \cdot T_p$.

TABLE V

Determination of the Bank Tax Rate

Year	*Adjusted personal property tax paid by corporations (in millions)*	*Corporate net income plus personal property tax rate*	*Ratio (in percent)*
1950	$56 9	$1990 4	2 859
1951	66 4	2326 0	2 853
1952	73 7	1993 6	3 745
1953	87 9	2155 2	4 076
1954	93 6	2252 6	4 154
1955	102 1	2760 1	3 698
1956	114 9	2944 9	3 903
1957	147 5	2997 0	4 922
1958	156 7	2770 0	5 657
1959	140 7	3230 3	4 356
1960	140 1	3123 0	4 775
1961	169 8	3305 4	5 136
1962	180 0	3583 5	5 024

SOURCE Franchise Tax Board, *Report Preliminary to Determination of Bank Tax Rates* various years, mimeo

Hence, the second-payment rate r_t is equal to·

$$(1)\ r_t = \frac{T_p - r_p T_p}{Y + T_p}, \text{ where } Y \text{ is the net income of corporations}$$

Since T_p is equal to the average tax rate on personal property r_p times the assessed value of personal property (P), we can write·

$$(2)\ r_t = \frac{r_p \cdot P - r_y \quad r_p \quad P}{Y + r_p P} = \frac{r_p(1 - r_y)}{r_p + Y/P} \leq 4\%$$

Therefore, the second-payment rate depends on four factors

1. The basic corporate income tax rate;
2. The average tax rate on personal property;
3. The net income of corporations; and
4. The assessed value of personal property of corporations

An increase in the personal property tax rate, other factors unchanged, would increase the amount of personal property taxes paid by corporations The ratio of their property taxes to their income would rise—and this ratio would rise more to the extent that Y/P was low (i e, that corporations held a large amount of personal property relative to their net income). To this extent, the tax rate on banks would be higher [22] However, during the last six years (1957 to 1962), the ratio as computed each year has been higher than the 4 percent maximum rate allowed by law. Thus, any increases in personal property tax rates in this period would not have increased the tax revenue from banks.

For analogous reasons, a decrease in the personal property tax rate would tend to decrease bank tax revenue

[22] Using equation 2 above, we have $\frac{\partial r_t}{\partial r_p} = \frac{(1 - r_y)Y/P}{(Y/P + r_p)^2} > 0$

E. Objections to Present Method of Taxing Banks: An Evaluation

Although the U S. Supreme Court decision which denied review of the appeal of California banks from an adverse decision of the Supreme Court of California presumably settled the issue of bank taxation as far as the State of California is concerned, it apparently did not placate the banks. The California Bankers Association has continued its protests against the *in-lieu* part of the bank tax

The three main issues revolve around: (1) bank dissatisfaction with the administrative procedure in setting the *in-lieu* rate; (2) the validity of using the personal property of other corporations as the basis for setting the bank rate; and (3) the allegation that property taxes can be shifted more easily than income taxes, with a resulting discrimination against banks as compared to either nonfinancial corporations or savings and loan associations We will discuss each of these in turn

1. ADMINISTRATIVE PROCEDURES

The appeal of the California banks to the U S Supreme Court raised three issues, two of which were directly based on the alleged objectionable administrative practices in setting the *in-lieu* rate The claim was that the California banks were being deprived of their property without due process of law under the 14th Amendment (1) The banks said they were denied "the right to a full and fair hearing and judicial review of the tax commissioner's factual determinations" which had the effect of permitting the commissioner to determine the "component factors of the tax rate and the resulting tax liability on the basis of secret and unidentifiable evidence without such hearing or review "[23] (2) The banks protested that the assessing authorities in California systematically misclassify real property as personal property, with the result that "the commissioner in relying upon such determinations erroneously computed the rate and the resulting tax liability upon the basis of an overstated personal property tax component."[24]

All of these criticisms along with the replies of the Franchise Tax Board are covered extensively in the most recent study of the bank tax[25] That report contents itself with asking the question: "Does the board comply with the requirements and intent of the law in its procedures in administering the act?" The answer given in the report is: "Certain of these questions apparently must be resolved by judicial determination . . ."[26] As has already been stated, the case was decided for the state.

If personal property of corporations is to be the basis of bank *in-lieu* taxation, then equity demands—not only for banks but for the corporations themselves—that such property be correctly identified The reader is referred to Section 4, and Section 5, Part 1 where the general problem of the administration of the personal property tax is discussed.

[23] *Report to the Management Committee on the California Bank Tax Case,* American Bankers Association, June 27, 1961, p 1
[24] *Ibid*, pp. 1–2.
[25] *Report of the Senate Interim Committee on State and Local Taxation, op cit.,* pp 218–21.
[26] *Ibid*, p. 221.

2. PERSONAL PROPERTY OF NONFINANCIAL CORPORATIONS AND BANK TAXATION

Should the personal property of nonfinancial corporations—even if correctly identified—be used as the basis for bank taxes? The banks claim that it should not be, and to support their position they go back to the conditions and discussion surrounding the original imposition of the *in-lieu* tax.

It will be recalled from Chapter C that the tax in force from 1929 to 1932 was a 4-percent franchise tax on all corporations, with a limited offset for personal property taxes paid However, while banks did not pay the latter taxes, many corporations paid more than they were allowed to offset. Hence, banks were taxed at 4 percent while many corporations were taxed in excess of 4 percent The tax was therefore inequitable as between banks and corporations.

> Analysis of the franchise tax returns reveals that many corporations pay personal property taxes which are in excess of allowable offsets. To that extent these corporations have paid franchise and personal property taxes amounting to more than 4 percent of their net income It is obvious that no bank has paid comparable taxes which are as great.[27]

Furthermore, the above makes it clear that some corporations paid more taxes to the state relative to income than other corporations did, even though all were taxed at 4 percent of income. Hence, it was felt that the tax was inequitable between some corporations and others

> It will be noted that less than 12 percent of the corporations taxable under the act benefit from the offset provisions and that these corporations pay less than one-third of the total tax.
>
> The law has established net income as the measure for taxation of corporate franchises, and assessed value as the proper measure of local tax liability. Consequently, there appears to be no valid reason for taxing certain corporations at smaller percentages of their net income than are applicable to other companies, merely because of differences in property holdings Therefore, the offset cannot be said to result in equitable treatment as between corporations themselves.[28]

Largely for these reasons, the offset provisions were repealed and the present *in-lieu* tax imposed.

The California banks now claim that the present method of taxing banks results in discrimination against banks, in much the same way that the previous taxing method discriminated against corporations. All banks, it is claimed, are required to pay 9 5 percent of net income in taxes but business corporations which have no or small amounts of personal property pay less than this to the state—as little as 5 5 percent of net income Therefore, it is argued, since the previous taxing method was repealed on grounds that it was inequitable, the present method should also be repealed for the same reason.

> In repealing the offset provisions in 1933 the Legislature acted upon the recommendation of the Tax Research Bureau that the

[27] *Summary Report of the California Tax Research Bureau*, op cit, p 79
[28] *Ibid*, p 81.

> offset provisions permitted discrimination between business corporations because it [sic] in effect permitted a different rate of franchise tax based upon the amount of personal property owned by the individual corporate taxpayer. The same principle should apply to the franchise tax on banks . . . It cannot be said that there is no discrimination against banks when all banks are required to pay a franchise tax of 9 5 percent of income whereas any business corporation which does not own tangible personal property pays total taxes of only 5½ percent.[29]

The principal issues involved here can best be sorted out if we look at the problem by means of an example. Assume that two taxes—a personal property tax and an income tax—are imposed on both banks and nonfinancial corporations. Assume that both groups have the same net income, but that banks have less personal property than other corporations.[30] Then banks would pay less total taxes than other corporations—and rightly so if both personal property and income are considered to be equitable bases for taxation

To illustrate with numbers, suppose that a 5-percent tax on personal property and a 10-percent tax on net income are imposed on banks and other corporations; that each group has $50 of net income; and that banks own $100 of personal property and other corporations twice that amount. We then get the following results:

	Banks		*Other corporations*	
	Amount of	*Tax on*	*Amount of*	*Tax on*
Personal property	$100	$5	$200	$10
Net income	50	5	50	5
Total taxes		$10		$15
Total taxes as percent of income		20%		30%
Total taxes as percent of personal property		10%		7½%

Banks and other corporations are each taxed fairly, but because other corporations have more personal property they pay more in total taxes. It is true that corporations' total taxes are a larger percentage of their net income than are the banks' taxes, but banks pay more taxes relative to their personal property than do other corporations. And both results are simply reflections of two taxes imposed equitably upon two bases, income and property

It would clearly be inequitable to ask that banks pay the same total taxes as other corporations—$15 in the above example—even though both groups would then be paying taxes equal to the same percentage of their *net income*. Equity between two groups does not demand that each pay total taxes equal to the same percentage of income, if another tax base, *personal property*, is also employed by the taxing authorities. For the same reason, it would not be equitable to ask both groups to pay the same taxes as a percentage of their personal property.

[29] Hugo A. Steinmeyer, *Evolution of Bank Tax Legislation in California*, Oct. 31, 1963, pp. 51, 53

[30] Whether this is in fact true will be discussed below However, if banks hold more personal property than other corporations, they should pay more taxes than other corporations

If equal total taxes, in the above numerical example, are nevertheless required, then the property tax *rate* on banks would have to be raised from 5 percent to 10 percent, while that on other corporations remained at 5 percent.[31] This would obviously discriminate against the banks. The results are shown below:

	Banks		*Other Corporations*	
	Amount of	*Tax on*	*Amount of*	*Tax on*
Personal property	$100	$10	$200	$10
Net income	50	5	50	5
Total taxes		$15		$15
Total taxes as percent of income		30%		30%
Total taxes as percent of personal property:		15%		7½%

Now, if personal property taxes cannot legally be imposed on banks, the above inequitable result can be obtained in another way. This is to impose a supplementary income tax rate on banks, which is equal to the property taxes paid by other corporations ($10) as a percentage of their net income ($50)—or a rate of 20 percent.[32] Thus banks would pay the basic income tax rate of 10 percent plus an additional 20 percent, or 30 percent in all. This would yield $15 in total taxes, equal to the tax payments of other corporations.

The supplementary bank tax of 20 percent in this case is based on the personal property taxes of other corporations relative to their income. This method is equivalent to taxing banks directly on their personal property, but at a rate twice as high as that imposed on other corporations, "twice as high" because personal property of other corporations is twice that of banks, in our example.

Both of these taxes—the higher personal property rate and the supplementary income rate—discriminate against banks.[33] If banks cannot be taxed directly on their personal property, an equitable alternative is to impose a supplementary income tax rate on them equal to their personal property taxes as a ratio to their net income; or, in the above example, at a rate equal to 10 percent. Thus, banks would pay the basic income tax rate of 10 percent plus a supplementary rate of 10 percent, or $10 in all.

The conclusion to which this discussion leads is that, if personal property taxes cannot be imposed on banks directly, a supplementary tax on their income should be based on *their* personal property holdings and not on those of other corporations. To the extent that other corporations hold larger amounts of personal property than do banks, banks are discriminated against by a supplementary rate based on corporations' personal property. This is modified to the extent that a ceiling limits the *in-lieu* rate or to the extent that those corporations with especially large holdings of personal property are excluded in

[31] This assumes the income tax rate is given. Alternatively, the banks' income tax could be raised to 20 percent.

[32] This supplementary rate is equal to $r_p(P_o/Y_o)$, where r_p is the personal property tax rate, P_o is the assessed value of personal property of other corporations and Y_o is their net income.

[33] If banks held more personal property than other corporations, the attempt to equalize total taxes would still result in an inequitable tax—only, instead of discriminating against banks, it would discriminate against other corporations.

computing the supplementary rate, i e, public utilities[34] Of course, if all corporations with higher or lower holdings of personal property (relative to their incomes) than those of banks were excluded, the supplementary bank rate would simply be based in effect on banks' personal property. And this is how it should be Hence, this principle dictates that not only should public utilities be excluded because they hold unusually large amounts of personal property, but other corporations which hold unusually large or *small* amounts of personal property should be excluded as well.

In conclusion, the present method of computing the *in-lieu* tax rate on banks cannot be defended from an equity standpoint, because it is based on other corporations' personal property and not on that of banks.

3. TAX SHIFTING ARGUMENTS

Even if the *in-lieu* rate imposed on banks' net income were set fairly, in accordance with the previous discussion, it is claimed that banks would still be discriminated against owing to the extent to which various taxes can be shifted.

In particular, it is argued that the personal property taxes imposed on business corporations can be shifted more easily than income taxes imposed on both banks and other corporations On income taxes, Jacoby and Weston have written:

> A tax measured by business net income or profits does not ordinarily possess a high degree of shiftability, because it does not directly affect the short-run variable costs of businesses Therefore, in the short run, the incidence or burden of such a tax remains substantially upon the taxed firms under ordinary conditions This may now be regarded as the orthodox and essentially correct analysis of the incidence of a tax on corporate net income in the short run.[35]

On the other hand, personal property taxes on goods in the process of manufacture and sale would appear to be more readily shiftable if the taxes are on all competitors

Consequently, according to this argument, the *in-lieu* tax on banks is inequitable because it cannot be shifted, whereas the personal property tax on corporations can be shifted.

The same argument can be applied to the banks vis-à-vis the savings and loan associations. These associations pay a franchise tax of 9 5 percent measured by their net income; they are also taxed locally on their personal property However, they are allowed to offset the personal property tax against the franchise tax owed The purpose of the offset is to put them in a position of equality with banks and with

[34] It will be recalled that the 1945 Legislature provided for the elimination of the personal property of public utilities and of their income in determining the formula rate applicable to banks The banks had argued that "It is only by including the taxes paid by public utilities upon the vast amounts of personal property owned by them and striking an average that it can be said that the additional rate imposed upon banks bears the same ratio to their net income as the amount of personal property taxes paid by all other corporations bears to the net income of all other corporations" Calif Bankers Assn., *Reply to Report on Calif Bank Tax*, Mar 1945 pp 5-6

[35] N H Jacoby and J F Weston, "Economic Problems of *In Lieu* Taxation of Banks," *National Tax Journal*, Mar 1963, p. 4.

nonfinancial corporations. The result is that savings and loan associations pay a franchise tax equal to 9 5 percent of their income, the same as banks. However, here again equality is not achieved, according to the argument of Jacoby and Weston, because that part of the tax which is on personal property is more readily shifted than the part based on income.

However, Jacoby and Weston carry this argument much further than either theory or empirical work would support The fact is that there are good theoretical reasons for believing that some significant portion of income taxes are shifted in the short run. Thus, Musgrave, in the standard work in the field, sums up the present theoretical position in this way:

> The traditional rule that a profits tax cannot give rise to short-run adjustments in price remains a good point of departure, but hardly more. Without falling back upon the "practical" argument that businessmen do not act this way, we find a variety of situations where the tax may lead to adjustments in price and output. These include the return to working capital, monopoly pricing under restraint, oligopoly pricing, and situations of collective bargaining where the firm's ability to pay is taken into consideration. Possibilities such as these throw considerable doubt on the conventional position that price policy remains unaffected in the short run.[36]

Aside from theoretical arguments, the two most recent empirical studies in the area of shifting of the corporation income tax came to diametrically opposite conclusions Krzyzaniak and Musgrave found that the corporation income tax was shifted by more than 100 percent in the short run.[37] The other study—that of Challis Hall—found that profits taxes were not significantly shifted in the short run [38]

Furthermore, the extent to which almost any tax is shifted is an open question. There have been no definite answers. Thus, Jacoby and Weston go much too far in their assertion of agreement on such questions. This being so, their argument based on such agreement is invalid.

4. SUMMARY

In summary, if personal property is used as a basis for taxation, bank taxation is inequitable to the extent that banks are taxed, not on their own personal property, but on others' holdings of such property; and to the extent that the administration of such taxation is deficient There is no definitive evidence to support the assertion that banks are discriminated against because of tax-shifting differentials.

F. Alternatives to Present Method of Taxing Banks

As we have seen, if other corporations hold more personal property than banks, the present *in-lieu* tax discriminates against the banks. Perhaps there is no superior alternative, within the present legal frame-

[36] Richard A Musgrave, *The Theory of Public Finance*, New York, 1959, p 286
[37] Marian Krzyzaniak and Richard A Musgrave, *The Shifting of the Corporation Income Tax* (Johns Hopkins Press, 1963)
[38] Challis A. Hall, Jr., Direct Shifting of the Corporation Income Tax in Manufacturing," *Papers and Proceedings of the American Economic Association*," May, 1964, pp. 258-87

work, to the current method of bank taxation. But several proposals have been made, and it is necessary to examine them.

We will first consider a proposal to set the *in-lieu* rate at approximately 1 percent. We then turn to two general proposals, to tax banks like nonfinancial corporations, and to tax nonfinancial corporations like banks. We conclude this section with some recommendations.

1. SET *IN-LIEU* RATE AT 1 PERCENT

The California Bankers Association favors bank taxation that would impose the basic income tax rate (5.5 percent) on banks plus an additional percentage to allow for personal property taxes not paid by banks This additional percentage has been stated to be in the neighborhood of 1 percent.

Recently, Jacoby and Weston attempted to measure the personal property taxes that would have been paid by California banks if they had been taxed in the same manner as nonfinancial corporations during the periods 1932–49 and 1950–59.[39] Their main findings are as follows:

> The major categories of personal property held by banks are furniture and fixtures and coin and currency. Other items of personal property are. automobiles, bullion, gold dust, inventories of stationery and supplies, and repossessed property arising from consumer loans. For all forms of personal property other than money, the calculation procedure could readily be performed: the total amounts of personal property were summed and an average property tax rate was applied.
>
> The determination of the appropriate taxes on money held by California banks involves some complexities Since it is well known that only a small fraction of the money held by the public and subject to assessment is actually assessed, it would be obviously unfair to assume that 100 percent of bank-held money would be assessed. It is reasonable to assume that money held in banks would be assessed to the same extent that money outside banks is actually assessed. Accordingly, estimates of money assessment ratios were developed The percent of currency and coin subject to personal property taxes which was actually assessed averaged 1 34 percent for the 1930's, .75 percent for the 1940's, and 3 04 percent for the 1950's. The money assessment percentages were multiplied by the values of the coin and currency held by California banks on assessment dates to obtain the amounts of personal property taxes which would have to be paid on money.
>
> The total personal property taxes which would have been paid by California banks during the years 1932–1949 averaged about 5 percent of their annual net income; for 1950–1959 they averaged about 1 percent. The actual *in-lieu* tax rate was between 2 and 4 percent for most of the earlier years, and averaged almost 4 percent for the period 1950–1959 The cumulated excess of the *in-lieu* tax over the personal property taxes which would have been paid by California banks for the years 1932–1949 was some $20 million; for 1950–1959 it was $68 million.[40]

[39] Jacoby and Weston, *op. cit.*, pp 7–8
[40] *Ibid.*, pp. 7–8

The above calculation of the amount of taxes that banks would have paid on their personal property relies on a very low assessment of coin and currency. Jacoby and Weston used a figure representing the percentage of coin and currency that was actually assessed to other holders (3 04 percent for the 1950's). However, the law states that coin and currency are to be "taxed in proportion to value" If the assessor adhered to the law, and there is no reason to suppose that he would not, he would be obliged to assess any coin and currency that he knew of at the regular rate.

The Jacoby-Weston argument implies that any taxpayer has the right to declare only part of his tax base for tax purposes if he knows or suspects that others are doing this Thus, presumably wage earners, under the personal income tax, would be justified in declaring only a part of their wages if they felt that other taxpayers were being taxed on only part of their receipts.

If coin and currency are subject to personal property taxes, as they are, but if some taxpayers are not being taxed on their full holdings, the solution is not to extend the results of poor assessment procedures to areas where good assessment is possible Rather, the proper solution is to improve assessment methods where they most need improvement; or, if this is too costly, to eliminate the tax altogether.

Thus, alternative calculations should be made, assuming that bank-held coin and currency would be "taxed in proportion to value" in accordance with the law These calculations are recorded in Appendix Tables 3 and 4 In these tables, the Jacoby-Weston data are used, but it is assumed that bank-held coin and currency are assessed at 50 percent of value, as is other tangible personal property in, for example, Los Angeles County [41]

Instead of total personal property taxes of about 1 percent of net income (75 average for 1950–1959 as computed by Jacoby and Weston), these taxes average 3 17 percent of net income for 1950–1959 The average *in-lieu* rate for the same period was 3 71 percent Instead of a "cumulated excess of the *in-lieu* tax over the personal property taxes which would have been paid by California banks" for the years 1950–59 of $68 million [42] the use of the new assumption results in a maximum of $14 million.[43]

It appears, therefore, that, if coin and currency had been assessed and taxed properly, banks would have paid about one-half percentage point less—not three percentage points less—if the *in-lieu* rate had been based on their personal property rather than on that of nonfinancial corporations. This result depends entirely on how coin and currency of banks are taxed The bankers of course realize this better than anyone else For example, the attempt to amend Section 5219 (H R 3175, 82nd Congress), which was promulgated by the American Bankers Association and the National Tax Association, contained, among other provisions, an authorization to tax national banks on their personal property. However, it was carefully stipulated that·

[41] Los Angeles County has recently reduced its assessment ratio on tangible personal property to 25 percent
[42] *Ibid*, p 8, and *Appendix Table 1*, Row 7.
[43] *Appendix Table 3*, Row 7.

"For the purposes of this subsection, coin, bullion, and currency shall not be deemed to be tangible personal property." [44]

If coin and currency are taxed as personal property, an administrative problem may arise because of the shipment of coin and currency out of the banks just before the tax assessment date This could be solved by utilizing a call date rather than a fixed assessment date. Banks submit condition reports to supervisory authorities which are based on call dates, to prevent the banks from concealing their true financial condition These condition reports could be used by the states to assess the tax due on coin and currency For example, the figures from the four condition reports submitted each year could be averaged for each bank to give an average amount of coin and currency held on which the tax could then be assessed.

In summary, the proposal to set the *in-lieu* rate at 1 percent is based on the banks' contention that this is the rate they would pay if they could be taxed on their own personal property instead of by a tax based on personal property held by other corporations. It has been shown that, under the present law defining coin and currency as tangible personal property, the rate the banks would have paid averaged more than 3 percent of net income from 1950–1959. If the *in-lieu* rate is to be lowered to reflect the personal property of banks instead of that of other corporations, this rate should be set close to 3 percent, and not the 1 percent advocated by the bankers.

2. TAX BANKS LIKE NONFINANCIAL CORPORATIONS

The 1 percent *in-lieu* tax proposal, just discussed, does not contemplate altering federal law in order to impose personal property taxes on national banks However, an alternative proposal does contemplate such a change this is the proposal to tax the personal property of banks in the same way as corporation personal property is taxed. Since such bank taxation is now prohibited, this would require amendment of federal law—specifically, Section 5219

Jacoby and Weston have recently offered this alternative, the heart of which lies in the preferential treatment of coin and currency.[45] They suggest three possible ways of treating coin and currency. First, coin and currency could be assessed to banks in the same ratio as it is assessed outside banks This method, they admit, would not be easily administered "The practical difficulty here is that the calculation of the money assessment ratios is a highly involved and laborious task." [46] As pointed out in the previous chapter, the imposition of a new tax which relies on the inadequate enforcement of the same tax in other sectors of the community cannot be recommended.

Second, the authors suggest a classified tax system with low rates on intangibles, including coin and currency. This would encourage fuller assessment of money and "make less discriminatory the taxation of the full amount of money held by banks" [47] In this case, all the money held by banks would be assessed and taxed, but at special low rates The State of California has had a classified tax on intangibles

[44] S 2547 (81st Congress)
[45] Jacoby and Weston, *op cit*, p 9.
[46] *Ibid*, p 9
[47] *Ibid*, p 9

for many years—the solvent credits tax. This tax has never been very highly regarded and in fact its elimination has been suggested The Northern California County Supervisors Association has testified favoring elimination of this tax "on grounds of administrative feasibility and productivity, holding that 'income from the taxation of intangibles is not sufficient to cover the cost in time and money that is consumed in the collection of taxes on these intangibles . . .'"[48]

Third, Jacoby and Weston advance the proposal of the National Tax Association and the American Bankers Association This alternative would allow states to tax banks directly on their personal property, excluding money The authors claim that· "Of the alternatives considered, this proposal seems superior on both theoretical and practical grounds It avoids the discrimination of the *in-lieu* system of taxation, with a minimum of change in tax practices."[49]

The above three versions of this general proposal give highly favorable treatment to banks' holdings of coin and currency without advancing any good reasons for such treatment Moreover, the proposal seems impractical in that its success depends on the amendment of Section 5219, and for years this section has withstood wave after wave of assaults It is relevant at this point to review recent efforts to amend the section, if only to gain an appreciation of the strength of the opposition against amendment.

Recent Efforts to Amend Section 5219

The amendment of Section 5219, as finally agreed upon by committees of the American Bankers Association and the National Tax Association after lengthy discussions, was first introduced in the 81st Congress in 1949 as S 2547 and H R. 7896. H R 3175 was introduced in the 82nd Congress in 1951.

The main objective of these bills was to invalidate by congressional act the *in-lieu* tax or so-called built-up rate The bills would not allow states to tax the income of national banks at a rate higher than the highest rate of like character on the income of other corporations The adoption of this amendment would have invalidated California's additional tax, and also the excise taxes levied by other states on banks which exceeded the rate imposed on other business corporations[50]

S 2547 was reported favorably by the Senate Banking and Currency Committee and passed by the Senate that year. Before any action on the bill was taken in the House, opposition developed from a number of the state bankers associations which led to a special meeting of the Administrative Committee of the American Bankers Association in January 1952 At this meeting, 15 state associations expressed opposition to the bill

The opposition to the proposed amendment was led by the Missouri Bankers Association which complained that "the bankers of California do not like their built-up rate and desire to outlaw it by the proposed amendments Their gain in this regard would result in rendering in-

[48] Report of the Senate Interim Committee on State and Local Taxation, Part Two, *The Taxation of Personal Property in California*, (Sacramento, 1955) p 63
[49] Jacoby and Weston, *op cit*, p 9
[50] *The Position of the Missouri Bankers Association in Regard to the Proposed Amendments to Section 5219*, (Columbia Mo, May 1954) pp. 30–31.

valid the present excise tax laws by which national banks are taxed in the States of Missouri, Colorado, Minnesota, North Dakota, South Dakota, Oklahoma, Alabama and Arizona." [51] State and national banks in Missouri pay an excise tax measured by net income of 7 percent, with gross income including what is otherwise tax-exempt income. "This 7-percent rate . . . was deemed . . . to be the equivalent of franchise, income, and tangible personal property taxes paid by other corporations." [52] The Missouri bankers further complained that "In order to conform the tax law of Missouri . . . it would be necessary to change the method of taxing *all other corporations* in order to tax validly national banks in Missouri, or as the only other alternative, it would be necessary to change the 1945 Constitution of Missouri in order that national banks might again be taxed on the share tax basis" [53]

At the conclusion of the meeting of the administrative committee, the following resolution was adopted:

> The Administrative Committee of the A B A. hereby reaffirms the principles long ago expressed and several times repeated, that the banks in the national banking system pay their just and equitable share of state taxes, but, at the same time, should be effectively protected against the imposition by the respective states of taxes upon national banks, which discriminate against such banks as compared with other corporate taxpayers.[54]

A recommendation also was made that the association continue its study with the National Tax Association in an effort to develop a satisfactory amendment and that pending this further study "no action shall be taken to urge consideration of H R. 3175 now pending in the House of Representatives." [55]

Since 1952 there have been no further attempts to amend Section 5219 through the introduction of bills in Congress. However, the issue is by no means a dead one The California Bankers Association has continued its efforts to line up support for an amendment to the section In late 1963 a meeting was held at which Mr Hugo A. Steinmeyer of the California Bankers Association presented the case to the A.B.A. again However, the 5219 committee felt that this section had net benefits and that the A.B.A should not support any set of amendments which would hurt bankers in other states It was also felt that Section 5219 should be left as it now stands unless California bankers can propose a set of amendments that can draw widespread support throughout the country.

W. R Courtney, President of the Missouri Bankers Association, expressed the view that "the bankers of Missouri believe that the problems of California national bankers should be worked out by them at the local level with their own legislature, rather than at the national level in Congress, particularly when solution at the national level is opposed by and materially injures the banks in a number of other states as is the situation." [56]

[51] *Ibid*, p. 22
[52] *Ibid*, p 10.
[53] *Ibid*, p 10.
[54] *Ibid*, p. 24.
[55] *Ibid*, p 24
[56] *Ibid.*, p. 10.

The conclusion which emerges from this résumé of developments is that any amendment of the federal law governing taxation of national banks by the states is unlikely in the foreseeable future

3. TAX NONFINANCIAL CORPORATIONS LIKE BANKS

One solution to the problem of equity between banks and nonfinancial corporations is available without federal legislation. The personal property tax on corporations could be abolished and the regular franchise tax rate on all banks and corporations increased to make up the loss in revenue.

A strong case can be made for the abolition of the personal property tax on corporations. In 1953 a study was undertaken by the California Senate Interim Committee on State and Local Taxation in "response to requests from various business and agricultural groups and associations that the committee inquire into the taxation of personal property in California and develop remedies for the inequities which allegedly characterize the present local ad valorem tax." [57]

The committee found many serious weaknesses in the ad valorem taxation of personal property. Some of these are as follows: [58]

1. The burden of the tax is distributed inequitably because the tax "cannot be applied universally and uniformly to widely varying types of property."
2. The tax does not meet the ability-to-pay principle, which rests on income and not property.
3. The tax does not meet the benefit principle, either, because the benefits of government services are widespread and do not necessarily follow property ownership patterns.
4. The tax cannot achieve equality among persons, because it is on *things*.
5. The tax tends to be regressive in its impact because "of the widespread tendency for properties of lower value to be assessed at a higher ratio to actual value than is the case for properties of higher value . . ."
6. The tax is vague enough to encourage negotiation and personal influence "and create an unhealthy atmosphere of caprice in place of clear-cut official responsibility."
7. "As administered, including fixed lien dates, the personal property tax results in periodic dislocation of transportation and storage facilities, and the impossibility of uniform administration places some firms at a competitive disadvantage."

Inventories are one of the largest components of personal property, and some of the chief criticisms in the committee's report of the personal property tax were directed to their treatment. There are problems arising from the valuation of inventories as of a certain date rather than by an averaging technique There are complaints regarding the "great disparities among tax rates on inventories throughout the state." [59] On this subject of inventories the report concluded: "How-

[57] Taxation of Personal Property in Calif., *op. cit.*, p 5.
[58] *Ibid.*, p 22.
[59] *Ibid.*, p. 58.

ever, even with efficient technical assessment, some inequities, inherent in the nature of inventory taxation will remain Although this is true in some degree of all property taxation, it applies with particular force to the ad valorem taxation of personal property used in business, and is the basis of much of the current agitation for the exemption from taxation . . . of business inventories '' [60]

Witnesses who testified at the hearings on behalf of business generally favored the elimination of the personal property tax, particularly the taxation of business inventories This of course is not necessarily a strike against the tax, but, if it does have serious inherent weaknesses, it could be eliminated without widespread opposition from business Moreover, the elimination of this tax would permit the elimination of the *in-lieu* tax on banks, against which, as we have seen, there have been numerous complaints

Therefore, a happy solution should be the abolition of both taxes. How would the revenue loss be made up? The most likely source is that of net income for which there "is much to be said . . . on grounds of equity, administration, and productivity." [61]

TABLE VI

Rate Necessary to Make Up Revenue Loss if Personal Property Taxes Abolished on Corporations

Year	Corporation net income (in millions)	Bank net income (in millions)	Total net income (in millions)	Corporation franchise tax (in millions)	Corporation personal property tax (in millions)	Bank franchise tax (in millions)	Total (in millions)	Rate necessary to secure the same revenue (percent)	Rate actually paid by banks (percent)	Rate actually paid by corporations (percent)

We have calculated the uniform franchise tax rates that would have elicited the same total revenue (as was actually paid) from corporations and banks during each year of the period 1950–1961. The rates are shown in Table 6 It is readily apparent that the average rate that

[60] *Ibid*., p. 27
[61] *Ibid*., p. 35.

would have been necessary during the years 1950–1956 is very little different from the actual percentage of net income paid by corporations and banks in those years However, from 1957 on, with the exception of 1958, the banks would have paid a somewhat higher rate and corporations a somewhat lower one if the proposal for a single rate applying to both had been in effect This results from the ceiling of 4 percent on the *in-lieu* rate; thus the corporation taxes are free to rise and have done so, while the bank tax has been held down by the ceiling. In 1961, for example, the banks would have paid about 1 percent more of their net income in taxes—the required rate for that year was 10.5 percent and banks actually paid 9 42 percent.

A single tax rate of 8.5 percent on the net income of banks and corporations would have provided about the same revenue as was actually forthcoming had it been in effect from 1950 to 1961. However, the percentage of income paid in taxes rose from 6 86 in 1950 to 10.5 in 1961 so that by the end of the period a rate of 10 5 percent would have raised the same revenue It seems very probable that an 11-percent rate would provide about the same income at the present time. An estimate for one year was made by the Senate committee. It was thought that a "total tax of 11 percent on corporate net incomes would be necessary to provide the present revenue now derived by the state from this source plus an additional $200 million now produced by local ad valorem taxation of personal property."[62]

Abolishing the personal property tax would mean a large revenue loss for the local governments It would be necessary for the state to distribute its increased revenue from the higher franchise tax back to the local governments on some equalization basis.

4. THE OFFSET PROVISION PROPOSAL

If it is considered desirable to retain the personal property tax because of adverse effects on state-local governmental relations arising from its abolition, there is another method of equalizing the taxes of banks and corporations within the framework of existing federal law. The use of this method would require a higher franchise tax rate on the net income of banks and corporations with a deduction allowed for personal property taxes paid.

As was mentioned earlier, this method is currently in use in taxing savings and loan associations in California. They are, like banks, subjected to an additional franchise tax measured by their net income Unlike banks, however, they are taxed on their personal property. But they are permitted to offset (or deduct) their personal property tax payments from their franchise tax liabilities.

This offset of personal property taxes has its origin in the original provisions of the Bank and Corporation Franchise Tax Act, and from 1929 to 1933 it applied to all corporations "The device suggested of permitting an ordinary corporation to offset it's personal property taxes against the new franchise tax was adopted to make it possible for the corporation which was subject to these personal property taxes to have such taxes count as part of its tax burden."[63] This is precisely the reason that we would give today for the use of a property tax offset.

[62] *Ibid.*, p 35.
[63] *Final Report of California Tax Commission, op. cit.*, p 302.

At the time the offset provision was granted it was regarded as "a temporary adjustment, undesirable in itself, which should be eliminated at the earliest possible moment" [64] However, as we noted in Chapter C, this offset was limited in amount and because of that, the tax was inequitable between business corporations The limited offset provision as it applied to corporations was repealed in 1933 when the *in-lieu* tax on banks was put into effect.

A full offset provision, without limits, would be free of such inequitable treatment Both nonfinancial corporations and banks would pay a uniform net income tax. To the extent that corporations also paid personal property taxes, these could be deducted without limit from income taxes otherwise owed to the state. Thus, local governments would receive revenue directly, rather than indirectly through the state, and all corporations including banks would pay total taxes equal to the same percentage of net income.

The only disadvantage of this proposal is the retention of the personal property tax with its array of weaknesses as enumerated above.

G. *Summary and Recommendations*

We have reviewed the possible methods of taxing banks Although four methods are permitted in the law, the effective choices are really only two—the share tax and the franchise tax The share tax was used in California from 1911 to 1928 and was deemed to be satisfactory in its operations Also when we looked at the methods of bank taxation used by the states, we found that the share tax can be and has been used by the states to collect relatively large amounts of revenue. However, its legality vis-à-vis the taxation of "other moneyed capital" has been one of the thorniest problems in bank taxation and for this reason a return to the share tax is not recommended.

The franchise tax has been used by California since 1929. From 1929 to 1932 the state did not get much revenue from it. In 1933 a supplementary or *in-lieu* tax was imposed on bank income at a rate determined by the ratio of personal property taxes to net income of nonfinancial corporations, and revenue from the tax has been satisfactory in recent years. California banks rank 16th in the nation in the ratio of total state and local taxes to net profits.

The banks' complaints concerning the inequity of being taxed on the basis of personal property of other corporations appear to be justified To the extent that other corporations hold larger amounts of personal property than do banks, banks are discriminated against by a supplementary rate based on corporations' personal property This is modified to some extent because those corporations (i e., public utilities) with especially large holdings of personal property are excluded in computing the supplementary rate.

As it turns out, banks probably have not paid a significantly higher rate of tax under the present method than they would have paid if they had been taxed directly on their own personal property, provided that their coin and currency had been treated in the way the law specifies. This has depended, however, in recent years partly on the fact that the 4 percent ceiling on the *in-lieu* tax has been effective, which has reduced bank taxes from what they otherwise would have

[64] *Ibid.*, p. 301.

been. There is, of course, always the possibility that the excess of the computed *in-lieu* tax rate over the 4 percent level will be used as an argument to raise the ceiling. Hence, even if banks are not now paying excessive taxes in substantial amounts, one cannot guarantee that this will continue to be so.

Although it cannot be said that an emergency exists in the way taxes are imposed on banks in California, it would still be desirable to remove the unattractive features of the tax noted above There are two alternatives which can be recommended.

First, abolish the *in-lieu* tax on banks and the personal property tax on corporations. The income tax (franchise) rate on banks and corporations could be raised to make up the lost revenue. The personal property tax has been extensively criticized for its many weaknesses; it is not a good tax either from the ability-to-pay viewpoint or from the benefit criterion; and equitable administration of it presents many problems. If it were abolished, a corporation income tax rate of about 10.5 or 11 percent would be necessary to provide the same revenue. In addition, a system of returning revenue to the local governments would have to be worked out.

The second alternative is to abolish the *in-lieu* tax on banks and allow nonfinancial corporations a full offset for personal property taxes paid to local governments against franchise taxes owed to the state The franchise tax rate could be raised to make up the revenue loss to the state

Even though the courts have upheld the present system of taxing banks in California, there seems to have been very little change in the bank tax situation since April 1951 when the last study of the bank tax was issued. Recommendation number one of that report will serve just as well today as it did when it was made "In the first place, some effort should be made to resolve the difficulties that now exist between the state on the one hand and the banks upon the other in order to create a more satisfactory position for the state with respect to definiteness of revenue and taxpayer acceptance of the law and of administrative procedure under it. The answer is not easily found."[65]

H. Addendum: Leasing Practices of National Banks

During the past 10 years, many industries have found that there are definite advantages in the leasing of production equipment and other personal property rather than the purchase of this property The use of the leasing method frees working capital for other purposes The development of lease-financing companies showed that there was a demand for a form of leasing in which the property is managed by the company leasing it. Prior to March of 1963, it was generally believed that national banks had no authority to engage in personal property leasing. In September 1962, the Advisory Committee on Banking to the Comptroller of the Currency recommended that national banks be permitted to do so under certain circumstances.[66]

[65] *1951 State Senate Report, op cit*, p 223

[66] *National Banks and the Future Report of the Advisory Committee on Banking to the Comptroller of the Currency*, extracts from pages 55 and 58 Personal Property Leases Analysis of the issues The lease has become a popular tool for financing the acquisition of machinery, equipment, fixtures and other personal property by industry and business generally Banks have engaged in such financing, usually on the security (when security is required) of a chattel mortgage and assignment of rentals executed by the lessor Situations frequently arise, however, when it would be to the interest of all concerned that such secured financing be arranged

On March 18, 1963, the Comptroller addressed a letter to the presidents of all national banks, authorizing them to engage in the direct leasing of personal property. The letter expressed the conclusion that:

> The leasing by the bank of personal property acquired upon the specific request of and for the use of its customer, and the incurring of such additional obligations as may be incident to becoming an owner of personal property and the lessor thereof, is a lawful exercise of the powers of a national bank and necessary to the business of banking.

Although banks have proceeded slowly in taking advantage of the authorization by the Comptroller, there have been complaints, from automobile dealers and lease-financing companies in the leasing of automobiles, about this competition from banks. The objection has been made that it is not a proper function of banks to engage in the purchase and lease of merchandise. There has been a further objection that the intrusion of banks into the business of leasing constitutes "unfair" competition for those now engaged in the business.

So on January 31, 1964, Congressman Abraham J. Multer introduced H.R. 9822, which is an effort to counteract the Comptroller's ruling and to restore the status quo prior to March 18, 1963. The bill was referred to the House Committee on Banking and Currency. On February 25 and 26, 1964, hearings were held before the Subcommittee on Bank Supervision and chaired by Congressman Multer.[67]

The hearings disclose that, for various reasons, the enactment of H.R 9822 is not favored by any of the bank supervisory agencies; the Board of Governors of the Federal Reserve System; the Federal Deposit Insurance Corporation; the Comptroller of the Currency; and the National Association of Supervisors of State Banks. The main reason given for not favoring H.R. 9822 was lack of evidence that it was needed [68]

---

by a bank discounting a lease or otherwise acquiring the lessor's interest in the lease and the leased property, without recourse on the lessor. There appears to be some question of the propriety of a national bank providing the latter type of financing since the bank would thereby succeed to the lessor's ownership of, and reversionary interest in, the leased property. The committee feels that this type of financing is a proper and useful method of credit extension for national banks.

The committee further feels that national banks should be permitted to purchase personal property for the purpose of leasing it directly to a lessee. National banks should be permitted to engage in such lease financing in appropriate situations, rather than be compelled to resort to the more cumbersome and less efficient security devices now used. Recommendations: National banks should be permitted to discount leases of personal property, or otherwise acquire a lessor's interest in the lease and the leased property, without recourse to the lessor, and to purchase personal property for the purpose of simultaneous leasing.

[67] Hearings before the Subcommittee on Bank Supervision and Insurance of the Committee on Banking and Currency, on H.R. 9548 and H.R. 9822 (Washington, 1964), 154 p.

[68] Statement of Board of Governors, Federal Reserve System: "The Board does not know how the Comptroller's ruling has been interpreted and applied by national banks or the extent to which national banks and state banks engage in purchasing and leasing equipment and other personal property in an unsafe and unsound manner." *Ibid.*, p. 6.

Statement of Joseph W. Barr, Chairman, Federal Deposit Insurance Corporation: "Because of the few insured banks engaged in the practice of personal property leasing and the absence of any known bank supervision problems in this area, I might say that in the narrow sense the corporation would have little interest in the proposed legislation. To our knowledge, few banks are now engaging in direct leasing of personal property. If future experience should disclose unsafe or unsound aspects of personal property leasing by banks, this corporation would support corrective legislation." *Ibid.*, pp. 8–9.

Statement of Hollis W. Burt, executive vice-president, National Association of Supervisors of State Banks: "We do not have any information at this time as to the extent to which state banks are permitted under state law to engage in this practice and, if so, the extent to which they have, in fact, done so." *Ibid.*, p. 13.

The bill is still in committee. Since it has been opposed by all the bank supervisory agencies it is unlikely that there will be any action on it in its present form

It has not been possible to get much information on the extent of leasing. The only statistics available are in the *National Banking Review*, according to which banks "have written only $5 million on a direct lease basis through September 30, 1963." [68]

A survey by the *American Banker* gives the only other clue on the extent of leasing "On November 13, 1963, the *American Banker* published the results of its survey of more than two dozen leading national banks in seven large cities and reported that only a few banks at this time are ready to enter the leasing field because the 'problems are many.'" [70]

It is entirely possible that a large percentage of the direct leasing so far has been in California. The Bank of America was the first bank to engage in direct leasing and has been advertising aggressively to expand its business [71]

At the present time national banks engaging in direct leasing would have a cost advantage because of their exemption from the personal property tax If other leasing firms have to pay personal property taxes on the leased property and banks do not, this would be unfair competition However, it is not clear that banks are exempt from personal property taxes in this case "The Supreme Court has held that a tax whose economic burden in fact falls on the customers of the bank is not unconstitutional as a tax upon a federal instrumentality. Sales taxes, use taxes, and similar levies may be imposed legitimately upon leasing operations of national banks and on all collateral operations, such as applications for permits to collect sales and use taxes." [72]

Recommendation

The direct leasing of capital equipment by banks is a recent development and is very likely to expand. If banks are exempt from personal property taxes on this equipment, it gives them an unfair cost advantage over other leasing firms. There seems to be very little possibility that this power to engage in direct leasing will be taken away from national banks, either by federal legislation, by legal action, or by the Comptroller of the Currency.

It is recommended that the state make a study of the possibility of taxing the banks on the personal property owned by banks on direct lease It may be pointed out here that this problem could also be solved by the adoption of either of the recommended alternative methods of taxing banks and corporations.

ACKNOWLEDGMENT

In preparing this study, I have received assistance from many persons, some of whom have been identified in the text which follows I am particularly indebted to Dr Ronald B. Welch, Assistant Executive Secretary of the Property Tax Division of the California State Board of Equalization, Melvin Gipe and Peter Tashnovian of the California State Department of Education, Bureau of Education Research, H W Myers, Fresno County Tax Collector, and Vincent T Cooper, Assistant General Manager, County Supervisors Association of California

David R Doerr, Consultant to the Committee on Revenue and Taxation, and the assistant consultant, Raymond R Sullivan, were particularly helpful in directing me to the persons and departments named above

A. *Introduction*

Estimates of limits above which total tax collections seriously begin to impair economic efficiency, incentives to work and invest, and to promote either inflation or recession, have little validity. Dollar ceilings for one decade are overwhelmed by the economic growth of the next. One author has observed,

> "No fixed limits to the expansibility of a particular tax exist Consequently, it is not easy to evaluate the contention that as of a given moment the limits are being approached "[1]

Ceilings set as a percent of aggregate income may also be breached with no apparent effect upon the productivity of the economy[2] While it is not possible to set a dollar figure beyond which California property tax collections impair the smooth conduct of the economy of this state, it is possible to isolate some factors from the mass of data available, in order to give a general impression of the changing degree of pressure on economic activity applied over time by the property tax Much of the evidence is necessarily indirect, for again, there is no formula by which to set a ceiling Governor Brown has said, "There are signs of rising protest over our local property taxes "[3] It is the main task

[1] Kenyon E Poole *Public Finance and Economic Welfare*, New York Rinehart & Company, 1956, p 295

[2] Colin Clark, "Public Finance and the Value of Money," *Economic Journal*, December 1945, develops the notion that tax increases become self-defeating beyond 25 percent of the national income It should be noted that in no year since 1942 has the sum of federal, state and local taxes been below 25 percent of the national income In 1961, the sum was 29 6 percent of national income, yet, economic growth has proceeded at a rapid pace since that time

[3] Governor Edmund G Brown, *California Assembly Interim Committee on Revenue and Taxation, California's Tax Structure 1961, A Major Tax Study, Part 1*, January 1964, p 7

of this study to indicate the nature of these signs, and, where possible, to explain the forces underlying the indications given by the data, that the taxable capacity is being approached.

As a point of departure, it is convenient to define "taxable capacity" as the level beyond which further increases in revenue severely interfere with productive effort and the smooth functioning of the economy In the case of property tax revenues in California, this definition can be stated as "the point beyond which further increases in revenue discourage property development, increase rental prices, discourage voter approval of new bond issues to be financed out of property tax revenues, encourage rising numbers of assessed valuation protests, discourage entrance of migrants, encourage exit of population, encourage delinquencies of due taxes, and cause a large turnover in local boards of supervisors at each election " This is, perhaps, an unduly harsh criterion by which to identify the limits of the California property tax Yet, it is useful to examine the various test points, realizing that other factors than the property tax have likely been at work in determining the numbers that emerge.

Property tax levies by substate governments in California have risen substantially in recent years This study is concerned with the relationship of these levies to evidence of both economic and psychological nature which might suggest an increasing taxpayer awareness of and resentment toward present and expected revenue levels While it may be true that taxpayers always resent the paying of taxes, it is reasonable to think that they will not resent the tax bill presented them in sufficient degree to cause them to react in economically wasteful ways unless the temperature of their resentment runs high In a sense, this study is an effort to provide a thermometer by which to gauge present property taxpayer temperature It therefore undertakes to discuss only the part of what temperature exists that is related to property taxes The relationship between property tax levies and the total tax levy for a property owner can be dramatically illustrated by asking whether the degree of resentment for the property tax would be lowered, in the present circumstance, if taxes of all other forms were abruptly stopped or sharply curtailed in amount The answer probably is that it would be greatly lowered. This answer points to the necessity of attempting to separate effects of the property tax from effects of taxes in general

The time period to which the study applies is, for the most part, the span 1946 to the present, for it is during this period that California's most rapid population growth to date took place, and the demand for services by various branches of government within the state rose most sharply It is also the period in which property tax levies have grown most rapidly, for this revenue provided the funds out of which the great majority of county, city, school, and special district operations are financed The period has seen a recovery from the war-induced shortages in both public and private sectors, increased demands for additional services by substate governments, and large construction outlays for the purpose of answering these demands In one sense, this study has the purpose of attempting to balance the demands for additional property-tax-financed services against whatever resentment may be present against the necessity to pay for these The task of measuring such resentment in the context of rising nonproperty state and federal

taxes is a formidable one. Much of the data to be used in order to weigh the contention that property tax levies are at or near their ceiling, must be of circumstantial nature.

Experience has shown that interview surveys of taxpayer attitudes have typically overstated the degree of irritation with taxes for a variety of reasons. The taxpayer, always resentful of the necessity to pay taxes, looks upon an interview as his opportunity to state in the strongest terms his feeling that taxes (at whatever level) are presently confiscatory, and cannot be increased short of open rebellion. Further difficulties involve the taking of an adequate sample, the design of an impartial questionnaire, and the use of highly qualified public opinion interviewers. For these reasons, this study does not involve a direct survey technique, though such an attempt is not beyond the feasible. Rather, the evidence to be developed is of indirect nature. This method of analysis allows the reader of the study the latitude of reviewing the data herein and evaulating the suggested interpretations of the author.

B. *The Bases of Property Tax Resentment*

Table 1 facilitates the comparison of California property tax levies with similar levies for the United States, in per capita form, as a percent of personal income, and as a proportion of state and local levies, for the period 1946–1962. Column 2 indicates that property levies increased 465 percent, while column 3 shows total state and local property levies for the United States rose 280 percent during this period. Thus, this form of taxation has increased nearly twice as fast in California as in the United States since 1946. As a proportion of state and local taxes collected, property levies in California rose 13 percent (column 8); during the same period, state and local property levies for the entire United States *decreased* 19 percent of nationwide total state and local revenues (column 9). Again, the property tax in California has been increasing in importance as a producer of revenue, while the opposite tendency has set in over the United States.

In per capita terms, the California property tax levy increased 215 percent (column 4), while column 5 indicates nationwide per capita state and local property levies increased 190 percent. Notwithstanding an 80-percent increase in California's population within the period, the California per capita property tax today exceeds that of the United States state and local governments

As a proportion of California personal income, property levies increased nearly 80 percent (column 6), while for the United States as a whole the proportion of state and local levies on property to United States personal income rose only about 56 percent (column 7). Once again, the California property tax has made necessary the allocation of a greater proportion of personal income to such payments than has been true for the United States. In addition, the percentage increase of this proportion has been larger in California than in the United States. Deflated by the gross national product implicit price deflators, the California ratio of property levies to personal income shows a 25-percent rise. This figure is included as an approximation of the "real burden" of the tax—the loss in purchasing power to the taxpayer. It also serves as a rough measure of the change in real expenditure power of the county and local governments of California.

TABLE I

Comparative Statistics of Property Tax Levies, 1946–1962

Year or fiscal year	California property levies (in millions)	Total U.S., state and local property levies (in millions)	Per capita California property levies (in millions)	Per capita property levies U.S., state and local governments	California property levies as percent of California personal income (in millions)	U.S., state and local property levies as percent of U.S. personal income	California property levies as percent of California state and local revenues	U.S. property levies as percent of U.S., state and local revenues	Deflated ratio of California property levies to California personal income
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
1946	$367 7	$4988	$38 46	$35 13	2 29	2.78	30 7	40 4	3.06
1947	465 8	----	47 47	----	2 80	----	33 0	----	3 37
1948	544 4	6126	54 09	41 61	3 09	2 91	34 8	35 5	3 49

Columns 4, 5, 6, United States Department of Commerce, Office of Business Economics Column 10 Implicit price deflators for Gross National Product, (1954 = 100), United States Department of Commerce, Office of Business Economics

It is helpful to note that federal income tax receipts from the United States in total, increased about 180 percent, and corporate income taxes about 80 percent over their level in 1946. These figures may be compared with the previously mentioned 466-percent increase in California property tax levies.

By each measure, California property tax levies have shown increases which have surpassed the increases in tax revenues of other varieties as well as the nationwide average of state and local property taxes. These facts provide some basis for taxpayer antipathy toward further increases in the yield of the tax, and lay the groundwork for further discussion of the bases of taxpayer resentment.

So far, the only concern has been with the taking of revenue It must be noted that a large proportion of the revenue taken is returned to the public sector of the locale in which it has been raised. To the extent that salaries of public servants are dependent upon the revenue raised, and that services and materials are purchased in the state with property tax revenue funds, these expenditures presumably are an offset to taxpayer indignation, among those whose incomes are related to the level of such expenditures In this scheme of things, why is it that the taxpayer becomes dissatisfied when property taxes rise? There are two general reasons (1) There are relatively fewer direct recipients than payers of property tax revenue (2) The taxpayer loses the identity of the money he pays as property taxes, with the return in tangible and intangible form, in which the revenue reappears in the public sector of his locale Further, he does not typically feel a proprietary interest in the goods and services made available in the public sector with the proceeds of his own revenue On balance, therefore, the owner of property, faced with the necessity of meeting payments on a mortgage of the property, uncertain of the nature of the return he gets for the taxes he pays, and uncertain of the direction his future income will take, becomes anxious as he observes over the years, the upward trend of both rates and assessments, shown in Table 1 It is in this setting that the property tax finds itself today In addition, it has been the experience of property owners that as the state's population increases, the dollar value of services demanded by the population tends to expand proportionally.[4] There is present then, a component of anticipation of future revenue increases that worries the California taxpayer. Not only the present level, but the probability of future increases, helps determine the degree of his resistance to property taxes

A further difficulty for the property tax involves its inability to vary in amount with the cycles of taxpayer income, so that in the event of a serious recession, the property owner is likely to experience a constant dollar amount of taxes to be paid out of a dwindling dollar income This is true because of the impossibility of keeping assessments exactly current with the change in market value of property One author concludes,

> "Continued high property tax collections in depressions take purchasing power that would otherwise be spent and also cause

[4] Southern California Research Council, "The Cost of Metropolitan Growth," Pomona, 1954, has estimated the cost of capital construction required to provide such services as streets, water, sewers, and schools to be $17,000 for each new family arriving in a county Noncapital costs must be added to this figure

serious individual sacrifices In inflationary periods the lag in property tax collections creates problems for the local governments and aggravates the inflationary tendencies "[5]

In general then, there are several bases upon which taxpayer resentment may set in The taxpayer resents inequitable treatment He knows that his $17,500 property on which he has a $15,000 mortgage with 15 years to run, is taxed in the same amount as his neighbor's $17,500 property which his neighbor owns free and clear The personal wealth of the mortgaged property owner is considerably less than that of the unmortgaged property owner, yet the tax paid by each is the same. Further, disparities in the types of wealth owned by taxpayers receive inequitable treatment by the property tax Owners of stocks and bonds, for example, pay no tax on these assets, while those who have a home as an asset are taxed

To the extent that the wealth of a person is largely in the form of a home his expenditures for the home are large relative to his income, so that the taxes on his home are regressive relative to his income A 1954 study verifies that property taxes for the United States are regressively distributed.[6] To the inequities already mentioned, must be added those which result from inaccurate assessment, that creep in despite diligent efforts of assessors to prevent them

Another barrier to increasing property taxes is the proposition that the older segment of the population, forced to live within a fixed dollar income, and unable to defend itself against tax increases by raising the prices of its output, cannot continue to experience increases in its tax load. In the context of rising property values of shelter and generally increasing costs of living, this portion of the taxpaying community reaches its ceiling sooner and more definitely than a portion which is able to increase its dollar income proportionally with increases in property taxes In terms of ability to pay property taxes, it is clear that older persons are disadvantaged Further, it is contended, there are indications that the elderly do not require services of various kinds which are financed through the property tax, the services of schools for example So on the benefit and equity principles, it appears that the aged may presently be victims of property tax practices in California A later section will investigate this contention, again, in the light of its basis for taxpayer resentment

The foregoing supports the view that the degree to which each of the considerations mentioned is, or is thought by the taxpayer to be, inequitable, affects his willingness to pay the property tax So far, this study has developed the general background for the contention that property taxes are presently resented It is necessary to develop the evidence that resentment is widespread The most convenient way to do this is to present relevant data for each of the points raised initially in the definition of "taxable capacity." The first of these relates to the discouragement of property development

[5] John F Due, *Government Finance*, Richard D Irwin, Inc., 1963, p 374

[6] R A Musgrave, "The Incidence of the Tax Structure and Its Effects on Consumption," in Joint Committee on the Economic Report, *Federal Tax Policy for Economic Growth and Stability*, Washington, D C U S Government Printing Office, 1955, p 98 shows the regressivity of the property tax in the chart cited

C. The Development of Property

It is useful at the outset, to visualize how a property owner can defend himself against an increase in his property taxes. If his income, the source from which he pays the taxes, can be increased by the amount of the increase in his property taxes, by working harder or in some way increasing his productivity, then he is able to defend his after-tax income against tax increases. If his income is generated substantially from rental receipts, perhaps he can defend his money income level by raising the rents he charges. In this case, the tax increase is translated directly to an increase in rental prices, if the demand for rental occupancy allows this. An inability to raise rents would lead to a third line of defense, involving the sale of the assessed property to a new owner, if one could be found at a satisfactory price If the new owner were unable to raise the rent he could charge, then he would have to be willing to accept a comparatively lower yield on the property than the former owner. An example will clear up the relevant points.

Suppose an untaxed property with $10,000 market value yields net yearly rent of $500, affording an annual return of 5 percent. If a $200 yearly property tax is imposed on the property, causing the annual yield to fall from 5 percent to 3 percent, the owner can attempt to increase his rent $200 and maintain his original 5 percent yield by passing the tax along to the tenant. Or he can sell, attempting to realize the same price as he might have obtained before the tax increase, when he capitalized the property at 5 percent But a prospective buyer of the property, able to realize $300 yearly income from the property, would only be willing to pay $6,000.

This would be the result if the prospective purchaser of the property thought the tax on the property would remain at $200 for the period over which he wished to capitalize the yearly rental income. However, if he thought the property tax likely to rise above the $200 level, he would subtract the capitalized increase from his purchase price

It should be noted that capitalization by property owners occurs only if the property tax cannot be shifted, so that it lowers the rate of return on the property. To the extent that the tax does not impact equally upon all types of property, the market value of taxed property is depressed relative to untaxed property. Owners may be able to escape the capitalization penalty by shifting the tax forward to the tenant so that the proportional rise in rents matches the proportional rise in taxes on the property. If part of a tax increase can be passed along to the renter, the owner is able to avoid part of the capitalization loss. Capitalization provides a basis for property owner resentment toward increased taxes. For if capitalization of the tax can occur, the owner is confronted by an increase in his taxes if he retains ownership, and a decrease in the price the property can command in the market if he decides to sell. Evidence bearing on the likelihood of capitalization of California property taxes and its attendant basis for taxpayer resentment of the tax will be subsequently introduced in the section which discusses the cost of housing.

Offsetting capitalization factors in the determination of the price of property, is the prospective purchaser's estimation of the likely increase in the rental price of the property. This is determined by the

SOURCES Housing Starts, U S Department of Labor, Bureau of Labor Statistics, prior to 1959, Department of Commerce thereafter Population, California Department of Finance, Budget Division, Financial and Population Research Section

change in population and the level of income of the area, neither of which is within the ability of the purchaser to estimate precisely for a horizon very distant Yet, there can be little doubt that both the increase in California's population and the increase in family income of residents has, to a large degree, supported the base from which increased property tax yields have become available

If property tax levies, as they approach their ceiling, cause property owners to neglect property improvement as a means of avoiding increases in the assessed valuations, this would pinpoint statistically the impact of property levies on development If improvements decline with historically rising assessments and levies, this would provide an insight into taxpayer reaction to increased taxation, and further, would indicate one result of property-owner indignation toward taxes

Column 2 of Table 2 shows the yearly level of one kind of improvement—private residential housing starts in California since 1948 The trend of these starts is clearly upward, though irregular There are several apparent reasons for this irregularity The large increase in residential starts in 1950, following the recessions of 1948–49, reflects the catching-up process on construction foregone during the Second World War The Korean Conflict caused a renewed reduction in 1951 starts The 1953–54 recession, and an accompanying increase in net migration of California (column 6) had a small net effect upon starts Column 5 of Table 2 shows, for example, an erratic number of starts per thousand of California population from 1952 through 1955. (This series will be discussed in greater detail below) By 1956, rising costs of construction and financing led to a decline in the absolute number of starts, which continued into the recession of 1957–58 However, as monetary conditions became less stringent in this recession, the money market allowed an increase in both California and nationwide housing starts It is useful, therefore, to compare California starts with those of the United States, for this technique makes possible at least partial isolation of effects unique to the state

Column 4 gives California starts as a percent of United States starts, combining columns 2 and 3 During the years 1948 through 1963, California starts increased 95 6 percent above their 1948 level, while United States starts rose 70 9 percent As a percent of United States starts, California starts reached their highest point in 1963, when 18 6 percent of nationwide starts occurred in California This figure does not indicate the absolute effect of California property taxes, but it shows that in relation to the United States, other factors favorable to continuation of California property development have swamped the rise in property tax levies, leading to a pronounced rise in the 1963 California-United States ratio Except for the modest downturn in this series in 1960, it has risen rapidly since 1959

Thus, housing start figures do not suggest that fear of present levels of property taxes have interfered with the smooth functioning of the California housing industry This point is even more dramatically seen in the comparison of proportions of total property taxes levied in California to total state and local revenue of the state with the similar proportion for the entire United States The data have been shown in Table 1 In 1946, property taxes accounted for 40 4 percent of total

United States state and local revenue In 1962, the nationwide proportion was 32 7 percent, a decline of 7.7 percentage points. California, in contrast, levied 48 4 percent of total state and local revenue in property tax form in 1946, and 49 percent in 1963, an increase of six-tenths of a percentage point While the United States ratios have been declining since 1946, California's ratios have risen. Thus, if it can be shown that property tax levels threaten the smooth functioning of the California economy, the preceding data suggest that the *trend* of these levies over time, in addition to their absolute level, may be responsible for watever apprenhension attaches to them. The contrast of California experience with that of the United States underscores the basis for apprehension

As new residents arrive in California, swelling the population base, it is reasonable to expect this population increase to cause a decline in housing starts per thousand population in the state There is no clearly discernible trend in starts per thousand population for the period 1948–63. The series is erratic, ranging as high as 18.3 in 1950 and as low as 11 7 in 1957 Net yearly migration into California (column 6) reached a peak in 1957, but has not fallen below 325,000 since 1955 Column 9 expresses yearly changes in migration, relating these to yearly changes in housing starts (column 7) and to changes in starts per thousand population (column 8) Both of the last mentioned series bear the maximum relationship to changes in migration when they are lagged two years behind the change in net migration, to allow the housing industry to recognize an increased market for housing and to undertake the details which precede the actual start of construction. Casual observation of the three series supports this lag. Yet, even in their closest (lagged) relation, changes in migration explain only 5 percent of lagged private residential housing start changes, and less than 1 percent of the changes in the lagged starts per thousand population. Further, changes in migration bear a negative relationship to changes in California starts as a percent of United States starts, lagged two years In each case, it is clear that yearly changes in net migration have had little to do with yearly changes in the number of housing starts It is equally clear that recent increases in property tax levies have not effectively discouraged migration into the state, there being persuasive positive aspects which make California residency, on balance, relatively attractive to potential immigrants Further, the high level of California starts as a percent of United States starts in 1963 indicates that the level of property taxation has not effectively discouraged absolute levels of improvement to property in the state.

Had property taxes increased at a rate in excess of the rate at which rents and property prices could be increased, and the developer had been unable to pass along to the tenant or ultimate buyer of the improved property the increase in tax costs, then development of property presumably would have proceeded at a less rapid pace than it has. In other words, so long as the housing market would support the increase in housing prices which in part stemmed from increased property taxes, development proceeded, and newly arrived migrants into California paid the price of at least the housing standard to which they

had become accustomed in prior locations. Although the year-to-year relationship of housing starts to net migration has not been a close one over the decade 1940–49, the population of California increased 53 3 percent while the number of dwelling units increased 53 4 percent In the decade 1950–59, the corresponding figures were 42 9 for California population and 52 2 for the number of dwelling units. In this decade, development of dwelling units outran the arrival of new population.

Thus, over two decades, it does not seem to be true that increasing property taxes have restrained the improvement of property by construction of housing It is likely that the arrival of new residents into the state has been the determining factor in encouraging property development, and the encouragement has apparently been more warmly received in the 1950–59 decade than in the prior decade It is safe to conclude that rising property taxes have not restrained the development of property with respect to the population to be housed Further, rising property taxes also failed to affect the rate at which new residents entered the state to live and work, in comparison with earlier similar rates But the possibility can legitimately be raised that newly arrived residents entered the state's population either in ignorance of the relatively high property taxes in California, were attracted by other more attractive and positive features of the state, or were transferred by their employing firm and moved to California out of necessity In any of these cases, the decision to locate in California was made irrespective of the level of property taxation. But it can be supposed that the response of new residents to their property tax bills in California is, typically, one of surprise, perhaps of indignation The reason for this is, as outlined in Table 1, that per capita California property taxes are higher and have risen more rapidly than those of the United States as a whole.

If the preceding analysis is correct in stating that property tax increases have been passed on to buyers or tenants by builders or owners, then the prices paid for housing in California could be expected to have risen relative to those in the United States. The study now concerns itself with this question.

D. The Cost of Housing

Table 3 presents yearly data describing the costs of shelter in the United States, California, Los Angeles, and San Francisco for the years 1947–63 These index figures are compared with the total Consumer Price Index figures, year by year They show a California rental price progression which has proceeded from a level below the rental price for the United States in 1947 to a 1963 level which surpasses that of the United States. Put in other terms, if the California rent index had increased in the same proportion as that of the United States, it would have only risen to 100 6 instead of 112 4 in 1963. Conversely, had the U.S. rent index increased proportionally with the California index, it would, in 1963, have been at a level of 119.3, instead of 106.8. In this period, while U.S rent prices increased 55 5 percent above their 1947 level, California rents increased 73 7 percent As previously indicated, one explanation for this difference lies in the ability of

TABLE III

Consumer Price Index, With Housing and Rent Components, for the United States, California, Los Angeles, and San Francisco, Yearly, 1947–1963. (1957–59 = 100)

Year	Total index				Rent component				Housing component			
	U S	California	Los Angeles	San Francisco	U S	California	Los Angeles	San Francisco	U S	California	Los Angeles	San Francisco

property owners to pass on to tenants the increases in property taxes charged to owners During the same period, California property levies as a percent of California personal income increased 79 3 percent, similar to the increase in the proportion of personal income of Californians which a large segment of the population spent for property taxes and rent [7]

Turning to the housing component of the CPI, it is not so apparent that this category of costs has risen as rapidly as the rent component. Although the California housing index increased 50 percent from 1947 to 1963, and the index for the United States increased 43 percent, the California rise in costs of housing has not so far outstripped the U S. rise as in the case of rent. Instead of 106 2 percent of the 1957–59 average, the housing index for the United States would have been 112 had it increased in the same proportion as the California housing index since 1947. But the 3 3 percentage point difference in the 1963 indices of United States and California is slight.

The reason for the lag in housing costs behind rental costs lies in the definition of the housing index This index includes, in addition to rental costs, the costs of acquiring and operating homes, which involve such items as financing charges, insurance, gas and electricity, taxes, repairs, fuel, house furnishings, and household operation, many of which are far removed from relationship to the costs of housing as affected by property tax levels In total, the housing index items are estimated by the CPI to account for about one-third of family expenditures by those families to which the index applies [8] Thus, relatively little importance can be attached to the housing index as a device by which to measure the impact of property taxes The rental index, which pertains only to the cost of rent, does not obscure this effect to the degree that the housing index does Although the latter includes a direct accounting of the property taxes which accrue to housing, the importance of such taxes is diminished by the other items which are included, so that this housing index is a relatively insensitive measure of the tax impact on the cost of housing

Among those persons who have elected to purchase shelter, many have been recipients of California Veterans' Farm and Home Loan Program financing aid, made available to California veterans of military service and supported by general obligation state bonds [9] In addition to this form of subsidy, the California veteran is eligible for a yearly exemption of $1,000 on assessed value to property so long as the total tangible property he owns is not in excess of $5,000 [10] Thus, the state has encouraged veterans to purchase shelter, both by direct and indirect subsidy. In doing this, it has increased the property tax base of dwellings owned by veterans If California property tax limits are being reached, the altruism of the State of California has inadvertently been converted to an invitation to tax resentment on the part of veterans, partly *because* of the veteran's exemption

[7] This evidence tends to indicate that property tax increases are passed on from owner to tenant

[8] U S Department of Commerce, Bureau of Labor Statistics, *Consumer Price Index*, various dates

[9] The federal government has also been active in the underwriting of various loans for the purchase of residences

[10] *California Constitution*, Article XIII, Section 1¾.

An additional aspect of Table 3 is of interest Comparison of the costs of all items in the CPI relating to the United States and to California reveals an increase of 37 percent in the U S index since 1947, and an increase of 42 percent for California The all-item index, while presently higher in California than the United States, is not greatly so, and California's increase since 1947 closely parallels the U S experience Only in the rent category have California prices risen very much more rapidly than U S prices If this behavior could be ascribed to increased demand for housing brought about by the growth in California's population, then why have costs other than rent in California not shown increases surpassing those of the U S all-item index by as wide a margin as the California rent index shows? Demand for other goods and services has also increased in California as the population has increased The small difference between the United States and California all-item indexes of goods and services does not support the view that rising rental costs have resulted only from increases in California population Other factors have also been present, among which, increases in property taxes presumably rank high in importance If increases in property taxes have appeared as increases in California rents, and if this fact is widely known among tenants, then it must also be true that the association between rising property taxes and rising rents has been made in the mind of tenants If so, the analysis has shown that increases in taxes have not caused resentment among homeowners alone, but have also become a source of what resentment exists among those who rent their shelter It is not hard to conjecture that what tenant resentment generated in this way is present, has become more vehement since 1959 Prior to that time, the California rent index had been below the U S rent index, and the relative price advantage which California tenants enjoyed had persisted at least since 1947, as Table 3 indicates After 1959, however, California rents began a climb that has been persistent in its acceleration past the U.S rent index In the same period, California property levies have been growing at an increasing pace

E *Assessment Valuation Protests*

The State Board of Equalization, through its Assessment Standards Division, is charged with the duty of assisting county assessors in the task of maintaining high levels of intracounty equalization as well as equalization among counties as stipulated by the Constitution California was one of the first states in centralizing this duty, which makes possible the minimizing of tax resentment arising from gross inequalities of assessment at the county and subcounty levels Each year, the BOE samples randomly by stratum of property type and value within one-third of the counties of California The sample is expanded to estimate the full cash value of property in the sampled counties which is subject to the general property tax This estimate is then projected to the lien date of the county rolls through use of certain economic indices, which, in conjunction with the current assessment roll totals

by county, gives the ratio of assessed to full cash value of real property in the counties [11] These are the ratios presented by county for the years 1955–63 in Table 4, which includes the statewide average and range within which the ratios occurred each year.

Since 1955, Board of Equalization has issued 19 orders to counties to change the county ratio of assessed to cash value, in order to more equitably distribute the tax burden among counties.[12] In these 19 cases, the board felt that the assessment ratios of the counties involved had fallen outside the tolerance zone of deviation from the statewide average ratio Thus, in 522 reviews of county assessment ratios, the board has been convinced of the necessity to raise a county's ratio in only 3.6 percent of the cases, indicating acceptable similarity of assessment results among counties in 503 cases The range of county ratios narrowed and their standard deviation decreased in each fiscal year, except in 1956, 1959, and 1963, as Table 4 shows.

If the ratios were normally distributed among counties, the average of the ratios, plus and minus two standard deviations, would include about 95 percent of all ratios in that year. Except in 1959, the yearly number of counties within two standard deviations of the statewide average of ratios is at least 95 percent of the 58 counties. Further, the standard deviation of ratios shows a marked tendency to decline from year to year, indicating increasing uniformity of assessment among counties This trend is to be applauded, however, it is difficult to understand why there should be any variance at all in ratios among counties A county is surveyed triennially by the board under Section 1815 of the Revenue and Taxation Code of California Thus, two-thirds of the counties are not surveyed in any given year Their total full cash value of locally assessable tangible property is estimated under Section 1817 by the board If equity in assessment among counties is to be served, it is not clear why the board should not, at this point, impose equal ratios on all counties for that year, so that the ratio on which taxes are computed, could be the same for all counties

When assessments on the various classes of real property are examined, the equity effects are less satisfactory. Although, as shown above, the average of assessed to cash value for all types of property is relatively uniform among counties, there is a basis for the impression of inequitable treatment of owners of various types of property. Table 5 outlines the nature of the problem. In the two years shown, 1956 and 1961, the ratios of assessed value to market price at which property changed ownership show considerable variance between property types within each year. Further, the ratio of assessed to sales value changed differentially between 1956 and 1961. The nonfarm residential ratio declined only one-half percent, while the ratio for vacant lots decreased 21 3 percent, the acreage and farm ratio decreased 14 7 percent, and the commercial and industrial ratio fell 9 8 percent Although

the Board of Equalization assists the counties in equalizing assessments at one point in time, it does not necessarily undertake to equalize various assessment to cash value ratios *through* time In consequence, the difference in the changes in ratio among types of property through time may engender resentment of some owners toward the assessment outcome Table 5 provides a basis for this contention. It is in this task of equalizing assessment ratios among property types through time that the board of equalization and the county assessor face the greatest difficulty. For in the attempt to assess at highest and best alternative property use, the assessor necessarily involves himself in a certain amount of guesswork There is, for example, no established market price for an orange grove adjacent to an industrialized area, so long as the grove has not changed hands in a fairly recent period The assessor, to discharge his duty of estimating the price the land could command in the market if it were to be offered as an industrial site, must value the land as though it were in fact available for industrial development, if it is his professional opinion that this is the use which would yield the greatest return. Relevant to this decision, the United States Supreme Court found that,

> ". . . the value of property results from the use to which it is put and varies with the profitableness of that use, present and prospective, actual and anticipated. There is no pecuniary value outside of that which results from such use The amount and profitable character of such use determine the value and if property is taxed at its actual cash value it is taxed upon something which is created by the uses to which it is put." [13]

Clearly, however, the task of determining highest and best use of property cannot always be objectively undertaken The assessment and equalization outcome, apart from the question of the *level* of property taxes, is of great importance to the capacity of the taxpayer to tolerate the property tax. One estimate of the equity of the assessment procedure for all types of tangible property can be obtained through a summary of recent California protests by property owners to county boards of equalization over assessed values, their disposition, and the amounts involved in the appeals. This aspect deals with owner recourse to assessed valuation, an integral part of the equity of the entire assessment process.

Table 6 presents a record of such protests heard by county boards of equalization or tax appeals boards during the period 1959–63. The number of protests within this five-year period exceeded 17,000, although their number in 1963 (2,838 was 13 percent below that of 1959, and was the lowest in any of the five years The number of reductions granted under Sections 1607–11 of the Revenue and Taxation Code of California rose 94 percent, from 872 in 1959 to 1,693 in 1963, indicating an increasing willingness of county boards to sympathize with property owners in their appeals to have assessed values lowered This observation is further bolstered by the 122-percent increase in the ratio of reductions to protests, which occurred during the period The number of counties making reductions each year increased 75 percent, from 20 in

[13] *Cleveland, C C, and St L Ry Co v. Backus*, 154 U S. 445 (1894)

1959 to 35 in 1963. During the same period, the number of counties hearing protests increased only 12 percent, from 41 to 46 Four counties received no protests.[14] The average value of reductions increased 30 percent, though the total of such reductions rose 153 percent

The preceding summary figures indicate an increase in all phases of the assessment protest procedure except the number of protests heard, showing either a general acceptance of the assessment levels and procedures set by assessors, or a reluctance on the part of some property owners to formally protest assessment levels. It is significant that in 1963 the statewide number of protests declined to its lowest level for the five-year period, the dollar value of reduced assessments reached a five-year peak. An investigation of the facts surrounding this large increase in the average size of reduction per protest indicates considerable variation in assessment reduction practices among the counties, as it will be subsequently shown

As indicated by Table 6, the statewide number of protests per 100,000 population has declined every year except 1961, falling from 21 in 1959

TABLE VI

Summary of California County Boards of Equalization in Dealing With Protests of Assessed Property Values During the Years 1959 to 1963

	1959	1960	1961	1962	1963	Five-year average	Percent increase 1959-1963

to 16 in 1963. As the state has grown, the "propensity to protest" assessed valuations has declined. Offsetting this tendency in some degree, have been two factors The statewide probability of obtaining a reduction, the ratio of number of reductions to number of protests, has more than doubled in these five years, rising from 27 per 100 protests in 1959, to 60 in 1963. In the latter year, more than one-half the protests resulted in some reduction. How large a reduction is indicated by what might be called the "propensity to reduce," the ratio of statewide total reductions in assessed value in a year to the number of protests This average dollar reduction per protest has increased from $1,904 in 1959 to $5,507 in 1963, and its course is clearly upward Both of these factors

[14] Alpine, Amador, Mariposa and Sutter Counties, whose 1960 combined population was 48,831

have tended to result in the accrual of a certain amount of concentration of growing economic benefit (assessment reduction) in the hands of a declining number of property owners.

The degree of concentration can be estimated by the relationship of total dollar reductions to the number of reductions—the average size of reductions obtained. This average has risen from $7,097 in 1959 to $9,232 in 1963, and represents a 30-percent increase, after having been as high as $11,990 in 1960. Because the average residential property is not subject to assessment misquotation of such magnitude, it must be concluded that owners of relatively highly valued property have tended to receive a preponderence of valuation reductions. Several examples support this point; one 1959 reduction in Yolo County was for $112,000, six in San Francisco County in 1962 averaged $309,423, and one in Sierra County in 1963 was for $64,600. Reductions of these magnitudes obviously involve property of very high total value, and likely apply to large enterprises, whose staffs are equipped with persons trained in presentation of protests of this and similar nature. Their success is underscored by Chart 1 and Table 7 which show concentration ratios for each of the five years for which data are available. The ratios shown are the percentages of total statewide dollar assessment reductions absorbed by the various percentages of the number of reductions. For the five years, the 10 percent of reductions having the largest average

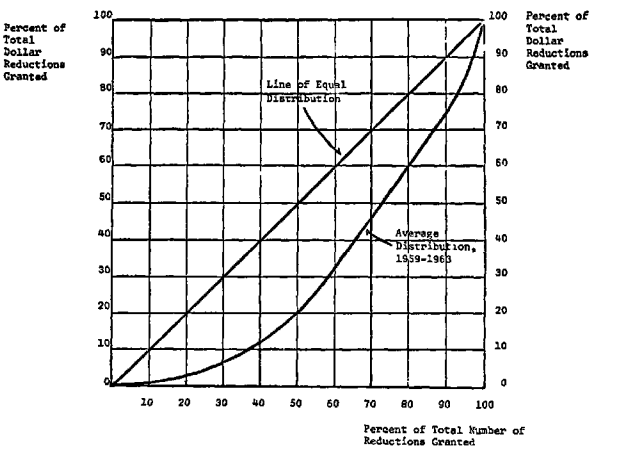
SOURCE *Activity of County Boards of Equalization, 1959–1963*, an unpublished table reporting results of a survey taken by the County Supervisors Association of California in 1964, and made available by Vincent T Cooper, assistant general manager, Sacramento The author is responsible for summary computations.

value provided an average ratio of 25.52 percent. Put another way, if the 10 percent of the *number* of reductions having the largest average dollar value is divided into the total *dollar amount* of reductions, the result is 25 52. The yearly ratios reached a low of 21 0 in 1960 and a high of 28 4 the following year. The number of years involved is too small to suggest a trend toward increased concentration of the benefits of reductions in favor of large property owners, but they do suggest that the total amount of reductions is biased strongly in favor of the large dollar reduction

CHART 1

Lorenz Curve Showing Average Degree of Size Concentration of Assessment Reductions in California During 1959–1963



SOURCE: Derived from Table VII

This bias is not equitable to the owner of moderately valued property, and is suggested as one reason for the decline in number of protests heard by county board. The Lorenz curve of Chart 1 is the most conservative possible statement of the degree of concentration of assessment reductions toward large values. The reason for this conservatism is found in the nature of the available data, which show only county totals of the number of protests heard, number of reductions, and dollar reductions. Chart 1 is conservative because it is based on *average* dollar reductions per county. Thus, in 1963, the Los Angeles County Board of Equalization granted 821 reductions out of 914 protests. The total reduction was $10,494,200, and the average dollar reduction per reduction was $13,784. The Lorenz curve embodies the assumption that each of the 821 reductions granted was $13,784. At the extreme, is possible that 820 reductions of one dollar each were made, and that one reduction of $10,493,380 filled out the total. This would indicate a very large concentration in the county; one reduction would account for 67 percent of the statewide total of dollar reductions in that year.

It is reasonable to argue that if individual assessment reductions were available for all counties, the concentration shown in Chart 1 would be even greater than the chart reflects. It is also reasonable to argue that the relatively high average concentration in favor of large reductions (and therefore in favor of owners of property the value of which is high) has been associated with the failure of protests to keep pace with the growth in dollar value of total reductions.

The following letter, taken from a California newspaper, although wrong in criticizing the county board of equalization or the assessor for his statement that "there were less requests for adjustments due to fewer complaints," catches the central idea of the above argument.[15]

> Editor of the Bee—Sir: I have attended the hearings of the board of supervisors [sic] on property appraisals and the protests by property owners on the values set on their property. Those protesting are wasting their time doing so as the board has no intention of changing as indicated by its actions at these hearings
>
> For example, a chicken raiser with property at the north end of McClellan Field stated he had offered to sell his land at $20,000 or $25,000 as it was strictly undesirable due to the location and the assessor's office had it assessed at $30,000 even though the deputy stated to Mr. Barbaria he had no idea how he arrived at this figure The property owner's request was denied.
>
> Another property owner sold a small parcel to the county as demanded by the county for a sewer pumping plant and those in the purchasing part of the county stated the land was worth $5,000 per acre yet the assessor has this same land assessed at $17,000 per acre The property owner's request for reduction was denied without explanation.
>
> The assessor's statement, "there were less requests for adjustments due to fewer complaints," is strictly unfounded as the people have learned that the board of supervisors will only listen to the assessor and his large staff and the taxpayer is only wasting his time by appearing
>
> A grand jury review of this department is needed right now
>

Although the owner of less highly valued property may have been discouraged from formally protesting assessed valuations by his relative lack of success in obtaining reductions evident in Table VII and Chart 1, it is also apparent that his "propensity to protest" has been affected by his general level of economic well-being For example, statewide protests per 100,000 population were steady at 21 in 1959 and 1960, but they rose to 26 in 1961, a year in which the California unemployment rate rose from 5 8 to 6 9 In the following year, the protests per 100,000 declined to 18 The implication is that protests are stilled by prosperity, when marginal effort in increasing income is more adequately rewarded than it is in protesting tax levies, while in recession, when the marginal tax dollar takes on a relatively greater taxpayer disutility, the reward for successful protest becomes more attractive This conclusion is supported also by the average reduction in each year, which reached its lowest point in 1961, when a large number of small protests were heard

Turning now to an analysis of the results of protests and reductions by counties, a disclaimer is necessary. It is not the purpose of this section of the study to point an accusing finger at various county boards, for the very diversity of situations among counties should preclude this. However, in the county-by-county analysis, it is possible

[15] Letter to the editor of the Sacramento *Bee*, August 5, 1964

SOURCE *Activity of County Boards of Equalization, 1959–1963*, an unpublished table reporting results of a survey taken by the County Supervisors Association of California in 1964, and made available by Vincent T Cooper, Assistant General Manager, Sacramento

to indicate why the statewide averages have behaved in the fashion indicated above, to identify those counties which appear to have been instrumental in contributing to the shape of the Lorenz curve previously shown, why property taxpayers in some counties have been at a disadvantage in making their protests effective, and to state that the variation among counties is sufficiently large to have given rise to the sort of impression indicated in the preceding letter.

Column 3 of Table 8 lists the number of protests per thousand of the 1960 population of each county Measured in this way, four counties have very high "propensities to protest" Lake, Marin, Mono and Placer Counties show that protests per thousand are above the mean more than two standard deviations for the 54 counties in which protests were heard during this five-year period, and that Calaveras, Sacramento, Sierra and Tulare Counties were more than one standard deviation above the 54 county mean Taken alone, the "propensity to protest" reveals only one side of the assessment reduction market—the demand for assessment reductions Apparently, this demand has not been structured in a very consistent manner from county to county The average is 1 81 protests per thousand population, but the standard deviation is 2 7, which, considering a floor of zero protests, indicates a pronounced skew in the distribution of propensities among counties toward those with relatively high propensities

Looking now at the side of the market which describes the supply of reductions in response to the demand for reductions, column 5 of Table 8 shows the probability that a protest resulted in a reduction. This column is the ratio of number of reductions to protests for the five-year period Only one county, Monterey, had a probability that was more than two standard deviations above the average of 42 counties which heard 10 or more protests Seven counties were more than one standard deviation above the same average It is significant that only one of the eight counties with high propensities to protest (more than one standard deviation above the average) experienced a probability of reduction (in response to protest) in excess of the average probability Marin County, with a propensity to protest of 9 16, experienced a probability that 51 percent of protests resulted in reductions. The 42-county average was 33 percent.

At the other extreme of the distribution of reduction probabilities, lie nine counties showing a propensity to reduce more than one standard deviation below the county average of which they are a part [16] In aggregate, these nine counties heard 1,335 protests and granted 18 reductions, for a combined probability of 0 013 In these nine counties during the period indicated, about 13 out of every thousand protests resulted in a reduction of assessed valuation One county, Tulare, heard 1,010 protests in 1959 without making a reduction Special circumstance undoubtedly entered here, but if the Tulare experience is omitted from that of the counties more than one standard deviation below the 42-county average, the combined number of reductions in ratio to the number of protests shows that 43 in every thousand protests resulted in reductions, where the 42-county average (including

[16] Butte, Fresno, Kern, Lassen, Modoc, Napa, Siskiyou, Solano, and Tulare Counties

these low-propensity counties) was 330 per thousand protests With no judgment on the acceptability of assessment procedures in these eight counties, and referring only to the average experience of the 42 counties, it is not difficult to conjecture that property owners in these eight counties have reconciled themselves to acceptance of the assessed valuations which they receive in the mail.

Three additional aspects of Table 8 remain to be discussed. Each relates to the dollar amounts of total valuation reduction in the five-year period. Among 43 counties which allowed reductions in assessed valuations during this period, column 6 shows that the per-resident value of the total dollar value of reductions was very high in Del Norte, Mono, and Sierra Counties, and was more than one standard deviation above the average of the 43 counties in Placer County. It is not possible to state categorically that the per-resident value of reductions were unjustly biased in favor of large reductions. All that is possible is to observe that the per-resident figure in these counties has departed noticeably from the statewide average among those counties which allowed reductions The three counties which departed from the statewide average most significantly were counties in which population did not exceed 18,000 in 1960, and two of the three had populations under 3,000. Placer County, with population in excess of 50,000 and pre-resident reductions totaling $14 93, had a high "propensity to protest" and a below average "propensity to reduce."

Continuing with the value of reductions granted by counties, column 7 of Table 8 shows the dollar value of reductions per protest (column 9 divided by column 2), and column 8 the value of reductions per reduction (column 9 divided by column 4). In the first category, San Francisco County, granting reductions to 42 percent of protests, showed the highest per-protest reduction value in the state. The average value of protests was $68,602. The average dollar reduction was $152,884. Yolo County was the second county with very high ratios, $18,666 and $112,000 respectively, but it should be noted that only one reduction was granted during the five years, in this county Tehama County shows a per-protest value of $31,265, more than two standard deviations above the statewide average, but that county heard only one protest in the five years covered. The value of its average reduction was less than one standard deviation above the statewide average

The spread between average value of reduction per reduction and average value of reduction per protest for all counties hearing at least 10 protests and allowing at least one reduction, was $6,128, as shown in column 10. Counties hearing less than 10 protests were excluded as being unrepresentative in showing the disposition of protests. Of the 39 counties which fall in this over-ten protests category, only San Francisco County was more than two standard deviations above the average spread of the 39, and Modoc County was more than a single standard deviation above the average Had all protests been granted reductions in these counties during the five years considered, the difference described above would have been zero, as in Glenn and Tehama Counties. In San Francisco and Modoc Counties, the difference between the average value per reduction and the average value per protest was

enough larger than the statewide average difference to indicate bias toward the large reduction. In other words, they tended to allow relatively large dollar reductions in assessed valuation, as a percentage of the total number of protests heard. And although in the case of Modoc County, the "propensity to reduce" was only 0.08, and only one reduction was allowed, it was of sufficient size to cause the spread of ratios to be large relative to the statewide average. San Francisco County, with a "propensity to reduce" of 0.45 (45 in 100 protests resulted in reductions) also allowed a large spread in the ratios of dollar value of reductions and protests.

The preceding figures tell nothing of the protests which were disallowed. It is possible that the average assessed valuation of property on which the protest was denied, may be even larger than that on which the protest was allowed. However, if this were the case, the point could still be made that protests tend to be undertaken by owners of large-value property. The protest mechanism either is not familiar to owners of small-value property and they therefore do not, in the main, avail themselves of this machinery, or they are not dissatisfied with the assessed valuation of their property. In the latter case, the immediate question becomes, "why do owners of large-valued property make as great use of the appeal machinery as they obviously do?" One plausible answer is the bias observed in obtaining reductions by the large application, together with the ability of the owner of high valuation property to undertake his protest with competent legal staff and appraisal resources. These aids are not economically feasible for the owner of lower valuation property; the costs of obtaining such aids are higher than the reduction in taxes would be even if the protest were successful. It is not unthinkable that the state might make available at reduced private cost, the competent requisite aids for owners of property below a certain before-protest valuation who wish to protest the assessed valuations of their property. It is in the interest of the state to insure the smooth functioning of the machinery of county, city, local property taxation, and part of this task lies in opening the appeal route to equitable assessment where this is thought by the property owner to be other than equitable. To allow the residential taxpayer equal economic access to competent help in preparing his protest would assure him of a modicum of equality with the owner of high-value property in the protest proceedings. The latter should not benefit from the unequal feasibility of such assistance to all property taxpayers.

F. Property Tax Delinquencies

Delinquencies in payment of secured property tax charges are prepared by each county tax collector and presented to the county auditor on May 10 of each year, describing the total taxes due February 1 but uncollected April 10, as outlined in Sections 2617 and 2618 of the Revenue and Taxation Code of California. Owners of property described on the delinquent roll are then subject to charges of 6 percent of the amount outstanding, plus three nominal charges. If the taxes remain unpaid after June 30 of the same year, the state takes title to the de-

linquent property and credits the prior owner with payment of taxes within five days The data presented are therefore the totals of delinquencies and charges on May 10 of each fiscal year The delinquency totals indicate either an unwillingness or an inability to pay the taxes charged on secured property No figures are presently available to show the proportion of properties whose taxes have become delinquent and which have been sold to the state after June 30 The data merely indicate the difficulty of collection in the years 1951–52 through 1962–63, and are shown, together with related data, in Table 9 below.

TABLE IX

Statewide Totals of Property Tax Charges, Delinquencies, Delinquency Ratios, Median and Average County Delinquencies, and California Personal Income, 1952–1963

Year or fiscal year	Total tax charged ($000)	Total delinquency ($000)	Delinquency per $1000 charged	Median county delinquency	Total delinquency as percent of increase in tax charge above previous charge	California personal income per capita

Percent increase, 1952–1963	213	337	39	303	--	40

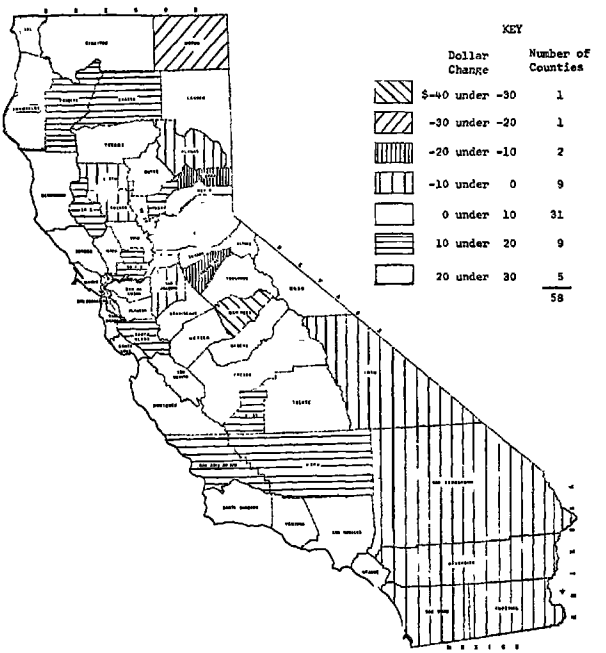
SOURCES Columns 1 through 4, H W Myers, Fresno County Tax Collector Column 5, U S Department of Commerce, Office of Business Statistics

Chart 2 showing geographic distribution of the changes, since 1951-52, in the county property tax delinquencies per $1,000 of tax charged, may be compared with Chart 3, which gives a similar distribution of the percent change in "inside" county tax rates for the same period There is no systematic relationship between the changes in delinquencies and tax rates, leading to the conclusion that other factors than the tax rate have been responsible for the increase in delinquencies This observation is supported by the correlation between tax rate changes and changes in delinquency ratios of counties during the period The correlation is -0.17 which indicates that for a rise in tax rates of 10 percent, the county delinquency ratio has *fallen* about 3 percent $[(-0.17)^2 = 0.03]$ The relationship obviously is not strong among counties, and the preliminary conclusion is that changes in tax rates do not significantly affect the tendency of property owners to allow delinquencies to occur It will be apparent below that changes in income, however, do bear a significant relationship to delinquency totals

The ability of the owner of real property to pay the taxes charged him is strongly related to his particular income situation Because it is with respect to a level of income that statements about the property tax ceiling can most usefully be made, Table 9 includes California per capita personal income By 1963, this income series increased 40 percent above its 1952 level Total secured property tax charges increased 213 percent above the same base, and total dollar delinquencies rose 337 percent. The outstanding delinquency amount in the median county in-

CHART II

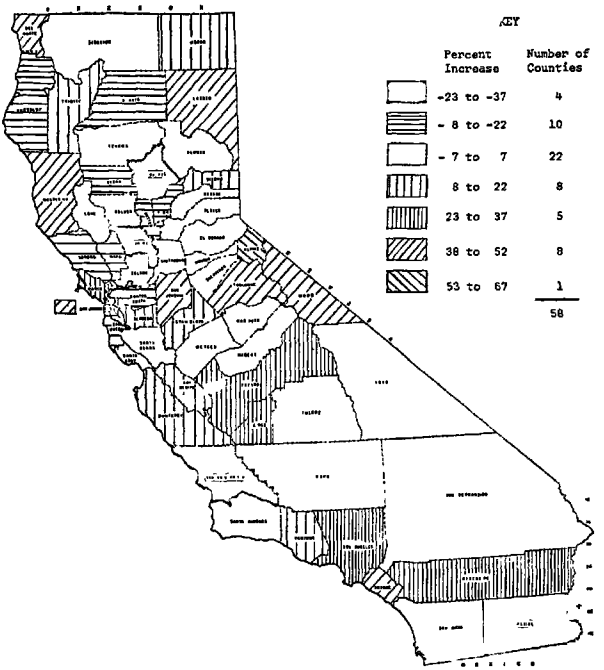
Change in County Property Tax Delinquencies per $1,000 Tax Charged: 1951–52 to 1962–63



creased 303 percent Clearly, the tendency of property owners to allow property taxes to become delinquent has risen faster than the total taxes charged, though the statewide delinquency per thousand dollars of taxes charged has remained below 2 percent, even in years during which incomes increased less rapidly than the tax charge However, the statewide delinquency rate has itself risen 40 percent in the last 12 years, slowly through 1959, and then at an accelerated rate of increase Since 1960, the delinquency rate has increased 22 percent, while per

CHART III

Percent Increase in Inside County Tax Rate: 1951–52 to 1962–63



capita income rose only nine percent More important, at least from the view of a possible ceiling on property taxes, is column 5, which shows the percent of the yearly increase in total tax charge absorbed by delinquency. Since 1953, this figure has increased 7 percentage points, from 14 to 21. In 1963, therefore, for every increase of $100 in tax charge, delinquencies increased $21 If the state found itself in a position in which, for every $100 of increase in property taxes charged, delinquencies rose $100, then it would be obvious that the ceiling had been surpassed In the present circumstances, in which owners of relatively high-valued property meet the tax deadline prior to delinquency date, as conjecture suggests is the case, then it follows that the majority of delinquencies appear against smaller (residential) property. This point will reappear below in the discussion of tax relief for elderly citizens.

In addition to the ability to pay, the desire of the taxpayer to avoid tax delinquency status is related to a number of determinants. These presumably include his view of the equity of the assessment process and the setting of tax rates, as well as the regard in which he holds the benefits of public expenditure. Thus, his willingness to pay increasing dollar amounts of property taxes depends upon his being correctly assured that there is equity in assessment and collection as well as in value received in the expenditure of the resulting revenues There is no evidence that at present levels of taxation, property owners have chosen to allow due taxes to become delinquent through a desire to protest the amount of taxes charged them, or through lack of knowledge of the pattern of expenditures out of revenues

To the extent that variations in personal income have been strongly associated with changes in county delinquency ratios, the willingness of taxpayers to meet the tax deadlines has been less closely related to the equity of assessment procedures, distribution of revenues, and penalties for delinquency The strength of the income determinant in prompt payment of property taxes is the next aspect of tax delinquency to be considered

It is useful to introduce an uncommon statistic in the exploration of the income determinant, the elasticity of tax delinquency. This is simply the response of changes in statewide delinquency, first to changes in California personal income (the income elasticity of delinquency), and second to changes in the amounts of statewide property taxes charged (the charge elasticity of delinquency). The income elasticity of delinquency for a given year is computed as the percentage change in dollar amount of delinquency from one year to the next in ratio to the percentage change in California personal income between the same two years The computational procedure is shown in the footnote to Table 10, which contains, in column 4, the income elasticities of tax delinquency for the years 1952–63 The charge elasticity is shown in column 6 of the same table, and is also defined in a footnote.

Several characteristics of the two elasticities are important to the ensuing discussion. First, the income elasticity of delinquency has twice as high a yearly average (2.81) as the charge elasticity (1 32) This result suggests that on the average, a percentage change in income

TABLE X

[a] The ratio of percentage change from previous year's total delinquency, to percentage change from previous year's personal income The 1963 income elasticity of delinquency is computed as,

$$\frac{\frac{632}{9,828}}{\frac{1,553}{25,089}} = \frac{06430}{06189} = 1\ 04$$

[b] The ratio of percentage change from previous year's total delinquency, to percentage change from previous year's total tax charge The 1953 charge elasticity of delinquency is computed as,

$$\frac{\frac{632}{9,828}}{\frac{75,630}{753,770}} = \frac{06430}{09967} = 0\ 65$$

SOURCE: H W Myers, Fresno County Tax Collector, provided the basic data The author is responsible for subsequent calculations

has been associated with a percentage change in delinquencies more than twice as large as the percentage change in tax charge. Obviously, the extent of change in delinquencies has tended to move opposite to the extent of change in income When income has taken a large upward jump, delinquencies have taken a large downward move. The same holds for the charge elasticity figures, except that the degree of movement in delinquencies for a given percentage change in tax charge has been less than one-half as great as for income elasticity. The conclusion is that delinquencies respond more drastically to income changes than to charge changes. If a tax ceiling were in the offing, it is likely that a given percentage change in tax charge would produce a much larger response in delinquencies than it has seemed to produce, because the tolerance of taxpayers for increased charges would be lower, and their tendency to allow delinquency much higher.

A second aspect of the elasticities of Table 10 relates to this point The three-year moving average of charge elasticities shows a definite upward trend, indicating an increasing sensitivity of property owners to increases in tax charges The moving average of income elasticity, while more volatile than that of charge elasticity, does not show such a trend It is dominated by a sharp dip in 1956, when personal income increased more than 10 percent, while delinquencies increased less than 7 But the 1954 moving average of income elasticity was lower than the moving average of the terminal year in the series Nonetheless, it is apparent that the two series are moving closer together through time—that the response of delinquencies to changes in tax charge is approaching that of changes in income In 1955, the two elasticities took the same value, but this was due, in the main, to a recovery by taxpayers from the recession-induced rise in delinquencies in 1954, while both the tax charge and personal income in the state increased 10 percent above their 1954 level

One limitation attaches to the elasticity figures. The income elasticity purports to measure the sensitivity of changes in delinquencies to changes in personal income alone, and the charge elasticity, to measure the sensitivity of delinquencies to changes in the dollar amount of total tax charge on property Thus, in the first case, the taxpayer is assumed to react only to changes in personal income, *given* the tax charge, while in the second, he is assumed to react only to changes in the charge, *given* the level of personal income. The total tax charge does not react to changes in income, which, of course, is a central weakness of the property tax But the elasticity figures do not show the interaction (which can be assumed to be present) between income changes and changes in the tax charge, and which produce jointly, the changes in outstanding delinquencies Yet, enough has been shown to allow the conclusion that delinquencies respond in more dramatic fashion to changes in income than to changes in the tax charge, and they have done so consistently.

G. School Bond Elections

The search for evidence of the approach toward a property tax ceiling next leads to the outcome of various votes on proposed bond issues for California elementary and unified school districts, high school districts and junior college districts[17] The outcome of any bond proposal is obviously contingent upon more than voter awareness that the approval of a bond issue will make necessary future servicing and amortization expenditures by the district involved. In the case of school bonds, interest and retirement charges fall upon the school district's property revenue, and very likely involve future property tax rate increases Knowing this, California voters have approved 75 percent of the bond issues brought to a vote since 1954–55, a high tribute to the traditional regard in which Californians have held education

Since 1954–55, the dollar amount of school bonds authorized by voters has exceeded $2.25 billion, out of a total of $3 02 billion proposed, as the summary results of Table 11 indicate. No other state in the United States has approached this outlay, during the time period in question In approving 74 5 percent of the dollar amount of proposed issues, voters have either placed a very high value on the education of California children, or have shown no lack of ability and willingness to incur higher property taxes or both; they have approved 1,706 issues and rejected 568.

The *trend* of bond votes is an important part of this study. The appearance of a downward slope in the proportion of bonds approved during the period 1954–55 to 1963–64, could, all other things equal, be interpreted as a sign of increasing unwillingness of voters to lend approval to rising property taxes In any case, Table 12 does not indicate such a trend Californians, in 1963–64 passed the largest single issuance of school bonds during the entire period, $330 million, approving the issuance of $79 of each $100 they voted upon. For the entire period, junior college proposals have received least voter support—35 percent of the dollar amounts of proposed bonds were not approved, although in 1963–64, more than $70 million passed Other types of issues received warmer welcome, though not consistently throughout the period.

The level of California personal income has exerted a powerful influence on the outcome of school bond elections, as it did in the cases of protests of valuation and delinquencies of property taxes. In fiscal year 1962, for example, one-half of all proposed bonds were rejected. Most of the rejected bonds were defeated in calendar year 1961, when the state and nation were emerging from the recession of 1960–61, and uncertainty about the future course of the economy was high. In that year, voters evidently preferred to support relatively smaller sizes

[17] School bond issues have been chosen for this purpose because they have been proposed in all counties of the state during the period in question Data on their number, dollar amounts and percent accepted or rejected have been carefully collected and reported by the California State Department of Education, Bureau of Education Research Other types of bond issues have not been centrally collected

SOURCE The California State Department of Education, Bureau of Education Research provided basic data. The author is responsible for the computation of summary totals

of issues—the average size of issue rejected was 104 percent of the average size proposed. A similar result occurred in 1958–59, when the same ratio was 109 percent In that year, the recession of 1957–58 ended, and similar uncertainty was present In more "normal" years, voters have preferred larger issues, and have tended to reject those of smaller size This is underscored by the point that in 6 of the 10 years, the average size accepted was greater than the average size proposed. The four years in which this was not the case were years in or just following recessions. It is apparent that voters have been unwilling to underwrite long-term capital outlays in periods of income uncertainty, or in periods during which many of them were engaged in the attempt to recover income "lost" during the recession.

By type of bond proposed, there is no upward trend in the yearly percent of amounts rejected during the 10-year period covered in Table 12. Indeed, high school issues show a decrease in rejections for the period as a whole. Again, however, periods of recession obscure any smooth trend which might otherwise emerge The statewide amount of bonds approved has exceeded 1 percent of California personal income only in 1954, when an amount equal to 1.14 percent of that year's personal income was approved for issuance In the ensuing years, the ratio of approved bonds to personal income has fallen. The willingness to approve bond issues and incur higher taxes has not declined, but California personal income has increased rapidly. In 1954, when $354 million of bonds were approved, California personal income was $27 billion. In 1963, $419 million of bonds were approved, but personal income had risen to $52 billion, so that only 0 63 of 1 percent of that year's income was approved for issuance

To summarize, no increase in reluctance to approve school bond issues is apparent in California, either in numbers of issues or dollar amounts The approval of bond issues apparently has proceeded independently of the burden of property taxes, except in periods during which recessions have engendered income uncertainty The general acceptability of school bonds to voters has been high for each of the four types of school districts in which bonds are proposed.

H. County Boards of Supervisors

Members of county boards of supervisors are required to approve the tax and expenditure process of each county in each year. The five-man board approves the final county budget by September 1, and sets the tax rate necessary to provide sufficient revenue from secured property. In addition, the board frequently acts as a county board of equalization in reviewing assessment protests, and has the power to raise or lower assessed valuations Except for those of school districts, the county boards set final budgets and tax rates, and may alter assessed valuations of property on the secured roll

Clearly, members of these boards are heavily involved in the property taxation process If property taxes were approaching their ceiling, it is likely that tenure of boards would become less permanent, as tax resent-

ment caused increasing turnover of incumbents of boards in each election. Table 13, however, shows no increase in the percentage of opposed incumbents who were defeated, since June 1958, when the County Supervisors Association of California began obtaining this information. In the four primary and three general elections since

TABLE XIII

Results of Seven Recent Elections Involving County Boards of Supervisors in California

SOURCE: County Supervisors Association of California

that date, 370 incumbents opposed in the primary elections have experienced 66 defeats, for an average turnover of 18 percent In the general elections, 41 were defeated, from among 77 opposed incumbents standing, an average turnover of 47 percent. The turnover of incumbents in the three elections since June 1962 is below the average for the seven elections. Again, there is no evidence of recent increase in turnover in board members throughout the state.

This result does not necessarily indicate lack of taxpayer resentment toward county boards of supervisors. Many counties have not redistricted in accordance with changes in the distribution of population within the county. One author has said.

> ". . . 21 counties have not been redistricted since 1900. In 18 of these counties, the supervisorial district boundaries today are identical with the original boundaries drawn 70 to 100 years ago The population in these counties has increased by as much as 4,800 percent during these last eight or nine decades " [18]

The County Supervisors Association of California has recently completed a survey showing that in 26 counties, control of three positions representing the three smallest supervisorial districts on the county boards rests with less than 60 percent of the population of the county which fully equitable representation would make necessary Uneven representation obscures the ability of protesting taxpayers to make changes in the incumbency of county boards, and the turnover rates shown in Table 13 probably understate the degree of taxpayer resentment toward property taxes

[18] Stuart C Hall, *County Supervisorial Redistricting in California,* Bureau of Public Administration of the University of California at Berkeley, February, 1961, pp iii and iv

I. Property Taxes and the Elderly Taxpayer

In 1960, there were 1 4 million persons residing in California who were 65 years old or older These persons comprised nearly 9 percent of the state's population By 1990, it is estimated that 12 9 percent of California's population, or 2 256 million persons, will be in this age grouping [19] Many of these persons are and will be infirm, and almost all of them are and will be experiencing the task of keeping living costs within the constraints of a budget which is fixed in amount. In this situation, elderly citizens presently face the necesisty of paying property taxes of increasing yearly amounts No figures are available to indicate the proportion of elderly persons giving up title to homes in which they may have lived as long as they were financially able Neither are there figures which indicate what happens to those elderly who have been financially incapable of maintaining their homes

As demonstrated in an earlier section, the cost of living in California is presently higher, and has risen more rapidly than costs of living in the rest of the nation. And of the total cost of living, costs of housing and rent have increased much more rapidly than they have nationwide. It has been shown that property taxes in California are also higher and have risen more rapidly than they have in the United States as a whole. Elderly taxpayers, then, view the level and direction of property taxes on their residences with an apprehension, indicated by these two letters, written to the Chairman of the Assembly Revenue and Taxation Committee

Dear Sir June 24, 1964

I am writing to see if it would be possible to get some reduction on the high taxes I have only 85 feet from a 50 by 140 ft lot I have no back yard or trees on the place, and the taxes have jumped from $263 72 to $283 25 last year And I was told that the raise will be more than that the coming year

I will be 78 years old in October of this year, and not being employed, the taxes are a problem I contacted the Assessor's Office and was referred to you May I hear from you soon

Respectfully yours,

ANNA E KUBACKI

Dear Sir: August 3, 1964

In "The Los Angeles Times" Sunday 7/26/64, there was an article that the "State Likely to Reshuffle Tax Set Up"

I am 76 years old, married, my wife is over 66 I am retired My income is a Social Security check, and I have a very small amount of saving which is diminishing rapidly; because I have to pay taxes on my home Unfortunately, the taxes were increased in the last few years, from $500 to $1200

I have put all of my life savings in the house, now I am sandwiched between two newly constructed big buildings It is very hard to sell my home for a reasonable amount I am forced to pay very big taxes. Any proper investigation will show that I was cornered in this situation

I will be grateful to you if something could be done to save my home from a future tax foreclosure

Very respectfully yours,

(Name withheld by request)

[19] California Legislature, *Report of the Senate Subcommittee on Housing and Recreational Needs of Elderly Citizens—1961.*

Each of these letters describes a common situation of the elderly Each mentions a fixed income, and each expresses concern about the level of, and recent increases in property taxes on a residence Each writer is unemployed

> "For these citizens, the ever-rising rates of property taxation present a constant irritation as well as a real financial problem Over the past several years, communities with higher-than-average numbers of low- to middle-income aged residents have had difficulty in securing approval of bond issues or tax overrides, a fact attributed to the hypersensitivity of many aged homeowners to the property tax "[20]

In addition to the threat to financial capacity of the elderly posed by the property tax, and its consequent social problem, this quotation briefly outlines a problem which affects not only the aged, but all members of a community—the support of the schools of a community Many aged property owners no longer have members of the immediate family who currently are being educated in the schools of the community in which the aged live This condition undoubtedly is true of many taxpayers who are not elderly, but the younger taxpayer is capable of working, and can depend upon an income which is not fixed in amount This makes him more likely to vote for the tax override or a school bond issue The elderly taxpayer is less able to defend himself against decreases in his spendable income which inevitably occur as property taxes rise Thus, he reaches a tax ceiling sooner than younger, employed persons. If this occurs and if the assessment protest of the owner of small-valued property is less successful than that of the large-valued property owner in obtaining reduction, (as Section V of this study has shown to have been the case in California during at least the last five years) it is not surprising that the delinquency ratio of property taxes to taxes charge has increased There can be little doubt that many of the delinquencies on due taxes have been delinquencies of the aged, whose incomes have not kept pace with the increases in property taxes Those among the aged who were unable to obtain a large enough supplement to their income to meet the delinquency prior to the sale date, were therefore in the position of having their homes sold for taxes

The county assessor cannot be criticized for having assessed the property as his professional abilities allowed, and as demanded by the state Neither can the school board or the county supervisors be criticized for having set a budget requiring the tax rate which applied alike to the housing of the young and the aged The aged person cannot justly complain that he is not being treated equally with other taxpayers, for his home is assessed by an assessor who uses the same techniques in assessing the home of other taxpayers The aged property owner is caught in the position of being treated fairly (equitably) while simultaneously being treated inequitably because his income is fixed He has no control over this circumstance. but is, in the present scheme of things, constrained to somehow obtain the necessary payment for his home. or have it sold for taxes

[20] California Legislature, *Final Report of the Assembly Interim Committee on Revenue and Taxation*, 1961, Vol 4, No 7, p 43

In 1960, 44 percent of the California elderly lived in dwellings they owned, and only 3 4 percent were institutionalized 1,022,000 households were inhabited by 338 thousand couples, 200 thousand unattached men, and 400 thousand unattached women, all 65 or more years old.[21] In 1941, only 26 thousand old age and survivors monthly payments were made to California residents By 1950, the number had risen to 275 thousand, and by 1961, to nearly 1 3 million [22] The number as well as the amount of benefits has greatly increased in the last 20 years, but among the aged, there are many who, because they may never have held jobs which qualified them for coverage, do not receive OASI payments Even among those who do receive these benefits, the amounts are such, that in 1958, an average of $10 72 was diverted from OASI checks to cover housing expenses [23] At this time, California's sole contribution to the housing of needy aged persons is through cash payments for housing to OASI recipients Thus, California is in the position of supplementing housing expenses of needy aged persons while simultaneously extracting from them, an increasing amount of property taxes

For these reasons, one author has written,

> "Either we must accept increasing poverty as a concomitant of old age, or we must make such well-designed community plans to protect the elderly as will support a decent standard of housing and maintenance for them " [24]

As a technique for extending the property tax ceiling, it is difficult to imagine a more fertile area to begin than the taxation of the residential property of the elderly Oregon, in 1963 adopted a system by which persons 65 or older were accorded the privilege of accepting property tax exemptions and/or tax deferrals, provided they met certain minimum tests of their income and wealth, involving an income of $2,500 or less in gross receipts in the previous year, and a "true cash or market value of the taxpayer's principal personal residence " [25] The amount of true cash value exempted from taxation is scaled according to the age bracket in which the person who passes the "means" test belongs.

The tax deferral for elderly citizens of Oregon is available to those who are unable to entirely exempt their residence because of income receipts in excess of the above minimum, or who have not reached the age (80) at which all property taxes on the residence have become exempt These property owners may defer due property taxes on their residence by giving the state a lien against the property of the same sort as the customary unpaid taxes lien, in the amount of the taxes deferred. Upon the death of the owner of the tax-deferred property and his spouse, if she is also a resident of the home, the state receives full payment of the deferred taxes plus the accumulated (6 percent) in-

terest on these, and returns the balance of the estate to the heirs. At any time, the owner, next of kin, or heirs, may pay any fraction of the deferred taxes and interest without affecting the deferred status of the property, as long as the taxpayer gives his assent

Counties of Oregon in which the tax deferred property is located, receive payment from the state each year in the total amount of deferred taxes of the county In Oregon, these payments are financed out of the Public Employees Retirement Fund, which receives interest on the amount of tax deferrals outstanding at the yearly rate of 6 percent, and which accrues as part of the lien on the property.

Briefly, this is the program as it has been adopted in Oregon In effect, it defers each year, the payment of property taxes out of the frequently limited income of the aged, and affords them a substantial increase in real spendable income, thus providing financial aid of a voluntary nature in preference to old age assistance payments which might otherwise necessarily be increased, and which would involve an involuntary subsidy to the aged paid by the nonaged.

A program of this sort operating in California would undoubtedly provide property tax relief to those aged who badly need it In doing this, it would also therefore extend the capacity and willingness of property taxpayers as a group throughout the state to tolerate the current levels of property taxes An important byproduct of such a program would be the accordance of an increased degree of dignity to the aged, who would be able to continue to live within their own home, on a fixed income.

J. Miscellaneous Psychological and Equity Aspects of the Property Tax Ceiling

This study has concerned itself mainly with the tax on real property, the largest base among those to which the property tax applies. Yet, other property tax sources commend themselves to attention, not only because they involve substantial revenue, but because they also contribute to the ceiling limitations upon growth of this revenue

HOUSEHOLD FURNISHINGS

In particular, the tax upon household furnishings is a sore point with taxpayers if casual inspection of letters appearing in California newspapers give valid clues. The valuation of these personal items is frequently made by persons unprepared professionally to make such estimates, and who often do nothing more than estimate the value of household furnishings according to the valuation placed on the house, in many cases, not entering the house at all This practice understandably leads to a degree of taxpayer contempt for the entire property tax administration The "assessor" who does enter homes is regarded as a "snooper for the county." Further, the revenue produced by this tax is not large, in comparison with the costs of administration and collection, which in Los Angeles County alone, have been estimated to run as high as $250,000 annually [26] The costs to the local government

[26] John P. Shelton and Bruce F Davie, "How to Keep Local Expenditures Under Control," Chapter 4 of *California Local Finance Trends, Prospects, Standards*, Claremont Social Research Center, Claremont, California, January 1959, p 4–59 This volume contains much additional information about California taxation and expenditures

in terms of restrictions on the ability of property taxes to be collected smoothly, as well as the high dollar costs of administration and collection of this revenue, indicate that California should follow the lead of New York and several other states which terminated this form of property taxation, making up for the revenue lost by slightly increasing the rate on real property Such a plan would seem to benefit residents of unfurnished apartments, who now pay a small tax on furnishings which they own If the furnishings tax were dropped, and the rate on the building slightly increased to compensate for the revenue loss, the owner of the apartment would then pay the taxes to replace those lost on the cessation of the furnishings tax It is assumed the owner would then pass along this tax increase to the tenants as increased rent Thus, the tax would impact in the same manner as it presently does, but without the onus or expense involved in "assessor snooping." (For a more detailed discussion of the assessment of household personalty see Section Five, Part Two)

PROPERTY TAX EXEMPTIONS

In fiscal year 1963, 988,102 exemptions from taxation removed over $1 6 billion assessed tangible property from the tax base Veterans received 98 percent of the number and 55 percent of the statewide dollar total of exemptions Churches received 16 percent of the number and slightly more than 1 percent of the total dollar amount of property exemptions The remainder was distributed between colleges, schools of less than collegiate grade, hospitals, and miscellaneous other exemptions, most of them serving various welfare functions. Two constitutional amendments affecting veterans' exemptions, proposed by the Legislature, were submitted to the electorate and approved in the general election of 1964 One restricts eligibility for exemption to veterans or surviving wives or parents of persons who were residents of the state when they entered service or who were receiving the exemption when the amendment was approved The other increases from under $5,000 to under $10,000 the value of property a widow of a veteran may own without being disqualified

Such exemptions shrink the tax base, and must be made up for by a transfer of the burden to nonveteran property owners. This subsidy to veterans is in the nature of a transfer payment for services rendered in the past It is difficult to recommend that the veteran's exemption be removed, but it is equally difficult to give approval to the continued unequal treatment of the taxpaying body For a more detailed discussion of the veterans' exemption see Section Three)

THE INVENTORY TAX

Finally, in this section of miscellany, is a consideration of the method by which inventories are assessed Section 441 of the Revenue and Taxation Code of California fixes noon on the first Monday in March as the moment when the business inventory is to be valued for tax purposes. This is at variance with the state procedure for the valuation of rolling stock, set forth in Section 1103, which specifies that the board "shall determine and assess the average amount of rolling stock habitually in this State." In the latter case, state-assessed rolling

stock is valued for tax purposes at its average amount Business inventories, on the other hand, are assessed by the county assessor at one point in time, a technique which allows firms to minimize inventories at the tax date, avoiding a portion of this tax by running their inventories down and shrinking the tax base To the extent that the "running down" of inventories is disruptive to the smooth course of business, reporting of inventory values at only one point in the tax year contributes to interference with economic efficiency This interference, it will be recalled, was one test of the suitability of the property tax Further, it is apparent that the tax as it now is imposed, yields less revenue than it would under an averaging technique. Such a change in the tax base would improve the equity of this tax by ceasing to penalize firms whose seasonality requires a relatively heavy inventory on the assessment day, while giving a relative advantage to firms which are normally able to deplete inventory at the assessment date, thus partially avoiding the tax As it has previously been argued, improvements in equity would tend to raise the ceiling of this particular tax (For a more detailed discussion of the inventory tax see Section Five, Part One)

K Summary, Conclusions, and Recommendations

SUMMARY

Property tax revenues in California have increased nearly five times since the end of World War II, outrunning the rise of California personal income The increase in this source of revenue has been nearly twice as fast in California as in the United States On a per-head basis, too, the California rise has exceeded the United States increase Further, property tax revenues have continued to rise as a proportion of state and local revenue in California, while, for the United States as a whole, the opposite trend has set in. California property tax levies have increased to a point beyond the levies of other state and local taxes in California. The continued large net yearly migration into California has made necessary in the rapidly growing areas of the state, large capital outlays and increased operating expenses for the governmental functions supported by property taxes

Continued increases in its yearly yield have drawn attention to certain aspects of the property tax which could, in time, impose a limit to further expansion The contention that a ceiling on these revenues is approaching, has concerned apparent inequities of the tax, involving assessment procedures and laws, the regressivity of distribution of the burden (particularly of the tax paid on residential property) and the excessive burden upon the elderly living on fixed incomes Other difficulties of the tax have to do with its insensitivity to cycles of income, which makes its burden relatively larger in recession periods than in periods of high income, as well as with the complexity of laws under which assessment, collection and expenditure of property tax revenue remain a near mystery to many Californians These provide the conditions for resentment of the tax, and make necessary the question, "What are the economic and psychological limits of the property tax in California?"

The manifest impossibility of estimating a rigid ceiling beyond which property tax charges seriously affect economic efficiency, work and investment incentives, and cause general price levels to increase, permits only an identification of factors which have affected economic and psychological limits of the property tax in the past two decades

This study has shown that the rise in housing rents has been more rapid in California than in the United States, and that recent rent increases have tended to match property tax assessment and rent increases in the state, an indication that part, if not all residential property taxes have been passed along to tenants. There has been no support for the argument that lag in the development of property has occurred as a result of the tax increases on property. Housing starts have responded to population increases in the state, and so long as California personal income continues to advance, and Californians continue to be willing to absorb the increasing costs of shelter, housing starts will proceed with population growth. Net yearly migration into California has shown no tendency to decline, a fact which supports the view that high property taxes have been less important in discouraging movement into the state, than other, more positive aspects of life in California, have encouraged it.

As a check on the relationships of housing starts, population growth and property taxes, the study examined the changing costs of obtaining housing, showing that California rents have increased more rapidly than the changes in housing supply (housing starts) and housing demand (net migration) suggest they would have in the absence of rising property taxes passed along to tenants as rent.

Assessment valuation protests of property owners to county boards of equalization represent a recourse to the taxpayer, and also provide a measure of taxpayer reluctance to accept the assessment and taxing process. Between 1959 and 1963, the number of assessment protests declined, though the dollar value of reduction in assessed valuation granted more than doubled, suggesting a concentration of reductions in favor of property having a relatively large value. In 1963, the average assessment reduction was $5,507. The study has shown that during the five-year period, when 50 percent of the total *number* of reductions had been granted, only 20 percent of the total dollar *amount* of reductions had been allowed. The decline in number of protests very likely has been related to the inability of the owner of property of relatively small value to obtain assessment reductions. This study indicates that the assessment protest has been most frequently undertaken by owners of property of comparatively large value.

Another measure of taxpayer reluctance to submit to the payment of property taxes has been his willingness to allow delinquencies to occur against property on which taxes have become due Since fiscal year 1952, the statewide delinquency of due taxes has more than tripled while the total property tax charge has doubled. There are powerful indications that yearly delinquency totals are greatly affected by the behavior of such indicators of economic health as income and employment, as well as the amount of taxes charged. Since 1960, the delinquency rate has increased more rapidly than the rate of increase in California personal income, so that in 1963 for every $100

increase over the 1962 level of property tax charged throughout the state, delinquencies increased $21

Yearly variations in California personal income have, since 1952, produced about twice as great an effect on statewide delinquency totals as yearly variations in the total tax charged. However, the response of delinquency totals to the rising tax charge has accelerated rapidly in the last few years, and increases in delinquencies have become nearly as sensitive to increases in the taxes charged as to income changes.

California voters have, since 1954, approved 75 percent of the total dollar amount of bond issues proposed for construction of school facilities Inevitably, the issuance of school bonds has required increases in property tax revenue for the school district floating the bonds In approving the issuance of $2 25 billion of school bonds, Californians have shown either a very high regard for the role of education in our society, or have not thought the property tax burden so high it could not be increased There has been no tendency for the proportion of bond issue amounts rejected by voters, to increase over time, a fact underlined by the approval in 1963–64 of $330 million new school bonds throughout the state, the largest dollar amount approved in the period since 1954

It is significant that declines in the growth rate of California personal income have been accompanied by increased rejection of proposed issues This occurred in each recession period, with a consistency which suggests that a fundamental limitation of the property tax, its failure to respond to variations in income, was asserting itself, as it has done in the case of tax delinquencies cited above Over the period studied, however, no evidence suggesting increasing taxpayer antipathy to school bond proposals, has been apparent

If taxpayers experienced a growing hostility to the property tax level, a hostility so great as to overwhelm all other considerations of the conduct of local government, they could express this by voting out of office, all incumbent members of county boards of supervisors There is no evidence of increased turnover of incumbents of these boards in California since 1958, and therefore, no evidence of a high degree of property tax resentment such a turnover could suggest.

There is abundant evidence that many elderly property taxpayers find difficulty in meeting the increased levies upon their residences. In 1960, there were 1 4 million persons 65 or over living in California, representing nearly 10 percent of the state's population In the same year, 1 2 million old age and survivors monthly payments were made to residents over 65 or their spouses About 200 thousand elderly persons were not eligible for this benefit Among these elderly citizens are many whose incomes from retirement, pension and welfare sources are fixed in amount Rising residential property taxes impinge more heavily upon spending power of these than upon younger persons, whose family incomes grow over the years The property tax ceiling is accordingly reduced by the fixed incomes of the elderly It is likely that the rising delinquency rates described above are in part related to inability of the elderly to keep pace with increasing residential tax burdens.

Several aspects of the propery tax involve a psychological reaction among taxpayers to what they could be expected to interpret as in-

equitable treatment in the tax process Among these, the assessment practices for valuation of house furnishings, the California-based insurance company deduction from their net premiums tax of property taxes paid on principal office buildings, the growing dollar amount and number of property tax exemptions, and the assessment technique for inventories, involve apparent inequities which cannot be held to increase the property tax limit in the state.

CONCLUSIONS

1. Rent increases in San Francisco and Los Angeles have paralleled the rise in California property taxes, suggesting that the taxes have been passed along to tenants by property owners

2. There is no evidence that the development of property has been hampered by increased property taxes Housing starts have responded to the increase in California population

3. Net migration into California has apparently proceeded independently of the level of California property taxes

4 Since 1953, county boards of equalization have been more sympathetic to assessment protests lodged by owners of high-value property, than to those protesting assessments of property of lower value This conclusion is consistent with the observation that the yearly number of assessment protests has declined since 1959, while the yearly dollar amount of reductions in assessed valuation has continued to increase Effective redress of assessment grievances has not been equally available for all taxpayers, and the tax ceiling has been accordingly reduced.

5 The California delinquency rate on due taxes has risen very rapidly in the past three years, and there are indications that the response of the delinquency rate is nearly as great to increases in taxes charged as to changes in income This provides a strong indicator of the approach of a ceiling on property taxes for the growing number of those who have been affected

6 Simultaneously, Californians have shown a readiness to undertake increased property taxes by approving 75 percent of the dollar amounts of school bonds proposed for issuance since 1954. This tendency has, however, been strongly affected by recession in the economy. This, and the preceding point. illustrate a frequently noted limitation of the property tax—its rigidity in the face of income declines

7 Property tax resentment, if very high, could be expected to cause a rise in the statewide turnover rate of incumbents on county boards of supervisors opposed in elections This rate has not increased since data became available in 1958.

8. Elderly taxpayers are unable to respond to increased residential property tax charges because many of them are constrained by incomes which are fixed in amount The elderly are a focus of resentment toward the residential property tax

9 Several miscellaneous inequities exist in the present property tax procedures of assessment and exemption, and these are resented by those of the majority of taxpayers who are treated unfairly.

RECOMMENDATIONS

This study has shown that several facets of California's property tax are inequitable. The measures proposed below are intended to increase the ceiling of the tax by lessening or removing these inequities as causes of psychological and economic resentment which tends to lower the tax ceiling.

1. California should make available to elderly citizens who reside in their own homes, and who are declared eligible by certain "means" tests, a voluntary program of property tax exemption/deferral, which would reduce the effects of rising taxes upon the ability of these citizens to defend themselves against a fixed income

2. Dweller-owners of residential property below a certain minimum before-protest assessed valuation, should receive aid in preparing and protesting to county boards, assessed valuations which they feel are unjust.

3 The State Board of Equalization should be charged with the responsibility of *precise* intercounty equalization of assessed-to-cash valuation ratios. Further, the board should redress apparent unequal assessment ratios among the various types of property

4 The house furnishings tax should be terminated

5. The nondisabled veteran's residential exemption should be terminated.

6 Information about the ages and income levels of owners of property against which tax delinquencies occur should be the subject of a future study by the committee

PART II

TAX RATE LIMITS

DAVID R. DOERR and RAYMOND R. SULLIVAN

In general, the public has felt the need to be protected from unlimited increases in property taxes. For this reason, many units of local government, both in California and elsewhere, are circumscribed through a variety of constitutional and statutory limitations in the use they can make of the property tax.

The pattern of tax rate limitations in California defies logical explanation. Tax rate limitations apply to some local governmental jurisdictions but not others. The constitutional limit on the property tax is the limit placed on the taxing of intangibles.[1]

By statute the Legislature has set maximum property tax rates for general-law cities, school districts and most special districts. Limitations on property tax rates have also been written into the charters of some cities.

The Legislature has not seen fit to put a cap on county property tax rates, however, and in almost all jurisdictions with limits (except for some special districts), the maximum tax rate may be exceeded·

1. By a vote of the people, or
2. For a specially designated purpose, or
3. For repayment of bonded indebtedness

It should also be noted that the limit on the assessed value—the other half of the combination which determines the tax bill—is "full cash value" although most assessments (except for some cities and special districts) range from 18 to 26 percent of full cash value. (For a complete summary of California's tax rate limits, see appendix.)

Other States

Most other states (43) also have property tax limits of one form or another.[2] Although there are many variations, there are two basic forms of property tax limits: (1) limits on rates of taxing jurisdiction and (2) overall limits of the amount of tax that can be levied by all taxing jurisdictions.

Nine states impose what is generally classified as an "overall rate limitation."[3] Allocation of funds is a particularly troublesome problem

[1] Article XIII, Section 14 limits the tax rate on specified intangibles to four-tenths of 1 percent of the actual value of the property. In practice, most intangibles are exempt from property taxation and solvent credits are taxed at a rate of 1 mill per dollar of full value. See Section II, Part IIIa.

[2] The seven states that do not impose any property tax rate limitations are Connecticut, Maine, Maryland, Massachusetts, New Jersey, New Hampshire and Vermont. SOURCE: Advisory Commission on Intergovernmental Relations, *State Constitutional and Statutory Restrictions on Local Taxing Powers*, Washington, D.C., October 1962, p. 39.

[3] The nine states with overall rate limitations are Indiana, Michigan (excluding cities), Nevada, New Mexico, Ohio, Oklahoma, Rhode Island, Washington and West Virginia. SOURCE: *Ibid.*, p. 41.

in states with overall rate limitations. The method of allocation varies among the states. According to the Advisory Commission on Intergovernmental Relations:

"In Ohio the constitution directs that the local taxing units (primarily counties, municipalities, and school districts) be given the same relative proportion of the 10-mill limit that they previously received from the county budget commissions under the pre-1934 15-mill limit. In that state the allocation of the tax limits, which existed as of January 1, 1934 (the effective date of the new 10-mill limit), and varied from county to county under the old 15-mill limit requiring allocation by the counties, was frozen into law at two-thirds of the former rates New Mexico and Washington also froze, by statute, the allocation of the overall limits. In contrast, the statutes of these two states specify a given rate limitation for each class of local taxing unit, a basic limitation that does not vary among local taxing units of the same class.[4]

"West Virginia also froze by statute (in 1933) the allocation of the overall property tax rate limit (adopted by constitutional amendment in 1932) among the various contending taxing jurisdictions. As in Ohio, for different reasons, the rate limit varies for local taxing units of the same type The Constitution of West Virginia classifies property into four broad classes for purposes of taxation A different overall rate limit is applied to each class Class I property (intangible personalty and agricultural personalty, including agricultural products while owned by the producer) has a rate limit of 5 mills. Class II property (owner-occupied property used exclusively for residential purposes, farms occupied and cultivated by owners or bona fide tenants) carries a 10-mill rate limit Class III property (all other property situated outside of municipalities) has an overall 15-mill limit, and class IV property (all other property situated inside municipalities) has the top limitation of 20 mills. Of the 5 mills allowed on class I property municipalities are allocated by statute 1 25 mills; counties receive 1.215 mills; school districts get 2 295 mills; special districts are allotted 0 215 mill; and the state obtains the balance of 0 025 mill The allotments in the other classes of property are in the same proportion Depending upon the composition of property in the local taxing units, the maximum property tax can vary from 1.215 to 4 86 mills for counties, 1.25 to 5 0 mills for municipalities, 2.295 to 9.18 mills for school districts, and 0 215 to 0 86 mill for special districts.

"Michigan and Oklahoma leave the determination of each local unit's share of the overall rate to county allocation boards The allocation of Michigan's 15-mill limit deserves a closer look As initially passed, the 1932 constitutional amendment establishing the overall limit was intended to apply to all local units of government However, a Supreme Court decision of that state ruled in 1933 that municipalities were not automatically under the overall limit, but could choose to do so by amending their charters Only 11 cities availed themselves of the opportunity. Subsequently, a 1949 amendment to the General Property Tax Act prohibited a

[4] The mill limitation refers to mills of tax per dollar of assessed value.

municipality from including a tax limitation in its charter if it would result in reducing the combined taxing power of the other taxing units to less than 15 mills At the present time the 15-mill limitation is allocated among counties, school districts, and townships The county allocation board is authorized by the statutes to allocate a minimum of 3 mills to the counties, 4 mills for school, 1 mill for townships, and (where applicable) 2 mills for port districts The board allocates the residue on the basis of need

"The Nevada State Tax Commission apportions the overall rate among the various political subdivisions only when the combined (proposed budget) levies would exceed the 50-mill limit, but the mandatory state and school district rates cannot be reduced (The specific rate limits in the Nevada statutes total more than 50 mills.)[5]

Effects of Rate Limitations

It is difficult to measure the effectiveness of rate limitations in holding down property taxes. In California, as elsewhere, the property tax burden has been mounting steadily despite the existing rate limitations One can only speculate whether property taxes would be even higher without existing limitations.

Data presented by the Advisory Commission on Intergovernmental Relations show that, in the no-limit states, the average per capita property tax is the highest in the country Ironically, the percentage increase of the property tax in these states since 1941 has been lower, on an average, than in more restrictive states.

TABLE I

Trends in State and Local per Capita Property Tax Collections, by Stringency of Limitation Groups: 1932 to 1961

Group	Number of states	Per capita general property taxes					Per capita general and special property taxes		
		Amount			Percent increase or decrease (−)		Amount		Percent increase
		1932	1941	1957	1932 to 1941	1941 to 1957	1957	1961	1957 to 1961
U S total*	48	$37	$33	$73	−11 4	122 8	$76	$99	30 7
I	7	47	50	99	5 4	97 8	103	130	26 5

"I The seven states with no property tax limitation.
"II The 20 states with specific limitations that affect only certain types of local government, which allow considerable flexibility in the application of the limitations, or which provide relatively high maximum rates,
"III The 12 states with specific limitations applicable to all or to most of their local governments, allowing for little flexibility, or providing relatively low maximum rates, and
"IV The nine states with overall limitations"

SOURCE *State Constitutional and Statutory Restrictions on Local Taxing Powers*, Advisory Commission on Intergovernmental Relations, Washington, D C, October, 1962, pages 54, 55

* Excludes Alaska and Hawaii, for which historical data are not available Also excludes District of Columbia

[5] *Ibid*, p 41–43

Tax rate limitations often have disturbing side effects. In addition to the intended effect of holding down the property tax, they can force a curtailment of services—the services which may mean life or death to some people The substandard services can range from lack of adequate fire and police protection to inadequate schools and hospitals They can thoroughly snarl local government fiscal affairs and may lead to assessment manipulations and costly borrowing

Despite tax rate limitations, property taxes have gone up Some of the factors responsible for this increase are.

1. Demands by the people for increased and better services and the authorizing of higher tax rates through popular vote
2 The exclusion of debt service from property tax limits
3 The provisions for an excess levy for a certain specified purpose
4 The exclusion of counties, some cities, and some special districts from the provisions of rate limitation
5 The increase of local assessment levels
6. Legislative changes in the statutory maximum

Need for Additional Property Tax Limits

If the state is to provide property tax relief by allocating large sums of money to local government for this purpose or by authorizing supplemental revenue sources for local government to use, assurances are needed that this objective will actually be accomplished and that the total property tax bill the taxpayer receives will be significantly lower Without additional tax rate limits, local governments may not reduce their property tax but use the additional funds for increased services

There are other reasons for additional property tax rate limits. The property tax is the giant in the state-local revenue picture, raising as much as all state taxes combined In view of the magnitude of the property tax, other revenue sources should be encouraged to expand A limit on property taxes would encourage this development These limits would check the growth of a tax source considered by many to be regressive (See Section II, Part VI)

Tax rate limits also prevent taxes on local homeowners from increasing to the extent that a wave of delinquencies and foreclosures result, with the resultant upheaval in the social structure These are compelling reasons for tighter rate limitations; yet, there are also compelling arguments against rate limitations and certainly against tightening rate limitations For one, rate limitations are offensive to locally elected representatives of the people who have a responsibility to conduct the public's business in a prudent manner They are in a position to judge what the people in their community want and should not be tied by artificial barriers If the voters do not approve of their decisions, they will be replaced at the next election

These limits tend to place a straightjacket on local government and may cripple vitally needed services and preclude expansion and improvement of socially desirable services They result in further demands by local government for state assistance

There is always the possibility that tax rate limits have the opposite effect on jurisdictions not yet at the limit These jurisdictions may feel threatened by the limit and go to that level immediately to husband tax

revenues for the day when they might wish to exceed the limit but cannot.

If rate limits are designed to hold taxes down, property tax relief can be instituted effectively through other means. Devices such as the exemption and/or classification of property can be used. Reductions can be made through additional state school aid keyed to a drop in the existing maximum tax rate of the school district for current expenses. It would be possible to take schools off the property tax altogether

If "overall" limitations on the amount of revenue which can be collected from a parcel of property are to be considered,[6] a number of additional problems arise The problems associated with the allocations of funds among local governments would be very great, short of having all property taxes collected on a countywide basis and remitted on a per capita or ADA basis or some other formula As a hypothetical example of this problem, if the present tax rate in an area is $10 per $100, it would have to drop to $8 per $100 under a 2-percent limitation and a 25-percent assessment ratio Assume each of four levels of government (city, county, school, and special district) must drop their tax rate in this area by 50 cents It is a fundamental principle of property taxation that the burden of taxes must be borne equally by all property Thus the county tax rate would have to be reduced in all other areas of the county, irrespective of the fact that the 2-percent limit had not been reached in these areas When the great number of tax-rate areas (code areas) that now exist are considered, the effect of a flat limitation would be to reduce all taxes to the lowest common denominator, seriously interfering with local governmental activity in a number of places The impairment of local credit under such a proposal would be serious Current debts would have to be excluded; future borrowing would be impossible unless it were excluded too While it is desirable to keep property tax burdens as low as possible and preferably under 2 percent of the value of property, setting a fixed overall limit on property taxation would seriously weaken the stability and independence of local government and cause endless administrative problems Tax rate limits for various types of local governmental jurisdictions (as generally exist at present) and a standard assessment ratio would be a better approach to this problem.

[6] It has been suggested that the total property tax be limited to 2 percent of the full value of property

SECTION SEVEN

SUMMARY

Reform of the property tax is of the utmost urgency if this tax is to survive as an important revenue source. This rehabilitation is necessary to restore public confidence in the tax, to protect the taxpayers from gross abuse and discrimination, and to preserve the stability and independence of local government. Without such remedial action, the property tax may well become an historical curiosity.

This report has discussed many of the major weaknesses of the property tax. When judged against general principles of tax policy, the property tax fails badly. It is regressive, difficult to administer, and deleterious in its economic impact Without modification, some existing exemptions are inequitable and sap the integrity of the tax While this study recognizes the extremely difficult task of the county assessor, it is clear that all property is not being assessed equally in proportion to value. In addition, duplicate assessing now being performed by 54 cities is wasteful and confusing to the taxpayers

The tax puts a particular hardship on those living on retirement incomes and on those wishing to preserve prime agricultural land in the urban-rural fringe area Unique problems exist in the assessment and taxation of timber. Economic dislocations caused by the imposition of the tax as of one fixed date on business inventories are serious

Also of concern is the fact that the tax has been increasing since World War II In 1947 the property tax represented 3 2 percent of the personal income of the state By 1963 this percentage had increased to 5.3, but it has not yet reached the 5 5 percent level of 1939.

With substantial renovations and under good management, the property tax can have a proper role in the revenue structure. Without a tax on property, the price of land would increase, perhaps significantly. The property tax is a tax on wealth, and although an imperfect one, it complements taxes on incomes and transactions. Of particular importance, the property tax has been a good revenue producer and is well suited for use by local governmental jurisdictions

It is clear that the laws guiding the administration of the property tax and setting the basis of their application cannot remain as they are. The situations and circumstances in which they were conceived have changed and the laws must change too. Many reforms are necessary.

APPENDIX

PART I

RELATIONSHIP OF REDEVELOPMENT IN SAN FRANCISCO TO INCREASED ASSESSED VALUES AND TAX REVENUES

In examining the relationship of the redevelopment program in San Francisco to property tax revenues the Redevelopment Agency does not overlook the other important social, cultural, and urban design benefits of the program and the effectiveness of the redevelopment process in providing better housing for our citizens while removing unsafe, unhealthy, and undesirable slums and blighted neighborhoods.

However, the effect of the program on tax revenues is one of the most important benefits of the redevelopment process to San Francisco. The increase of tax revenues from the redevelopment program in all communities in the country has been receiving national, state and local attention for several years. Examples of recent attention given to taxation and urban renewal are the articles in the December 7, 1963, issue of *Business Week* and testimony given by William L. Slayton, Commissioner of the Urban Renewal Administration, on November 21, 1963, before the Subcommittee on Housing of the Banking and Currency Committee of the House of Representatives *Business Week* quoted Urban Renewal Administration findings that after redevelopment, assessed valuations in urban renewal projects were on the average five times greater than assessed valuations prior to redevelopment. Commissioner Slayton in his testimony pointed out that in 403 projects across the country in which redevelopment has started or been completed, assessed values have risen from $575,000,000 to $3,031,000,000, a 427-percent increase.

However, the citizens of San Francisco are most interested specifically in the effect of redevelopment on property taxes from San Francisco redevelopment projects. Therefore, it is proper to discuss in particular the three projects under redevelopment in San Francisco As background for a statement on assessed values and taxes it should be pointed out that in the three projects under redevelopment the estimated capital investment after the completion of redevelopment, including land and improvements, will exceed 300 million dollars

CHART NO. 1

In San Francisco's three projects under development, as shown in Chart No. 1, assessed values will increase, after redevelopment is completed, over 10 times above the assessed values prior to redevelopment This over tenfold increase compares very favorably to the four and a quarter times increase on a national basis described by Commissioner Slayton in testimony referred to above.

Chart No. 1 compares the assessed value of properties in the three projects under development in San Francisco in the following periods prior to redevelopment, as of the 1963–64 tax year, and as projected after redevelopment is completed.

In the Diamond Heights and the first Western Addition projects the assessed values of the partially completed projects in the 1963–64 tax year already exceed the assessed value of properties in these projects prior to redevelopment.

In the Golden Gateway on tax Monday in the 1963–64 tax year there were only limited new improvements to assess At that date the principal improvements consisted of a large excavation for the buildings which at the present time are approximately 40 percent completed This is the reason assessed values in the Golden Gateway are not yet equal to or in excess of the assessed value of properties in the project prior to redevelopment.

The composite assessed values of the three projects under development shown on Chart No 1 indicate that the total assessed values in the three projects in the tax year 1963–64 amount to $5,250,180 as compared to $7,964,200 prior to redevelopment The last bar on the right of Chart No 1 indicates that the estimated assessed values in the three projects will amount to almost $90,000,000 after the completion of development.

Three illustrations of widely differing reuses of cleared parcels further support the certainty of substantial tax increases through the redevelopment process

CHART NO. 2

Chart No. 2 illustrates what has happened and will happen in terms of taxes to the three-block parcel of land occupied by the recently completed St Francis Square development of moderate-priced private housing in the first Western Addition project. In the 1957–58 tax year, the Redevelopment Agency began to buy properties in these three blocks. From this date until the 1963–64 tax year the properties were being bought, structures cleared, and arrangements made for selling the properties During this period taxes were paid on some properties and the city received some local credits in lieu of taxes toward the financing of the project Some tax losses also occurred. In the current tax year the property was partially completed and therefore partially assessed In the 1964–65 tax year the property will again be paying full taxes, but now on the new improvements, and will return to the city in that year three times the taxes paid on the property in the 1957–58 tax year, when the agency first started buying properties

The two columns on the far right of Chart No 2 show for the period 1957–65 that had redevelopment not taken place, total taxes would have exceeded the taxes which were actually returned on this parcel to the city under redevelopment In one additional year, however, taxes actually received will exceed what would have been returned had redevelopment not occurred, and the city will be well on its way to obtaining much more tax income from the area due to redevelopment

One additional point should be made about Chart No 2 The tax rate of $7.37 per $100 of assessed value effective in the 1957–58 tax year was applied as a flat rate over the years covered by the chart in order to make the comparison simpler However, if the current tax rate of $8 82 per $100 of assessed value is applied to the assessed value in the 1964–65 tax year, the taxes received are estimated to be $104,600 rather than $87,400, as shown on the chart.

CHART NO. 3

Chart No 3 is similar to Chart No. 2 in its form of presentation, but applies to a two-block parcel for high-rise apartments in the Golden Gateway The first properties in this area were bought by the Redevelopment Agency in the 1959–60 tax year In the current year a partial assessment on the construction was made By staging the acquisition, demolition, and resale of the property, the agency was able to minimize the tax losses to the city Chart No. 3 shows that in no year was all the land in this parcel off the tax rolls of the city

Again, the two bars on the right of this chart show a comparison of what the city would have received in taxes over the years represented in the chart had redevelopment not taken place and what the city actually did and will receive in taxes with the redevelopment of the area during the years 1959 to 1965 Chart No 3 shows that during this relatively short period of time and with taxes based only on partial assessments on uncompleted buildings, the redevelopment program will result in a net gain in taxes from this parcel of land

Applying the current tax rate of $8 82 per $100 of assessed value rather than the 1959–60 rate of $8 09, the actual tax returns on this parcel in the 1964–65 tax year are estimated to be $176,400 rather than the $161,800 The lower amount stated on the chart results from using the lower tax rate as a flat rate over the years shown in the chart to make the comparison simpler

CHART NO. 4

Chart No 4 again is similar in form to the previous two, but applies to one parcel in Diamond Heights used for a single family residence This parcel was acquired by the agency during the 1956–57 tax year, during which the actual taxes paid were $13.06 The land was then off the tax rolls while the extensive grading and capital improvement program was underway in Diamond Heights. At the 1956–57 tax rate of $7 06 per $100 of assessed value, in the current tax year taxes would be $901 56 In fact, however, since the current tax rate is actually $8 82 per $100 of assessed value, the return in taxes this year to the city from this parcel is $1,126 31

The two columns at the far right of Chart No 4 compare what taxes would have been received from this parcel over the years 1956 to 1964 had redevelopment not occurred and the taxes which were received during this period In this case the temporary losses in taxes during the years 1957 through 1961 were extremely small in comparison with the tax income potential made possible through redevelopment.

These data illustrate the reasons why about 700 cities throughout this nation have undertaken redevelopment or renewal projects As was stated at the outset, there are many other considerations and values apart from taxation But it is obvious that the higher uses applied to underused or badly misused urban land are certain to create greater values and greater income and, therefore greater tax resources so sorely needed by our cities

PART IV

STATE OF CALIFORNIA
OFFICE OF LEGISLATIVE COUNSEL
Sacramento, October 8, 1963

HONORABLE NICHOLAS PETRIS
815 Financial Center Building
405 14th Street
Oakland 12, California

PROPERTY TAXES—#954

Dear Mr. Petris:

You have asked us two questions relating to property taxation. These questions are set forth and considered separately below.

QUESTION NO. 1

What are the constitutional and statutory limitations on the rates of property taxation for general law cities and counties, school districts, and special taxing districts * ?

ANSWER NO. 1

A. State Constitutional Limitations

Under the California Constitution, the Legislature has power, by a two-thirds vote of all of the members elected to each of the two houses, to limit the amount of taxes which may be imposed upon real and personal property according to the value thereof for county or city and county purposes (Sec. 20, Art. XI, Cal Const). If a deficiency in local revenue is sustained by any county or city and county as a result of any such limitation, the Legislature must apportion to the county or city and county out of state revenue an amount equal to the deficiency (Sec. 15, Art XIII, State Const)

The California Constitution provides that the rate of any tax imposed on notes, debentures, shares of capital stock, bonds, solvent credits, deeds of trust, mortgages and any legal or equitable interest therein, may not exceed four-tenths of 1 percent of the actual value of such property (Sec 14, Art. XIII, Cal Const) With respect to solvent credits, the Legislature has fixed a rate of one-tenth of 1 percent of actual value (Sec 2153, R & T.C)

The California Constitution also provides that the Legislature may classify any taxable personal property for tax purposes "in a manner and at a rate or rates in proportion to value different from any other property . . " (Sec 14, Art. XIII, Cal Const)

The taxes levied upon unsecured personal property and possessory interests must be based upon the rates for taxes levied for the preceding year on secured property (Sec 9a, Art XIII, Cal Const)

* You have informed us that by "special taxing districts" you have in mind those special districts that impose taxes on land, improvements and personal property, as distinguished from those that impose taxes or assessments only on land or land and improvements and not on personal property

B. Statutory Limitations

1. *Generally*

When, following an intercounty equalization of property by the State Board of Equalization, a decrease in the valuation of property on a county's or city's secured tax assessment roll requires an upward adjustment in tax rates for county, city or district purposes to produce the revenue that was anticipated at the time of the tax levy, the adjustment may be made irrespective of any tax limitations elsewhere in the law (Sec 1825, R. & T.C.).

As noted above, the maximum tax rate on solvent credits is one-tenth of 1 percent of actual value (Sec. 2153, R & T C.)

The rate of tax on baled cotton is one-tenth of 1 percent of its full cash value (Sec 2192 3, R & T C).

The rate of tax on aircraft is 1¼ percent of the market value of the aircraft (Sec 5391, R. & T.C).

2. *General Law Cities*

Except with the consent of the city electors expressed at an election held for that purpose, and except as otherwise specifically authorized, the annual property tax levied by general law cities may not exceed $1 per each $100 of assessed valuation. This general rate, however, is exclusive of taxes to pay the following· costs of any pension plan for city employees, civil defense or disaster preparedness (not exceeding five cents on each $100 assessment), sewage, park and recreational facilities (Sec 43068, Gov C.); veterans' homes (not exceeding three mills on each $1 of assessed valuation (Sec 37465, Gov.C.)), museums (not to exceed two mills on each $1 of assessed valuation (Sec 37558, Gov C)); embankments, sea walls, storm drains and other flood control works (not exceeding 20 cents on each $100 of assessed valuation (Sec 43069, Gov C)); public parks and boulevards (Sec 5304, P R C); and libraries (not to exceed from two to three mills per dollar of assessed valuation (Sec. 27401, Ed.C)) (Sec 43068, Gov C.).

The general rate limitation does not prevent a city having a validly contracted bonded indebtedness from levying and collecting taxes for the payment of such indebtedness, in addition to other authorized taxes (Sec 43070, Gov.C.).

A general law city may also levy special taxes for the following purposes at the rates indicated 15 cents per $100 of assessed valuation for parks, music, and advertising (Sec 43200, Gov.C); 50 cents per $100 of assessed valuation for municipal improvements generally (Sec 43225, Gov.C).

3. *Counties*

There is no general statutory limitation upon the tax rate levied by counties However, limitations are imposed in many cases with respect to tax levies authorized for specific purposes These include the following: four cents per $100 of assessed valuation for advertising county resources (Sec 26100, Gov C); three mills per dollar of assessed

valuation for airports (Sec 26020, Gov.C.); three mills per dollar of assessed valuation for libraries (Sec 27263, Ed.C.); 40 cents per $100 of assessed valuation for county highways (Sec. 1550, S. & H.C.); four cents per $100 of assessed valuation for fairs and expositions (Sec. 25904, Gov C.); from 1½ to 2½ mills per dollar of assessed valuation for buildings for veterans' purposes (Sec 1262, M. & V C), 1½ mills per dollar of assessed valuation for veterans' homes (Sec 1121, M. & V C).

4 *School Districts*

Subject to certain exceptions, the statutory limitations upon the rate of property taxes, exclusive of bond interest and redemption, authorized to be levied by school districts, per $100 of assessed valuation, are as follows:

(a) Separate elementary school district, the boundaries of which are not coterminous with those of a high school district, 80 cents for elementary school purposes, or 90 cents for combined kindergarten and elementary school purposes.

(b) Separate high school district, the boundaries of which are not coterminous with those of an elementary school district or with those of a junior college district, 75 cents for high school purposes, or $1.10 for combined high school and junior college purposes.

(c) Separate junior college district, the boundaries of which are not coterminous with those of a high school district, 35 cents for junior college purposes.

(d) Unified school district, $1 55 for combined elementary and high school purposes; or, $1 65 for combined kindergarten, elementary, and high school purposes; or, $1 90 for combined elementary and high school, and junior college purposes; or, $2 00 for combined kindergarten, elementary school, high school, and junior college purposes

(e) High school and junior college district the boundaries of which are coterminous and which are governed by the same governing board, $1 10 for combined high school and junior college purposes. (Sec. 20751, Ed.C.)

Various special tax levies are authorized over and above the foregoing limitations, including levies for the following:

(1) Costs of providing breakfasts and lunches for needy pupils (Sec 11706, Ed C.).

(2) Costs of contributing to the Retirement Annuity Fund (Secs 14210 and 14214, Ed.C.).

(3) Costs of making payments required by a district retirement plan (Secs. 14657 and 14758, Ed.C.).

(4) Costs of installing fire prevention facilities (Sec 15517, Ed.C.).

(5) Costs of maintaining a child care center (Secs. 16633-16635, incl., Ed.C.).

(6) Replacement of the amount withheld from a district by the State Controller for state school apportionments (Secs 19443 and 19619, Ed C.).

(7) Costs of district contributions to the State Employees' Retirement System (Sec 20532, Gov C).

(8) Costs for use of school property for pubic purposes and community recreation (Sec. 20801, Ed C).

(9) Costs for the Old Age and Survivors' Insurance System (Sec 20801.5, Ed.C.).

(10) Costs for operating a junior college district or a unified school district maintaining a junior college Effective for three consecutive fiscal years following date of first election at which junior college bond issue is passed, or until end of any four year period in which no bond issue is submitted to voters. (Sec. 25541.5, Ed.C.)

(11) Costs of the premiums payable for medical and hospitalization premiums, but only in a school district whose boundaries are coterminous with the boundaries of a city and county (Sec 20802 6, Ed C)

(12) Costs of the premiums payable for health and welfare benefits (Sec. 20806, Ed C.).

(13) Costs of making payments for special programs for the education of educationally handicapped minors (Sec 20807, Ed C)

(14) Costs of making payments to county school service fund for education of mentally retarded children where county superintendent of schools educates mentally retarded minors for school districts (Sec 8955 1, Ed C ; operative July 1, 1964).

(15) Costs for the program of adult education not to exceed 10 cents per each $100 of assessed value (Sec 20802 8, Ed C)

(16) Costs where any school district is obligated to pay another school district tuition or other expenses of educating pupils in grades 7 and 8 in a junior high school (Sec 20810, Ed C)

(17) Costs of educating mentally retarded minors (Sec 6913 1, Ed.C.).

(18) Costs of establishing and maintaining child care centers for physically handicapped and mentally retarded children (Sec 16645 5, Ed C).

5 *Special Taxing Districts*

There is no general statutory limitation upon the rates of property taxes authorized to be levied by special taxing districts Many of the special taxing district laws, however, contain rate limitations The table following shows such limitations It might be noted that in some instances the limitations are exclusive of the district's power to tax to pay off bonded indebtedness.

DISTRICTS (GENERAL LAW)—STATUTORY TAX LIMITATIONS [1]

District	Limitation	Citation
Airport districts	†$0 20/$100	P U C, Sec 22907
Bridge and highway districts	0 10 / 100 if the purpose of the taxation is to supply funds for investigating the project prior to the issuance of bonds and the payment of the officers and employees of the district prior to the time when the works of the district are earning revenue	S & H C, Sec 27201
Cemetery districts	0 002 / 1	1909 106 156, Sec 4 (Repealed 1941 933 2519)[2]
Cemetery districts	0 002 / 1	H & S C, Sec 8981
Community services districts	1 00 / 100	Gov C, Sec 61755 5
Fire protection districts (in one or more counties)	Not to exceed 1 percent of assessed valuation for (1) establishing and equipping district and (2) maintaining district	H & S C, Secs 14703, 14704
Garbage and refuse disposal districts	0 15 / 100	H & S C, Sec 4183
Harbor districts, small craft	0 75 / 100	H & N C, Sec 7262
Harbor districts	0 03 / 100 for capital outlay	H & N C, Sec 6093 4
Health districts, local	0 15 / 100	H & S C, Sec 952 (Repealed)
Hospital districts, local	0 20 / 100	H & S C, Sec 32203
Labor camps (public service districts)	0 005 / 1	Lab C, Sec 2145 (Repealed)
Library districts	0 15 / 100	Ed C, Sec 27803
Limited water districts	0 20 / 100	D A 5243a, 1959 2136, Sec 19
Memorial districts (veterans)	0 003 / 1	M & V C, Sec 1192
Metropolitan water districts	0 05 / 100	D A 0129, 1927 439, Sec 5(8)
Mosquito abatement districts	0 15 / 100, unless board of directors finds necessity for higher rate, and then allows maximum of $0 40 / $100, providing district covers more than one county	H & S C, Sec 2302 1
Planning districts	0 01 / 100	Gov C, Sec 66361
Police protection districts in unincorporated towns	Not to exceed 1 percent of assessed value for establishment and equipment of police department Not to exceed one-half of 1 percent of assessed value for maintenance of department	H & S C, Secs 20101, 20110, 20111
Police protection districts in unincorporated territory	Not to exceed in any one year, $3,000	H & S C, Sec 20332
Recreation and park districts	0 50 / 100	P R C, Secs 5784 5, 5784 7
Regional park districts	0 05 / 100 Also $0 05 / $100 through 1968–69 for land acquisition and capital improvements	P R C, Sec 5545
Regional shoreline park and recreation districts	0 10 / 100	P R C, Sec 5728 (Repealed)
Resort improvement districts	1 00 / 100	P R C, Sec 13161
Road districts	0 40 / 100	S & H C, Sec 1550
Sanitary districts (1923 Act)	0 60 / 100, except if district board elects to use the county assessor's tax roll pursuant to law, no more than $1 / $100	H & S C, Sec 0605
Sewer districts, municipal (1911 Act)	0 20 / 100	H & S C, Sec 4640
Student transportation districts	0 05 / 100	Ed C, Sec 16972

[1] *General taxes* are levies imposed on all the taxable property within the jurisdiction of the taxing agency for ordinary governmental purposes, no special benefit to the taxpayer need be shown, nor need the revenue be spent only for particular governmental functions (see 46 Cal. Jur 2nd 486 et seq)

Special taxes are like general taxes except that they are levied for a designated purpose upon all property within a certain district. The fact that some property benefits more than other property does not prevent the levy from being a tax (see *Anaheim Sugar Co.* v. *Orange County*, 181 Cal 212).

Special assessments are not taxes in the constitutional or usual sense, although sometimes spoken of as taxes (see *San Diego* v. *Linda Vista Irrigation District*, 108 Cal 189), but are levied upon real property in a district for the purpose of paying for improvements, the amount of the levy being based upon the benefits accruing to the property as a result of the improvements

This table lists only the rate limitations on taxes and not those on assessments

† Here and in the following the figure after the slant sign represents the amount of assessed valuation to which the figure preceding the sign is applicable Here, therefore, the rate is 20 cents per each $100 of assessed value

[1] District laws which have been repealed are included where a savings clause, as to existing districts formed under the act, has been enacted by the Legislature

QUESTION NO. 2

What provisions are there for levying taxes at rates above the statutory limits without a vote of the people?

ANSWER NO. 2

As noted in our consideration of Question No. 1, there is no general statutory limitation upon the tax rates that may be levied by counties.

In the case of a general law city or a school district, a vote of the people is necessary before a tax may be levied at a rate in excess of the statutory limit (see Sec 43068, Gov.C.; and Sec 20803, Ed C.)

As for special taxing districts, some of the special taxing district acts contain no provision for an increase in the tax rates authorized without further legislative action (see, e g., Alpine County Water Act, Sec. 45, D A 270, Stats 1961, Ch. 1896). Where this is the situation, the district involved apparently cannot levy taxes above the statutory limit Other district laws permit an increase in the tax rate only after an election (see, e g, Crestline-Lake Arrowhead Water Agency Act, Stats. 1962 (1st Ex. Sess.), Ch 40, Sec. 29).

Very truly yours,

PUBLISHER'S NOTE

This report on revenue and expenditure trends of local government is the sixth in a series of interim studies to be published this year by the Committee on Revenue and Taxation The recommendations in this report are those of the researcher and should not be construed as representative of the views or decisions of the committee. The committee recommendations will be made in due course.

ABOUT THE AUTHOR

This report on local government finance was prepared for the committee by Mrs. Wilma Mayers, a lecturer on economics at Sacramento State College. Mrs. Mayers graduated at the head of her class when she received her A B. in economics from the University of British Columbia From 1944 to 1947 she was a teaching assistant in economics and statistics at the University of California in Berkeley and at that same time she was on the staff of the university's Bureau of Business and Economic Research. In 1949 she became a lecturer in economics at U.C.L.A , leaving in 1950 when she began work for the State Board of Equalization on property and sales taxes.

Mrs Mayers has been active in civic affairs in Sacramento and was president of the League of Women Voters in 1958–59. She is now a candidate for the Ph.D. at the University of California, Berkeley.

FINANCING LOCAL GOVERNMENT IN CALIFORNIA

LIST OF TABLES

LIST OF TABLES—Continued

INTRODUCTION

FINANCING LOCAL GOVERNMENT IN CALIFORNIA

Local government in California is big government—in every sense except the way we usually see it Total expenditures by our cities, counties, school districts, and special districts are more than double total state expenditures, and revenue from the property tax alone exceeds $2 billion a year, or the entire yield of *all* state taxes Over half of the state budget itself is devoted to assistance to the 5,441 local governments, and federal funds for various programs also go both directly and through the state to local government

Local government expenditures have more than doubled in the last decade, having risen about 10 percent a year—considerably faster than population growth and personal incomes Owing to the surge in school age population and the move to the suburbs, the fastest rising sectors were school and special district expenditure Meantime, state subventions and grants have almost doubled, but this local assistance has been unable to keep pace with the expansion in local spending

Accordingly, local governments have had to raise more revenue at the local level for both current and capital expenses They are restricted by law and by the State Constitution in the means that they may use, and have been pressed into greater reliance on the property tax Fortunately, economic growth, with an assist from the statewide property reappraisal program, produced rising assessed valuations, but property tax rate increases were also required to plug the revenue gap A disproportionately heavy burden on property taxpayers has developed, and more frequent failures of bond issues for capital improvements perhaps indicate that the fiscal limits of this tax are being approached

A great boon to the cities, and to a lesser extent the counties, has been the improvement of the local sales tax under the Bradley-Burns Act In addition, those local governments in a position to do so have made increasing use of service charges Both municipally owned enterprises and special districts have made maximum use of the benefit theory of taxation, with charges or taxes levied on those who use the service, although these districts have often been small, uneconomical, and without sufficient tax base or borrowing power to provide for needed expansion

The search for other non-property-tax revenues is on Business licenses have attracted increasing attention, though a statutory change would apparently be necessary to make this a real source of revenue at the county level Hotel taxes are being adopted to finance civic and convention facilities And more sustained thought is being given to developing long-range equitable new sources of revenue Should they be of the sales or income type, or additional fees for service? Should they be levied by local governments at their own discretion, or by the state on behalf of its local jurisdictions?

There are very few signs of diminishing needs. Population is expected to keep right on increasing, with the most rapid rate of growth in the age group which will increasingly attend junior colleges. Urbanization continues and produces more demand for transit, water, sewage disposal, parks, mental health services, smog control, and planning. Prices and salaries will probably increase.

How should the needed capital outlays be handled? Four alternatives are possible: financing out of general revenues (but these amounts are limited), financing by a lease-purchase arrangement; increasing bonded indebtedness at the local level (which may be difficult where a two-thirds majority vote in favor is required, and which of course increases interest costs); and making use of the borrowing capacity of the state government. (There are, of course, other competing demands for state funds, such as higher education, corrections, and water development; and more state assistance may mean less local fiscal independence.)

Should there be a reorganization of functions among the state and local governments? Can we afford to get less for our tax dollars in some areas for the sake of preserving "home rule"? How can the state and local governments cooperate to form a stronger, fairer revenue system?

Another aspect of local finance is the great diversity in the economic capacity of the individual cities, counties, and districts,* often leading to great divergence in levels of service and in the cost at which supposedly comparable services are rendered. This must be kept in mind in observing the aggregates and averages with which we must deal in discussing local government on a statewide basis.†

This report discusses first the total expenditures of all local governments over the last decade; then breaks these down into current and capital (since current expenditures can be expected to be much more closely related to changes in workload than capital outlays, which tend to be more uneven in their rates of change); then analyzes expenditures by function in order to lay the basis for projection of local government needs in the future. Secondly, the changing patterns of local revenue are discussed. Finally, present and possible additional sources of local revenue are evaluated, from the point of view of their impact on individuals, businesses, and the economy as a whole, revenue-raising potential; administrability, and effects on state-local relationships.

The objectives of this study are to examine the expenditures and revenues of the cities, counties, school districts, and special districts of California, in order to determine their present and anticipated needs, and to appraise the adequacy of local sources of revenue in meeting these needs. For this purpose, the 11-year period from fiscal 1952–53 to 1962–63 will be studied (1962–63 is the last year for which complete data are available from the office of the State Controller), with particular attention to areas of rapid growth and to changing patterns in both expenditures and revenues. The main question to which the study is addressed is, "How can local jurisdictions obtain additional revenues to meet necessary expenditures?"

† Data appear to be incompletely reported for special districts 1952–53

Source: Controller's *Annual Reports*, 1952–63

In the aggregate, local government expenditures have risen sharply in the 11-year period at an average rate of more than 10 percent a year, compared with an average population growth of about 3 5 percent and an annual growth in personal incomes of Californians of 7 percent The cost of local government services in our state has thus increased from 9 1 percent of personal income to 11 1 percent of personal income Because local governments are restricted in their taxing powers to those sources of revenue granted to them by the State Constitution

and Legislature, there has developed an imbalance between rapidly rising revenue requirements and limited revenue-raising powers And, although state assistance to local governments is over half the state budget and has increased by 8 percent a year during this period, it has not kept pace with the even faster climb of local expenditures Consequently, there has been increasing pressure on traditional local sources of revenue, notably the property tax, and a mounting search for additional revenue.

What should be the criteria employed in the choice of future revenue sources? What criteria should be used in evaluating local needs? Are there adjustments in the functional responsibilities of the state and its local jurisdictions which could result in greater economy without destroying the desired balance of powers and responsibilities?

It is apparent that the answers to these problems go far beyond the practical limitations of the present study Nevertheless, some estimate of local government needs is essential as a guide to tax policy, particularly in areas where state policy is to provide a minimum–adequate level of service, as in the field of education It would be helpful if there were more objective criteria of the results obtained from governmental expenditures, to assist in arriving at an optimum output of services per dollar of input This would involve greater use of performance budgeting at the local level

One approach to the measurement of local needs is to project them on the basis of past trends and patterns For this purpose data have been gathered in this study on the operating expenditures and capital outlays of cities, counties, school districts and special districts over a 10-year period Because of problems of noncomparability in the data, this has been a time-consuming task, and attempts to obtain complete data for the earlier years could not be accomplished in the time available. Some existing projections of need are considered

Second, expenditures have been analyzed by functions performed, such as education, welfare, streets and highways, health, mental health, corrections, and so on Some possible future trends in the level or quality of these services are noted

Finally, local revenues are analyzed over the same period, with an overall view of the changing patterns under the impact of expenditure growth in each type of jurisdiction, and with a longer look at each of the individual sources of revenue Emphasis has been placed on nonproperty-tax revenues, since the property tax will be treated in greater detail in another section of the committee study *

TOTAL EXPENDITURES OF LOCAL GOVERNMENTS

A. Rapid Growth 1952-53 to 1962-63

(1) In the Nation

State and local governments together provide by far the largest share of civil government services In the nation as a whole, in the postwar period, state and local governments employed 1 out of 12 persons in the country, and state and local construction accounted for one-fifth of all new construction State and local expenditures have thus both stimulated the growth of the economy and been stimulated by it, in the sense that relative affluence has led to a demand for new and better services

Economic growth tends to increase the revenue from existing taxes, and to thus provide part of its own fiscal solution to rising expenditures But studies indicate that various tax sources respond quite differently to economic growth For example, income taxes tend to rise about 1 7 percent for every 1 percent increase in the economy, while sales tax receipts go up only about 1 percent † One explanation for the relative lag in sales taxes is that "the proportion of income spent on commodities—as contrasted to services—tends to decline as income increases" ‡ One of the best measures of economic growth is gross national product, the value of all the goods and services produced in the nation as a whole In the decade 1953–63, gross national product rose 60 percent, but the nation's local expenditures rose 132 5 percent.

State and local expenditures have thus increased twice as fast as gross national product, and three times as fast as federal civilian expenditure Some of the main reasons for this rapid growth are

(a) A general rise in prices and salaries The price index of state and local government purchases rose 39 percent

(b) The increase in population, and changes in its structure and mobility In particular, a high rate of increase in the school-age group as a result of the postwar baby boom called for extraordinary expenditures for education, as well as aid to needy children The growth in numbers of persons over 65 years of age also brought higher welfare expenditures

(c) Increased urbanization, since two-thirds of the population increase in the 1950–59 decade occurred in metropolitan areas both inside and outside cities This has increased traditional government costs, and added new ones such as mass transportation, water and sewage improvements, and smog control

* Lillian P Barnes etc "State and Local Government Activity," *Survey of Current Business*, March, 1961, p 16
† Joseph Robertson "Possible Alternatives to State Tax Increases," *National Tax Association*, Proceedings 1960
‡ State of California *Budget*, 1963–64, p A-13

(d) Improved levels of service, in part the result of increased affluence

(2) In California

One measure of the aggregate increase in local government expenditures in California is provided by the State Controller's total payments figure for counties, cities, school districts and special districts These figures exclude disbursements made from moneys derived from indebtedness.

TABLE II

LOCAL GOVERNMENT EXPENDITURES: 1951-52 TO 1962-63
(Dollar figures in thousands)

1951–52	$2,096,838
1952–53	2,349,560
1953–54	2,612,657
1954–55	2,820,061
1955–56	3,067,227
1956–57	3,491,161
1957–58	3,943,752
1958–59	4,324,419
1959–60	4,823,255
1960–61	5,282,108
1961–62	5,727,573
1962–63	6,286,848

Source State Controller, *California Statistical Abstract*

The average annual growth rate of over 10 percent illustrates the aggregate movement of local expenditures

A somewhat narrower measure of this movement is provided by total general fund expenditures This excludes the various bond and other special purpose funds, and therefore includes only such capital outlay as has been made out of regular income.

TABLE III

GENERAL FUND EXPENDITURES OF LOCAL GOVERNMENTS: 1952–53 AND 1962–63 *

(Dollar figures in thousands)

	1952–53	1962–63	Percent change 1963 from 1953
Counties	$718,194	$1,651,473	129 9
Cities	499,434	1,152,595	130 7
City-owned enterprises	221,451	394,906	78 3
School districts	636,880	1,903,843	198 9
Special purpose districts	35,585	471,906	1,226 1
Total	$2,111,544	5,574,723	164 0

* The City and County of San Francisco is included in cities and excluded from counties to avoid double counting
Special purpose districts excludes irrigation districts
City-owned enterprises are separated from cities because they are treated differently in the earlier and later data

Source State Controller, *Annual Reports*, 1952–63

B. Current Expenditure and Capital Outlay

(1) All Local Governments

The two decades between 1937 and 1957 are discussed in the Claremont Social Research Center Study, *California Local Finance* The authors conclude that although the dollar amounts spent by California local governments for operating expense rose quite sharply from 1937 to 1957, this was nearly all accounted for by price and population increase, and that furthermore the taxpayer was probably getting somewhat better service for his dollar. They also concluded that this growth did not represent any real increase in the economic burden of financing local government, since the cost remained fairly constant as a share of the personal income of Californians. (This situation has now changed)

For the latter of the two decades, between 1947 and 1957, per capita operating costs in constant dollars rose 26 percent for cities and 30 percent for counties, but most of the increase was between 1947 and 1950 when wartime shortages were being made up Current expenses of education, on the other hand, increased 30 percent even after adjustment for changes in enrollment and general price level. Increases in teachers' salaries accounted for part of the rise Capital outlays for education rose sharply, with major factors being increasing school population and rising construction costs Special district expenditures increased, but even when capital spending was included, the increase could be accounted for by population and price level changes. When capital spending was included in county expenditure, this expenditure had risen even after adjustment for population and price level changes

During this period counties grew in fiscal importance, partly because of the move to the suburbs, and also because of the growth of welfare costs A wide range existed in per capita operating costs among various cities and counties in California City costs per capita apparently do not fall as cities become larger. Economies of scale may be offset by higher costs of administration However, some city services, such as libraries, may be better in quality in larger cities.

For the period which they studied, the authors concluded that if there was a crisis in local government finance, it could not be blamed on an excessive increase in local expenditures, and that the fault must lie elsewhere, perhaps the following

(a) An inequitable or ill-administered tax system that causes the cost of local government to seem more burdensome that it really is.

(b) A slight increase in capital investment in real dollars, due primarily to rapid population growth, which might have been the straw breaking the camel's back

(c) The taxpayer may be venting his economic uneasiness and frustration against local taxes, although the real fault lies elsewhere, perhaps with federal taxation, heavy interest payments on time purchases, or perhaps inflation.

Leaving the Claremont study and turning to the most recent decade, we observe that current expenditures of all local governments increased

by almost 170 percent between fiscal 1953 and fiscal 1963.* Only part of this could be accounted for by population and price increases, since population increased by 46 percent and prices of things purchased by governments by 39 percent Thus the total real per capita burden of local government current expense has increased significantly Even when the increase in personal incomes is taken into account, the relative burden has increased, since in the earlier year current local government expenses were just over 7 percent of personal incomes of Californians, whereas they had increased to over 9 percent of personal incomes by 1963

When capital outlays are also included, total local government expenditures rose from 9 1 percent of personal incomes in fiscal 1953 to 11 1 percent in fiscal 1963 Capital outlays alone more than doubled over the decade, but did not increase as fast as current expenditure This suggests that capital outlays have been postponed, because of the necessity of taking care of the day-to-day needs brought on by increasing population, growth of the suburbs, and demand for improved services

Because current revenues have generally provided but a sparse margin for capital outlays, increasing recourse to borrowing for capital improvements has been necessary This shows up in the fact that debt service expenditures have more than tripled in the 11-year period

Some areas in which greater capital outlay may be expected in the coming years will be in the construction of facilities for junior college education, correctional facilities, and mental health facilities, with current levels in other categories probably continuing to keep pace with current growth in population and relevant price levels

(2) By Jurisdiction

(a) Counties

From fiscal 1953 to the end of fiscal 1963, current county expenditures rose from $669,603,000 to $1,551,701,000, an increase of 131 6 percent At the same time population increased 46 2 percent and prices of the things bought by 39 percent

Capital outlays from general funds have averaged slightly in excess of $127 million a year in the last 7 years, and capital outlays from bond funds over the same period have varied from a low of $11 million in 1957–58 to $31 million in 1962–63 The fastest growing item in county budgets has been interest payments and debt redemption, which increased from a low of $1,621,000 in 1952–53 to $17,040,000 in 1962–63, an increase of 1,051 percent, but this is largely due to a low volume of long-term bond financing in the earlier years

In general, it may be concluded that although county expenditures about doubled in the 11-year period, almost all of this increase can be explained by population and price increases

Looking at the last six years, in order to observe more recent changes, we note the following

Current expenses increased 60 7 percent from fiscal 1958 to fiscal 1963, while prices of local government goods and services rose about 16 percent and population rose almost 20 percent

* Total expenditures are not broken down into current and capital for the earlier years in the data collected by the State Controller, but estimated amounts are given in the tables on pages 17 and 18

1963–64 (estimate)	3,980,000					

Source State Controller, *Annual Reports*, 1957–58—1962–63, and State Department of Education

There has been about a 63 6 percent rise in current expense of education expenditure for the six-year period fiscal 1958–63, while average daily attendance has risen almost 37 percent, and the general price level of government goods and services has risen another 16 3 percent Personal incomes of California meantime have risen about 39 2 percent.

(d) Special Districts

TABLE XI

SPECIAL DISTRICTS,* CURRENT AND CAPITAL EXPENDITURES FROM GENERAL FUNDS

(Dollar figures in thousands)

Fiscal year	Number of districts	General purpose expenditures	Operating expenses	Capital outlay
1957–58	2,982	$209,750	$148,802	$60,948
1958–59	3,038	264,298	192,702	71,595
1959–60	3,123	330,162	222,372	107,791
1960–61	3,178	388,796	259,724	129,072
1961–62	3,237	436,716	275,749	160,968
1962–63	3,342	471,906	298,046	173,860

* Excluding irrigation districts

Source State Controller, *Annual Reports*, 1957–63

The number of districts increased by 360 General purpose expenditures have more than doubled during this period, with capital outlay almost tripling (up about 185 percent) Expenditures from long-term indebtedness more than doubled—for those reporting it rose from $92,109,700 to $135,814,346. Debt service expenditure rose from $48,730,500 to $109,121,583.

TABLE XII

GENERAL FUND REVENUE SOURCES FOR LOCAL GOVERNMENT, 1962-63 *

(Dollar figures in millions)

	Property tax revenue	State apportionments	Federal grants	Sales tax revenues	Other	Total
Counties	$688	$451	$300	$38	$203	$1,680
Cities	447	†143	22	223	385	1,220

Special districts	‡161	5	7		§308	481
Total	$2 392	$1,343	$379	$282	$926	$5,323

* Not including revenues to bond funds, and other special funds

† Including motor vehicle revenues, trailer coach, alcohol, gasoline

‡ Taxes and assessments Taxes and assessments were levied not only for general purposes but also for interest and retirement of long-term debt The total levy by special districts for all purposes was $225 3 million
School districts also levied an additional $212 3 million in property taxes for bond interest and redemption

§ $261 6 million was from charges for service

Source State Controller, *Annual Reports*, 1952–63

General fund revenues of local governments exclude bond funds and other special funds which are earmarked for specific purposes General fund revenues totaled $5 3 billions in 1963 Almost half of this was property tax revenue

EXPENDITURES BY FUNCTION AND REVENUES BY TYPE, 1952-53 to 1962-63

A. Counties

(1) Expenditures—Analysis by Function

County government has historically provided the basic services of courts, probation, and county jail, recordkeeping, registration of voters; testing of weights and measures, assessment of property and collection of property taxes; provision of basic police, health, and some library services to the unincorporated areas; and general relief to the needy More recently, there has been an expansion of welfare services, park and recreation services, flood control, smog control, water conservation, and areawide planning, to mention but a few of the growing services

In the 11 years 1952–53 to 1962–63, while the total of all county expenditures rose approximately 133 5 percent, general government costs increased 190 3 percent, protection of persons and property, 382 2 percent, health and sanitation, 87 8 percent, recreation, 173 8 percent, educational expense, 239 1 percent, and debt service, 945 4 percent The slower growing items, though large in terms of absolute dollars, were roads and bridges, 82 percent, and charities and corrections, 102 5 percent

The percentage of total expenditures claimed by each of these functions in 1962–63 compared to the earlier period was

TABLE XIII

COUNTY EXPENDITURE BREAKDOWN: 1952–53 TO 1962–63

	1952-53 Percent of total	1962-63 Percent of total
General government	12 09	16 02
Protection of persons and property	7 18	15 06

Charities and corrections	61 52	54 19
Education	1 08	1 60
Miscellaneous	2 85	
Debt service	0 23	1 03
Public enterprise		0 19
	100 00	100 00

Source State Controller *Annual Reports* (excludes San Francisco, which has been included in cities)

Within the category of general government the largest items in 1962–63 were buildings and grounds expense, assessor, justice and municipal courts, surveyor and engineer, superior courts, auditor and

controller The sheriff's department, jails and rehabilitation, agricultural commissioner, communications, constables and marshals, and the recorder were the most important items in protection to persons and property.

The health and sanitation category went mostly for expenditures of health departments, with a sizeable amount for tubercular care (almost half of which was spent in Los Angeles County)

The charities and corrections item of $894,997,000 was itemized as follows:

TABLE XIV

County Expenditures Breakdown: 1963

	Current Expenses (Dollar figures in thousands)
Hospital	$183,730
Home for aged—county farm	
Welfare administration	69,322
Aid to needy—disabled	28,484
Aid to needy—children	168,689
Aid to needy—blind	15,868
Aid to needy—aged	280,166
Aid to partially self-supporting blind	380
Aid to children in boarding homes	7,234
General relief	24,152
Juvenile court wards	7,902
Crippled children	9,870
Other welfare	11,718
Probation department	21,980
Juvenile hall	17,584
State institutions	4,202
Burials, cemetery and veterans care	117
Veterans service officer	1,498

Source State Controller, *Annual Reports*, 1962–63

In the education category, library expenses were the most sizeable item, followed by expenditures of the Superintendent of Schools Debt service included $5,215,371 for interest and $8,186,500 for retirement of principal Miscellaneous included $48,018,658 for retirement, plus expenditures for advertising county resources, fairs, and airports

(2) Revenues by Type

The property tax and subventions by the state and federal governments are still the mainstays of county finance But there has been a decline over the period since 1952–53 in the extent to which outside subventions and grants meet the total cost of county government, and an increase in the extent to which counties have had to rely on the property tax Whereas total revenues increased roughly 133 percent in the 11-year period, subventions and grants increased only 97 2 percent and property taxes by 145 1 percent To look at it another way, property taxes formed 38 9 percent of total revenue in fiscal 1953, but 41 percent in fiscal 1963 On the other hand, subventions and grants made up 52 8 percent of total revenues in the earlier year, but only 44 7 percent in 1963.

Licenses and permits produced only 0 6 percent of the revenue at both ends of the 10-year period, in contrast to the case in the cities, where this category produced 6 7 percent of the total. Part of the reason is that counties are restricted to license charges for regulation

TABLE XV

COUNTY EXPENDITURE, BY FUNCTION *: 1952–53 TO 1962–63

(Dollar figures in thousands)

	1952–53	1953–54	1954–55	1955–56	1956–57	1957–58	1958–59	1959–60	1960–61	1961–62	1962–63	Percent of total		Increase of 1962–63 over 1952–53 in percent

* Excludes San Francisco City and County, which is included in "cities"

Source: State Controller's *Annual Reports*

purposes only, whereas cities may levy, for example, business licenses for revenue, using gross receipts or some other measure related to the volume of business instead of a flat charge Of the total statewide of $11 4 million in this category, $7 6 million came from construction permits, $1 1 million from business and $1 7 million from animal licenses

In contrast, the revenue from charges for services, including fees and commissions, increased 301 2 percent over the decade, and the share of total revenue from 4 percent to just over 7 14 percent With a total yield of over $120 million, this category was third in importance, after property taxes at $688 million and subventions and grants at $751 million

Sales taxes increased from $21 million in fiscal 1957 (the first complete year of operation under the Bradley-Burns Act) to $38 million in fiscal 1963 They now provide about 2 26 percent of total county revenue

Fines and penalties enjoyed a slight relative increase over the decade, and at $25 3 million produce 1 51 percent of the total There was a 264-percent increase in interest income but it still provided only 0 96 percent of all revenue at $16 2 million for the counties of the state Rents, concessions, and royalties were quite small, as were receipts from privileges granted Each produced about $4 million, statewide, and each accounted for about 0 24 percent of county revenues

Sale of property is a variable item In 1963 it produced $7 1 million Miscellaneous items accounted for another $20 3 million

B. Cities

(1) Expenditures—Analysis by Function

At the end of fiscal 1963, there were 382 cities in California, of which chartered cities numbered 70, with the balance being general law cities Although charter cities have more freedom of action than do general law cities, including the use of tax sources not open to general law cities, there is no apparent rush to become chartered One reason may be the preference of the voters for the restriction of general law cities to a property tax rate limit of $1 per $100 of assessed valuation, unless an amount in excess of this is passed by the voters *

The main city expenditures, other than city-owned enterprises, are for general government, police and fire protection, public works such as streets, sewers, storm drains, and street lighting, parks and recreation; libraries, health, retirement, and debt service City-owned enterprises, including water, electricity and gas companies, public transportation systems, airports, parking facilities, harbors, hospitals, housing, and cemeteries are treated separately from other city expenditures in an effort to make comparisons between the expenditures in the earlier and later years

General government, which includes the expenses of the city council, manager, clerk, controller, treasurer, attorney, planning, and the upkeep and outlay on government buildings ($33 8 million in fiscal 1963), as well as the housekeeping functions of purchasing and personnel, apparently increased as a share of total city expenditures, but when

* Exclusive of the tax for pensions, civil defense, sewage, parks and recreation, bond service, flood control, museums, libraries, etc, as stated in various Government Code sections

* County Sales Tax not in operation for full year

Source: State Controller's *Annual Reports*

San Francisco's expenditures on charities and corrections are removed (since these are largely county rather than city functions), the share of total expenditures is about 9 percent, or approximately the same as in 1952–53 *

Protection to persons and property is still the largest category in the budget, at 29 16 percent of the total compared to 29 2 percent in the earlier year, since it has grown slightly less rapidly than total expenditures The largest items here were police protection, at $182 million and fire protection at $133 million, with lesser amounts for building regulation, animal regulation and $1 6 million for civil defense

Health expenditures, though only 2 6 percent of the total (as compared with 1 9 percent in fiscal 1953), were a rapidly growing item, having increased 214 percent over the period compared with an overall increase of 116 percent in total expenditures Sanitation is still about 6 5 percent of the budget at $62 7 million

Other public works, mainly streets, storm drains, street lighting and parking, came to 14 4 percent of the 1963 budget, almost equal to the 14 0 percent of a decade ago The percentage increase was 202 percent over the period At $213 million, this was the second largest category in the total California city budget

Education, mostly libraries, was 2 6 percent of the total, or very slightly greater than the proportion in 1952 Recreation expenditure, on the other hand, grew from 7 9 percent to 8 6 percent of the total budget and cost more than $95 million

Interest on debt was actually a declining percentage of total expenses, at 2 32 percent compared to 3 8 percent 10 years ago Debt redemption was 5 96 percent compared to 8 8 percent in 1952 However, debt service requirement was equivalent to a $0 39 property tax rate † Aid to other government units (except city-owned enterprise) came to $1 8 million, but there is no comparable figure for the early year

Expenditures by city-owned enterprises rose from $221 million in 1952-53 to $395 million in 1962-63, an increase of 74 percent Cities contributed $11 million to their city-owned enterprises, but got back a net contribution from them of almost $57 million, so that on the whole these services more than paid for themselves

Total city expenditures, exclusive of city-owned enterprises, grew at an average rate of 8 9 percent a year during this period City population increased about 53 7 percent (slightly less in 1962–63, 7 2 percent), during the decade, or slightly faster than the general state population increase of 46 percent, while the price index of goods and services brought by governments increased 39 percent Therefore, about two-thirds of the increase can be explained by price and population increase alone

(2) Revenues by Type

The headline story in city revenues in the 11-year period up to the end of fiscal 1963 was the great increase in sales tax revenues under the impetus of the Bradley-Burns Act In 1952–53 sales and use taxes produced 9 6 percent of total city revenue (exclusive of city-owned

* Retirement expenses of $69 million, however, have been included in the miscellaneous category, in an attempt to make the data comparable to earlier years
† State Controller, *Annual Report for Cities*, 1961–62, p viii

†Mostly San Francisco, which is a county as well as a city Starting with 1958–59, these expenditures are included in "general government"
Note n a—"not available"

Source State Controller's *Annual Reports*

enterprise revenue), but in 1962–63 this had risen to a large 19 54 percent While total revenues on this basis increased by 128 percent over the 11-year period, sales taxes increased 463 percent, and amounted to $223 million out of a total of $1,140 million As will be discussed more fully elsewhere in this report, this was partly due to the entrance of new cities into this field, as well as the growth of taxable sales

The growth of sales taxes permitted less relative reliance on the property tax, which formed almost 44 percent of city revenue at the beginning of this period, but only 39 percent in fiscal 1963 (In 1930, 78 percent of all revenues had been derived from this source) However, it was still the most important revenue, providing $447 million

Business licenses were the third most important tax, providing $39 million, or 3 4 percent of total revenue, almost the same percentage, however, that they had yielded in 1953

Franchise taxes, such as gas and telephone, were a relatively minor revenue producer at about 1 percent of total revenue over the decade Other nonproperty taxes raised just under $3 million These largely consisted of the San Francisco hotel tax, and minor revenues such as taxes on theater admissions and horseracing by a few California cities

Turning to the nontax revenues, licenses (other than business licenses) and permits rose from 1 5 percent of the total to 3 percent in 1963 These were largely made up of parking meter receipts, $9 33 million, building permits, $11 76 million, plumbing permits, $3 71 million, and electrical permits, $3 71 million Sewer permits, street and curb permits, and animal licenses each brought in between $1 million and $2 million

Fines and penalties held their own over the decade at 3 7 percent of total revenues Nearly $30 0 million was realized from Vehicle Code fines—some of this goes to finance driver education in the schools Other court fines and penalties accounted for an additional $10 7 million

A rewarding gain was made in the return from the use of money and property, up from 1 6 percent to 2 7 percent of total revenue Nearly $18 3 million of this was interest income, with about $11 8 million from rents, royalties and concessions This represented a 317 percent gain over the decade

Another fast-increasing source of revenue was current service charges, which increased 203 percent over fiscal 1953, and rose from 7 percent of total revenues to 9 5 percent The more than $108 3 million from this source was mainly the result of park and recreation charges, sewer charges and refuse collection charges, at $21 8 million, $13 2 million, and $22 1 million respectively Engineering fees, charges for street and curb repairs, local assessments, library fines and fees, plan checking fees, zoning and subdivision charges, health inspection fees, and sale of refuse all brought in from $1 million to $8 million

Revenue from city-owned enterprises, such as water, gas, and electric utilities, transportation systems, airports, housing, and cemetery districts is shown as a net contribution to the cities of $57 million in 1962-63 This was quite variable in the earlier years of the decade, and with the different method of reporting, comparisons may not be very meaningful

C. School Districts

1. Expenditures

At the end of fiscal 1963 there were 1,659 California school districts 1,253 elementary, 213 high school, 46 junior college; and 147 unified school districts Their total expenditures consist of general fund expenditures and expenditures out of various building funds and a bond interest and redemption fund General fund expenditures consist of the current expense of education (including administration, teachers' salaries, other salaries, other expenses of instruction, maintenance and operation of school plant, transportation of pupils, and fixed charges), plus that part of capital outlay made from the general fund, and expenditures for food service and community service

Educational expenses per pupil vary according to the grade level, size of school district, wealth of the district and other considerations The average current expense of education for all grade levels in fiscal 1963 was $480 81 per A D A , but varied from $204 72 in Fresno County to $683 26 in Mono County *

The total current expense of education rose from $580,249,000 in 1952–53 to $1,800,196 in 1962–63, an increase of 210 3 percent Total average daily attendance meantime rose 94 4 percent, and the price level of government purchases by 39 percent Thus, the per capita (A D A) increase in constant dollars was 14 84 percent

These overall figures are more meaningful when broken down into the four main levels of public school education, as shown in the tables on the next two pages

2. Revenue

It is evident that school expenditures almost tripled during this decade Meanwhile total general fund income rose 198 9 percent Of this, district taxes rose 217 7 percent and state apportionments rose 170 8 percent The state apportionment as a percentage of the general fund

TABLE XIX

TOTAL GENERAL FUND EXPENDITURE OF ALL SCHOOL DISTRICTS, CURRENT EXPENSE OF EDUCATION AND CAPITAL OUTLAYS FROM GENERAL FUNDS: 1952–53 TO 1962–63

(Dollar figures in thousands)

	Total general fund expenditure	Total current expense of education	Capital outlay from general funds
1952–53	$636,880	$580,249	848,146
1953–54	741,744	674,597	55,192

1962–63	3,960	--	--	--	--

Source Controller's *Annual Reports* of financial transactions concerning school districts of California, 1952–53 to 1962–63

At the same time, bonded indebtedness of all school districts in California rose from $718,392,000 in 1953 to $2,270,853,000 in 1963

D. Special Districts

There has been a phenomenal increase in both the number and expenditure of special districts in California 1,322 such districts reported general fund expenditures of $35,585,000 in 1952–53 * and 3,342 districts reported $471,906,000 in 1962–63, a 1,226-percent increase.

* Data appear to be incomplete for this year, however.

Source State Controller, *Annual Reports*

Special districts are organized primarily to supply urban-type services in unincorporated areas of the counties, most of them being limited to one specific function, such as fire protection, garbage disposal, parks and recreation, street lighting, sewers and so on, but the Community Services Act of 1951 permits the formation of multiple-purpose districts Special districts may be formed by petition of residents, subject to review of the county board of supervisors and election, or by a city or county governing body They may be governed by independent, elective boards or by the county board of supervisors, or by appointed members In 1962–63, 1,223 districts were governed directly by county boards of supervisors, 2,106 by elective or appointive boards They have the power to make assessments, charges, and to levy a general property tax as provided by statute The tax base varies, being land only for water, soil conservation, and irrigation districts; land and improvements for others; and all property for others There are varying provisions for tax exemptions Many have bonding power, with varying legal limits

In addition to the small urban-type service districts are the metropolitan districts such as the Metropolitan Water District of Southern California, the San Francisco Bay Area Air Pollution Control District, and the East Bay Municipal Utility District, as well as rural service districts, for a variety of purposes ranging from police protection to weed control, and irrigation districts

There are several reasons for the mushrooming of special districts One has been the rapid growth of suburban areas with city needs, but no city government Forming a special district has been made relatively quick and easy by state law, as compared with annexation or incorporation procedures Counties were reluctant to provide urban-type services in view of their limited revenue sources, and because of problems involved in providing services to one part of the county and not to the rest Also, the patterns of growth often created one need at a time, so that the simplest solution appeared to be the formation of a single-purpose district Too often, little thought was given to planning for future expansion, and limited tax bases and borrowing power prevented the accumulation of funds for capital expansion Some districts may not incur any bonded indebtedness at all, such as highway lighting, county maintenance, and public cemetery districts

As a result, there were uneven services, gaps in service, great variation in the cost of providing service with many small uneconomic districts, and lack of jurisdiction to perform many areawide functions such as planning and transportation A typical citizen of a metropolitan area may live in two or three school districts and perhaps ten special districts, as well as in a city or county Many people are unaware of what special districts they live in, where to complain when the service is poor, who governs the district, or what it costs Few trouble to vote in the elections County offices have to provide some services to the districts, such as auditing, tax collecting, and engineering, so that citizens of the whole county usually pay part of the cost whether they live in the districts or not

One apparent advantage of the special district is that money for a particular function is earmarked and thus need not be battled for in

budget session. Yet this means that the public's relative needs and desires for many services are never measured against each other in a deliberate allocation process, so that it is possible that more urgent needs which are subject to the general budgeting procedure may lose out.

Some control over future growth of these districts may result from the local agency formation commissions created by act of the 1963

Legislature. Many such districts could probably be combined in the interests of greater economy. There is much attraction in the idea that he who receives the service should pay for it, but services should also be provided in the most economical manner, and by governmental bodies which are responsive to the electorate

(1) Expenditures

Reported expenditures in fiscal 1953 were only about $35 million, but by 1963 they had skyrocketed to $472 million, an increase of 1,226 percent.

(2) Revenues

Taxes and assessments, together with charges for service, are the chief means of financing special districts In 1953–54 taxes and assessments on property provided 47 percent of general fund income, and service charges 43 percent By 1963, these were in reverse importance, with charges producing 54 4 percent of revenue and taxes only 33 5 percent Subventions and grants made up another 3 3 percent and miscellaneous income almost 8 8 percent of total income

TOTAL PROJECTED NEEDS AND MAIN SOURCES OF REVENUE

The chart on the following page shows the actual total dollar expenditures of all local governments, as well as the subcategories of current and capital expenditures Current expenditures have risen more rapidly and at a more even rate than have capital expenditures There has been some slackening in the rate of capital expenditure in the last four years, producing a slight apparent slowing down in the rate of growth of total local government expenditures On the assumption that this slowing down of trend is not temporary, a visual trend line indicates that local government expenditures will rise considerably faster than the property tax base (as indicated by a projection of assessed valuation of tangible property) or state plus federal assistance to local governments

On the assumption that the slowing down of capital expenditures in recent years has represented the postponement of needed capital improvements, such as roads and public buildings, or that capital requirements will grow for such projects as junior colleges and corrections facilities, then this trend projection will prove too low In that case, the gap between local government expenditure needs and foreseeable future revenues will be even wider Additional revenues for the support of local government will be urgently required

THE ROLE OF LOCAL TAXATION IN THE TOTAL FEDERAL-STATE-LOCAL TAX STRUCTURE

We return now to a consideration of our local government tax structure, its place in the total federal-state-local tax system, and its increasingly important role both in California and the nation. Then we shall be in a position to seek some answers to the basic question of how local governments can obtain additional revenues. Can the property tax be improved and exploited more fully; can nonproperty tax revenues plug the gap, or must the local governments look to the state and federal governments for much more assistance?

For the year ending June 30, 1963, the total tax bill of 17,380,000 Californians was $15,964,900,000. This was allocated among the various levels of government for the past five years as follows:

TABLE XXXI

TOTAL TAX COLLECTIONS IN CALIFORNIA

(In billions of dollars)

	1958–59	1959–60	1960–61	1961–62	1962–63
Federal	$6.9	$8.0	$8.4	$9.0	$9.8
State*	1.9	2.3	2.5	2.7	3.0
Local	2.1	2.3	2.5	2.7	3.0
Total	$10.9	$12.6	$13.4	$14.4	$15.8

* Other than disability insurance

Source: State Board of Equalization, *Annual Report*, 1963–64

The federal taxes in 1962–63 were:
(In thousands of dollars)

Individual income	$7,058,000
Corporate income	1,439,900
Excises	846,700
Estate and gift	272,600
Other	128,100

The state taxes were:
(In thousands of dollars)

Retail sales	$794,500
Motor vehicle and gasoline	686,800
Unemployment	643,100
Personal income	324,200
Bank and corporate income	306,500
Inheritance and gift	95,000
Alcoholic beverages	72,100
Other	356,100

The local taxes were:
(In thousands of dollars)

Local property taxes	$2,679,500
Local sales taxes	261,300

(Business license taxes were $48.7 million in 1962–63, and franchise taxes $12.5 million.)

Source *Tax Digest*, 3rd Quarter, 1963, p. 78

In the nation as a whole during the 1952–62 decade, state and local expenditures increased twice as fast as the gross national product and three times as fast as federal civilian expenditures. Total taxes (excluding nontax revenues) rose 56 percent, with the different levels of government accounting for this increase as follows *

	Rate of increase 1952–62
Federal taxes	38%
State taxes	109%
Nonmunicipal local taxes (mostly property taxes)	146%
City taxes	83%

Within the federal category, federal income tax increased by only 35 percent, primarily because corporate income tax collections remained practically unchanged between 1952 and 1962, while personal income taxes rose 63 percent. Within the state and municipal categories, general sales and selective excise taxes increased 110 percent and 117 percent, respectively. Property taxes, while increasing very sharply in the nonmunicipal area, declined in importance in municipal finance, from 50 percent of the total in 1952 to 44 percent in 1962.

The total tax burden as a percentage of net national product was practically unchanged over this decade, being $24.28 per $100 of net national product in 1952, and $24.42 in 1962. Within the totals, the approximate shares in 1962 were

Federal	$16.00
State	4.00
Nonmunicipal local	2.50
City	1.70

Over the decade, federal taxes on this relative basis actually declined $2.23, but were more than offset by the combined increases of the state and local levies. The state tax burden increased $1.02, the local nonmunicipal by $0.93, and the municipal by $0.22. The property tax showed an increase in burden of $1.03, of which only $0.14 could be attributed to an increase in municipal property taxes. Sales and excise burdens increased $0.47 for the decade, with the federal declining $0.23.

* Reuben A. Zubrow, Professor of Economics, University of Colorado, "Recent Trends and Developments in Municipal Finances," paper presented at 49th Conference of International City Managers Association, October 16, 1963.

the state increasing $0 60, and the local by $0 07 The income tax showed a *decrease* of $1 86 for all levels of government combined, which was primarily due to the fact that the absolute level of corporate income taxes remained unchanged during the period

These figures demonstate the increasingly heavy burden of *local* taxes, even while the total of *all* state-federal-local taxes did not increase appreciably during the period from 1952 to 1962 What this boils down to is that tax burdens have been shifted to those who pay property taxes, and to a lesser extent to those who pay sales and excise taxes If we consider the incidence of these taxes, we will find much agreement that the net effect is a proportionately heavier burden on the lower income property owner and the lower income consumer, although exemption of food softens the latter effect in California If that part of the property tax which is levied on the improvements, as distinct from the land, of business enterprises tends to be shifted to consumers to a considerable extent, this will tend to further increase the regressiveness of the local tax structure

Equity considerations would appear to indicate that needed changes in the revenue structure should bring reforms in the property tax, with less reliance on it if possible, unless overwhelming considerations of total revenue requirements or impact on economic growth should be overruling.

CRITERIA FOR CHOICE OF FUTURE LOCAL GOVERNMENT REVENUE SOURCES

If local government expenditures continue to rise as rapidly as they have in the past decade, what should be done to meet the cost? Some of the criteria that may be considered in choosing between alternative courses of action (or inaction) are the following:

1 Balance and equity in the state-local revenue-raising system (with due regard for federal taxes as well) This means taking account of the final incidence on persons and economic groups of particular taxes and nontax revenues. All should bear a fair share of the cost of government according to some index of ability to pay. Net income is probably the best single measure, although ownership of productive resources should not be neglected.

2 Benefits received may be a fair criterion where the benefits are unusual or separable, but this approach should not be extended beyond the *limits of reasonableness.* (For example, most people would balk at separate charges for the service of a fireman in putting out a fire in their home.)

3 Economy in administration and enforcement expense.

4 Flexibility. Additional revenues should be applied where needs are greatest Jurisdictions which do not need new revenues should not be led into adopting new levies. Neither should they stand in the way of needy jurisdictions.

5. Use of revenues that minimize conflict and competition among local jurisdictions.

6 Preservation of the greatest possible degree of local independence as to what services should be rendered and how they should be financed

7. Avoidance of heavy taxpayers' compliance burden, and the levying of a lot of "nuisance" taxes that raise very little revenue.

8 Allowance of only such exemptions as are defensible on grounds of sound public policy. One suggestion is to give exemptions only to those groups or individuals that the government would give corresponding appropriations to.

9 Avoidance of an unfavorable impact on the local and state economy Stimulating economic growth will help provide jobs, incomes, and local government revenues.

10 Production of sufficient revenue to cover local government needs on which there is a citizen consensus, plus willingness to make an adequate revenue-raising effort, with due regard for fairness in the allocation of the burden.

HOW WELL DO LOCAL NONPROPERTY TAXES MEET THESE CRITERIA?

A 1961 report of the Advisory Commission on Intergovernmental Relations* has this to say·

"Many local nonproperty taxes distort competitive business relationships because the local taxing jurisdiction, even the very large city, is typically smaller than the economic area of which it is a part Its taxes, therefore, handicap local business firms in their competition with firms beyond the city line Local taxes typically entail high administrative costs for government and heavy compliance burdens for taxpayers, and all the while are not well administered Furthermore, the widespread use of these taxes handicaps state government itself, through its adverse impact on the state's economy and by limiting its freedom in shaping its own tax system."

This report goes on to suggest some general guidelines (quoted in part):

1 The case for most nonproperty taxes is strongest in the large urban places. Even here these taxes are best imposed cooperatively by a group of economically interdependent jurisdictions Therefore, the city and the other jurisdictions comprising an economic area should be provided with (a) uniform taxing powers and (b) authority for cooperative tax enforcement.

2 In states where a particular tax, such as the sales or income tax, is in widespread use by local governments and is simultaneously used also by the state, the most promising coordinating device is the local tax supplement to the state tax It gives local jurisdictions access to the superior enforcement resources of the state and eases taxpayer compliance, but leaves the decision to impose the tax to local initiative

3 In situations where a particular nonproperty tax is widely used locally but the state does not itself use the same tax, the state can nonetheless help local jurisdictions by facilitating the pooled administration of the separate local taxes by a state administrative agency; alternatively, it can authorize local jurisdictions to join in creating such an administrative agency for themselves

4 States can minimize needless variety among local nonproperty taxes by accompanying the authorization for using them with generally applicable specifications with respect to their structure (tax base, exemptions, etc) and administrative features

5 Individual states' tax policy should aim to limit local government to the more productive taxes Local jurisdictions should be discouraged from levying many different kinds of taxes, none of which produces enough to warrant reasonably good enforcement

6 States should provide their local units with technical assistance by serving as a clearinghouse of information on tax experience in other parts of the state and country

7 While the tax sharing device may run a poor second to grants-in-aid where the objective is to provide state financial assistance to local units on a stable basis, it has distinct advantages as a substitute for locally imposed taxes.

* *Local Nonproperty Taxes and the Coordinating Role of the State,* Report A-9, September 1961

STUDY OF SPECIFIC NONPROPERTY TAX REVENUES OF LOCAL GOVERNMENTS

A. Business License Taxes

After property and sales taxes, business licenses were the third most important source of tax revenue to California cities in 1962-63. They produced almost $39 million.

The cities may tax for revenue as well as for regulatory purposes. The relevant sections of the Constitution are Article XI, Sections 6, 11, 8½, 12. Both charter and general law cities have the power to license for regulation and revenue, except where the charter itself contains a limitation on that power. *

Counties, on the other hand, are not empowered specifically by the Constitution to license for revenue. They are restricted mainly to licensing for regulations by Section 16100 of the Business and Professions Code. Section 16101 and Section 16102 permit a license for revenue to be issued to hawkers, itinerant peddlers, or itinerant vendors, but exempts war veterans. It is not surprising that counties received only $1.1 million in revenue from this source in fiscal 1963. Nearly half of this was collected in Los Angeles County.

(1) Base of the Tax

(a) *Cities.* Some cities impose only flat-rate license taxes, but a larger and growing proportion relate the license tax in some measure to the volume of business. In the League of California Cities study published in 1957, half of the 287 cities included in the survey were taxing on the basis of gross receipts, less than a third on a flat-rate basis, and about one-sixth on the basis of average number of employees, and one on the basis of net income.

There was also variation in which types of business were subject to the license tax. All but 37 out of the 287 had some levy on wholesaling, all but 71 on manufacturing or processing, all but two on retailing, all but two on professions, and all but two on contracting. In general, gross receipts was defined to mean the total sale price, or charges received, minus cash discounts and taxes required to be paid by consumers. Other measures entered into the base for such businesses as dancehalls and theaters, where amount of floor space or seating capacity was used. Average number of employees was also used, either alone or in combination with gross receipts.

(b) *Counties.* Counties were restricted to the flat-rate type of license tax for regulation purposes, although the Los Angeles County ordinance appears to have used different brackets of gross receipts.

(2) Rates

Most of the ordinances using gross receipts provided for a fixed dollar tax for each bracket of gross receipts. For example, the tax might

* League of California Cities, *Business License Taxes*, June, 1957, p. 3 and following.

be $5 per quarter if gross receipts were less than $2,000, $6 per quarter for gross receipts between $2,000 and $5,000 and so on, usually with some fixed upper limit

One of the equity problems is that, for example, retailers in different lines of business may have identical gross receipts, but different profit margins This is sometimes adjusted to a certain extent by classifying businesses as to type, so that those with small profit margins (taking the average for the industry) would have lower rates

Another equity problem is that where the brackets are wide, the firm at the lower end of the bracket may be bearing a proportionately greater burden than the firm at the upper end of the bracket For these reasons, it has been suggested that *net receipts* would be a better basis Fairfax, in Marin County, has used this method

To quote the League of California Cities report, "Since the worth to the licensee of the privilege of carrying on business in a city is the profit he can derive from the exercise of that privilege, the payment he should make ought to be geared as closely as possible to that profit License taxes measured by net income most satisfactorily achieve this objective Gross receipts license taxes with rates making allowance for varying relationships between gross receipts and gross profits or net income can approximate this objective so far as classes of business are concerned, although discrimination among individual firms in any class of business is not eliminated License taxes measured by the average number of employees are inferior to either of the above and flat-rate taxes are wholly without justification except in special cases" *

The City of Portland, Oregon, permits licensees in retail, wholesale, and service businesses, manufacturers, hotels, professional persons, and certain miscellaneous businesses to elect between gross receipts and net income Under the net income option the annual tax is $15 plus 2 percent of all net income, under the gross receipts option it is $15 plus $1 40 per $1,000 of gross receipts in excess of $10,700 In 1956, 5,942 were using the net option and 7 255 the gross option † Net profits of unincorporated business are used as a base in the municipal income taxes of cities in Pennsylvania, Ohio, Kentucky, and Missouri Corporate profits are also taxed, except in Pennsylvania One study concluded that there was no evidence in these states that business either migrated out of a city or failed to locate in a city because of the tax, at least at the low rates of around 1 percent or less on net profits which were typical The problem of segregating what portion of the income was attributable to sources within the taxing city was generally settled by use of the "Massachusetts formula" which uses a combination of the percentage which payrolls, book value of property, and gross receipts within the city bear to the total of each item

(3) Impact

Some businessmen may regard business licensing for revenue with disfavor If some jurisdictions within an economic area levy the tax and others do not, there may be unfavorable competitive effects, not so much perhaps with retail businesses which desire to locate near the concentration of customers, but perhaps a little more in the case of

* *Business License Taxes*, June, 1957, op cit p 27.
† *Ibid*

wholesaling or manufacturing concerns Nevertheless this is but one item in a host of deciding factors for business location

There appears to be a logical case for taking the position that since businesses demand and get many services from cities and counties they should be willing to contribute in proportion to the worth of the services of local government to them If the portion of the property tax on improvements is shifted by business to consumers, then it would not seem unfair to require another type of contribution from the owners of business

Since many counties today render approximately the same range of urban services to businesses in the unincorporated areas as do cities, perhaps counties should be given the same power as cities to levy license taxes for revenue Counties receive relatively small amounts of sales tax revenue compared with the cities, and if property taxes prove to be not indefinitely expandable, then this may be one legitimate source of future revenue. Also those cities still using flat-rate taxes will be able to increase their revenues by moving to income-based taxes

It seems probable that in order for a county business license ordinance to be legal it would have to be levied on a countywide basis In this case a business already paying a license tax within a city should be entitled to credit this amount against his county tax It would be desirable, of course, to achieve some uniformity within a given economic area.

A crude estimate of possible revenue might be obtained by relating retail, wholesale, and service receipts within cities levying license taxes for revenue, and the total receipts for the county as a whole

B. Local Sales and Use Tax in California

(1) History

When the State of California reduced its sales tax levy from 3 percent to 2½ percent in 1943 in order to ease tax burdens at a time when the state's fiscal position was very good as a result of substantial wartime revenue collections plus limited wartime expenditures, it was regarded by several cities as an opportunity too good to be missed.* San Bernardino levied the first municipal sales tax in 1945, taking unto itself the revenue foregone by the state (and more, since it levied a 1 percent tax). San Bernardino was followed by Santa Barbara, Colton, Redlands, and Los Angeles By January, 1956, 19 cities collected a locally administered sales tax at a rate of ½ percent; 176 cities collected 1 percent; and one city, Needles, collected 1½ percent † The logic was clear to these cities—costs had gone up rapidly, particularly with wartime shortages to be made up, and the property tax base was not keeping up with costs Most of the cities exempted sales for delivery outside the city There was, of course, competition from retailers outside the city limits who were able to sell at prices which did not include the tax. Another problem was the relatively high cost of administration and the fact that most cities could not afford an adequate audit program, and therefore did not collect a substantial amount of revenue to which they were technically entitled ‡

* Dixwell L Pierce, "California Has a Sales Tax Headache," *National Tax Journal*, June 1953
† Board of Equalization, *Annual Report*, 1956–1957
‡ Dixwell L Pierce, *op cit*

Meantime, the state had restored its 3 percent sales tax rate in 1949. A desire for uniformity, plus the costliness of the local taxes, led to the passage of the Bradley-Burns Uniform Sales and Use Tax Law at the legislative session in 1955. This law enabled counties to levy sales and use taxes, provided that they contracted with the state board for administration, and provided they used the state's tax base and limited the rate to 1 percent Each city within a county levying the tax could then also levy a state-administered tax of 1 percent or less which was credited against the county tax If a city did not levy a tax, and the county did, sellers within the city would be collecting revenue for the benefit of the county government. City government officials rapidly saw that they could have this revenue for the city, without increasing the tax paid. If they stayed outside the Bradley-Burns program, the tax they levied would not be credited against the county tax, and would therefore mean that retail sales within the city would carry higher sales taxes than in the rest of the surrounding area, to the probable detriment of business

Seven counties, including Los Angeles, came into the program on April 1, 1956, and by the end of 1957, 81 percent of all state-taxable transactions were subject to local sales and use taxes under the Bradley-Burns Act.

When a city chose to come within the program but enacted a tax of less than 1 percent, then part of the tax collected within city boundaries under a 1 percent countywide tax would go to the county. Therefore the local division of such revenue was subject to local negotiation. If the county's prospective share did not look adequate, it had bargaining power in that it could refuse to enter the program If this happened, cities could not take advantage of the superior collection system of the state because they could not qualify for the Bradley-Burns program unless their county were a member Arguments over this local division of revenue slowed down the adoption of the program somewhat, but by 1964 the 58 counties and 385 cities had adopted this type of local sales tax Some of the last counties to adopt were Fresno, San Mateo, Santa Barbara, Siskiyou, Plumas, and Alpine.

The distribution of the sales tax between the cities and counties is shown in Table XXXII

In 1961 the Legislature passed a law exempting prescription medicines from the sales tax. It was estimated that this saved purchasers of these medicines $8 million a year, and reduced state revenue by $6 million. Another change, apparently designed to stabilize city sales tax rates and possibly membership in the program, required that on and after October 1, 1961, the adoption, amendment or repeal of Bradley-Burns ordinances will require a two-thirds vote of the total membership of the legislative body This would mean four out of five votes in the case of a five-man board.

(2) Cost of Administration

As can be seen in Table XXXII, the cost of administration as a percentage of total yield of the tax has been steadily reduced since the beginning of the program and is a very low amount in comparison to many other tax programs Changes in techniques, equipment, and reporting intervals have been some of the contributing factors This points

TABLE XXXII

NET AMOUNT OF LOCAL SALES TAX DISTRIBUTED TO CITIES AND COUNTIES

(In millions of dollars)

Fiscal year ending	Net amount distributed			Charge for administration	
	Total	To cities	To counties*	Percent	Amount
1957	$124.5	$103.2	$21.3	1.65	$2.1
1958	161.9	132.4	29.5	1.72	2.8
1959	189.8	115.0	44.8	1.64	3.2
1960	215.1	162.7	52.4	1.40	3.9
1961	222.8	174.5	51.8	1.60	3.7
1962	240.6	186.9	53.8	1.57	3.8
1963	261.2	205.4	55.8	1.52	4.2
1964	282.2	222.9	59.2	1.53	4.4

* Includes City and County of San Francisco

† Includes $3.8 million advanced to cities and counties in the 1958–59 fiscal year that would normally have been distributed in the first quarter of 1959–60 to help became of the 1957–58 business recession

‡ Excludes amount discussed in previous footnote

Source State Board of Equalization

up the advantages of state administration of a uniform local tax, compared with many different local administration programs

(3) Base

The base of the local sales and use tax is, with minor exceptions identical with that for the state levy Broadly speaking, retail sales other than food for home consumption, services, and prescription drugs are taxed The tax is imposed upon the retailer, who collects the tax from the consumer The use tax is imposed upon the use of property after it is brought into this state from another state, and its purpose is to prevent avoidance of the sales tax by buying goods out of state

Other exemptions from the sales tax are gross receipts from sale or use of gas, electricity, and water, gold, goods sold for use in public works, ships of over 1,000 tons, motor vehicle fuel (which is taxed separately), animal life, feed, seeds, and fertilizer (destined to produce food), ice, newspapers and periodicals, and a number of other items Sales to the United States government are exempted

A special use tax exemption applies to out-of-state purchases by privately owned public utilities Although these firms pay the 3-percent state use tax, they are exempt from the 1-percent local use tax They are exempt since at the time of adoption of the Bradley-Burns Act, not all counties imposed the 1-percent levy and the utilities would have had to account for the ultimate jurisdiction in which each of its purchases would be used in order that the 1-percent tax could be properly distributed When buying small, cheap parts which may be used throughout an extensive transmission systems spread over several counties and many cities, the cost of accounting for the taxable versus tax free items would have been more than the tax liability The loss to the local governments has been estimated at $3 to $4 million annually

(4) Rates

As explained in the previous section on the history of the tax, the maximum local rate is 1 percent, this being in the first instance a county tax Cities may have lesser rates, up to a maximum of 1 percent, which means that all of the revenue being collected within the city limits goes to the city At less than 1 percent, some of this revenue goes to county government. For example, if the city rate is 0 80 percent, then 20 percent of the revenue collected in the city goes to the county The lowest city rate in 1962–63 was 0 60 percent in the City of Colusa, and the highest 1 percent All of the cities in each of nine counties were at this maximum rate, including the populous Los Angeles, Orange, and San Diego Counties, together with many individual cities See Appendix C, column 2, for the various rates

(5) Incidence and Burden

The legal intention was to collect the tax from the consumer The amount of the tax is stated separately from the purchase price, and retailers are prohibited from advertising that they have absorbed all or part of the tax by reducing the price of the product before tax Nevertheless, the incidence of this type of tax cannot be dismissed so simply Some of the factors which will influence the initial burden sustained at various points in the economy by various groups will be the competitive or noncompetitive structure of the industry, the character of supply and demand conditions, price policies in different firms and industries, and so on Resources may be transferred from taxed to nontaxed industries However, once the initial adjustments are made, an ongoing sales tax of general application will be passed on to consumers for the most part In a buoyant economy, consumption taxes may act as a favorable brake on inflationary tendencies, but generally rising incomes have been associated in the last few years with a declining proportion of income being spent on taxable goods, while a greater proportion was spent on services which are not taxed This of course has meant that sales taxes may grow less fast than incomes at high levels In a period of low economic activity, sales taxes will have deflationary effects, reducing consumer demand

The distinction may be made between the direct and the indirect burden of the tax The direct burden means the loss of purchasing power felt by the consumer when he pays the tax * The indirect, or unseen, burden will be the sales taxes paid by businessmen on property used in the productive process, costs which will be included in the base price at retail Other business taxes, such as license and property taxes, may be also included here to the extent to which they were not absorbed by the reduction of profits of business at an earlier stage

(6) Is the Revenue From the Local Sales Tax Equitably Distributed?

(a) *Between cities and counties* In 1962–63 the cities received 79 0 percent of the total amount returned to local jurisdictions while the counties got 14 5 percent The City and County of San Francisco received 6 44 percent Thus the cities are receiving a considerable

* William H Hickman "The Distribution of the Burden of California Sales and Other Excise Taxes," issued by the State Board of Equalization, December 1958 See page 9 for a discussion of this point

amount of relief from the necessity of using the property tax to finance growing costs Expressing the sales tax distributed to the cities as a property tax equivalent, the typical city in 1962–63 received a sufficient amount of sales tax revenue to save $0 97 on the property tax, whereas the median value for counties was about $0 20 * On a per capita basis cities collected an average of $16 88 per person, while counties collected only $3 21 per person

It can be seen that the counties benefit much less than the cities from the use of the local sales tax The larger urban counties in particular receive very limited relief For example Los Angeles County's property tax equivalent from sales tax revenues was $0 05; San Diego, $0 06; Alameda, $0 10, Contra Costa, $0 11; and Orange County, $0 03 When one considers the heavy costs borne by some counties as a result of urbanization, the question arises as to whether they should not receive a greater proportion of sales tax revenues These revenues might, for example, be apportioned according to population, as in the case of some motor vehicle taxes Or other compensating revenues may be allocated primarily for county use, if relief from the property tax is sought in this area as well as in cities

(b) *Among the different cities.* The range in per capita amounts of sales tax received by cities was from less than $0 005 in Bradbury to $10,073 per capita in Vernon, which is an industrial city with a population of 229 persons Amounts of over $100 per capita were likewise received in Emeryville, Commerce, Irwindale, and Industry †

Among cities the median value of per capita receipts was $15 in 1963, but there was a great deal of variation in the yields for the various cities This can be seen in the following frequency distribution·

Per capita sales tax receipts	*Number of cities*
Less than $5 00	24
$5 00– 9 99	92
10 00–14 99	80
15 00–19 99	79
20 00–24 99	49
25 00–29 99	25
30 00–39 99	19
40.00–99.99	7
100 00 and more	5

Source See Appendix C

Some of the lowest per capita receivers were purely residential areas such as Palos Verdes or Piedmont Large commercial or industrial centers got considerably more than the "bedroom" cities Some residential cities have had policies against encouraging certain types of industry to locate within their boundaries. Others have incorporated without adequate tax bases to begin with The question of equity would be very hard to decide in these cases

(7) Local Sales Tax in Other States

At present sales taxes are levied by local governments in 13 states. The first local sales tax was levied by New York City in 1934 followed by New Orleans in 1938 Now, 6 of the 15 largest cities in the United States impose a sales tax Table XXXIII indicates the number of local governments imposing a sales tax (by state).

* This excludes the City and County of San Francisco, which saved $1 14 on the property tax

† See Appendix C

[1] This tabulation includes only those local sales taxes about which authoritative information is available. The following cities with 1960 populations of 50,000 or more impose a sales tax: Albuquerque, Baton Rouge, Denver, Huntsville, Jackson, Mobile, Montgomery, New Orleans, New York, Niagara Falls, Phoenix, Pueblo, Salt Lake City, Syracuse, Tucson, and all cities of 50,000 or over in California and Illinois. The District of Columbia, not included in this tabulation, levies a 3-percent sales tax.

[2] The rates shown are those applicable to sales of tangible personal property at retail. The state rate for Illinois includes a 1-percent additional tax, effective through June 30, 1965.

[3] Twenty of these cities are in 12 counties that also have local sales taxes. The legislation authorizing county sales taxes, however, takes account of any city sales taxes in the county. For example, in Marion County, where the general county rate is 2 percent, it is only 1 percent in cities that levy their own 1-percent sales taxes, so that the overall rate in those cities is no higher than the general county rate.

[4] Includes the City and County of San Francisco.

[5] Three of the 14 municipalities, namely, Baker, Baton Rouge, and Zachary, are located in East Baton Rouge Parish, which is one of the four parishes imposing a tax. The East Baton Rouge Parish tax does not apply to the three municipalities.

[6] Includes Watertown, the only sales tax city located in a county (Jefferson) that also has a local sales tax. The Jefferson County 2-percent tax is reduced to 1 percent in Watertown.

[7] Excludes Warren County's 2-percent tax, suspended during litigation. Although the tax was upheld by the Court of Appeals, it had not been activated by the end of 1963.

[8] Erie County: The county 1-percent rate is reduced to ¾ of 1 percent in Buffalo because of Buffalo's 2¼-percent consumers' utility tax.

[9] Norfolk has adopted a 2-percent sales tax, effective July 1, 1964.

Source. Advisory Commission on Intergovernmental Relations, "Tax Overlapping in the United States, 1964," Washington, D C., July 1964. p. 108

C. Local Income Tax

(1) History

Beginning in 1939 when Pennsylvania granted to its local jurisdictions the right to tax anything not being taxed by the state itself, there has been a growth in the use of the local income tax until, in 1964, 10 of the 43 largest cities were using it.* It is restricted to the States of Pennsylvania, Ohio, Kentucky, Missouri, Alabama, and Michigan, as shown in Table XXXIV although it has been widely considered by cities in a number of other states.† It has often been adopted in a situation of imminent fiscal crisis, where property taxes had become too burdensome, and where the cities lacked authority to levy local sales taxes

Pennsylvania's municipal income tax was at first ruled unconstitutional because of its exemption provisions, but a successful statute was passed in 1939, and in 1947 the state had given this authority to 3,600 local jurisdictions By 1964, local income taxes were being levied by approximately 44 cities, 350 boroughs, 1,265 school districts, and 145 townships, with each year bringing adoptions by about 200 new jurisdictions.

In Ohio, Toledo was the first to adopt such a tax in 1946, followed by Columbus, Springfield, Youngstown, Dayton, Warren, Canton, Cincinnati, and many smaller cities By 1961 it was being used by 42 cities and 13 villages

It was adopted by Louisville, Kentucky, and St Louis, Missouri, in 1948 Gadsden, Alabama, has a tax which was imposed as an occupational license tax, as were those in several Kentucky cities One county (Jefferson) in Kentucky levies this latter type of local income tax In both Kentucky and Missouri there are also state-level income taxes

The tax has been very productive of revenue where levied, despite the low rates customarily used For 7 of the 10 cities in Ohio over 50,000 population which used the tax in 1962, total revenue from the income tax exceeded all other tax revenues combined It has produced one-quarter or more of total general revenues in cities where adopted even at rates as low as one-half of 1 percent.† It is also very responsive to inflation

(2) Base

The base used varies somewhat, but it is usually a tax on gross earnings and net profits Personal exemptions are allowed in Warren, Ohio, where the first $1,200 is exempt Deductions for medical expenses, interest or taxes generally are not allowed Personal income in the form of dividends, interest, and rent is not usually taxed by local income tax laws

Because of the common exemption of unearned income, the tax has been sometimes criticized on the ground of equity, but there seems to be some feeling that receivers of significant amounts of unearned income could easily migrate out of the jurisdiction In some instances rent is

* Advisory Commission on Intergovernmental Relations, "Tax Overlapping in the United States," Washington D C , July 1964 p 134
† These include New York, Atlanta Baltimore, Boston, Chicago, Dallas, Fort Worth, Minneapolis, and San Francisco

Akron	1 0	-			
Canton	[3]	53 9			
Cincinnati	1 0	30 7			
Columbus	1 0	66 0			
Dayton	75	46 0			
Hamilton	8	49 0			

Note Excludes Washington, D C which has a graduated net income tax that is more closely akin to a state tax than to these municipal income taxes

[1] A taxpayer subject to the 1 25-percent tax imposed by the city of Louisville may credit this tax against the 1 25-percent tax levied by Jefferson County

[2] Tax went into effect after fiscal year 1962

[3] The Lancaster city tax is 0 5 percent The Lancaster township school tax is 1 percent

[4] The Pittsburgh city tax is 1 percent The Pittsburgh school district tax is 0 5 percent

[5] The Scranton school district rate is also 0 5 percent.

Source Advisory Commission on Intergovernmental Relations, "Tax Overlapping in the United States," Washington, D C, July 1964, p 135

taxed only if it arises from a business activity (e g , takes up 30 percent or more of the taxpayer's time †) Some cities exempt capital gains, while others tax them if the sale of assets is a business activity

There is variation in the treatment of residents and nonresidents on the one hand, and on the other, income earned inside and outside the jurisdiction In Pennsylvania (except for school districts) all income earned by residents may be taxed regardless of origin, and nonresidents may be taxed on the basis of income earned in the taxing jurisdiction (but credit must be allowed for taxes paid to the jurisdiction of domi-

† *Ibid*, p 21

cile). An exception is Philadelphia, which has *full* taxing power over income earned in the city by persons who reside elsewhere * School districts may tax only residents Detroit residents are required to pay 1 percent of taxable income whether earned in the city or not. Nonresidents are required to pay on the basis of income earned in the city Where nonresidents are required to pay, there is a tendency for cities to adopt the tax in a "cluster" around a major taxing center

(3) Rate

Tax rates are typically low and levied at a flat rate. They range from one-eighth of 1 percent to 2 percent, but are usually one-half of 1 percent or 1 percent. There are usually state restrictions on maximum rates, and it has been presumed that graduated rates are ruled out by constitutional requirements of uniformity in taxation

(4) Administration Cost

The percentage cost to yield was quite low, in 1959 below 5 percent in the larger cities, and was 2 percent in Louisville and St. Louis. The usual method of collection is by withholding the tax from wages and salaries in the case of individuals Net profits of both unincorporated and incorporated businesses are self-assessed, as are incomes of individuals who live outside the city, earn money in it, but who are not subject to withholding. It is sometimes difficult to check the reported income of professional people and small unincorporated businesses Where firms are required to have business licenses, this provides a means of checking whether all firms are filing reports. Good auditing is expensive There has been no apparent difficulty in collecting corporate income taxes.

(5) Compliance Cost

The main compliance problem comes in businesses which withhold taxes from the wages and salaries of employees where the jurisdictions of residence and employment are different. Employers may not have adequate knowledge of the ordinances in neighboring jurisdictions, the reporting dates may be different, and different kinds of information may be required by different taxing jurisdictions Where there are only one or two employees, the amount of the tax may seem insignificant compared with the cost of reporting it The chief compliance problems are due to lack of uniformity in local ordinances, and lack of centralized collection procedures.

Evasion is pretty much confined to areas where there is not employer withholding. Canadian municipalities found evasion was a difficult problem under a system of self-assessment. Sigafoos estimates that the evasion rate does not go above 10 percent of total liability, but nevertheless adequate enforcement is a definite local problem.

(6) Incidence and Burden

In the case of the gross income tax on wages and salaries, the incidence is on the worker. If there are no exemptions or deductions, the proportional nature of the tax will make it burdensome for low-income families A mitigating circumstance is the relatively small dollar

* Robert A Sigafoos, *The Municipal Income Tax*, 1955, p 27.

amounts involved, but there seems to be a good case for exemptions at the lower end of the scale.

In the case of the net profits tax on both unincorporated and incorporated business, the primary incidence is on the owners of the business, although there are circumstances in which a portion (perhaps up to one-third as Musgrave suggests) can be shifted to consumers in the form of higher prices. The effects may be somewhat uneven as between new and growing businesses and the older well-established ones, in the sense that there may be a shortage of capital for expansion where there has been insufficient time to build up retained earnings, a situation which will be accentuated by the necessity of paying a tax on profits. Another argument that is often made is that a tax on corporate profits by reducing earnings to owners makes equity investments less attractive than nonequity investments, such as municipal and corporate bonds, which might have a somewhat negative effect on economic growth.

Sometimes the argument is made that a payroll tax will create difficulties in attracting and holding a labor force Where the rates are low this position will probably not have much merit Similarly, the argument is made that this tax will induce businesses to migrate out of a taxing community, or decide not to locate there While there may be such an effect in marginal cases, it does not seem to have been a general effect In the opinion of Sigafoos, " . it is doubtful that firms will sacrifice the basic cost advantages of a central location to win a point over a relatively minor net profits tax "*

Another consideration is that if the local income tax replaces a property tax there may be less regression in the lower ranges than with an equivalent property tax Bronder has calculated for the city of Detroit that an income tax of one percent with a $600 exemption is less than the "equated" property tax until the $5,000 income is reached † After that, it is more. (The equated property tax is the tax that would have been necessary to raise the same amount of revenue as the new income tax, and for Detroit worked out to be $8 per $1,000 of assessed valuation.)

(7) Some Additional Problems

(a) Where a central city taxes the incomes of commuting workers, on the theory that they cause expenditures for the central city, it is sometimes argued that this is "taxation without representation " This may be true also of city sales taxes paid by suburban residents. In Pennsylvania there has been a tendency for the surrounding communities to enact similar taxes to keep the revenue "at home." A desire to get sales tax revenues has been a factor leading to incorporations in California, and this might be a result with a municipal income tax here Another possible outcome might be more of a desire on the part of the outlying areas to be annexed by the central city

If an industrial city with very few residents levied this tax (which would mean a tax on business profits as well) on nonresident employees, there would certainly be a tendency on the part of the surrounding communities to levy a similar tax in retaliation.

* Sigafoos, op. cit., p 130.
† Leonard D. Bronder, "Michigan's First Local Income Tax," *National Tax Journal*, December 1962, p 427.

(b) Could counties as well as (or rather than) cities be empowered to levy local income taxes? There would certainly be benefits in area-wide administration, collection and enforcement, and most of all in uniformity within an economic area It has been suggested that in the absence of a county-wide tax each unit could be allowed to levy a tax of up to one-half percent on incomes earned in the city or other local unit, and up to one-half percent on those residing in the unit, on the theory that this would eliminate tax gains from reciprocity and thus retard proliferation of the tax for retaliatory motives *

(c) Another recommendation is that the local income tax base be established by state law to eliminate confusing variations Adjusted gross income as defined in the federal or state tax is a possibility, with whatever exemptions are desired * The tax could then be a simple percentage of state tax liability

(d) How much could be raised in California? This depends upon which units of local government would be empowered to use this tax and on the base and rate selected Prior to the enactment of AB 661 in the 1963 session of the Legislature, some chartered cities in California appeared to have the right to levy such a tax This bill prohibits any city, whether chartered or not, from levying an income tax for two years If this law is not extended, it will perhaps be regarded as an invitation to enter this field by the chartered cities A Senate committee calculated that if all municipalities had a 1-percent tax in 1962–63, levied as a percentage of state tax liability, approximately $3 3 million could have been raised, or $33 million at a 10-percent rate † No calculation was made of the amount which could be raised if counties were empowered to levy the tax

(e) If there is a choice between assisting local governments by a statewide tax that would be used to provide either grants-in-aid or shared revenues, and authorizing local governments to levy their own taxes, how should the choice be made? One argument is that locally raised revenues lead to more careful spending than state grants Desire for home rule is another argument for the local tax On the other hand, the advantages of state-level administration are very considerable, as we have seen in the case of the local sales tax Moreover, the confusing variation, lack of uniform treatment of taxpayers, compliance burdens, and competitive characteristics of the local income tax are significant negative features

D. Fees and Charges for Service

Local governments charge for a great variety of direct services to individuals and groups, from recording births to fees for the use of a government-owned cemetery Noteworthy is the great increase in relative importance of this type of revenue, and this way of financing government services At the city level service charges were 7 percent of total revenues in fiscal 1953, but had increased to 9 05 percent by 1963 This represented over $108 4 million worth of revenue At the county

* Bronder, op cit, p 430
† "A Study of the Feasibility of Increasing State and Local Government Revenues from Selected Taxes," report of the Senate Fact Finding Committee on Revenue and Taxation, April 1963.

level, service charges increased from 4 percent to 7 percent over the same period, and also yielded over $120 million

What are these charges for? Some of them are adoption fees, swimming pool and golf course fees, charges for institutional care (such as in a county hospital, juvenile hall, boys' ranch, or foster home), library fees, court and legal service fees, estate fees, fees for recording or reproducing documents, filing fees for elections, engineering fees to subdividers, fees for sanitary inspection, fees for agricultural inspection, animal redemption fees, rezoning and variance fees, parking lot charges, parking meter receipts, charges for the use of an auditorium, airport fees, charges for street and curb repair, and sewer and refuse collection charges

Service charges are also important to special districts, where they totaled $261 6 million in 1962–63, having increased from 43 percent of total revenue in 1952–53 to 54 4 percent of total revenue in fiscal 1963 Even the school districts charged $102 million for cafeteria service (including the food), and some tuition fees (but these are met through taxes)

As population increases, these receipts grow Even increases in delinquency rates have the one redeeming feature of providing more court revenues More to the point, increased community desire for park and recreational services, and a growing variety of public enterprise services, leads to the possibility of expanding revenues through service charges

Two question that arise are Under what circumstances should charges for service be made? And what costs should the service charge cover? In the latter connection, should the service charge cover just the direct cost of the service, or should it also cover its share of general overhead, and should service charges be large enough to provide a margin for capital expansion? These questions are often seen sharply in a case like setting fees for a toll bridge

The answers to the first of these questions will not be the same in every case In some instances public policy will be to provide a service at the lowest possible direct cost to the user for various reasons For example, library service is of benefit to the whole community (even those who do not use the library), and it is thought desirable to promote its use by children and other citizens who may not be able to afford fees that would cover all costs Therefore, the cost of a library card is low, or it may be free Similarly, swimming pool charges in public parks are usually low to encourage recreational use by children On the other hand, golf course fees may be more directly proportional to actual cost of the service The amount of public subsidy in a given service will then vary according to public policy, and may be influenced also by the revenue needs and resources of the local government What one community can afford, another may not be able to, even though *public policy* might be the same in both cases

In general, special services to individuals or limited groups where the benefits are directly related to the charge made, where there are no measurable communitywide benefits, and where public policy does not indicate the desirability of subsidizing the activity in whole or in part, may be considered as areas in which service charges covering all or

most of the cost may be considered Few people would advocate charging directly for police or fire service. It is rather the type of activity that could have been undertaken by private enterprise, but which can be done more conveniently or cheaply at the government level, which is most suited to service charges Parking lots, golf courses, square dance lessons, swimming classes, boat launching facilities, and the like are some clear examples Even here there may be a definite desire to subsidize participation by children or by underprivileged groups, out of such motives as encouraging athletic achievement, sportsmanship, or helping to combat juvenile delinquency The public may be better off in the long run with an efficiently run city- or county-level service, for which there is a uniform charge, than with a system in which numerous small districts are formed to provide park services to a tiny area, or street lights to a few blocks formed into a special district.

The second question of financing capital expansion of public enterprise projects is a pressing problem in many cities and counties. Trying to finance capital development on a pay-as-you-go basis from service charges may mean doing a little at a time when it would be more economical to build ahead for future population growth. Funds for this kind of expansion may have to come from the sale of general obligation or revenue bonds Voting requirements present a substantial hurdle where an increase in property taxes will be needed.

E. Hotel and Motel Taxes

Up until 1963 only chartered cities had the authority to levy hotel and motel taxes Bakersfield, Fresno, Long Beach, and San Francisco had entered this field In most cases the tax was enacted with the understanding that a portion of the revenues would be devoted to attracting business by using the revenue to develop convention facilities The Cities of Needles and Carmel had also imposed similar taxes, but their features were different inasmuch as they were part of the business license ordinances of the particular cities At the 1963 Legislative Session AB 1491 was passed authorizing general law cities and counties to levy a tax "on the privilege of occupying a room or rooms in a hotel, inn, tourist home or house, motel or other lodging unless such occupancy is for any period of more than 30 days." Where a county levies the tax it is to apply only to the unincorporated areas of the county Thus the tax is meant to be imposed on transients, but not on residents of hotels. As a result of this legislation many California cities have adopted the hotel tax

(1) *Base*

The hotel tax is an excise tax based on the amount of the hotel bill up to a certain number of days, shown as a separate amount on the bill, with the legal incidence on the consumer of the occupancy service Business license taxes on hotels which are levied on the basis of gross receipts are akin to this, but various classifications of gross receipts and class of establishment may produce different results. A proposed ordinance for San Diego exempted from the tax persons paying $2 or less a day for accommodations, this being thought of as subsistence-income shelter.

(2) Rates

A drafting committee, composed of representatives from both the League of California Cities and the County Supervisors Association, has prepared a suggested uniform ordinance for cities and counties in which a 4 percent rate occurs, the same as for the retail sales tax.

(3) Revenue

The amount of revenue clearly depends largely upon whether the city or county which levies the tax is a tourist center or not. In 1963–64, San Francisco realized $1 271,247 from the tax according to the State Controller's report Estimated revenues for Long Beach were $160,000 in 1962, and for Fresno $155,000 for 1963.*

Estimates of yield may be made on the basis of average occupancy rate, average room rate, and number of rooms within a city or unincorporated area, although an allowance would have to be made for residential hotels, excluding guests who stay longer than the maximum number of days as specified in the ordinance The statewide average annual occupancy rate for first-class hotels and motels has been estimated to range from 71 percent to 78 percent The statewide revenue potential was estimated at $12 million if every city and county levied the tax, $9 million for cities and $3 million for counties †

(4) Incidence and Burden

The tax is meant to be paid by transient guests, who may use many public facilities and services, but who ordinarily may not pay their proportionate share of government costs. Where there is competition from hotels or motels in an adjacent nontaxing jurisdiction, the possibility exists that basic room charges may be lowered in the taxing jurisdiction to meet the competition, so that the incidence of the tax may be in part on the owners of the business Where all jurisdictions in an economic area impose the tax, this possibility is diminished, at least in the best season and in good times.

A citizens' committee in Berkeley, after rejecting the idea of a city hotel tax in 1962 because of possible unfavorable competition from surrounding areas and the relatively small amount of revenue estimate, suggested "that an effort be made through the League of California Cities for a transient room tax on a statewide basis, all revenue remaining in the community in which it is collected " A number of states do levy a sales tax on transient lodging. Twenty-seven states plus Washington, D.C., were listed in a publication of the United States Advisory Commission on Governmental Relations ‡ for 1961 Two other states were added to this number in 1962. The Berkeley committee felt that statewide administration would eliminate the competitive disadvantage that a single jurisdiction would have in levying the tax, and would also be less costly and more effective. Their second choice was an area-wide tax, arranged by negotiation with surrounding communities.

TABLE XXXV

STATE COLLECTED, LOCALLY SHARED CIGARETTE TAXES, 1962

State	Tax revenue (thousands)	Distribution formula	Recipient local governments	Amount distributed (thousands)	Local use of funds
Alaska	$1,805	After allocation of part to state schools (a) a specified amount to each school unit, and (b) the remainder, one-half in proportion to average daily attendance and one-half in proportion to number of professional employees	Cities School districts	$294 881	School construction
Kansas	9,498	37½ percent to counties in proportion to population, and one-half of each county's share redistributed among cities in proportion to population	Cities Counties	1 795 1,795	General purposes
Louisiana	27,943	37½ percent in excess of $1 million (a) to cities at specified rates per capita, graduated according to population size of city, (b) any surplus remaining to parishes in which there are no incorporated municipalities, at a specified rate per capita, and (c) any additional surplus remaining is used to increase the per capita allocations to cities From the remaining 62½ percent, an additional 50 cents per capita to cities of over 100 thousand population	Cities and parishes	9,938	Do
Maryland	22,456	One-half to City of Baltimore and counties on basis of population	City Counties	3,605 7,649	Do
Minnesota	24,294	One-fourth to cities and counties in proportion to population	Cities Counties	3,887 1,746	Do
Nevada	4,253	5½ percent to county of origin and 28½ percent to cities and counties in proportion to population	Cities Counties	834 603	Do
New Mexico	7,043	One-eighth to city and county of origin	Cities Counties	758 66	Recreation
North Dakota	3,706	One-half mill per cigarette distributed in proportion to population	Cities	551	General purposes
Wyoming	1,737	All to city or county of origin	Cities Counties	1,538 126	Do
Total	102,825			36 066	

[1] Includes an amount from taxes on tobacco products other than cigarettes

SOURCE U S Bureau of the Census, *State Payments to Local Governments*, 1962 Census of Governments, Vol VI, No 2

TABLE XXXVI

LOCAL CIGARETTE TAX RATES, JANUARY 1, 1964 [1]

(per standard package of 20 cigarettes)

State	State rate (cents)	1 cent	2 cents	3 cents	4 cents	5 cents
Alabama	6					
99 municipalities[2]		11	83	4	1	
6 counties		2	2	2		
Colorado 33 municipalities		2	24	7		
Florida Municipalities[3]	8					
Missouri 38 municipalities	4	1	33	2	1	1
New Jersey 1 municipality (Atlantic City)	3		1			
New York 1 municipality (New York)	5				1	
Tennessee	7					
1 municipality (Memphis)		1				
1 county (Shelby County outside corporate limits of Memphis)		1				
Virginia 6 municipalities	3		5	1		

[1] A total of 18 counties and municipalities in 4 of the states listed (Alabama, Colorado, Florida, and New Jersey) levy taxes on other tobacco products as well, as do 1 city and 2 counties in Maryland. Over one-half of these are in Alabama.

[2] The rates shown apply only in the town or city. Rates in police jurisdictions are generally lower, usually one-half the city or town rate.

[3] The municipal 8 cents tax is allowed as a tax credit against the 8 cents state tax.

F. Cigarette Tax

(a) In California

Although Section 30111 of the Revenue and Taxation Code provides that the state cigarette tax is in lieu of all other state, county, municipal, or district taxes on the privilege of distributing cigarettes, charter cities apparently feel that the limitation does not apply to them. In August 1964, the City of Los Angeles imposed a cigarette tax at the rate of two cents per pack It was estimated by city officials that this tax would raise approximately $6,000,000 in the city each year

(b) Other Local Cigarette Taxes

A number of cities in eight other states also levy cigarette taxes ranging from one to five cents per pack as shown in Table XXXVI. Nine other states had state-collected locally shared cigarette taxes in 1962.

Summary

1. Local government needs have been outdistancing the main local sources of revenue, in particular the property tax base, and have also risen faster than state and federal assistance. Local expenditures have been hard pressed to keep up with rising current needs, so that frequently much-needed capital expenditures have had to be foregone or postponed indefinitely

2 Trends projected on either an overall basis or by main categories of expenditure indicate that this gap between local needs and available revenues will widen, making it urgent to plan for new sources of revenue in the years ahead. Alternatively, local governments could be relieved of some services they now perform, or, at least, economies should be sought by reorganization or otherwise.

3. Further exploitation of the property tax may be necessary, but is undesirable on grounds of equity, particularly in jurisdictions which have been forced to make unduly heavy use of this tax because of legal limitations on their power to use other types of revenue-raising devices. Furthermore, increases in assessed valuation cannot be expected to be sufficient to provide 10 percent additions to total revenues each year, so that substantial rate increases would be necessary if this tax were used to close the gap This would be a dismal solution for the already overburdened property taxpayer.

4 Some nonproperty taxes merit consideration. Local income taxes at the city or county level could be productive and equitable, particularly if levied uniformly within economic areas, if all income including dividends and interest is taxed and administered by the state, in a manner similar to the local sales tax under the Bradley-Burns Act.

5 An increase in local sales tax rates would be possible, though serious question may be raised as to whether local sales tax receipts are equitably distributed in terms of the needs of the local jurisdictions. If additional revenues could be apportioned on the basis of population or some other index of need, this would increase the attractiveness of this tax. The sales tax has also been disappointing in periods of rising personal incomes, whereas income-based taxes are more responsive

6 Better use could be made of business license taxes In particular, counties could be given the same power as cities to license for revenue, and cities could exploit their power more fully

7 Service charges can, and probably will be, used more extensively, but care should be taken not to violate broad public policy where charges cannot be definitely matched with direct benefits

8 Hotel and motel taxes provide a logical source of revenue for such things as convention facilities, but would be best levied on a uniform basis within a given economic area to avoid competition among local jurisdictions

9 Local governments should avoid use of a multitude of low-producing "nuisance" taxes, particularly if they provoke retaliation by neighboring jurisdictions

10 Needless variation in local taxes can be avoided by state specifications as to rates, bases, and so on, whenever power to levy a new tax is given to local governments

11 In general the device of the local tax supplement to a state tax of the same type has the merit of leaving the decision to impose the tax to local initiative, while making available the superior enforcement resources of the state, and easing taxpayer compliance

12 The State of California could provide a central information service to all of its local governments, particularly with regard to tax experience in other parts of the state and the nation At the present time much useful information is scattered, uncollected, or unavailable

APPENDIX D-1

The Counties' View of Their Own Revenue System, statement by Wm. R. MacDougall, general counsel and manager, County Supervisors Association of California, to the Assembly Committee on Revenue and Taxation, Fresno, California, January 29, 1964.

Mr Chairman and Gentlemen of the Committee

While California counties are always willing to cooperate in legislative interim committee studies, it is a rare thing when the counties are actually delighted by such a study Your investigation of California revenue and taxation problems is that rare thing We are excited over its possibilities—and welcome joyously your official look into our 58 county purses Since we are taking your important studies this seriously, we have examined all the fiscal policies declared by the County Supervisors Association of California since World War II This examination was conducted by our tax committee and its findings were gone over at great length by the association's entire board of directors Thus, we are able to lay before you today a comprehensive collection of the beliefs of California counties respecting their finances

We find that we have 40 policies currently in effect, all of which bear on the broad subject of your study It is our intention here today to place these policies officially into your record

Fortunately, you have provided for us a framework of classification for those policies and we have used that in classifying them Our discussion, then, will be within the framework of the 10 principal questions which have been determined by your committee to be the guideposts for your large-scale investigation

I will wish to comment briefly on each question and upon those county policies which bear upon it You will note that each of our policies is set forth in this statement under the question upon which it bears

Your first question inquires what will the local government be in the years ahead and how will these needs be met?

Even though we are one of your "best customers," we cannot essay to answer this question with any degree of certainty We do know that county government revenue needs in the years ahead will positively be greater than they are now We would suggest to your analysts that they project county needs into the future on a basis which will include all three of the following factors

(1) Normal charted growth based on past experience with consideration of factors such as population increase which influence county costs

(2) Growth based on additional services being undertaken by county government—some being local in nature on request of the county residents—and some being state in nature, by virtue of new duties imposed upon counties by the Legislature

(3) Growth based on whatever inflation is to be experienced in the dollar

We feel that all three of these factors will combine to produce revenue needs even beyond the heavy demands of today

Meeting these needs will be a mutual problem upon whose solution we must all work together We do not look for any radical departure

from the traditional methods of meeting these needs It is our feeling that the increased revenues will be provided in part by additional local tax levies (hopefully not in the property tax field) and partly by state aid for state programs administered by the counties and partly by shared revenues collected centrally by the state

This you will recognize as the pattern which has already evolved in California It has worked reasonably well through some very rough times

You next ask if local government expenditures can be reduced in any way The obvious answer is, of course, "Yes, by reducing services" At first blush, this might seem to be an impertinent answer, but I assure you that it is not California county expenditures are the composite product of local demands for services and state law requirements of services To achieve any substantial reduction, specific services now being provided by county government would have to be transferred to another level of government or discontinued entirely I can say flatly, and be almost sure that I am right, that most California county boards of supervisors would willingly discontinue any special county government service at any time the public asked for it There is just not support for such action and there is constant demand both for increased service and for new types of services Likewise, we will immediately discontinue any of the things mandated upon us by the state the moment the Legislature changes the law making such programs mandatory upon us

County government, particularly, is in the field of services which are not optional We do not deal in the "frills of government" The needy must be fed, the ill must be hospitalized and the bad must be incarcerated These are the services and programs which account for most of county government expenditures

In smaller, less spectacular ways, we are constantly at work in California counties endeavoring to reduce expenditures through greater efficiency We are happy to report that we now have central administrative offices in over 40 counties This is typical of the modern administrative and organization devices we use to increase operations efficiency

Two of our standing policies bear on this question Expenditures are tending to be reduced

> "by continually worked on modernization of county budgets and fiscal procedures,
>
> "by continually urging reduction in the multiple number of special funds in counties"

The tremendous load now being carried by the property tax is already before this committee in all its awfulness We will not burden your record with further statistical proof of the weight of this load

The property tax has, of course, not reached a *legal* limit, but we in county government do think that for all practical purposes it has reached a *working* limit

Were it not for the continuous growth of California with its direct effect on property values, the load of the property tax would be proving itself close to unbearable right now What gives us some sleepless nights in county government is the thought that we have arrived at this situation in times of prosperity and economic growth There is not one bit

of reserve left in the property tax base to cope with the many problems which would arrive during a period of economic adversity In fact, we would then see a sharp rise in property tax delinquency based on the present property tax load

Your questions as to whether an absolute ceiling on the property tax should be imposed by the Legislature, of course receives an answer of an emphatic "*No!*" from California county government

> "CSAC opposes limitations of assessments or tax on county property tax base or rates
> "CSAC opposes an in lieu tax on motor boats which levy would tax motor boats in the same manner as automobiles "

As far as counties are concerned, there is no legal ceiling of the property tax at present Counties have regarded their home-rule powers here as a matter of sacred trust Our record speaks for itself Counties have been reluctant at all times to increase their tax rates and California history, even in these postwar growth years, has been a story of parsimony and frugality in county budgeting We will continue this philosophy

In addition, any arbitrary ceiling on the county tax rate would render us powerless to execute the vast programs you have assigned to county government to do for you We must administer the welfare programs We must provide hospitals for the needy sick We must preserve law and order We must provide a court system We must guard the public health. We must provide roads to feed and to supplement the great state highway system We must do these and dozens of other things, not of our own choosing, but because they are assigned to us by law.

This committee is, of course, searching for new revenue sources to supplement and to replace partially the property tax We are happy to join in that search with you but we have no magic answers to offer at the beginning of 1964. We know that you will consider every possible alternative to the property tax

We particularly request your consideration of the income tax as a supplement or alternative to part of the existing property tax Such a tax as levied by and for the benefit of local governments should, nevertheless, be collected by the state. Taxpayers must not have the burden of additional records and returns

You asked if the present tax relationships between levels of government are adequate. We believe they are reasonably adequate California has gone through some trying times since 1945 and we have done this with the fiscal fiascos which have characterized the experience of other states and their local governments.

We do have one firm principle which we do emphasize at every possible opportunity

> "The property tax field should not be entered by the state "

We welcome your investigation into the question of whether the state should pay local government an amount equivalent to that removed from the tax rolls by exemption We have long felt that exemptions which are voted on a statewide basis should be financed on a statewide basis.

While the property tax burden is now close to its absolute maximum, there continues to exist in the state-favored groups who are just as able as anyone else to pay their share of the current tax burden but are excused by special law from doing so.

The sentiment behind all of these exemptions is kindly and in the nature of providing an indirect subsidy The trouble is that the extent of this is never really understood since it is a silent payment through excuse from taxation borne by everybody else

Specifically, our policies include the following·

"CSAC endorses legislation where state is to reimburse local jurisdictions for tax losses due to veterans exemption."

"CSAC supports in-lieu tax measures for state beaches and parks."

"CSAC opposes legislation which increases veterans exemption."

"CSAC endorses legislation providing that only California veterans who were residents at time of entry into the service are eligible for veterans exemption but amend to include all veterans eligible and entitled to exemption on operative date of this constitional amendment"

"CSAC supports specification of information to be incorporated in veterans property tax exemption affidavit, also rebuttal information as to nonresidents and careful administration of the program"

"CSAC supports measures for taxing publicly owned utilities"

You ask if the great proliferation of the units of government is putting too much pressure on the property tax.

We think that it is The existence of several thousand special districts in addition to the cities, the counties and the schools, has strained the property tax much, particularly when one considers that every one of these governmental units uses the property tax as a revenue base. We welcome the new legislation now becoming operative where there is a local agency formation commission in each county which can exercise control of the creation of new units of government and control of growth of existing units A partial solution to this problem is thus now in the hands of every county and its cities on a home rule basis We are pleading with them to use this new power wisely and well.

You ask which functions now performed by cities and counties could be transferred to another level for more efficient administration

We have no specific recommendations to make here We feel that the great progress we have made in the last 10 years in city-county cooperation is providing an answer to this question We have documented over 3,000 instances of consolidation of functions between cities and counties. We could hardly have a better record! Progress here is continuing —it merits your endorsement and it needs your stimulation However, we do not need legislation making such transfers mandatory

For example, we have achieved almost complete consolidation of the public health function with the passage of time and the growth of understanding being the principal factors By July, there will probably

be only four independent city health departments operating in the entire state

We are making like progress in the field of assessment of property and collection of property taxes Cities maintaining duplicate services here are merely indulging in a political luxury which their taxpayers tolerate largely because they do not realize it exists The vast majority of cities have already moved to use county services here This is the kind of progress which should be encouraged and which will produce more efficient administration It will provide the additional dividend of the major benefits of regional government without the need of creating any new third level of local government

We have several policies bearing on your question as to whether or not the property tax is an equitable tax at present You will see that the general tenor of county philosophy is that the property tax is an equitable tax save to the extent that it has become inequitable through surgery upon it caused by exemptions from it

> "CSAC urges State Administration and Legislature to give immediate attention to each of the partnership programs meriting financial costs sharing adjustments and until such adjustments are made, not to embark on new governmental programs or expand existing programs in fields of health, welfare, corrections, et al "
>
> "CSAC opposes any legislation that would give taxing power to any appointive state agency without a prior vote of the people in the areas involved "
>
> "CSAC should meet by insistent and vigorous county effort any renewed efforts to revive the rejected multi-million-dollar tax shift from state-assessed property to common property owners "
>
> "CSAC opposes state in-lieu taxes on boats and other property not now assessed at the state level This does not apply as opposition to CSAC long-standing policy of supporting in-lieu payments on state beaches and parks "

Generally, you ask if new exemptions to the property tax base should be allowed The county answer to this question will be no news to this committee We have been appearing before you and your predecessors for over 50 years, urging that the property tax base be retained intact We firmly feel that any present difficulty with the property tax comes from the general heavy burden of the tax itself and not from the fact that it applies to any identifiable small group of people with special problems The nature of the property tax, its amount and its manner of collection all combine to make it an unpopular and onerous tax It is only natural for any identifiable group with problems to suggest that the answer to their problem is an exemption which will shift the burden to the remaining taxpayers

I submit for the record the following array of county policies on this subject

> "Property tax must be preserved without further inroads on its base "
>
> "CSAC opposes legislative moves which call for shrinking of the county tax base "

"CSAC opposes any cut into county tax base by further liberalization of property tax exemptions"

"CSAC opposes legislation which would exempt all personal property from taxation"

"CSAC opposes legislation which provides that personal property consisting of only household goods and personal effects of every householder, is exempt from personal taxation with the understanding that a more uniform approach be sought in assessing household goods and personal effects, bearing in mind that any method substituted for present practices should continue to produce comparable revenues"

"CSAC takes no action on proposal to allow tax exemption for bomb shelters"

"CSAC opposes legislation which provides for tax exemption for noncompetitive raw materials imported into California"

"CSAC opposes legislation in Congress in re tax exemption or evasion by barley or other producers participating in the Commodity Credit Corporation stabilization program"

"CSAC opposes legislation which exempts from taxation possessory interests of private owners using publicly owned land"

"CSAC opposes freezing assessments in any class of property"

You asked if the emphasis on the property tax should be shifted to land values

We believe that it should not

"CSAC opposes the single tax on land, as an unworkable tax theory in modern times"

You asked if there should be a standard ratio of assessment, presumably one fixed in percentage points by statute

"CSAC opposes a fixed standard ratio of assessed value to market value established by law"

You inquire if a better system of tax appeals is needed By this, we assume you mean appeals from assessed valuation determined by county assessors

We feel that the present system of annual sessions of county boards of equalization works well There would seem to be no need for additional machinery

The volume problem which was critical in Los Angeles County is being solved by the new tax appeals boards being created by that county There is no need for such boards in the other counties where the normal volume of appeals before the county board of equalization each July is easily handled Our policies

"Procedures of county boards of equalization should be evaluated and instructional institutes held in each of the regional associations of CSAC"

"CSAC does not oppose creation of tax appeals boards in counties with over 400,000 population if sought by boards of supervisors in such counties"

Like you, we are deeply interested in the improvement of assessment practices Our policies in this field speak for themselves They demonstrate positively that this is one of the prime fields of interest of California county government.

"CSAC endorses legislation which changes tax lien date from first Monday in March to December 31 and moving tax calendar ahead almost two months."

"CSAC approves in principle legislation which would provide for the assessment of business inventories on the arithmetic average of the assessed value of such property. It opposes any optional feature wherein taxpayer may elect to choose either the present method of taxation or the average inventory method "

"CSAC pledges continuing cooperation to State Association of County Assessors in general field of improving property tax administration "

"All boards of supervisors are urged to furnish the county assessor with adequate space, staff, maps, equipment and reasonable travel expenses."

"CSAC endorses provision of adequate staff for the Division of Assessment Standards in the State Board of Equalization to aid and assist assessors."

"CSAC endorses visual education and the preparation of locally applicable films, filmstrips or slides to be used in furthering public education on assessment practices and the local tax base "

"CSAC recommends legislation which would require documents transferring title to have affixed thereto, internal revenue stamps, prior to the recording of such documents "

"CSAC recommends a uniform practice in county government, whenever such is practicable and feasible, whereby the county tax collector in each county shall itemize and clearly show by dollar figures on each tax bill the amount of taxes for county, cities, schools districts."

"CSAC does not oppose permissive measures providing for furnishing of duplicate tax bills to lending agencies upon request "

"CSAC opposes proposals to mail notices of delinquent taxes."

"CSAC opposes any proposal offering special tax discounts for early tax payments "

We share your interest in equalization of the property tax both intercounty and intracounty We are grateful for the leadership of the State Board of Equalization over the years in giving California effective intercounty equalization and in assisting us in providing the certainty of intracounty equalization Intracounty equalization is properly a local problem. It is easily policed locally The provision of proper funds and staff for the assessor, the continuing direct interest of the public in their property taxes and the increasing knowledge of the public about the peculiar features of the property tax will all combine to make ridiculous even the suggestion that there is not intracounty equalization throughout the state We pledge ourselves to continuous educational projects here in cooperation with the County Assessors Association.

You ask how inequities of taxable resources between government units at the same level can be reduced

This is one of the most difficult and continuous problems which we have We feel that there is no simple and no complete answer. The partial solution at which we seem to have arrived may have to suffice for some time to come It, of course, consists of the use of several types of taxation and several types of tax base in financing the programs which are the most expensive For instance, our huge $800,000,000 a year social welfare program in California is financed in partnership by the county, state and federal governments with all three contributing from their treasuries, which, in turn, are fed by different tax bases. Even so, the burden carried by the property tax here is notoriously heavy and 1963 welfare legislation further compounded existing inequities among counties As a result, we still have such situations as the mountain Counties of Mono and Inyo sitting side by side with the welfare property tax rate of one being 10 times that in the other Similar disparities exist in metropolitan areas with the welfare tax rate differences between the neighboring Counties of San Bernardino and Orange being on a three-to-one ratio

We will continue to work with the Legislature in chipping away at these problems as best we can We will pray that this particular committee will come up with the grand solution!

You ask if cities should be required to give up assessing functions which duplicate those of the counties

We very definitely feel that time itself will provide opportunity to eliminate the remaining duplicating assessing functions Recent studies in the few large cities still maintaining their own assessing office indicate that the proponents of maintaining the expensive duplicate office are running out of reasons for justification Time and an informed public will provide the answer in the best home rule tradition of California local government

Again, I would like to thank this committee for the monumental effort you are taking to study, to appraise, to revise and to improve the revenue and tax system of California Just the county portion of this is so vast it takes our breath away as we contemplate it Yet we realize that it is only a small part of the huge task you have undertaken

We dream that the results of your work will be the provision of methods by which California counties can continue to serve the State of California in providing both state and local services at the "home level" and can finance these services from a dependable revenue system which produces no inequities in its operation We pledge our best efforts in working with you toward this goal

APPENDIX D-2

MUNICIPAL REVENUE PROBLEMS

Statement by Richard Carpenter, executive director and general counsel, League of California Cities, to the Assembly Committee on Revenue and Taxation, Fresno, California, January 30, 1964.

Before endeavoring to answer some of the questions raised by your committee, I would like to make it clear that I will not attempt at this time to make a factual and statistical presentation, but will with your permission either make such a presentation at a later date or furnish you in writing the results of the research and recommendations made by the league's Committee on Revenue and Taxation This league committee, which recently was appointed, will review in depth the long range revenue problems confronting cities in California, make recommendations to the league board of directors and to your committee and the committee of the Senate considering these same problems I have attached to this paper a list of the members of the league committee which we believe to be broadly representative of municipal government throughout California You will note that the committee's tax consultant is Professor Malcolm M Davisson of the Department of Economics, University of California Professor Davisson has served as the league's tax consultant at different times over a long period of years and on a variety of municipal tax problems. We hope that your committee will feel free to call upon the league and its member cities for any factual and statistical information which will enable you to fairly judge the revenue needs of cities in relation to all other levels of government in this state

The principle of local self-government is an indispensable element of the American concept of democratic government We believe that it should be strengthened at every opportunity, but the principle of local self-government can become an empty phrase if it refers to a government financially incapable of meeting the essential needs of the people The task we face in the cities and in the league, and we sincerely hope in your committee, is to determine whether there is a politically, economically and administratively feasible way to devise a municipal revenue system, with most taxes levied locally, which will support an adequate and responsible city government The system must be equitable among municipal taxpayers as well as among the beneficiaries of the services provided with such revenues It must be flexible enough to anticipate the needs of cities in the years ahead

During the course of your hearings and, in fact, during the course of almost any committee hearings considering the problems of government in this state, California's past, present and anticipated growth is the starting point Ninety percent of the state's growth since 1950 has been in metropolitan areas Of the expected growth of some 6½ to 7 million people during the 1960's, the great proportion will be concentrated in these same urban areas The nine bay area counties alone will increase by 1¼ million people between 1960 and 1970 and in the Los Angeles area during the same period there will be an

estimated increase of 2½ million persons This brief reference to growth suggests that the revenue and expenditure programs of local government within those areas is not likely to change very much during the foreseeable future This further suggests, in keeping with experience to date, that there will be tremendous need for expanding existing facilities and providing new services I am not alone in assuming that revenues and expenditures will increase rather than level off or diminish in the years ahead Leslie Carbert, tax analyst of the Pacific Gas and Electric Company, in his paper on "The Limits and Possibilities of Local Tax Resources in the 1960's" stated in 1962 that "We must very soon begin the search for new sources of revenue" Professor Davisson in his monograph "Financing Local Governments in the San Francisco Bay Area" states "All available evidence suggests that the revenue requirements of existing local governments will continue to increase as growth, urbanization and rising living standards bring demand for more and better public services" The massive 1959 report on "California Local Finance" by the Associated Colleges, Claremont, comes to the same conclusion Hale Champion, State Director of Finance, in his remarks at a conference in Sacramento earlier this week said

> "The rate of growth of the public sector of our economy is going to be even greater than the rate of population growth However disturbing this may be to those who regard government as already a monstrous ogre, our history and our needs both point to this conclusion Indeed, they permit no other, no matter how upset some may be at the prospect
>
> "Who is going to make the initial major financial commitments to clean skies and clean streams? Who is going to provide the money for adequate beaches and parks and wilderness and recreational areas? Who is going to pay the costs of great new public health programs, particularly in the area of mental health? Where will the money come from to stimulate the rebuilding of our cities? Above all, who will finance the cost of conserving and developing, through education, our greatest California resource—the people of this state?
>
> "The answer is obvious The very size and cost of the programs needed—and the lack of reasonable profit incentive in most of them—will continue to force government to be the prime mover —and to pay many of the bills"

An examination of the services provided by cities, the increasing cost of such services and public facilities and the conservative forecast of continuing growth seem to make it clear that these assumptions of need for more revenue as a result of greater expenditures made by representatives of business, universities and government are valid

While most of us live in cities and take many municipal services for granted, I would like to digress for a moment to briefly mention some of them in order to anticipate the natural suggestion so frequently made about reducing expenditures The great majority of cities have centralized administration, use modern management techniques, have adopted sound budget and fiscal controls, utilize centralized purchasing and personnel systems and have elected legislative

bodies vitally interested in cutting out every dollar of waste While I am sure that expenditures can and will continue to be made more and more efficiently, I am also equally sure that no great reduction in municipal expenditures will occur unless services are either curtailed or eliminated and it is primarily for this reason I would like to mention some of the services performed by cities The list is fairly long and includes planning and zoning, streets, sidewalks and bridges, sewerage and drainage systems; urban renewal and redevelopment; recreation, parks and playgrounds; landscaping, tree planting and beautification; police and fire protection; traffic control, building inspection; public health; civil defense and protection against disasters, animal control; water supply and distribution, refuse and garbage collection and disposal; small craft harbors; hospitals; off-street parking facilities; street lighting; transportation, airports; libraries; museums, cultural facilities and the management and housekeeping functions necessary to the provision of these services Not all of these services are provided by all cities A few not listed are provided by several large cities The point I wish to emphasize is that any significant reduction in municipal expenditures will be at the expense of one or more of these services We also should keep in mind that our increasing urban society and phenomenal growth have thrust many new problems upon cities. New services are expected of municipal government with respect to the problems of youth and the aging, human relations, urban renewal, recreation and industrial development. There will be others in the cities of the future

Professor John A Vieg of Pomona College and Claremont Graduate School, one of the authors of "California Local Finance" has stated·

> "When due allowance is made for inflation and the immense increase in our urban population, the cost of city government in California has hardly increased at all during the past 20 years What is more is that such small increases as have occurred have in most cases been counterbalanced by extensions or improvements in services."

In the report itself the comment is made that "This pattern has emerged in too many separate studies to be mistaken." It appears, therefore, that we cannot reasonably anticipate a reduction in municipal expenditures even though we can continue to expect continued improvement in municipal administration leading to savings in operating costs

It has been stated that it costs about $13,500 per family to provide local public works facilities These additional capital expenditures for the 15 million additional people who will be added to our population during the next 16 years have been estimated at somewhere between $55 and $60 billion It is for this reason that we anticipate that local expenditures will increase at a more rapid rate than either federal or state expenditures during the period between now and 1980. In 1945 the Legislature made available to cities and counties $10 million on a matching basis to provide plans for public works facilities. At a special session in 1946, the Legislature appropriated $90 million, also on a matching basis, for use by cities and counties to construct sewage

treatment facilities The foresight on the part of the Legislature in making those surplus funds available made it possible for cities and counties to meet one of their most pressing problems during the forties and fifties It is difficult to believe now that a population decrease was predicted by most people following World War II. We now know what happened to our population and these well-planned state and locally financed facilities have in many cases become inadequate Public insistence on the elimination and prevention of contamination, pollution and nuisance will require enormous outlays for new and expanded sanitation facilities during the next few years The federal aid program for sewage treatment facilities falls far short of meeting our needs and there are many who feel that this is a state and local responsibility rather than an obligation of the federal government The Legislature demonstrated similar foresight with respect to city streets Both in 1947 and again in 1963 additional revenues were made available to assist in correcting the deficiencies on the city street and county road systems These are just two of the many facilities required to meet the problems of growth in California's cities—two of the many services listed above Cities are no different basically in terms of community needs than are schools School needs now and in the future are well known to the Members of the Legislature Accurate estimates can be made of the number of school children who will enter our school system year after year so that you may anticipate the amount which will be needed to construct new facilities, hire new teachers and pay for operating costs We believe that it is reasonable to assume that these same people will require and demand services and facilities provided by municipal government

All public facilities should be provided at the lowest possible cost to taxpayers Because of the two-thirds vote requirement contained in the Constitution of California municipal public works facilities often cost more than similar projects constructed by the state The interest rate is higher on lease-purchase than on general obligation bonds. We are aware of the fact that the supervisors association recently has reversed its position and now opposes any reduction in the two-thirds vote requirement and that some city officials believe that this limit should be retained. The league board of directors and most city officials, however, are of the opinion that the two-thirds vote requirement is simply costing municipal taxpayers more money to finance public works facilities than would a majority or 60-percent vote provision.

We hope that during the course of your hearing you will consider this vote limit and a related problem. Most tax limitations produce at some time or another unexpected and costly results Your committee has been interested in elimination of the wasteful duplication of assessing and tax collecting on the part of some cities Under present statutory law a city cannot incur an indebtedness for a public improvement which exceeds 15 percent of the assessed value of all property within the city Crescent City adopted an ordinance turning over the assessing and collecting function to the county but must now rescind that action because a bond issue would exceed the statutory limitation if the county assessment rolls were used This arbitrary and artificial limitation will cost the taxpayers of Crescent City an additional $7,000 annually until the law is changed

We are inclined to agree with those who state that the property tax has reached its limit However, revenue derived from property taxes will continue to be a substantial source of municipal revenue for years to come While many assessors have done an outstanding job in improving assessment practices, there are still inequities and these become more acute as the rate increases There is room for considerably more improvement in the administration of our property tax laws The legislature can be most helpful in this field One of the greatest difficulties confronting those responsible for property tax administration and those agencies dependent upon property tax revenue as a major source of support is the long and rather arbitrary list of property tax exemptions Every exemption makes the tax more difficult to administer while at the same time reducing the tax base While your committee did an outstanding job during the last session to halt tax exemptions and even to reverse the trend in connection with sales and use tax exemptions, we believe that it is now time to reexamine all the property tax exemptions contained in the constitution and statutes of California We understand that you expect to review the welfare exemption at the next meeting of your committee We do not believe that it was ever the intention of the legislature to exempt from property taxes the so-called life-care homes occupied by senior citizens having substantial means These homes tend to cluster in certain areas of the state, they require all of the services of local government and they are only in a legal sense charitable institutions Tax exemption simply shifts tax burdens, it does not reduce the need for revenue Los Angeles, Santa Barbara, Claremont and others are confronted with the same problem posed by this "welfare exemption" San Diego has a particularly acute problem with respect to the welfare exemption and San Diego also is facing all of the problems of growth As Mayor Frank Curran indicated in his report of January 13, 1964,

> "More than 628,000 persons now live inside the city boundaries about double the population of 1950 Our more than 300 square miles of land area is three times as large as the 1950 figure But these vast increases have not brought a proportionate increase in tax revenues On the contrary, these increases have imposed additional and critical stresses upon our ability to provide a level of municipal service which San Diegans demand and receive
>
> Concurrent with increased demands on our facilities, we have been subjected to the spiral of rising costs of providing these services, just the same as has private business and industry"

Cities have all of the higher costs confronting business and industry and in addition have costs which must be met because the service is provided by government rather than by private industry Costs frequently increase at a faster rate than appears warranted by the growth in population An example of higher municipal costs which often increase at a more rapid rate than the increase in population, is the cost of land A 1,500-foot airport runway which was sufficient 10 years ago must now be 5,000 feet long even though population has only doubled The need for park and recreation sites in the next six years is one-third of all the park and recreation acreage cities have acquired since 1850

Cities have developed in part a tax base which is sensitive to economic conditions A large percentage of the city budget is now financed from the sales tax and gross receipts business license revenues These same cities have been careful in most instances not to commit all of the revenue from these sources to operating expenses for fear that an economic recession would seriously impair their ability to maintain facilities on a normal operating basis Nevertheless these revenues have become a vital part of the financial program of most cities and no change should be made in the tax structure in this regard unless there would be a willingness to increase the sales tax rate in cities for the purpose of meeting long-range capital outlay needs.

The members of your committee already are well aware of problems created by attempts to narrow the sales and use tax base Actually existing exemptions should be carefully reviewed for the purpose of broadening this tax base to meet revenue needs A substantial increase in revenue can be realized by the elimination of the utility local use tax exemption, by subjecting utility sales generally to sales and use taxes and by including "services" generally rather than limiting sales and use taxes to tangible personal property We recognize that in the structure and administration of municipal business license taxes, cities are in a position to help themselves While this is not a major source of revenue within cities, it is nevertheless one that, if used, should be based on gross receipts so that all doing business within the city are treated alike We have published a report on business license taxes which recommends a complete review of existing ordinances

At the last session of the Legislature cities and counties were authorized to impose a hotel-motel occupancy tax on transients Prior to the enactment of this measure several charter cities had adopted local ordinances imposing a hotel room tax Here in Fresno the tax produces about $1 10 per capita, is easily administered and applies to about 75 hotels and motels It is an excellent example of the manner in which the Legislature can help cities and counties help themselves The same thing could be done with respect to property transfer taxes and others

The most important question raised by your committee cannot be answered except in general terms We do not know what the precise revenue needs in the years ahead will be or how these needs will be met We think that it is almost obvious that there will be increasing revenue needs and we hope to be able to tell you at a later date what they will be in terms of dollars and how we believe the dollars need to be raised.

We do not believe that property tax limitations serve any useful purpose Absolute limits have a way of being avoided and political limitations seem to be more effective than statutory limitations As already stated, tax and indebtedness limitations have retarded functional consolidation

Several tax experts have suggested that new revenue sources might include a percentage increase in income taxes to be shared with local government The Legislature has imposed a two-year moratorium on local income taxes even though the tax is in effect in many eastern cities and provides the only effective means of getting revenue for central cities from persons who come in from surrounding areas to earn their living We do not recommend this tax at this time, but neither do we believe in tying the hands of responsible local officials without

knowing more about their future revenue needs. The present sales and use tax relationship between the state and counties and cities is a highly satisfactory one, at least from the standpoint of administration, and this device of a local levy with state administration suggests the possibility of additional similar levies. The state should continue to collect taxes such as the sales and use tax where it is administratively feasible to do so and the political responsibility for levying the tax rests with local legislative bodies. The state cannot constitutionally levy a tax for a function clearly defined as a local responsibility.

We do not believe that the state should make payments in lieu of taxes except under extraordinary circumstances where a large portion of the property tax base is removed from local rolls by state action However, we do believe that tax exemptions should be carefully reviewed and eliminated wherever possible

We do not believe that the great proliferation of units of government is a major cause of the pressure on the property tax and we have presented to other committees of the Legislature many hundreds of examples of formal and informal intergovernmental contracts and arrangements which avoid actual duplication even though two or more governmental agencies capable of furnishing identical services exist within the same area. The Assembly Committee on Municipal and County Government is now undertaking the development of uniform procedures for the consolidation, dissolution and exclusion of special purpose districts The local agency formation commissions are authorized to review all new formations.

During the last 20 years many functions performed by cities or counties have been transferred to another level of government. I have already commented on the transfer of the sales and use tax administration from the local level to the state and on the transfer of the tax assessing and collecting function from cities to counties Counties now administer most public health services for cities and there are literally thousands of formal and informal arrangements by which one agency provides for another. The ultimate test here will be whether the agency to which the function is to be transferred is capable of and is actually administering the function more efficiently. If it is the transfer generally will be made voluntarily

PUBLISHER'S NOTE

This booklet contains reports on four tax levies not now used by California. The merits of each are discussed in light of California's changing economy and the need for equitably distributing the financial burden of government. The suggestions for change are those of the authors, committee recommendations will be made in due course.

ABOUT THE AUTHORS

The reports on the Real Estate Transfer Tax and the Stock Transfer Tax were prepared by Mrs Wilma Mayers, a lecturer in economics at Sacramento State College Mrs Mayers graduated at the head of her class when she received her A B in economics from the University of British Columbia From 1944 to 1947 she was a teaching assistant in economics and statistics at the University of California in Berkeley and at that same time she was on the staff of the University's Bureau of Business and Economic Research In 1949 she became a lecturer in economics at U C L A, leaving in 1950 when she began work for the State Board of Equalization on property and sales taxes

Mrs Mayers has been active in civic affairs in Sacramento and was president of the League of Women Voters in 1958–59 She is now a candidate for the Ph D at the University of California, Berkeley

Marvin Lee wrote "Taxation of Petroleum-Producing Properties in California" for the committee Dr Lee is an Associate Professor of Economics at San Jose State College He is a graduate of the University of California at Berkeley and received his Ph.D from the University of North Carolina in 1960, before his employment as a tax consultant for the North Carolina and South Carolina A F L-C I O He was later on the southern regional staff of the Amalgamated Clothing Workers of America at their New York headquarters He has done tax research for the Department of Tax Research at Raleigh, North Carolina, where he prepared reports for the legislature on many sectors of the state's economy He was a consultant on Economic Development and Prospects to the Joint Committee for Study of the Tax Structure in North Carolina Among his publications is "Tax Incentives and the Industrialization of the Southeast" which appeared in the *Proceedings,* National Tax Journal in September, 1961

Dr Lee was an Instructor in Economics at the University of North Carolina and an Assistant Professor of Economics at Hofstra University, Hempstead, Long Island, before coming to San Jose State College in September, 1963.

David Doerr is responsible for the material on the Chain Store Tax Mr. Doerr is consultant to the Assembly Committee on Revenue and Taxation

THE STOCK TRANSFER TAX

A stock transfer tax is one of a family of documentary taxes levied on the issue, recording or transfer of various documents such as bonds, stocks, mortgages, or deeds to real property. Normally the tax is paid by affixing stamps to the document in question, but different types of institutional arrangements now prevail in cases where the volume of business makes the use of stamps impractical.

PRESENT SITUATION

Most stock transfers which take place on securities exchanges are now subject to both a federal and a New York state tax, since approximately 85 percent of the total dollar volume of such business is transacted on the New York Stock Exchange Only 2 percent of exchange business takes place on the Pacific Coast Stock Exchange There is also a large and growing volume of business which is conducted in the over-the-counter market rather than on the exchange A Securities and Exchange Commission study in 1961 indicated that this market on a national basis was 75 percent as great as the organized exchange market in terms of the number of shares transfered and 35 percent as large in terms of dollars.

Alabama, Florida, South Carolina, and Texas also levy a tax on the sale or transfer of stock Pennsylvania repealed its tax in 1957. In Texas, where the tax is on stock transfers only, the comptroller reports that the tax presents many administrative problems considering the small amount of revenue it produces [1] In Alabama, Florida, and South Carolina the tax is applied not only to stock transfers, but also to other types of documents

TABLE I

Transfers in United States and Selected States

		Issues and transfers of bonds, capital stock, foreign insurance policies, and deeds of conveyance		
	Total (in thousands)	*Sales by postmasters (in thousands)*	*Sales by district directors (in thousands)*	*Playing cards and silver bullion transfers (in thousands)*
United States	$149,069	$45,687	$94,685	$8,698
California	17,703	10,713	6,955	35
New York	55,199	1,824	53,094	280
Illinois	11,019	1,496	8,283	1,240
Ohio	9,616	1,556	2,614	5,446

Source: Annual Report of U S Commissioner of Internal Revenue, 1963

The yield of the different state taxes is quite varied, for several reasons:

(1) The base differs from state to state—from the broadest base of a tax on the issue and transfer of practically all documents, including

[1] Letter to Mrs Wilma G Mayers from Robert S Calvert, Comptroller of Public Accounts, State of Texas, March 13, 1964.

bonds, debentures, stock, mortgages, deeds and conveyances of real property (as in Florida), to the narrowest base of stock transfer only (as in New York). Some stock transfer taxes are based on the number of shares rather than the value (See Table II)

(2) The rates vary from a high of 25 cents per $100 in Alabama (for no-par-value stock for which an actual value is not shown) to a low of 3.3 cents per $100 in Texas.

(3) There is a great difference in the size of the financial communities in the different states and the consequent number and value of stock transactions.

TABLE II

Federal and State Stock Transfer Tax Rates

State	*Rate on stock transfers*
Alabama	25 cents per $100 or fraction of par value. If no par value, stock is valued at $100 a share, unless actual value is shown
Florida	15 cents per $100 of face value, or fraction thereof, for par value stock; 15 cents per $100 of actual value for no par stock.
South Carolina	10 cents per share for no par value shares; if over $100 actual value, 10 cents plus 1 cent per $10 above $100; if under $100 actual value, 1 cent per $10 or fraction (For sale or transfer of capital stock, 4 cents per $100 or fraction of face value; if no face value, 4 cents per share)
Texas	3 3 cents per $100 of face value or fraction thereof or 3 3 cents for each share where shares are issued without designated monetary value
New York	Selling price. Less than $5 — 1 cent per share $5, but less than $10 — 2 cents per share $10, but less than $20 — 3 cents per share $20 or more — 4 cents per share Transfer tax on other than by sale — 2 cents per share
Federal Tax	4 cents on each $100 or major fraction of actual value (maximum 8 cents a share, minimum 4 cents)

Source Letters from directors of revenue of the states listed

THE FEDERAL STOCK TRANSFER TAX

The federal government imposed a tax on stock transfers during both the Civil War and the Spanish-American War, but repealed it after each war. It was imposed in 1914, repealed in 1916, imposed again in 1917, and has been in effect ever since

The federal tax is imposed on each sale or transfer within the territorial jurisdiction of the United States of shares, or certificates of stock, or of rights to subscribe for or to receive such shares or certificates, issued by a corporation This includes transfer by gift, transfer to a legatee, transfer from a partnership on its termination, and transfer to or by trustees.

The rate of tax is 4 cents on each $100 or major fraction thereof of the *actual* value of the certificates or shares, or of the rights to receive them (See Table II) In no case can the tax be more than 8 cents on each share, or less than 4 cents on the sale or transfer, regardless of the actual value (A major fraction is defined as an amount in excess of $50 but less than $100)

For example:

The tax on 100 shares at $50 a share would be $2 00
The tax on 200 shares at $70 a share would be $5 60
The tax on 100 shares at $20 a share would be $0.80
The tax on 100 shares at $200 a share would be $8 00
The tax on 100 shares at $300 a share would be $8 00
The tax on 100 shares at $1 a share would be 4 cents
The tax on 1 share at $40 a share would be 4 cents

The minimum means that on any transaction involving less than $50 the tax will be 4 cents The law provides for an exemption from the stock transfer tax for odd-lot purchases by the public on a national securities exchange This is accomplished by exempting the sale by an odd-lot dealer of an odd lot of stock to a broker for one of his customers. (On the New York Exchange, an odd lot would be 1 to 99 shares where the unit is 100 shares For a few shares traded in 10 unit lots, an odd lot would be 1 to 9 shares) But when a public customer sells an odd lot, the sale is subject to the federal stock transfer tax.

"Actual value" of stock for the purposes of the stock transfer tax is "the selling price where the stock is sold in an arm's-length transaction."[2] In the case of a gift or bequest, "actual value" is the mean between the high and low selling prices on the day the gift or bequest is made In the same way the tax on the transfer of stock rights is based on the actual value of those rights. In the event of a merger of two corporations, a stock transfer tax is imposed on the merged corporation in return for stock in the new corporation In the case of a consolidation of two corporations, both groups of stockholders will be issued new stock, so the stock transfer tax will be more than in the preceding case

TABLE III

Yield of Stock Transfer Taxes and of Other Nonseparable Documentary Taxes in 1962 and 1963 in Alabama, Florida, New York, South Carolina, and Texas.*

State	*1962*	*1963*
Alabama (securities, including bonds)	$97,000	$134,000
Florida (all documents, issue and transfer, about ⅓ probably real property transfer tax)	12,918,000	13,161,000
New York (stock transfer only)	78,895,000	65,878,000
South Carolina (all documents, issue and transfer)	1,431,000	1,657,000
Texas (stock transfer only)	302,000	284,000

* Current statistics on the federal stamp taxes on documents are not sufficiently detailed to show the yield of the stock transfer portion separately from the portion on bonds, deeds of conveyance, or foreign insurance policies, nor the portion on the original issue of stock (Their accounting procedures do not make possible a separate breakdown)

Source. Compendium of State Finances, U S Dept of Commerce, Bureau of the Census

THE NEW YORK STOCK TRANSFER TAX

New York State taxes the sale or transfer of stock (and rights to stock), but does not tax the issue of stock Neither does it tax the transfer of bonds. The only other New York documentary stamp tax is a mortgage recording tax. Deeds of conveyance are not taxed although New York City has a realty transfer tax.

[2] U S Excise Tax Guide 1963, p 255

The state tax is applied according to the selling price of the stock, regardless of par value[3] Exemptions from the tax include the following.

(1) Sales or transfers by odd-lot dealers (odd lot is less than the normal trading unit, usually 100 shares)

(2) Agreements evidencing deposits of certificates as collateral security

(3) Mere loans or returns of stock

(4) Transfers where neither the sale or evidence thereof, nor delivery, nor act necessary to effect such transfer occurs in New York.

The law permits stock exchange members to pay their taxes in cash, through affiliated clearing corporations, or to designated banks, rather than by the use of documentary stamps Over-the-counter dealers may also elect to pay their taxes in cash, direct to the State Tax Commission, and over 80 percent of the tax is now collected without the use of stamps

If the transfer of stock on the books of record takes place within the state, the transaction is taxable regardless of the place of sale Domestic corporations must transfer their stock within New York State unless permission has been obtained to keep their books outside the state[4]

As shown in Table IV, $3.962,677 of the total collected in 1963 is allocated to over-the-counter dealers, but it is not clear to what extent they are also included in the collections from the sale of stamps, which accounted for $6,044.134 Most of the total (over $56 million) came from collections from stock exchange clearing associations

Violation of the provisions of the stock transfer tax law lead to penalties and misdemeanor charges, carrying punishment of imprisonment or fines. (See page 13 of N.Y. Stock Transfer Tax Law and Regulations)

THE FLORIDA DOCUMENTARY STAMP TAX

Florida's tax is on a variety of documents, including the issue of certificates of stock, transfer of stock, all bonds, debentures, certificates of indebtedness, notes, assignment of wages, mortgages, and deeds and conveyances of interests in land

Collections from all Florida documentary taxes in fiscal 1963 were approximately $13 million The 50-percent increase in rates passed by the 1963 session of the Legislature (as reflected in the rates shown below) was expected to increase collections The income from all of these taxes as of February 1964 was estimated to be about $2 million a month.[5]

TABLE VI

Florida Documentary Tax Rates

Bonds, debentures, certificates of indebtedness	15¢ per $100 of face value
Original issues in State of Florida	15¢ per $100 or fraction thereof of face value
Sales agreements	15¢ per $100 or fraction thereof of face value
Shares of no par value	15¢ per $100 or fraction thereof of actual value
Notes, wage assignments	15¢ per $100 or fraction thereof of face value
Certain mortgages	15¢ per $100 of face value
Conveyances of realty	30¢ per $100 of the consideration
Notes and obligations in connection with sales made under retail charge account services	10¢ per $100 or fraction thereof of face value
Share of no face value	15¢ per $100 or fraction thereof of actual value

Florida also has a separate "intangibles tax" which includes a tax of $2 per $1,000 on obligations secured by mortgages on Florida real estate This "one time" intangible tax is paid only at the time of the mortgage recording Revenue in 1962 from this source was $5,465,000, compared with $12,918,000 from the other documentary stamp taxes.

[5] Letter to Mrs Wilma G Mayers from M C O'Berry, Chief, Documentary Stamp Tax Department, Comptroller's Office, Florida.

STRUCTURE OF THE CALIFORNIA SECURITIES MARKET

According to estimates in the 1962 Census of Shareowners published by the New York Stock Exchange, there were more than 2 million individual shareowners in California, or approximately 12 percent of the national total. In 1961, California shareowners received $1,187,000,000 in dividends from their stock.

As of December 31, 1963, the California Corporation Commissioner listed 949 licensed brokerage firms, of which 469 were members of the National Association of Security Dealers, 86 members of a stock exchange, and 394 were nonmembers.

Since the California securities market is part of a broader national securities market, the total number or value of shares bought and sold by Californians is not known. The value of the 53 million shares transferred on the Pacific Coast Stock Exchange in San Francisco and Los Angeles in 1963 was $1,542,443,000 but the precise size of the over-the-counter market in California is not known. In the National Association of Security Dealers District No. 2, which covers California, Nevada, and Hawaii, the estimated value of sales by registered broker-dealers in 1961 was $3,226,830,000 or 9.2 percent of the national total.[6] This may be compared with 1961 sales on the Pacific Coast Stock Exchange of $1,279,816,000.

Officials of the Pacific Coast Stock Exchange have regularly pointed out the importance of the saving of New York stock transfer tax as an inducement to security dealers to use the Pacific Coast exchange rather than the New York exchange. The question then arises, if California had such a state stock transfer tax would it have an injurious effect upon the local exchange, its members, or the general public? To fairly evaluate this question and its significance for public policy it is necessary to understand the role of the regional exchange both for the California economy and for the national economy.

STRUCTURE OF THE NATIONAL SECURITIES MARKET

An important source of funds for both private and government investment is the sale of securities to the public. These include federal, state and local bonds, corporate bonds, and corporate preferred and common stock. The existence and smooth functioning of a market mechanism permitting easy buying and selling of securities has made the provision of capital for both public and private purposes more attractive to investors, because of the normal assurance of liquidity given by a well-organized market. The most important sections of this market are the national exchanges (including the New York Stock Exchange and the much smaller American Exchange which is also located in New York), the over-the-counter market, and the 14 regional exchanges, of which 4—Midwest, Pacific Coast, Philadelphia-Baltimore-Washington, and Boston—accounted for 92 percent of the dollar volume of regional exchanges in 1962.[7]

A Securities and Exchange Commission study published in 1963 estimates that in 1961 the relative sales volume of all securities sold

[6] Securities and Exchange Commission, Report of Special Study of Securities Market, 1963, p. 737.
[7] *Ibid.*, p. 928.

on exchanges was 2 0 billion shares, worth $63 8 billion In the over-the-counter market 2 5 billion shares were sold, worth $38 9 billion. Eliminating sales from one dealer to another in the over-the-counter market, its stock transactions in 1961 amounted to 75 percent of exchange transactions in terms of shares, and 35 percent in terms of dollars [8]

Within the category of exchange transactions, in 1962 the New York exchange accounted for 71 32 percent of share volume, 86 32 percent of value; the American accounted for 20.12 percent of share volume, 6 81 percent of value; the registered regional exchanges 8 49 percent of share volume, 6 83 percent of value The Pacific Coast exchange by itself accounted for 2 95 percent of share volume and 2 0 percent of value of all shares sold on exchanges The domination of the New York exchange is apparent. This relative position of the regional exchanges has been characteristic of the period since the 1929 stock market crash, prior to which in the decade of the twenties the regional exchanges had enjoyed a temporary boom, partly because securities listed on regional exchanges at that time were exempt from registration requirements under many state laws.

THE PACIFIC COAST STOCK EXCHANGE

The San Francisco branch of the exchange was founded on September 18, 1882, the Los Angeles branch 15 years later, and the two were merged into the Pacific Coast Stock Exchange on January 2, 1957 Commenting on this event in its 1957 report, the chairman said · "It is the responsibility of a financial community of the size and importance of the Pacific Coast to provide a growing and successful securities exchange to serve industries and public investors in the West." At the end of 1957 there were 95 member organizations, including 29 member corporations Today there are about 130 members

The Pacific Coast exchange is one of seven major regional exchanges operating in addition to the principal exchanges in New York. The other regional exchanges are Philadelphia-Baltimore-Washington, Midwest, Boston, Cincinnati, Detroit, and Pittsburgh All of the regional exchanges together transacted $3.75 billion worth of business in 1962, or only 6 9 percent of the total dollar volume transacted on all exchanges during that year. Nevertheless they have been the subject of considerable interest in congressional hearings, and in the deliberations of the Securities and Exchange Commission because of their past relationship and potential influence on the national securities market. The feeling was expressed that impairment of the activity of regional exchanges would increase the concentration in New York City of control over the nation's capital funds.

Early growth of regional exchanges was associated with their function of providing for initial flotation of securities in developing regions. In the absence of modern communication facilities they provided a central place for bargaining in both new and outstanding securities.

Source Annual Reports of the Pacific Coast Stock Exchange 1957–1963

When the Securities and Exchange Act was passed in 1934, securities listed on registered exchanges were required to be registered with the Securities and Exchange Commission, which meant disclosure of extensive data, limitations on "insider" trading, and other regulations In the wake of the crash, states withdrew from exchanges the privilege of distributing new issues (which had been a main source of regional exchange business). As a result companies which had new issues or a reluctance to disclose business details or to submit to SEC regulations, turned to the over-the-counter market Companies which could meet the SEC reporting standards could seek the greater publicity and prestige of a listing on the New York exchanges. Meantime, the technological development of the open-end teletype system allowed over-the-counter dealers to make immediate contact with each other all over the country, and thus destroyed the unique advantage of face-to-face dealing on a regional exchange

Accordingly, one of the main historical uses of the regional exchange, which was to provide a market for local or regional issues of companies which were not developed to a point where they would be ready for national listing, has failed to become their dominant function Indeed, in terms of percentage of business, regional listings have become of minor significance

On the Pacific Coast exchange, for example, 93 percent of the (dollar volume of) stocks admitted for trading were also traded on the New York or American exchanges [9] The SEC study shows that the dollar volume of trading in regional-only stocks on the Pacific Coast exchange was 11 4 percent of total volume in 1961, compared to 22 6 percent in 1948 [10]

The major activity on regional exchanges is trading in securities already traded on another exchange, that is, multiple-trading This includes trading in both listed and unlisted stocks. Fearing for the future of regional exchanges if unlisted trading were not allowed to continue, the SEC in 1936 recommended that the practice be legalized They took the position that it was in the public interest to promote competition in the securities market by encouraging and bolstering regional exchange operation [11]

Another factor contributing to the overriding importance of multiple trading in dually-listed stocks on the regional exchanges has been

[9] Letter to Mrs Wilma G Mayers from James L McPharl, Vice President, Pacific Coast Stock Exchange, February 18, 1964

[10] SEC study, *op cit*, p 1078.

[11] *Ibid*, pp 918–924

the public or "nonmember" commission schedule of the New York Stock Exchange, under which a nonmember broker must pay a member broker the same commission that his customer would pay if the customer were to place the order directly with the New York exchange member. Since competition normally prevents charging the customer more than the rate charged by the New York member, the nonmember broker gives up his entire commission-income on the sale to the New York member, besides incurring overhead and other costs. Yet he may take the loss in order not to lose the customer. Nonmember orders account for a substantial amount of the New York Stock Exchange's business, but the rules of the New York exchange forbid any rebate or discount on commission charges to nonmembers. As a result, several methods have emerged whereby the nonmember is rewarded for bringing in the business. The one that concerns us here is the technique whereby the New York member places business on a regional exchange with a nonmember who is a member of that regional exchange, even when the New York member is also himself a member of the same regional exchange (dual member), or where the dual member could have made the transaction on the New York Stock Exchange where the issue is listed. This reciprocal commission business, usually carried out under arrangements with 3-to-1 or 2-to-1 ratios in favor of the New York member firm, is facilitated by the multiple-trading of nationally listed stocks on the regional exchanges.[12] The SEC study comments that "in general, however, Pacific Coast trading in dually traded stocks actually appears to drop off sharply when the primary exchanges suspend operations for the day."[13]

From the public point of view, the existence of firm commitments as to an agreed upon ratio may, of course, lead to the placing of business according to the ratio rather than in the best market for the customer. The regional exchanges have also become dependent on reciprocal commission business, and dependent on the maintenance by the New York exchange of its single commission structure. It also follows that sole members of regional exchanges in many cases rely heavily on this type of business.

The question now is what would the effect of a state stock transfer tax be on this structure and the individuals involved? In response to an SEC questionnaire asking dual members to rank their reasons for executing orders on the regional stock exchanges, 14 dual members mentioned saving the New York tax among the three highest-ranking reasons. One firm put it first, 3 firms second, and 10 firms third. On the other hand, the first-ranking reason for 14 firms was "better price available on regional exchange" (8 firms had this reason ranked second, and 2 ranked it third). "Trade after New York Stock Exchange closes" was ranked first by 8 firms, second by 10, and third by 9. "Retain larger percentage of gross commissions" was ranked first by 8, second by 3, and third by 2. "Reciprocal arrangement with another member of the regional exchange" was ranked first by 4, second by 1, and third by 3 firms. "Orders originated in the vicinity of the exchange" was ranked first by 4, second by 4, and third by 2.[14]

[12] SEC study, *op. cit.*, p. 302.
[13] *Ibid.*, p. 939, Part 2.
[14] *Ibid.*, p. 1086.

Other reasons receiving fewer votes were "reduce market impact on NYSE" (which could occur in the case of a large block bought or sold), and "reduce time involved in transfering securities"

HOW IMPORTANT IS THE PACIFIC COAST STOCK EXCHANGE IN CALIFORNIA'S ECONOMY?

According to James Walter, writing in *The Role of Regional Security Exchanges*, in 1957, "the truly significant function of regional exchanges is one of providing good markets for regional issues" He concedes that an alternative function exists, that of facilitating the entry of regional brokerage firms into the market for nationally listed securities, but he feels that this problem of entry could be handled without the existence of regional exchanges It is clear that the cost of a seat on the New York Stock Exchange may be prohibitive for many local firms (around $200,000), whereas the cost of a seat on the Pacific Coast Stock Exchange has been around $15,000. A nonmember firm trading on the New York exchange must pay full commission rates,

therefore, this business does not pay. One possible solution would be a change in the commission rate structure to permit nonmember firms a discount from the public rate

Regional issues tend to be selected on the regional exchanges, according to Walter, with correspondingly greater emphasis on multiple-traded issues, that is, issues which are listed on the New York exchange but admitted to trading on the Pacific exchange, either by multiple listing, or by being admitted to unlisted trading privileges. In 1959, out of 550 stocks on the list at Pacific, just 76 had a market only on the Pacific Coast Stock Exchange, i.e. were regional-only stocks. And according to a letter of February 1964 from the vice president, approximately 93 percent of the stocks admitted to trading on the PCSE are also also traded on the New York or American Stock Exchanges. This indicates a further attrition of the volume of regional business Because of a limited volume of orders to buy and sell for regional issues, the spread between buying and selling prices is likely to be wider than on the New York exchanges This makes for a thinner and less satisfactory market with greater potential for price instability. Some large single transactions may be too important for a competitive market in their influence on price

This may in turn further weaken the regional exchange market by causing regional firms to de-list and change to the over-the-counter market. All securities are now initially issued in the over-the-counter market Corporations trading in the over-the-counter market are not generally required to report to the Securities and Exchange Commission, except in connection with new issues. The absence of disclosure requirements permits dealers to charge different prices to different customers, and permits variable prices among brokerage firms. The extra opportunities for profit may cause dealers to oppose the listing of issues they have handled on the exchange, where commissions are published. Only bid and offered quotations are published for over-the-counter stocks, and these may not correspond to prices at which transactions are actually made. Also, the size of over-the-counter transactions is kept secret, and "potentially embarrassing details, such as insider transactions, need not be divulged." [15] In the face of this secrecy and flexibility in the over-the-counter markets, exchanges have a more difficult time attracting and holding regional listings Listing, of course, is in the investor's interest in that he has the disclosure protections of the SEC, as well as the standards required by the exchange itself.

The Pacific Coast exchange does attempt to attract some business that would perhaps be conducted over-the-counter by offering discounts on commission charges to nonmember firms which originate business on the exchange. The question then arises whether anything else may be done to facilitate regional security handling on the exchanges. Some may question the need for this, yet it seems clear that relatively new, growing industries that are not yet national in scope may be the source of vital economic development to California and the nation

From the tables above it can be seen that the share volume on the regional exchanges of exclusively listed stocks has declined over the years while the percentage of dollar volume in exclusively listed stocks has remained fairly constant.

THE OVER-THE-COUNTER MARKET

Originally, the phrase "over-the-counter" described transactions which actually took place over the counters of banking houses. Now it refers to any securities transactions not effected on a stock exchange. On the other hand the securities exchanges are auction markets in which the member-brokers act primarily as agents for buyers and sellers, although they may also buy for their own account. The New York Stock Exchange accounts for 85 percent of this business. Over-the-counter markets include the marketing of new issues as well as transactions in outstanding securities off the exchanges. Thus they include the underwriting function, and the buying and selling of securities by firms as dealers, with the assumption of inventory positions. The underwriting of corporate, federal, state, municipal and other local securities takes place in the over-the-counter market. It is also the trading place for securities which lack national market ability or do not fit into the requirements of the exchange markets. Large blocks of stocks or bonds which cannot be easily absorbed by exchange transactions are traded over-the-counter. Bank, insurance company and mutual funds are usually over-the-counter transactions. In 1953 it was estimated that over-the-counter markets accounted for almost all government, municipal and corporate bond transactions, about one-half of preferred stock and one-third of common stock transactions by value.[16]

[16] U S Congress, Senate, Banking and Currency Committee, Hearings, 1955, *Stock Market Study*, p 349

According to the Securities and Exchange Annual Report for 1962, there were 4,165 stocks with 300 holders or more, of about 3,840 domestic companies, quoted only in the over-the-counter market The aggregate market value of these stocks on December 31, 1961 was $105 8 billion This compares with an aggregate market value of exchange traded stocks on the same date of $426 billion

The $105 8 billion in over-the-counter stocks included

$26 2 billion for bank stocks
$22 1 billion for insurance stocks
$57 5 billion for industrial, utility and other miscellaneous stocks
Stocks issued by registered investment funds (e g. mutual funds) were not included in this compilation

According to the SEC report, substantial percentages of over-the-counter stocks are often held by officers and directors of companies, or other controlling persons; e g $8 7 billion of Western Electric Company was 99 82 percent owned by A T & T

In addition to the $105 8 billion worth of over-the-counter stocks mentioned above, there were more than 1,000 actively quoted stocks of companies so small as not to require continuous reporting to the commission It might be noted that some of the previous group also do not report (2,177 stocks worth more than $64 billion)

The total number of stocks listed in the daily service of the National Quotation Bureau was over 8,000 in 1962 as compared with 3,000 on the organized exchanges.

INCIDENCE AND BURDEN OF THE STOCK TRANSFER TAX

The legal incidence of the tax may be illustrated by the New York State stock transfer tax law and regulations. To quote·

> "Subdivision 3 of section 270 of the Tax Law imposes liability for the tax upon the person or persons making or effectuating the sale or transfer, including the person or persons to whom the sale or transfer is made Thus, both transferor and transferee are liable, and if a transfer is made on the books of the corporation, it is also liable"
>
> "As between themselves, the parties may agree which of them shall bear this liability and payment of the tax by either discharges the liability of both However, if the party who has agreed to pay the tax fails to do so, the other party is not exonerated from liability by such agreement and in such case payment may be enforced against either party."
>
> "The fact that either the transferor or the transferee may not be subject to the tax does not exempt the transaction For example, a transfer by or to the United States or any of its agencies, a foreign government, the State of New York or any of its political subdivisions is subject to the tax"[17]

Assuming that in practice the seller does in fact pay the tax, the question then arises as to whether the seller can pass on any part of this to the buyer in the form of a higher price for the stock than

[17] State of New York, Department of Taxation and Finance, *Stock Transfer Tax Law and Regulations*, July 1, 1960 (as amended 1963)

would otherwise prevail Presumably a prudent investor will attempt to recover all of his costs in selling his shares, but this will be more possible in a rising market than in a falling market. Moreover, it is not apparent that historical cost, either including or excluding tax costs, is a strongly felt force in the shaping of a particular market price. Future expectations as to the value of the stock may frequently be dominant in establishing the price If we knew how much selling was done for the purpose of profit taking we would have a more exact answer to this problem Some sales are involuntary, as in the case of the disposition of an estate in the form of securities, and some sales are undertaken for the purpose of establishing a tax loss In addition, the strength of the buying versus the selling side of the market clearly varies from stock to stock and from one time to another Therefore, the question of incidence might best be confined to a discussion of what economic groups own and transfer stock.

A Securities and Exchange Commission report indicates that at the end of 1961, individuals owned more than three-fourths of all common and preferred stock outstanding Of the institutions which owned the remaining one-fourth, the largest holders were personal trust funds, noninsured private pension funds, and open-end investment companies (See Table XI) If personal trust funds are removed from the list as

Source *Report of Special Study of Securities Markets of the Securities and Exchange Commission, Part 2,* p 970, July 17, 1963

Note Estimated market values at end of year Includes foreign issues outstanding in the United States Intercompany holdings of nonfinancial corporations are excluded Figures may not add to totals because of rounding

being closer to individuals than to institutions, then the institutional share drops to about 15 percent

Of all the stock owned by individuals, about one-half was owned by those with incomes of $25,000 or over, and three-quarters was owned by individuals with incomes of $10,000 or over.[18]

Only 1 percent of all taxpayers fell in the first group in 1960, and only 10 percent in the second group Therefore, the great bulk of individual buyers and sellers of stock were well-to-do or wealthy.

It has been estimated in an October 1962 survey of the New York Stock Exchange that in 1962 individuals bought about $40 to $50 billion worth of stock, and sold an amount about $1 6 billion greater than they bought Mutual funds bought about $4 billion worth and sold about $3 billion Insurance companies bought about $0 4 billion and sold about $0 3 billion. Noninsured private pension funds bought $2 billion net, and other institutions bought around $1 billion net

The SEC estimated that in 1961 the total value of securities sold on all exchanges was $63 8 billion, and over-the-counter $38 9 billion Although these figures are for a year earlier than those in the preceding paragraph, it can be roughly stated that around three-quarters of all sales of stock on exchanges are by individuals, and a somewhat smaller fraction in the over-the-counter market We may then conclude that most of the stock transfer tax is paid by this relatively well-off group of individuals

Institutional sellers will be more able to recover their costs in charges for service to their individual customers Some of this burden is doubtless borne by individuals in lower income groups, but distribution is not certain

Brokers dealing on their own account are one clearly definable economic class which would definitely feel the impact of a new stock transfer tax

POSSIBLE EFFECTS OF A STOCK TRANSFER TAX IN CALIFORNIA

If a stock transfer tax were to be levied on all stock transactions in California, would it lead to a decline in the volume of transactions taking place in this state, either on the Pacific Coast Stock Exchange or over-the-counter? Although usually not the overriding reason for trading on the Pacific Coast Exchange rather than on a national exchange, this potential tax saving may have weight in marginal cases. Commissions charged by brokers vary according to a standard schedule of prices and the number of shares bought. The average commission is in the neighborhood of 2 percent, whereas in a typical case the New York State stock transfer tax may be in the neighborhood of one-tenth of 1 percent. In the usual case, then, the tax will be a very small part of the selling cost.

Example A: For example on a transaction in which 100 shares at $50 a share are sold (total $5,000), the Pacific Coast Stock Exchange commission would be $39, plus one-tenth of 1 percent of the money involved. This comes to $44, or less than 1 percent. The federal stock

[18] Cited in Daniel Seligmen and T A Wise, "New Forces in the Stock Market," *Fortune*, February, 1964, pp 92 ff

transfer tax at 4¢ per $100 would be $2, or one twenty-fifth of 1 percent, and a state transfer tax at the New York rate of 4¢ a share would be $4, or two twenty-fifths of 1 percent All of the charges together would total $50, or a total of 1 percent of the selling price.

Example B: If 100 shares of a stock priced at $200 a share were sold, the commission would be $59, the federal tax $8 and the New York basic state tax $4. This totals $71 on a $20,000 transaction, or less than ½ of 1 percent.

This consideration would seem to argue against the tax having a large negative impact on the volume of transactions taking place in California When balanced against the list of other motivations for trading on this regional exchange discussed above, the tax saving was of first importance to only 1 firm interviewed, of secondary importance to 3, and third in importance to 10. The number of member firms on the Pacific Coast Stock Exchange at the time of this questionnaire was 106, of which 83 were sole members, and 23 were dual members (that is, members of Pacific and also of the New York or American exchanges, or both). Seventeen were members of both American and New York, two of American.

The reaction of nonmember firms who get special discounts on commission charges for originating business on the Pacific exchange should also be considered They would still stand to gain from the reduction in commission charges, so would presumably still be motivated to place orders on Pacific rather than elsewhere. What effect would the tax have on the actions of the brokerage firms which were not members of any exchange? There were 863 of these firms at the end of 1963, whereas only 86 were members of an exchange. Four hundred twenty firms received preferential treatment on the Pacific exchange, leaving 443 who did not There is great diversity in the size and activity of firms which do over-the-counter business. They range in size from the sole proprietor selling mutual funds or a single underwritten issue to large firms with networks of branch offices. In 1961 sales by any one broker-dealer ranged from $50,000 to $2 billion.[19] However, some of the firms doing the largest amounts of over-the-counter business were New York Stock Exchange members. Of 67 broker-dealers doing more than $100 million worth of business in 1961, 43 were NYSE members. Perhaps it would be safe to conclude that most of the nonexchange members in California are relatively small, in terms of their share of total over-the-counter business and that the impact of the tax would not be such as to cause them to shift a significant volume of business out-of-state.

ESTIMATE OF POSSIBLE COLLECTIONS IN CALIFORNIA

Assuming that the levying of the tax will not have a significant effect on the volume of business on the Pacific Coast Stock Exchange we can estimate how much revenue would have been raised in the calendar year 1963 with a stock transfer tax at the New York state rate and structure Taking the last price at which each stock sold during the year (on the assumption that this may provide a better estimate of potential revenue than the high, low or even the median for the year),

[19] SEC Report *op cit*, p 548

figuring the amount per share that would have been levied in New York, and the share volume, we have calculated the tax. The total tax that would have been collected on this basis in 1963 was $1,598,000. This represents the portion that could have been collected as a result of organized exchange transactions.

In order to estimate the amount collectible in the over-the-counter market, we take note of the fact that over-the-counter sales in 1961 constituted 35 percent of the value of all exchange transactions. Furthermore, the over-the-counter sector seems to be growing relatively faster than the exchange sector.[20] The tax would then have raised approximately one-third as much as on the exchange, if we can apply the national ratios to the California security market. This would produce an estimate of $500,000.

Thus the total from both exchange and over-the-counter transactions would have been in the neighborhood of $2 million in 1963, with New York rates.

If the tax had been levied on the federal basis of 4¢ per $100 of value of transactions, then on an assumed total volume of $2–2.5 billion on both exchange and over-the-counter markets together, the tax collected would have been between $800,000 and $1,000,000

These estimates may be too low, since in 1961 the National Association of Security Dealers estimated that all sales by registered broker-dealers totaled $3 3 billion for California, Hawaii, and Nevada 1961 sales on the Pacific Coast Stock Exchange were $1 28 billion The remaining $2 billion cannot be allocated among the three states, but it would seem logical to guess on the basis of incomes and population that more than $1 billion could be allocated to California This would make total sales in 1961 about $2.3 billion Since exchange sales were up about 20–25 percent in 1963 over 1961, it would perhaps be fair to estimate that total sales in California in 1963 were between $2.8–$3 0 billion This would raise the current estimate for the tax about one-third Thus the state tax on the New York basis would have yielded about $3 million Transfers other than by sales may then be added.

The federal tax estimate could then be raised to $1 5 million plus, for 1963. Elsewhere it is noted that total stamp taxes collected by the federal government in California in 1962–63 were $17.7 million [21] The real estate transfer tax was probably in the neighborhood of $12 million so that the tax on stock and bond issue and transfer, and on foreign insurance policies made up the balance. Is it logical to assume that only $1 5 million of this was stock transfer tax? This would leave $4 million for the tax on issue of new stock and bonds and bond transfer, and the tax on foreign insurance companies Perhaps $2 million for federal stock transfer tax collections in California in 1963 would be a better estimate.

[20] Over-the-counter is probably a larger share of total in California than nationally, because New York has most of exchange business As of the end of 1963, according to the 1963 Annual Report of the Pacific Coast Stock Exchange, "the volume of over-the-counter clearing through the clearing department approximated 50 percent of the listed items being cleared" p 3

[21] Federal collections were separately reported in 1952 when the stock transfer tax brought in $2.2 6 million out of $77 6 million, or about 29 percent Since New York dominates, this is probably too high a percentage for California If we take 10–15 percent as more realistic, then we can conclude that the federal stock transfer tax in California in 1963 was $1 7 million to $2 6 million (Friend, Hoffman and Winn *The Over-The-Counter Securities Market*, 1958, p. 459)

ARGUMENTS FOR AND AGAINST A STOCK TRANSFER TAX

A.—FOR

(1) Revenue. Depending on the rates, California could realize $1 5 to $2 5 million at the federal tax rate, $3 million plus at the New York state tax rate, and more at the higher rates prevailing in Florida, Alabama, or South Carolina

(2) Although this tax is levied on the transfer of stock, it may plug a loophole in the property tax, in that it reaches a form of intangible property which ordinarily escapes the property tax The capital gains tax may reach this area indirectly, but capital gains are taxed more lightly than other forms of income Moreover, on other types of property both property taxes and capital gains taxes are paid

(3) This tax could assist in dampening the fluctuations of the stock market by discouraging heavy trading when stock prices are rising or falling rapidly.

(4) The implementation of this tax at a light rate would yield information about a field of activity where little is known, and which may require state regulation in the future.

B.—AGAINST

(1) The tax might have a possible negative effect on the volume of business on the Pacific Coast Stock Exchange, to the possible detriment of future growth of this institution, a volume which the SEC feels worth sustaining to prevent undue concentration of capital markets in New York Another aspect of this point is the possible loss of income to Pacific members, who would then pay less state income tax. However, the saving in out-of-state stock transfer tax has not been shown to be more than a secondary reason for trading on the Pacific Exchange.

(2) This tax might have a high administrative cost Both Pennsylvania, which repealed its stock transfer tax, and Texas have mentioned the administrative difficulties. To quote Robert S Calvert, the Comptroller of Public Accounts in Texas·

> "There are approximately 15,000 foreign corporations doing business in Texas and there are some 55,000 domestic corporations. This causes a tremendous audit problem In addition, the tax is not levied against the corporation, but is levied against the individual transferors, therefore, it is sometimes necessary to file claims against a large number of individuals for the tax due on the transfers of stock of a single corporation. The law does provide for certain penalties against the responsible officials of the corporation for recording the transfer on the records of the corporation without the stamps having been affixed, however, these penalties are in the nature of a misdemeanor and are not effective except on conviction " [22]

On the other hand, New York reports no particular difficulties Eighty percent of their tax is now collected without the use of

[22] Letter to Mrs. Wilma G Mayers, dated March 13, 1964.

stamps by direct payment of cash to the State Tax Commission or its designated bank.

(3) This tax may be regarded as a "nuisance" type tax by tax administrators and the business community.

(4) A stock transfer tax, not accompanied by a bond transfer tax, might discourage the use of equity capital. It may be argued that equity or "venture" capital is needed to promote the growth of new industry and employment, and that the tax might, therefore, be detrimental to future economic growth in California.

THE REAL ESTATE TRANSFER TAX

THE REAL ESTATE TRANSFER TAX

THE NATURE OF THE REAL ESTATE TRANSFER TAX

A real estate transfer tax is a tax on the transfer of real property and is analagous to a "sales tax" on property. This tax yielded $20 million to the state of Pennsylvania in 1963, and could yield four or five times this amount in the state of California It also has interest as a potential source of revenue to local governments, and might be particularly attractive as a means of raising money for schools, since rising school costs are often associated with an influx of new residents and a concurrent increase in real estate transactions. If levied on a countywide basis, as in the state of Washington, the proceeds could be apportioned on the basis of average daily attendance, thus achieving a measure of intra-county equalization

The three main variations of real estate transfer taxes are

(1) A sales or transfer tax on the total value of the property transferred.

(2) A recording tax on the amount of the mortgage secured by real property.

(3) A sales or transfer tax on the value of the equity transferred

A real estate tax in the first form is like a sales or excise tax on the sale of real property such as land and structures Technically it may be levied on the transaction itself, or on the instrument by means of which the transfer is legally carried out This latter method enables the taxing authority to include transfers of real property other than by sale, as for example in corporate merger.

The second variant is a tax on the recording of a mortgage which represents a real estate loan in connection with the sale of real estate This tax is levied on the debt itself, or the debt document to be recorded, and is based on the dollar value of the debt secured by the mortgage This value will differ from the *total* value of the property transferred, as in the case of a house sale where some fraction of the total sale value is lent by the mortgaging agency However, supplemental mortgages creating additional debt on the same piece of property may also be taxed.

The third variant is the tax levied on the value of the property transferred, *minus* the mortgage debt at the time of sale It thus becomes a tax on the net value of the property transferred, or the owner's equity The federal tax is of this type

Sometimes one or more of these taxes will be included as part of a broad documentary tax law, which may cover the transfer of stocks, bonds, mortgages, deeds of conveyance, and similar instruments

Eleven states and the District of Columbia use the first type of tax, on the total value of property transferred The states are Alabama, Florida, Maryland, Massachusetts, Minnesota, Pennsylvania, South

Carolina, Tennessee, Virginia, Washington, and West Virginia Eight states use the mortgage recording tax: Alabama, Kansas, New York, Minnesota, Oklahoma, South Carolina, Tennessee, and Virginia It can be seen that there is some overlapping between these two groups.[1] In addition, local governments in five states (Maryland, New York, Pennsylvania, Virginia, and Washington) levy some form of real estate transfer tax.

USE OF REAL ESTATE TRANSFER TAXES BY THE STATES

States listed in Table I make use of the tax on the total value of property being transferred, usually as represented by the consideration shown in the deed Typically, deeds involving the state or the United States are exempt, as are transfers between close members of a family where there is no consideration other than love and affection

TABLE I

States With Real Estate Transfer Tax on Total Value of Property Transferred, With Rate

Alabama	50 cents for each $500 of property conveyed (exclusive of assumed mortgages)
District of Columbia	one-half of 1 percent of the consideration paid for each deed
Florida	30 cents per $100 of the consideration shown in deeds and conveyances of interests in realty
Indiana	2 percent of the selling price (exclusive of assumed mortgages) Applicable only to corporations subject to the gross income tax.
Maryland	55 cents per $500 of actual consideration paid, on instruments conveying title to property (seven specified counties and Baltimore City are authorized to supplement the state tax)
Massachusetts	$1 on first $500, 55 cents for each additional $500 or fractional part, on any deed or instrument involving sale of realty (called an excise tax) (exclusive of assumed mortgages)
Minnesota	$1 10 on first $1,000 plus 55 cents for each additional $500 or fractional part thereof (exclusive of assumed mortgages)
Pennsylvania	1 percent of the value of the property represented in the document transferring realty (local governments can levy an additional 1 percent)
South Carolina	$1 for each $500 of property conveyed (exclusive of assumed mortgages)
Tennessee	$1 50 per $1,000 on the consideration which shall not be less than the value of the property
Virginia	15 cents per $100 of the consideration of the deed, or the actual value of the property conveyed (cities and counties levy at one-third of state rate)
Washington	50 cents per $500 (39 counties have also adopted maximum permissible rates of 1 percent on real estate sales)
West Virginia	$1 10 for each $500 of actual consideration

Source *Tax Overlapping in the United States 1964*, Advisory Commission on Intergovernmental Relations, (Washington U S Government Printing Office), July 1964, p 216

Other states make use of mortgage recording taxes levied on the debt secured by the mortgage as shown in Table II These taxes are often said to be in lieu of any ad valorem tax on the intangible prop-

[1] Tennessee, for example, taxes both real estate transfers and mortgages, but apparently intends the mortgage tax to be levied on the holders or owners of indebtedness

erty represented by the mortgage, which, although a debt to someone, is for someone else a claim to wealth.[2] Generally this type of intangible property is not subject to the property tax, partly because of the difficulty inherent in assessing the value of such property and in administering the tax fairly, and partly because of the objection that this would constitute double taxation—first a tax on the property itself and second a tax on the claim to the property. Of course there are numerous examples of double, triple, or quadruple taxation on the same entity in other areas of taxation. Sometimes the states having taxes on mortgage debt have taxes on other types of debt as well, such as bonds and debentures.

TABLE II

States Imposing Mortgage Recording Taxes

Alabama	15 cents for each $100 of indebtedness
Kansas	25 cents per $100, on all real estate mortgages
Maryland	55 cents per $500 (Baltimore City and 7 specified counties are authorized to supplement the state tax)
Minnesota	15 cents per $100 of principal debt secured
New York	50 cents per $100 of principal debt secured
Oklahoma	2–10 cents per $100 depending on length of mortgage
Tennessee	10 cents per $100 of amount secured
Virginia	15 cents per $100 of amount secured (counties and cities levy a tax of ⅓ the state tax—5 cents per $100)

Source: *Tax Overlapping in the United States 1964*, Advisory Commission on Intergovernmental Relations (Washington: U.S. Government Printing Office), July 1964, p. 216.

In 1963 the real estate transfer tax produced millions of dollars for the states in which it is used. As shown in Table III, the tax yielded $19.5 million in Pennsylvania for state government and produced a substantial sum in Florida.

TABLE III

Yield of Real Property Transfer Taxes in Other States

State	*1963 (in thousands)*
Alabama (total documentary stamp taxes)	$1,448
District of Columbia	1,700
Florida (total documentary stamp taxes)	18,718
Maryland (property transfer and mortgages)	56
Massachusetts (real property transfer)	1,494
Minnesota (property transfer and mortgages)	1,206
Pennsylvania (state realty transfer)	19,523
South Carolina (total documentary tax)	1,657
Tennessee (mortgage and real estate transfer tax)	1,830
Virginia (property transfer and mortgage tax)	4,840
Washington (state tax on transfer of real estate)	1,077
West Virginia (realty transfer)	487

Source: *Compendium of State Government Finances*, U.S. Dept. of Commerce, Bureau of the Census.

[2] It may be questioned, however, whether mortgage recording taxes will be borne by the owners of the mortgage-claims-to-wealth if passed on to the borrower, then this tax is not so much a tax on intangible property, but rather a tax on borrowing.

THE PENNSYLVANIA REALTY TRANSFER TAX

(Reference: "The Realty Transfer Tax Act." 1951, Dec 27, P.L. 1742, as amended to date)

The Pennsylvania tax was selected as an example of the more detailed structure of a state tax of the first and more important type, from the point of view of yield.

Base: The tax is levied on transactions in which real property is transferred and effectuated by documents which are to be recorded Real property is any "lands, tenements or hereditaments"[3] or any interest therein which shall be sold, granted, or otherwise conveyed. The tax is levied according to the value of the property conveyed, which is defind as "the amount of the actual consideration therefor, including liens or other encumbrances thereon and ground rents, or a commensurate part of the liens or other encumbrances thereon and ground rents" where these also encumber or are charged against other lands, tenements or hereditaments There is a provision that where there is a small or nominal consideration the property shall be valued at the actual monetary worth, which shall not be less than the highest assessment for local tax purposes

Exemptions:

(1) wills
(2) mortgages
(3) transfers between husband and wife
(4) transfers between parent and child or the spouse of such child
(5) straw transactions
(6) correctional deeds without consideration
(7) transfers to the United States or Pennsylvania or any of their political subdivisions by gift, dedication or deed of confirmation in connection with condemnation proceedings
(8) reconveyance of condemned property to owner at time of condemnation and within one year thereof
(9) leases
(10) a conveyance under recorded trust agreement for purpose of holding title as security for a debt contracted at time of conveyance under which the trustee is not the lender and which requires the trustee to reconvey upon payment of the debt
(11) the transfer from a purchase money mortgagor to a vendor holding the purchase money mortgage
(12) transfers between nonprofit industrial development agencies and industrial corporations purchasing from them
(13) a transfer by owner of previously occupied residence taken in trade by builder as part consideration for new, previously unoccupied residence
(14) transfers to nonprofit industrial development agencies
(15) conveyance to townships, school districts and counties by sale of delinquent properties
(16) transfer between religious organizations of real estate which is not being or has not been used for commercial purposes

[3] Tenement—any kind of permanent property, e g , land, rents
Hereditament—real property that can be inherited

Legal Incidence: Every person, association or corporation who makes, executes, issues, delivers or accepts any deed, instrument or writing whereby any real property within Pennsylvania or any interest therein is conveyed; or in whose behalf such a document is conveyed. Various legal decisions have held that both parties to the transaction are liable for the payment of the tax, that in the absence of an agreement between the parties the tax must be borne by the seller, and that the taxing officials will look to the party recording the deed for payment of the tax, leaving him to seek contribution from the other party under such agreement. Where one party to a transaction is exempt, the nonexempt party remains responsible for payment of the tax It is customary for the tax in Pennsylvania to be divided equally between the seller and the buyer, although the law does not require this

Rate: The rate is 1 percent of the value of the property represented by the document, payable at the time of making, execution, delivery, acceptance or presenting for recording of the document.

Collection: Payment is by affixing documentary stamps to every document described above. It is unlawful for any recorder to record such a document without the proper stamps affixed thereto

Revenue: In 1962 Pennsylvania collected a little over $20,000,000 from the realty transfer tax In 1961 collections were $18 953,000 The 1962 Census of Governments provides an estimate for the total sales of real property for a six-month period in 1961

New houses	$104,509,000
Other nonfarm residential property	488,442,000
Acreage and farm properties	51,637,000
Vacant lots	23,726,000
Commercial and industrial properties	114,949,000
	$783,263,000

For a complete year, we can thus get a rough estimate of $1,576,526,000 for the value of properties transferred by sale. One percent of this figure would be about $16 million in anticipated realty transfer tax Property transferred in ways other than by sale must then account for nearly $4 million, or represent a value of property transferred of almost $400,000,000

According to Alfred C Buehler, Professor of Public Finance at the University of Pennsylvania, the state and local property transfer taxes in Pennsylvania do not, in general, appear to have affected real estate activity appreciably in Pennsylvania [4]

THE FEDERAL DOCUMENTARY STAMP TAX ON REAL PROPERTY SALES

The U S government imposes a tax on the transfer of equity in real property This approach is examined below:

Base: The tax is imposed upon deeds, instruments, or other writings whereby realty sold is granted, assigned, transferred, conveyed to, or vested in, the purchaser, or at his direction, in any other person, when the consideration for, or the value of, the interest or property

[4] Alfred C Buehler, *Tax Study, State of Connecticut*, March 1963, p 147

conveyed, exclusive at the time of the sale, exceeds $100.[5] The tax is limited to conveyances of realty *sold* and does not apply to other conveyances. The tax accrues at the time the deed or conveyance is delivered. Deeds deposited in escrow become subject to the tax upon delivery to the grantee. The federal government has requested local recorders to advise district directors of internal revenue in all cases where deeds are presented for recording without bearing the proper stamps.

Rate: The rate of tax is 55 cents on each $500 ($1\frac{1}{100}$ of 1 percent) on each $500 or fractional part thereof of the net consideration paid for, or the net value of, the realty conveyed. This amounts to being the gross consideration or gross value less the amount of all liens or encumbrances on the realty existing before the sale, or the seller's equity in the property.

Exemptions:

(1) The conveyance of realty to secure a debt, also the reconveyance of such realty upon payment of the debt.
(2) Conveyances of realty without consideration including bona fide gifts.

Legal Incidence: The tax is payable by any of the parties to the taxable transaction. An agreement between the parties as to who shall pay the tax does not relieve the others from liability in case the agreement is not carried out.

ESTIMATE OF POTENTIAL YIELD IN THE STATE OF CALIFORNIA

1. *Estimated Yield of Federal Real Estate Transfer Tax, 1961 and 1963*

In 1961 the U.S. census estimated the measurable sales of real property in California in a six-month period to have been about $4 billion.[6] On the assumption that a full year's sales would have been about $8 billion, the federal tax, which is levied at the rate of 11 cents per $100, would have yielded $8.8 million had it been levied on the total sales value. However, the federal tax is levied on the net consideration paid for the realty conveyed, that is, the gross consideration or gross value less the amount of all liens and encumbrances existing before the sale. It is not known by how much the estimate should be reduced to take account of this net basis.

On the other hand, the above estimate is low because the "measurable sales" of the census do not include property transfers other than by sale. In Pennsylvania these were estimated to be from one-fifth to one-quarter of transfers other than by sale. If we apply a one-fifth in-

[5] *U.S. Excise Tax Guide*, 1963, p. 297.

[6] Census data on which these estimates are based are from the 1962 Census of Governments, *Taxable Property Values*. This survey was undertaken primarily to ascertain the relationship between the assessed value of property and the sales price, for property changing hands on an ordinary market basis, that is, between buyers and sellers dealing at arm's length with one another. The method used was a survey of 119,000 sample pieces of real estate sold. It was limited to sales of real estate listed on local property tax rolls, and did not include state-assessed property. It also excluded transfers between relatives and other types of transactions in which the total money consideration involved might not reasonably be regarded as the current market worth of the property changing hands. (See table on page 13.) On this basis, sales increased 45 percent between the 1956 census and the 1961 census.

crease to the $8 8 million, we would raise the estimate to $10 5 million Perhaps on balance a total of $9 million would not be unrealistic.

Between 1961 and 1963 the dollar volume of real estate loans recorded increased 45 percent for 30 California counties [7] This is not a totally satisfactory index of actual real property sales, since it includes both new and renewal loans But assuming a 30-percent increase in the dollar volume of property sales between 1961 and 1963, we then get a crude overall estimate of approximately $12 million for the 1963 yield of federal real estate transfer taxes in California.

2. *Estimate of Yield of 1-percent Tax on Gross Sales of Real Estate*

Assuming that California were to adopt the tax on the total value of property transferred, such as used in Florida, Pennsylvania, and other states, and further assuming a rate of 1 percent (the rate used in Pennsylvania), what would the yield be? If levied on the approximately $8 billion in "measurable sales" of the 1961 census, the yield would have been $80 million Assuming that transfers other than by sale would increase this by one-fifth, we would obtain an estimated yield of $96 million Projecting this to 1963 on the basis of an assumed 30 percent increase, we obtain an overall estimate of $125 million yield

TABLE IV

Measurable Sales of Property in California During a Six-month Period, 1961 *

Type of property	*Number of properties sold*	*Aggregate assessed value of properties sold (in thousands)*	*Aggregate of sales prices of properties sold (in thousands)*
Nonfarm			
Residential			
Previously occupied**	107,730	$413,257	$2,099,131
New houses	31,237	N.A	616,246
Acreage and farm properties	11,024	48,574	440,858
Vacant lots	26,034	24,952	178,353
Commercial and industrial properties	7,499	112,732	681,326
Total	N.A.	N A.	$4,015,914

N A Not Available

* Bureau of the Census, *Census of Governments, 1962, Taxable Property Values*

** Excludes new houses Transfers of previously occupied houses, a sub-category of nonfarm residential property, amounted to 95,415 with an aggregate sales price of $1,644,926 Thus the total sales of all new and previously occupied single-family nonfarm houses was $2,261,172 for the six-month period

The six-months' total of $4,015,914,000 would yield a one-year estimate of $8,021,828,000, for the total sales prices of all properties sold within the scope of this sample.

3. *Estimate of Yield of Mortgage Recording Tax*

Complete information about the dollar volume of mortgages and deeds of trust recorded in California is not available. However, several title insurance companies have supplied data covering 35 of the most populous counties [8] for 1963. The total dollar amount of new and renewal loans for this year was $14,862,933,822. Had all of these record-

[7] Security Title Insurance Co of Los Angeles

[8] Alameda, Butte, Contra Costa El Dorado, Fresno, Humboldt, Imperial, Kings, Los Angeles, Madera, Marin, Merced Monterey, Napa, Nevada, Orange, Riverside, Placer, Sacramento, San Bernardino, San Diego, San Joaquin, San Francisco, San Luis Obispo, San Mateo, Santa Barbara, Santa Clara, Santa Cruz, Solano, Sonoma, Stanislaus, Tulare, Ventura, Yolo, Yuba

Source Security Title Insurance Company, California Tax Agency.

ings been taxable, a 1-percent tax in these 35 counties would have yielded $148 6 million. In New York State a tax of one-half of 1 percent is levied, with certain exemptions such as Federal Land Bank and Federal Home Loan Bank mortgages

In California there has been a rapid growth in the dollar volume of real estate loans in recent years. Data for 30 of the above counties, though incomplete, indicate that there has been an increase of about 80 percent in the three years 1960-1963. New household formation is expected to crest in the late 1960's when the "war babies" reach marriage age. We might conclude that the yield from a mortgage recording tax would rise substantially in the next decade.

USE OF REAL ESTATE TRANSFER TAXES BY LOCAL GOVERNMENTS

Mortgage recording taxes and estate transfer taxes are used by a number of local government units throughout the nation. The local government taxes are in addition to similar taxes levied by the respective state governments. The five states in which local governments used this tax in 1963 were Maryland, New York, Pennsylvania, Virginia, and Washington The District of Columbia also has a deed recordation tax.

In some cases the proceeds are devoted explicitly to schools. Counties in the state of Washington, which all levy this tax, must use all of the net proceeds for schools. In Pennsylvania, school districts may impose this tax on their own behalf, and 347 school districts collected more than $5 million from this source in 1957–58.[9] In the other states, school districts are indirect beneficiaries, since this tax relieves pressure on the traditional source of city and county financing, the property tax, and accordingly makes it more available to the school districts.

It has been suggested that a rationale for this tax can be found in many communities where the construction and sale of new homes is accompanied by increased costs for schools and other local government facilities such as roads, sewers, and water lines. Accordingly there is considerable justification for levying the tax on the groups associated with a substantial part of the increase in costs. An argument which may appeal to the already-established citizens of a community is that the tax would fall largely on newcomers, or at any rate the rather small segment of the community at any one time engaged in real property sales.

LOCAL USE IN THE STATE OF WASHINGTON

The state of Washington has had a state conveyance tax of 50¢ per $500 on realty since 1935, and has permitted a county real estate transfer tax since 1951, with the yield earmarked for the public schools. The statewide yield of this county tax is between $11 and $12 million a year In the largest county (King County), which was about the size of Alameda County in 1960, it has yielded over $5 million per year. In Pierce County (pop 250,000), the 1963 yield was $1,120,000.

The tax was initiated because of the need for money for the schools. The Washington State Legislature in 1951 passed an enabling act which authorized the board of directors of more than a majority of the school

[9] Albert L Alford, *Nonproperty Taxation for Schools*, Office of Education, U S Department of Health, Education, and Welfare, 1963, p. 114.

districts of each county to declare by resolution to their respective county commissioners the need for additional funds for the support of the schools.[10] The county commissioners are then required to furnish 17 cents per day of attendance credit, or to levy a tax of 1 percent of the sales of real estate within the county, the proceeds of which are transmitted to the county school fund, except for 1 percent of the taxes collected which goes to the county for administration expense.

If this tax does not produce 17 cents per day per pupil, the schools then qualify for state equalization money to make up the difference The result has been that all counties in the state have adopted this tax. Not to adopt means not to qualify for the additional state money for schools. The tax has provided 11 cents per pupil per day in King County, the maximum yield for any county in the state.

Thus the tax can assist in alleviating the financial problems of mushrooming suburban districts Where there is a lag between the time of construction and the placing of the new property on the regular property tax rolls, the tax can also be justified as a pickup device

In the Washington counties, the tax is stated to be the obligation of the seller. It is levied at the rate of 1 percent of the gross sales price of each piece of property transferred, that is, the total consideration paid for the property, including all unpaid encumbrances, except governmental, that are assumed by the buyer or grantee.

There is no tax charged under the following circumstances:

(1) There is no consideration paid beyond the mere assumption of a mortgage or a contract balance
(2) A bona fide love and affection transfer, usually between close relatives.
(3) One of the parties is a local, state, or federal political agency.
(4) Sellers assignment of a contract.
(5) Technical legal decisions may exempt in cases of dissolution of corporations solely owned by grantees of its stock

The tax is collected by the county treasurers in the county in which the property is located. Each transaction must have an affidavit signed by one of the interested parties, or his legal representative. After the tax is paid, a rubber stamp is applied to the deed or contract as evidence of payment. The deed may then be filed with the county auditor for recording. The excise tax must be paid within 30 days of the date of sale, with a 1 percent per month penalty on late payment Failure to pay is also a misdemeanor, and subject to fine. County auditors will not honor a contract without an affidavit and instrument stamped by the county treasurer.

Apparently the county ordinances are reenacted each year. Originally the tax met with considerable opposition from realtors, but in the opinion of county officials the tax has now grown to be accepted

[10] In Washington a general minimum standard of $1.03 per pupil per day is established policy It is provided as follows
40¢ from the state
46¢ from the local property tax, with a deficiency made up from the state school equalization fund
17¢ from the real estate property tax, augmented by the state school equalization fund
The state also provides an appropriation per teacher unit to motivate the proper number of students per teacher

as any other part of the tax program A side benefit is that it provides a yardstick for judging assessment levels between and within counties.

Generally the rates used by local government units are quite moderate, with a maximum of 1 percent on the total value of the property sold or transferred There is an exemption for transfers below $20,000 in Montgomery County, Maryland, and below $25,000 in New York City Although this concentrates the tax on those with the greatest presumable ability to pay, it also greatly restricts the possible yield of the tax

The following table gives the available information about the types and rates used by the various local governments.

Maryland

State tax Document recording stamp tax, 55¢ per $100 of actual consideration

Counties Montgomery, Baltimore, Worcester, Queen Anne's, St Mary's, and Anne Arundel Counties *document recording tax*, both on instruments conveying title to property and instruments securing a debt; rate $1 10 for each $500 of actual consideration paid

Harford County rate is $2 20 per $500 of actual consideration paid

Baltimore City rate is $1 65 per $500

Collected by affixing stamps at time of purchase from the clerk of the court

New York

State tax Mortgage tax 50¢ per $100 or fraction based on principal debt or obligation secured

New York City Realty transfer tax, ½ of 1 percent of the net consideration on each deed when the consideration exceeds $25,000, payable within 30 days after delivery

Pennsylvania

State tax Realty transfer tax, 1 percent of the value of the property transferred by the document

City of Philadelphia Realty transfer tax; 1 percent of the value of the property transferred by document [11]

City of Pittsburgh same as Philadelphia

Various other local governments: including school districts, 1 percent of the value of the property transferred by document [12]

Virginia

State tax Deed and mortgage tax, 15¢ per $100 of the consideration of the deed or the actual value of the property conveyed

City and County tax Recordation tax; tax is levied on the first recordation of each taxable instrument in the city or county and is at the rate of one-third of the state tax.

Washington

State tax Tax on conveyances, 50¢ per $500 or fraction of consideration; first $100 exempted

County tax Tax on real estate sales; maximum rate of 1 percent (all 39 counties levy at the maximum rate).

District of Columbia: has a deed recordation tax with a rate of 0 5 percent of the consideration paid for the deed, and a minimum tax payable on each deed of $1.

[11] Philadelphia collected $3 6 million from the realty transfer tax in 1961, or 1 56 percent of the general fund revenues of the city government, which does not include the school district Alfred G Buehler, *Tax Study of the State of Connecticut*, March 1963

[12] The State of Pennsylvania has a 1 percent tax rate, and the combined state and local tax rates may not exceed 2 percent, a rate which is reached in many communities It is apparently customary for the tax to be divided equally between the buyer and the seller, although not required by law According to Buehler, the state and local realty transfer taxes "do not, in general, appear to have affected real estate activity appreciably in Pennsylvania."

LOCAL REAL ESTATE TRANSFER TAX—CALIFORNIA EXPERIENCE, CITY OF SANTA BARBARA, CALIFORNIA

Santa Barbara adopted a "deed transfer tax" on November 20, 1962, which was at the rate of 1 percent of the face amount of the transaction However, the Santa Barbara Board of Realtors opposed this tax, and circulated an initiative petition to have it repealed [13] They gathered 7,000 signatures and got it on the May 7th ballot, when it was voted down by 2 to 1. The Santa Barbara Home Builders Association had also opposed the tax During the five months when the tax was in force, the city collected $41,158, but this was refunded by court order to the taxpayers.

ARGUMENTS FOR AND AGAINST A REAL ESTATE TRANSFER TAX

FOR:

1. If levied on the basis of the total value of the property transferred, this tax can be a significant revenue raiser At a rate of 1 percent, the estimated yield in 1963 would have been approximately $125 million.
2. This type of tax might be particularly suitable for use by local governments, subject to statewide uniformity provisions. Its attractiveness would be enhanced by earmarking the proceeds for school purposes, as in the state of Washington If collected on a countywide basis, with the revenue allocated to the various school districts on the basis of average daily attendance, the tax could be used to accomplish a measure of intracounty equalization among the various school districts within the county
3 There would be a byproduct of useful information about real estate sales and market values of property which would provide a yardstick for measuring assessment levels both within and between counties
4 Administration costs would be quite moderate, judging by experience in the state of Washington, where 1 percent is allocated for these expenses

AGAINST:

1 It may be argued that property owners in general and homeowners in particular have been subject to an increasing proportion of the local tax burden, and that this tax would be an addition to that burden for those who transfer property unless this tax were to be levied in lieu of ad valorem property taxes
2 It may be argued that sales of very low-priced houses should be exempted to the extent that these houses are valued at or below the shelter requirements of a minimum standard of living
3 The tax may add to the selling costs in real estate transfers If we assume that a 1-percent tax will not be quantitatively significant enough to bring about a withdrawal of property that would otherwise be for sale, then the tax will tend to be borne in combination by the buyer, seller and broker Marginal sellers may feel that the total of all selling costs is too large, and may attempt to avoid part of them by bypassing the use of real estate agents
